of this agent. Her revenues were received and disbursed, in every part of the nation, with a promptness and safety almost incredible. The domestic exchanges of the country were aided, to the entire satisfaction of all concerned. The currency, the vital principle of industry, was sound, astonishingly sound; all of the banks redeeming their notes on demand, with specie. Sir, it may safely be said, that no People ever before had so safe, so uniform, and so convenient a circulating medium. It was exactly suited to the enterprise of the American People—a mixed currency; a paper currency, convertible into the precious metals, at the will of the holder. I would to Heaven, Mr. President, that we had just such a currency at this time, in lieu of the deranged circulating medium which has been forced upon us, by the mistaken policy of the late Administration. But, is this all? No, sir. The fiscal agent of the Government, the Bank of the United States, not only discharged all these duties to the Government without the loss of a dollar, but it actually paid to the Government the sum of \$1,500,000, as a bonus, for the privilege. Why, then, let me ask, did the Government abandon this agent; give up the bonus, which was increased to \$3,000,000 by the act which passed Congress, and met the veto power of the President; give up the benefits arising from a sound and wholesome state of the exchanges and currency, and ask to be delivered from that union? Sir, I was opposed to that divorce; first, because I thought the old matron a mainstay in the family; and, secondly, because I could not discover any of the predicted advantages that were to arise from the new alliance with the local banks. I viewed the matter then, as those who are asking for a divorce from that union seem to view it now; and gentlemen will excuse me if I cannot have much confidence in the new "expedients" of those who, like the present Executive, with a full knowledge of the results of former trials of the State bank system, still urged it upon the American People as altogether entitled to their confidence and regard. I was somewhat surprised to see the open avowal of the President, in his message, read to us a few days ago. He says, "Local banks have been employed for the deposit and distribution of the revenue at all times, partially; and, on three different occasions, exclusively: first, anterior to the establishment of the first Bank of the United States; secondly, in the interval between the termination of that institution, and the charter of its successor; and, thirdly, during the limited period that has now so abruptly closed. The connexion, thus repeatedly attempted, proved unsatisfactory on each successive occasion." Then why did they resort to it again? They openly avow, and admit the fact, that it (the "experiment") had been tried twice before. But there are two simple facts, admitted by the President, that to me speak volumes in favor of the wisdom of a Washington, a Madison, and their cotemporaries, in establishing a national bank; they are these: that even the most desperate of the officers of the army that has been employed in the war against the bank while living, and against its ghost since its decease, cannot say—has not dared to say—that it had not at all times discharged its fiscal duties with fidelity; and, secondly, it is admitted that the operations of the Government became obstructed, in each case, when the Bank of the United States was dispensed with as a fiscal agent of the Government.

I come now, Mr. President, to speak of the bill before the Senate, known here as the divorce bill. I was opposed, as I have told you, to the original divorce; I was still more opposed to the object of your then choice; and had I been here, in the name of my country I would have forbidden the banus. But, you married, and I now find the groom, and nearly all the wedding guests, in favor of another divorce. Sir, upon principles of common law, you are not entitled to it; you winked at—nay, more, you seduced your bride from the path of virtue; and you ought not to be allowed to take advantage of your own wrong. But, sir, I am ready to confess that I am much more opposed to the object of your third union, than I am to a separation from the darling of your second choice.

Sir, this sub-treasury scheme of divorcing the Government from the banks and People is, in my

mind, the most alarming proposition that has ever been presented to the American People. In vain did our revolutionary sires shed their blood in the contest for liberty; in vain did the sages and patriots of that eventful epoch contend for the glorious privileges which we enjoy, if, at this day of the Republic, we are to surrender up to the Executive, and to his immediate advisers, the liberties of this great People. Sir, when the patriot daily sees the immense powers claimed for, and exercised by, the Executive, has he not just cause for alarm? The veto power is his; the army is his; the navy is his; the appointing and removing power of all the inferior officers of Government is his; the sword is his; and he now asks for the purse. Shall we give it to him? Shall we surrender up the treasures of the nation—the hard earnings of the People—into his hands, as is proposed by this bill? Never, Mr. President, with my consent—never, never. I speak not with reference to the present Chief Magistrate. I am discussing this matter upon principle. Sir, I have reason for alarm when I see the other powers of the Government surrendered up, one at a time, either before or after the exercise of the veto, to the will of one man. How can I forbear to look with jealousy and alarm at a power so inordinate in its desires, and so ingulfing in its effects? This bill, sir, surrenders up the remnant of power which we had still left with us. I object to it because of the vast increase of Executive power and patronage it confers, first, by giving up the sole control of the revenues of the nation; and, secondly, by the vast increase of officers it authorizes. In addition to the land and custom-house offices now in existence, it will be necessary to establish a great many more, as sub-treasuries; add to these the twelve thousand post offices, all of which are to be little treasuries, and, sir, then come the visitors and examiners of these offices—as the bill requires an examination once, at least, each year—and you have an army of officers, traversing every part of the country at the bid of the Executive, paid from the public moneys by the President, and bound, upon pain of dismissal from office, to obey the Executive or party fiat. Sir, I am unwilling, by any vote of mine, to contribute to this result. But, sir, will the public money be safe? This is a question of great importance. Experience tells us that it will not; and, my word for it, when it shall have been tried to the satisfaction of those who are pressing it upon us, the defalcations will be found a much more formidable item in the unavailable funds than what appears against the national bank. But, in addition to this, you give up the bonus paid by the United States Bank. You give up the advantages resulting to the country from a well-regulated currency, and a wholesome state of the exchanges, and you pay not less than \$100,000 annually to carry on the “expedient,” without one countervailing benefit.

Sir, there is another objection to this measure more formidable, in my mind, than any of those I have attempted to urge. You propose to separate your fortunes from the destinies of the great body of the People; to make this Government, which I have always understood to be a Government of the People, an alien to their interest; you propose to give the Government and its officers gold and silver, and leave the People to struggle on with such a currency as the States may furnish. Sir, I know this People love the Government; I am not unapprized of their deep-rooted devotion to the institutions under which they live. Have they not on all occasions, in times of peril, when the existence of the nation was threatened by a hostile foe, rallied to the standard of their country, and laid down their lives a voluntary sacrifice on the altar of liberty? and shall they then be told, in times of difficulty and embarrassment, that this Government will take care of itself—that it has no power to assist the People—that it will provide for its own officers the precious metals, although the consequence may be ruin to the People? Sir, let those who are pressing this matter upon them not presume too far. It is not your parchment roll, called a Constitution, that holds this People together; it is a supposed community of interest; and whenever you shall satisfy them that the Government of their choice has no common interest with the People, the governed, that moment they will lose all attachment to the Constitu-

tion, and either dissolve themselves from a Government of requisitions and burdens, and not of benefits, or they will seek redress in a change of rulers. And, sir, I am no prophet, yet, judging from the voice you have heard from the West, and the responsive echoes from the East, if you carry these measures, in the course of my senatorial term of six years you will see these tables turned, and a confident majority reduced to a harmless minority here; and, in that event, mark my words to-day—you will hear a voice long and loud coming from that minority crying for another divorce from the evils of this measure. I hope in this I may be mistaken; but such are my opinions of the evil consequences which must result from this measure, that I hazard the opinion.

But, sir, as the representative in part of one of the western States, I protest against this measure as being of the most noxious character to our interest. Does not every western man see that its practical effect must be to drain all our specie from us, through the land offices and post offices, and expend it here and on the eastern waters in the creation of a navy, break-waters, light-houses, fortifications, &c., &c.? Since you have abandoned the doctrines of internal improvement, we have no objects for national expenditure, except, to be sure, the Cumberland road; and the expenditure on that is as a drop in the bucket when compared with the amount received by the Government from the people of the State.

Again: I object to this bill as being wholly illusory, and presenting a false issue to the People. It is not a question now, whether the People will have specie or paper in their common business transactions. This Government has no power over the State banks; they are the creatures of the legislatures of the different States; and whether this bill passes or not, the People of the States will have a paper currency; and the true question for them to decide is, whether they prefer a local paper exclusively, or whether they would prefer a national paper of universal circulation, controlling the State issues within wholesome bounds, and convertible into specie at the will of the holder.

Sir, let us examine for a moment the consequences that must necessarily result from any measure, at this time, reducing the property of this nation to a metallic value. Would it not at once amount, in effect, to a confiscation of at least two-thirds of the property in the country? Would it not increase, as two to one, the debts of the People? And how, let me ask, do gentlemen suppose the debtors—either merchants, banks, or people—can pay their debts, if specie should be required? Property must come to the hammer of the auctioneer; and the sacrifice would create ruin, wide-spread ruin. Sir, I would rather see a foreign army in your country, than to see the property of every debtor brought to the hammer on a specie demand. The desolation would be far less. Innocent and unoffending families who are in supposed affluence to-day, would be beggars to-morrow; thrown upon the cold charity of an unfriendly world. Sir, I cannot see it. I would avert it if I could. But, if gentlemen will go on, let them take the responsibility. The Senator from South Carolina, (Mr. CALHOUN,) told you that the disease was debt, and he knew of no cure, but to pay it. This may be true; but does not that Senator know that it is in vain to tell men to pay their debts, if you take from them the ability and means of payment? If you render the property with which they might pay valueless, how do you expect them to pay? Do gentlemen suppose that there is specie enough in this nation to pay the one-fourth of the debts, independently of answering the ordinary medium of circulation? If they do, I can only say that they have surely not examined the subject.

Sir, I have detained the Senate much longer than I had anticipated before I rose. I will say a few words, relative to the amendments of the Senators from South Carolina and Missouri, (Messrs. CALHOUN and BENTON,) and resume my seat.

I cannot go for the amendment of the Senator from South Carolina. It assumes the same principle of the bill; that is, that the Government, in the collection of its dues, will, at given periods, re-

fuse to take the paper of specie-paying banks, and will collect all its revenue in specie. I object to the principle, and cannot give any vote that can be construed into a sanction of such doctrines.

The amendment of the Senator from Missouri is still worse in principle. The amendment gives a premium, on the part of Government, of one per cent. for all the gold that may be paid by her debtors? What does this mean? What can be the object? Is it to draw all the gold of the country into the Government vaults for the benefit of its favorites? For if the Government gives one per cent., surely she will not pay it out in her ordinary business transactions at par.

I cannot close my remarks, Mr. President without saying that I entertained strong hopes, when I came here, that we should be able to unite on some measure that would restore confidence, regulate the currency, and give relief to the People. But I am now compelled to say that, in my opinion, we shall do nothing to meet their just expectations; and my fondest hopes will end in disappointment. I shall vote, as a choice of evils, for the bill of the gentleman from Virginia; but I must say I have little or no confidence in it. Still I do not think it so objectionable as the sub-treasury scheme. My opinion has been, and still continues to be, that experience has proven that a national bank, properly guarded in its powers, is an indispensable fiscal agent to the Government, as well as absolutely necessary as a general regulator of the currency and of the exchanges, and of the issues of the local banks. A majority here, however, think otherwise, and it will be for the People ultimately to decide the matter; and in that decision let all acquiesce. I am sure I have no personal interest in sustaining any bank. I never owned a dollar of stock in a bank in my life, nor do I expect to do so; but I have an interest in sustaining those measures that may benefit the People. Their interest is my interest, and my interest is their interest.

Mr. President, I know I have occupied too much of the time of the Senate; yet I offer no other apology than the importance of the subject; and in resuming my seat I return to the Senate my unfeigned thanks for the marked respect and attention which it has honored me with in this my first attempt to address it.

## SPEECH OF MR. WEBSTER.

### OF MASSACHUSETTS,

In Senate, September 23, 1837.—The Senate having resumed the consideration of the bill “imposing additional duties, as depositories in certain cases, on public officers,” with the amendment offered thereto by Mr. CALHOUN—

Mr. WEBSTER addressed the Senate as follows:

Mr. President: I am opposed to the doctrines of the message, to the bill, and to the amendment of the member from South Carolina, (Mr. Calhoun.) In all these I see nothing for the relief of the country; but I do see, as I think, a question involved, the importance of which transcends all the interests of the present occasion.

It is my purpose to state that question; to present it as well to the country as to the Senate; to show the length and breadth of it, as a question of practical politics, and in its bearing on the powers of the Government; to exhibit its importance, and to express my own opinions in regard to it.

A short recital of events and occurrences will show how this question has arisen.

The Government of the United States completed the forty-eighth year of its existence under the present Constitution on the 31 day of March last. During this whole period, it has felt itself bound to take proper care of the currency of the country; and no administration has admitted this obligation more clearly or more frequently than the last. For the fulfilment of this acknowledged duty, as well as to accomplish other useful purposes, a national bank has been maintained for forty out of these forty-eight years. Two institutions of this kind have been created by law: one commencing in 1791, and limited to twenty years, and expiring, therefore, in 1811; the other commencing in 1816, with a like term of duration, and ending, therefore,

in 1836. Both of these institutions, each in its time, accomplished their purposes, so far as currency was concerned, to the general satisfaction of the country. But before the last bank expired, it had the misfortune to become obnoxious to the late administration. I need not at present speak of the causes of this hostility. My purpose only requires a statement of that fact, as an important one in the chain of occurrences.

The late President's dissatisfaction of the bank was intimated in his first annual message, that is to say in 1829. But the bank stood very well with the country, the President's known and growing hostility notwithstanding; and in 1832, four years before its charter was to expire, both houses of Congress passed a bill for its continuance; there being in its favor a large majority of the Senate, and a larger majority of the House of Representatives. The bill, however, was negatived by the President. In 1833, by an order of the President, the public moneys were removed from the custody of the bank, and were deposited with certain selected State banks. This removal was accompanied with the most confident declarations and assurances, put forth in every form, by the President and Secretary of the Treasury, that these State banks would not only prove safe depositories of the public money, but that they would also furnish the country with as good a currency as it ever had enjoyed, and probably a better; and would accomplish all that could be wished in regard to domestic exchanges. The substitution of State banks for a national institution, for the discharge of these duties, was that operation, which has become known, and is likely to be long remembered, as the "experiment."

For some years all was said to go on extremely well, although it seemed plain enough to a great part of the community that the system was radically vicious; that its operations were all inconvenient, clumsy, and wholly inadequate to the proposed ends; and that, sooner or later, there must be an explosion. The administration, however, adhered to its experiment. The more it was complained of the louder it was praised. Its commendation was one of the standing topics of all official communications; and in his last message, in December, 1836, the late President was more than usually emphatic upon the great success of his attempts to improve the currency, and the happy results of the experiment upon the important business of exchange. But a reverse was at hand. The ripening glories of the experiment were soon to meet a dreadful blighting. In the early part of May last, these banks all stopped payment. This event, of course, produced great distress in the country, and it produced also similar embarrassment to the administration.

The present administration was then only two months old; but it had already become formally pledged to maintain the policy of that which had gone before it. The President had avowed his purpose of treading in the footsteps of his predecessor. Here, then, was difficulty. Here was a political knot, to be either untied or cut. The experiment had failed, and failed, as it was thought, so utterly and hopelessly, that it could not be tried again.

What, then, was to be done? Committed against a Bank of the United States in the strongest manner, and the substitute, from which so much was expected, having disappointed all hopes, what was the administration to do? Two distinct classes of duties had been performed in times past by the Bank of the United States; one more immediately to the Government, the other to the community. The first was the safe-keeping and the transfer, when required, of the public moneys; the other the supplying of a sound and convenient paper currency, of equal credit all over the country, and every where equivalent to specie, and the giving the most important facilities to the operations of exchange. These objects were highly important, and their most perfect accomplishment by the experiment had been promised from the first. The State banks, it was declared, could perform all these duties, and should perform them. But the "experiment" came to a dishonored end in the early part of May. The deposite banks, with the

others, stopped payment. They could not render back the deposites; and, so far from being able to furnish a general currency, or to assist exchanges, (purposes, indeed, which they never had fulfilled with any success,) their paper became immediately depreciated, even in its local circulation. What course, then, was the administration now to adopt? Why, sir, it is plain that it had but one alternative. It must either return to the former practice of the Government, take the currency into its own hands, and maintain it, as well as provide for the safe keeping of the public money by some institution of its own; or else, adopting some new mode of merely keeping the public money, it must abandon all further care over currency and exchange. One of these courses became inevitable. The administration had no choice. The State banks could be tried no more, with the opinion which the administration now entertained of them; and how else could any thing be done to maintain the currency? In no way but by the establishment of a national institution.

There was no escape from this dilemma. One course was, to go back to that which the party had so much condemned; the other, to give up the whole duty, and leave the currency to its fate. Between these two, the administration found itself absolutely obliged to decide; and it has decided, and decided boldly. It was decided to surrender the duty, and abandon the constitution. That decision is before us, in the message, and in the measures now under consideration. The choice has been made; and that choice, in my opinion, raises a question of the utmost importance to the people of this country, both for the present and all future time. That question is, *whether Congress has, or ought to have, any duty to perform in relation to the currency of the country, beyond the mere regulation of the gold and silver coin.*

Mr. President, the honorable member from South Carolina remarked, the other day, with great frankness and good humor, that, in the political classification of the times, he desired to be considered as nothing but an honest nullifier. That, he said, was his character. I believe, sir, the country will readily concede that character to the honorable gentleman. For one, certainly, I am willing to say, that I believe him to be a very honest and a very sincere nullifier, using the term in the same sense in which he used it himself, and in which he meant to apply it to himself. And I am very much afraid, sir, that (whatever he may think of it himself) it has been under the influence of those sentiments, which belong to his character as a nullifier, that he has so readily and so zealously embraced the doctrines of the President's message. In my opinion, the message, the bill before us, and the honorable member's amendment, form, together, a system, a code of practical politics, the direct tendency of which is to nullify and expunge, or, perhaps, more correctly speaking, by a united and mixed process of nullification and expunging, to abolish a highly important and useful power of the Government. It strikes down the principle upon which the Government has been administered, in regard to the subject of the currency, through its whole history; and it seeks to obliterate, or to draw black lines around that part of the constitution on which this principle of administration has rested. The system proposed, in my opinion, is not only anti-commercial, but anti-constitutional also, and anti-union, in a high degree.

You will say, sir, that this is a strong way of stating an opinion. It is so. I mean to state the opinion in the strongest manner. I do not wish, indeed, at every turn, to say, of measures which I oppose, that they either violate or surrender the constitution. But when, in all soberness and candor, I do so think, in all soberness and candor I must so speak; and whether the opinion which I have now expressed be true, let the sequel decide.

Now, sir, Congress has been called together in a moment of great difficulty. The characteristic of the crisis is commercial distress. We are not suffering from war, or pestilence, or famine; and it is alleged by the President and Secretary, that there is no want of revenue. Our means, it is averred, are abundant. And yet the Government is in distress, and the country is in distress; and Congress

is assembled, by a call of the President, to provide relief. The immediate and direct cause of all is, derangement of the currency and the exchanges; commercial credit is gone, and property no longer answers the common ends and purposes of property. Government cannot use its own means, and individuals are alike unable to command their own resources. The operations both of Government and people are obstructed; and they are obstructed, because the money of the country, the great instrument of commerce and exchange, has become disordered and useless. The Government has funds; that is to say, it has credits in the banks, but it cannot turn these credits into cash; and individual citizens are as bad off as Government. The Government is a great creditor and a great debtor. It collects and it disburses large sums. In the loss, therefore, of a proper medium of payment and receipt, Government is a sufferer. But the people are sufferers from the same causes; and inasmuch as the whole amount of payments and receipts by the people, in their individual transactions, is many times greater than the amount of payments and receipts by Government, the aggregate of evil suffered by the people is also many times greater than that suffered by Government. Individuals have means as ample, in proportion to their wants, as Government; but they share with Government the common calamity arising from the overthrow of the currency. The honorable member from Mississippi (Mr. Walker) has stated, or has quoted the statement from others, that while the payments and receipts of Government are twenty millions a year, the payments and receipts of individuals are two or three hundred millions. He has, I think, underrated the amount of individual payments and receipts. But even if he has not, the statement shows how little a part of the whole evil falls on Government. The great mass of suffering is on the people.

Now, sir, when we look at the message, the bill, and the proposed amendment, their single, exclusive, and undivided object is found to be, *relief to the Government*. Not one single provision is adopted or recommended, with direct reference to the relief of the people. They all speak of revenue, of finance, of duties and customs, of taxes and collections; and the evils which the people suffer, by the derangement of the currency and the exchanges, and the breaking up of commercial credit, instead of being put forth as prominent and leading objects of regard, are dismissed with a slight intimation, here and there, that, in providing for the superior and paramount interest of Government, some incidental or collateral benefits may, perhaps, accrue to the community. But is Government, I ask, to care for nothing but itself? Is self-preservation the great end of Government? Has it no trust powers? Does it owe no duties, but to itself? If it keeps itself in being, does it fulfil all the objects of its creation? I think not. I think Government exists, not for its own ends, but for the public utility. It is an agency, established to promote the common good, by common counsels; its chief duties are to the people; and it seems to me strange and preposterous, in a moment of great and general distress, that Government should confine all deliberations to the single object of its own revenues, its own convenience, its own undisturbed administration.

I cannot say, sir, that I was surprised to see this general character impressed on the face of the message. I confess it appeared to me, when the banks stopped payment, that the administration had come to a pass in which it was unavoidable that it should take some such course. But that necessity was imposed, not by the nature of the crisis, but by its own commitment to the line of politics which its predecessor had adopted, and which it had pledged itself to pursue.

It withdraws its care from the currency, because it has left itself no means of performing its own duties, connected with that subject. It has voluntarily, and on calculation, discarded and renounced the policy which has been approved for half a century, because it could not return to that policy, without admitting its own inconsistency, and violating its party pledges. This is the truth of the whole matter.

Now, sir, my present purpose chiefly is to maintain two propositions:

1. That is the constitutional duty of this Government to see that a proper currency, suitable to the circumstances of the times, and to the wants of trade and business, as well as to the payment of debts due to Government, be maintained and preserved; a currency of general credit, and capable of aiding the operations of exchange, so far as those operations may be conducted by means of the circulating medium; and that there are duties, therefore, devolving on Congress, in relation to currency, beyond the mere regulation of the gold and silver coins.

2. That the message, the bill, and the proposed amendment, all, in effect, deny any such duty, disclaim all such power, and confine the constitutional obligation of Government to the mere regulation of the coins, and the care of its own revenues.

I have well weighed, Mr. President, and fully considered, the first of these propositions, to wit: that which respects the duty of this Government, in regard to the currency. I mean to stand by it. It expresses, in my judgment, a principle fully sustained by the Constitution, and by the usage of the Government, and which is of the highest practical importance. With this proposition, or this principle, I am willing to stand connected; and to share in the judgment which the community shall ultimately pronounce upon it. If the country shall sustain it, and be ready, in due time, to carry it into effect, by such means and instruments as the general opinion shall think best to adopt, I shall co-operate, cheerfully, in any such undertaking, and shall look again, with confidence, to prosperity in this branch of our national concerns. On the other hand, if the country shall reject this proposition, and act on that rejection; if it shall decide that Congress has no power, nor is under any duty, in relation to the currency, beyond the mere regulation of the coins, then, upon that construction of the powers and duties of Congress, I am willing to acknowledge that I do not feel myself competent to render any substantial service to the public councils on these great interests. I admit at once that if the currency is not to be preserved by the Government of the United States, I know not how it is to be guarded against constantly occurring disorders and derangements.

Before entering into the discussion of the grounds of this proposition, however, allow me, sir, a few words, by way of preliminary explanation. In the first place, I wish it to be observed that I am now contending only for the general principle, and not insisting either on the constitutionality or expediency of any particular means, or any particular agent. I am not saying by what instrument or agent Congress ought to perform this duty; I only say it is a duty, which, in some mode and by some means, Congress is bound to perform. In the next place, let it be remembered that I carry the absolute duty of Government, in regard to exchange, no farther than the operations of exchange may be performed by currency. No doubt, sir, a proper institution, established by Government, might, as heretofore, give other facilities to exchange of great importance, and to a very great extent. But I intend, on this occasion, to keep clearly within the Constitution, and to assign no duty to Congress not plainly enjoined by the provisions of that instrument, as fairly interpreted, and as heretofore understood.

The President says, it is not the province of Government to aid individuals in the transfer of their funds, otherwise than by the use of the post office; and that it might as justly be called on to provide for the transportation of their merchandise.

Now, I beg leave to say, sir, with all respect and deference, that funds are transferred from individual to individual, usually for the direct purpose of the payment and receipt of debts; that payment and receipt are duties of currency; that, in my opinion, currency is a thing which Government is bound to provide for and superintend; that the case, therefore, has not the slightest resemblance to the transportation of merchandise, because the transportation of merchandise is carried on by ships and boats, by carts and wagons, and not by the use

of currency, or of any thing else over which Government has usually exclusive control. These things individuals can provide for themselves. But the transfer of funds is done by credit, and must be so done; and some proper medium for this transfer it is the duty of Government to provide, because it belongs to currency, to money, and is therefore beyond the power of individuals.

The nature of exchange, sir, is well understood by persons engaged in commerce; but as its operations are a little out of the sight of other classes of the community, although they have all a deep and permanent interest in the subject, I may be pardoned for a word or two of general explanation. I speak of domestic exchanges only. We mean, then, by exchange, this same transfer of funds. We mean the making of payment in a distant place, or the receiving of payment from a distant place, by some mode of paper credits. If done by draft, order, or bill of exchange, that is one form; if done by the transmission of bank notes, through the post office, or otherwise, that is another form. In each, credit is used; in the first, the credit of the parties whose names are on the bill or draft; in the last, the credit of the bank. Every man, sir, who looks over this vast country, and contemplates the commercial connection of its various parts, must see the great importance that this exchange should be cheap and easy. To the producer and to the consumer, to the manufacturer and the planter, to the merchant, to all, in all classes, this becomes a matter of moment. We may see an instance in the common articles of manufacture produced in the north, and sent to the south and west for sale and consumption. Hats, shoes, furniture, carriages, domestic hardware, and various other articles, the produce of those manufacturing, and of those employments which are carried on without the aid of large capital, constitute a large part of this trade, as well as the fabrics of cotton and wool. Now a state of exchange, which shall enable the producers to receive payment regularly, and without loss, is indispensable to any useful prosecution of this intercourse. Derangement of currency and exchange is ruinous. The notes of local banks will not answer the purpose of remittance; and if bills of exchange cannot be had, or can be had only at a high rate, how is payment to be received, or to be received without great loss? This evil was severely felt, even before the suspension of specie payment by the banks; and it will always be felt, more or less, till there is a currency of general credit and circulation through the country. But when the banks suspended, it became overwhelming. All gentlemen having northern acquaintance, must know the existence of this evil. I have heard it said that the hitherto prosperous and flourishing town of Newark has already lost a considerable part or its population by the breaking up of its business, in consequence of these commercial embarrassments. And in cases in which business is not wholly broken up, if five or six per cent., or more, is to be paid for exchange, it by so much enhances the cost to the consumer, or takes away his profit from the producer. I have mentioned these articles of common product of northern labor; but the same evil exists in all the sales of imported goods; and it must exist, also, in the south, in the operations connected with its great staples. All the south must have, and has, constant occasion for remittance by exchange; and no part of the country is likely to suffer more severely by its derangement. In short, there can be no satisfactory state of internal trade, when there is neither cheapness, nor promptness, nor regularity, nor security, in the domestic exchanges.

I say again, sir, that I do not hold Government bound to provide bills of exchange for purchase and sale. Nobody thinks of such a thing. If any institution established by Government can do this, as might be the case, and has been the case, so much the better. But the positive obligations of Government I am content to limit to currency, and, so far as exchange is concerned, to the aid which may be afforded to exchange by currency. I have been informed that, a few years ago, before the charter of the late bank expired, at those seasons of the year when southern and western merchants usually visit the northern cities to make purchases,

or make payment for existing liabilities, that bank redeemed its notes to the amount of fifty or even a hundred thousand dollars a day. These notes, having been issued in the West, were brought over the mountains as funds to be used in the eastern cities. This was exchange; and it was exchange through the medium of currency; it was perfectly safe, and it cost nothing. This fact illustrates the importance of a currency of universal credit to the business of exchange.

Having made these remarks for the purpose of explaining exchange, and showing its connexion with currency, I proceed to discuss the general propositions.

Is it the duty, then, of this Government to see that a currency be maintained suited to the circumstances of the times, and to the uses of trade and commerce?

I need not, sir, on this occasion, enter historically into the well-known causes which led to the adoption of the present Constitution. Those causes are familiar to all public men; and among them, certainly, was this very matter of giving credit and uniformity to the money system of the country. The States possessed no system of money and circulation; and that was among the causes of the stagnation of commerce. Indeed, all commercial affairs were in a disjointed, deranged, and miserable state. The restoration of commerce, the object of giving it uniformity, credit, and national character, were among the first incentives to a more perfect union of the States. We all know that the meeting at Annapolis, in 1786, sprang from a desire to attempt something which should give uniformity to the commercial operations of the several States; and that in and with this meeting arose the proposition for a general convention, to consider of a new constitution of Government. Every where State currencies were depreciated, and continental money was depreciated also. Debts could not be paid, and there was no value to property. From the close of the war to the time of the adoption of this Constitution, as I verily believe, the people suffered as much, except in the loss of life, from the disordered state of the currency and the prostration of commerce and business, as they suffered during the war. All our history shows the disasters and afflictions which sprang from these sources; and it would be waste of time to go into a detailed recital of them. For the remedy of these evils, as one of its great objects, and as great as any one, the Constitution was formed and adopted.

Now, sir, by this Constitution, Congress is authorized to "coin money, to regulate the value thereof, and of foreign coins;" and all the States are prohibited from coining money, and from making any thing but gold and silver coins a tender in payment of debts. Suppose the Constitution had stopped here, it would still have established the all-important point of a uniform money system. By this provision Congress is to furnish coin, or regulate coin, for all the States. There is to be but one money standard for the country. And the standard of value to be established by Congress is to be a currency, and not bullion merely; because we find it is to be coin; that is, it is to be one or the other of the precious metals, bearing an authentic stamp of value, and passing therefore by tale. That is to be the standard of value. A standard of value, therefore, and a money for circulation, were thus expressly provided for. And if nothing else had been done, would it not have been a reasonable and necessary inference from this power, that Congress had authority to regulate, and must regulate and control, any and all paper, which either States or individuals might desire to put into circulation, purporting to represent this coin, and to take its place in the uses of trade and commerce? It is very evident that the Constitution intended something more than to provide a medium for the payment of debts to Government. The object was a uniform currency for the use of the whole people, in all the transactions of life; and it was manifestly the intent of the Constitution, that the power to maintain such a currency should be given to Congress. But it would make the system incongruous and incomplete, it would be denying to Congress the means necessary to accomplish ends which were manifestly intended, it would render the

whole provision in a great measure nugatory, if, when Congress had established a coin for currency and circulation, it should have no power to maintain it as an actual circulation, nor to regulate or control paper emissions designed to occupy its place, and perform the same functions that it would on the coinage power alone; and on a fair, and just, and reasonable inference from it, therefore, I should be of opinion that Congress was authorized, and was bound, to protect the community against all evils which might threaten from a deluge of currency of another kind, filling up, in point of fact, all the channels of circulation. And this opinion is not new. It has often been expressed before, and was cogently urged by Mr. Dallas, the Secretary of the Treasury, in his report in 1816. He says, "whenever the emergency occurs that demands a change of system, it seems necessarily to follow that the authority, which was alone competent to establish the national coin, is alone competent to create a national substitute."

But the Constitution does not stop with this grant of the coinage power to Congress. It expressly prohibits the States from issuing *bills of credit*. What a bill of credit is, there can be no difficulty in understanding by any one acquainted with the history of the country. They had been issued at different times, and in various forms, by the State Governments. The object of them was to create a paper circulation; and any paper, issued on the credit of the State, and intended for circulation from hand to hand, is a bill of credit, whether made a tender for debts or not, or whether carrying interest or not. Is it issued with intent that it shall circulate from hand to hand as money, and with intent that it shall so circulate on the credit of the State? If it is, it is a bill of credit. The States, therefore, are prohibited from issuing paper for circulation on their own credit; and this provision furnishes additional and strong proof that all circulation, whether of coin or paper, was intended to be subject to the regulation and control of Congress. Indeed, the very object of establishing one commerce for all the States, and one money for all the States, would otherwise be liable to be completely defeated. It has been supposed, nevertheless, that this prohibition on the States has not restrained them from granting to individuals, or to private corporations, the power of issuing notes for circulation on their own credit. This power has long been exercised, and is admitted to exist. But could it be reasonably maintained, looking only to these two provisions, (that is to say, to the coinage power, which is vested exclusively in Congress, and to the prohibition on the States against issuing their own paper for circulation,) that Congress could not protect its own power, and secure to the people the full benefits intended by and for them against evils and mischiefs, if they should arise, or threaten to arise, not from paper issued by States, but from paper issued by individuals or private corporations? If this be so, then the coinage power evidently fails of a great part of its intended effect; and the evils intended to be prevented by the prohibitions on the States may all arise, and become irresistible and overwhelming in another form.

But the Message intimates a doubt whether this power over the coin was given to Congress to preserve the people from the evils of paper money, or only given to protect the Government itself. I can not but think this very remarkable and very strange. The language of the President is, "there can be no doubt that those who framed and adopted the Constitution, having in immediate view the depreciated paper of the confederacy, of which five hundred dollars in paper were at times equal to only one dollar in coin, intended to prevent the recurrence of similar evils, so far at least as related to the transactions of the new Government." Where is the foundation for the *qualification* here expressed? On what clause, or construction of any clause, is it founded? Will any gentleman tell me what there is in the Constitution which led the President, or which could lead any man, to doubt whether it was the purpose of that instrument to protect the people, as well as the Government, against the overwhelming evils of paper money? Is there a word or particle in the coinage power, or any other

power, which countenances the notion that the Constitution intended that there should be one money for the Government, and another for the people; that Government should have the means of protecting its own revenues against depreciated paper, but should be still at liberty to suffer all the evils of such paper to fall with full weight upon the people? This is altogether a new doubt. It intimates an opinion, which, so far as it shall find those who are ready to adopt and follow it, will sap and undermine one of the most indispensable powers of the Government. The coinage power is given to Congress in general terms; it is altogether denied to the States; and the States are prohibited from issuing bills of credit for any purpose whatever, or of any character whatever. Can any man hesitate one moment to say that these provisions are all intended for the general good of the people? I am, therefore, surprised at the language of the Message in this particular, and utterly at a loss to know what should have led to it, except the apparent and foregone conclusion and purpose, of attempting to justify Congress in the course which was about to be recommended to it, of abstaining altogether from every endeavor to improve or maintain the currency, except so far as the receipts and payments of the Government itself were concerned. I repeat, sir, that I should be obliged to any friend of the administration, who would suggest to me on what ground this doubt, never expressed before, and now so solemnly and gravely intimated, is supposed to stand. Is it, indeed, uncertain, is it matter of grave and solemn doubt, whether the coinage power itself, so fully granted to Congress, and so carefully guarded by restraints upon the States, had any further object than to enable Congress to furnish a medium in which taxes might be collected?

But this power over the coinage is not the strongest nor the broadest ground on which to place the duty of Congress. There is another power granted to Congress, which seems to me to apply to this case, directly and irresistibly, and that is the commercial power. The Constitution declares that Congress shall have power to regulate commerce, not only with foreign nations, but between the States. This is a full and complete grant, and must include authority over every thing which is part of commerce, or essential to commerce. And is not money essential to commerce? No man, in his senses, can deny that; and it is equally clear, that whatever paper is put forth, with intent to circulate as currency, or to be used as money, immediately affects commerce. Bank notes, in a strict and technical sense, are not, indeed, money; but, in a general sense, and often in a legal sense, they are money. They are substantially money, because they perform the functions of money. They are not, like bills of exchange or common promissory notes, mere proofs or evidences of debt, but are treated as money, in the general transactions of society. If receipts be given for them, they are given as for money. They pass under a legacy, or other form of gift, as money. And this character of bank notes was as well known and understood at the time of the adoption of the Constitution as it is now. The law, both of England and America, regarded them as money, in the sense above expressed. If Congress, then, has power to regulate commerce, it must have a control over that money, whatever it may be, by which commerce is actually carried on. Whether that money be coin or paper, or however it has acquired the character of money or currency, if, in fact, it has become an actual agent or instrument in the performance of commercial transactions, it necessarily thereby becomes subject to the regulation and control of Congress. The regulation of money is not so much an inference from the commercial power conferred on Congress, as it is a part of it. Money is one of the things, without which, in modern times, we can form no practical idea of commerce. It is embraced, therefore, necessarily, in the terms of the Constitution.

But, sir, as will be seen by the proposition which I have stated, I go further: I insist that the duty of Congress is commensurate with its power; that it has authority not only to regulate and control that which others may put forth as money and currency, but that it has the power, and is bound to

perform the duty, of seeing that there is established and maintained, at all times, a currency of general credit, equivalent in value to specie, adapted to the wants of commerce and the business of the people, and suited to the existing circumstances of the country. Such a currency is an instrument of the first necessity to commerce, according to the commercial system of the present age; and commerce cannot be conducted, with full advantage, without it. It is in the power of Congress to furnish it, and it is in the power of nobody else. The States can not supply it. That resource has often been tried, and has always failed. I am no enemy to the State banks; they may be very useful in their spheres; but you can no more cause them to perform the duties of a national institution than you can turn a satellite into a primary orb. They can not maintain a currency of equal credit all over the country. It might be tried, sir, in your State of Kentucky, or our State of Massachusetts. We may erect banks on all the securities which the wit of man can devise; we may have capital, we may have funds, we may have bonds and mortgages, we may add the faith of the State, we may pile Pelion upon Ossa, they will be State institutions after all, and will not be able to support a national circulation. This is inherent in the nature of things, and in the sentiments of men. It is in vain to argue that it ought not to be so, or to contend that one bank may be as safe as another. Experience proves that it is so, and we may be assured it will remain so.

Sir, mine is not the ruthless hand that shall strike at the State banks, nor mine the tongue that shall carelessly upbraid them with treachery or perfidy. I admit their lawful existence; I admit their utility in the circle to which they properly belong. I only say they can not perform a national part in the operations of commerce. A general and universal accredited currency, therefore, is an instrument of commerce, which is necessary to the enjoyment of its just advantages, or, in other words, which is essential to its beneficial regulation. Congress has power to establish it, and no other power can establish it; and therefore Congress is bound to exercise its own power. It is an absurdity, on the very face of the proposition, to allege that Congress shall regulate commerce, but shall, nevertheless, abandon to others the duty of maintaining and regulating its essential means and instruments. We have in actual use a mixed currency: the coin circulating under the authority of Congress, the paper under the authority of the States. But this paper, though it fills so great a portion of all the channels of circulation, is not of general and universal credit; it is made up of various local currencies, none of which has the same credit, or the same value, in all parts of the country, and therefore these local currencies answer but very loosely and deficiently the purposes of general currency, and of remittance. Now, is it to be contended that there is no remedy for this? Are we to agree, that the Constitution, with all its care, circumspection, and wisdom, has, nevertheless, left this great interest unprotected? Is our commercial system so lame and impotent? Are our constitutional provisions and our political institutions so radically defective? I think not, sir. They do not deserve this reproach; and think it may now be easily shown that, that under all administrations, from General Washington's time down to the 3d of March last, the Government has felt and acknowledged its obligation, in regard to the currency, to the full extent in which I have stated it, and has constantly endeavored to fulfil that obligation. Allow me to go back to the beginning, and trace this matter down to our times a little in detail.

In his first speech to Congress, in 1789, having just then assumed his new office, General Washington recommended no particular subjects to the consideration of Congress; but in his speech at the opening of the second session, he suggested the importance of a uniform currency, without distinguishing coinage from paper; and this body in its answer, assured him that it was a subject which should receive its attention. Recollect, sir, at that time, that there were State banks having notes in circulation, though they were very few. The first Bank of the United States was established at the third session of the Congress in 1791. The bill

for its creation originated in the Senate; the debates in which were at that time not public. We have, however, the debates in the House, we have the reports of the Secretaries, and we have the law itself. Let us endeavor to learn, from these sources, for what objects this institution was created, and whether a national currency was one of those objects.

Certainly, sir, it must be admitted that currency was not the only object in incorporating the bank of 1791. The Government was new, its fiscal affairs were not well arranged, it was greatly in debt, and the political state of things at the time rendered it highly probable that sudden occasions for making loans would arise. That it might assist the operations of the Treasury, therefore, and that it might make those loans to Government, if pressing occasions should arise, were two of the purposes had in view in establishing the bank. But it is equally clear that there was a third purpose, and that respected commerce and currency. To furnish a currency for general circulation, and to aid exchange, was, demonstrably, a clear, distinct, and avowed object, in the creation of the first bank.

On the 13th of December, 1790, the Secretary of the Treasury made a report to the House of Representatives, recommending a national bank. In this report, he set forth the advantages of such an institution; one of these advantages, he says, consists "in increasing the quantity of circulating medium, and quickening the circulation." And he then proceeds to observe: "This last may require some illustration. When payments are to be made between different places, having an intercourse of business with each other, if there happen to be no private bills at market, and there are no bank notes which have a currency in both, the consequence is, that coin must be remitted. This is attended with trouble, delay, expense, and risk. If, on the contrary, there are bank notes current in both places, the transmission of these, by the post, or any other speedy or convenient conveyance, answers the purpose; and these again, in the alternations of demand, are frequently returned, very soon after to the place whence they were first sent: whence the transportation and retransportation of the metals are obviated, and a more convenient and a more expeditious medium of payment is substituted."

Is not this clear proof, that one object in establishing the bank, in the opinion of the Secretary, was the creation of a currency which should have general credit throughout the country, and, by means of such credit, should become a convenient and expeditious medium of exchange? Currency, sir, currency and exchange were then, beyond all doubt, important objects, in the opinion of the proposer of the measure, to be accomplished by the institution. The debates which took place in the House of Representatives confirm the same idea. Mr. Madison, who objected to the bill on constitutional grounds, admitted, nevertheless, that one of the advantages of a bank consists "in facilitating occasional remittances, from different places where notes happen to circulate," and Mr. Ames, who was one of the most distinguished friends of the measure, and who represented a commercial district, enlarged on the great benefit of the proposed institution to commerce. He insisted that the intercourse between the States could never be on a good footing, without an institution whose paper would circulate more extensively than that of any State bank; and what he saw, in the future, we have seen in the past, and feel in the present. Other gentlemen, also, contended that some such institution was necessary, in order to enable Congress to regulate the commerce of the country, and, for that reason, that it would be constitutional, as being proper means for a lawful end.

When the bill had passed the two Houses, the President, as we all know, asked the opinion of his Cabinet upon its constitutionality. The Secretary of State and the Attorney General were against it; the Secretary of the Treasury was in favor of it; and among the grounds on which he placed the right of Congress to pass the law, was its adaptation to the exercise of the commercial power, conferred by the Constitution on Congress. His language is: "The institution of a bank has, also, a natural relation to the regulation of trade between the States, in so far as it is conducive to the

creation of a convenient medium of exchange between them, and to the keeping up a full circulation, by preventing the frequent displacement of the metals in reciprocal remittances. Money is the very hinge on which commerce turns; and this does not mean merely gold and silver; many other things have served the purpose, with different degrees of utility. Paper has been extensively employed. It can not, therefore, be admitted, with the Attorney General, that the regulation of trade between the States, as it concerns the medium of circulation and exchange, ought to be considered as confined to coin." "And it is," he adds, "in reference to these general relations of commerce, that an establishment which furnishes facilities to circulation, and a convenient medium of exchange and alienation, is to be regarded as a regulation of trade."

Nothing can be plainer, sir, than this language; and therefore, nothing is more certain than that those who recommended and supported the first bank, regarded it as a fit and necessary measure, in order to enable Congress to exercise its important duty of regulating commerce, and to fulfil, especially, that part of the duty which enjoined upon it the provision of a proper and suitable currency for circulation and exchange.

But it is not necessary to rely on these opinions of individual friends of the measure. Let the act speak for itself. Let us look into it, and search its reasons on its face. What are the grounds and objects of the law, as set forth in the law itself? The preamble tells us. It declares:

"That the establishing of a bank will be very conducive to the successful conducting of the national finances, and will tend to give facility to the obtaining of loans for the use of Government in sudden emergencies, and will be productive of considerable advantage to trade, and industry in general."

Trade and industry in general, therefore, constituted one distinct and definite object of the incorporation, if the law truly expounds its own purposes. It was not revenue alone; it was not the facility of making loans merely; it was not mere utility to Government; but, in addition to these, it was commerce, it was the interest of the people, it was trade and business in general, which, among other considerations, formed an important part of the objects of the incorporation; and indeed, sir, events proved that it was vastly the most important part of all. What else did the first bank do, for the Government or the country, at all to be compared, in the amount of benefit, to its influence on the currency and the exchanges?

It is as clear as demonstration, therefore, that the Government, in General Washington's time, did feel itself authorized by the Constitution, and bound in duty, to provide a safe currency of general credit for circulation and for exchange. It did provide such a currency. It is remarkable enough, so comparatively small was the mere object of keeping the public money, that no provision for that purpose was inserted in the charter; nor was there any law on the subject, so far as I remember, till the year 1800.

The bank went into operation, and its success was great and instantaneous; and during the whole period of its existence, there was no complaint of the state of the currency or the exchanges.

And now, sir, let me ask, what was it that gave this success to the new institution? Its capital was small, and Government had no participation in its direction; it was committed entirely to individual management and control.

Its notes, it is true, were made receivable in payments to Government: that was one advantage. It had a solid capital, and its paper was at all times convertible into gold and silver at the will and pleasure of the holder: that was another and a most important ground of its prosperity. But, sir, there was something more than all this. There was something which touched men's sentiments, as well as their understandings. There was a cause which carried the credit of the new-born bank, as on the wings of the wind, to every quarter and every extremity of the country. There was a charm, which created trust, and faith, and reliance, not only in the great marts of commerce, but in

every corner into which money, in any form, could penetrate. That cause was its nationality of character. It had the broad seal of the Union to its charter. It was the institution of the nation, established by that new Government which the people already loved; and it was known to be designed to revive and foster that commerce which had so long been prostrate and lifeless.

Mr. President, let it be borne in mind that I am not now arguing the constitutionality, or present expediency, of a Bank of the United States. My sentiments are already well known on that subject; and, if they were not, the subject is not now before us.

But I have adverted to the history of the first bank, and examined the grounds on which, and the purposes for which, it was established, in order to show the fact, that this Government, from the first, has acknowledged the important duty and obligation of providing for currency and exchange, as part of the necessary regulation of commerce. I do not mean, at present, to say that a bank is the only, or the indispensable, means by which this duty can and must be performed; although I certainly think it the best. Yet I will not set limits to the wisdom and sagacity of gentlemen, in the invention and adaptation of means. If they do not like a bank, let them try whatever they do like. If they know a better instrument or agent, let them use it. But I maintain that the performance of the duty, by some means, or some instrument, or some agent, is indispensable; and that so long as it shall be neglected, so long the commerce and business of the country must suffer.

The history of the late Bank of the United States manifests, as clearly as that of the first, that the Government, in creating it, was acting, avowedly, in execution of its duty, in regard to the currency. Fiscal aid, except so far as the furnishing of a currency was concerned, was hardly thought of. Its bills were made receivable for revenue, indeed; but that provision, as far as it went, was obviously a provision for currency. Currency for the revenue, however, was not the leading object. The leading object was currency for the country.

The condition of things, at that time, was very much like that which now exists. The revenue of the Government was entirely adequate to all its wants; but its operations were all obstructed by the derangement of the currency, and the people were as bad off as the Government. The banks, or most of them, had suspended payments. Their paper was depreciated in various degrees; the exchanges were all disordered, and the commerce of the country thrown into confusion. Government and people were all rich; but, with all their riches, they had no money. Both might apply to themselves what Mr. Addison, being a much readier writer than speaker, said of himself, when he observed, that although he could draw for a thousand pounds, he had not a guinea in his pocket.

Mr. Madison, at that time, was President of the United States. He had been one of the opposers of the first bank, on constitutional grounds, but he had yielded his own opinions to the general sentiment of the country, and to the consideration that the power had been established and exercised. He was not a man who carried his respect for himself, and his own opinions, so far as to overcome his respect for all other men's judgments. Wise men, sir, are sometimes wise enough to surrender their own opinions, or at least to see that there is a time when questions must be considered as settled. Mr. Madison was one of these. In his annual message in December, 1815, he says:

"The arrangements of the finances, with a view to the receipts and expenditures of a permanent peace establishment, will necessarily enter into the deliberations of Congress during the present session. It is true, that the improved condition of the public revenue will not only afford the means of maintaining the faith of the Government with its creditors inviolate, and of prosecuting successfully the measures of the most liberal policy, but will also justify an immediate alleviation of the burdens imposed by the necessities of the war. It is, however, essential to every modification of the finances, that the benefits of a uniform national currency should be restored to the community. The absence

of the precious metals will, it is believed, be a temporary evil; but, until they can again be rendered the general medium of exchange, it devolves on the wisdom of Congress to provide a substitute, which shall equally engage the confidence, and accommodate the wants, of the citizens throughout the Union. If the operation of the State banks can not produce this result, the probable operation of a national bank will merit consideration; and if neither of these expedients be deemed effectual, it may become necessary to ascertain the terms upon which the notes of the Government (no longer required as an instrument of credit) shall be issued, upon motives of general policy, as a common medium of circulation."

Here, sir, is the express recommendation to Congress to provide a "NATIONAL CURRENCY," a paper currency, a uniform currency, for the uses of the community, as a substitute for the precious metals, and as a medium of exchange. It devolves on Congress, says Mr. Madison, to provide such a substitute as shall engage the confidence and accommodate the wants of the citizens throughout the Union; and if the State banks can not produce this result, a national bank will merit consideration. Can language be more explicit? Currency, national currency, currency for exchange, currency which shall accommodate all the people, is the great and leading, and, I may add, the sole and single object of the recommendation.

Contrast now, sir, this language, and these sentiments, with those of the Message before us. Did Mr. Madison confine his recommendation to such measures of relief as might be useful to Government merely? Did he look exclusively to the Treasury? Did he content himself with suggesting a proper medium for the receipt of revenue, or a proper deposite for its safe-keeping? Far otherwise. His view was general, statesmanlike, and fitted to the exigency of the times. The existing evil was one which afflicted the whole country; and the remedy proposed by him was, as it should have been, commensurate with the whole evil. And, sir, what a shock it would have produced at that time, if Mr. Madison, seeing the prostrate state of commerce and business all around him, had recommended to Congress to do nothing in the world but to take care that the taxes were collected, and those in the employment of Government well paid.

Well, sir, what was done with this message? Why, sir, the House of Representatives resolved "that so much of the President's Message as related to a uniform national currency should be referred to a select committee." Such a committee was raised, and the honorable member from South Carolina was placed at its head, as he well deserved to be, from his standing in the House, and his well known opinions on this subject. The honorable member was thus at the head of a committee, appointed, not on the subject of a revenue currency, or a currency for Government, but a **UNIFORM NATIONAL CURRENCY**; and, to effect the great object of this appointment, he brought in a bill for the establishment of a Bank of the United States.

As had been the case formerly, so on this occasion, the Secretary of the Treasury made a report on the subject. And now hear, sir, what he says of the duty of Congress to provide a national currency, and of the objects which he proposes by the establishment of a national bank:

"The constitutional and legal foundation of the monetary system of the United States is thus distinctly seen; and the power of the Federal Government to institute and regulate it, whether the circulating medium consist of coin or of bills of credit, must, in its general policy, as well as in the terms of its investment, be deemed an exclusive power. It is true, that a system depending upon the agency of the precious metals will be affected by the various circumstances which diminish their quantity or deteriorate their quality. The coin of a State sometimes vanishes under the influence of political alarms, sometimes in consequence of the explosion of mercantile speculations, and sometimes by the drain of an unfavorable course of trade. But, whenever the emergency occurs that demands a change of system, it seems necessarily to follow that the authority which was alone competent to

establish the national coin, is alone competent to create a national substitute. It has happened, however, that the coin of the United States has ceased to be the circulating medium of exchange, and that no substitute has hitherto been provided by the national authority. During the last year, the principal banks established south and west of New England, resolved that they would no longer issue coin in payment of their notes, or of the drafts of their customers, for money received upon deposite. In this act the Government of the United States had no participation; and yet the immediate effect of the act was to supersede the only legal currency of the nation. By this act, although no State can constitutionally emit bills of credit, corporations erected by the several States have been enabled to circulate a paper medium, subject to many of the practical inconveniences of the prohibited bills of credit."

"Of the services rendered to the Government by some of the State banks, during the late war, and of the liberality by which some of them are actuated in their intercourse with the Treasury, justice requires an explicit acknowledgment. It is a fact, however, incontestably proved, that those institutions can not, at this time, be successfully employed to furnish a uniform national currency. The failure of one attempt to associate them, with that view, has already been stated. Another attempt, by their agency in circulating Treasury notes, to overcome the inequalities of the exchanges, has only been partially successful. And a plan recently proposed, with the design to curtail the issues of bank notes, to fix the public confidence in the administration of the affairs of the banks, and to give to each bank a legitimate share in the circulation, is not likely to receive the general sanction of the banks. The truth is, that the charter restrictions of some of the banks, the mutual relation and dependence of the banks of the same State, and even of the banks of the different States, and the duty which the directors of each bank conceive they owe to their immediate constituents, upon points of security or emolument, interpose an insuperable obstacle to any voluntary arrangement, upon national considerations alone, for the establishment of a national medium through the agency of the State banks."

"The establishment of a national bank is regarded as the best, and perhaps the only adequate resource to relieve the country and the Government from the present embarrassment. Authorized to issue notes which will be received in all payments to the United States, the circulation of its issues will be co-extensive with the Union; and there will exist a constant demand, bearing a just proportion to the annual amount of the duties and taxes to be collected, independent of the general circulation for commercial and social purposes. A national bank will, therefore, possess the means and the opportunity of supplying a circulating medium of equal use and value in every State, and in every district of every State.

"The power of the Government to supply and maintain a paper medium of exchange will not be questioned; but for the introduction of that medium there must be an adequate motive."

"Upon the whole, the state of the national currency, and other important considerations connected with the operations of the Treasury, render it a duty respectfully to propose—

"That a national bank be established."

This language, it must be admitted, is explicit enough, both in regard to the power and the duty; and the whole report bears very little resemblance, most certainly, to the official paper from the Treasury Department now before us.

When the bill was called up, the honorable member from South Carolina explained its objects in an able speech. He showed the absolute necessity of a national currency; the power of Congress over such currency, whether metallic or paper; and the propriety and expediency of establishing a bank, as the best means of exercising these powers and fulfilling these duties. I agreed then, and I agree now, to the general sentiments expressed in that speech, heartily and entirely. I would refer to it on this occasion, both as an able argument and a high authority; and beg to adopt it, as setting forth,

in a strong light, the sentiments which I am now endeavoring to enforce.

[Mr. CALHOUN here rose to make an explanation. He said that he never saw the reporter's note of his speech on that occasion, and, therefore, what he did say, may not have been what he would have said. There were points of omission in that speech which occupied a column and a half of the National Intelligencer. Mr. C. said, that he took care, then, as now, to fortify himself, and leave a road open to oppose, at any coming time, a national bank. He then said that he was opposed to a bank, but that he submitted to the necessity of the case. There was then a connection between the Government and the banks; and if the Government had a right to regulate the currency, there was no means of doing it but by a national bank. He had, both then, and since then, contended that Government had no right to have any connection with any banks. In his opinion, the United States Bank (which he then advocated, and assisted to establish) was not established according to the Constitution. Congress had no right to establish such a bank. He acted contrary to his own impressions of right. Many people may do things which they do not believe to be lawful, from necessity. He acted from necessity.]

Mr. WEBSTER, resuming his remarks, said, he thought the gentleman had said, formerly, that in consequence of the decision of the question, he felt thereforeforward, precluded from opposing the bank as being unconstitutional.

[Mr. CALHOUN again explained: He (Mr. C.) thought the connection between Government and banks was now broken, and that set him at liberty; so that now he could oppose what he had then, and since, earnestly advocated.]

It is not my desire, sir, to hold the gentleman to a report of his speech, which he may choose, even now, to disclaim. I have never heard of his disclaiming it before; and, even now, sir, I do not understand him as being desirous of retracting or denying any thing contained in the printed report of his speech, respecting the importance of a uniform national currency. That topic makes up the sum and substance of his whole speech. It was the topic of the occasion; it was the express purpose for which his committee had been raised, and for the accomplishment of which the whole proceeding was gone into. It was all currency, currency, currency; and whether the gentleman now thinks the law constitutional or unconstitutional, he can not deny that his own object, and the object of Congress, was to furnish a circulating medium for the country. And here again, so unimportant, relatively, was the mere custody of deposite of the public moneys in the bank, that the bill, as originally introduced, contained no provision for that object. A section was afterwards introduced, in Committee of the Whole, on my motion, providing for the deposite of the public moneys with the bank, unless the Secretary of the Treasury should, at any time, otherwise order and direct; a reservation of power to the Secretary, which, as I think, and always have thought, was greatly abused, by the removal of the deposites, in 1833.

By reference to the debates, sir, it will be found that other friends of the measure followed up the general ideas of the honorable gentleman from South Carolina, and supported the bank as a necessary agent or instrument for establishing a new national currency for the uses of commerce and exchange.

The operation of the joint resolution of April, 1816, aided, no doubt, in a proper degree, by the institution of the bank, and the currency which it furnished, accomplished the great end of the resumption of specie payments; and, for a long period, we had no further trouble with the currency.

And I now proceed to say, sir, that the late President of the United States has acknowledged this duty as often, and as fully and clearly, as any of his predecessors. His various admissions, or recognitions, of this obligation, are too recent and too fresh in every one's recollection, to require, or to justify, particular citation. All the evils we now feel, indeed, we have encountered in the search after a better currency. It has been in the avowed attempt to discharge the duty of Government, con-

nected with the circulation, that the late administration has led us to where we now are. The very first charge that the late President ever brought against the bank, was, that it had not maintained a sound and uniform currency. Most persons, probably, will think the charge quite unfounded; yet this was the charge. Its dereliction of duty, or its want of ability to perform what had been expected from it—its failure, in some way, to maintain a good currency, was the original professed cause of dissatisfaction. And when the bill for rechartering the bank was negatived, it was not on the ground that Government had nothing to do with the national currency, but that a better provision for it might be made than we had in the bank. The duty was not to be disclaimed, or thrown off, or neglected; new agents, only, were to be employed, that it might be better performed. The State banks would do better than the national bank had done; the President was confident of this, and therefore he rejected the national bank as an agent, and adopted the State banks. And what he so constantly promised us would happen, he as resolutely maintained, afterwards, had happened. Down to his last message, down to the last hour of his administration, he insisted upon it that the State banks had fulfilled all his expectations, and all their own duties; and had enabled the Government to accomplish, in the very best manner, the great and important objects of currency and exchange. We have the same head of the Treasury, sir, who has repeated and echoed all these statements, whether of prophecy or fulfilment, in successive reports, some of them not less tersely and intelligibly written than that now before us; and we have heads of other departments who concurred, I presume, from time to time, in the original statements, and in the faithful echoes of them, from the Treasury. All these functionaries have been laboring with the utmost zeal, as they professed, to perform their constitutional obligation of furnishing the country with a good currency, with a better currency; with the best currency; and they have dragged Congress, dragged the country, and dragged themselves, into difficulty, perplexity, and distress, in this long and hot pursuit. And now, behold, they draw up all at once, and declare that the object of all this toil and struggle is one with which they have nothing at all to do!

But, as the last Message of the late President was loud and warm in its praises of the State banks, for the good services which they rendered to currency and exchange, so, no doubt would the first Message of the present President have commended, with equal earnestness, the success with which Government had been able, by means of the State banks, to discharge this important part of its duties, if the events of May last had not left that subject no longer a topic of felicitation. By the suspension of specie payments, all was changed. The duty of Government was changed, and the Constitution was changed also. Government was now to give up, and abandon for ever, that very thing which had been the professed object of its most assiduous care, and most earnest pursuit, for eight long and arduous years!

Mr. President, when I heard of the suspension of the banks, I was by the side of the Ohio, on a journey, in the course of which I had occasion, frequently, to express my opinion on this new state of things; and those who may have heard me, or noticed my remarks, will bear witness that I constantly expressed the opinion that a new era had commenced; that a question of principle, and a question of the highest importance, had arisen, or would immediately arise; that hereafter the dispute would not be so much about means as ends; that the extent of the constitutional obligation of the Government would be controverted; in short, that the question whether it was the duty of Congress to concern itself with the national currency, must, inevitably, become the leading topic of the times. So I thought whenever I had the pleasure of addressing my fellow-citizens, and so I feel and think now. I said often on these occasions, and I say now, that it is a question which the people, by the regular exercise of their elective franchise, must decide. The subject is one of so much permanent importance, and public men have become so committed, on the one side or the other,

that the decision must, as I think, be made by the country. We see an entirely new state of things. We behold new and untried principles of administration advanced and adopted. We witness an avowed and bold rejection of the policy hitherto always prevailing. The Government has come, not to a pause, but to a revulsion. It not only stops, but it starts back; it abandons the course which it has been pursuing for near fifty years, and it reproaches itself with having been acting, all that time, beyond the limits of its constitutional power.

It was my second proposition, sir, that the Message, the bill, and the amendment, taken together, deny, in substance, that this Government has any power or duty connected with the currency, or the exchanges, beyond the mere regulation of the coins.

And, sir, is this not true? We are to judge of the Message by what it omits, as well as by what it proposes. Congress is called together in a great commercial crisis. The whole business of the country is arrested by a sudden disorder of the currency. And what is proposed? Any thing to restore this currency? Any thing, with a direct view of producing the resumption of payment by the banks? Is a single measure offered, or suggested, the main purpose of which is general relief to the country? Not one. No, sir, not one. The administration confines its measures to the Government itself. It proposes a loan, by the means of Treasury notes, to make good the deficiency in the revenue; and it proposes secure vaults and strong boxes, for the safe-keeping of the public moneys; and here its paternal care ends. Does the Message propose to grapple, in any way, with the main evil of the times? Seeing that that evil is one affecting the currency, does the Message, like that of Mr. Madison, in 1815, address itself directly to that point, and recommend measures of adequate relief? No such thing. It abstains from all general relief. It looks out for the interest of the Government, as a Government; and it looks no further. Sir, let me turn to the message itself; to show that all its recommendations, and, indeed, all the objects in calling Congress together, are confined to the narrow and exclusive purpose of relieving the wants of Government.

The President says that the regulations established by Congress for the deposit and safe-keeping of the public moneys having become inoperative by the suspension of payment by the banks; and apprehending that the same cause would so diminish the revenue that the receipts into the Treasury would not be sufficient to defray the expenses of Government; and as questions were also expected to arise respecting the October instalment of the deposit to the States, and doubting whether Government would be able to pay its creditors in specie, or its equivalent, according to law, he felt it be his duty to call Congress together. These are the reasons for calling Congress. They are all the reasons; and they all have exclusive regard to the Government itself.

In the next place, let us see what measures the Message recommends to Congress. In its own language, the objects demanding its attention are—

“To regulate, by law, the safe-keeping, transfer, and disbursement of the public moneys; to designate the funds to be received and paid by the Government; to enable the Treasury to meet promptly every demand upon it; to prescribe the terms of indulgence, and the mode of settlement to be adopted, as well in collecting from individuals the revenue that has accrued, as in withdrawing it from former depositories.”

These are all the objects recommended particularly to the care of Congress; and the enumeration of them is followed by a general suggestion, that Congress will adopt such further measures as may promote the prosperity of the country. This whole enumeration, it is obvious, is confined to the wants and convenience of the Government itself.

And now, sir, let us see on what grounds it is that the Message refrains from recommending measures of general relief. The President says:

“It was not designed by the Constitution that the Government should assume the management of domestic or foreign exchange. It is, indeed, authorized to regulate, by law, the commerce between

the States, and to provide a general standard of value or medium of exchange in gold and silver; but it is not its province to aid individuals in the transfer of their funds, otherwise than through the facilities afforded by the Post Office Department. As justly might it be called on to provide for the transportation of their merchandise.”

And again:

“If, therefore, I refrain from suggesting to Congress any specific plan for regulating the exchanges of the country, relieving mercantile embarrassments, or interfering with the ordinary operations of foreign or domestic commerce, it is from a conviction that such measures are not within the constitutional province of the General Government, and that their adoption would not promote the real and permanent welfare of those they might be designed to aid.”

The President, then, sir, declines to recommend any measure for the relief of commerce, for the restoration of the currency, or for the benefit of exchanges, on the avowed ground, that, in his opinion, such measures are not within the constitutional power of Congress. He is distinct and explicit, and so far entitled to credit. He denies, broadly and flatly, that there is any authority in this Government to regulate the currency and the exchanges, beyond the care of the coin. The question, then, is fairly stated. It can not be misunderstood; and we are now to see how Congress, and, what is much more important, how the country will settle it.

Mr. President, if, in May last, when specie payments were suspended, the president of one of the banks had called his council of directors together, informed them that their affairs were threatened with danger, that they could not collect their debts in specie, and might not be able to pay their creditors in specie, and recommended such measures as he thought their interest required; his policy, in all this, would have been no more exclusively confined to the interests of his corporation than the policy of the Message is confined to the interests of this great corporation of Government. Both in practice, therefore, and on principle, in reality, and avowedly, the administration abandons the currency to its fate. It surrenders all care over it, declines all concern about it, and denies that it has any duty connected with it.

Sir, the question then comes to be this: Shall one of the great powers of the Constitution, a power essential to it, on any just plan or theory of Government, a power which has been exercised from the beginning, a power absolutely necessary and indispensable to the proper regulation of the commerce of the country, be now surrendered and abandoned for ever? To this point we have come, sir, after pursuing the “experiment” of the late administration for five years. And from this point, I am persuaded, the country will move, and move strongly, in one direction or another. We shall either go over to the gentleman from Missouri, and suffer him to embrace us in his gold and silver arms, and hug us to his hard-money breast; or we shall return to the long-tried, well-approved, and constitutional practice of the Government.

As to the employment of the State banks for the purpose of maintaining the currency, and carrying on the operations of exchange, I certainly never had any confidence in that system, and have none now.

I think the State banks can never furnish a medium for circulation, which shall have universal credit, and be of equal value every where.

I think they have no powers, or faculties, which can enable them to restrain excessive issues of paper.

I think their respective spheres of action are so limited, and their currencies so local, that they can never accomplish what is desired in relation to exchanges.

Still, I prefer the employment of State banks to the project before us; because it is less of a project; because it is less dangerous; and, chiefly, because it does not surrender, effectually, and in terms, a great power of the Constitution.

In every respect, this project is objectionable. It is but another “experiment;” and those who recommend it so zealously, were the authors of the

last, and were equally full of confidence and assurance in regard to that.

Who invite us to try this experiment? What voices do we hear raised in its recommendation? Are they not the well-known voices which we heard so often when the late "experiment" was begun? We know of but one accession. The voice of the honorable member from South Carolina is heard, it is true, now mingling with the general strain; and that is all. Where, then, is the ground for confidence in this experiment, more than there was for it in the last?

This scheme, too, is against all our usages and all our habits. It locks up the revenue, under bolts and bars, from the time of collection to the time of disbursement. Our practice has been otherwise, and it has been a useful practice. In 1833, the Secretary of the Treasury admonished the deposit banks, since they had obtained the custody of the public funds, to accommodate the public, to loan freely, especially to importing merchants. And now, a system is proposed to us, according to which, any use of the public funds, by way of loan or accommodation to the public, is made a criminal offence, and to be prosecuted by indictment! Admirable, admirable consistency!

But the great objection to the measure, that which so much diminishes the importance of all other objections, is its abandonment of the duty of Government. The character of this project is, severance of the Government from the people. This, like the mark of Cain, is branded on its forehead. Government separates itself, not from the banks merely, but from the community. It withdraws its care, it denies its protection, it renounces its own high duties. I am against the project, therefore, in principle and in detail; I am for no new experiments; but I am for a sound currency for the country. And I mean by this, a convertible currency, so far as it consists of paper. I differ, altogether, in this respect from the gentleman from South Carolina. Mere Government paper, not payable otherwise than by being received for taxes, has no pretence to be called a currency. After all that can be said about it, such paper is mere paper money. It is nothing but bills of credit. It always has been, and always will be, depreciated. Sir, we want specie, and we want paper of universal credit, and which is convertible into specie at the will of the holder. That system of currency, the experience of the world, and our own experience, have both fully approved.

I maintain, sir, that the People of this country are entitled, at the hand of this Government, to a sound, safe, and uniform currency. If they agree with me, they will themselves say so. They will say, "it is our right; we have enjoyed it forty years; it is practicable, it is necessary to our prosperity, it is the duty of Government to furnish it; we ought to have it, we can have it, and we will have it."

The language of the Administration, on the other hand, is, "Good masters, you are mistaken. You have no such right. You are entitled to no such thing from us. The Constitution has been misunderstood. We have suddenly found out its true meaning. A new light has flashed upon us. It is no business of ours to furnish a national currency. You can not have it, and you will not get it."

Mr. President, I have thus stated what I think to be the real question now before the country. I trust myself, cheerfully, to the result. I am willing to abide the test of time, and the ultimate judgment of the People; for it is a sentiment deeply infused into me, it is a conviction which pervades every faculty I possess, that there can be no settled and permanent prosperity to the commerce and business of the country, until the constitutional duty of Government in regard to the currency be honestly and faithfully fulfilled.

## SPEECH OF MR. PICKENS, OF SOUTH CAROLINA,

In the House of Representatives, October 10, 1837—  
On the bill imposing additional duties on public officers, as depositories of the public money, and

requiring the payment of the revenue in specie, or evidences of public debt.

MR. PICKENS said:

Notwithstanding, Mr. Chairman, I labor under painful indisposition, yet I feel bound to present my views upon the interesting and absorbing questions connected with the bill on your table: but I can assure this committee that I will economize its time as much as possible.

Sir, we have heard much declamation upon the distresses and embarrassments that pervade large classes of our community, and I confess I have heard these complaints with the deepest and most profound emotions of sympathy. I trust I have felt as an American ought to feel on such an occasion. A stranger, unacquainted with our peculiar form of government, might be led to believe, on hearing the cries for relief that have come up to us from all quarters of this land, that we had nothing to do but to speak and to proclaim peace, prosperity, and contentment, to an excited and divided community; but, sir, I am induced to believe that that government is the freest which is the farthest removed from those individual pursuits, and those individual occupations, that belong either to sections or to classes; and that the less we interfere with those concerns, the more contented and the more prosperous will the people be.

I have also been induced to believe that it is one of the peculiar features of our federal constitution, that this government was formed, principally, to conduct our foreign intercourse with the nations of the earth, and to prepare us to defend ourselves from foreign invasion or to resist foreign aggression; and that local interests, and local pursuits, whether connected with commerce, manufactures, or agriculture, were almost entirely left to those territorial divisions over which separate and independent governments hold their sway. I protest against this modern doctrine, which has been introduced so extensively into this country within the last fifteen years, and which teaches classes and sections of this community to look up to the bounties and favors of this Government with more eagerness and anxiety than do the farmers of our land, under a burning noonday sun, look for the coming shower to bless and refresh their parched and withering fields of grain. The consequence of all this, is to introduce that servile dependence upon this Government which is utterly at war with the nature of our institutions, and the integrity of man. Sir, I feel for the distresses of my country, and I trust I shall ever feel as I ought; but, there are constitutional limitations to this Government that forbid the idea of carrying out those sympathies which, though they ever belong, perhaps, to generous natures, yet, if habitually put into practice, produce as much injustice and pressure, and, not unfrequently, more than they ever avoid. Any other doctrine would substitute our poor and frail judgments in place of that interest and instinct which belong to every individual in society, and prompt him to pursue whatever is best and most suitable for his happiness and prosperity. But let the Government attempt, with one hand, to dispense favor and bounty, and the inevitable consequence is, that the other will be stretched out but to be felt in its pressure and the burthen it imposes. Such reckless and miserable policy as this, would convert the Government into one great insurance office for all those who chose to engage in the mad and giddy career of speculation and extravagance, instead of waiting the slow but certain rewards of honest industry. Government has no magic power by which to create wealth or to bestow its bounty upon one class or one section, unless at the expense of others.

Mr. Chairman, I am not disposed to trespass upon the attention of this committee by discussing minutely those abstruse questions connected with currency and trade. I too well understand the sagacity of this committee, and its profound common sense to detain them long upon those subjects. I know well, sir, that for a man to discourse here upon currency, trade, and commerce, at least if he expects to command the attention of this body, he must have a high character for experience, and be blessed also with a good old age. Yes, if he expects to entertain this house upon those abstruse questions he must first put on the "powdered wig" and "fair-top-boots," and place himself on the "tripod," and talk about trade and commerce beyond the waters, and in another hemisphere, thirty or forty years ago. Such a man would be listened to as a sage, particularly if he stepped forth as the

advocate of some peculiar theory, or if he ascribed the prevailing embarrassments to some foreign or remote cause, or declared them to be owing to causes beyond our control; to something that operated deeply upon the community, which they could neither foresee nor avert! If one were to proclaim the doctrine that our suffering and ruin have sprung from over-speculation, over-trading, or extravagance, or a combination of them all; or if he were to say that many a man had been brought to bankruptcy and poverty by dashing forth in a coach and four, with splendid damask curtains, Brussels carpets, and broad mirrors, upon a capital, in reality, of but three hundred dollars, with a credit of *thirty thousand dollars*, he would advance such sentiments but to call down upon his head the denunciations of the wise in this enlightened age, for his folly and his madness!! But, while I am not disposed, minutely, to touch these intricate points, I cannot altogether overlook them without a passing notice.

The immediate causes, sir, of our distress arise from that peculiar system of credit and currency which has, for the last five years, been enlarged so extensively both in England and in this country. In England, during the year 1836 alone, no less than two hundred joint stock banks were created, the influence of which was deeply felt, first in that country and then in this. Vast facilities were extended to our capitalists, while, also, they received an extension of the credit system here, connected with a peculiar juncture in our affairs during the same period. The Bank of the United States was about to wind up, or was supposed to be about to wind up, its concerns. For twenty years had that institution held a control over the currency and exchanges of the country, and hundreds, I might almost say thousands, of other institutions were created in order to supply the demand in the circulating medium which, it was supposed, would ensue upon the decease of that bank. We all know, too, (I refer to these things as matters of history) that a war at that time was carried on against that institution, and that, for the purpose of creating counter interests in society, the deposits of this Government were placed in local institutions, and that these latter, after being made the fiscal agents of this Government, with an immense surplus, were expressly encouraged, nay more, enjoined, to enlarge their circulation. This, connected with the extended credit system in Great Britain, and the long peace which had engendered confidence, producing large investments of foreign capital in our stocks, had the effect of expanding our local currency and credits, and produced a gigantic system of speculation and enterprise never witnessed in any age or country before. I do not allude to the increased amount of mere issues alone; but the bills, checks, and other substitutes for money which these banks brought into circulation. This produced a bloated system of credit, which, with the apparent prosperity of the times, seemed to expand and place unbounded means within the grasp of almost every individual member of society. He seemed to breathe a new atmosphere, and gaze alone upon the splendid fortune that glittered before his excited imagination.

This system has one remarkably peculiar feature. It grows up, is fostered and nourished under free institutions. But there is another remarkable principle in it, that, after it has spread itself into all the ramifications of society, then, sir, those who depend upon it, and are deeply identified with it, (although at first springing up under free institutions,) soon become disposed to lean, for aid and support, upon any government, no matter how despotic, rather than run the risk of a shock by reform or revolution.

The slightest irregular movement of the Government must necessarily produce an electric shock in this delicate and vital credit system, which would be felt and extend from the centre to the circumference of all society. It can only live under a free Government, as far removed from it as possible; and, if it be once brought into contact with a lawless Government, it must either fall altogether, or lean upon that Government for protection and support, and become intimately identified with it. Now, I am about to refer to something which belongs to the history of this question, and which has happened within the last four or five years. To my mind it is an example not to be disregarded, but presents a lesson of profound wisdom, which no one can reflect upon without profit. The war made upon the Bank of the United States, and the seizure of the public deposits, a seizure without

law, caused local institutions to spring up like mushrooms under the fostering care of an all powerful hand here, dispensing distinction and patronage and wealth, until all society became, as it were, dependent upon his will and movements. Let no man be induced to create the same state of things again, when a bold and daring genius may be tempted to run the same career, and bring the property and honest industry of the country under the will and mercy of him who may give life and soul to this Federal Government.

This conflict produced a tremendous shock, and even the banking system itself, the local institutions, created for the express purpose of sustaining the warfare against that overshadowing central institution, have been paralyzed, for a time at least, under its desolating effects. And here I will say, that though I ever believed in the unconstitutionality of that institution, yet those who made war upon it never could have succeeded without raising up powerful local antagonist interests. The effect of that war was felt from one end of the country to the other, and the consequence was that sagacious capitalists in stocks, ready for any result, began to look elsewhere for safe investments; and hence it was that we find such extensive investments in real estate, to the amount of forty millions of dollars in two years alone, in the public lands, besides upwards of one hundred millions in other real estate speculations, such as town and village property, &c. This conflict against credit, deeply affecting currency, was anticipated by capitalists, who preferred risking the loss of something in the high prices of real estate, to a probable loss of all. It was at least investing in something beyond total destruction from an arbitrary government.

Sir, when this change began, and the capitalists began to contract their credit, the banking institutions of the country also felt it incumbent upon them to contract too. And what was the result? Why, the result was exactly what we now experience.

Approaching this juncture, viz: in 1836, the deposit act was passed, to be carried into effect in 1837. I was a supporter of that law, sir, but I understood it at that time, as I now understand it to be, in the nature of a bill for general account and settlement with those institutions which had, up to that time, leaned upon, and been sustained by, the credit and fiscal action of this Government. They were, therefore, compelled by that distribution, or deposit act, and particularly in the peculiar manner in which it was executed, to come to a general account. Their paper was necessarily compelled to be "convertible" paper, or they themselves compelled to suspend specie payments. This circumstance, connected with our immense foreign debt, and the demand thereby produced for specie, or its representative abroad, brought about this result; that is, brought us to the present condition of the country, under a general suspension of specie payments by the banks.

But, Mr. Chairman, I will say here, that the great and radical difficulty, and, in fact, the primary cause, that produced the present state of things, arises from the peculiar currency which, in modern times, has so much extended itself in Great Britain and in this country, and its peculiar capacity for expansion and contraction, in the hands and under the control of banks and bankers, and particularly from the fact that there, as here, the system has depended upon and been so deeply identified with Government and its financial action for support and extensive credit. This is the real and radical cause which has produced this great shock in our modern banking and credit system.

Sir, under this suspension of specie payments, the Government is found in a peculiar situation. Under the law of 1816 it can receive, in payment of its dues, nothing but gold and silver, or convertible paper, or notes of the then Bank of the United States; the latter clause became, however, practically repealed, when these institutions suspended specie payments, thereby making their paper inconvertible. Then, there was, in fact, under the provisions of the law, an immediate separation of the Government from the banking institutions of the country. Under the law, the Government could not take inconvertible paper, and convertible paper did not exist from one end of the country to the other, with the honorable exception, perhaps, of one or two banks in the State of Georgia, and a single small institution in the State of Ohio. And now, sir, the great question presented to this committee is, not

whether you will separate the banks from the Government, because that is already done, but the great question is, whether and how we shall reunite the Government and the banks. Under this view of the case, we have three alternatives presented to us:

The first is, to renounce ourselves, or rather the Government, with the State institutions, in the manner in which they have been connected for the last three or four years.

The second is, the proposition creating a bank of the United States, a national institution to conduct the fiscal operations of this Government, and regulate the exchanges and currency of the country.

The third is, the proposition on your table, sir, to separate the Government and its agents from all banks whatever.

Now, sir, as to the first proposition: if we do not separate the Government from the banks in this peculiar juncture of our affairs, we never can separate them. The system will be fixed upon us for ever, and we compelled to run the same round we have done for the last three or four years in periodical terms, and then be in the same, or a worse condition, distracted and embarrassed from one end of the country to the other.

Now, Mr. Chairman, I have heard a great deal as to the comparison between the State bank system, as it is called, and the peculiar policy of separating the Government and its agents from all banks whatever. I have heard, too, much declamation, and no little denunciation of that system; that it is the most outrageous proposition ever presented to the American people; that it is, in fact, a treasury bank. Yes, sir, I have heard much declamation upon that subject, both here and elsewhere, (better suited to newspaper politics than grave legislation,) but I confess to you that that declamation only reminds me very strongly of the description of a certain grandiloquent class of poets which a profound and polished ancient critic describes as swelling—"Inceptis gravibus plerumque et magna professis, Purpureus, late qui splendeat, unus et alter Assuitur pannus."

It is not pretended that this system is perfect, because you cannot present any system to the people that is so. All questions upon which a practical legislator is called to act, involve more or less a comparison of evils, and we must not adopt any measure as perfect, but as embracing the lesser evil. We must go on to perfect details after the establishment of great and vital principles. It is neither pretended, sir, that this bill involves no patronage: it certainly does to a degree. But the question is, whether this system, or that of employing the local banks as fiscal agents of the Government, contains or involves the most patronage? Now, upon that point, permit me here to say that I feel myself committed, from a deep and an anxious reflection upon the question heretofore. The question is between the power and influence of an individual, and the power and influence of an incorporated bank. To tell me that a bank which chooses to go into the politics of the country, with its power to extend discounts and accommodations to its friends, and refuse them to its enemies, has no more influence than an individual, is to tell me what is contradicted by the daily experience of every man; even if that individual have millions of the public money in his possession for safe-keeping. Sir, the one system winds and spreads itself into all the secret and business recesses of society. Hundreds and thousands of honorable and high-minded men have been brought to degradation and sycophancy by this tremendous and almost invisible power. I have seen them around their domestic fire-sides, with every thing apparently to bless and gladden the heart of man, full of sadness and gloom—while even those who were the confiding and devoted partners of their joys and their sorrows, were in doubt and ignorance as to the causes of their melancholy and dejection.

Sir, this system is as hidden as the air we breathe, and penetrates unseen, but, alas, not unfelt, into the most retired scenes of society. No man can tell upon what power he is depending when he looks for support, aid, and assistance from this system. No man can tell what the situation of his neighbor may be—what his obligations—his alliances and contracts, that swerve him from the path of independence and rectitude. Then how can you say that such a system as this, allied to, and dependant upon Government, has less patronage than that which makes an individual responsible for whatever public funds he may have in his custody, without the power of loaning, without

the power of discounting, without the power of accommodating a friend, or refusing an enemy, unless he chooses openly to incur the odium and penalty of crime and misdemeanor? It does seem to me that the question admits of no argument so far as the question of patronage is concerned.

But I have said, sir, that I felt myself somewhat committed on this subject. In 1835, a friend of mine from Virginia, (Mr. Gordon,) now not a member of this House, (and I will here take occasion to say of him, that he is a gentleman who would have done honor to Virginia in her proudest days of glory and fame,) presented the very identical proposition to this House, which is embraced in the bill on your table. For that proposition, sir, I then voted. I acted from reflection, and from a conscientious conviction of the effects of that measure to bring about honesty in the Government, and secure the independence of the people. True, I was then but a very young man, and had but for a few weeks taken my seat in this House; yet, sir, I had made up my opinion from observation and reflection. And although young, yet, to use the language applied to another, I was old enough—

*"Acta parentum jam legere, et quæ sit poterit cognoscere virtus"*

Sir, I had formed my judgment then, and I have not yielded it since. On the contrary, the experience between then and now has only tended to confirm my conviction.

I desire the clerk to read the proposition, and the vote upon it.

"The question recurred on the motion made by Mr. Gordon, to amend the said bill, to strike out all thereof after the enacting words, and insert:

"That, from and after the — day of — in the year —, the collectors of the public revenue, at places where the sums collected shall not exceed the sum of — dollars per annum, shall be the agents of the Treasurer to keep and disburse the same, and be subject to such rules and regulations, and give such bond and security as he shall prescribe for the faithful execution of their office; and shall receive, in addition to the compensation now allowed by law — per centum on the sums disbursed; so that it does not exceed the sum of — dollars per annum."

"Sec. 2. And be it further enacted, That, at all places where the amount of public revenue collected shall exceed the sum of — dollars per annum, there shall be appointed by the President, by and with the consent of the Senate, receivers of the public revenue to be agents of the Treasurer, who shall give such bond and security to keep and disburse the public revenue, and be subject to such rules and regulations as the Treasurer shall prescribe, and shall receive for their services — per centum per annum on the sums disbursed: provided it does not exceed the sum of — dollars per annum."

"Sec. 3. And be it further enacted, That, from and after the — day of —, the whole revenue of the United States, derived from customs of lands or other sources, shall be paid in the current coins of the United States."

This received 33 votes.

Mr. Chairman, it was not my desire, nor have I caused the vote upon that proposition to be read, to show the consistency or inconsistency of any honorable member of this body. My sole and entire object was to prove that the present bill was no new proposition, and that, as far as I am concerned, it is the very identical proposition upon which I then voted coolly and deliberately. I have no desire, sir, to show that there has been any contradiction on the part of any gentleman on this floor, or that there has been any change in their opinions. It is with neither of those views that I had the proposition read. I will now quote a paragraph from the speech of the mover of the proposition made at the time, as illustrating the views under which we acted, and which too truly portrays what has really happened since, and what I fear we will again see, if the system be continued. Mr. Gordon said:

"There is another consideration which has induced me to offer this amendment. We may all very plainly see that the contest for the Executive office is the rock on which the permanency of this republic is likely to be wrecked. And the vehemence of this contest will ever be in proportion to the Executive patronage. But for this the office would have no allurements but for virtuous ambition; but with this concomitant, it exerts an in-

fluence which may one day prove fatal to the federal part of our system. If we do not separate the influence of the Executive from the interest of banking incorporations, we shall have another controversy on the subject of banks. The political will be united with the money power; the contest must come; it will come. You will witness a struggle in this Capitol between State banks and federal banks; and the combatants for the President's chair will be found contending in different ranks of interest and influence, whilst they mar the peace of the country, and shake the pillars of the constitution. Separate them, I beseech you, representatives of the American people, if you wish to put down this fearful contest for the Presidential chair—I had almost said Presidential throne. Separate, I entreat you, banking and politics. Let the banks facilitate the exchanges of commerce, and further the interest of trade; but let them, I pray you, have nothing to do with the Government."

"The predictions of my friend have been fulfilled to the letter. What have we seen? You brought into existence a system of State banks, connected from one end of this confederacy to the other, receiving, disbursing, and acting upon those depositories, organized and controlled by, and responsible to, one man, and then brought into overwhelming conflict, as I believe, with the freedom of elections. Sir, I speak plainly. I believed then, and I now believe, that this was the true source of power for the last three years. Gentlemen may speak as they please. They may deny, and say they have never seen or felt it; but who is it that knows any thing of the operations of banks, who is it at all acquainted with their peculiar influence, who is not irresistibly impressed with their tremendous power? Sir, I believe they did more than any thing else to elect the present President of the United States; and am I now to be called upon, and urged to re-organize such a system, and abandon the position I then assumed? The experience of the last three years strengthens my position. It may be denied; but I conscientiously believe, that these institutions have controlled, more or less, not only the destinies of this Government, but the destinies of the people of this country during that period. Yes, we all know that at the last session of Congress enough was developed upon this floor to demonstrate that there was an organized system, acting through one man, giving energy to the whole, and for one and the same purpose. Yes, sir, we have seen this cordon of leagued banks, with their various interests, raising their banner, from one end of this Union to the other, upon which was inscribed, the infamous motto, "To the victors belong the spoils;" and calling upon their mercenary bands to gather in to the plunder of sacked cities and subjugated provinces.

Again, Mr. Chairman, am I now, at this time, to change my course because others have come to me? No, sir. I maintain the very grounds I then maintained, and I ever will maintain them, till my judgment and my conviction tell me they are wrong.

I cannot but believe that the signal failure of these institutions as fiscal agents for this Government—I cannot but believe too, sir, that the experience of the last three years, must have convinced every one of their inefficacy, and the inexpediency and folly of their being selected again as the depositories of the Government, except with one view. And this is the reason why some gentlemen now acquiesce in their re-organization; that is, that they well know that this operation, and their re-organization, will bring us again into a state of anarchy and confusion, and force the country into the adoption of a bank of the United States. They know well, sir, that it tends to that, and they know that, if these State banks are again selected as public depositories, they will be but the stepping-stone to the establishment of a bank of the United States. This, sir, is the real, the true issue. It is an issue between making the fiscal agents of the Government separate and independent from all banks, and the establishment of a bank of the United States, which inevitably must be adopted eventually, and that not at a very remote period, if you re-adopt now the State bank system as the fiscal agency of the Government.

As to the constitutional argument, Mr. Chairman, in reference to the establishment of a national bank, I will not trespass upon the attention of the house to discuss it at length at this late period of the session. I too well know, sir, that a reference to the strict letter of the federal constitution, is too apt to excite the laughter and mirth of a majority

on this floor; and the gentleman from Pennsylvania, (Mr. Biddle,) the other day, with truth, alluded to an observation of a late distinguished citizen from Virginia, (John Randolph,) that "the time was not far off when a man would be called to order on the floor of Congress, for speaking of the constitution of the United States." I am not, therefore, disposed to press that argument, but still I take occasion here to say, that the framers of the constitution never intended to confer such a power. What changes might have taken place, could they have foreseen what has since taken place, is a question not for me to decide. I lay down this position, from the history of the federal convention, that the framers of that instrument never intended to confer this power. And why? Because the proposal was distinctly made, first to create corporations generally, and then to incorporate where the general good required. These propositions were referred to a committee, and that committee never reported. Afterwards, a proposition was made to confer the power to make canals, and a motion to amend it by conferring the power to create corporations, was made, and it was expressly rejected. One argument used in debate, was, that if this power were conferred, the Government would incorporate a bank, and that, therefore, the large cities would then be opposed to the adoption of the constitution. As far, then, as history is concerned, it is clear the framers of the constitution never intended to confer that power.

I know, sir, there is an argument upon this point which appears very specious. It is this; that, in looking into that instrument, we cannot look *de-hor* the preamble and the specific provisions, for its sound construction, but are bound to confine ourselves to the instrument itself. Sir, if this were a court of justice, I would yield to the general soundness of that rule; but we are a political tribunal, not sitting in judgment upon the law already made, but to make the law itself according to the instrument under which we hold authority. I know that, in a judicial tribunal; in a case arising between *meum* and *tuum*, where vested rights are concerned, a judge can only look to the preamble and the act; he cannot look beyond the law itself. This is a sound and wise rule as applied to a judicial tribunal, but will not hold in its application to a political tribunal, where we are bound to look at the circumstances under which the constitution was formed, and we are to decide on the powers contained in that instrument by the circumstances under which it was itself adopted. Here we have no *case* arising under the law—no vested interests. That which is a wise rule when applied to a judicial tribunal has no application to a political tribunal. The creation of a corporation is the exercise of a substantive independent power, and to attach it by construction as a vagrant power to this or to that clause in the constitution, is establishing a loose generality of reasoning which must end in the total overthrow of that noble instrument. I am not unaware of the arguments that, in fact, the constitution of the United States intended to confer the power in this Government over the currency of the country, and that the State banks have been created since the formation of that instrument, which have substantially created a new currency, and thereby usurped that power from the General Government. It is a *questio verborum* whether the States have not committed a fraud upon that clause in the constitution which forbids them "to emit bills of credit directly or indirectly." They have created local institutions which, to a great extent, have set afloat a new currency that the framers of the constitution never contemplated, and now it is contended that it is constitutional to counteract and control this currency by the creation of a corporation under the style and title of a bank of the United States. Now this argument proves too much, if it proves any thing; because it is clear that if this evil has arisen since the formation of the constitution, the framers of that instrument never could have intended to counteract it. The evil is admitted to be a new one, and has arisen since the formation of that instrument, and they never could have intended to confer a power to counteract that which they never understood or knew would exist.

Sir, I say the argument proves too much—but I am not disposed to press this matter. I will only say that, as far as experience goes, (and it may seem strange to some gentlemen, but I am disposed to lay down and maintain the proposition strange as it may appear to some,) that the bank of 1816 never did restore the currency of the country, and could

not; that it was not the bank which restored the deranged currency at that time, but it was the power and credit of this Government, under the constitution, by enforcing the collection of its dues in specie. If this power had been simply enforced, it would have compelled an unsound currency to be withdrawn, or to fall to an ascertained value. The United States Bank was the agent to carry on the fiscal operations of the Government, and what gave it its power was the credit given to it by this Government, declaring that its bills should be received as gold and silver. It was the credit of this Government endorsed upon its bills, without reference to their convertibility at all, but simply and absolutely receiving them as gold and silver. The Government being the great and universal money dealer, had practically surrendered up its power to coin money, and to receive nothing else into the hands of a corporation, and made its notes the same as coined money, so far as the Government demands were concerned. But, even then, in 1817, '18, and '19, that bank was brought to the brink of insolvency, and all the other banks were made to feel its power, while many fell prostrate before it. And what alone sustained that bank then? The power of this Government declaring that its bills should be received in payment of its dues as gold and silver. While other banks had to sustain themselves upon their capacity to convert their bills into coined money, this bank sustained itself by the Government converting its credit to the use and benefit of the bank, and that credit serving as a specie basis. The great confusion that has occurred on this subject arises from the fact, that many have confounded the power and credit of the Government with that of the bank.

The power to "coin money and regulate the value thereof," and the prohibition of this power to the States, and also the prohibition that prevents any thing but gold and silver being made a legal tender, is all the power conferred by the constitution over the currency. Whether it be defective or not, it is all the power given. But if it be rigidly adhered to without temporising, it must, of necessity, create a general standard by which the local or paper currency can be compared. It is immaterial what a bank bill purports to be upon its face; if it have an ascertained value, by comparison with specie, it is all that can be required. And the Government, collecting its dues in this standard, and habitually disbursing in its equivalent, would create centres at different points, around which the local currency would revolve and receive a fixed and known value.

Sir, to all intents and purposes, this would be a measure of currency. I am aware that it is not as exact a measure as weights and measures are applied to other things, but it is the best ever invented by man, and comes nearer to it than any other standard yet created by Government, or which, I believe, can be created. As to exchanges, this is not a subject within the legitimate object of this Government, except as it may be incidentally effected. They must be left, as they are in other countries, to be regulated by the interests of the commercial community, and conducted by banks or bankers, who have acquired credit by long economy and prudence, based upon real capital and resting upon the productions of different sections. Sir, the difficulty in 1814 and 1815 was, that the Government became embarrassed and involved. Individuals could not advance to it—the local banks did advance, and, upon the faith of the debts, in the shape of stocks they held against Government, these banks went on discounting as if they had that amount in specie instead of Government stock; and what was the result? Why, when those debts became due, the Government itself was unable to make payments, and the inevitable consequence was, that these local bank notes fell below par, as they could not be converted, and the Government then, in turn, sustained those institutions it had borrowed from. And, although it never was, I believe, sanctioned by law, yet the Government received their notes in public dues on a par with gold and silver. This produced a demand for depreciated paper, and that which was most depreciated was sought after to pay into the custom-houses, as it could be purchased with the least coined money. The result of this was, that the Government would have had, finally, all the depreciated paper of the country forced upon its collectors. It was the policy the Government adopted of receiving advances from the local banks, and then pursuing the temporising expediency of receiving

their depreciated paper, after they had discounted upon what they had no right to discount upon, (because they were, at the same time, receiving interest upon the Government stocks,) that involved us in the depreciated paper of that day. It was the folly of this Government, not its impotency under the specific powers of the constitution. It was this state of things which the Government felt bound to stop the progress of, and they, therefore, adopted the joint resolution of 1816, declaring that they would receive, in payment of the public dues, nothing but gold and silver, or the notes of specie paying banks. This, of course, threw depreciated paper out of circulation, and stopped the issues of spurious banks. The Government was enabled to enforce this resolution, because peace had been restored and the resources of the country became expanded, and if they had adhered to that resolution, and never adopted the policy of receiving other notes, you could have had, for all practical purposes, a sound currency, according to the intent of the constitution.

It is the only control over the currency which the constitution contemplates; whether enough or not, has been questioned. I contend that it is enough for all safe purposes. You receive nothing but gold and silver or its equivalent, and the result is that the local banks are compelled to have that which is as good as gold and silver, or their paper will be run back upon them. I admit that, if you receive by law, as the permanent policy of this country, the paper of local institutions, the result will be that you are compelled to resort to a bank of the United States. I maintain that if you receive paper you cannot control it and make it a sound and equal currency under the constitution, except by and through a national bank. There are but two feasible modes by which you can regulate the currency. The one is the mode provided for under the constitution, in the clauses to which I have referred, and which is the mode intended and pointed out by our ancestors. And if you attempt to throw this Government upon that stupendous system of currency, which has grown up in modern times, by receiving the paper of banks in Government dues, then there is no other possible regulation of it but by a bank of the United States.

But, sir, what a monstrous proposition is contained in the second mode? You declare that you will receive the paper of banks, and you charter a bank of the United States, and give it power to control all other banks; and, by subjugating the State institutions through the creation of this check, you, at the same time, part with the power given to you by the constitution, and confer it upon a set of men wholly irresponsible, except to the stockholders of their bank, and reckless and regardless of every thing save the interests of the institution. Sir, in creating such an institution as this, you create a greater evil than that which you intend to counteract.

What would have been the result in 1813 and '14 if a bank of the United States had been in operation? Why, the Government being in difficulty, instead of borrowing from the local institutions, as it did, it would have borrowed, in all probability from that bank; that bank would have discounted upon the credit of the Government, as the others did, and the Government being unable to meet its debt, the notes of the institution would have fallen below par, as those of the local banks did, and you would have had precisely the same state of things as did take place. And then nothing could have sustained the bank but the power of the Government to receive its notes as gold and silver, although not convertible; and this Government credit would have given it power and control over other banks without the slightest merit. It is absurd to talk about the bank sustaining the Government. The Government can sustain the bank but not the reverse. The credit of restoring the currency is due to the Government, under that noble instrument, the constitution, and not under the bank.

But, sir, will you part with your power—the power to coin money and regulate its value—a power that is one of the greatest and highest attributes of sovereignty? And if you make paper money the currency of the Government, then the power that regulates it, is as high and sovereign as the power that now makes coin and fixes its value. And let gentlemen recollect that, if they once part with it on the policy of creating a bank institution, it is not to last for this year or the next, but FOREVER; for that which is sound policy in regulating the currency now, will be so fifty years hence; and

it must become a branch of Government, permanently engrafted upon the institutions of the country. And are we prepared to say, that those who are to manage it, are for ever to be pure and enlightened men? Recollect that the power that holds the sway over the currency, holds a sway over the fortunes of every man in this republic. Sir, if we once part with this power, my deliberate and firm conviction is, that we shall centralize a moneyed action in this country, which will, in the end, make the labor of the confederacy virtually, and for ever, tributary to those who will have but little interest in it. I believe that nothing tended so much to this as the establishment of the last institution. It is its natural and inevitable course.

Now, sir, what would be the results upon the exporting sections of the country? Where would you locate your institution? Why, you must place it where nine-tenths of the banking capital of this country already exists. And what can be a greater or more tremendous engine of power than this, located in a particular section, organizing with system, and creating dependence in all the banking and stock interests of the country? You do nothing more nor less than give away the power to regulate the money and exchanges of the whole country, to an institution located in the non-exporting section, and thus deprive, for ever, the possibility of the exporting region of the country doing its own importing trade. Identify it with Government, by receiving in public dues its notes as gold and silver, and you, in effect, loan the credit of this Government, which is equal, annually, to its revenue and disbursements, to capitalists in stocks, for their benefit—thus creating an artificial credit, instead of letting all interests, resting upon their natural resources and credit, rely finally upon the productive industry and bona fide capital of each individual or section.

Is it not an extraordinary fact that nearly all the exports and imports of the exporting region of this confederacy, touches, both going and coming, at northern ports? Why is this? It has arisen from the fiscal action of this Government, which has heretofore sustained, and been identified with, the banking capital of this country. We have raised the articles demanded in foreign countries, and they compel us to touch, both going and coming, at their ports. This does not arise from their holding the tonnage, or their bottoms, but they hold the credit or banking system, and by their connection with the Government, create exchanges against us and force us to touch for tribute. Suppose, for a moment, we were separate States, would it not be absurd for us, then, to touch at foreign ports? Let there be no central moneyed power with which the fiscal action of the Government shall become identified, and the export region will do its own imports through its own ports. With our local currency, resting as it does on these articles which go into the markets of the world, fifteen per cent. discount in New York, we can never afford to sustain the state of things that has existed heretofore. Without a bank, identified with Government, the exports of the country must, to a great extent, become a substitute for all foreign and even domestic bills.

Mr. Chairman, in looking over the statistics of the past, I find, that in 1769, Virginia and Maryland imported, in amount, 851,140 pounds sterling; the New England States, 561,034; New York, 188,976; Pennsylvania, 399,820; South Carolina, including part of North Carolina, 535,714 pounds sterling, &c. In 1774, the exports from Virginia and Maryland to England, were 738,356 pounds sterling; South Carolina, 579,549; Pennsylvania, 175,962; New York, 187,018; New England, 116,588, &c. This general proportion is sustained, with no great variation, whenever things were not deranged by war, up to 1788 and 1789. The export region did its imports; and although it was of course generally in foreign or British bottoms, yet it never touched at two ports, but went and came directly through our own ports. But things have now changed, and we have lost our relative proportion. Trade was then suffered to take its natural channel. Since then, however, the political power, together with the moneyed power, has been worked against us, and our trade is now compelled to touch where nature never intended. I contend that, as far as the fiscal action of this Government is now concerned, we are where we were, under the articles of the confederation; and I, for one, desire for the present to keep there. And, sir, it is under these convictions, and believing this to be the ope-

ration of things, that I feel bound to make the true issue now presented by the bill under consideration. I contend that this organization of the banking power of the country connected with the Government, tends directly to the result which I have attempted to show; that is, to make the labor of the exporting region of the country tributary to those who hold nine-tenths of the banking capital in their hands. I call upon gentlemen to consider well before they make this plunge. We have some deeply interesting questions before us intimately connected with the power and ascendancy of sections, and the destiny of this republic. Sir, I have been here for three years, and watched the progress of this abolition feeling which is now spreading itself over half of this confederacy. When it was first brought into this hall, it was viewed with indifference as the excitement of a few bigots and fanatics. But now, in the short progress of a few years, we find that it has pervaded all society with intense anxiety. That speck, which was at first scarcely visible to the naked eye, has now grown blacker and deeper, until over one half of our horizon hangs a dark and gloomy cloud, through which the thunder rolls and the lightning flashes, and this temple, under which we all have heretofore gathered for common protection, is destined to rock and totter amid the desolating whirlwind and rushing tornado. It has assumed of late somewhat a different shape.

But gentlemen need not be deceived by the color given to the Texas question. Do you suppose it is opposition to Texas? No. It is opposition to that vital interest in this confederacy with which we are identified—a deep pervading opposition, grown up from education and infancy, and partaking now even of the religious sympathies of the community—and I call upon gentlemen to pause before they are willing to throw the power and the credit of this Government into the hands of capitalists who are at war with us, not only in interest but in feeling and in sympathy. Organize again the banking interests of this confederacy, and connect them with Government, and you cannot escape from the grasp. I cannot look upon the future without feeling the deepest (unless we are true to ourselves at this juncture) and most solemn apprehensions, that that persecuted and slandered country which now stretches itself from the banks of this noble river to the mouths of the Mississippi, rich in character, rich in intellect, rich in the glory of the past, rich in all those qualities which make a great and a gallant people, will, in progress of time, be laid low in ruin and desolation, with only here and there a solitary inhabitant to trace out upon deserted tomb-stones, those obliterated letters which transmit to posterity the names of our mighty dead, and then to shed over them a burning tear.

Sir, it is the fiscal action of this Government connected with the banking power that has tended to draw from us our substance, for forty years. It is the vampire that has fed upon our life-blood and our vitals, and I, for one, am not prepared to perpetuate it, or sanction its renewal.

But, Mr. Chairman, gentlemen say, in opposition to this bill that it is impracticable, and that the Government will find great difficulty in getting along with it. Sir, that furnishes no objection in my mind. I love a Government the better that moves with difficulty. Despotisms only move in untrammelled power. Free Governments live and move in difficulty. Collect your taxes with difficulty, and the consequence is that you never will find people willing to pay taxes for distribution upon lawless and unconstitutional objects. No, sir. The difficulty presents no obstacle to the passage of this measure to me. When Mr. Fox visited Paris, at the time Napoleon was in the height and pride of his glory, the first consul desired to know something of the operation of the trial by jury, with a view to introduce it into France. But when Fox told him that its fundamental principle was that no man could be deprived of his rights but by the judgment of his peers, and those peers twelve of his fellow-citizens, the first consul immediately replied it would not do for him—"his government would find too much difficulty to get along with it."

Mr. Chairman, many may suppose that I am unnecessarily apprehensive in my fears as to the connection of the banking system with the power and credit of this Government; but, sir, I have seen enough to fear and dread it. In 1832, when the contest, as we supposed, was about to arise for the very existence of our peculiar rights and liberties, we felt its power. And though I shall forbear to

dwelt upon particulars now, yet I will take occasion to say to those gentlemen who were deeply identified with that institution, those gentlemen who were the bitter political opponents of the then President of the United States, what was the spectacle they exhibited? When he asked for the sword of this Government to be buried in the vitals of our people, they came forward and gave it to him freely. And why? Because they dreaded a revulsion which would shake the credit system, and that institution with those who depended upon it, to the deepest foundation. Sir, no part of this country under the influence of a Bank of the United States will ever resist the encroachments of this Government, or the Government itself, however despotic it may be. Such an institution then, connected with this Government, to control the moneyed power of this country, I confess I do dread. I confess I do look with dread and terror upon its influences. Sir, if you want to make the Government of this Union despotic, create a Bank of the United States, and connect it with the destinies of this Government, and my life upon it you can never escape.

You can never resist this Government in the hands of the moneyed power of the country, and the result will be that the fairest portions of this Union will become tributary to other and more powerful sections.

Mr. Chairman, while making these observations, I confess that I will go as far as any gentleman to sustain those peculiar local institutions organized by the States for their benefit, and to carry on their commerce with the different sections of this country. If they be properly organized, and limited within proper bounds, I will go as far as any man to sustain them, and give them vigor, as long as they act upon *bona fide* capital, for the good of the community, as well as for their own individual interest; such institutions are essential to the present state of commerce. But while I say this, I am compelled to say that I believe the banking system of modern times, as organized in different sections of this country, has any thing but a tendency to elevate or give liberty to man. Even this very session we have heard gentlemen upon this floor from the State of New York denounce the manner in which things have been conducted there as disgraceful and outrageous: charters granted, stocks distributed, to political partisans for political power and ascendancy.

The minority there, as in many other sections of the country, have been practically reduced to political vassalage; and it is idle to discuss or question the fact, that stock operations have been organized with a sole view to sustain political power, and make the labor of the country tributary to themselves.

Now, sir, a gentleman from Massachusetts, (Mr. Cushing,) not many days ago, warned southern gentlemen, and declared that the "progress of *radicalism* at the North was nothing more than the progress of *abolitionism*." Sir, I have thought of this matter. I have considered it with painful anxiety, and I feel bound to present what I conceive to be the true interests of this country. We are a peculiar people, I admit. We own nearly one half of our population. We hold them by physical force, and the law of necessity. I make this frank and candid avowal. And I will here take the occasion to say that the connection which exists between the slave-laborers and capitalists of the South, is one of the deepest interest to the northern and middle sections of this Union. We are interested in the *bona fide* profits of daily labor, for we own not only the proceeds of labor, but labor itself, and that Government which interferes as little as is possible, by any artificial arrangements, with the management or proceeds of labor, is the Government for us, because it leaves us in undisputed and undivided control over all profits of labor.

We are, then, in fact, capitalists standing in the place of laborers, and are, to all intents and purposes, laborers. There is little or no separation with us of capitalists and laborers. They are, in fact, one and the same. The laborers of the non-slaveholding States are interested also in the *bona fide* (not spurious or doubtful) profits of daily labor. The struggle of their capitalists (I speak of pecuniary interest, and it is nature) is to divide those pro-

fits with them. Hence they resort to all the artificial modes known to Government, by which they are brought to act with system and energy as one man, through corporations of all sorts, and the most important of which is the banking system. You pretend to give universal equality and equal power to all; and if this were practically carried into effect, after society has gone through an era long enough to be pressed down into its natural classifications, the inevitable result would be in a conflict that labor would make capital tributary, until it would, in the operation, change hands. To prevent this, where you profess to make all equal in political power, you are compelled to resort to those artificial combinations created by the Government, to give you that control which will enable you to sustain yourselves, and make your capital profitable, by the management of labor which your political professions forbid you to own. Now, sir, when gentlemen preach up, as they have done for the last three years, insurrection to the slaves of our community, I warn them that their own institutions are not so pure as they might at first suppose; and that I will preach up insurrection to the laborers of the North, when the tendency of things is such as to swindle them out of their power, by the fraud, duplicity, and cunning of modern times.

As far as mere pecuniary interest is involved, the relation of capital and labor is the same as that which exists there, in Great Britain and every where else; that is, just to allow labor as much as is necessary for subsistence, and to take the balance to divide among themselves, by all the inventions which the fraud of Government can create. This will be finally the interest of our northern capitalists. They have no standing armies to perpetuate this state of things, as in other countries; and the consequence is, that though they can not keep the laborers in physical subjection, they are compelled to resort to banking corporations and chartered institutions. While they preach to us universal equality and universal emancipation, they themselves are destined, if unreformed, to hold in tribute not only the labor of their own section, but also of this Confederacy.

The two systems of subjugation which now divide the world, seem to be a resort either to *fraud* or *force*, by which one-half of mankind may rule the other half.

Mr. Jefferson proclaimed, thirty years ago, that the democracy of the north were our natural allies, and there was profound philosophy in that declaration. When we contend for the undivided profits and proceeds of our labor, do you not see that we stand precisely in the same situation as the laborer of the north? We are, to all intents and purposes, in the place of laborers. We are the only class of capitalists, as far as pecuniary interest is concerned, which, as a class, are identified with the laborers of the country, while, at the same time, we shall ever form a barrier against breaking up the laws and foundations of society. I know this is a proposition which will strike some men with astonishment, and I know, too, that I utter words which burn. But I know, sir, it is the truth; and when these gentlemen expect to preach up insurrection and rebellion to the slaves of our country, I will preach back to them the same doctrine, by proclaiming universal equality, universal privileges, a universal right to northern laborers to be redeemed from the fraud, duplicity, and cunning by which they are destined to be made tributary to those who wield capital, connected with *political power*. The whole banking system there is a political substitute for the standing armies of Europe, without which the capitalists of the north would be compelled to submit to a loss of power.

Sir, these are my sentiments, and I believe that, as far as our people are concerned, we are not compelled to resort to those artificial institutions of society by which non-slaveholding regions seek to delude and deceive their victims. No, sir, we avow to the world that we own our black population, and we will maintain that ownership, if needs be, to the last extremity.

Mr. Chairman, in maintaining these peculiar sentiments, and in proclaiming the peculiar identity of interest existing between the capitalists of the slaveholding region, and the democracy of the North, I am aware that I come under denunciation, and am liable to the charge, from certain

quarters, of being a "loco foco." For maintaining my own rights and interests, and the rights and interests of those I represent, I may be called a "loco foco," but this name shall never terrify or deter me when the question arises, from maintaining the interests of those with whom I expect to live and hope to die. And, sir, when gentlemen tell me these things, I tell them I proclaim the doctrines of Jefferson, that the democracy of the north are the natural allies of the South; and this arises from peculiar interests which I, for one, am not disposed to sacrifice on this floor. "*Loco foco!*" Gentlemen seem to raise up that name as a ghost to create terror and alarm. The progress and tendency of things to be carried away by prejudices and party feelings, are monstrous. Why, sir, it was but the other night that, while holding a portrait of *John Milton* in my hand, a very estimable friend of mine looked at it, sneeringly, and denounced him as a "*loco foco!*" *John Milton* a loco foco!! And pray, sir, who was he, but a man, the grandeur of whose soul, and the splendor of whose genius, breathed not only inspiration into poetry, but threw a halo of glory over those burning pages which he devoted to English liberty? Sir, it is nature for those small birds that hop from branch to branch in the shrubs of the forest, to gaze with envy and hatred upon the noble eagle, as he soars aloft in the sunbeams of heaven; whose brow defies even the concentrated fury of the elements, and whose eye scans in scorn the earth beneath him. If *John Milton* was a "*loco foco*," then I, too, glory in catching, if I can, one live coal from off that altar which he hallowed and consecrated to the everlasting rights of man.

Sir, if I maintain the universal freedom of the white race, and the inalienable rights of man, shall I be deterred from my position by the contemptible name of "*loco foco*?" The scribbling writers of the day may call me what they please; their denunciations have no terrors. I scorn and despise them.

Perhaps, Mr. Chairman, in the sentiments I am about to utter, I may be considered as behind the age, and they will be regarded as very singular, if not unpalatable, by gentlemen raised from their infancy in large cities, or under the controlling influence of newspaper essays. But my excuse for entertaining them is, that the people among whom I was educated and trained up, are also peculiar in their habits and their institutions, and partake more of the impress of antiquity than of modern improvements. And I confess to you, sir, that I feel for them a lingering affection and attachment, because they were the customs and the habits of those ancestors who have given to us, all that we inherit in virtue and freedom. I do not believe much in the great blessings of your modern forms of society, and the great "*improvements of the age*." I do not believe the intellectual and moral endowments of man have been advanced or elevated of recent years. Sir, I admire the people who have gone before us, and bequeathed and transmitted examples worthy of our admiration. It is true we have more wealth, more enterprise, more speculation, and more of the gaudy show, and pomp, and temptations of commerce and luxury; but as far as the heart is concerned, as far as intellectual and moral qualities are concerned, I do not believe man has advanced for the last ten years. No, sir. It may be from my peculiar situation that I entertain these sentiments. You have drawn together the world; you have made your splendid works of improvement, by which contented and remote parts of society have been drawn under the temptations and vicissitudes of speculation; you have your credit and banking system by which all christendom has been concentrated into one consolidated living mass, and we have been brought by that system to bow in subjection before the banks and bankers of London and Wall street; and we look with more interest and admiration upon the movements of *Skylocks* gathered together in the exchanges of commercial cities, than we do to those noble pages of history which transmit to us the glory of arms or oratory.

Our people are consumed with *avarice*, *deep*, *absorbing*, unfeeling, mean avarice. Yes, sir, selfishness, hypocrisy, fraud, and cunning, seem to me to be the great characteristics of modern times, instead

of that lofty heroism, that devoted valor, that burning patriotism which characterised former and better days. True, sir, we develop more physical resources; but is there more sentiment, more virtue, more honesty? What is it that constitutes a great people? Is it power—is it wealth—is it numbers? No, sir! It is virtue—valor—devoted patriotism—arms—eloquence, and letters. These are the qualities that have covered others with immortality, and kindle in the heart of man all that is noble and spirit-stirring.

All society seems now to receive its hue and cast from those who hold the moneyed power of the world. Even our interior villages, painted as they are, and dressed up in all their show, receive, in submission, their fashions from the dandies of Broadway, and kneel in reverence before the molten images that idolaters raise up for worship in Wall street and London. The tendency of all these things is to constitute society into one living mass; and I war against it, because, if it succeed, my peculiar section, and the peculiar institutions existing in it, will be overwhelmed.

In reference, Mr. Chairman, to the details of the bill under consideration, I will only say that, upon that point, I have my own peculiar notions. But the bill asserts a great principle for which I contend—that principle which I believe to be identified with the liberties of this country. I will go for it, and hold the administration responsible for its details. I do not choose to propose any amendments in those details; for, if it be bunglingly or injudiciously arranged, I will not be held responsible. I go for it, sir, because it asserts those principles which belong to the Constitution of my country; but I leave the details to the administration to execute, and I shall hold them responsible for it. I go for that great leading feature which separates this Government from all connection whatever with State banks, or any great mother institution here. I am for it, because I have seen the fatal consequences upon the Government and banks themselves.

Sir, we have had these institutions, as I said before, entering directly and indirectly into the political canvasses of the day, dispensing power, and controlling, as I believe, to a great extent, the elective franchise; and we have seen the results, and heard the shouts of triumph raised around the funeral pile here upon which the Constitution was placed, and a fiendish joy seemed to light the countenances of hundreds, even while the smoke thereof rose as a sweet incense to that popular idol which we were all called upon to kneel down and worship before, as the only true and living image of democracy. And am I now to put this Government in the same position again? Let gentlemen beware how they unite the political with the banking power again. Have we not seen enough to give us lessons of wisdom in the dreadful consequences that have resulted from warring upon the institutions of the country? And, sir, in this conflict who have been the greatest sufferers? The industry of the country—men who have vested their all in the enterprise of the day, and who have been left to the mercy of contending foes. It is to separate these, and to avoid this result in future, that I am for this bill; for who can look at the future and not see how some bold and designing demagogue may desire to rise into power, and contend for political influence, by calling up the basest passions and prejudices against any institution which you may deem to be stable and fixed? He may wage a war of extermination, and may ride over the laws of his country. I desire no such conflict, in which the honesty, the industry, and the enterprise of all will be left to the mercy of factions contending for power over an institution in which the destinies of this country, through its currency, are to be placed. And if such a contest should come, I could not with any heart sustain an institution which I believe to be against the Constitution and the liberties of the country.

Mr. Chairman, my friend (and I use the term in no idle manner) from Virginia, (Mr. Wise) the other day, warned me that, on this measure, I should be "left in the lurch." Sir, on a question of this kind, affecting the liberties of my country, I never stop to inquire whether I shall be "left in the lurch" or not. I never stop to inquire who

may be with me, or who may be against me, on a question of that character. All I ask myself is, is it a constitutional proposition, and if it be right and correct to maintain it; I never stop to inquire who is with me or who is against me. The mere triumphs of party I disregard. I throw aside party considerations where a great question is concerned, in which the liberties and destinies of the people and the Government are involved. On such a question, sir, I subscribe to no party creed. Let me also say to those gentlemen who suppose that the tide of popularity upon which they are now floating, is for ever to set in one direction, that they will find the future full of bitterness and disappointment.

Let them not labor under the fatal delusion that the letter writers and newspapers of the day are to create that popularity which is to endure through time. Let them rather look to that deep, settled, abiding opinion which is to come back to us from the enlightened and reflecting free men of this country—come back to us upon the settled conviction of what is true, of what is constitutional, of what is for the good of the Government and the people.

Let us all look to that deep and fixed public opinion, formed upon enlightened conviction and sound discretion. Allow me now to say, in the noble language of Lord Mansfield, that those who have foregone that pleasing adviser, and given up their minds to be the slave of every popular impulse, I sincerely pity. I pity them still more if their vanity leads them to mistake the shouts of a mob for the trumpet of fame. Experience might inform them that many who have received the huzzas of a crowd one day, have been visited with its execrations the next. And many who, by the popularity of the times, have been held up as spotless patriots, have nevertheless appeared upon the historian's page, where truth has triumphed over delusion, the assassins of Liberty.

### SPEECH OF MR. CLAY, OF KENTUCKY.

*In Senate, September 25, 1837.*—The bill "imposing additional duties, as depositories in certain cases, on public officers," being under consideration.

Mr. CLAY rose and addressed the Senate upwards of three hours. We cannot undertake to report all that he said. We must content ourselves with exhibiting a view of his argument, employing generally the language in which it was expressed.

He commenced by observing that, feeling an anxious desire to see some effectual plan presented to correct the disorders in the currency, and to restore the prosperity of the country he had avoided precipitating himself into the debate now in progress, that he might attentively examine every remedy that should be proposed, and impartially weigh every consideration urged in its support. No period had ever existed in this country, in which the future was covered by a darker, denser, or more impenetrable gloom. None, in which the duty was so imperative to discard all passion and prejudice, all party ties, and previous bias, and look exclusively to the good of our afflicted country. In one respect—and he thought it a fortunate one—our present difficulties are distinguishable from former domestic troubles, and that is their universality. They are felt, it is true, in different degrees, but they reach every section, every State, every interest, almost every man in the Union. All feel, see, hear, know their existence. As they do not array, like our former divisions, one portion of the confederacy against another, it is to be hoped that common sufferings may lead to common sympathies and common counsels, and that we shall, at no distant day, be able to see a clear way of deliverance. If the present state of the country were produced by the fault of the People; if it proceeded from their wasteful extravagance and their indulgence of a reckless spirit of ruinous speculation; if public measures had no agency whatever in bringing it about, it would nevertheless be the duty of Government to exert all its energies and to employ all its legitimate powers to devise an efficacious remedy. But if our present deplorable condition has sprung from our rulers; if it is to be clearly traced to their acts and operations, that duty becomes infinitely more obligatory; and Government would be faith-

less to the highest and most solemn of human trusts should it neglect to perform. And it is not too true that the evils which surround us are to be ascribed to those who have had the conduct of our public affairs?

In glancing at the past, (continued Mr. C.) nothing can be further from my intention than to excite angry feelings, or to find grounds of reproach. It would be far more congenial to my wishes that, on this occasion, we should forget all former unhappy divisions and animosities. But, in order to discover how to get out of our difficulties, we must ascertain, if we can, how we got into them.

Prior to that series of unfortunate measures which had for its object the overthrow of the Bank of the United States and the discontinuance of its fiscal agency for the Government, no People upon earth ever enjoyed a better currency, or had exchanges better regulated, than the People of the United States. Our monetary system appeared to have attained as great perfection as any thing human can possibly reach. The combination of United States and local banks presented a true image of our system of General and State Governments, and worked quite as well. Not only within the country had we a local and a general currency perfectly sound, but in whatever quarter of the globe American commerce had penetrated, there also did the bills of the Bank of the United States command unbounded credit and confidence. Now we are in danger of having fixed upon us, indefinitely as to time, that medium—an irredeemable paper currency, which by the universal consent of the commercial world is regarded as the worst. How has this reverse come upon us? Can it be doubted that it is the result of those measures to which I have adverted? When at the very moment of adopting them, the very consequences which have happened were foretold as inevitable, is it necessary to look elsewhere for their cause? Never was prediction more distinctly made; never was fulfilment more literal and exact.

Let us suppose that those measures had not been adopted; that the Bank of the United States had been rechartered; that the public deposits had remained undisturbed; and that the Treasury order had never issued: is there not every reason to believe that we should be now in the enjoyment of a sound currency; that the public deposits would be now safe and forthcoming; and that the suspension of specie payments in May last would not have happened?

The President's message asserts that the suspension has proceeded from over-action—over-trading—the indulgence of a spirit of speculation produced by bank and other facilities. I think this is a view of the case entirely too superficial. It would be quite as correct and just, in the instance of a homicide perpetrated by the discharge of a gun, to allege that the leaden ball, and not the man who levelled the piece, was responsible for the murder. The true inquiry is, how came that excessive over-trading, and those extensive bank facilities which the message describes? Were they not the necessary and immediate consequences of the overthrow of the bank, and the removal from its custody of the public deposits? And is not this proven by the vast multiplication of banks, the increase of the line of their discounts and accommodations prompted and stimulated by Secretary Taney, and the great augmentation of their circulation which ensued?

What occurred in the State of Kentucky, in consequence of the veto of the recharter of the Bank of the United States, illustrates its effects throughout the Union. That State had suffered greatly by banks. It was generally opposed to the re-establishment of them. It had found the notes of the Bank of the United States answering all the purposes of a sound currency at home and abroad, and it was perfectly contented with them. At the period of the veto, it had but a single bank, of limited capital and circulation. After it, the State, reluctant to engage in the banking system, and still cherishing hopes of the creation of a new Bank of the United States, encouraged by the supporters of the late President, hesitated about the incorporation of new banks. But, at length, despairing of the establishment of a Bank of the United States and finding itself exposed to a currency in bank notes from adjacent States, it proceeded to establish banks of its

own, and since the veto, since 1833, has incorporated for that single State bank capital to the amount of ten millions of dollars—a sum equal to the capital of the first Bank of the United States created for the whole Union!

That the local banks, to which the deposits were transferred from the Bank of the United States, were urged and stimulated freely to discount upon them, we have record evidence from the Treasury Department.

The message, to reconcile us to our misfortunes, and to exonerate the measures of our own Government from all blame in producing the present state of things, refers to the condition of Europe, and especially to that of Great Britain. It alleges, that "in both countries we have witnessed the same redundancy of paper money, and other facilities of credit; the same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same overwhelming catastrophe."

The very clear and able argument of the Senator from Georgia (Mr. KING) relieves me from the necessity of saying much upon this part of the subject. It appears that during the period referred to by the message, of 1833-4-5, there was, in fact, no augmentation, or a very trifling augmentation, of the circulation of the country, and that the message has totally misconceived the actual state of things in Great Britain. According to the publications to which I have had access, the Bank of England in fact diminished its circulation, comparing the first with the last of that period, about 2½ millions sterling; and although the joint-stock and private banks increased theirs, the amount of increase was neutralized by the amount of diminution.

If the state of things were really identical, or similar, in the two countries, it would be fair to trace it to similarity of causes. But is that the case? In Great Britain a sound currency was preserved by a recharter of the Bank of England about the same time that the recharter of the Bank of the United States was agitated here. In the United States we have not preserved a sound currency, in consequence of the veto. If Great Britain were near the same catastrophe (the suspension of specie payments) which occurred here, she nevertheless ESCAPED it; and the difference in the condition of the two countries makes all the difference in the world. Great Britain has recovered from whatever mercantile distresses she experienced: we have not; and when shall we? All is bright and cheerful and encouraging in the prospects which lie before her; and the reverse is our unfortunate situation.

Great Britain has, in truth, experienced only those temporary embarrassments which are incident to commercial transactions, conducted upon the scale of vast magnitude on which hers are carried on. Prosperous and adverse times, action and reaction, are the lot of all commercial countries. But our distresses sink deeper; they reach the heart, which has ceased to perform its office of circulation in the great concerns of our body politic.

Whatever of embarrassment Europe has recently experienced may be satisfactorily explained by its trade and connexions with the United States. The degree of embarrassment has been marked, in the commercial countries there, by the degree of their connexion with the United States. All, or almost all, the great failures in Europe have been of houses engaged in the American trade. Great Britain, which, as the Message justly observes, maintains the closest relations with us, has suffered most; France next, and so on, in the order of their greater or less commercial intercourse with us. Most truly was it said by the Senator from Georgia that the recent embarrassments of Europe were the embarrassments of a creditor, from whom payment was withheld by the debtor, and from whom the precious metals have been unnecessarily withdrawn by the policy of the same debtor.

Since the intensity of suffering, and the disastrous state of things in this country, have far transcended any thing that has occurred in Europe, we must look here for some peculiar and more potent causes than any which have been in operation there. They are to be found in that series of measures to which I have already adverted.

1st. The veto of the bank.

2d. The removal of the deposits, with the urgent injunction of Secretary Taney upon the banks to enlarge their accommodations.

3d. The gold bill, and the demand of gold for the foreign indemnities.

4th. The clumsy execution of the deposite law; and

5th. The Treasury order of July, 1836.

[Here Mr. CLAY went into an examination of these measures to show that the inflated condition of the country, the wild speculations, which had risen to their height when they began to be checked by the preparations of the local banks necessary to meet the deposite law of June, 1836, the final suspension of specie payments, and the consequent disorders in the currency, commerce, and general business of the country, were all to be traced to the influence of the measures enumerated. All these causes operated immediately, directly, and powerfully upon us, and their effects were indirectly felt in Europe.]

The message imputes to the deposite law an agency in producing the existing embarrassments. This is a charge frequently made by the friends of the Administration against that law. It is true that the banks having increased their accommodations, in conformity with the orders of Secretary Taney, it might not have been convenient to recall and pay them over for public use. It is true, also, that the manner in which the law was executed by the Treasury Department, transferring large sums from creditor to debtor portions of the country, without regard to the commerce or business of the country, might have aggravated the inconvenience. But what do those who object to the law think ought to have been done with the surpluses which had accumulated, and were daily augmenting to such an enormous amount in the hands of the deposite banks? Were they to be incorporated with their capitals, and remain there for the benefit of the stockholders? Was it not proper and just that they should be applied to the uses of the People from whom they were collected? And whenever and however taken from the deposite banks, would not inconvenience necessarily happen?

The message asserts that the Bank of the United States, chartered by Pennsylvania, has not been able to save itself or to check other insinuations, notwithstanding "the still greater strength it has been said to possess under its present charter." That bank is now a mere State or local institution. Why is it referred to, more than the Bank of Virginia, or any other local institution? The exalted station which the President fills forbids the indulgence of the supposition that the allusion has been made to enable the Administration to profit by the prejudices which have been excited against it. Was it the duty of that bank, more than any other State bank, to check the local institutions? Was it not even under less obligation to do so than the deposite banks, selected and fostered by the General Government?

But how could the message venture to assert that it has greater strength than the late Bank of the United States possessed? Whatever may be the liberality of the conditions of its charter, it is impossible that any single State could confer upon it facilities equal to those granted to the late Bank of the United States—first, in making it the sole depository of the revenue of the United States; and, secondly, in making its notes receivable in the payment of all public dues. If a Bank of the United States had existed, it would have had ample notice of the accumulation of public moneys in the local banks, and, by timely measures of precaution, it could have prevented the speculative uses to which they were applied. Such an institution would have been bound, by its relations to the Government, to observe its appropriations, and financial arrangements and wants, and to hold itself always ready promptly to meet them. It would have drawn together gradually, but certainly, the public moneys, however dispersed. Responsibility would have been concentrated upon it alone, instead of being weakened or lost by diffusion among some eighty or ninety local banks, dispersed throughout the country, and acting without any effective concert.

A subordinate but not unimportant cause of the

evils which at present encompass us has been the course of the late Administration towards the compromise act. The great principle of that act, in respect to our domestic industry, was its stability. It was intended and hoped that, by withdrawing the tariff from those annual discussions in Congress, of which it had been the fruitful topic, our manufactures would have a certainty, for a long period, as to the measure of protection, extended to them by its provisions, which would compensate any reduction in the amount contained in prior acts. For a year or two after it was adopted, the late Administration manifested a disposition to respect it, as an arrangement which was to be inviolable. But, for some time past, it has been constantly threatened from that quarter, and a settled purpose has been displayed to disregard its conditions. Those who had an agency in bringing it forward, and carrying it through Congress, have been held up to animadversion; it has been declared by members, high in the confidence of the Administration in both houses, to possess no obligatory force beyond any ordinary act of legislation, and new adjustments of the tariff have been proposed in both houses, in direct contravention of the principles of the compromise; and, at the last session, one of them actually passed the Senate, against the most earnest entreaty and remonstrance. A portion of the south has not united in these attacks upon the compromise; and I take pleasure in saying that the two Senators from South Carolina, especially, have uniformly exhibited a resolution to adhere to it with perfect honor and fidelity.

The effect of these constant threats and attacks, coming from those high in power, has been most injurious. They have shown to the manufacturing interest that no certain reliance was to be placed upon the steadiness of the policy of the Government, no matter under what solemn circumstances it was adopted. That interest has taken alarm; new enterprises have been arrested; old ones curtailed; and at this moment it is the most prostrate of all the interests in the country. One-half in amount, as I have been informed, of the manufacturers throughout the country have actually suspended operations, and those who have not chiefly confined themselves to working up their stocks on hand.

The consequence has been, that we have made too little at home, and purchased too much abroad. This has augmented that foreign debt, the existence of which so powerfully contributed to the suspension, and yet forms an obstacle to the resumption of specie payments.

The Senator from South Carolina (Mr. CALHOUN) attributed the creation of the surplus revenue to the tariff policy, and especially to the acts of 1824 and 1828. I do not perceive any advantage, on the present occasion, in reviving or alluding to the former dissensions which prevailed on the subject of that policy. They were all settled and quieted by the great healing measure (the compromise) to which I have referred. By that act I have been willing and ready to abide. And I have desired only that it should be observed and executed in a spirit of good faith and fidelity similar to that by which I have been ever actuated towards it.

The act of 1828 was no measure of the friends of the manufacturers. Its passage was forced by a coalition between their secret and open opponents. But the system of production of American industry did not cause the surplus. It proceeded from the extraordinary sales of the public lands. The receipts, from all sources other than that of the public lands, and expenditures of the years 1833-4-5-6, (during which the surplus was accumulating,) both amount to about eighty-seven millions of dollars, thus clearly showing that the customs only supplied the necessary means of public disbursement, and that it was the public domain that produced the surplus.

If the land bill had been allowed to go into operation, it would have distributed gradually and regularly among the several States the proceeds of the public lands, as they would have been received from time to time. They would have returned back in small streams similar to those by which they had been collected, animating, and improving, and fructifying the whole country. There would have been no vast surplus to embarrass the Government; no

removal of deposits from the Bank of the United States to the deposit banks, to disturb the business of the country; no accumulations in the deposit banks of immense sums of public money, augmented by the circuit it was performing between the land offices and the banks, and the banks and the land offices; no occasion for the Secretary of the Treasury to lash the deposit banks into the grant of inordinate accommodations; and possibly there would have been no suspension of specie payments. But that bill was suppressed by a most extraordinary and dangerous exercise of Executive power.

The cause of our present difficulties may be stated in another way. During the late Administration we have been deprived of the practical benefit of a free Government; the forms, it is true, remained and were observed, but the essence did not exist. In a free, or self-government, the collected wisdom, the aggregate will of the whole, or at least of a majority, moulds and directs the course of public affairs. In a despotism, the will of a single individual governs. In a practically free Government, the nation controls the Chief Magistrate; in an arbitrary Government the Chief Magistrate controls the nation. And has not this been our situation in the period mentioned? Has not one man forced his own will on the nation? Have not all those disastrous measures—the veto of the bank; the removal of the deposits; and rejection of the land bill; and the Treasury order, which have led to our present unfortunate condition, been adopted, in spite of the wishes of the country, and in opposition, probably, to those of the dominant party itself?

Our misfortune has not been the want of wisdom, but of firmness. The party in power would not have governed the country very ill, if it had been allowed its own way. Its fatal error has been to lend its sanction, and to bestow its subsequent applause and support upon Executive acts which, in their origin, it previously deprecated or condemned. We have been shocked and grieved to see whole legislative bodies and communities approving and lauding the rejection of the very measures which previously they had unanimously recommended! To see whole States abandoning their long-cherished policy and best interests in subservience to Executive pleasure! And the numberless examples of individuals who have surrendered their independence, must inflict pain in every patriot bosom. A single case forces itself upon my recollection as an illustration, to which I do not avert from any unkind feelings towards the gentleman to whom I refer, between whom and myself civil and courteous relations have ever existed. The memorial of the late Bank of the United States praying for a recharter was placed in his hands, and he presented it to the Senate. He carried the recharter through the Senate. The veto came; and, in two or three weeks afterwards, we behold the same Senator at the head of an assembly of the People in the State House Yard, in Philadelphia, applauding the veto, and condemning the bank—condemning his own act! Motives lie beyond the reach of the human eye, and it does not belong to me to say what they were which prompted this self-castigation, and this praise of the destruction of his own work; but it is impossible to overlook the fact that this same Senator, in due time, received from the author of the veto the gift of a splendid foreign mission!

The moral deducible from the past is, that our free institutions are superior to all others, and can be preserved in their purity and excellence only upon the stern condition that we shall forever hold the obligations of patriotism paramount to all the ties of party, or to individual dictation; and that we shall never openly approve what we secretly condemn.

In this rapid, and, I hope, not fatiguing review of the causes which I think have brought upon us existing embarrassments, I repeat that it has been for no purpose of reproaching or criminating those who have had the conduct of our public affairs; but to discover the means by which the present crisis has been produced, with a view to ascertain, if possible, what (which is by far much more important) should be done by Congress to avert its injurious effects. And this brings me to consider the remedy proposed by the Administration.

The great evil under which the country labors is the suspension of the banks to pay specie, the total derangement in all domestic exchanges, and the paralysis which has come over the whole business of the country. In regard to the currency, it is not that a given amount of bank notes will not now command as much as the same amount of specie would have done prior to the suspension; but it is the future, the danger of an inconvertible paper money being indefinitely or permanently fixed upon the People, that fills them with apprehensions. Our great object should be to re-establish a sound currency, and thereby to restore the exchanges, and revive the business of the country.

The first impression which the measures brought forward by the Administration make is, that they consist of temporary expedients, looking to the supply of the necessities of the Treasury; or, so far as any of them possess a permanent character, its tendency is rather to aggravate than alleviate the sufferings of the People. None of them proposes to rectify the disorders in the actual currency of the country; but the People, the States, and their banks, are left to shift for themselves as they may or can. The Administration, after having intervened between the States and their banks, and taken them into the Federal service, without the consent of the States; after having puffed and praised them; after having brought them, or contributed to bring them, into their present situation, now suddenly turns its back upon them, leaving them to their fate! It is not content with that; it must absolutely discredit their issues. And the very People who were told by the Administration that these banks would supply them with a better currency, are now left to struggle as they can with the very currency which the Government recommended to them, but which it now refuses itself to receive!

The professed object of the Administration is to establish what it terms the currency of the Constitution, which it proposes to accomplish by restricting the Federal Government, in all receipts and payments, to the exclusive use of specie, and by refusing all bank paper, whether convertible or not. It disclaims all purposes of crippling or putting down the banks of the States; but we shall better determine the design or the effect of the measures recommended by considering them together, as one system.

1. The first is the sub-Treasuries, which are to be made the depositories of all the specie collected and paid out for the service of the General Government, discrediting and refusing all the notes of the States, although payable and paid in specie.

2. A bankrupt law for the United States, levelled at all the State banks, and authorizing the seizure of the effects of any of them that stop payment, and the administration of their effects under the Federal authority exclusively.

3. A particular law for the District of Columbia, by which all the Corporations and People of the District, under severe pains and penalties, are prohibited from circulating, sixty days after the passage of the law, any paper whatever not convertible into specie on demand, and are made liable to prosecution by indictment.

4. And lastly, the bill to suspend the payment of the fourth instalment to the States, by the provisions of which the deposit banks indebted to the Government are placed at the discretion of the Secretary of the Treasury.

It is impossible to consider this system without perceiving that it is aimed at, and, if carried out, must terminate in, the total subversion of the State banks; and that they will be all placed at the mercy of the Federal Government. It is in vain to protest that there exists no design against them. The effect of these measures cannot be misunderstood.

And why this new experiment or untried expedient? The People of this country are tired of experiments. Ought not the Administration itself to cease with them? Ought it not to take warning from the events of recent elections? Above all, should not the Senate, constituted as it now is, be the last body to lend itself to further experiments upon the business and happiness of this great People? According to the latest expression of public opinion in the several States, the Senate is no longer a true exponent of the will of the States or of the

People. If it were, there would be thirty-two or thirty-four Whigs to eighteen or twenty friends of the Administration.

Is it desirable to banish a convertible paper medium, and to substitute the precious metals as the sole currency to be used in all the vast extent of varied business of this entire country? I think not. The quantity of precious metals in the world, looking to our fair distributive share of them, is wholly insufficient. A convertible paper is a great time-saving and labor-saving instrument, independent of its superior advantages in transfers and remittances. A friend, no longer ago than yesterday, informed me of a single bank whose payments and receipts in one day amounted to two millions of dollars. What time would not have been necessary to count such a vast sum? The payments, in the circle of a year, in the city of New York, were estimated several years ago at fifteen hundred millions. How many men and how many days would be necessary to count such a sum? A young, growing, and enterprising People, like those of the United States, more than any other, need the use of those credits which are incident to a sound paper system. Credit is the friend of indigent merit. Of all nations, Great Britain has most freely used the credit system; and of all she is the most prosperous. We must cease to be a commercial People; we must separate, divorce ourselves from the commercial world, and throw ourselves back for centuries, if we restrict our business to the exclusive use of specie.

It is objected against a convertible paper system, that it is liable to expansions and contractions; and that the consequence is the rise and fall of prices, and sudden fortunes or sudden ruin. But it is the importation or exportation of specie, which forms the basis of paper, that occasions these fluctuations. If specie alone were the medium of circulation, the same importation or exportation of it would make it plenty or scarce, and affect prices in the same manner. The nominal or apparent prices might vary in figures, but the sensation upon the community would be as great in the one case as in the other. These alternations do not result, therefore, from the nature of the medium, whether that be specie exclusively, or paper convertible into specie, but from the operations of commerce. It is commerce, at last, that is chargeable with expansions and contractions; and against commerce, and not its instrument, should opposition be directed.

I have heard it urged by the Senator from South Carolina (Mr. CALHOUN) with no little surprise, in the course of this debate, that a convertible paper would not answer for a currency, but that the true standard of value was to be found in a paper medium not convertible into the precious metals. If there be, in regard to currency, one truth which the united experience of the whole commercial world had established, I had supposed it to be that emissions of pure paper money constituted the very worst of all conceivable species of currency. The objections to it are: First, that it is impracticable to ascertain, *a priori*, what amount can be issued without depreciation; and, secondly, that there is no adequate security, and, in the nature of things, none can exist, against excessive issues. The paper money of North Carolina, to which the Senator referred, according to the information which I have received, did depreciate. It was called Proc., an abbreviation of the authority under which it was put forth, and it took one and a half and sometimes two dollars of proc. to purchase one in specie. But if any one desires to understand perfectly the operation of a purely paper currency, let him study the history of the Bank of the Commonwealth of Kentucky. It was established about 15 or 16 years ago, with the consent of the majority of the people of that State. It is winding up and closing its career, with the almost unanimous approbation of the whole people. It had an authority to issue, and did issue, notes to the amount of about two millions of dollars. These notes, upon their face, purported an obligation of the bank to pay the holder, on demand, the amount in specie; but it was well known that they would not be so paid. As a security for their ultimate payment, there were, 1st, the notes of individuals supposed to be well secured, every note put out by the bank being represented by an individual note discounted. 2d. The funds

of the State in a prior State bank, amounting to about half a million of dollars. 3d. The proceeds of a large body of waste lands belonging to the State. And 4th. The annual revenue of the State and public dues, all of which were payable in the notes of the Commonwealth Bank.

Notwithstanding this apparently solid provision for the redemption of the notes of the bank, they began to depreciate shortly after it commenced operation, and in the course of a few months they sunk as low as fifty per cent.—two dollars for one specie dollar. They continued depreciated for a long time, until after large amounts of them were called in and burnt. They then rose in value, and now, when there is only some fifty or one hundred thousand dollars out, they have risen to about par. This is owing to the demand for them, created by the wants of the remaining debtors to the bank, and their receivability in payment of taxes. The result of the experiment is, that, although it is possible to sustain at about par a purely paper medium to some amount, if the legislative authority which creates it will also create a demand for it, it is impracticable to adjust the proportions of supply and demand so as to keep it at par; and that the tendency is always to an excess of issue. The result, with the people of Kentucky has been a general conviction of the mischiefs of all issues of an irredeemable paper medium.

Is it practicable for the Federal Government to put down the State banks, and to introduce an exclusive metallic currency? In the operations of this Government, we should ever bear in mind that political power is distributed between it and the States, and that, whilst our duties are few and clearly defined, the great mass of legislative authority abides with the States. Their banks exist without us, independent of us, and in spite of us. We have no constitutional power or right to put them down. Why, then, seek their destruction, openly or secretly, directly or indirectly, by discrediting their issues, and by bankrupt laws, and bills of pains and penalties? What are these banks now so decried and denounced? Intruders, aliens, enemies that have found their way into the bosom of our country against our will? Reduced to their elements, and the analysis shows that they consist: 1st, of stockholders; 2d, debtors; and 3d, bill-holders and other creditors. In some one of these three relations, a large majority of the People of the United States stand. In making war upon the banks, therefore, you wage war upon the People of the United States. It is not a mere abstraction that you would kick, and cuff, and bankrupt and destroy, but a sensitive, generous, confiding people, who are anxiously turning their eyes towards you, and imploring relief. Every blow that you inflict upon the banks reaches them. Press the banks and you press them.

True wisdom, it seems to me, requires that we should not seek after, if we could discover, unattainable abstract perfection; but should look to what is practicable in human affairs, and accommodate our legislation to the irreversible condition of things. Since the States and the People have their banks and will have them, and since we have no constitutional authority to put them down, our duty is to come to their relief when in embarrassment, and to exert all our legitimate powers to sustain and enable them to perform, in the most beneficial manner, the purposes of their institution. We should embank, not destroy, the fertilizing stream which sometimes threatens an inundation.

We are told that it is necessary to separate, divorce the Government from the banks. Let us not be deluded by sounds. Senators might as well talk of separating the Government from the States, or from the People, or from the country. We are all—People—States—Union—banks bound up and interwoven together, united in fortune and destiny, and all, all entitled to the protecting care of a parental Government. You may as well attempt to make the Government breathe a different air, drink a different water, be lit and warmed by a different sun from the People! A hard-money Government and a paper-money People! A Government, an official corps—the servants of the People—glittering in gold, and the People themselves, their masters, buried in ruin, and surrounded with rags.

No prudent or practical Government will in its measures run counter to the long settled habits and

usages of the People. Religion, language, laws, the established currency and business of a whole country, cannot be easily or suddenly uprooted. After the denomination of our coin was changed to dollars and cents, many years elapsed before the old method of keeping accounts, in pounds, shillings and pence, was abandoned. And, to this day, there are probably some men of the last century who adhere to it. If a fundamental change becomes necessary, it should not be sudden, but conducted by slow and cautious degrees. The People of the United States have been always a paper money People. It was paper money that carried us through the Revolution, established our liberties, and made us a free and independent People. And, if the experience of the revolutionary war convinced our ancestors, as we are convinced, of the evils of an irredeemable paper medium, it was put aside only to give place to that convertible paper which has so powerfully contributed to our rapid advancement, prosperity, and greatness.

The proposed substitution of an exclusive metallic currency to the mixed medium with which we have been so long familiar, is forbidden by the principles of eternal justice. Assuming the currency of the country to consist of two-thirds of paper and one of specie; and assuming also that the money of a country, whatever may be its component parts, regulates all values, and expresses the true amount which the debtor has to pay to his creditor, the effect of the change upon that relation, and upon the property of the country, would be most ruinous. All property would be reduced in value to one-third of its present nominal amount; and every debtor would, in effect, have to pay three times as much as he had contracted for. The pressure of our foreign debt would be three times as great as it is, whilst the six hundred millions, which is about the sum now probably due to the banks from the People, would be multiplied into eighteen hundred millions.

But there are some more specific objections to this project of sub-Treasuries, which deserve to be noticed. The first is its insecurity. The sub-Treasurer and his bondsmen constitute the only guaranty for the safety of the immense sums of public money which pass through his hands. Is this to be compared with that which is possessed through the agency of banks? The collector, who is to be the sub-Treasurer, pays the money to the bank, and the bank to the disbursing officer. Here are three checks; you propose to destroy two of them, and that most important of all, the bank, with its machinery of president, directors, cashier, teller and clerks, all of whom are so many sentinels. At the very moment when the Secretary of the Treasury tells us how well his sub-Treasury system works, he has communicated to Congress a circular, signed by himself, exhibiting his distrust in it; for he directs in that circular that the public moneys, when they amount to a large sum, shall be specially deposited with those very banks which he would repudiate. In the State of Kentucky, (other gentlemen can speak of their respective States,) although it has existed but about forty-five years, three Treasurers, selected by the Legislature for their established characters of honor and probity, proved faithless. And the history of the delinquency of one is the history of all. It commenced in human weakness, yielding to earnest solicitations for temporary loans, with the most positive assurances of a punctual return. In no instance was there originally any intention to defraud the public. We should not expose poor weak human nature to such temptations. How easy will it be, as has been done, to indemnify the sureties out of the public money, and squander the residue?

2. Then there is the liability to favoritism. In the receipts, a political partisan or friend may be accommodated in the payment of duties, in the disbursement, in the purchase of bills, in drafts upon convenient and favorable offices, and in a thousand ways.

3. The fearful increase of Executive patronage. Hundreds and thousands of new officers are to be created; for this bill is a mere commencement of the system, and all are to be placed under the direct control of the President.

The Senator from South Carolina (Mr. CALHOUN) thinks that the Executive is now weak, and that no

danger is to be apprehended from its patronage. I wish to God I could see the subject in the same light that he does. I wish that I could feel free from that alarm at Executive encroachments by which he and I were so recently animated. When and how, let me ask, has that power, lately so fearful and formidable, suddenly become so weak and harmless? Where is that corps of one hundred thousand office-holders and dependents, whose organized strength, directed by the will of a single man, was lately held up in such vivid colors and powerful language by a report made by the Senator myself? When were they disbanded? What has become of proscription? Its victims may be exhausted, but the spirit and the power which sacrificed them remain unsubdued. What of the dismissing power? What of the veto? Of that practice of withholding bills, contrary to the Constitution, still more reprehensible than the abuses of the veto? Of Treasury orders, put in force and maintained in defiance and contempt of the legislative authority? And, although last, not least, of that expunging power which degraded the Senate, and placed it at the feet of the Executive?

Which of all these enormous powers and pretensions has the present Chief Magistrate disavowed? So far from disclaiming any one of them, has he not announced his intention to follow in the very footsteps of his predecessor? And has he not done it? Was it against the person of Andrew Jackson that the Senator from South Carolina so ably co-operated with us? No, sir, no, sir, no. It was against his usurpations, as we believed them, against his arbitrary administration, above all, against that tremendous and frightful augmentation of the power of the executive branch of the Government, that we patriotically but vainly contended. The person of the Chief Magistrate is changed, but there stands the Executive power, perpetuated in all its vast magnitude, undiminished, re-asserted, and overshadowing all the other departments of the Government. Every trophy which the late President won from them now decorates the Executive mansion. Every power, which he tore from a bleeding Constitution, is now in the Executive armory, ready, as time and occasion may prompt the existing incumbent, whoever he may be, to be thundered against the liberties of the People.

Whatever may have been the motives or the course of others, I owe it to myself and to truth to say, that, in deprecating the election of General Andrew Jackson to the office of Chief Magistrate, it was not from any private considerations, but because I considered it would be a great calamity to my country; and that, in whatever opposition I made to measures of his administration, which more than realized my very worst apprehensions, I was guided solely by a sense of public duty. And I do now declare my solemn and unshaken conviction that, until the Executive power, as enlarged, extended, and consolidated by him, is reduced within its true constitutional limits, there is no permanent security for the liberties and happiness of this People.

4. Lastly, pass this bill, and whatever divorce its friends may profess to be its aim, that perilous union of the purse and the sword, so justly dreaded by our British and revolutionary ancestors, becomes absolute and complete. And who can doubt it who knows that over the Secretary of the Treasury at Washington, and every sub-Treasurer, the President claims the power to exercise uncontrolled sway? To exact implicit obedience to his will?

The message states that, in the process both of collection and disbursement of the public revenue, the officers who perform it act under the Executive commands; and it argues that, therefore, the custody also of the Treasury might as well be confided to the Executive care. I think the safer conclusion is directly opposite. The possession of so much power over the national treasury is just cause of regret, and furnishes a strong reason for diminishing it, if possible, but none for its increase, none for giving the whole power over the purse to the Chief Magistrate.

Hitherto I have considered this scheme of sub-Treasuries as if it was only what its friends represent it—a system solely for the purpose of collecting, keeping, and disbursing the public money, in specie exclusively, without any bank agency whatever. But it is manifest that it is destined to become, if it be not designed to be, a vast and rampi-

fied connexion of Government banks, of which the principal will be at Washington, and every sub-Treasurer will be a branch. The Secretary is authorized to draw on the several sub-Treasurers in payment for all the disbursements of Government. No law restricts him as to the amount or form of his drafts or checks. He may throw them into amounts suited to the purposes of circulation, and give them all the appearance and facilities of bank notes. Of all the branches of this system, that at New York will be the most important, since about one-half of the duties is collected there. Drafts on New York are at par, or command a premium from every point of the Union. It is the great money centre of the country. Issued in convenient sums, they will circulate throughout the whole Union as bank notes, and, as long as confidence is reposed in them, will be preferred to the specie which their holders have a right to demand. They will supply a general currency, fill many of the channels of circulation, be a substitute for notes of the Bank of the United States, and supplant, to a great extent, the use of bank notes. The necessities of the People will constrain them to use them. In this way, they will remain a long time in circulation; and in a few years we shall see an immense portion of the whole specie of the country concentrated in the hands of the branch bank—that is, the sub-Treasurer, at New York, and represented by an equal amount of Government paper dispersed throughout the country. The responsibility of the sub-Treasurer will be consequently greatly increased, and the Government will remain bound to guaranty the redemption of all the drafts, checks, or notes, (whatever may be their denomination) emitted upon the faith of the money in his custody, and, of course, will be subject to the hazard of the loss of the amount of specie in the hands of the sub-Treasurer. If, in the commencement of this system, the holders of this Government paper shall be required to present it for payment in coin, within a specified time, it will be found inconvenient or impracticable to enforce the restriction, and it will be ultimately abandoned.

Is the Senate prepared to consent to place not only all the specie that may be collected for the revenue of the country, at the will of the President, or; which is the same thing, in the custody of persons acting in obedience to his will, but to put him at the head of the most powerful and influential system of Government banks that ever existed?

It is said, in the message, that Government is not bound to supply the country with the exchanges which are necessary to the transaction of its business. But was that the language held during the progress of the contest with the late Bank of the United States? Was not the expectation held out to the People that they would be supplied with a better currency, and with better regulated exchange? And did not both the late President and the Secretary of the Treasury dwell, with particular satisfaction, in several messages and reports, upon the improvement of the currency, the greater amount in exchange, and the reduction of the rates, under the operation of the State bank system, than existed under the Bank of the United States? Instead of fulfilling the promises then held out, the Government now wraps itself in its dignity—tells the People that they expect too much of it; that it is not its business to furnish exchanges; and that they may look to Europe for the manner in which, through the agency of private bankers, the commerce and business of its countries are supplied with exchange. We are advised to give up our American mode of transacting business, through the instrumentality of banking corporations, in which the interests of the rich and the poor are happily blended, and to establish bankers similar to the Hopes, the Barings, the Rothschilds, the Hotinguers, of Europe; houses which require years or ages to form and to put in successful operation, and whose vast overgrown capitals, possessed by the rich exclusively of the poor, control the destiny of nations and determine the fate of empires!

Having, I think, Mr. President, shown that the project of the Administration is neither desirable nor practicable, nor within the constitutional power of the General Government, nor just; and that it is contrary to the habits of the People of the United States, and is dangerous to their liberties, I might here close my remarks; but I conceive it to be the duty of a patriotic opposition not to confine itself merely to urging objections against measures to promote the general prosperity, brought forward by those in power. It has further and higher duties to

perform. There may be circumstances in which the opposition is bound formally to prevent such measures as, in its judgment, are demanded by the exigency of the times; but if it has just reason to believe that they would be unacceptable to those who alone can adopt them, and give them effect, the opposition will discharge its duty by suggesting what it believes ought to be done for the public good.

I know, sir, that I have friends whose partiality has induced them to hope that I would be able to bring forward some healing measure for the disorders which unhappily prevail, that might prove acceptable. I wish to God that I could realize this hope; but I cannot. The disease is of such an alarming character, as to require more skill than I possess; and I regret to be compelled to fear that there is no effectual remedy but that which is in the hands of the suffering patient himself.

Still, under a deep sense of the obligation to which I have referred, I declare that, after the most deliberate and anxious consideration of which I am capable, I can conceive of no adequate remedy which does not comprehend a National Bank as an essential part. It appears to me that a National Bank, with such modifications as experience has pointed out, and particularly such as would limit its profits, exclude foreign influence in the government of it, and give publicity to its transactions, is the only safe and certain remedy that can be adopted. The great want of the country is, a general and uniform currency, and a point of union, a sentinel, a regulator of the issues of the local banks; and that would be supplied by such an institution.

I am not going now to discuss, as an original question, the constitutional power of Congress to establish a national bank. In human affairs there are some questions, and I think this is one, that ought to be held as terminated. From several decisions of Congress affirming the power, the concurrence of every other department of the Government, the approbation of the People, the concurrence of both the great parties into which the country has been divided, and forty years of prosperous experience with such a bank, appear to me to settle the controversy, if any controversy is ever to be settled. Twenty-two years ago, Mr. Madison, whose opposition to the first Bank of the United States is well known, in a message to Congress, said:

"Waiving the question of the constitutional authority of the Legislature, to establish an incorporated bank, as being precluded, in my judgment, by repeated recognitions, under varied circumstances, of the validity of such an institution, in acts of the legislative, executive, and judicial branches of the Government, accompanied by indications, in different modes, of a correspondence of the general will of the nation; the proposed bank does not appear to be calculated to answer the purposes of reviving the public credit, of providing a national medium of circulation, and of aiding the Treasury by facilitating the indispensable anticipations of revenue, and by affording to the public more durable loans."

To all the considerations upon which he then relied, in treating it as a settled question, are now to be added two distinct and distant subsequent expressions of the deliberate opinion of a republican Congress, two solemn decisions of the Supreme Court of the United States, twenty years of successful experience, and disastrous consequences quickly following the discontinuance of the bank.

I have been present, as a member of Congress, on the occasion of the termination of the charters of both the Banks of the United States; took part in the discussion to which they gave rise, and had an opportunity of extensively knowing the opinions of members; and I declare my deliberate conviction that, upon neither was there one-third of the members in either House who entertained the opinion that Congress did not possess the constitutional power to charter a bank.

But it is contended, that, however indispensable a Bank of the United States may be to the restoration of the prosperity of the country, the President's opinion against it opposes an insuperable obstacle to the establishment of such an institution. It will indeed be unfortunate if the only measure which can bring relief to the People, should be prevented by the Magistrate, whose elevated station should render him the most anxious man in the nation to redress existing grievances.

The opinion of the President which is relied

upon, is, that contained in his celebrated letter to the Hon. S. Williams, and that which is expressed in the message before us. I must say, with all proper deference, that no man, prior to or after his election to the Chief Magistracy, has a right to say, in advance, that he would not approve of a particular bill, if it were passed by Congress. An announcement of such a purpose is premature, and contrary to the spirit, if not the express provision of the constitution. According to that instrument, the participation of the President in the legislative power—his right to pass upon a bill—is subsequent, and not previous, to the deliberations of Congress. The constitutional provision is, that, when a bill shall have passed both Houses, it shall be presented to the President for his approval or rejection. His right to pass upon it, results from the presentation of the bill, and is not acquired until it is presented. What would be thought of the judge who, before a cause is brought before the court, should announce his intention to decide in favor of a named party? Or of the Senate, which shares the appointing power, if it should, before a nomination of a particular individual is made for an office, pass a resolution that it would not approve the nomination of that individual?

It is clear that the President places his repugnance to a Bank of the United States, mainly upon the ground that the popular will has been twice "solemnly and unequivocally expressed" against it. In this, I think the President is mistaken. The two occasions to which he is understood to refer, are the election of Gen. Andrew Jackson in 1832, and in his own election in 1836. Now, as to the first, there was not, before it took place, any unequivocal expression of the opinion of the late President against a national bank. There was, in fact, a contrary expression. In the veto message, President Jackson admitted the public convenience of a bank; stated that he did not find in the renewed charter such modifications as could secure his approbation, and added that, if he had been applied to, he could have furnished the model of a bank that would answer the purposes of such an institution. In supporting his re-election, therefore, the People did not intend, by the exercise of their suffrage, to deprive themselves of a national bank. On the contrary, it is within my own knowledge, that many voted for him who believed in the necessity of a bank quite as much as I do. And I am perfectly persuaded that thousands and tens of thousands sustained his re-election under the full expectation that a national bank would be established during his second term.

Nor, sir, can I think that the election of the present Chief Magistrate ought to be taken as evidence that the People are against a bank. The most that fairly can be asserted is, that he was elected, the expression of his opinion in the letter to Mr. Williams notwithstanding. The question of the election of a Chief Magistrate is a complex question, and one of compensations and comparison. All his opinions, all his qualifications are taken into consideration, and compared with those of his competitors. And nothing more is decided by the People than that the person elected is preferred amongst the several candidates. They take him as a man takes his wife, for better or worse, with all the good and bad opinions and qualities which he possesses. You might as well argue that the election of a particular person to the office of Chief Magistrate implies that his figure, form, and appearance exhibit the standard of human perfection, as to contend that it sanctions and approves every opinion which he may have publicly expressed on public affairs. It is somewhat ungrateful to the People to suppose that the particular opinion of Mr. Van Buren, in regard to a Bank of the United States, constituted any, much less the chief recommendation of him to their suffrages. It would be more honorable to him and to them to suppose that it proceeded from his eminent abilities, and his distinguished services at home and abroad. If we are to look beyond them and beyond him, many believe that the most influential cause of his election was the endorsement of that illustrious predecessor, in whose footsteps he stands pledged to follow.

No, sir, no: the simple and naked question of a bank or no Bank of the United States, was not submitted to the People and "twice solemnly and unequivocally" decided against by them. I firmly believe that if such a question were now submitted to them, the response of a vast majority would be in the affirmative. I hope, however, that no bank will be established or proposed, unless there shall be a clear and undisputed majority of the Peo-

ple and of the States in favor of such an institution. If there be one wanted, and an unequivocal manifestation be made of the popular will that it is desired, a bank will be established. The President's opposition to it is founded principally upon the presumed opposition of the People. Let them demonstrate that he is mistaken, and he will not separate himself from them. He is too good a democrat, and the tenor of his whole life shows that, whatever other divorces he may recommend, the last that he would desire would be one between him and the People. Should this not prove to be the case, and if a majority should not exist sufficiently large to pass a bank charter in spite of the veto, the ultimate remedy will remain to the People to change their rulers, if their rulers will not change their opinions.

But, during this debate, it has been contended that the establishment of a new Bank of the United States would aggravate existing distresses; and that the specie necessary to put it in operation could not be obtained without prejudice to the local banks.

What is the relief for which all hearts are now so anxiously throbbing? It is to put the banks again in motion; to restore exchanges, and revive the drooping business of the country. And what are the obstacles? They are, first, the foreign debt, and, secondly, a want of confidence. If the banks were to reopen their vaults, it is apprehended that the specie would immediately be exported to Europe to discharge the foreign debt. Now, if a Bank of the United States were established, with a suitable capital, the stock of that bank itself would form one of the best subjects of remittance; and an amount of it equal to what remains of the foreign debt would probably be remitted, retaining at home or drawing from abroad the equivalent in specie.

A great, if not the greatest existing evil is the want of confidence, not merely in the Government, but in the distant banks, and between the banks themselves. There is no tie or connexion binding them together, and they are often suspicious of each other. To this want of confidence among the banks themselves, is to be ascribed that extraordinary derangement in the exchanges of the country. How otherwise can we account for the fact that the paper of the banks of Mississippi cannot now be exchanged against the paper of the banks of Louisiana, without a discount in the former of ten or fifteen per cent.; nor that of the banks of Nashville, without a discount of eight or ten per cent. against the paper of the banks of the adjoining State of Kentucky? It is manifest that, whatever may be the medium of circulation, whether it be inconvertible paper and specie, supposing confidence to exist, the rates of exchange in both cases ought to be nearly the same. But, in times like these, no bank will allow its funds to accumulate, by the operations of exchange, at points where no present use can be made of them.

Now, if a Bank of the United States were established, with a proper capital, and it were made the sole depository of the public moneys, and its notes were receivable in all Government dues, it might commence operations forthwith, with a small amount of specie, perhaps not more than two millions. That sum would probably be drawn from the community, where it is now hoarded and dormant; or if it were taken even from the local banks, they would be more than compensated in the security which they would enjoy, by the remittance of the stock of the new bank to Europe, as a substitute for their specie.

Such a new bank, once commencing business, would form a rallying point; confidence would revive, exchanges be again regulated, and the business and prosperity of the country be speedily restored. And it is by no means certain that there would be any actual augmentation of the banking capital of the country, for it is highly probable that the aggregate amount of unsound banks, which can never resume specie payments, would be quite equal to that of the new bank.

An auxiliary resolution might be adopted with salutary effect, similar to that which was adopted in 1816, offering to the State banks, as a motive to resume specie payments, that their paper should be received for the public dues; or, as their number has since that period greatly increased, to make the motive more operative, the offer might be confined to one or two banks in each State known to be trustworthy. Let them and a Bank of the United States commence specie payments, and all the other sound banks would be constrained, by the united force of public opinion and the law, to follow the example.

If, in contrasting the two periods of 1817 and 1837, some advantages for the resumption of specie payments existed at the former epoch, others, which distinguish the present, greatly preponderate. At the first, there were none, except the existence of a public debt, and a smaller number of banks. But then an exhausting war had wasted our means. Now we have infinitely greater wealth; our resources are vastly more developed and increased; our population nearly doubled; our knowledge of the disease much better; and, what is of the utmost importance, a remedy, if applied now, would be administered in a much earlier stage of the disorder.

A general currency, of sound and uniform value, is necessary to the well-being of all parts of the confederacy; but it is indispensable to the interior States. The seaboard States have each of them banks, whose paper freely circulates within their respective limits, and serves all the purposes of their business and commerce at their capitals, and throughout their whole extent. The variations, in the value of this paper, in passing through those States, from one commercial metropolis to another, are not ordinarily very great. But how are we, of the interior, to come to the Atlantic cities to purchase our supplies of foreign and domestic commodities, without a general medium? The paper of our own banks will not be received but at a ruinous discount. We want a general currency, which will serve at home, and enable us to carry on our accustomed trade with our brethren of the Atlantic States. And such a currency we have a right to expect.

I do not arrogate to myself a right to speak for and in behalf of all the western States; but as a Senator from one of them, I am entitled to be heard. This Union was formed to secure certain general, but highly important, objects, of which the common defence, commerce, and a uniform currency, were leading ones. To the interior States, none is of more importance than that of currency. Nowhere is the attachment to the Union more ardent than in those States; but if this Government should neglect to perform its duty, the value of the Union will become impaired, and its very existence, in process of time, may become endangered. I do believe, that, between a sound general currency, and the preservation of the Union itself, in full vigor and perfect safety, there is the most intimate connexion.

If, Mr. President, the remedies which I have suggested were successful, at a former period of our history, there is every reason to hope that they would again prove efficacious; but let me suppose that they should not, and that some unknown cause, which could not then, should now, thwart their operation, we should have, in any event, the consolation of knowing that we had endeavored to profit by the lessons of experience, and if they failed, we should stand acquitted in the judgment of the People. They are heartily tired of visionary schemes and wild experiments. They wish to get out of the woods, into which they have been conducted, back to the plain, beaten, wide road, which they had before trodden.

How, and when, without such measures as I have suggested, are the State banks to resume specie payments? They never can resume without concert; and concert springs from confidence; and confidence from knowledge. But what knowledge can eight hundred banks, scattered over our vast territory, have of the actual condition of each other? It is in vain that statements of it be periodically published. It depends, at last, mainly upon the solvency of the debtors to the bank; and how, whenever their names are not known, can that be ascertained?

Instead of coming to the aid of these prostrate institutions, and assisting them by a mild and parental exercise of your power, in a mode sanctioned and approved by experience, you propose to abandon them and the country to their fate. You propose worse: to discredit their paper; to distrust them even as special depositories; and to denounce against them all the pains and penalties of bankruptcy.

How, and when, will they resume specie payments? Never, as far as my information extends, have exertions been greater than those which the banks have generally made to open again their vaults. It is wonderful that the community should have been able to bear, with so much composure and resignation, the prodigious curtailments which have been made. Confidence re-established, the foreign debt extinguished, and a national institution

created, most of them could quickly resume specie payments. Some of them, urged by a high sense of probity, and smarting under severe reproaches, will no doubt make the experiment of resuming and continuing payment in specie. They may even go on a while; but without the co-operation of the State banks generally, and without the co-operation of a national bank, it is to be apprehended that they will be again seized with a paralysis. It is my deliberate conviction, that the preservation of the existence of the State banks themselves, depends upon the institution of a national bank. It is as necessary to them as the Union is to the welfare of the States in our political system. Without it, no human being can foresee when we shall emerge from the difficulties which surround us. It has been my fortune several times to see the country involved in great danger; but never before have I beheld it encompassed with any more menacing and portentous.

Entertaining the views which I have presented, it may be asked why I do not at once propose the establishment of a national bank. I have already adverted to the cause. Constituted as Congress now is, I know that such a proposition would be defeated; and that it would be therefore useless to make it. I do not desire to force upon the Senate, or upon the country, against its will, if I could, my opinion, however sincerely and strongly entertained. If a national bank be established, its stability and its utility will depend upon the general conviction which is felt of its necessity. And until such a conviction is deeply impressed upon the People, and clearly manifested by them, it would, in my judgment, be unwise even to propose a bank.

Of the scheme of the Senator from Virginia, (Mr. RIVES,) I think now as I thought in 1834. I do not believe that any practicable connexion of State banks can supply a general currency, be a safe depository of the public moneys, or act efficiently as a fiscal agent of the General Government. I was not then opposed to the State banks in their proper sphere. I thought that they could not be relied upon to form exclusively a banking system for the country, although they were essential parts of a general system.

The amendment of the Senator, considered as a measure to bring about the resumption of specie payments so much desired, I think must fail. The motive which it holds out of the receivability, in all payments to the Government, of the paper of such banks as may resume by a given day, coupled with the conditions proposed, is wholly inadequate. It is an offer to eight hundred banks; and the revenue, payment of which, in their notes, is held out as the inducement, amounts to some twenty or twenty-five millions. To entitle them to the considerable extension of their circulation, which would result from the credit given by Government to the paper of all of them, they are required to submit to a suppression of all notes below five dollars, and, at no very distant period, to all below twenty. The enlargement of their circulation, produced by making it receivable by Government, would be much less than the contraction which would arise from the suppression of the prohibited notes. Besides, if the quality proposed again to be attached to the notes of these local banks was insufficient to prevent the suspension, how can it be efficacious enough to stimulate a resumption of specie payments?

I shall, nevertheless, if called upon to give a vote between the project of the Administration and the amendment of the Senator from Virginia, vote for the latter, because it is harmless, if it effects no good, and looks to the preservation of the State banks; whilst the other is fraught with mischiefs, as I believe, and tends, if it be not designed, to the utter destruction of those institutions. But, preferring to either the postponement moved by the Senator from Georgia, I shall, in the first instance, vote for that.

Such, Mr. President, are the views which I entertain on the present state of our public affairs. It is with the deepest regret that I can perceive no remedy, but such as is in the hands of the People themselves. Whenever they shall impress upon Congress a conviction of that which they wish applied, they will obtain it, and not before. In the mean time, let us go home, and mix with and consult our constituents. And do not, I entreat you, let us carry with us the burning reproach, that our measures here display a selfish solicitude for the Government itself, but a cold and heartless insensibility to the sufferings of a bleeding people.

## SPEECH OF MR. KING, OF GEORGIA.

[As reported in the National Intelligencer.]

In Senate, September 23, 1837.—On the bill imposing additional duties, as depositories, in certain cases, on public officers.

Mr. KING said that he had not intended to address the Senate on the subject before it until yesterday evening. He had great difficulty in making up his mind between the projects urged by different gentlemen, and, as he was not satisfied with either of them, he had thought it best to postpone the subject till the regular session, and offer some remarks in explanation of his reasons for doing so.

Two plans where (he said) urged upon the Senate; one reported by the Committee on Finance, as proposed to be amended by the Senator from South Carolina; the other the State bank system, which had already been tried, and failed.

As to the last, various apologies had been made here and elsewhere, for its failure; and it had been insisted that it had not had a fair trial, and, therefore, could not be said properly to have failed. The most able and ingenious advocates and apologists of this system that he had heard were his friends from Virginia and New York. If they had not succeeded in convincing the Senate that the system should be re-adopted, (with the modifications proposed,) conviction might be considered as hopeless. He certainly agreed with them, that the system had not had a fair trial. The pets had certainly had a hard time of it under their Executive patron; but he had never had confidence in them from the beginning, and, in truth, the system had never succeeded for one moment. The history of the world furnished no instance in which an administrative measure, so vitally interesting to the whole community, had been so long sustained by a system of mere assumption, deception, and puffing. Business men were rarely deceived by these means; but a large portion of the people were less informed, and believed the statements which were from time to time imposed upon them. Why, (said Mr. K.) I lately saw in one of the numerous apologetic essays on this subject, (even when the exchanges had got into such confusion as to render it impossible to deceive any body,) that the system had been one of the most beautiful in its operation ever devised by the wisdom of man. The author regretted very much that he was not entitled to any share of the honor of having first conceived it; which honor was all due to the great financial wisdom of the ex-President. The fruits of this mighty conception had, however, been blasted by the stupidity of Congress, who had passed, contrary to the known will of the Executive, the obnoxious measure for the distributive deposit with the States in June, 1836. A beautiful system, truly, for the administration of the public finances, that should wither at a hint that we should want a portion of the public treasure in quarterly instalments; the first becoming due more than six months ahead. But, (said Mr. K.) unfortunately, this bill was passed rather too late to afford even a pretext to the advocates of the late President's experiment. I state to the Senate as a fact coming within my own knowledge, that before the distribution bill was passed or talked of, the president of a southern institution passed through this city, with a large amount of specie in his possession, on his way to New York, there to purchase southern and southwestern exchanges. The same operation had been made by others. Was such an operation ever made or dreamed of during the existence of the Bank of the United States before the withdrawal of its branches? A beautiful system of exchanges, this, which would lead men a thousand miles from home to shave the commercial paper of their neighbors.

Here are the evidences of the fulfilment of the promises, that the experiment would give us a better currency, safer depositories, and a "cheaper" system of exchanges. The local banks, whilst the deposits in their vaults were large; the currency expanding; and speculation furnishing demands for money every where and credits every where, afforded exchanges tolerably well between the most commercial points; but the moment these causes ceased to operate, and the branches of the United States Bank were withdrawn, the exchanges fell

into the utmost confusion, and every pretension after this that they were furnishing exchanges as cheaply "as the United States Bank ever did," has been mere assumption, and not calculated to deceive any business man in the community. Sir, (said he,) I have gone to the very counters of these banks and asked for exchange at the published rates. The answer generally was, that, "if they were drawing," they would sell at the published prices, but they rarely had any to sell.

Now, sir, what kind of a profit do you suppose could have induced the strange operation I have described? I have been informed it frequently amounts to 15 and 17 per cent. sometimes less, but always enormous. The operation, if I understand it, was this: A bill was purchased in New York on the debtor of the drawer in the South or West, or Southwest, at a discount of from 4 to 6 per cent. and perhaps sometimes higher. If the bill were paid, the purchaser (being established between the drawer and drawee) again sold a bill drawn on the fund, and charged a premium; for these great regulators were in the habit of shaving in every direction. They would buy southern funds at a heavy discount, and sell a bill on it at a heavy premium. This was the operation if the bill were paid; but if the bill were dishonored, as frequently happened before, and nearly always after the adoption of the specie circular, the bill went back upon the New York drawer with an accumulation of charges, and 5 per cent. damages for the dishonor. The drawer had it to pay, though he had suffered a heavy loss on the discount. This payment of bill and damages furnished the drawer with a northern fund, on which he could again draw at a premium of 5 per cent. Thus the Senate will see the enormous profit that was often made by the discount of a single bill.

It was from exchanges, added to other profits, Mr. KING said, that accounted for the enormous profits and heavy dividends that had been made by some of the banks, some of which he mentioned to have been prodigious within fourteen months preceeding the 1st of March, 1837. Where did these enormous profits come from, and who ultimately paid them? Why, they were shaved from the hard earnings of the industrious classes, being clearly a tax on the circulation of the products of labor.

Mr. K. said he would not detain the Senate by going fully into the capabilities of the State bank system to perform the services promised by it. He stood upon firm ground on this subject. His friends could not charge him with change or inconsistency in this matter; and, as was well known, he had generally predicted, step by step, the consequences that would follow from the financial experiments that had afflicted the country, beginning with that unfortunate and unnecessary measure, the removal of the deposits in 1834. It would be seen that he had no strong predilection for the State bank deposit system, though he admitted that it might have done, and still could do, much better than heretofore, if the Executive would consent to let it alone, and cease the continual interferences by which the banks have been tormented, and the commerce of the country deranged, ever since the Executive had taken the control of the finances.

Mr. K. then proceeded to notice the plan of the committee as proposed to be amended. This he looked upon as a new experiment, though it had been alleged to be otherwise by the Senator from Missouri. The Senator insisted that we were ahead of our destiny, and ought to go back to the glorious days of the Roman empire to learn lessons on finance and political economy. This plan was strongly recommended as having been that under which the Roman quæstors made their mild exactions from the people. It was also recommended most warmly by the Senator, because it was that under which the war levies of Napoleon were made, and the finances of Spain and Turkey collected and disbursed. Upon the first recommendation, the Senator had given us a most eloquent discourse upon Roman heroism, bloody battles, and the levies of the quæstors. He had spoken of the great pleasure with which he read Roman history on these subjects, and the delight with which he contemplated the renown of this great people.

Well, Mr. K. said he had read some Roman history too, though certainly not as good a historian as his friend from Missouri. But if any thing in Roman history had made a strong impression upon his republican mind, it was the heartless cruelty, the unfeeling rigor, and pitiless tyranny with which exactions were made upon the people by the Roman quæstors; and, unfortunately for the Senator's Roman precedent, when these exactions had been made by plundering the Roman people and provinces to support heroism in the trade of conquering and plundering the rest of mankind, these exactions were deposited with Roman bankers appointed for the purpose.

As the Roman precedent was not found exactly satisfactory to Mr. K. he proceeded to notice the system so warmly recommended as the plan of that great democrat and ardent lover of liberty and free institutions, the Emperor Napoleon. His friend from Missouri had stated that when the Emperor mounted the throne of power, he found the State coffers empty, or nearly so; but in a short time they were filled to overflowing. Thereupon the Senator produced a book, or a document, to prove the important fact. The fact was not doubted; but how were these wonders of finance accomplished? Let his impoverished country, and the blood and tears of unhappy Germany, answer the question. However, perhaps the financiering of this great economist was strongly recommended from the fact that the largest and most timely accession to his finances was made by the robbery of a bank; and that, too, a bank belonging to one of the freest and most commercial cities of Europe.\*

Mr. K. said he saw nothing in these imperial precedents, ancient or modern, very applicable or very captivating; and as he saw nothing in the happy and prosperous condition of the people of those free and commercial nations, Turkey and Spain, to excite his envy, he would rather consider this as a new and untried experiment, and digest it a little better before it was adopted. Mr. K. added, that the system was already in operation, as the changes proposed did not alter essentially the specie system adopted by the Executive since the suspension of specie payments. The postponement would give us a little more time to observe the workings of the system, and ascertain the wishes of the people. He was glad to see the finances restored to Congress, their lawful guardian, on almost any terms; but really they were in such a worthless and ragged condition, from Executive manipulation, that it was difficult to say what disposition had better be made of them.

Mr. K. said he doubted whether he ought to detain the Senate to say any thing upon the causes of the present distress, which had called Congress together. As this subject had been dwelt upon, however, by every speaker who had preceded him, and was certainly of great importance to the country, it was perhaps the duty of every member to give his views upon the subject. The subject, said he, is too important to be trifled with. It comes to the doors and dwellings, and reaches the bread and business, of every citizen, of every condition; and I shall give my views, however unwillingly, uninfluenced by all personal friendships and party associations. Unless we ascertain the causes which have so strangely brought the country into its present distressed condition, in a time of profound peace, we shall neither know how to apply present remedies nor avoid similar evils in future.

Mr. K. then said he had not the slightest doubt that our difficulties were owing entirely to the unfortunate policy and violent measures of the Executive in relation to the finances for several years past. This was the only cause, and this was abundantly sufficient. Mr. K. said he could prove this to any one who would not shut his eyes to facts, and close his understanding against correct information on the subject. He had felt and expressed his astonishment when he first read the President's Message, at the statements of the President in relation to these causes; and he had been equally astonished at hearing his friends from Connecticut and North Carolina adopt these statements, and take them as admitted truths. The President was

\* Hamburg.

entirely mistaken in these statements, and to allow them to remain uncorrected would only continue to obscure and mystify the subject.

For the better understanding of the subject, he would read the passages alluded to. Mr. K. then read the passages which follow:

"However unwilling any of our citizens may heretofore have been to assign to these causes the chief instrumentality in producing the present state of things, the developments subsequently made, and the actual condition of other commercial countries, must, as it seems to me, dispel all remaining doubts upon the subject. It has since appeared that evils, similar to those suffered by ourselves, have been experienced in Great Britain, on the Continent, and, indeed, throughout the commercial world; and that in other countries, as well as in our own, they have been uniformly produced by an undue enlargement of the boundaries of trade, prompted, as with us, by unprecedented expansions of the systems of credit. A reference to the amount of banking capital, and the issues of paper credits put in circulation in Great Britain, by banks, and in other ways, during the years 1834, 1835, and 1836, will show an augmentation of the paper currency there, as much disproportioned to the real wants of trade, as in the United States. With this redundancy of the paper currency, there arose in that country also a spirit of adventurous speculation, embracing the whole range of human enterprise. Aid was profusely given to projected improvements; large investments were made in foreign stocks and loans; credits for goods were granted, with unbounded liberality, to merchants in foreign countries; and all the means of acquiring and employing credit were put in active operation, and extended, in their effects, to every department of business, and to every quarter of the globe. The reaction was proportioned in its violence to the extraordinary character of the events which preceded it. The commercial community of Great Britain were subjected to the greatest difficulties, and their debtors in this country were not only suddenly deprived of accustomed and expected credits, but called upon for payments, which, in the actual posture of things here, could only be made through a general pressure, and at the most ruinous sacrifices.

"In view of these facts, it would seem impossible for sincere inquirers after truth to resist the conviction, that the causes of the revulsion in both countries have been substantially the same. Two nations, the most commercial in the world, enjoying but recently the highest degree of apparent prosperity, and maintaining with each other the closest relations, are suddenly, in a time of profound peace, and without any great national disaster, arrested in their career, and plunged into a state of embarrassment and distress. In both countries we have witnessed the same redundancy of paper money, and other facilities of credit; the same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same overwhelming catastrophe. The most material difference between the results in the two countries has only been, that, with us, there has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments, occasioned by the suspension of specie payments by the banks."

Now, that over-banking, over-issuing, &c. as mentioned by the President, have been operating causes, is only a common belief. But where did they originate, and who produced them? That is the first question. And here Mr. K. stated that the President was mistaken in every fact assumed by him to exculpate our own Government from the charge of being the original cause of the mischief. Other countries have been suffering "no evils similar to those suffered by ourselves," except those which they have suffered by their connections with, and losses by, us. And "a reference to the amount of banking capital, and the issues of paper credits, put in circulation in Great Britain, &c. during the years 1834, 1835, and 1836," will not "show an augmentation of the paper currency there, as much disproportioned to the real wants of trade as in the United States." Nor has there been in England any general rise of prices; nor do we witness "in both

countries, the same redundancy of paper money, and other facilities of credit," or the "the same spirit of speculation." These positions of the President are entirely erroneous, and the facts he supposes have not a shadow of existence.

He said he did not, of course, make these contradictions in an offensive sense, or in a way disrespectful to the President. He had been in favor of his election, and did not regret it. He moreover believed him to be a man of patriotism and integrity, as well as intelligence, and he hoped to be able to support his administration. But if he was (as he was doubtless) a "sincere inquirer after truth," he would be glad to be corrected in views calculated to deceive the people, and divert their minds from the true agency by which they have been overwhelmed. The President's "difference," in fact, ought to have shown him where the fault lay. He states that one nation has become bankrupt. The other sustained itself, and is now nearly recovered. Why this "difference?" Why, simply because ours is the distress of the debtor unable to pay the debt; theirs is the distress of the creditor for want of the money due him. The creditor of a bankrupt is frequently much injured for want of his money, but it does not necessarily follow that he also fails. And in no case is he also chargeable with the follies and extravagances that brought about the disaster. He may have been too confiding, but there his fault ends. The injudicious prodigal, with bad advisers, may contract debts, multiply obligations, make experiments, and become embarrassed and bankrupt. The confiding neighbor who trusted him too far, may feel sensibly the want of his debt, be obliged to curtail his expenses, or otherwise economize for a while; but, being the creditor, and therefore most likely the richer of the two, he is not so likely to be ruined. [Here Mr. K. read an extract of a letter from a gentleman of Liverpool, stating that "there is no distress in England except that which grows out of American connections; and that is passing off, though much of the debt remains unpaid." England, we are told from all quarters, is now easy, and, with an abundance of capital, prepared to make investments, and engage in new enterprises. Yet a mere check to the lavish accommodations of the capitalist, by the embarrassment of his debtor, is analogized with the utmost complacency to the prostrate and helpless condition of his bankrupt debtor himself!]

Those, he said, who insisted that the national distress could not have been occasioned by the acts of our own Executive, because there had been some distress in those commercial nations with whom we trade, put him in mind of that great philosopher who stumped his toe in the darkness of midnight, and railed out against the sun for not shining in the night instead of the day; alleging, as the result of his most profound observation, that there was light enough in the day without him. They confounded cause and consequence, and lost all connection between them. It never occurred to the philosopher that the sun might itself be the cause of light, and these gentlemen cannot see our own agency in producing this embarrassment abroad, though the one agency is just about as plain as the other.

Mr. K. said he would try and remove the difficulty of those who felt so much embarrassment on this subject by proving—

1. That there had been no redundancy of the currency in England between 1834 and 1837; but, on the contrary, the value of money during this period had greatly increased, by the increase of national wealth, whilst currency remained about stationary.

2. That there had been in England no national over-trading, and that her exchanges had been depreciated by receiving our credit in exchange for her cash and commodities.

3. That our extraordinary, but speculative, demand for the products of English labor had created some activity, especially to the manufacturing interests. Our increased demand for the products of their labor, counteracting our unnatural credit demand for their money also; and, thereby, only maintaining prices which otherwise (so far from a speculative rise) would have been depreciated by an appreciation of money.

These propositions, Mr. K. said, would rather

astonish those who had taken it for granted, without inquiry, that, by some magical fatality the whole world had been guilty of folly similar to our own, and visited with similar punishment. But if they would take leave of mere assumptions, stump speeches, party presses, and vagrant conjectures, and be content with the plain evidence of their senses, he thought he would maintain every proposition to the satisfaction of all who would listen to him.

On the first proposition, let us see whether "a reference to the amount of banking capital, &c. in Great Britain, during the years 1834, 1835, and 1836, will show an augmentation of paper currency there as much disproportioned to the wants of trade as in the United States."

Mr. K. then read the following table, (prepared from official statements:)

*Circulation of the Bank of England, joint stock, and private banks.*

	Bank of Eng.	Joint stock.	Private.	Total.
January, 1833,	18,318,000	1,315,000	8,836,000	28,469,000
1834,	18,377,000	1,258,000	8,733,000	28,568,000
1835,	18,100,000	2,188,000	8,281,000	28,519,000
1836,	17,427,000	3,093,000	8,357,000	28,875,000
1837,	17,863,000	3,755,000	7,268,000	28,881,000

The foregoing table is made from the February monthly returns of the Bank of England, and the December to March quarterly returns of the joint stock and private banks, as being the most likely way to approximate to the aggregate for the month of January. The original official returns were before him, Mr. King said, and were at the service of any gentleman; and the monthly and tri-monthly variation in the entire circulation was so trifling that it was scarcely worth naming. It would be seen, from the above table, that the entire "augmentation of paper currency" in England during the years 1834, 1835, and 1836, the period mentioned by the President, was only £323,000, or about one-third of one per cent. on the currency, estimating the whole currency of England at £200,000,000; and the entire "augmentation" during 1833 to 1836 inclusive, (commencing one year earlier,) was only £412,000, or not quite one-half of one per cent. on the whole currency, and about one and a half per cent. on the paper circulation. Now let us see whether this increase is "similar to our own," during the same period.

Mr. King then presented a statement, which he believed to be as accurate as it could be made by a collection and continuation of the returns of local banks up to 1st January, 1837. It was more likely to be an under than an over estimate, from the great difficulty of finding new banks and getting statements of their issues. The following is the statement:

On the 1st of January in the following years, the state of the banks was this:

Number of banks.	Capital.	Loans.	Bills in circulation.	Deposites.	Liabilities on bills & deposits.
	Millions of dollars.				
1830, 320	145	200	61	56	117
1834, 506	200	324	95	76	171
1835, 558	231	365	104	83	187
1836, 567	252	458	140	115	255
1837, 677	324	591	186	155	341

By the above table, it will be seen that, when we add the estimated amount of specie in 1834 and 1836, respectively, we find an augmentation of the entire currency of nearly ninety-four per cent. and an augmentation of paper circulation of nearly ninety-six per cent. Our own entire currency, then, "during the years 1834, 1835, and 1836," has increased nearly ninety-four per cent. and our paper circulation, during the same period, nearly ninety-six per cent.; whilst the entire currency of England has increased about one-third of one per cent. and her paper circulation, during that period, having fluctuated a mere trifle at any time, and sometimes even contracted, is found, at the end of the period mentioned, to have increased only about one and a half per cent. He had not given himself the trouble to be very minute in the calculation.

tions above, and had used round numbers; but no use of authentic materials could vary the result more than a mere fraction, and strict accuracy would most likely make the comparison more unfavorable to the statement of an equal expansion in the two countries during the period referred to.

Instead of equality, then, we had, for England, an increase in the entire estimated currency of the nation of about one-third of one per cent.;

In the United States, an increase of about ninety-four per cent.;

In England, an increase of paper currency of about one and a half per cent.;

In the United States, an increase of about ninety-six per cent.

So much (said Mr. King) for an equal expansion of the currency in both countries. As to the "other credits," they were not tangible, but every man of any observation must know that on this item we should suffer in the comparison more than in the other. Credits were certainly multiplied in England, in some districts, by the increase of the number of joint-stock banks, by which new connections were formed, and the number of checks, drafts, &c. increased. But the increase of joint-stock banks (deducting the private banks melted into them) bears no comparison to the increase of banks in this country, as we find from official statements. The consequent increase of credits, though they can not be ascertained with precision in either country, may be compared by the result. The increase of credit in England has been based on the same national cash capital, as appears by the unchanged quantity of the currency, as exhibited by the tables. And that it has not been redundant, is unanswerably proven by its having produced no general speculative rise of prices. To speak of a redundancy of currency or credit, when no speculative rise in commodities has taken place, is perfect nonsense. Where facts have been stated and not proved, I have taken issue, and disproved them by facts fully established. Where facts are conjectured, I will presently introduce evidence to prove the conjectures groundless, by proving the absence of consequences invariably connected with them. The only way in which a redundancy of currency or credit depreciates foreign exchange, is by producing a speculative rise in prices, and a consequent over-trading. England has not over-traded; on the contrary, she has exported more than she imported, and left us enormously in her debt. But, whilst she had a large balance against us, exchange was against her, and making a continual drain upon her bullion! This strange financial and commercial anomaly, so embarrassing to the English, I will hereafter explain, after having completed the proof on the first proposition.

He then read the evidence of Mr. Gurney, a man of so much intelligence and authority on these subjects as to be called before the joint stock bank committee lately appointed by parliament. This witness shows remarkable intelligence on the subject of finance, but is here strangely embarrassed for want of facts, of which he seems entirely ignorant. [Here Mr. K. read the evidence of Mr. Gurney as follows:]

*Evidence of Mr. Gurney before the Committee of Joint Stock Banks.*

Q. 2592. Has there been any change of late in the State of the London money market?

There has been a gradual increase in the value of money.

Q. 2594. To what do you attribute that altered state of the money market in London?

One cause has been the exportation of bullion to foreign countries; but I apprehend the main cause is, the circulating medium existing in Europe and the mercantile parts of America (!) is not increased in proportion to the transactions, and that the same quantity of circulating medium, or, perhaps, even a reduced quantity, has to perform a much larger amount of transactions.

Q. 2595. Would not the effect of it, if owing to that to which you have alluded, be rather indicated in a fall in the money prices of commodities?

That is the tendency of it; but there are conflict-

ing causes that have marvellously maintained (not increased) the value of commodities generally.

Mr. Gurney is a bill broker, who procures the discount or rediscount of country bills in the London market. He was, therefore, well acquainted with the facts, and the subject on which he speaks, so far as England was concerned; and he tells us that "the value of money had gradually increased." And in another part of his evidence he tells us that the increase is about 20 per cent. He knew this as a fact, and in England he was enabled, in some measure, to account for it, for he knew that currency had not increased, whilst, from the progressive increase of national wealth, commodities and transactions had. He could, therefore, account for the depreciation of exchange, and export of gold to America, on no other supposition than that the currency of the "commercial parts of America" was even more contracted and disproportioned to commodities than in England. But why was not the appreciation of money "indicated by a fall in the money prices of commodities?" Though this was the natural "tendency," "conflicting causes marvellously maintained prices." What were the conflicting causes referred to by Mr. Gurney? Evidently the "increased activity in the manufacturing districts" by the increased demand for the products of English labor for American consumption. The depreciation of commodities by the appreciation of money was counteracted by an appreciation of commodities by an increased demand for them. Though the ideas of Mr. Gurney seem clear, he seems, for want of facts, to be involved in embarrassment and apparent contradiction. That the value of money was raised in England by an insufficiency in quantity, was inconsistent with the exportation of gold, unless in America, also, the currency was contracted. And yet a contraction of the currency in America was inconsistent with our increased demand for English manufactures. Had the witness, however, known that, so far from a contraction, our currency had expanded near 100 per cent. and that exchanges were in our favor whilst there was a large balance against us; that we were draining them of their gold in defiance of this heavy debt and redundant currency; his embarrassment would have increased, until he ascertained that we were performing all these commercial miracles under a new system of finance, by which we exchanged our credit for their capital, and, after going in debt for a large commercial balance, borrowed a still greater amount, and thereby turned the exchanges against them by borrowing their own money.

Mr. K. further sustained his proposition, and strengthened his evidence upon this point by introducing official tables from England of some of the principal articles of raw produce for English manufactures, &c. entered for home consumption, and the official and declared valuation of exports; both embracing the period in question, except the official valuation for 1837, which he had not been able to obtain.

The following are the tables produced and read by Mr. KING:

*Quantities of several principal articles of raw produce of manufactures, &c. entered for home consumption in the years ending January 5, respectively, with the absolute, and proportional increase from 1834 to 1837.*

ARTICLES.	1834	1835	1836	1837
Cotton, lbs.	396,497,167	303,602,601	333,043,464	376,950,569
Silk, raw "	3,838,795	3,346,751	4,151,006	4,372,493
thrown "	268,367	165,763	254,578	294,931
Wool "	39,153,463	41,113,448	43,119,993	60,724,794
Absolute increase.				
Cotton, lbs.	72,384,168			20.20 nearly
Silk, raw "	1,025,747			30. do
thrown "	129,166			50. do
Wool "	19,611,316			50. do

*Table of the produce and manufactures of Great Britain exported to foreign ports, calculated at the official and declared rate of valuation.*

Official Valuation.				
1834	1835	1836		
69,633,853	73,495,535	77,932,616		
Increase official value, 5.9.				
Declared Valuation.				
1834	1835	1836		1837
39,305,512	41,286,594	41,437,123	46,796,937	
Increase declared value, 12.9.				

By the above official tables, Mr. K. said it would clearly appear that the national wealth and industry had greatly increased, whilst the currency had remained about stationary, as previously established. Mr. K. thought he had now fully established that the currency of England had not been equally expanded with our own, but on the contrary there had been actually "a gradual increase in the value of money."

The second proposition (Mr. K. said) scarcely needed proof, from its close connection with the first. He would put the matter at rest, however, by the production of evidence that ought to be satisfactory to all. This evidence was the perfect agreement, on this point, of Mr. Horsley Palmer and Mr. Knowles, in their controversy concerning the action of the joint stock banks and the conduct of the Bank of England. Mr. Palmer, in apologizing for the contraction of the bank, and alluding to the causes, etc. says: "it is necessary to state these, as they seem, in no degree, to have arisen from over-trading or any undue speculative advance in commercial prices." Mr. Knowles, however, is not satisfied with this admission; but wishing the fact established beyond doubt, he asserts the same thing, and refers to the proofs. Mr. Knowles, after proving that the legitimate demand for currency had been increased by the increase of national wealth, says: "A table of prices, had I time to prepare one, would prove beyond question that so far from a rise in prices generally, in many cases there has been a fall, even with decreasing stock; a fact quite incompatible with an over-issue and depreciation of the currency. While, again, where a rise in prices has taken place, it is distinctly referrible to causes prospectively affecting the market as to supply." Some fluctuations were doubtless exhibited in the manufacturing districts in particular articles, and especially in articles for American consumption, which, from the heavy increased demand for them, could not be readily supplied by existing establishments. This, however, "is distinctly referrible to causes affecting the market as to supply," and was no evidence of a redundancy of the circulation. The distinction might always be settled by an observation of the following rules: that whenever there is a great fluctuation in the value of a particular article or commodity, whilst the value of the property of the country generally remains unaffected, we may take it for granted that the fluctuation is owing to a change in the relation between the demand and supply. For instance, if there be a short crop of corn, the supply will fall short of the demand, and the price of corn will rise, whilst all other commodities may stand firm. This rise is occasioned by the change in the relation between the supply and demand. But if we find the price of every commodity raised to an unusual elevation, (as lately in the United States,) we may take it for granted that the price is owing to the change in the relation between currency and commodities; in other words, that currency or credit, or both, has been greatly increased, and, consequently depreciated. This partial and local fluctuation, then, where it existed, amounted to nothing, as it was trifling and partial, and attributed to a fluctuation between supply and demand—a fluctuation to be found to some extent in all countries, and at all times. Doubtless some additional activity was occasioned by our artificial and credit demand for manufactures, attended also with an increase of manufacturing stock. It was very likely, also, some local over-action in the joint stock banks was occasioned by the large profits they derived from the discount of American securities and credits to supply our credit demand for money; for under our preposterous system adopted in 1834, of importing borrowed money to multiply credits upon, we have been willing to take all their cash as well as all their commodities, and give more than any body else for them, if they would only let us have them on credit. These partial fluctuations were uncertain and unimportant, and, so far as they did exist, if at all, are easily accounted for, and principally, if not entirely, to be attributed to a connection with us. In no view of the subject could they be used as evidence of a national redundancy of currency or credit, or of a national over-trading, neither of which, as we have seen, had taken place.

Mr. K. said the latter part of the second proposition, and the whole of the third, seemed to be established by inference from the positions already established, and the proofs already adduced. The only further proof that could be deemed necessary on these points, was to establish the fact, that, at the very time we were importing large sums of specie under the encouragement of the wise policy of the Executive, as it was called, we were enormously indebted, not only on a commercial balance, but also for money borrowed in the very face of this commercial balance against us.

Mr. K. said, it here again became his unpleasant duty to prove that the President was mistaken in his estimate of the amount of our foreign debt. It was important to notice this mistake with another view. We would not act in reference to our true situation as debtors, if we believed we owed nothing. The President gives the estimate of our foreign debt in March last, at thirty millions of dollars. The President could have had no unworthy object in this under estimate; but still it is a mistake, and one that should be noticed and corrected. If the estimate of the President were correct, the debt had evidently been paid, and over paid. He had seen an estimate more than two months ago, which seemed reasonable, and probable in all its details, which estimated the liquidation of our foreign debt since the suspension of specie payments at \$32,000,000. We had been remitting specie, and exchange, and shipping cotton ever since; and he had not the slightest idea that we had paid and liquidated in different ways, since March last, less than forty-five, and perhaps fifty millions of dollars: and yet we find the exchanges heavily against us. He hoped, then, our banks would not begin to expand, and our people to over-trade, on the presumption that Europe was indebted to us.

Mr. K. said no one could pretend to accuracy as to the amount of our foreign debt in March last, but he thought he could satisfy the Senate, that if every species of obligation were taken into account, it was much nearer one hundred and thirty than thirty millions of dollars.

Mr. K. then proceeded to furnish the Senate with such evidence as he had to offer on this subject. In the first place, he took the commercial balance alone for the year 1836, as reported by the Secretary of the Treasury, at upwards of sixty millions. It seemed, by the report furnished at this session by the Secretary, that he estimated the commercial balance which remained as a foreign debt, at over thirty millions; and perhaps this statement misled the President, who took the Secretary's commercial balance of one year for the entire balance at the period referred to. He thought, however, that the Secretary was mistaken even as to this commercial balance for 1836. He seemed to have deducted thirty millions from the sixty (as Mr. K. supposed,) for our share of the profits of trade. Mr. K. thought not a cent should be deducted. We had it from English accounts, and had too much reason to believe the fact, that the principal articles of American exports declined from 30 to 40 per cent. between July, 1836, and April, 1837. He believed, then, we had lost on our exports the full amount of profit, and perhaps more; and that the gross amount of balance might safely be estimated as a foreign debt against us for the year 1836 alone.

Mr. K. then proceeded to show the amount of money we had borrowed in Europe in the space of one year ending in the fall of 1836. As Europe owed us nothing on an exchange of commodities, of course the amount of specie (beyond that included in the statement of imports) which we obtained from them, must have been obtained on credit, in some form or other. It was impossible to get at any thing like correct official information on this subject. As there was no duty or prohibition either on exports or imports of specie, there was but little attention paid to it at custom-houses either in Europe or America. Large bankers, whose business gives them an interest, as well as knowledge of loans and specie shipments, were the only class from which much information could be obtained, and they rarely knew of any except large and notorious transactions. A statement made by Mr. Fayot, of Paris, a man of great research and many opportunities, he believed as much to be

relied on as any other. This statement was made in the latter part (if he mistook not) of 1836, and purported to be an estimate of the specie shipped from Europe to America during the year preceding the statement. This statement Mr. K. read, as follows:

Statement from Frederick Fayot's essay, published in Paris, in 1836, of the amount of specie shipped from Europe to America in one year previous to the date of the essay.

England, from documentary evidence, say	-	-	-	\$6,041,666
Holland, two loans, forming together	-	-	-	
£2,500,000, one-half shipped in specie				1,250,000
In France, the indemnity 18,000,000 fr.				
and Hottinguer loan 14,000,000, together	-	-	-	1,333,333
				\$8,624,999

If the above statement be correct, (and it was certainly more likely to be under, than over, the true amount,) we had imported near forty millions of dollars in one year, besides the indemnity, which, if the laws of trade had been allowed a free operation, would have been more profitably drawn for than imported. Adding the above sum to the commercial balance of 60,000,000, and we had evidence of about 100,000,000, less only the specie included in imports. In addition to this, it was well known, he said, that we had been issuing credits to a greater or less extent, ever since the commencement of 1834, and the entire foreign debt might safely be put down at much more than 100,000,000 in March last. The debt being established, it follows that the state of our foreign exchanges have been false and delusive, and, having been effected by the use of credit, have been no indication of the true balance of trade on a fair exchange of commodities; credit having the same effect on the exchanges as the exportation of an equal value in commodities. Mr. K. however, concluded this branch of the subject by adding that it would not be necessary to pay the whole debt before exchanges would be equalized, a very large portion of it having assumed the form of investments, on which we should only have to pay the interest; and, moreover, the nature of the commerce between the two countries will bear a very considerable foreign debt against us, without affecting the exchanges.

Mr. K. said that he hoped he had proven to the satisfaction of the Senate, that the causes of the present distress were not common to other commercial countries, which, in fact, had suffered only by their connection with us. They had not over-traded, over-issued, nor had any speculative rise in prices similar to our own. The causes, then, must be located in our own country; and Mr. K. said he would endeavor to explain when, how, and by what agency, they originated here.

He then went back to the removal of the depositories in 1833—a measure that he had frequently spoken of before, as having been productive of much mischief, and no counterbalancing good. He had briefly noticed its agency in bringing the country into its then present condition at the last session; and every prediction then made had become true, and each cause had operated in the manner there stated, so far as they had been since developed. He would only now say of it what all admitted—that it produced a panic which greatly depreciated every article of home consumption in the latter part of 1833 and part of 1834, whilst the price of our exports was not affected by the measure in the foreign market. The immediate effect was a rise in our foreign exchanges, and twelve or fourteen millions of specie poured in upon us. This effect was not anticipated by the President, as we could see by an exposition of his views when the measure was adopted. He had no more idea of bringing specie, than he had of bringing London to America by the removal of the depositories. Yet the friends of the measure immediately boasted of it, as one of the happy results of that wise measure, from which many and countless blessings were to flow in upon the country. Well, sir, the currency was already full, if not redundant; and that this specie, thus suddenly forced in upon us by violently striking down the value of home con-

sumption, would displace an equal amount of paper circulating in good credit, was one of those strange experimental notions by which people unacquainted with the subject have been deluded, and our finances ruined. Paper must first be expelled, and then specie will fill the vacuum, by a law of currency. Expulsion must precede, and can not, under such circumstances, be expected to follow, the introduction of specie, which, instead of expelling paper, will become the basis of further issues by banks, if they be left uncontrolled by any restricting or regulating power. Accordingly, much of this specie went into banks, or was collected together in the formation of new banks, the whole continuing to expand, and produce a speculative rise in prices, which, by a reciprocating operation, produced still farther expansions, by a well-known law of finance. This, of course, produced speculation at home and heavy importations from abroad, which at last even extended to the necessities of life. Our people being intoxicated by this delusive prosperity, every species of property was embraced in the wide range of speculation, which speedily reached the public lands. Every one seemed to think it much easier to get rich by speculating in land than by cultivating it; and, by large land sales, added to heavy importations, soon produced an enormous surplus in the Treasury, which was distributed in a great number of banks. There was a great anxiety to recommend State depositories to the people, and reconcile them to the loss of the United States Bank, by proving that institution to be unnecessary, and accordingly they were stimulated to accommodate the community by the use of the public funds. In this way banks were multiplied, paper issues were multiplied, speculations were stimulated, and produced that bloated and diseased condition which began to manifest itself in the summer of 1836.

It may be necessary in this connection more particularly to notice the means by which we were enabled so long to keep up this forcing process, and prevent an earlier reaction by the operation of our foreign debt. This was plain enough, when the facts were known, though it had continued long to puzzle the best financiers of Europe. The natural effect of the general speculative rise of prices here, from a redundancy of our currency and credit, was to depreciate our foreign exchanges, and produce a call for the balance of our foreign debt. Yet we prevented this, by sending them bonds, bank shares, State stocks, and credits of various descriptions, to a greater amount than we owed them. By these means we raised our own exchanges and depreciated theirs, which drained them of their bullion, (as before intimated,) by means of the credits they extended to us. These speculations at home had produced almost an unlimited demand for money, and we would take all their cash, as well as all their commodities, and overbid their own capitalists to get them, provided we could make the operation on credit. Thus we continued inverting the laws of trade, and utterly confounding the bank directors and capitalists of England, until the summer of 1836. We find that the bank directors then made the discovery that the United States had been draining them of their gold "on credit," and they took steps to prevent it, by increasing the rate of interest in June to four and a half, and in August to five per cent.

Let us now return to the United States. In June, 1836, the ruin threatened by so large an accumulation of the public money, and the uses that were made of it, and the unsound state of the currency generally, was so manifest, that all parties united in the opinion that something must be done with it. After full discussion and great deliberation, Congress, with uncommon unanimity, adopted the law to distribute the deposits among the States. Though no measure could be free from objection, this was certainly the wisest that could have been adopted in reference to the end proposed. It depleted the Treasury, and checked over-issues, by a public law, with full notice, easy terms, and ample time for its execution. The President was, unfortunately, opposed to it, and seemed determined not only to use every means to prevent its efficiency, but to prevent its operation on the western and southwestern deposite banks; which, in fact, most needed its opera-

tion. With this view, he adopted the famous Specie circular—a sort of order in council—though the identical measure had been a few days before proposed as a legislative measure, and, with almost perfect unanimity, rejected by the Senate.

The principal, perhaps only, object of this measure was to save from explosion some of the tottering deposit banks in the west and southwest, when they should be called on to comply with the deposit law, and surrender the public money. His object could not have been to prevent over-issues, such an object being inconsistent with his opposition to the deposit bill, which was certainly, of all others, the best conceived for that purpose. Whatever might have been the motive, the measure was an unwise and unfortunate one, deranging the whole internal commerce of the country, producing panic, breaking up exchanges, and destroying credit, at the very time, of all others, when the country should have been permitted to make the best of its resources, without violence or surprise.

Mr. K. said he was sorry to see his friends who had voted against this Executive measure throughout, now coming forward sanctifying an Executive triumph over the legislative authority, by acknowledging their error. His worthy friend from Connecticut had said, that though he had voted uniformly against it, yet that it "might have done some good in saving the banks." This confession of his friend was, perhaps, a harmless offering to Executive power; but as he did not approve of such gratuitous benevolence at the cost of consistency, in a matter of so much importance to the country, he must say to his friend that he entirely disagreed with him, and must call upon him for some of the beneficial effects of this wise and salutary measure. The Senator himself told us in the next breath that the deposit banks, and all other banks, are broken, and that the public money, both specie and paper, have become unavailable in their vaults. The patient is dead, and yet the treatment is lauded. If a quack, in defiance of all remonstrances, continues his treatment, and the patient dies, we may conjecture that he would have done *no better* with a different treatment, or without treatment; but *how he could have done worse*, it is somewhat difficult to conceive. This measure, then, condemned by the Senate, condemned by the Cabinet, condemned by the people, after full trial, condemned by the whole legislative authority, and condemned by the strong evidences of the mischief it has produced, is still persevered in by the Executive, lauded for its "salutary effects," and was referred to by one Senator (looking at Mr. Benton) as "the glorious specie circular." [Mr. BENTON: "Yes, the ever-glorious specie circular."] Mr. K. (with great animation) Ah, yes, it is all glory, and no good. Where are the evidences of your glory? Is there any thing glorious in the present unhappy condition of the country? Your Government insolvent and disgraced. Our people branded by foreigners as a nation of fraudulent bankrupts and swindlers; your merchants bankrupt; your manufacturers languishing in idleness and distress; your planters ruined, and two-thirds of the laboring population of the United States threatened with actual starvation. These are the evidences of the "salutary" effects of the measures we are called on to glorify. Why, sir, the Senator must have forgotten that glory has depreciated in the market. Like paper currency, it has been redundant, and is now almost as much below par, as rag money; very much for the same reason, too. One examination, we find that neither has had a very solid basis to rest upon.

So much (said Mr. KING) for the *glory* of this order. I now propose to take a more dispassionate, and better reasoned view of it as a financial measure.

The plain objection to the circular as a financial measure is, that it did violence to all the laws of trade and commerce *by the forcible interference of the Government*. The easing operations of exchanges, so useful and necessary in adjusting ascertained balances between different sections of the country, were suddenly and violently interrupted. The useful admonition of an unfavorable balance, as indicated by the exchanges, was not only disregarded, but that balance forcibly increased. The destructive tendency of such interference by Govern-

ment in the commerce of the country has been acknowledged by the Senator from North Carolina (Mr. Strange) though I thought the principle might have been better applied by him. Such measures produce the same effects in the same way, whenever and wherever applied in a free commercial country; always taking the people by surprise, and breaking up the established order of thing. The business of the country is as effectually deranged and disorganized by such violence as is the human system by the destruction of the heart.

Commerce has its laws. The People study them, and by study, observation, and experience, become acquainted with them, to a very great extent, and make their calculations and regulate their business accordingly. They always must greatly suffer when forcibly deprived of these advantages; and particularly if the force be applied to a paper or mixed currency. Doubtless the evils of a paper currency (though it has some advantages,) are very great. I do not know, in many respects, that they are over-estimated by the Senator from Missouri. I hope he, however, after the most fatal experience to the country, will come to the conclusion that the evils of the system can only be reached by a legislative authority that can reach the system itself. It is acknowledged we have no power over the system, and yet, by this Executive lashing and fretting, and chastising, and torturing, we keep the country and the currency in a perpetual fever and fluctuation, giving us all the evils of the system, without its advantages. Sir, you might as well undertake to make a full-grown intellectual man, with trowel and mortar, and regulate the circulation of his blood with a tinker's tools, as to undertake to make a uniform standard of value of a paper or mixed currency, and regulate its functions, as money, by the continual tinkering, and the successive and sudden application of force by the iron hand of Government. Sir, you can't do it; you have neither the materials nor the laws for such a consummation. You may do infinite mischief, but you will never do any good. You may break up business, and ruin the industrious classes, but you will do no good to any class, except such as know how to profit by confusion, and speculate on the misfortunes of their fellow-men.

He said, that at the very time this strange order was issued, exchange was already sufficiently high against the southwest, and west, to have made the transmission of specie a profitable operation. This was seen by the Senate when they with such unanimity refused to take the responsibility of the measure. The effect, as foreseen, was first to raise the exchanges, and then break them up. Why, sir, said he, if the whole currency of the country had been specie, any measure opposing the force of Government to the laws of trade, the practical effect of which should be to require the actual transmission of specie against the rate of exchange, would so far double the exchanges upon a mathematical principle, by requiring two transits of specie instead of one. So true is the operation of this principle, that even an arbitrary requisition that the paper money alone of the Atlantic seaboard should be received for public lands, would have produced a heavy effect upon the exchanges, because in the exchanges it would have aided to the wrong side of the account.

But, sir, when we come to the actual operation in question; when we come not only to take money from a point where it is due, and send it to a point from which it is owing—to take it from the creditor and send it to the debtor, but perform this rough and anti-commercial operation by taking away the very basis upon which five-sixths of the currency rests, you produce effects that can never be arithmetically calculated, and of which no adequate conception can be formed, except by witnessing the actual effects almost immediately produced by the measure on the commercial seaboard, and those sections upon which the measure was intended to operate. An exact ratio would contract the whole currency in the money market, from which the specie is thus drawn, in the proportion in which paper is based on specie, thereby contracting six millions for every one thus abstracted, if the proportion be five paper dollars based on one of specie. But we all know that such measures do

not operate in an exact, but in a loose ratio, from the apprehension, the confusion, panic, and alarm which they create, and the commercial resources they cut off. This measure cut off, to a great extent, the resources of the Atlantic merchants in the enormous amount of debt due them from the West and Southwest, for it not only unnaturally sent their money from them, but prevented any coming to them. But determining to have some friends to the measure, it has been insisted that although it may have ruined the Atlantic merchants, and done injury to creditors, yet it was a great blessing to the people of the West. These people, however, it seems, are not so easily gulled by these forced blessings, for, after a full trial of it, their representatives, with great unanimity, voted last session to repeal it. The able speech of one of their representatives, (Mr. WALKER,) at the last session, explained to us the nature and operation of this blessing, and the Legislature of his State had, by a resolution, unanimously sustained him. He did not know how grateful his friend felt for these blessings forced upon him by the Executive, and which had contributed so largely to bankrupt his constituents; but for himself, Mr. K. said (to use a rustic phrase) he would not like to be *funnelled* even with champagne.

But what was its "happy effect" upon the West and Southwest, whilst it ruined the seaboard? Was the debtor aided whilst the creditor was oppressed? Not at all, sir. Whilst this specie was on the voyage of its exile, and after it reached the deposit banks, so far as the commercial and planting interests were concerned, it might as well have been buried in the middle of the earth, or carried back to the mines of Mexico. Did it aid the merchant in paying his northern and eastern debts? No: it immediately increased the cost to him of such payment, by increasing the rate of exchange, whilst, at the same time, it closed upon him all the usual resources of obtaining money. This increase in the rate of exchange increased the danger of a demand upon the banks by the merchants, whilst they had also to answer the demands of their bill-holders, who might want to purchase the public lands. What northern exchange they had was soon exhausted in reducing their circulation, whilst they could not prudently do any business that would place their own issues in the hands of the business part of the community. Against the business part of the community, *not* merchants and planters, they were suddenly and effectually closed. They could not pay out paper for fear specie would be demanded for it, for the reasons before named. They could not pay out specie or discount for merchants, because the high rate of exchange and difficulty of procuring it at any price would have started it back in twenty-four hours to the section from which it had been unnaturally exiled. They could not pay out specie to the planters, for they owed the merchants, and its destination would have been the same. If, then, they did any business at all, they must do it with the purchasers of public lands, in which they were secure of the return of the specie deposits. Accordingly, they favored this class of customers, in order to do any business at all, and the President himself, in his Message, refers to the circular operation by which they contracted many millions of debt upon a few millions of specie; and yet one popular catch to recommend this measure has been, that it was aimed at land speculators!

The measure, Mr. K. said, seemed to have been attended with unmitigated mischief. Even the sales of public lands had most probably been increased by it, before the suspension of specie payments. There was no other way of accounting for the heavy amount of those sales, after the mania for speculation had already begun to decline. Money became dear and difficult to procure, and all the public lands in market very much culled and selected. The deposit banks in the new States had been devoted almost exclusively to the use of speculators, as before stated, and, moreover, a great number were induced to go into the business after the adoption of the order, who otherwise would not have thought of it. Ours, he said, is an enterprising, speculative people; and whenever Government commits an error, or adopts an unusual measure, they

warmly applauded by his friend near him, (Mr. Strange.) We were told *that though expedient, we should not make this State bank a depository, "because it would be a triumph over the Government!"* What Government? The "Government" at the Hermitage, or the Government at the White House? These Governments were both, to be sure, inimical to the present State bank, because they did not like Mr. Biddle, its president, who was formerly president of the national institution. But what had the Government had to do with the present State institution? He had supposed, until lately, that the Government meant the legislative power, as established by the Constitution; and if the people, through their representatives, according to the forms of the Constitution, should deem it expedient to make any State institution a depository, it would be no objection with him that either the ex-President, or present Executive, *was supposed to be inimical to one of its officers.* I do not propose (said he) to make this institution a depository, and nobody has proposed or thought of proposing it, so far as I know. Why, then, this war-whoop against it? To show our devotion to the supposed Executive will? "A change, what a change," has been produced in the tone of American feeling by these violent encroachments and recent triumphs of the Executive over the Legislative authority, in relation to the finances! All eyes are turned to the Executive. The spirit of our fathers has fled. The blood of '76 has run out. Sir, there have been more gray hairs brought upon the head of our youthful and vigorous Republic in the last four years, than ought to have grown upon it in one entire century of quiet and peaceful administration, with the constitutional co-operation of the legislative departments.

My friends need not be astonished at the freedom with which I express these sentiments. They believe with me; they have acted with me. We have vainly stood up together against the will of the Executive. Our efforts have been impotent. We have been trampled under foot. The Executive has had his way, and we see the result. I only wish my friends to join me in taking a firm stand to teach the Executive that his friends are to be consulted in measures of such immense importance to the people as those by which our finances have been ruined. I have no idea of deserting them, sir; they need not apprehend that. I am only expressing freely sentiments I and they have entertained, and not very carefully concealed. I am a party man, sir. All I am as a politician I was made so by party. I have no sympathies with any other party except that with which I have always acted, and by which I have been honored. I respect my political opponents as my fellow-citizens, living under the same laws, subject to the same Government, and equally honest and patriotic with myself. But I differ with them in some of the essential and fundamental principles upon which our Government should be administered, and have nothing to ask, and nothing to expect from them.

I am a democrat, a real democrat. I do not make the profession *ad captandum*; I fear it is becoming rather unpopular; but my early habits and youthful associations made me so. In fact, the sentiment was planted in my heart by nature, cultivated by education, and approved by reason. I believe a democratic Republic to be the most philosophical government, and best calculated to develop the energies and sustain the dignity of man, so long as the people have sufficient intelligence to qualify them for self-government. I, therefore, abhor tyranny and irresponsible power in every possible form in which it can be presented; whether it be presented in the hypocritical garb of republican homespun, or unsifted over in the glittering trappings of royalty. I go for a strict construction of the Constitution, limited Executive patronage, and an economical administration of the Government; and you will never find me here, sir, with democracy and economy upon the lips, and tyranny and plunder in the heart. "I borrow no false liveries from heaven to serve the devil in."

Mr. K. after some further remarks, concluded this branch of the subject, by saying that he had full confidence that the President, when some present difficulties were removed, would administer

his department with wisdom and patriotism, and he hoped and expected to be able to give him his feeble support. But he just wished to tell him now, that if he intended "to tread in the footsteps of his predecessor" in trampling on the legislative authority, in the management of a subject of all others of the most importance to the people, he should feel it his duty to jostle him out of them. He never would consent, he said, to surrender the finances to the exclusive control of the Executive. If we did this, we should share the fate of every other nation who had submitted to Executive financiering: we should first become a nation of beggars, and then a nation of slaves.

Mr. K. said he had been led on to a length altogether unexpected to himself, and he feared tiresome to the Senate. Several other topics had been suggested by the remarks of other gentlemen, that he would like to touch, but he would dispense with them, and come to a conclusion, after a few words more upon the bill and amendment under consideration. As to the separation from the State banks as depositories, he conceived that a matter of no great consequence, if in the details we could provide safety to the money, and guard against too much patronage and expense. But the bill he thought imperfect and obscure on both these points. And when we had passed the bill, we should have but little idea of what we had done.

As to the amendment proposed, which restricted the receipts of the Government to gold and silver, he could never consent to think of it, without hearing from his constituents, so long as specie is not the common currency, used by the people in the business transactions of the country. They are never prepared with a currency not in common circulation, and would often and truly be reminded of the Roman quæstors, who were in the habit, among other acts of tyranny, of demanding *particular kinds of money* for the purposes of extortion. Here, 11,000 specie gatherers, demanding a currency not furnished the people by their own States, or by the ordinary circulation, will give them more trouble than all their other pecuniary transactions, and, being different to the demands made upon them for State taxes, will give to the Federal Government an alien character of tyranny and oppression. He could not conceive, he said, of a measure better calculated to give to the Government of the Union the appearance of a foreign Government, and alienate the affections of the people from it, than the measure proposed.

But, we are told that the Government only demands the constitutional currency, and therefore only asserts a right. This is true, sir; but is it the part of practical wisdom to exert all the power we have, and assert all the rights we claim? Every man has a right to demand specie at all times for every sale he makes, and for every debt due him. But suppose every body were to do it, whilst paper is the common currency, what would become of the country?

Suppose all the merchants of a single city were to suddenly demand specie for all dues from their customers for sales made, and to be made, they would only assert a right: and yet what would be the result? The effect would be such upon their debtors and dealers, that they would probably mob the merchants out of the city. You propose that the Government shall do that with the people which people dare not do with each other. Look at the conduct of the people towards the banks ever since they have stopped payment, and specie is at a large premium: do they assert their rights, though they have every inducement to do so? I will refer to my own State as a strong argument to dissipate theoretical beauties by practical consequences. There the banks are by law compelled to pay 18 per cent. on a refusal to pay specie. They are good and every bill-holder could get his principal and his 18 per cent. *in specie*, if he were to demand and insist on it. No man of capital could make so good an investment as to get a large sum in Augusta bank bills, make a demand, and hold them till the bank resumes specie payments. Yet nobody does this; and why? Because they are all friendly to banks? Not at all, sir. *It is because they are frightened at a view of the consequences, and yield their own to the interests of the community.*

They know that if specie is forced from the banks, the banks will have to force it from the merchants and the merchants from the planters and the great mass of consumers; and, before the matter wound up, its effects would be equal to the confiscation of one-third of the property of the country. The laborious and industrious classes constitute the debtor class, which are much the most numerous, and much the most needy. On this class the sacrifice would ultimately fall. The benefits would be confined to a few creditors, capitalists, and money-lenders. And the measure you propose (said Mr. K.) will operate precisely in the manner I have described, though perhaps not to the same extent. It will do to talk about and speak about here, and some people may think well of it, whilst they think it is only going to put the merchants to a little trouble; but when they find, from experience, that the merchants are *only their factors*, and the operation falls on them, they will be prepared for a more practical view of the subject.

Mr. K. said he was, to be sure, opposed to the banking system, particularly its abuses. But the people had established it, become accustomed to it, and it now seemed necessary to their business and prosperity. He saw no reason or expediency in taking away the discretion of the Secretary of the Treasury to receive the notes of specie paying banks when they resume, disburse them for Government purposes at the points where collected, and call on the banks for balances, when necessary for transfers of the Government funds from the points where collected, to the points where needed.

Mr. K. here commented upon the estimates which the Senators from Missouri and North Carolina had put upon current bank bills, and the losses which the bill-holders had sustained by the suspension of specie payments. They seemed to estimate the actual value of a bank bill by the proportion which the specie in the vaults of the banks bore to the aggregate of circulation and deposits; as though the banks had no other means to pay their liabilities but specie. In this way the Senators make out the loss of the people by the banks to be immense. Could there be any advantage in propagating errors so palpable? As a practical question, so far from the bill-holders having lost, they had generally gained by the suspension. Mr. K. here discussed the nature and purposes of money. Money, said he, represents commodities. Its uses are to command them at pleasure, and circulate them with convenience. Whatever answers this purpose, answers the purposes of money. Its value depends on the quantity of commodities it will command, and this again depends on the relation which the quantity of money bears to the quantity of commodities.

The active circulating medium has been greatly reduced in quantity since the suspension, not only by withdrawing specie from circulation, which has become a commodity; but by a reduction of bank paper, and hence it is that *current bank paper is now much more valuable than gold and silver was before the suspension, whilst the whole currency, both paper and specie, was depreciated by its redundant quantity.* Are the passions and prejudices of men to be wrought upon when their senses may direct them? Do we not know as an admitted fact, that current bank bills are more valuable now than before the suspension? Let me ask one of these suffering bill-holders what he wishes to do with his money which he held at the time of the suspension? Does he owe a debt? If so, his creditor will be glad to receive it, and expects nothing else. Does he wish to buy provisions for his family? If so, he gets them cheaper than he could before the suspension of specie payments. Does he wish to buy real estate or stocks? If so, he can get them from 30 to 50 per cent. cheaper than he could before the suspension of specie payments. In short, there is no purpose for which money is used, for which bills are not now more valuable to the holder than before the suspension, whilst the whole currency was depreciated by its quantity, except for the payment of a foreign debt. Those, then, who clamor most about their losses have lost nothing, but generally gained. The merchants sustain the whole loss that is sustained, for they receive it from their debtors at par,

and bankers to engage in. John Bull will probably lose twenty-five or thirty millions by it!

But, (continued Mr. K.) we are told of frequent convulsions before. Unfortunate references, Mr. K. thought, for those who made them. What were they when compared to the present? That of 1819 arose from too hasty an effort to restore the confusion into which the finances had fallen under the State banks; that of 1825 was known to have been brought upon us by England; and was short in duration and comparatively trifling in consequence; and what was that of 1832, that is so much harped upon now? Why, but for the diligence of gentlemen in looking up evidences of these *great revulsions*, they would not have been known or recollected out of the seaports, and hardly there. He recollected some short paragraphs in 1832, alluding rather timidly to the "rattling of specie in Wall street;" this continued a few days; about five millions were shipped; the Bank of the United States drew bills for about an equal amount; the foreign creditor was satisfied, and the panic ended. We had then no Executive financing, no specie circulars; *trade was left in the hands of its lawful guardians; specie went off when the rate of exchange required it; and by the prompt payment of five millions, the Bank of the United States got the nation a credit for the balance, which was paid by the crop and a diminished import.*

Yet such had been the nature of the warfare against the bank whilst in life, and now against its ghost, that his friend from Connecticut, in the next breath after having praised the circular, made a furious attack upon the bank, for *interfering with the laws of trade in 1832, and preventing the export of specie to the whole amount of the foreign debt.* How this argument was to be reconciled with the specie circular and the whole "policy" and arguments by which it has been lauded and justified, Mr. K. would leave to the Senator and the friends of that measure to settle among themselves. This charge against the bank, he thought, carried the true doctrine to the opposite extreme. A demand for a cash balance always admonishes the nation that it has over-traded; and unless it has the whole amount to spare, it is frequently an advantage to pay a part, and have time to adjust the balance. He thought then the bank had done well in 1832 to pay what was required in specie, and get the nation credit for the balance until the crop of exports could be sold. It was frequently of advantage to an individual, he said, when he had become unexpectedly indebted, to pay what ready money he had, and get credit for the balance until the sale of his crop; and one advantage of a national institution was, that its credit always enabled it in such circumstance to *get indulgence for the nation*, as a friend was sometimes useful in getting credit for an individual. Sir, said he, the fate of this institution was most extraordinary. If Mr. Biddle expanded, he was bribing the country: if he contracted, he was ruining the country: if he imported specie, he was speculating upon the country: if he exported specie, he was conspiring against the country: if he stood up, he was impudent: if he sat down he was suspicious: if he lay down, he was useless: and whenever he made a move, whether he crossed above or below the Executive, he equally muddled the waters.

He thought the Senator from Connecticut had made another mistake in stating that the expansion of the bank occasioned the speculative rise in prices, and our importations of 1831. The over-importation *preceded* the expansion, and the expansion was avowedly intended to circulate the increase of commodities occasioned by the over-importation. The speculative rise, and over-importation of 1831, were owing to a cause as natural as the ebb and flow of the tides, and almost as periodical. They arose from the preceding low prices, which had stimulated consumption, and exhausted the stocks in 1830. These fluctuations are always going on in every nation to some extent, and arise from the impossibility of keeping up, in the extended business of a nation, an exact relation between supply and demand.

Mr. K. said the United States Bank, though no longer in existence, had been the theme of every gentleman who had addressed the Senate. He

should say no more of it than was necessary to justify and defend himself, and the numerous friends of the Administration who had believed in the utility of that institution. His defence was fully justified, for, *although that institution was established by the democratic party*, every friend of it is placed, in sweeping denunciations, among aristocrats, rogues, and conspirators; ranked with the "Biddles and the Barings, and the banks," and set upon in full cry by dunces and demagogues, anxious only to turn attention from their own mischievous blunders and errors.

When he came to maturity, he said he found the Bank of the United States in successful and happy operation. He learned its history, and found that it was established by the party to which he had always been attached, with the immortal Madison at their head; who, after fatal experience, had changed his opinion on the subject. This paternity recommended it, but reflection as well as experience convinced him of its great utility as a financial agent to the Government, as an aid to internal and external commerce, and a wholesome regulator of an otherwise unregulated paper system. As an *original question*, he was and ever had been opposed to the whole paper system, but the system certainly had many advantages in a free country, and, moreover, was fixed upon us, and no one generation either could or would bear the sacrifices it would cost to get rid of it. And (added he) the progress we should make in getting rid of the system and its abuses, by putting down the Bank of the United States, was predicted by me in the Senate in 1834. Sir, the great Temperance President, or temperance reformer, Mr. Delavan, who sends us so many temperance papers, might just as well have undertaken to encourage the cause of temperance in which he is engaged, by breaking up one respectable grocery in Chesnut street, that he might raise up 500 grog shops in the Liberties, the villages, and the western wilderness. He thought it the part of wisdom not to waste itself on impracticable extremes, but to secure the blessings of the system, and avoid as many of its evils as possible. This he thought was best effected by a national bank, with the aid of the Treasury. The vast extent of our country gave full time to such an institution to lop off redundancies and fill up deficiencies on notice of an irregularity in the currency in any particular sections before the effect became general. It was clearly the interest of such an institution to perform these duties faithfully. Its own successful operation in a great measure depended on it; which was the best guaranty to the public that they would be so performed. He also believed that the money of the nation could be entrusted to no agency so little dangerous to liberty, or so unlikely to use it for political purposes. Experience proved the truth of this opinion. We had again the best of all security—that is, the *security of interest. To engage in politics, or unite itself with a political party, is death to the institution.* What evidence had been shown, or could be shown, that the bank ever hinted an interference with politics, until it supposed the Executive to make an overture for that purpose? In 1829 the Executive commenced a correspondence with the bank to procure a change in the President of the New Hampshire branch. He did not say that any thing improper was intended by the Executive, but it was the first interference of the kind, and the bank supposed it to be an attempt to enlist it in politics, and unite the power of the bank with the power of the Government. It declined on the ground that the bank never had, and could not now, think of interfering in the politics of the country. The rest is known. The Message followed with a charge of what nobody had ever heard of before, and recommending a Treasury bank, uniting the power and patronage of a bank to that of the Government. From that time forth the Executive continued to struggle for the money power until it took possession of it in 1833, by the removal of the depositories. I only mention these facts, sir, to prove the great reluctance with which such an institution will always engage in politics. Its interest requires the custom and friendship of both political parties, and it can not prosper against a war by either. The money power of the Treasury is great, let it be

lodged where it will; but, for the reasons stated, believe it is less in a national bank, *connected to and dependent on the business of the country, than any other.* There was no danger of the political influence of a bank, if the Executive would be alone. Some admitted that the bank had been properly attacked, but that, being attacked, it had over-issued and otherwise mismanaged in its struggles for a recharter. This might be true to some extent, but, if so, it is more an objection to the recharter than the institution, and might be prevented by a simple provision in the charter, which the charter ought to have contained.

Sir, these are the opinions I have always entertained, and were the opinions of my then colleagues when I came into the Senate. They were known to our constituents. But as this was a matter of expediency, on which they had a right to judge, they expected to be, and shall be, represented; and their wishes, when I last heard from them, were against a national bank. In fact, although I believe it unfortunate that the old bank was destroyed, the question of establishing a new one, at this time is a very different question. Under our anti-bank administration, the bank capital has been much more than doubled in a few years. Is it expedient to add to it? If so, the practicability of controlling it by a national bank of permissible size, and the manner of doing it, are important questions. The present rate of exchange, too, would render it difficult to procure specie for the institution, and to create a demand for it, that would, for the present, add to the distress. There were some other reasons that had been referred to, but which he would not, at this time, notice.

But, we are gravely told, sir, that the "Bank of the United States, with its still greater strength has not been able to prevent the present state of affairs; that it 'has not been able to check other institutions, or save itself.'" This reference to the bank would have done very well for a pauper newspaper; but I must confess I was somewhat astonished to find it in a Message of the President of the United States. Can it be supposed that the most ignorant can be deceived by this catch at mere name? Whoever thought of holding the Bank of the United States responsible for the currency, or as a financial regulator, after the withdrawal of its branches, or even after the removal of the depositories? What obligation was it under to the public, after the public had taken away its depositories and dispensed with its services? Was it under any very strong obligation, if it had the power, to aid the Executive in an experiment made at its expense, and intended for its destruction? I should think not; and to hold a *State bank* responsible, because it is called "the Bank of the United States," is absolutely ridiculous. It has fallen in line with the multitude of State banks created under the late administration. It has supported the "policy" by importing specie on credit, that might hatch more paper upon it. It has gloried in the confusion of the exchanges, by which it has made millions. In short, like the rest of the State banks, it has gone for making money; it has joined its fortunes with the State banks; it has borrowed specie like the State banks; has expanded with the State banks; has shaved with the State banks; has failed with the State banks, and is a State bank and yet it is held responsible to the country as a national bank. Sir, it is no more a United States Bank, and not so much, as the little Burlington bank, which produced such a happy effect with modicum of the spoils sent to it, and pressingly set forth for more to operate on the elections, "in anticipation of the wool clip." *There is a United States Bank for ye, established by the Executive to prevent public money from being employed to operate on the politics of the country!*

Why, then, these valiant charges upon a ghost this war upon a sign; these tilts upon a tombstone? They are about as useful, and about as rational, as the charges of the redoubtable Don Quixotte upon the windmills.

In connection with these perpetual efforts to frighten us with ghosts and "things that are not," Mr. K. said he had never had his democratic feelings so shocked as they had been by a sentiment of the Senator from South Carolina, (Mr. Calhoun

warmly applauded by his friend near him, (Mr. Strange.) We were told that *though expedient*, we should not make this State bank a depository; "because it would be a triumph over the Government!" What Government? The "Government" at the Hermitage, or the Government at the White House? These Governments were both, to be sure, inimical to the present State bank, because they did not like Mr. Biddle, its president, who was formerly president of the national institution. But what had the Government had to do with the present State institution? He had supposed, until lately, that the Government meant the legislative power, as established by the Constitution; and if the people, through their representatives, according to the forms of the Constitution, should deem it expedient to make any State institution a depository, it would be no objection with him that either the ex-President, or present Executive, *was supposed to be inimical to one of its officers*. I do not propose (said he) to make this institution a depository, and nobody has proposed or thought of proposing it, so far as I know. Why, then, this war-whoop against it? To show our devotion to the supposed Executive will? "A change, what a change," has been produced in the tone of American feeling by these violent encroachments and recent triumphs of the Executive over the Legislative authority, in relation to the finances! All eyes are turned to the Executive. The spirit of our fathers has fled. The blood of '76 has run out. Sir, there have been more gray hairs brought upon the head of our youthful and vigorous Republic in the last four years, than ought to have grown upon it in one entire century of quiet and peaceful administration, with the constitutional co-operation of the legislative departments.

My friends need not be astonished at the freedom with which I express these sentiments. They believe with me; they have acted with me. We have vainly stood up together against the will of the Executive. Our efforts have been impotent. We have been trampled under foot. The Executive has had his way, and we see the result. I only wish my friends to join me in taking a firm stand to teach the Executive that his friends are to be consulted in measures of such immense importance to the people as those by which our finances have been ruined. I have no idea of deserting them, sir; they need not apprehend that. I am only expressing freely sentiments I and they have entertained, and not very carefully concealed. I am a party man, sir. All I am as a politician I was made so by party. I have no sympathies with any other party except that with which I have always acted, and by which I have been honored. I respect my political opponents as my fellow-citizens, living under the same laws, subject to the same Government; and equally honest and patriotic with myself. But I differ with them in some of the essential and fundamental principles upon which our Government should be administered, and have nothing to ask, and nothing to expect from them.

I am a democrat, a real democrat. I do not make the profession *ad captandum*; I fear it is becoming rather unpopular; but my early habits and youthful associations made me so. In fact, the sentiment was planted in my heart by nature, cultivated by education, and approved by reason. I believe a democratic Republic to be the most philosophical government, and best calculated to develop the energies and sustain the dignity of man, so long as the people have sufficient intelligence to qualify them for self-government. I, therefore, abhor tyranny and irresponsible power in every possible form in which it can be presented; whether it be presented in the hypocritical garb of republican homespun, or tinselled over in the glittering trappings of royalty. I go for a strict construction of the Constitution, limited Executive patronage, and an economical administration of the Government; and you will never find me here, sir, with democracy and economy upon the lips, and tyranny and plunder in the heart. "I borrow no false liveries from heaven to serve the devil in."

Mr. K. after some further remarks, concluded this branch of the subject, by saying that he had full confidence that the President, when some present difficulties were removed, would administer

his department with wisdom and patriotism, and he hoped and expected to be able to give him his feeble support. But he just wished to tell him now, that if he intended "to tread in the footsteps of his predecessor" in trampling on the legislative authority, in the management of a subject of all others of the most importance to the people, he should feel it his duty to jostle him out of them. He never would consent, he said, to surrender the finances to the exclusive control of the Executive. If we did this, we should share the fate of every other nation who had submitted to Executive financiering: we should first become a nation of beggars, and then a nation of slaves.

Mr. K. said he had been led on to a length altogether unexpected to himself, and he feared tiresome to the Senate. Several other topics had been suggested by the remarks of other gentlemen, that he would like to touch, but he would dispense with them, and come to a conclusion, after a few words more upon the bill and amendment under consideration. As to the separation from the State banks as depositories, he conceived that a matter of no great consequence, if in the details we could provide safety to the money, and guard against too much patronage and expense. But the bill he thought imperfect and obscure on both these points. And when we had passed the bill, we should have but little idea of what we had done.

As to the amendment proposed, which restricted the receipts of the Government to gold and silver, he could never consent to think of it, without hearing from his constituents, so long as specie is not the common currency, used by the people in the business transactions of the country. They are never prepared with a currency not in common circulation, and would often and truly be reminded of the Roman quæstors, who were in the habit, among other acts of tyranny, of demanding particular kinds of money for the purposes of extortion. Here, 11,000 specie gatherers, demanding a currency not furnished the people by their own States, or by the ordinary circulation, will give them more trouble than all their other pecuniary transactions, and, being different to the demands made upon them for State taxes, will give to the Federal Government an alien character of tyranny and oppression. He could not conceive, he said, of a measure better calculated to give to the Government of the Union the appearance of a foreign Government, and alienate the affections of the people from it, than the measure proposed.

But, we are told that the Government only demands the constitutional currency, and therefore only asserts a right. This is true, sir; but is it the part of practical wisdom to exert all the power we have, and assert all the rights we claim? Every man has a right to demand specie at all times for every sale he makes, and for every debt due him. But suppose every body were to do it, whilst paper is the common currency, what would become of the country?

Suppose all the merchants of a single city were to suddenly demand specie for all dues from their customers for sales made, and to be made, they would only assert a right: and yet what would be the result? The effect would be such upon their debtors and dealers, that they would probably mob the merchants out of the city. You propose that the Government shall do that with the people which people dare not do with each other. Look at the conduct of the people towards the banks ever since they have stopped payment, and specie is at a large premium: do they assert their rights, though they have every inducement to do so? I will refer to my own State as a strong argument to dissipate theoretical beauties by practical consequences. There the banks are by law compelled to pay 18 per cent. on a refusal to pay specie. They are good and every bill-holder could get his principal and his 18 per cent. *in specie*, if he were to demand and insist on it. No man of capital could make so good an investment as to get a large sum in Augusta bank bills, make a demand, and hold them till the bank resumes specie payments. Yet nobody does this; and why? Because they are all friendly to banks? Not at all, sir. It is because they are frightened at a view of the consequences, and yield their own to the interests of the community.

They know that if specie is forced from the banks, the banks will have to force it from the merchants and the merchants from the planters and the great mass of consumers; and, before the matter wound up, its effects would be equal to the confiscation of one-third of the property of the country. The laborious and industrious classes constitute the debtor class, which are much the most numerous, and much the most needy. On this class the sacrifice would ultimately fall. The benefits would be confined to a few creditors, capitalists, and money-lenders. And the measure you propose (said Mr. K.) will operate precisely in the manner I have described, though perhaps not to the same extent. It will do to talk about and speak about here, and some people may think well of it, whilst they think it is only going to put the merchants to a little trouble; but when they find, from experience, that the merchants are *only their factors*, and the operation falls on them, they will be prepared for a more practical view of the subject.

Mr. K. said he was, to be sure, opposed to the banking system, particularly its abuses. But the people had established it, become accustomed to it, and it now seemed necessary to their business and prosperity. He saw no reason or expediency in taking away the discretion of the Secretary of the Treasury to receive the notes of specie-paying banks when they resume, disburse them for Government purposes at the points where collected; and call on the banks for balances, when necessary for transfers of the Government funds from the points where collected, to the points where needed.

Mr. K. here commented upon the estimates which the Senators from Missouri and North Carolina had put upon current bank bills, and the losses which the bill-holders had sustained by the suspension of specie payments. They seemed to estimate the actual value of a bank bill by the proportion which the specie in the vaults of the banks bore to the aggregate of circulation and deposits; as though the banks had no other means to pay their liabilities but specie. In this way the Senators make out the loss of the people by the banks to be immense. Could there be any advantage in propagating errors so palpable? As a practical question, so far from the bill-holders having lost, they had generally gained by the suspension. Mr. K. here discussed the nature and purposes of money. Money, said he, represents commodities. Its uses are to command them at pleasure, and circulate them with convenience. Whatever answers this purpose, answers the purposes of money. Its value depends on the quantity of commodities it will command, and this again depends on the relation which the quantity of money bears to the quantity of commodities.

The active circulating medium has been greatly reduced in quantity since the suspension, not only by withdrawing specie from circulation, which has become a commodity; but by a reduction of bank paper, and hence it is that *current bank paper is now much more valuable than gold and silver was before the suspension, whilst the whole currency, both paper and specie, was depreciated by its redundant quantity*. Are the passions and prejudices of men to be wrought upon when their senses may direct them? Do we not know as an admitted fact, that current bank bills are more valuable now than before the suspension? Let me ask one of these suffering bill-holders what he wishes to do with his money which he held at the time of the suspension? Does he owe a debt? If so, his creditor will be glad to receive it, and expects nothing else. Does he wish to buy provisions for his family? If so, he gets them cheaper than he could before the suspension of specie payments. Does he wish to buy real estate or stocks? If so, he can get them from 30 to 50 per cent. cheaper than he could before the suspension of specie payments. In short, there is no purpose for which money is used, for which bills are not now more valuable to the holder than before the suspension, whilst the whole currency was depreciated by its quantity, except for the payment of a foreign debt. Those, then, who clamor most about their losses have lost nothing, but generally gained. The merchants sustain the whole loss that is sustained, for they receive it from their debtors at par,

and have to pay a premium for specie to pay their foreign creditors.

Strictly and logically speaking, Mr. K. said paper was *now* depreciated, when compared *now* with silver, by the amount of premium on specie, because we had no other legal standard to go by. All he meant to say was, that paper was more valuable *now* than specie was *before* the suspension, and, therefore, the holder had lost nothing. So glaring was the fallacy of estimating the loss of the community by the difference between the amount of specie in their vaults and the liabilities of the banks, that the community owed the banks more than the banks owed the community. *Each has a right to claim specie*; and, with a little time for adjustment, the banks could settle every dollar against them without a dollar in specie. He did not wish to be understood as advocating or even apologizing for an irredeemable bank paper; it was too precarious, and subject to fluctuation. But, as practical legislators, we should view things as they are, and he could see no expediency in endeavoring to impose such fallacies on an already excited community.

Mr. K. concluded by saying that he had no wish to postpone discussion, and, therefore, was indifferent as to the present fate of his motion. But as he did not like either project, as presented, and wished time to digest a *better*, he could not consistently make any other motion, and, therefore, moved the postponement of the whole subject to the first Monday in December next.

## REMARKS OF MR. NILES, OF CONNECTICUT,

In Senate, September 23, 1837.—In reply to Mr. KING of Georgia, on the bill "imposing additional duties, as depositories in certain cases, on public officers."

Mr. NILES said, he rose only to notice one or two observations of the Senator from Georgia, which related to some remarks of his a few days since. It was far from his purpose to enter the lists against his honorable friend from Georgia. Of all the men with whom he had ever been acquainted, that gentleman was the last with whom he should ever volunteer to engage in a contest. Sir, in the extraordinary and very able speech we have just heard, we have a specimen of the mode of warfare of the Senator. He prepares himself for a contest in a peculiar manner, and arms himself with unusual and extraordinary weapons; weapons with which most of us are wholly unacquainted, and still less acquainted with their use; bowie knives and other weapons, hostile, bloody, deadly. The gentleman has also a mode peculiar to himself in using his weapons: he wields his bowie knife both to cut and to thrust; and he strikes indiscriminately at all that stands in his way, whether friends or foes; the only difference being that he is careful when he aims at a friend to strike a heavier blow, and inflict a deeper wound. The Senator says he is friendly to the President, and Mr. N. knew him too well to doubt it for a moment; but he had a very odd way of showing it. The gentleman entertains peculiar notions about his duty to his friends, and seems to have a very strange way of backing them: he appears to consider it as his principal duty to chasten them. Perhaps he thinks they deserve it.

Mr. N. said there was another reason why he would avoid a contest with the Senator. He has a sort of magical power over facts. In his hands facts are very much like the man of mortar to which he has alluded, and called on the Senator from Missouri to breathe into it the breath of life: he moulds and fashions facts to his own liking. His naked assertions, not only unsupported, but directly opposed to known truths, were made with such force and gravity, and such strong apparent conviction of their truth, that they would almost be assented to, when known to be without the least foundation. Such was the Senator's power over facts, that he experienced none of the difficulties which others did, because he could make his facts to suit his arguments, as he had occasion for them. It is as much as most of us can do to supply argu-

ments, especially such as are worth using; but his friend from Georgia, with his fertile mind, could supply facts with the same facility as arguments. Mr. N. said he would not, therefore, think of contending with so formidable and dangerous an antagonist, but would only venture to examine some of the gentleman's facts on those points that related to himself.

The Senator thinks that the statement made by him (Mr. N.) that the Bank of the United States had stimulated the excessive importations in 1831, was incorrect, and says that the expansion of the bank did not commence until after that period. But the Senator is mistaken; he has not, in this instance, moulded his facts to suit his argument. The bank did stimulate the excessive importations of 1831. It began its rapid expansions in November, 1830, and by the month of May, 1832, had enlarged its discounts twenty-eight millions of dollars. This was a pretty rapid expansion, and calculated to give a dangerous enlargement to the bounds of trade. But, Mr. N. said that he not only charged the bank with stimulating the excess of importations in 1831, but of having interfered in violation of the laws of trade, and prevented a correction of the evil. The exchanges having become unfavorable in the latter part of 1831, in consequence of the large importations, the bank was fast being drained of its specie. It had parted with five millions, and, to save what it had left, it issued seven millions in drafts on Europe, for the purposes of remittance. This operation saved its specie, and renewed the stimulus to excessive importations. Had not the bank interfered, and arrested the laws of trade, exchange would have continued to rise, more specie would have been drawn from the banks, (which would have forced them to curtail discounts,) foreign goods would have fallen, and all the consequences followed which would have reduced the importations the next year. But the interference of the bank, by interposing its credit, prevented this.

The Senator asserts that the principal cause of our difficulties is owing to the irregular and improper commercial and financial transactions with England for several years, and the measures which such transactions forced that country to adopt. The general proposition was one of great importance, and he (Mr. N.) thought it was substantially correct. But the error of the gentleman was, that, from his great zeal to back his friends, he had attributed the commercial and financial transactions of this country with England to the measures of the administration, which had, in reality, little more influence upon them than facts appear to have had on the gentleman's speech.

Our foreign commerce had been of an extraordinary character since 1831, and particularly the last three years. Our importations for the last three years have exceeded our exports to the amount of nearly one hundred and twenty millions; and, during the same period, when we have had this great excess of importations, there has been specie imported beyond what has been exported to the amount of about thirty-two millions. This was in direct violation of all the ordinary laws of trade. That a large excess of importations should continue for six years in succession, was, he believed, unprecedented in this country, or perhaps any other. But it was still more extraordinary that, during this period, there should be a large importation of specie. This seemed to be a double violation of the laws of trade; it was a violation of the ordinary laws of commerce, that an excess of importations should continue for so many years; and it was another violation that, during such excessive importations of goods, there should be a large importation of specie. An unfavorable balance of trade ordinarily leads to the exportation of specie, and the reduction of imports in the following years—a portion of the exports being required to liquidate former balances. An unfavorable balance of trade usually produces an unfavorable state of exchange, which has not generally been the case during this period. Mr. N. said he recollected very well that this peculiar state of our foreign trade was the subject of much remark here at the first session of the last Congress, and particularly by a distinguished gentleman, who seems to consider himself as the or-

gan of the commercial interest. That Senator had much to say about the extraordinary state of our monetary affairs; money being scarce—a severe pressure coming upon the country, and interest rising in New York to two or three per cent. per month, whilst exchange on England was favorable. So extraordinary a state of things, it seems to have been supposed, must have originated from the measures of the Government, although it was not easy then to tell what measures, as it was before the Treasury circular.

The distinguished Senator from Massachusetts, so learned and skilled in subjects of commerce and finance, could not understand this inexplicable state of things. But the mystery is revealed; the mist which hung over the subject is dissipated, and the whole truth has come to light. This unnatural state of things has been brought about by the agency of credit in our foreign trade, and by loans and the sale of stocks in England, not connected with trade. The large excess of importations has been continued, and the exchange kept favorable by the bankers on both sides of the Atlantic, who loaned their credit to our importing merchants. As long as American merchants could import goods on credit, obtained abroad, the exchange would remain favorable; and even the credit of the United States Bank, in the form of drafts or bonds, payable in Europe, produced the same result.

The great American houses in England, the Wildes, Wilson, and Wiggins—the three W's, as they have sometimes been called—which have since all exploded, in co-operation with the United States Bank, have been the principal cause of the excess of our foreign importations. The sale of American stocks, and the negotiation of loans by the same bankers, have increased the difficulties, and swelled our debt in England, as the Senator from Georgia says, to one hundred and ten millions of dollars. American credit was drawing off the capital of England to this country, which was draining the Bank of England of its specie. The Bank of England had to contend against American credit, which was a contest it could not stand. Its only resource was to attempt to destroy that credit, and the only way to do that was to destroy the credit of the houses through which American credit found its way to the British market. This led to those measures on the part of the Bank of England to which the Senator alluded, intended to discredit the American houses, and strike down at a blow the price of the great American staple. These measures on the part of the Bank of England, occurring at a time when there was a pressure from other causes, brought on the great crisis in this country.

The gentleman from Georgia says these results have been occasioned by the Treasury circular, and other measures of the Government; he says the Government has encouraged the importation of specie; that it has induced the deposit banks to import specie. Mr. N. knew of no such act of the Government. These transactions, both commercial and financial, were of a private character, occasioned by the enterprise of this country, and stimulated by the abuse of bank credit on both sides of the water.

Mr. N. said he repeated his charge made the other day against the Bank of the United States, that it had been the principal agent which had deranged our foreign commerce, and brought the country into its present difficulties. Previous to the interference of that bank in our foreign trade, it was stable; now it was deranged. It had been constantly interfering since 1831; and Mr. Biddle boasts of having on one occasion, he believed in 1832, saved the whole commercial community from a terrible explosion, by hurrying across the Jerseys between two days—not as Washington did, pursued by the British army—to New York, where, by the use of the credit of the bank, he saved the country. Surely, our trade must rest on a sound foundation indeed, when it is indebted to a night's journey of one individual for escaping ruin!

The Senator from Georgia thought he (Mr. N.) had changed his sentiments regarding the specie circular; but he had changed them only, so far as circumstances had changed. He voted for superseding it last session, believing the exigency had

gone past, and still thought he was then right; but from circumstances which have since occurred, he believed the order had had a salutary influence. It has not only kept specie in the country, and saved the western banks, but it had secured one or two millions for the uses of the Treasury, which had been an essential aid to it, in the crisis it had gone through. The Secretary foresaw the coming storm, and some weeks before the explosion took place, sent circulars to the deposit banks in the West, requiring them to keep their specie for the use of the Treasury; and a large sum has been conveyed across the mountains for that purpose.

The Senator says Mr. N. approves of the Treasury circular, for its operation in preventing the exportation of specie, and condemns the Bank of the United States for measures which prevented the exportation of specie. In reply to this, Mr. N. said, that as a general or permanent rule, he was opposed to all interference, whether by Government or by banks, with the course of trade, and was opposed to all measures intended either to encourage the importation of specie, or to discourage its exportation. But there were exceptions to general principles; and at a peculiar crisis, when the credit and paper system of two great commercial nations had been greatly and unduly extended, and both were apprehensive of an explosion, and the question was, which should explode, the sudden abstraction of specie, which sustained the floating mass of paper, might be attended with the most serious consequences. It was only in this view of the subject, that he regarded the Treasury circular, as having had a favorable influence in preventing the exportation of specie.

Mr. N. said he would allude only to one topic more. The Senator said that Mr. N. and the Senator from North Carolina (Mr. Strange) had approved and endorsed the reasons assigned by the President in his Message for the revulsion which had overtaken the country. Mr. N. said he had in his speech barely alluded to that subject, without going into an examination of its merits. He, however, did approve, then and now, of the brief but very clear and satisfactory exposition of the causes of existing embarrassments contained in the Message. He would readily endorse that portion of the Message, notwithstanding the strong condemnation of the Senator. The gentleman having read this portion of the Message, remarked that this might be all very well; that he knew of but one objection to it, and which was, that there was not one word of truth in the whole statement. This was certainly very strong language; but Mr. N. supposed it was only the gentleman's peculiar mode of backing his friends.

Sir, what is this statement, which is thus summarily despatched by the gentleman's hostile weapons? Is there any thing new or extraordinary in it? Does the President pretend to have made any wonderful discovery, or to have looked deeper into the causes of our difficulties, than other intelligent individuals? The general cause which he assigns is the natural, the ordinary cause of commercial revulsions; he might almost say that, with the exception of some extraordinary causes, such as "war, pestilence, and famine," it was the only cause of such embarrassments. The general cause assigned was over-trading, over-action in every department of industry, and an undue extension and abuse of credit. These causes are said to be induced by a great expansion of the paper medium. Is not the statement, so far, correct? Has there not been over-trading, speculation, and gambling, of every kind, in the foreign trade and the domestic trade, in wild lands and city lots, in stocks, in every thing? Are not these facts universally admitted? Are they denied by any one—by the Senator himself? He (Mr. N.) did not understand that they were. And has there not been an excessive and alarming expansion of the paper medium? This is equally notorious, and cannot surely be controverted by the Senator; for he has himself stated that the currency had, within a few years, increased 200 per cent. In this important fact the Message is impregnable. Well, what is there, then, in this exposition of the President, which should call forth such a bold and daring assault? What is there in the statement which should have provoked

such a desperate thrust of the gentleman's deadly weapons? Why, sir, the President says that this revulsion has not been confined to the United States; that it has prevailed in England, and, to some extent, in all the commercial countries in Europe; and from this he infers that the causes have been similar; that the spirit of over-trading has been rife in England as well as in the United States, and induced there, also, by an expansion of the currency. In all this, we are told, the Message is entirely at fault. There is not one particle of truth here, says the Senator. There has been no expansion of currency in England, no over-trading, no speculation, no distress or commercial embarrassments; no failures; every thing has gone on quietly and smoothly. There has been no Treasury circulars there; no distress for money; John Bull has been at his ease, whilst Jonathan has been in trouble; Englishmen, under a more wise and beneficent Government, have been prosperous and contented, whilst the poor Yankees have had to suffer.

Such is the picture which the Senator drew of the condition of the two countries. He would not say that it was a fancy sketch; it was only an instance of the Senator's command over facts; but he would say that he did not think there was ever but one similar picture drawn before, and that was the Senator's own description of that hardy and meritorious class of settlers, the *squatters*, who were transformed from an honest race of pioneers, into a predatory banditti, who stole their lands from the United States, and their provisions from the Indians.

But is it really so, that there has been no failures, no distress in England? He (Mr. N.) had really supposed there had been. He had read some of their periodicals, from penny papers to stately quarterlies, and of different politics, whig and tory, radical and conservative; and all, he had supposed, admitted the existence of serious embarrassments and distress, whilst they attributed them to very different cases. But the Senator says that there has been no expansion of the paper currency in England, or no to exceed one and a half per cent. whilst in this country it has expanded two hundred per cent. This last statement was another instance of the Senator's power over facts. He knew not where the gentleman got his information, or on what data the statement was based. By the report of the Secretary of the Treasury, it appears that in 1834 there was about eighty millions of paper currency; and in his report last December, he states the paper currency at one hundred and twenty millions, which would be an increase of a little over forty per cent. This was a small inaccuracy, although, perhaps, hardly worth printing.

As respects the expansion in England, the gentleman had read statements from which it appeared there had been little or none, if they rested on good authority. He had heard the statements with great surprise, as he had supposed the fact was otherwise. In all the English publications he had seen, the expansion seemed to be admitted and universally regarded as the cause of the commercial difficulties; and the only dispute appeared to be where the blame belonged—one party charging it to the Bank of England, the other to the joint-stock banks. One thing was certain, and that appeared from the statement read by the Senator, there has been a great increase of the issues of the joint-stock banks, amounting to some three millions of pounds, or near fifteen millions of dollars. The currency of these banks is very frail, and very different from that of the Bank of England; and what may have been the disturbing effect of this large increase of a weaker paper medium, and corresponding diminution of a better currency, he was not financier enough to say.

But does the statement read by the Senator prove that there has been no increase of the paper circulation in England which has occasioned over-trading? Is there no other paper but the bills of the Bank of England, and the private banks, and the joint-stock banks? Is there not another description of paper, commonly called commercial paper, which would have perhaps the same tendency to stimulate over-trading? Are there not bills of exchange and acceptances issued by the great bankers, which form a sort of commercial currency? And

would not the expansion of this have a direct tendency to over-action in trade? What had caused the explosion of the three great American houses—the three W's which had had failed for two or three millions each? Had not these houses expanded their paper and credit to a most dangerous and ruinous extent?—for it had proved their ruin. The enormous extension of commercial credit by these houses, was the principal cause of our excessive importations, and the derangements of our foreign trade. Thus trade had been stimulated by credit, and carried on by credit, and this credit was principally in England. Sir, steam has been regarded as a powerful agent, and one of the greatest discoveries of modern times; but a much more powerful agent has of late been discovered, which is *credit*, factitious, artificial credit. The expansive power of credit is vastly beyond that of steam: it is almost as uncontrollable, and as boundless as thought. Yet even *CREDIT*, that most subtle of all agents, has its limits; and he thanked God it was so. If it had not, credit would destroy all property—all faith—all honesty, and would overwhelm society in one indiscriminate ruin. If there had been no excess of credit in the form of currency in England, there had been a rapid enlargement of commercial credit.

But the Senator says there has been no over-trading in England. What! no over-trading! How is this? There has been over-trading in the United States, and that in our foreign trade, to the amount of more than sixty millions, and this trade has been principally with England. Here are two great commercial nations, and, in the commerce between them, one has largely over-traded, and the other has not over-traded at all. It seems, according to the gentleman's logic, that the trading has been all on one side. We have imported to excess, but England has not exported to excess; we have bought sixty millions more goods than we ought, but they have not sold any more than to supply the usual demand. He had always supposed that, in the intercourse between two nations, if one party had traded to excess, the other had necessarily traded to excess also; if one had imported to excess, the other had exported to excess. Where the fault lay, which party was most to blame, or which had acted most rashly and imprudently, was another question. So far as respects their trade with America, which, he believed, comprised more than one-fifth of the whole commerce of England, it was certain that country had over-traded; and he believed in the India trade there had been a like excess, for the larger houses engaged in those two branches of trade appeared to suffer most. As to internal trade, all accounts he had seen agreed that a spirit of speculation and gambling in stocks, and every kind of property, real or imaginary, has been as rife in that country as in the United States. This part of the President's statement, Mr. N. thought, had a little more than one particle of truth in it.

But the Senator informs us that there has been no distress in England, and that on this point the Message is entirely mistaken. Well, how does he make this out? Why, he says that England is the creditor country, and America the debtor country; and, therefore, the commercial revulsions have not occasioned distress there; the debtors have been in distress, not the creditors. Is this correct? If debtors fail and can not pay, do not creditors lose their debts? and does not that occasion distress? In times of general commercial embarrassments and bankruptcies, it might be difficult to say which suffered most, debtors or creditors; he believed, however, that creditors, generally, had the worst of it. The Senator often illustrates his subject by throwing in an anecdote; and he (Mr. N.) would give him one applicable to this question. It was well known that that extraordinary man, Charles J. Fox, was very improvident, and usually involved over head and ears in debt. His father, Lord Holland, once remonstrated with him on the subject, and, after inquiring something into his private affairs, observed that he wondered how he could sleep of nights and owe so much money. *You ought rather, said Fox, to wonder how my creditors can sleep.* He believed that creditors, generally, had the worst of it, in times of pressure and

panic. But are not creditors and debtors united, not only in the same community, but usually in the same individuals? Show me a man who is a creditor to the amount of half a million, or any other large sum, and I will show you a man who is a debtor to a considerable part of the same amount. Let us test the Senator's argument in a case at home. The city of New York is a creditor community in relation to other parts of the Union. There is a very large balance due to it from the whole country, and particularly from the south-western States. It would, therefore, follow, if the argument was a sound one, that the late revulsion in trade would not have occasioned any distress in New York, because she is a creditor city. Her merchants have sold an immense amount of goods to the Senator's constituents and others, and by the knocking down of the price of the great staple of the South, they have been wholly unable to pay their debts in New York. But the loss of these debts will not affect the merchants of New York, as they are creditors, and creditors can not be distressed. But, from some cause or other, New York has been overwhelmed with bankruptcies and distress, in spite of the Senator's reasoning. Mr. N. said he had detained the Senate longer than he had intended, as he only rose to put himself right.

### REMARKS OF MR. STRANGE,

OF NORTH CAROLINA,

*In Senate, Sept. 23*—In reply to Mr. KING, of Georgia, on the bill "imposing additional duties, as depositories in certain cases, on public officers."

I would not do the Executive of this country the injustice to assume upon myself the office of its vindicator, while so many more able are at hand; but I choose to defend opinions entertained and even uttered by myself before they found a place in the President's Message. The Senator from Georgia has been pleased to impute common errors to the President, the Senator from Connecticut, and myself; and, so far as we are identified in the charge, the defence of one must *pro tanto* be the defence of all. He alleges that we have imputed the present difficulties in this country exclusively to foreign action, and then proceeds to show that, from the fact of our being a debtor nation, this can not be the case. Now this statement of our position, is not in the fairness which I expected from my friend from Georgia. Neither the President, nor any of those who have spoken on the same side of the question with myself, have pretended that the immediate cause of our difficulties was not to be found in the action of our own people. On the contrary, we have all expressly insisted that it was so. We have not attached blame to the bank or the people of England; but have argued that we, as individuals, and not as a Government, had put ourselves in the power of the Bank of England; and she, in the pursuit of her own real or supposed interests, had made us feel our situation. All arguments are in fairness to be considered in connection with the issue to be tried, and the issue in this case is, whether the present difficulties are imputable to the administration of the country. The negative of this proposition it was the object of this part of the Message and its advocates to maintain; and in the effort to do so, it would have been very foreign to our purpose to deny, that the people of the United States had been themselves the authors of their own misfortunes, or to seek to fasten exclusive blame upon those on the other side of the Atlantic.

It is said we have improperly assumed that there was any commercial distress beyond the limits of this country other than that created by our indebtedness to foreigners. I am far, very far from being convinced of error in this particular; on the contrary, the newspapers, according to my belief, have for the last few months been teeming with accounts of commercial difficulties on the other side of the Atlantic.

We are further charged with error in intimating that there had been any paper expansion in England, and statistics have been resorted to to fix

upon us this charge. Now I confess, not having anticipated this denial, I am not prepared either to admit or deny the correctness of the statistics of the Senator, or to produce others in answer to them. But taking the Senator's own statements, in connection with another known fact, so far from disproving, I think they fully substantiate our position. I doubt not there is some mistake or omission with regard to the issues of the joint stock companies in the statistics presented, which, if corrected or supplied, would show upon paper a vast actual increase of bank issues; but grant that it is not so, the Senator himself shows an actual increase of £400,000, or thereabouts. It is true in this the circulation of the Bank of England is reduced about £2,000,000, and this, it is said, can not be an expansion; but the gentleman overlooks the fact, that while the circulation of the Bank of England was about £20,000,000, her specie was nearly £11,000,000; while when it was reduced to about £18,900,000, her specie was reduced to only £4,600,000, making an excess, in proportion of her issues to her specie, of nearly £10,000,000. Now paper issues are redundant, or otherwise, in the proportion which they bear to the specie they represent. But this result in figures is met by a fact, from which it is inferred that the paper issues could not have expanded; and that is, that the value of money in England had rather advanced than depreciated; and here, sir, we detect the great liability we are under to fall into mistakes from too ready an assumption of fiscal maxims. In general, it is true that it may be safely affirmed that the currency is not expanded where money continues to advance in value; but there may be circumstances in which the reverse would be the case, and the circumstances of England at the time referred to are precisely such as would produce such a result. Allowing it to be true that the paper circulation of England had expanded only £400,000, yet we find that specie was withdrawn from the Bank of England, most of which probably came to this country, and of course left England, amounting to £6,300,000; so that the actual circulation of England was reduced about £6,000,000, and money would of course appreciate as the circulating medium would bear a so much less proportion to the property of the country; yet the paper credits of the country would be increased by the amount of whatever (be it bonds, notes, or stocks) was received in exchange for the specie transported to this country, and in proportion to the specie by the difference of the ratio of £20,000,000 to £10,000,000, and about £26,000,000 to £4,600,000; or throwing out of view altogether the amount received in bonds, notes, stocks, or other credits received in exchange for the expatriated specie, still there would be, as before stated, this difference in the state of the currency at the two periods, as far as the Bank of England alone is concerned. At the first her circulation was £20,000,000, or thereabouts, and her specie £10,900,000; and at the latter her circulation was £18,900,000, and her specie £4,600,000. So that even upon the Senator's own facts, in every point of view, our allegation is made good.

But I am still more surprised at hearing from a gentleman of the high financial attainments of the Senator from Georgia the position, that because as much property could be bought with a given amount of paper now as formerly, it was not depreciated; or because it will pay as much debt now as ever, that, therefore, it is not depreciated. The true question is, will it bring as much gold and silver now as ever? And as the answer must be in the negative, the depreciation of the paper is unquestionable.

In conclusion, we are told that we ought no longer to submit to being the mere registers of Executive fiat, and that the Executive should consult his friends, and not assume upon himself the dictation of important measures without such consultation. Sir, I have never looked upon this body as the mere register of Executive fiat; nor have I ever understood there was any impropriety in the President submitting to Congress his views of what was required for the public necessities; on the contrary, the Constitution expressly requires him to do so, and does not enjoin on him previous consultation with any one. Had the President on the present

occasion forbore to indicate, in his Message, such measures as he deemed it expedient, we should have heard the stale cry of "non-committal, non-committal," ringing from every quarter of this continent, and it would have been justly said he had shrunk from his duty; and now that he has frankly and faithfully performed it, we are tauntingly told of dictation and submission.

### REMARKS OF MR. CALHOUN, OF SOUTH CAROLINA,

*In Senate, September 23, 1837.*—On the motion of Mr. KING, of Georgia, to postpone the bill "imposing additional duties, as depositories in certain cases, on public officers."

Mr. CALHOUN rose, and said that he greatly regretted that the Senator had thought proper to make the motion to postpone the bill. Its effect, should the motion succeed, would be highly injurious to the country generally, and especially to the South. It was conceded that there was a vast amount of capital locked up, waiting the decision of Congress on this highly important subject; not less, probably, than from sixty to one hundred millions; which would flow into the business channels of the country as soon as the decision was made. This, he would remind the Senator, was the commencement of the business season for the great staples of the South. The cotton and rice would soon be prepared for market, and the tobacco would follow them. The entire machine of commerce, by which these great products were to be exchanged with the world, is deranged, he might say broke, and would not be reconstructed till it was ascertained what was to be done here. If the question is postponed till the regular session, there will be no final action till the spring; during all of which time, comprehending the almost entire business season, things would remain in their present uncertain and deranged condition. The consequences would be a very heavy loss to the planting interest of the South, not to mention other portions: a loss, he would venture to say, of many millions to the planters alone; which would be of vast detriment to that great interest, embarrassed as it now is by heavy debts. After full reflection, he did not think the loss on the coming crop of cotton alone, from delay of action here, would be not less than one or two cents the pound, and more than a million and a half on the whole crop. But there was another reason, to his mind still more powerful, against the postponement. We are on the eve of a great revolution in regard to the currency. The first step in that revolution is the separation of the Government and the banks, which he sincerely believed the good of both required. That once made, and each left to move in its own proper sphere, unembarrassed by the other, the change in the credit system, which he held to be inevitable, would, in all probability, be gradual, and without a shock or injury to any of the great interests of the community. But, if the question of separation be left open; if it is to run into the politics of the country, and be made an engine to act on the Presidential election, there is no answering for consequences. A direct issue will be made; and, when passions were roused, there would ensue a conflict between the Government and the banks, which may become violent and convulsive, and shake our system to the centre. For these reasons, he deemed it highly desirable, on all sides, that the motion to postpone should not succeed.

The Senator made a remark which had a personal bearing, which he (Mr. C.) could not pass unnoticed. He expressed great abhorrence at the declaration that he (Mr. C.) would not (if there were not other and powerful reasons against it) agree to employ Mr. Biddle's bank as our fiscal agent, because it would give that institution a triumph over the Government, and go far to make it the Government itself.

There was, said Mr. C. no disputing about taste. We were so dissimilarly constituted, that what was sweet to one was sometimes bitter to another. But he was inclined to think that in this case the difference did not result so much from any organic dissimilarity between him and the Senator, as from

the different aspect under which they regard the controversy between General Jackson and the bank. The Senator regards it, as is manifest from the whole tenor of his remarks, as a mere personal affair between General Jackson and the president of the bank; or, at best, between the Executive branch of the Government and the bank; in which, let which side prevail that might, it would be but the triumph of one individual over another, or of the bank over the Executive, or the reverse. Thus regarding it, he was not at all astonished that the Senator should indulge himself in the strong expression that he did; but he must say that he was not a little astonished that the Senator, knowing him and his past course, as he did, could for a moment suppose that he (Mr. C.) regarded it under that aspect. When did he ever utter a sentiment, or do an act, which could by possibility give countenance to the attributing such a sentiment to him, as to consider General Jackson, or the whole House, or the Executive department, as the Government? He would suppose that he was the last man to whom such a sentiment could be attributed. In making the declaration he did, he viewed the subject far more comprehensively. He regarded the controversy under all its circumstances, and looked to results as testing the relative strength of the Government and the banks. He saw the most popular and powerful President that ever filled the chair of State, with boundless patronage, and sustained by a well-formed and compact majority in the Union, and both Houses, (of which the Senator was one,) waging war against the bank, and striving, with all his energy and power, to put it down. Whether right or wrong (wrong he believed him to be, and still believed,) he was backed by the entire power of the Government, and a great majority of the people. Now, sir, I ask if, after all this, that bank should prove to be so indispensable to the Government as to force itself on it, notwithstanding all these powerful opposing obstacles, greater than can ever again be arrayed against any similar institution, would it not prove that the bank had become stronger than both Government and people? And would it not go far, as he confessed himself, to make the bank the Government? It was under this aspect that he obviously regarded the struggle; and he must say, that, if the Senator, looking on it in the same light, did not regard it with similar sentiments, he could neither envy him his feelings nor his patriotism.

### SPEECH OF MR. SERGEANT, OF PENNSYLVANIA,

In the HOUSE OF REPRESENTATIVES OF THE UNITED STATES, September 26, 1837, and the morning of two other days, the following resolution, reported from the Committee of Ways and Means by Mr. CAMBRELENG, being under consideration, viz:

"Resolved, That it is inexpedient to charter a National Bank."

MR. SERGEANT addressed the house as follows:

MR. SPEAKER: As a member of the Committee of Ways and Means, it seems to me that I am called upon to state to the house how I stand personally in regard to this resolution. I was not present in the committee when this report was agreed upon. I was prevented, by indisposition, from attending the meeting of the committee, and I have likewise been prevented by the same cause from taking any part in the important debates which have been going on in this house for some days past.

Sir, I never did, and, unless new light should break in upon me, I never can, as a citizen of the United States, concur in the opinion promulgated in this resolution. If I entertained a doubt on the subject, I should still hesitate about the propriety of adopting, or even bringing it up for consideration at the present time. I should do this partly for the reason assigned by the member from Massachusetts, (Mr. Reed,) that it is a great systematic measure on which I see no good cause why any man, and especially those who are to act here on behalf of the people for two years to come, should be called upon, beforehand, when no practical question

is pending, to express an opinion. The safest course will be to reserve our opinions until the time comes for action. Deliberation will then precede action; and action will be, as it should be, guided and directed by a full exhibition of the lights which we may receive from further experience. I ask the members of this house, with the exception of those who entertain constitutional scruples, (if any there be,) whether they are prepared now to say, that if, within the next two years, it should be made manifest that nothing less than a bank will restore the nation to a state of steady prosperity, they will vote at the end of that period against a national bank? Are they prepared to say, that if they can be satisfied that a bank can be advantageously employed by the Government of the United States, that it will be an effectual, and the only effectual mean that can be resorted to for the purpose of restoring order? Are they, I ask, prepared now to say that they will, notwithstanding, vote against it then. This would be a rash expression of opinion. But it is wholly unnecessary. The proposition of the gentleman from Massachusetts, (Mr. Reed,) to postpone the further consideration of the subject until December next, points out a safe and discreet course.

For what, sir, has Congress been called together? It was understood that the collective wisdom of the representatives of the people of the United States had been convoked for the purpose of administering relief, if it could be administered, to the existing distresses of the country. Every one has regarded the summons hither as an invitation to remain but for a short time; and the chairman of the Committee of Ways and Means (Mr. Cambreleng) has continually been informing us, up to this day, that there is but a short time for us to be here; and the general impression of the members themselves appears to be, that nothing is now to be disposed of that cannot be decided with very contracted deliberation. And yet this house, at this early period of its session, only three weeks from the day on which the subject-matters on which they were called together were propounded to their consideration by the Executive message, finds itself, day after day, sitting till a late hour of the night, to despatch the few measures recommended to its attention. Sir, is this a time to discuss a question of such serious bearing and consequences as that embodied in this resolution?

What is the nature of the distress existing in the country, and what condition of affairs has led to the convocation of this Congress?

The two great interests of this country which are primarily and deeply affected by the present situation of things, are interests which no man can disregard; and it so happens, that these two interests cannot be agitated and disturbed, at all events together, without agitating and disturbing every man, woman, and child, in the United States. The truth is, that an awful winter is before us: thousands of those who depend on their daily labor for their daily bread—for the roof which shelters, and the clothing which protects them from the inclemency of the season—are to be deplorably affected by the agitation which has commenced with these two great interests,—I mean, sir, the planting and commercial interests of this country. If you look at these two interests, for so I shall call them for my present purpose, how is one better off, at present, than the other, or less affected than the other? We look to them as different, because they are in appearance divided, and seem to be in different hands. But the planting interest is itself a commercial interest; and for this plain reason, that it produces a great staple commodity, which is the basis of your foreign commerce. If ever the time should come that the planter shall choose to be his own merchant, he is at liberty to be so; and if he finds it to his advantage, no doubt he will be so; but still the planter and the merchant, even if both were combined in one, would still have the two great interests to represent as they now have—the planting and commercial interests.

And, sir, what is the commercial interest of this country? When we talk about merchants, gentlemen are apt to form some general idea of a class of men confined within a very limited space. Whether they mean exporters and importers, residents of our large towns, or embrace dealers in articles imported, still they have some narrow limit to their conception. But this is an error. It falls far short of the truth. It by no means conveys any just or accurate idea of the magnitude of the class, nor of the vast importance of the interest. Every man

who deals in, in some sense, a merchant, and a part of the great community of trade. What, then, is the commercial interest of the country? It is spread over the whole nation, and you, its agents, are in communication with every living being. You may have your small dealers in the country, who, to accommodate their immediate neighbors, resort to barter—take in what produce they want, and give in exchange what will suit their customers. But they still are merchants, and are brought by their traffic into contact with the other. And your great merchant, whom you call by that name, he who imports from distant regions what your wants or convenience require, is but one of a class of men who are engaged in the great business of purchase and supply, by whose agency every thing circulates that is circulated, and by whose instrumentality it is that nations attain to that perfection which gives the highest motive and the surest reward to productive labor. Its embarrassments of a general nature, such as now exist, are equally pervading. They are felt throughout. They are felt, too, with the greatest force and intensity in the smaller channels. Disorder and derangement, when you will and where you will, this great process of circulation, as it is now disordered and deranged, by mismanagement and wrong measures relating to the commercial interests, the final, if not the greatest evil, falls on those who come in contact with the smallest of the dealers.

Mr. Speaker, it is the misfortune of public affairs in this country, that every thing resolves itself into party, and the war of party. Am I in error here? Surely not. It is not only the war of party against party, but worse; war against things which are common property, and actually beneficial to all of us; war against names. We have had a war against the Bank of the United States; we have had a war against the merchants. We have now a war of the United States against banks; and here we are invited to take upon ourselves the odium which it is supposed may be brought on those who can be designated as being in favor of the banks. What is the consequence? I ask the member from Virginia (Mr. Garland) what is the consequence? I am satisfied he has convinced himself, as I am also convinced, that nothing would be more ruinous; that nothing more dangerous could be accomplished, than the overthrow of the newly selected enemy; the destruction of the vast amount of capital accumulated in banks, and the impoverishment of all who are concerned in them. And yet, if this war is to be carried on in the spirit in which it has been begun, what less seems to be aimed at? What less is to be expected? Hostility is proclaimed. Public odium is as far as possible excited, and its fury made the great weapon of combat. In the rage of such a contest, reason is unheeded. Her voice is too feeble to be heard, especially when it must be addressed to the combatants, with weapons in their hands, doing battle against the selected enemy, and intent only upon his destruction. Nay, when the victory is won, and the enemy prostrate, the war spirit does not cease. It challenges universal acknowledgment of the justice of all it has done, and makes war upon every one who would venture to dissent, even when the question is forced upon him, and his opinion demanded. He is required to speak when for peace sake he would be silent, that if he speak with sincerity, he may be visited with reproach.

Sir, in reference to the topics alluded to, I am neither afraid nor ashamed, here or elsewhere, to declare my opinions, and to invite examination into them; to compare them with the opinions of others, and try with them what results we can bring out for the benefit of our common country. And I do this under a solemn conviction, that a state of things such as I believe to be now existing cannot continue without serious danger. I do not disregard the evils that are present; they are too great to be disregarded. But I view with much more serious apprehension the mischiefs that may result from them. If, in such a crisis, the Government of the United States should be found not only inefficient to relieve, but placing itself in an attitude of hostility to those interests which concern every man in the Union, and seeming to lend its aid to aggravate the disorder and suffering, I am afraid that the Union itself will begin to shake. It will be weakened in the public affection and regard.

Surely, sir, if the crisis itself be sufficient to engage regard and to invite exertion, there is every thing to quicken these feelings, in the conduct of those who have chiefly felt its unhappy influence

If, as was said, the spectacle of a good man struggling with adversity was pleasing to the gods, how would they have rejoiced to behold the honest and unyielding efforts of the merchants of the United States in the midst of sudden disaster? Never did a nation present such an array as that presented at this moment by the merchants of the United States. In the city of New York, the fire which destroyed their property and seemed destined to break their hearts, had only purified and invigorated them for the heavier trials that were to follow. Their conduct was heroic. They are already practising the lesson recommended by the message of the President of the United States. Have they not been reducing their establishments? The reduction which has been made of late, whether luxury existed or not, parting with accustomed comforts, has been such as no man at the head of a family can make without a severe pang; and have they not been, and are they not now, struggling at every expense, except that of their character for integrity, to make their contracts, unseduced by intelligible hints from certain quarters, that their English creditors did not deserve it. They scorned such profligate suggestions. Sir, I glory in it as an American citizen, that we have such a body of merchants in our country, represented as they are by the merchants of New York, and of that city which I have in part the honor to represent. And this commercial class is not more distinguished for its probity and good faith than for its enterprise and intelligence. It was once boasted that the sun never set on the dominions of Great Britain. Sir, the sun never sets on the achievements of the intelligence and enterprise of your merchants. In the greatest commercial metropolis in the world, existing as such, before these States were settled, even there an American merchant is to be found in every commercial establishment—I mean every one that has intercourse with this nation. If you go to China, there, without the aid of monopolies or associations, by his own individual enterprise, you find him planted side by side with the nabobs of the East—for such they are who enjoy the employments of the British East India Company—and you see him vieing with them in his commerce. If you go to the far coast of America, there too you find the American merchant. And if you come to the commerce that, beginning in the United States, embraces the world in its circuitous voyages, circumnavigating the globe, and, as a mere incident to trade, doing habitually what, performed in a single instance, gave celebrity to early navigators, there too you find the American merchant. He is well entitled to your regard.

These (the mercantile and the planting) are two great interests which are primarily affected; but the disease has reached far beyond them, and is now felt by every one. You and I, Mr. Speaker, have not come from our homes without being compelled to inquire every ten, fifteen, or twenty miles, whether a certain kind of money, which I do not choose here to call by the name it usually bears, would pass at the next town. No man can travel without being made to feel the derangement. It is present to him at every step.

Sir, I ask, what are the present immediate and most obvious causes of embarrassment? And I begin by stating that, for the present purpose, I shall deal in facts, and in conceded facts only. What is the present condition of things? Here is a suspension of specie payments. Does any man doubt that? No man can; because the first words in the message of the President inform us that this is the immediate motive for calling us together. What next? The want of a circulating medium in the United States—a common medium of exchange. Now, I will not say whether it is, or is not, connected with what I just now stated. I have received a letter calculated to exemplify this text. It is from an industrious man, not exactly, perhaps, to be called a merchant; he makes the articles he sells, and sells extensively, mingling the characters of the manufacturer and the merchant. He had a debt owing to him in Alabama; I think he informed me he had three of this description. His debtor was willing to pay; he might draw, or the debtor would send him Alabama bank paper. Well, said he, I have inquired of the exchange brokers (who, by the by, are enjoying a most luxurious state of existence, which they owe to the derangement of the currency) and they are willing to accommodate me at twelve or fifteen per cent. When I get this money at twelve and fifteen per cent., what will it be—specie? No. Notes of the bank

where I am, which has suspended specie payments, and whose notes, as compared with specie, are at a depreciation of about ten per cent. This would make a total discount of twenty to twenty-five per cent.; and here is an illustration of the condition of exchanges in the country. Thus, there is universal embarrassment. Why is it so? What is the cause? The want of a common medium: The want of a currency. You have local bank paper in superabundance; but it is local; and variously depreciated. You have, besides, a spurious progeny of the times—the little notes before alluded to. They have but a very limited circulation, but within their limits they have extraordinary credit. We have come to this point in reference to this sort of spurious paper, that, so far as I know, in the State of Pennsylvania, no man inquires by whom it is issued. But come to Baltimore or the city of Washington, and it does not pass. Such being the circumstances, what is this resolution we are asked to vote for? Why, sir, when we meet together to relieve these embarrassments, so far as we are empowered to do so by the constitution, we are called upon to declare, by resolution, against that which has never been co-existent with such a state of things; against that which, so far as experience will guide us, has been both a preventive and a cure, having been tried and proved efficacious, in health and in sickness. Against this we are called upon to declare, off-hand, by anticipation, without debate, and before we have tried out all the rest of the experiments before us. Nay, it is almost stronger than this; for if, after trying out our other experiments, we still find there is no other remedy than this—if our judgments and our consciences tell us it is the only remedy, still we are to commit ourselves against it. And not only so. We are to be committed against any species of bank that can be called a national bank. Have you, I would ask, thought them all over? Are you sure there is nothing coming within that designation, that will not be free from objections; nay, that even will be free from constitutional objections? Certainly you are not sure. You have not yet made the examination. You have not yet tried it. Would it not be rash for any man thus to commit himself? Would any intelligent man do so in his own private affairs? Whatever his feelings might be to the United States Bank of Pennsylvania, would he pronounce that he would, under no circumstances, avail himself of her credit? Bankruptcy might come; his family might starve. Things might be so disordered that your treasurer could not pay in what is called the constitutional currency. Nay, sir, this is the fact now; and, in illustration of my position, I will refer to the case of an individual. This very day a draft which the treasurer had sent to an individual for no larger sum than eight hundred and eleven dollars, owing by the Department of State, I believe, for money paid abroad, has been returned to him. It was upon a bank not paying specie. The creditor declined taking bank notes, and said he wanted specie, as he was required to pay his postage account and other dues to the Government in specie.

Now, sir, in this state of things, we are to proclaim that there is to be no national bank; nothing that can come under that denomination; and, in order to carry this through, we have a less formal, though not less intelligible proclamation that there shall be no connexion at all between the Government and the banks. There is to be a divorce. Sir, it is a word of evil omen, and especially coming from the stronger party, when there is reason to believe that the ground on which he makes the application is the consequence of his own misconduct. Cannot the honorable member from Virginia, (Mr. Garland,) cannot any gentleman who has turned his attention to this subject, see that this proclamation against a bank is a warfare against banks; and that whilst it appears only to pursue the foremost of those who are aimed at, it must very soon go to the hearts of those behind? Does he believe that a confederacy of 26 States can exist with local banks in every State, and yet have no one bank controlling in a friendly manner, and at the same time sympathizing with these local institutions? No national circulation—no national currency of a kindred nature—nothing to keep them together in a common system, and reconcile the citizens of the United States to them by preventing them from falling into the condition of inconvenience and disorder in which they are now placed? Those who are now pursuing this policy, see differently. A proclamation has gone forth against the banks. Let me not un-

necessarily take upon myself the championship of the State banks; it is not requisite for my present purpose that I should do so. But I will ask this question: Do you believe, in relation to circulation and currency, that the wishes and habits of the people ought to lead the Government, or that the Government ought to drive the people? If the people say that they wish to have a paper circulation, convertible at any moment into specie, do you think it is competent for the Government, according to the genius of our institutions, to tell them they shall not? If the people of the different States of this confederacy choose to have banks, is it for the Government, under the constitution, to say that they shall not? What is it for? To support the Government of the United States. How? By payments into the Treasury. And what are they? Contributions by the people from the money of the people. Sir, if we had nothing for a currency or a standard but tobacco, would it be allowable, on the part of the Government, to say it would not take it? I say, if they had nothing but tobacco, which was once a currency in several States of this Union—if they have nothing but what they have in China, a mixture of base metal—it would be most unreasonable and intolerable in the Government to say it would not take that from them; for, to say they would not take it from them is to say they would not take out of their property, such as they have, but would compel them to buy something else to pay their dues. Why, sir, this would be an exercise of authority in the Government over the people, to which, so far as I know, no society—no civilized Christian community—has ever been subjected.

It cannot be done consistently with my notions of the nature of our institutions; and it would not, and ought not, to be submitted to.

But, sir, when I say I do not know that this distinction is made in any Christian community, I admit it is made in one empire; that empire, from its name, would seem not to be of this earth. It styles itself the Celestial Empire, and all the rest of the world, with becoming self-complacency, it denominates barbarians—ourselves amongst the number. Fortunately, I am able to give you the result of their experience in the plan now talked of here, of one currency for the people, and another for the Government; of one money to pay each other, and another and better to pay their duties and taxes. But, first, a word of explanation.

Their money in China is metallic money. So far as it sounds in metal, they are in advance of us, according to the most fashionable theory of the day; it is made of a mixture of base metals. This is called "cash." Their standard is pure silver, and the time was when 1,000 "cash" was equal to, and would buy, a tale of pure silver. But silver has risen; or "cash" has fallen, so that it now requires 13 to 15 hundred "cash" to buy the same quantity of pure silver. Now, what does this wise Government do? And what is the effect? I read from a collection of public documents on the opium trade, and the contraction of the currency: for they, too, have trouble with their currency, though entirely metallic. Arrogant as they are, they admit one point of resemblance between them and other people. "For in the love of much money, and of good prices, the flowery people (Chinese) and the barbarians are altogether like minded." Now, for the passage more especially applicable to the present purpose. It is as follows: "Always in times past, a tale of pure silver exchanged for nearly about 1,000 coined cash; but of late years the same sum has borne the value of 1,200 or 1,300 cash: thus the price of silver rises but does not fall. In the salt agency, the price of salt is paid in cash, while the duties are paid in silver: now the salt merchants have all become involved, and the existing state of the salt trade in every province is abject in the extreme." Comment is unnecessary. If we borrow from the "flowery people" their wise and mild system, of one currency for the people and another for the Government, what can we expect but the same "extreme" abjectness which they have experienced under it?

I desire the attention of all who insist that duties shall be paid in one kind of money, when another is used in the transactions of the people, to this; the only experiment I know of in the world, of the application of their theory. Are they willing to introduce it here? What relief will it be to bring about "extreme abjectness" among the people. So much for that experiment.

In another of these documents, the rate is stated to have advanced from 1,000 to 1,500. Will it go

25th Cong.....1st Sess.

*Inexpedient to charter a National Bank—Mr. Sergeant.*

H. of Reps.

do so here? Will not such be the inevitable consequence of the new scheme of one currency for the Government and another for the people. Probably, I had better avoid the discussion of this matter now, as it belongs more properly to what is called the remedy that is before us in the sub-treasury bill, at which, however, it seemed not improper to glance.

Having spoken of the difficulties under which we labor, what are they to be ascribed to? And here I take the message of the President of the United States and the report of the Secretary of the Treasury. I take them, neither admitting nor denying them; but I take them both as they stand for the present. Over-trading is the cause,—is it not set forth in the message and report? Over-action it is called in the message; over-trading, and especially over-production of cotton, is stated by the Secretary of the Treasury as the principal cause of our trouble.

SATURDAY, SEPTEMBER 29, 1837.

MR. SERGEANT resumed:

MR. SPEAKER: This house has been so constantly in session, and the attention of the members of it occupied by so many speeches, that they must be a good deal fatigued, and it is almost unreasonable, at this time, to ask their attention to the subject of this resolution. I, sir, certainly never could have introduced it to the notice of the house; and I regret, very much, that it has been brought forward in such a way as to oblige us to vote upon it; and, as a matter of necessity to those who vote, to give some reason for their vote. With this view, and under the necessity forced upon us, I will pursue the course of remarks I was making when the subject was last under consideration.

Mr. Speaker, I will endeavor to condense what I have to say in a small compass, and to place it upon ground as little liable as possible to controversy and dispute, proceeding, chiefly, upon conceded facts. When I last addressed the House, I was adverting to that part of the report of the Secretary of the Treasury in which he ascribes the present embarrassed condition of the country and of the Government to several causes. The first that he mentions is, that of the over-production of cotton, combined with the sudden fall in its price, making a difference in the whole value of the crop of that year of forty millions of dollars. He estimates the over-production, compared with the past, at upwards of one hundred millions of pounds, and, as he intimates, more than it ought to have been, to that extent.

Now, sir, supposing it to be accurate, as he states, that half the crop has escaped the effects of this change, having got to market before it occurred, it appears that there is an actual loss on this article of \$20,000,000, and, of course, whatever it may be owing to, the loss to the cotton growing country may be put down, in regard to that crop, at \$20,000,000. I said, therefore, this was an interest primarily affected along with the mercantile interest; and the other interests throughout the whole country have also been affected consequentially. And now what do the Secretary of the Treasury and the President say, is, as far as their inquiries have gone, the ultimate cause of this? What has immediately led to this over-trading and over-purchasing of lands, this over-cultivation, to this over-action, as it is termed in the President's message, terminating in the present disorder and distress?

Sir, as far as they have looked into the matter, and I shall go no further for the present purpose, they ascribe this over-action and the evils resulting from it, mainly to the over-multiplication of banks, the undue increase of bank capital, and the excess of circulation, that is, of bank paper. What these things themselves were owing to; what were the primary causes; these are questions of great consequence, altogether avoided by the President and the Secretary. I am not now going into them. I will rest here for the present purpose, and suppose it to be correct, that the existing disorder in the country, so universally felt, is the consequence, not the cause, as just stated, of over-banking. Well, sir, what is this over-banking itself owing to? Sir, it would be natural to answer at once, that it is owing to the want of some suitable restraint. And, I presume this is a proposition so perfectly clear that every one would agree to it. Is it possible then to devise any restraint?

Now, sir, I mean by historical proofs to show you, I think conclusively, that it is possible; that we

have had such a restraint; and that the absence or removal of this restraint, is the real cause, the very source of so many mischiefs. We will afterwards consider what that is. Sir, I will call the attention of this house, in the first place, to two leading facts in our history. For forty years of its existence this Government had a national bank—I mean a bank that was the fiscal agent of the nation. In the same period, that is, since the adoption of the constitution, you have been for six or seven years only without a national bank, and this at two different periods. Now, sir, if it should be found upon the records of the history of the country, that such disorders as exist at present, have never occurred during the period when you had a national bank, though that period extended through the space of forty years, and that each time when a national bank ceased to exist, and as soon as it ceased to exist, these disorders began and continued, as they now do, is it not reasonable and natural to infer, that in this co-existence there is a connexion as of cause and effect? I believe it, as much as I believe any truth whatever, which I have been taught or been able to discover. Sir, it is the business of a statesman, from every event, good or bad, to endeavor to draw instruction. His pressing and immediate duty is to get through exigencies existing, with as little injury as possible; but his next duty is, out of the exigency itself, to extract lessons, which may be applicable in future times, and prevent a recurrence of similar disasters. Now I invite the attention of the house to three points in our history; for, short as our history is, it furnishes three periods upon the subject in question, and it is really astonishing when you come to look at them, what an universal and unquestionable testimony they bear in contradiction to this resolution.

Sir, the first bank ever established within the limits of the United States was a national bank. We are all familiar with the state of things which immediately followed the last emission of paper money, commonly called continental money, by the old Congress. The amount of that emission was, I think, two hundred millions of dollars. It rapidly depreciated, arriving no doubt in its descent, at the rate mentioned in the message, of five hundred for one; and finally was cried down, as it was termed, being of no value whatever. This was a dark and appalling moment. Our troops without pay, without clothing, and without provision; the Treasury was without money, and Congress was without credit. Prior to that time no bank had existed in these provinces, or colonies, or States, after they became States. The provinces, while provinces, had all been in the habit of issuing bills of credit, and the Congress of the United States caused to be emitted that paper, always since known by the name of "continental money," and which no man living, if he has any recollection of it, desires ever to see restored again, nor any thing in its likeness.

When things were in this condition, and that great and good man who was at the head of the armies of the United States was pressing, in every way, the indispensable necessity of raising means, a few patriotic citizens of the city of Philadelphia got together, united their funds, and with them established the Bank of North America. This was the first dawn of light. The means, the money, and the credit afforded by this establishment gave at once some aid and relief to the Government. In the following year, that is to say, in 1781, Congress found it necessary to have a regular system of finance; to appoint a superintendent; and that superintendent recommended to them the incorporation of this national bank, the Bank of North America, the only one then existing. And you will find, or whoever will be at the trouble of searching the journals of that Congress will find, that in that year, in a dark moment of the revolution, when, however, patriotism abounded as well as difficulty and danger, the resort of those who were to bear the brunt of the contest was to a national bank; and the national bank, under God, was among the great means that enabled them to accomplish their victories, and finally to achieve the independence of the United States. Such was the first national bank—the first bank, indeed, we ever had. Its foundation was laid by the hand of patriotism.

The next period, sir, is the establishment of the Government of the United States under the present constitution, in 1789, at which time there were four banks, I think, in the United States. State banks all of them. At this time, owing to doubts being entertained of the power of Congress, under the articles of confederation, to establish a national bank,

or, whatever it was owing to, it so happened that the Bank of North America, located in the city of Philadelphia, had accepted a charter from the State of Pennsylvania, and become a State bank. Banks were by that time also established in Massachusetts, in New York, and in one other State. There were four State banks.

When the Government became organized under the constitution, a national bank was established in 1791, with a charter for twenty years. Sir, twenty years of active commerce, twenty years of occasional commercial revulsion, twenty years of speculation, occasional; and at times, very active if you please, for never was there a period in the history of this country, perhaps, during which there was more speculation in trade, more speculation in land—not public lands—but lands of all sorts. About the years, 1795, 1796, and 1797, perhaps a little earlier; every one who recollects that period well knows that failures were not less frequent, and not less gigantic than they have been since. There were, besides the ordinary fluctuations, the ebbs and flows of business. But the bank kept on for the twenty years; and, during the whole of that period of twenty years, your currency was maintained throughout the United States, and you never had exhibited the scene you now have of a suspension of specie payments.

Well, sir, that bank expired in 1811; in the year 1814 specie payments were suspended, and continued so up to 1817. In 1816 the Congress of the United States again resorted to this expedient of establishing a national bank. And here, sir, allow me to say, and to say it as a matter of history, about which it is impossible there can be any doubt, that this bank was established for the purpose principally, if not entirely, of raising the country out of the state into which it had been thrown for want of a regular currency for the circulation and exchanges of the country. Yes, sir, I remember well, and if gentlemen will consult the journals of that day, they will find that the proposition to charter that bank was not reported by the Committee of Ways and Means of this house. They will hardly discern, in the history of its establishment, a reference to the fiscal wants of the Government, except so far as those fiscal wants were connected with the general business, and currency, and exchanges of the country—with the business of the citizen. But, sir, you will find that, passing by the Committee of Ways and Means, a special committee was raised on the currency—on the currency, and nothing else; and that committee, of which a gentleman, now a distinguished Senator, was chairman, being appointed upon the currency, reported a national bank; and that was the bank whose charter was passed in March, 1816.

Proceeding then, sir, historically, let me say that that bank fully answered its purpose from the period of its establishment up to the period of the expiration of its charter, or very near that time. You had a currency the most uniform, the most equal of any nation upon earth, beyond all comparison. Sir, if any gentleman doubts of this, I refer him to a speech made by the late William Lowndes, of South Carolina, in the year 1819, in March. A valuable speech it is, sir, in all respects, and worthy of all reliance. Mr. Lowndes was a man who, taking his talents, his acquirements, and his unquestionable integrity, has been excelled by none that I have met with in the course of my public walk through life. His early death was a loss to the country; for, before that time, the legislature of his State had honored him by nominating him for President of the United States. He was, too, an inquiring and careful man, and seldom ventured himself without adequate preparation, in regard to matters of fact, patiently collecting them wherever they could be learned. Now sir, if you will look at that speech of Mr. Lowndes in 1819, when the bank had been about two years in operation, you will find him there stating, as the result of a careful examination, that the currency of the United States, by the agency and under the auspices of that bank, was more uniform than the currency of France. It is there stated that the exchange between the most distant points in the United States was not more than three quarters of one per cent., whereas the exchange between Paris and Marseilles was from two to three per cent.

Now this bank had its day; but its departure was a little anticipated. It was given to understand, some six years before its charter would expire, that it must then cease to exist; and from that period

the people of these United States were led to believe, and to act upon the belief, that that bank would be withdrawn at the expiration of the period of its existence fixed by its charter.

Sir, what do you find then occurring immediately after this announcement? You have had a uniform currency; you have had exchanges as near to par as possible throughout this whole extent of country. What is more, you have had no such excesses of over-trading and over-speculating as even to destroy that uniformity, and to bring the banks to the condition they now are. I do not mean to say, sir, that there was no over-trading then. It is beyond the power of this Government, or of any other upon earth, to prevent over-trading. A specie currency will not do it; a paper currency will not do it; no currency will do it. If any gentleman doubts of this, let him only look at the most remarkable incidents presented in the history of speculation and trade, and he will find that the two most gigantic and disastrous schemes of speculation known in the world's history—the Mississippi scheme in France, and the South Sea scheme in England—were carried on, one in a country where there was a bank, and the other where there was none. But, sir, no Government, by any contrivance consistent with the freedom of individual pursuit, can prevent over-trading. Yet this I mean to say, that, during the existence of a national bank in this country, whether the people were over-trading or whether they were not, over-trading never produced the effects which it has done when no national bank was in existence. You have had but a very short interval between the expiration of the bank in 1811 and the establishment of a bank in 1816. You have had a still shorter interval between the expiration of the last bank and the present period; and yet, in both, it is not over-trading you complain of, much as you lament that; it is a total prostration of the currency, the destruction of the standard of value, and alterations and fluctuations in the value of your money, in such a way and to such an extent that no two parts of the country are in the same condition; no two departments of the Government are in the same condition; nay, that no one department, as I will presently show you, even the Post Office Department, can act consistently with itself; but that one man is paid in paper, from necessity, while another may get specie.

Now, I have heard it said, that there was a period of very great embarrassment in this country, in the year 1819, the time I before adverted to, and so there was. But every one who turns back his thoughts to that time will recollect; no doubt the chairman of the Committee of Ways and Means remembers it full well; that at that period prices were low, and there was an over-abundance of money, which facts, seemingly contradictory, nevertheless co-existed. They were owing to the excess of importation in the year immediately following the peace. It was the languor of trade which followed over-excitement. But so it was. That period of 1819, 1820, 1821, and 1822, was not a period when money was scarce, when specie was wanting, or when your currency was debased or affected. It was, sir, a period when money was abundant, and prices low, presenting an anomaly the converse of the period we have lately passed through, when money has been scarce and prices high. Such was the state of things in 1819, caused by the previous years; and we are now, in 1837, gathering the miserable harvest of the season prepared for us from 1830 to 1836.

Now, sir, I mention these facts for the purpose of laying the ground for the unavoidable deduction. And with regard to this period of 1830 to 1836, if confidence can be placed in making deductions from facts before you, the evidence is as conclusive as it possibly can be. I assume, still, without going farther back, that it is over-banking, over-issues, over-trading, from some cause or other, no matter what, that have produced the present embarrassments and disorder. I will assume that, without going any farther back to the final or primary causes. Now, only observe how over-banking, over-speculation, and the worst consequences of over-speculation and over-trading have been precisely co-existent with these periods when you have had no national bank. Sir, the charter of the first Bank of the United States expired on the first of January, 1811. You had then, in the United States, eighty-nine banks. On the first of January, 1815, you had two hundred and eight banks. That is as much of the period as can be ascertained between the cessation of the charter of the first bank and

the establishment of the second one. Upwards of a year is to be added, of which we have no account. And, sir, only note the extraordinary increase; no less than one hundred and nineteen banks added in the short space of four years. That is a period when you had no national bank. Well, in the year 1820, by which time the national bank established had got into operation and got through the embarrassments of its early existence, these banks had increased to three hundred and eight. Now, sir, take the next period of ten years, when the national bank was in full, active, and beneficial operation, and you will see how it worked to regulate and restrain. The whole increase of banks, from 1820 to 1830, if I understand the statement of the Secretary of the Treasury, is what? Why it is remarkable, and it is a fact every one must dwell upon; by that statement it appears that the whole number of banks, in 1830, was three hundred and twenty, being an increase of only twelve in ten years.

Now, sir, we come to the period when the Bank of the United States began to verge towards its dissolution—when it began to be believed, beyond a doubt, from clear indications, that it would not be continued. What do you find then? Exactly what you might have expected. From the 1st of January to the 1st of December, 1836, there were 110 new banks established; and whereas, in the year 1830, you had but 320 banks, you have now in the United States, in only six years, the period I have before adverted to, 677 banks, besides 146 branches. How much does that give you for the last six years? Three hundred and fifty-five; being more than had been established in all the antecedent periods from the origin of the Government!

Now, again, sir, look at the increase of banking capital during the same period:

In 1830 you had	\$145,000,000
In 1834 there were added	55,000,000
In 1835 there were added	31,000,000
In the beginning of 1836 there were added	20,000,000
In the remaining part of 1836 there were added	72,000,000
	<u>\$323,000,000</u>

Making a total of three hundred and twenty-three million of dollars, and something more, up to this time. So much for the number of banks and banking capital.

Now for your circulation; and it will be found to concur with the other evidence, and comes to precisely the same result. From the year 1830 to 1836-7, the circulation of bank paper increased in the United States from \$61,000,000 to upwards of \$185,000,000. The discounts and deposits were increased, probably, in the same proportion; that is to say, the sum total of banking operations was thus increased with a rapidity never before witnessed, and, I trust, not soon to be witnessed again. In six years it was more than trebled.

Sir, I am not adverse to the State banks; there is too vast an interest involved in them to be wasted and destroyed. A capital of between three and four hundred millions of property ought not to be sported with or endangered; for an injury to it must do extensive mischief to individuals and individual interests. But the statement of which I have given the particulars deserves, in my judgment, the serious attention of every American statesman; in it are involved all the evils that are complained of. What is it that has produced over-trading and speculation, and over-purchases of land? What is it that has stimulated the interests of this country to a morbid state of activity, threatening the existence of every thing, disturbing the relations between the different portions of the Union, embarrassing the intercourse between man and man, and compelling us to be here at midnight to pass bills to rescue the Treasury from impending bankruptcy? I need not go further back, and the result of the whole is that in forty years no such thing ever occurred; that in six years it did occur, and that in less than six years it occurred again; and that this state of things happened at two periods precisely identical, and alike distinguished from two other periods, identical also with each other when it did not happen.

The difference, so far as we are able to discern, is to be found in one great leading circumstance; that at the two favorable periods you had a great fiscal institution, acting as the fiscal agent of the Government, and at the other period, you had none.

I will not undertake to show that, even with such an institution, it is impossible that such a derangement could happen. I do not believe that it would. I am content at the present time to say, that if you want an experiment, the experiment has been made. You know the results of that experiment perfectly well, and in a manner to be relied upon; you know you can have a uniform currency; you know you can avoid the suspension of specie payments; you know that you can furnish a medium between the inhabitants of the most distant parts of this great confederacy for carrying on your intercourse. You know it, because you have done it twice for long periods; and the experiment has been twice so successful that no one can doubt its efficacy. But, if any man could doubt its efficacy upon the mere affirmative evidence, you have had its opposite also; the negative evidence, also, is concurrent and complete.

You have tried the experiment of doing without it, and it has twice resulted in the same way, and brought us to the same condition. This co-existence is, humanly speaking, and according to the soundest philosophy, a good reason for inferring that one is the cause and the other effect. And then you have the deduction from the whole, that a national bank has prevented and will prevent such occurrences, and without such an institution you are inevitably exposed to them.

Now, sir, you are in this crisis not deeper than you were before; the remedy is not more difficult than before, nay, I firmly believe, and thousands in the United States believe, that precisely the same treatment will give relief. What is this crisis? I have taken from a newspaper of yesterday, I do not recollect from what paper, the following article:

"TENNESSEE MONEY MARKET.—The Nashville Banner, of the 16th instant, quotes the following rates of exchange at which the brokers purchase bank notes and specie:

United States	124 premium.
Silver	15 do.
Gold	15 do.
Kentucky	9 a 10 do.
Virginia	9 a 10 do.
Indiana	9 a 10 do.
Illinois	5 a 6 do.
Ohio	7 a 9 do.
Alabama	2 a 3 discount.
Mississippi—Natchez and Vicksburg	3 a 6 do.
other banks	15 a 20 do.
New Orleans	par.

\* Taken by banks in payment of debts, and current in ordinary transactions."

Sir, what a scene does this exhibit? What medium of commercial communication is there at that point between the State of Tennessee and the adjacent parts of the United States? Well, sir, come to your officers, the officers of your Government. One man is paid in specie; another man is paid in what the department has to give him. I am not now charging any of the officers of any of the departments with favoritism; but I speak of what has happened, and, if you please, of that which inevitably must happen. A third man is paid in United States Bank paper—a fourth in Kentucky paper—a fifth in Ohio paper—a sixth in Alabama or Mississippi paper; sometimes by means of drafts; and probably, occasionally, one is paid in drafts on New Orleans. No two men are paid in the same currency, and no two men receive the same amount, even if the amount of the claims is precisely the same. Then you have a difference between different departments. I mentioned to you the other day, the case of a claim of a mercantile house on the department for about eight hundred dollars. The Treasurer of the United States sent to that house a draft for eight hundred dollars, drawn on a bank in Pennsylvania which had suspended specie payments. The house sent the draft back to the Treasurer, stating that they had paid one hundred and twenty dollars in specie for postage in a given time, and that they wanted specie to pay their postages that were accruing. He sent the draft back again. Now I do not impugn this officer. I believe he intended the best; but he could not give them specie otherwise than as he finally offered it, by a draft on a receiver in Ohio. How the matter ended, I do not know. But what is the consequence? In 1815 and '16, when a similar state of things existed, the New England banks continued to pay specie; the Post Office Department had the same command of specie, and the idea got abroad in Congress that certain gentlemen had been paid in the Post Office Department by drafts on those banks where specie was paid. A committee of investigation was raised, and the

officer, I believe, was acquitted. But what a state of things is this, when your officers are exposed to suspicion; and when, with intentions ever so fair, they have not the ability to do what they desire! And then reflect that the public creditor does not possess that which is essential to all good Government—one weight and one measure for the whole people; his weight and his measure must depend on the accidents that happen to the Government, and that at the post offices throughout the United States persons are compelled to pay specie for their postages; they must find specie to pay their dues to the Government, of every kind. Now reflect on the general effects of this! Think of the injustice which is done when the Government of the United States demands its pay in specie, and when no creditor of the United States can compel payment in a similar medium. What is to be the consequence of such a state of things? To what does it tend? What is to be its influence upon the affairs of this nation?

Independently of these particular considerations to which I have been inviting your attention, sir, take a broader view. Is not the Government of this Union established for the common welfare, to do those things which the States individually cannot do, to keep this Union together, to regulate its foreign commerce and the commerce between the States, to give to the institutions of these United States a nationality, and to give to that nationality a pervading character? The subject we are considering embraces matters which deeply concern the general national interest in its whole extent. Is the Government of the United States to take no heed of this? Are they to suffer a centrifugal force to become preponderant, and endanger the Union itself? Are they to incur the manifest risk, nay, the absolute certainty, of suffering the beautiful spheres which constitute this system to rush into confusion and collision for want, in its proper place, of the most beautiful of all the needful, kindred, national sphere, which combines and regulates them all, and presents them as one harmonious whole? Are they to take no care that the centrifugal force shall, by appropriate and adequate means, be so restrained as not to endanger the system itself, to separate those intended to be kept together, to produce adverse interests, to let the needful balance be destroyed, and leave us in our daily concerns as if we had no common country, and no national character?

Sir, what is this Government of the United States for? It is to make us a nation. It is to give us a national character. It is to give us national capacities and advantages—not by consolidation, not by interfering with or destroying the rights, and powers, and privileges of the States, but to facilitate their intercourse, without effacing the lines between them; to give to the citizens the rights, the immunities, and the privileges of free citizens throughout the United States; and, so far as it can, by these acts, to promote whatever is good, and to guard against whatever is evil.

Now, sir, if it be demonstrated that a fiscal agent of the Government is indispensable to this, can we be called upon to say there shall be no such fiscal agent? Sir, great interests have, I fear, been sacrificed to words—to words of factitious import and factitious power. We have been told there must be no longer any connexion between the Government and a bank, and now they have got a step beyond this. They now say there must be no association whatever between the Government and banks. Sir, I deny that this Government ever had a partnership with a bank or banks, or any thing that ought to be called by that name. It had an instrument, and the excellence of that instrument consisted in this, that it served also for the use of the people for the same purposes for which it was used by the Government; and thus it established, not a partnership between the Government and the bank, but, what ought always to exist, a community between the Government and the people, by bringing them together, in the common use of this instrument, to act upon the same ground. Is not this the English of it, turn it as you may? The people of this country choose to have banks. They choose to have credit. They choose to have that which they consider, and I believe to be, with regard to the business concerns of the nation, what that mysterious thing called life is to the organization of the human frame. Sir,

can the Government adopt this same faculty, and thus indulge the people in it? I repeat, can the Government indulge them in it? Take it, if you please, your experiment upon the State bank system has failed, as it most certainly has, and was foreseen it would, does it follow that you cannot indulge the people in their attachment to the credit system? Are you driven to the Chinese improvement, of silver for the Government, and base metal for the people? Be it that you can not use the State banks directly. I firmly believe you can not. But can not you so arrange as to allow the people to use them, if found convenient to themselves? Yes, you can, simply by adopting an instrument, such as you have heretofore had, of common use, and making the State banks of common use too.

The late Bank of the United States restored specie payments throughout the Union; it recovered the currency from a worse condition than it is now in. The State banks, without injurious pressure, returned to specie payment. Order was restored. Harmony was established between the United States Bank and the State banks; union between the Government and the people. Where is the difficulty of doing the same thing now? Is any thing wanting but the inclination? Ought not the happiness of Government to consist in promoting the happiness of the people? And are they not happy when their reasonable desires are indulged and the efforts of industry facilitated? And, let me ask, is it the business of government to seek to elevate itself before the world into a sphere different from the people, and say to them, we will not use the same instruments you do? We will not accommodate ourselves or our business to you, or to your business, or to your wishes; but, raising ourselves upon a heap of gold and silver, will leave you to flounder with your State banks in the region below, taking care of ourselves and careless of you? What would the people of these United States, in that case, consider?

Sir, is it desirable that such an unnatural state of the circulation should take place? Now, sir, supposing the multiplicity of State banks to lead to these revulsions in trade; to occasion a suspension of specie payments, and that, therefore, you cannot accomplish the required end by means of all the State banks in the United States, or by means of selected banks in the different States, numerous as they are, does it follow that it cannot be attained at all? Does not experience teach you that it can? Nay, sir, more than this. That by means of that common instrument, fit for your use, and fit for the use of the people too, which will not be injured, by their use of it. By means of that instrument, you can regulate and control the State banks, and render them as efficient as they ought to be, and more safe than they are throughout the different States.

I am desirous, Mr. Speaker, to get to a conclusion in this matter, so far as I am concerned with it, and I shall do all that is in my power to accomplish that object within a very short time. With this view, I shall proceed at once to state, that there is one evil arising from the present disordered currency of the country, which, so far as my recollection serves, is peculiar to the present crisis, and which, in my opinion, constitutes, by reason of its peculiarity, the greatest evil of the whole, and which, if I am not much mistaken, is as formidable as all the other evils put together. What this evil is, I shall proceed to state.

When a suspension of specie payments formerly occurred, and during the years it existed before the establishment of a national bank, we were all, according to my recollection, placed on one footing. I do not mean to say, that there was an equality in different parts of the Union, but there was an equality among the people at the same point, in the United States. The peculiarity of the present crisis consists in this, that it makes a distinction between the officers of the Government of the United States and other persons, in favor of the officers of the Government. On this subject it is requisite I should enter a little into details, but I will enter no farther into them than is absolutely necessary for the distinct illustration of my meaning. And, with this view, I will state in the first place, that every salary officer of the Government of the United States actually receives more than any officer of a State Government, whose salary is nominally equal. The salary of the President of the United States, for example, is \$25,000 per annum. The salary of the Governor of Pennsylvania, is \$4,000 per annum. The proportion between these salaries, according to law, is twenty-five to

four. When this Congress assembled, the difference between specie and the bank paper of the Commonwealth of Pennsylvania, was ten per cent.; and, for the sake of argument, I will now suppose it to be ten per cent; since whatever the proportion may be, requires only the alteration in the calculation to show what the actual effect is. The proportion, by law, between the salary of the President of the United States and the Governor of Pennsylvania, is, then, twenty-five to four. The Governor, therefore, ought to receive four twenty-fifths of what is paid to the President of the United States, and the President ought to receive as much as the difference between twenty-five and four, more than the Governor. Now, what is the fact? That the President of the United States receives \$27,500 per annum, and the Governor of Pennsylvania, \$4,000 per annum. The proportion, therefore, instead of being twenty-five to four, is twenty-seven and a half to four, supposing the difference between specie and the bank paper of the Commonwealth of Pennsylvania, to be ten per cent.

To look at another illustration. A gentleman who was, some time ago, Governor of Pennsylvania for two terms, is now First Comptroller of the Treasury under the Government of the United States. His salary, as Governor of Pennsylvania, was \$4,000 per annum, and the salary of the gentleman who succeeded him in that office is the same as his was. The salary of the Comptroller of the Treasury of the United States is \$3,500, if I am not misinformed, the Governor of Pennsylvania thus receiving, according to the statute-book, \$4,000 a year, and the Comptroller \$3,500 a year. But what is the fact. The fact is that the Governor only receives \$3,850; so that the difference between these two officers, instead of being as it appears to be by law, \$500, is in fact reduced to \$150. This is not all. Every salary officer of the Government of the United States, actually receives, in the present condition of things, more than any other individual having the same actual amount of salary, whatever his employment may be. We have all seen in the newspapers, a short time since, an account of the clerks in one of the Departments being paid by a Treasury draft of between \$13,000 and \$14,000, which was sent on to New York and sold, according to that statement, at a premium of eight per cent. If you take a clerk in the city of New York with the same nominal salary as that of one in the employment of the Government, how will the fact be as to compensation. Why, the consequence of the present condition of things will be, that a clerk in the Post Office Department receiving specie, or a draft equal or nearly equal to specie, is paid eight per cent. more than the clerk in the city of New York who gets the same nominal salary. Take the clerks in the custom-houses, or in the post-offices through the United States, and compare them with clerks in private employment, whose salaries are nominally equal, and what is the fact? Do they receive the actual compensation which they appear to receive? The Post Office Department deals in specie; and the benefit of specie, therefore, is given to the officers so far as they have specie to pay, and the difference between specie and paper being ten per cent., the salary of the officer is advanced ten per cent. by the operation of the present state of things, that is, by the mere change which has taken place in the suspension of specie payments. How is it in relation to our own wages, as compared with the wages of any working-man in the United States? We are allowed by law \$8 per day. A short time before the session commences it is very strangely announced to the public, for reasons which I cannot comprehend, since the Secretary says that the letter in which the announcement is made was not intended for publication, and how it came to be published I have not yet heard stated; but it is announced to the public, in the midst of all their suffering and distress, that, out of the wrecks in the Treasury remaining from this great convulsion, or revulsion if you please, the Secretary had continued to scrape together sufficient gold to pay the members of Congress in that coin. I am not going to say, sir, whether it is right or wrong to do this. I am now dealing with a matter of fact, and merely with a matter of fact, and with the unavoidable inference from it. I am not dealing in the language of censure, except so far as to say, that when there was such great and universal distress, it was unfortunate, very unfortunate, that it should have been publicly announced that a distinction was made in favor of any of the ser

25th Cong....1st Sess.

*Inexpedient to charter a National Bank—Mr. Sergeant.*

H. of Reps.

vants of the Government, even of members of Congress. Without meddling with the fact whether it was proper to pay them in specie or not, I will state that I remember the time when members of Congress were paid in the paper of the District of Columbia, then depreciated twenty per cent. below specie, and they were satisfied; and when, for the remainder of that session, according to my recollection, they were paid in Treasury notes, also below par as compared with specie. I say, therefore, the publication of the Secretary's letter was unfortunate, because it leads immediately to the inquiry now set on foot.

Suppose a workman in your navy yard, who is said to be paid in the common currency of the place, receives \$2 00 per day, which is nominally one-fourth of the pay of a member of Congress. Does he actually receive that proportion? His compensation for six days, if he received the whole amount, would be \$13 20. What does he actually get? Twelve dollars. What do we get? We get \$8 80 per day. You may calculate this for six days, and see what the difference would be. Of this I will speak hereafter. Now this is a letter which presents itself every where throughout the country, and at all times, and allow me to say, that it is the most disagreeable feature in the whole ugly face which our financial affairs now bear. It presents itself to all classes, in every condition throughout the country; and as if there had been a fear that that condition would not have been sufficiently seen and felt, we have this formal announcement published to make it the more striking. I regret very much that such a publication was made. And, sir, it presents itself in a manner even more odious than any I have yet adverted to—in a manner intolerably odious, which cannot be borne; which will not be borne. Sir, let me ask, is not the public creditor distinguished unfavorably from the officer of the Government? Is the public creditor paid in the same coin your officers of the Government are paid in? No, he is not. The chairman of the Committee of Ways and Means misapprehended me if he supposed that, in the instance I stated to him, I meant to prove that the Treasury was wholly destitute of means, available or unavailable. I did not mean that. I meant to say that it was destitute of the means of doing equal justice to all who have claims upon the Treasury; and the state of the case is sufficient to establish that fact satisfactorily. Sir, here was a claim upon the Government of \$811 00; perhaps it may be twice as much as my per diem allowance and travel will come to for this short session. An order was sent to that creditor to receive it from a non-specie-paying bank; that is to say, in bank paper depreciated below specie, or above which specie had been appreciated, it matters not which. Could he get payment of that order in specie? He could not. He then sends back the draft to the Treasury, and tells the Treasurer he wants specie. He said he had a heavy account for postages from month to month, and he thought the least that ought to be done was to pay that small sum, for advances to the State Department, in that kind of money in which he paid his postages. The answer was, they could not pay him in specie otherwise than by giving him drafts upon a public receiver in Ohio. That, sir, was the case of a public creditor, and it so must happen continually.

Now, without impeaching the conduct or the intention of any officer of the Government whatever, is it not obvious that it becomes, sooner or later, the interest of the officers of the Government to continue this state of things? Because it is an advantage to them, as they will be paid in better coin, and in a better currency. They are nearer to the Treasury. They have more knowledge, and have the means of obtaining, perhaps are entitled to, the priority, in the payment, and, whatever advantages are to be secured will be secured to them.

Sir, what do you create in them by this state of things? You are creating an interest in your officers of the Government adverse to the interests of the people, and adverse to the common claims of justice; an interest which makes it for their advantage that this difference between what they receive, and what is paid to others, should not only be destroyed, but even should be increased. Sir, it is the interest of the Government, therefore, not to correct but to continue these disorders. They gain an augmentation of their salaries without any appropriation by, or without the assent of, Congress; that is, the whole amount of difference between paper

and specie, paid to any other person performing the same service, or at the same nominal salary. This, I say, is intolerable. It cannot be borne. It will not be borne. Sir, what is remarkable is, that this being an evil manifestly of great consequence, and attended with very great danger, you have not a single proposition for the relief of it. The only proposition you have is to let it continue. I maintain that what is called the sub-treasury system, though I know it would be irregular to anticipate the discussion of that question now, is no system at all. It is a call upon Congress to legalize that state of things which has grown out of the suspension of specie payments, and to secure and perpetuate for ever the payment of the officers of the Government in specie, leaving it to the people to manage as they can with a debased and depreciated currency. Indeed, we have been told that this scheme exists already in the present state of things.

This, sir, is extraordinary; very extraordinary. How is it to restore one weight and one measure throughout the country?—a thing that you want, that is indispensable,—a thing in which, from the beginning of time down to the present day, has been deemed indispensable to every people, that there should be uniformity. But I know it is called by another name, perhaps a proper name. It is called a divorce from the banks—a divorce from the banks! That is to say, the Government has contracted an alliance, which every one who thought upon the subject told them would be attended with danger, with injury, and finally with the necessity of some sort of separation. What was predicted has come to pass, and then they call for a system of divorce, when, in fact, the separation has already taken place. That, however, is not the point upon which I am going to discuss the matter. I do not take upon myself here to inquire how far this is necessary, and still less to inquire how far this divorce should take place. It is becoming the fashion to make the banks as odious as possible. What interest may be injured by so doing, that is foreign to the present purpose to inquire? But, sir, I say it is not a divorce of the Government from banks. It is a divorce of the Government from the people, and that is a divorce which has already taken place—a divorce from bed and board. Sir, the Government and the people no longer sit down to the same table—they no longer feed upon the same food. The difference between them is ten per cent. And while the one has his table covered with utensils of gold and silver, and every thing that can gratify his appetite, please his taste, and constitute that thing about which we hear so much in the President's message called luxury, the people may get along with a wooden spoon, if they can; and if they cannot, why it is none of the business of him who has kept the gold and silver. Now, I say, sir, it is a divorce of the Government from the people, and not from the banks. And what is it, in order to relieve the people from their present difficulties and embarrassments, we are called upon to do? Why, in the first place, by the bill already passed postponing the instalment to the States, to relieve one party from the obligations they have contracted at the expense of the other; and the next, to furnish them with Treasury notes, in order that, by these Treasury notes, the Government may buy gold and silver. I can have no doubt of the genuineness of a certain letter that has been going the rounds of the newspapers, in anticipation of the passage of the bill now before this house, and which has already passed the Senate. And what is the purport of that letter? It is to inquire at what price, in gold and silver, the banks, (yes, sir, the divorced banks; I suppose, too, banks with whom, hereafter, there is to be no sort of intercourse or connexion,) the banks and individuals will pay to the Government for these Treasury notes, in order that the Treasury may be supplied with gold and silver. And what is it that the present resolution calls upon us to do? Why, after having legalized a divorce which has already taken place, so far as a separation from bed and board at all events, the banks keeping what is called unavailable means, but which will be made available in time, and the Government having the rest; I say, after this has taken place, and the evil resulting from the suspension of specie payments operating differently from the former suspension, to which I before adverted, what is it we are called upon, by this resolution, to do? Why, to give security to the Government that this state of things shall continue; that it shall be perpetuated; that it shall be fasten-

ed upon the people; for whereas, many intelligent and patriotic people in the United States do believe that a bank employed as the fiscal agent of the Government, and strengthened by the support of the Government, would at once restore the payment of specie, and put all classes of citizens upon an equal footing. We are called upon, by this resolution, to declare this shall never be. We must, as it were, all come up, and put our hand upon the book, to declare it hereafter settled and fixed that there is to be no bank. We are, as it were, to take an oath, to give a pledge, that there shall be no bank.

Let it, then, be demonstrated ever so clearly that a national bank would have its effect, would furnish a remedy, that it would remove this crying evil, which ought not to exist, and cannot be permitted to exist, yet that that is not to be thought of as an expedient, and what then follows? Precisely what I told you—that the evil is to be perpetuated, and security given to the government, by this resolution, that it shall be perpetuated. I ask the chairman of the Committee of Ways and Means whether that is one of the measures of relief for which this extra session of Congress was called? How is it to be, that this resolution is to operate to the relief of the people from the distresses and difficulties they are now laboring under? But the sub-treasury scheme I suppose will have its turn, and, therefore, I will say no more now than that it appears to me among those evils calculated to make the present state of things everlasting.

Mr. Spenser, as far as I have gone into this irregular and desultory sort of discussion, necessarily so for many causes, I have assumed nothing but what is stated by the President and the Secretary of the Treasury themselves. I do not mean, however, to be supposed to concur in the opinion they have expressed. I believe the disorders of our Government, for the last six or seven years, to arise from different causes, and, in due time, I will endeavor to show the grounds on which that opinion is founded. I believe them to have originated in the acts of the Executive; but this is not the time to say why I think so.

I state it now as the opinion I entertain, simply that assuming the bases stated both by the President of the United States and the Secretary of the Treasury, I am convinced that the only remedy is in returning to where we were;—o that which has been tried and found good; and I say it without reference, at present, to ulterior causes which existed in the action of the Government. Now, is this resolution relief? Some few half dozen memorials from respectable citizens of the United States have made their way to this house. The common understanding of all was, that this was a systematic measure not to be dealt with at the present time. What are we going to do? Rebuke those that sent them, for their culpable intentions? Are we going to proclaim to the people that they shall no longer think? that they shall no longer speak? no longer address their servants on this subject? Are you going to proclaim this to them? If they come to us and tell us that they are men who desire to be allowed the use of their understandings and consciences, in relation to great public measures, must we tell them first, to get rid of the majority now in Congress, and next, of the present President of the United States, and that until that is done the ears of both are forever shut against them, if they believe a bank is necessary? Is the issue intended to be presented, that we will not let the people think? Why not wait until the regular session? Why not, in the midst of their agony, when their minds are quickened by the intensity of their sufferings, tell them to present themselves here, that they may have the consolation to think that, at the bottom of all this mischief, there still is hope? But no, this resolution proclaims that there is no hope; that it is mischief to the bottom. Sir, is it expedient or proper that this should be done at such a time? Who has come forward with a single proposition for relief? Who has proposed to reduce the number of your custom-house officers, who are equal in number at this time to the number employed in the most flourishing state of commerce? Who has told you, that as trade has been reduced in New York three-fourths, you can dispense with three-fourths of your officers and save their salaries? Who has told you so in relation to any other part of the Government, or who has proposed a reduction of expenditures? What is the whole amount of the propositions that have been brought forward? To relieve the Government. Give us gold and silver, says the Govern-

ment, and then go home, and think no more about a bank; we forbid it. The President of the United States has told you beforehand in his message, that in reference to a national bank, ordinarily so called, his mind is made up; and the Congress of the United States, in both branches tell you, before the measure is proposed, that they have made up their minds; that it is vain to think of it; that it is vain to ask for it; nay, although you come to us, and, as with a pencil of light, sketch out a vision by which we can see with certainty, that the same means which in 1816 and 1817 dispelled clouds as dark as they are now, and longer gathering, promises the same results, yet they cannot be heard; that you have nothing to do with the currency; that it is their business, and not yours; that they must go to their homes, and not indulge themselves in luxuries. Sir, it appears to me very inexpedient thus to act.

[On the following morning Mr. SERGEANT moved that the resolution should be referred to a Committee of the Whole on the state of the Union, for the purpose of more ample and satisfactory debate. This was opposed, and, after some discussion, the previous question was ordered, which put an end to the discussion.]

### SPEECH OF MR. GARLAND, OF VIRGINIA,

*In the House of Representatives, September 25, 1837—*

In opposition to the bill "imposing additional duties, as depositories in certain cases, on public officers."

MR. CHAIRMAN: I am indebted to the kindness of the gentleman from Tennessee (Mr. Williams) who was entitled to the floor, for the privilege of addressing the committee at this hour. This privilege accorded by that gentleman and the house under existing circumstances will command my lasting gratitude.

After three years or more of seeming unparalleled prosperity, the nation has been overtaken by an adversity which has paralyzed its energy and prostrated all its branches of industry and enterprise. So vivid, and so real, were the appearances that the late President of the United States in his farewell address to the American people, felicitated the country, and himself, upon its unparalleled prosperity and happiness; yet its most important interests, as if this apparent prosperity were but a delusion, now lie prostrate, and bleed at every pore. It has withered like the beautiful and verdant flowers of spring, by the untimely nip of a premature frost. The blighting effects of this unlooked for adversity upon the agriculture, commerce, and navigation of the country, and the obstacles which it obtrudes to the pecuniary operations of the Government, has induced the President of the United States, in discharge of his high constitutional duties, to call together, at this unpropitious season, the representatives of the States and the people, with a view of applying, as far as legislation can do it, a remedy for the existing diseases of the country. *In limine*, I will remark, that legislation cannot afford that substantial permanent relief which the distresses and embarrassments of the country require; that, can only be found in the industry, economy and elastic energy of the people, which heretofore upon like trying occasions has so effectually availed. Wise and judicious legislation may do much to mitigate the severity of the present calamity and hasten the period of relief, but it cannot of itself be effective; it must be *auxiliary*—it cannot be *primary*.

Before I proceed to discuss the merits of the principal remedy proposed by the President, for the relief of the Government and the country, I ask the indulgence of the house, in making reference to the circumstances which place me in reference to that remedy, in a peculiar attitude—for no other consideration could induce me to obtrude upon the house any remark affecting me individually. The Journal of the house for the 23d Congress, exhibits the fact that my immediate predecessor, General Gordon, of Virginia, (a gentleman of whom I take pleasure in saying that, he is honest, talented, honorable, magnanimous and liberal in an eminent degree, who stood so strong in the confidence and affections of the people of his district that nothing but substantial differences of political opinion, could have brought me hither in his place,) offered a scheme embracing the very principles of the recommendations of the message. The principles of the bill, proposed by my predecessor in February,

1835, was opposed and denounced by the late administration, and all its prominent friends in both houses of Congress, in no unmeasured terms. In this denunciation and opposition, I united, and defended General Jackson's administration for its opposition to this scheme before the people of the Congressional district, which I now feel honored in representing. Now, Mr. Chairman, in less than three years, I find myself impelled to defend the opinions I then entertained and defended, not against my political opponents, but against the attacks of the present administration and its friends, so completely have they changed their position. Finding for a few months past, that my opinions upon this subject were in collision with those of the administration and most of its prominent friends, I carefully and deliberately reviewed my former opinions, with a view to detect any fallacy, error, or delusion, under which I labored, if there was any which had contributed to form those opinions. The result of this review has been to rivet my conviction of the truth of those opinions, and an increased and more inflexible determination to adhere to them. Being satisfied that my opinions are correct, I dare not—I cannot—I will not vote for this recommendation of the message.

This determination to resist the recommendation of the President's message upon this subject, and as it may be called, my obstinate perseverance in maintaining my own honest and sincere opinions in the late election of printer to this house, has brought upon me individually, and in connexion with many of my political friends, whose opinions and course have been in accordance with my own, severe and bitter denunciations from some presses professing democratic republicanism, in which we have been charged with *traitorism* to our party, and humble I, have been dignified as the head of "a party." God knows, Mr. Chairman, I never desired or dreamed of being a *party leader*; I have not upon this or upon any other occasion, since I have had the honor of a seat on this floor, attempted to lead or control the opinions of others, nor have I had any concern with any party arrangements, as every member with whom I heretofore acted, or with whom I now act, well knows. Why then have I been so dignified? As to the charge of *traitorism*, I shall only say, that I have not deserted my political party; but, upon this question, it has deserted *itself* as well as me. I have no more to say now; or shall I at any time hereafter refer to these editorial attacks—I leave them to revel in the glory of their achievements over the feelings of honorable men, as the Turks revelled amidst the ruins of bleeding and burning Missalonghi. It is to be regretted that the selections of our law givers are not confined to the editorial corps, who, from their course of remark, leave it to be inferred that they regard themselves as having *more wisdom, more information, and more patriotism*, than every other class of citizens; and, above all, that they possess the power of infallible scrutiny into the hearts and motives of others, which enables them, unerringly, to expose the secret springs of every man's action.

In discussing the recommendation of the message presented in the form of law by the Committee of Ways and Means, embracing the whole principle of the message, I shall not detain the committee by entering into a discussion of the comparative merits of a national bank and State banks, or the expediency of establishing a national bank. There is now no proposition for the incorporation of a national bank before the House, nor is it designed, so far as I am informed, to present one during the present session. If such a proposition were presented, and a national bank were incorporated, it could not be organized and put into operation in time to afford any relief to the present embarrassments of the country, even if it would have that effect, which I by no means admit. The incorporation of such an institution, with such a redundancy of bank capital and bank circulation, would, in increasing the demand upon the existing banks for specie, and diverting it from the course of trade, do more to continue the present embarrassments of the country than all other causes combined. In this state of things the question to be decided is, whether the continuance of the present State bank system of fiscal agency, with the improvements and restrictions which experience has pointed out as necessary and proper, or the "*untried experiment*" of excluding the State banks as depositories of the public money, and restricting the receipts of the public revenue to *gold and silver only*, shall be adopted. This is the true issue, to the decision of which as affects the future happiness and prosperity of the nation, the most serious and

deliberate attention of the house should be directed. I need not here repeat what I have before stated, that whenever the question of a national bank is presented, if I shall have the honor of a seat upon this floor, that I shall oppose it, both upon the grounds of the want of constitutional power, and its inexpediency. The opinions I imbibed in my earliest youth, I learned from the State papers of Jefferson, Madison, and their republican cotemporaries, and shall never surrender them until I become a tenant of the tomb.

Although the recommendation of the President's message, and the provisions of the bill from the Committee of Ways embraces, in its immediate scope, an exclusive metallic currency, for the operations of the Federal Government alone, yet it is manifest that in its operation it must come in collision with the "credit system," and wage a war of extermination against it, in every form and shape, as a medium of circulation; with what prospect of success it is not for me to undertake to determine. This presents to the American people a question of momentous importance. In modern times banking institutions have been adopted as the most safe and efficient agencies of credit; by all the most enlightened and most commercial nations of the world. They had their origin in Venice, in the days of her commercial prosperity, and have been successfully adopted by all commercial nations, particularly in England, and France. Early in the history of our own Government, they were adopted, and have grown with our growth, strengthened with our strength, and have been enlarged from time to time to meet the exigencies of our increased and widely extended commerce, until they have become so intimately interwoven with our commerce and connected with our local institutions, as to make the separation difficult and dangerous in the extreme. This scheme however presents the question, and it must be ultimately met and decided. In the conflict, this exclusive metallic system proposed for the Government must be abandoned, or all our banking institutions perish; there is no middle ground.

Let it be remembered, that, under the vivifying influence and salutary operations of our banking institutions, our country has flourished and prospered, beyond parallel, in the history of nations. When we compare our condition, at the close of the revolution, with what it is at the present day, we perceive that in population, agriculture, commerce, and manufactures, our improvement has been rapid beyond precedent. Our villages, our towns, and our systems of internal improvement, flourishing and improving beyond example, bespeak an increase of wealth, power, and commercial facilities, which would not exist without the healthful action of a sound system of credit. The secret of the system is, that by its operation, it throws into active circulation, more than three times the amount of actual capital, and thereby supplies trade and commerce with the means of successful operation in the absence of an adequate supply of the metallic medium. It is true, that these institutions, like others, constructed and managed by frail human agency, have been mismanaged and abused. There is no perfection in human nature, and nothing perfect can be produced at its hands. What estimate would be placed upon the intelligence of the man who, because the boiler of the capacious and majestic steamboat sometimes bursts, would recommend the destruction of the steamboat, and the re-adoption of the canoe navigation? Your Government, which my much esteemed friend from Virginia, (Mr. Jones,) says is an experiment, has sometimes been abused. What estimate would you place upon the intelligence of the man who, for this cause, would recommend the entire destruction of our system, as the proper remedy? So in reference to the banking system, would it not be wiser to correct and cut off the abuses, and preserve the system, than rashly and inconsiderately destroy it? If the question were now presented as an original one, whether we should adopt the banking system, perhaps my own mind would be led to the adoption of a system organized upon a quite different plan; but we have the system, and the question is, how we shall act in reference to it? There is no man who really thinks that there is the slightest prospect that this system will or can be eradicated for a length of time, if ever; hence we must accommodate our action as far as we can, to the state of things as they are, and seek rather to aid and assist the State Governments in correcting the abuses of the banks, and restore them to health

and soundness. Whether we shall ultimately recur to an exclusive metallic system, and in anticipation prepare for that event, deserves consideration of more than ordinary gravity, and the exercise of extraordinary sagacity.

The system of deposits adopted from the foundation of the Government, and which has prevailed to the present hour, whether it was practicable, is the bank system. This fact accompanied with the expressed opinions of every incumbent of the Treasury Department until the present time, proves conclusively to every reflecting mind, that it was regarded as the safest, most economical, and most convenient system; without this means of keeping the public money, it must have been kept and distributed by individuals, and subject to all the extravagance, insecurity, and liability to defalcation which has ever attended individual receipts and disbursements. All preceding Secretaries, and many of our most distinguished men of the old republican school, declared their opinions in favor of the plan now proposed. It is remarkable, that a system so republican, so safe, and so innocent as that now proposed, should never have been proposed for the adoption of Congress, by any preceding administration, or any preceding Treasury Department, if it had been viewed in its present favorable and superior light, it certainly would have been recommended; but as it was not, I regard the omission to do it, as conclusive evidence that it was not approved. The only difficulty which has ever prevailed, has been between the selection of a national and State banks, some preferring the former, some the latter. There being now no national bank, the question of preference is directly presented between the State bank system and the sub-treasury system, recommended by the Executive. The State bank system stands preferred, not only by the practice of the Government, but the expressed opinions of many of our most able and distinguished patriots and sages. In the year 1791, after the passage of the act incorporating the first Bank of the United States, Mr. Jefferson, in his official opinion to General Washington, as a member of his cabinet, upon the constitutionality of that act, resisted the argument of the necessity of that bank as the fiscal agent of the Government, on the ground that these facilities would be afforded by the State institutions, in that opinion he expressed himself thus:

"Perhaps, indeed, bank bills may be a more convenient vehicle than Treasury orders; but a little difference in the degree of convenience cannot constitute the necessity, which the Constitution makes the ground for assuming any non enumerated power.

"Besides, the existing banks will, without a doubt, enter into arrangements for lending their agency; and the more favorably, as there will be a competition among them for it; whereas the bill delivers us up bound to the national bank, who are free to refuse all arrangement, but on their own terms, and the public not free, on such refusal, to employ any other bank."

Mr. Madison, in his able and unanswerable speech in opposition to the charter of that bank, said:

"But the proposed bank, could not even be called necessary to the Government; at most, it could be but convenient. Its uses to the Government could be supplied by keeping the taxes a little in advance; by loans from individuals; by the other banks over which the Government would have equal command; nay, greater, as it may grant or refuse to these the privilege, made a free and irrevocable gift to the proposed bank, of using their notes in the federal revenue."

The arguments urged in favor of the charter of this bank were principally those of its safety, economy, and convenience as a depository and disbursing of the public money. This was a most propitious period in our history to have adopted a system of individual agency, and withheld all connexion with banks if it had been deemed safe, economical and convenient. When the question of the renewal of the charter of that bank was under consideration, a memorial was referred by the House of Representatives, praying the renewal of the charter of that bank. In his report upon that memorial, in enumerating the advantages of the bank to the Government, he speaks of the safe-keeping of the public moneys thus:

"1. *Safe-keeping of the public moneys.*—This applies not only to moneys already in the Treasury, but also to those in the hands of the principal collectors, of the commissioners of the loans, and of several other officers, and affords one of the best securities against delinquencies."

It is true that Mr. Gallatin was speaking of a national bank, yet the principle is the same in reference to the plan proposed, for that strikes at all banks, national or State. But to prove that while this distinguished financier preferred a national to State banks, he preferred a State bank to an individual agency, I here quote from his report to a

committee of the Senate of the 30th of January, 1830, upon the same subject.—He says:

"The banking system is now firmly established; and, in its ramifications, extends to every part of the United States. Under that system, the assistance of banks appears to me necessary for the punctual collection of the revenue, and for the safe-keeping and transmission of public moneys. That punctuality of payment is principally due to banks, is a fact generally acknowledged. It is, to a certain degree, enforced by the refusal of credit at the custom-house, so long as a former revenue bond, actually due, remains unpaid. But I think, nevertheless, that, in order to ensure that precision in the collection, on which depends a corresponding discharge of the public engagements, it would, if no use was made of banks, be found necessary to abolish, altogether, the credit now given on the payment of duties—a measure which would affect the commercial capital, and fall heavily on the consumers. That the public moneys are safer, by being weekly deposited in banks, instead of accumulating in the hands of collectors, is self evident. And their transmission, whenever this may be wanted, for the purpose of making payments in other places than those of collection, cannot, with any convenience, be effected, on a large scale, in an extensive country, except through the medium of banks, or of persons acting as bankers.

"The question, therefore, is, whether a bank, incorporated by the United States, or a number of banks, incorporated by the several States, be most convenient for those purposes.

"State banks may be used, and must, in case of a non-renewal of the charter, be used by the Treasury."

In this paragraph is found the expressed and decided opinion of Mr. Gallatin, not only that the banking system is firmly established, but that if there be no national bank, the Government must resort to State banks, and that the public moneys are safer in banks than accumulating in the hands of individuals, the opinion is entitled to great weight, as coming from a most able and experienced financier.

In addition to these, I refer to the opinions of several distinguished republican members of this House, in the session of 1810, upon the same subject.

Mr. Burwell said:

"I said, sir, it must be shown that the bank is necessary to the operations of the Government; without its aid our fiscal concerns cannot be managed. So far from subscribing to the necessity of the bank, I believe the revenue would be equally safe in the State banks, and could be distributed with considerable difficulty; the revenue received in most of the States is nearly equal to the expenditures within them, and when a deficiency occurred in any one, it could be supplied by arrangements with the different banks, by transportation or inland bills of exchange, in the same manner that the public engagements are fulfilled abroad."

Mr. Epes said:

"The creation of a bank with a capital of \$10,000,000, almost five times the capital of all the existing banks of the Union, under the patronage of the General Government, was calculated to produce and did produce a subversive on the part of the stockholders, to the views of their party. The influence of this powerful money capital was long felt. Nothing but the multiplication of State banks, and the increase of capital from the peculiar and fortunate circumstances under which the United States were placed, could have emancipated us from the shackles imposed on us by a moneyed interest wielded by foreigners."

Mr. Giles said:

"I cannot see how putting down this institution can materially affect the pecuniary abilities of the nation; its actual funds for discounting will be nearly the same; the position of them only will be changed; they will find their way into the State banks, and their ability to discount will be increased proportionably to the increase of their deposits. Nor am I at all alarmed at the suggestion that seven millions of dollars will be drawn out of the country by the British capitalists, because it will not be their interest to do so; their dollars are worth more here than in Great Britain; if drawn there, they would soon be melted down into their depreciated paper circulation. They might also draw bills to advantage, so that I doubt whether an additional dollar will be shipped from the country in consequence of the rejection of this bill. Certainly there will not to any great extent."

Mr. Clay said:

"Upon the point of responsibility, I cannot subscribe to the opinion of the Secretary of the Treasury, if it is meant that the ability to pay the amount of any deposits which the Government may make, under any exigency, is greater than that of the State banks. That the accountability of a ramified institution, whose affairs are managed by a single head, responsible for all its members, is more simple than that of a number of independent and unconnected establishments, I shall not deny; but, with regard to safety, I am strongly inclined to think it is on the side of the local banks. The corruption or misconduct of the parent, or any one of its branches, may bankrupt or destroy the whole system, and the loss of the Government, in that event, will be of the deposits made with each; whereas, in the failure of one State bank, the loss will be confined to the deposits in the vaults of that bank."

All these gentlemen resisted the argument of necessity for the renewal of the charter of the old bank, on the ground that the State banks were equally safe, and equally convenient, as the fiscal agents of the Government; so that the whole force of the argument, as applied in favor of a national bank over the system of individual agency, applies with full force in favor of the State banks. In the debate upon the charter of the late bank, the same opinions were expressed in favor of State banks, by many able and distinguished gentlemen. It is remarkable that in the whole range of debate, at the two pe-

riods referred to, no gentlemen, so far as I recollect, expressed the slightest inclination to resort to the sub-treasury system.

The administration of General Jackson exhibits still stronger and more conclusive proof of the superiority of the State bank deposit system over any other which the "wit of man could devise." Indeed, so little was the sub-treasury system in favor that when the removal of the deposits was determined upon, it did not enter into any consideration, as far as we are informed; but the State banks were recommended and selected, as being in every point of view equal to the Bank of the United States, as fiscal agencies, and, in a political point of view, infinitely safer—the comparison being instituted between a national and State bank alone. In General Jackson's expose to his cabinet on the — day of September, after reviewing the advantages and disadvantages of the United States and State banks in contrast, says:

"The President thinks, these facts and circumstances afford as strong a guarantee as can be had in human affairs, for the safety of the public funds, and the practicability of a new system of collection and disbursement through the agency of State banks."

Language could not be more unequivocal of the preference of the State bank system over every other; yet the President seems to be aware that danger lurks in all human systems, and that this system might be disordered from those causes which are incident to human frailty. If there could be a lingering doubt upon the mind of any man that the late President designed the State banks as the permanent system of the Government, it will be removed by the following extracts from his annual message, of December, 1834:

"The attention of Congress is earnestly invited to the regulation of the deposits in the State banks."

In the same message he expresses himself thus:

"Happily it is already illustrated that the agency of such an institution (the United States Bank) is not necessary to the fiscal operations of the Government. The State banks are found fully adequate to the performance of all services which were required of the Bank of the United States, quite as promptly and with the same cheapness. They have maintained themselves and discharged all their duties, while the Bank of the United States was still powerful, and in the field as an open enemy; and it is not possible to conceive that they will find greater difficulties when that enemy shall cease to exist."

In his annual message to Congress in December, 1835, General Jackson expresses himself thus:

"By the use of the State banks, which do not claim their charter from the General Government, and are not controlled by its authority, it is ascertained that the moneys of the United States can be collected and disbursed without loss or inconvenience, and that all the wants of the community in relation to exchange and currency, are supplied as well as they ever have been before."

In the annual message of December, 1836, which was the last General Jackson delivered after the emanation of the Treasury circular, requiring gold and silver for the purchases of the public lands, and a full knowledge of the facts upon which that order was deemed necessary, in the following strong and emphatic terms, he expressed his unabated confidence in the State bank system:

"Experience continues to realize the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government. At the time of the removal of the deposits it was alleged by the advocates of the Bank of the United States that the State banks, whatever might be the regulation of the Treasury Department, could not make the transfers required by the Government, or negotiate the domestic exchanges of the country. It is now well ascertained that the real domestic exchanges performed, through discounts, by the United States Bank and its twenty-five branches, were at least one-third less than those of the deposit banks for an equal period of time; and if a comparison be instituted between the amounts of service rendered by these institutions, on the broader basis which has been used by the advocates of the United States Bank in estimating what they consider the domestic exchanges (transacted by it), the result will be still more favorable to the deposit banks."

Thus we have the unequivocal evidence that the late President of the United States, preferred the State bank to any other system; as to the sub-treasury scheme, he did not in a single expression in any of the messages referred to, or in any other state paper emanating from him, intimate a desire to resort to it.

The evidences from which the preference for the State bank system by the late administration is to be derived, is not confined to the quotations which I have made from General Jackson's messages. Mr. Taney, the Secretary of the Treasury, who directed the discontinuance of the Bank of the United States, and adopted the State banks as the depositories of the public money, in his annual report of the 3d December, 1833, after contrasting the advantages and disadvantages of both agencies, decidedly recommends the State banks. He said:

good to prove; and, as the proof was in the documents of the Senate, he would use it, and extinguish at once this delusive and deceptive comparison between State banks and the Federal banks."

Mr. Benton was sustained in his preference for the State banks by Mr. Wright, of New York. The present Speaker of the House, in a speech delivered by him on this subject, on the 20th of June, 1834, ably vindicated the State bank system, in the course of which he made the following remarks:

"The State banks, then, are to be employed, either under our law as it exists, or under the law as Congress may modify it. The bill before us proposes modifications, limiting and defining, with more precision than has heretofore been done, the executive discretion and power. It is tendered to the house, and especially to those who have raised the cry of a union in the President of the sword and the purse, when in fact he possesses neither. The present Executive does not desire, and never has desired, to retain any discretionary power in the execution of the laws, which, from its nature, is susceptible of being defined by law. The Executive, and his friends upon this floor who sustain him in the recent executive measure of the removal of the deposits, desire to see him, and not only him, but his successors in the executive office, relieved from the responsibility of exercising discretionary power in relation to the safe-keeping, management, and disbursement of the public money, as far as, by legislative provisions, it can be done. The bill which has been presented, contains provisions suited, in the opinion of the committee who prepared and brought it forward, to attain this end. I have invited gentlemen who may think its provisions inadequate, or who may suppose that too much power is still left in the hands of the Executive, to come forward with their modifications, still further limiting and confining his power. If they will neither accept this bill, nor propose to amend and make it more perfect, the conclusion must be, that they prefer the law as it is to any new legislative provision. If they do not co-operate with us in perfecting and passing this bill, the conclusion will be irresistible that the charge which has been made against the President, of a desire to seize upon powers which do not belong to him, was designed to produce an erroneous impression upon the public mind, and is wholly unfounded in fact; that they prefer the existing laws to any amendments which can be made; and, in a word, that the real purpose to be effected by all the violent and impassioned appeals which have been made, charging him with usurpation, was to operate upon the public, with a view to procure a continuance of the present odious bank monopoly."

In a speech delivered by him on the 10th of February, 1835, he said:

"The State banks are not only competent to furnish all the domestic exchange required for the convenience of trade, but they furnish it at cheaper rates, in many parts of the Union, than the Bank of the United States has heretofore done the same business."

In relation to the sub-treasury scheme, offered by Mr. Gordon, which seems to be the pioneer of the present, in the same speech, Mr. Polk said:

"Unless the States, and the United States, should both deem it proper, gradually, and in the end, entirely, to disperse with the paper system, and which result is not anticipated, the Government cannot escape occasional losses from that quarter, and can never hope to escape all losses from banks as fiscal agents, except by the employment, in their place, of other and individual agents, who will probably be found less responsible, safe, convenient, or economical."

"He concedes that it would be practicable to employ such agents, but does not recommend it, for the reasons stated in the paragraphs of the report which I have read, and because it would not, 'in the present condition of things, be so eligible a system as the present one.'"

"A corporation may be safer than any individual agent, however responsible he may be, because it consists of an association of individuals who have thrown together their aggregate wealth, and who are bound, in their corporate character, to the extent of their whole capital stock, for the deposit. In addition to this, the Secretary of the Treasury may require as heavy collateral security, in addition to their capital paid in, from such a corporation, as he could from an individual collector or receiver, which makes the Government depositories safer in the hands of a bank than it could be with an individual."

"It may be well questioned whether the heaviest security which the most wealthy individual could give, could make the public deposite safe at the point of large collection. In the city of New York, half the revenue is collected. Several millions of the public money may be in the hands of a receiver at one time; and if he be corrupt, and shall engage in speculation or trade, and meet with a reverse of fortune, the loss sustained by Government would be inevitable. With ample security, as it was supposed, the Government lost a million or more in the case a few years ago. The losses in three cases alone, as already stated, in 1827 and 1823, when it was supposed ample care had been taken to secure the debt, amounted to near two millions. As, then, between the responsibility of a public receiver and bank corporations, as banks do exist, and are likely to exist, under State authority, the latter, upon the ground of safety to the public, are to be preferred."

"Banks, when they are safe, recommend themselves to the service of the Treasury for other reasons:

"1. The increased facility they possess over individual collectors or receivers, in making transfers of public money to distant points for disbursement, without charge to the public. Indeed, this is a service which individuals, to the extent of our large revenues, could not perform."

"2. It may happen, in the fluctuation of the amount of revenue and expenditures, that there will be, at some times, a considerable surplus in the Treasury; which, though it may be temporary, if it be withdrawn from circulation, and placed in the strong box of a receiver, the amount of circulation will be injuriously disturbed, by hoarding the deposit, by which the value of every article of merchandise and property would be affected. So that, inasmuch as we cannot anticipate or estimate what the exact amount of revenue or expenditure may be from year to year, there may occur an excess of revenue in the Treasury, not immediately called for to be disbursed, which it would be very inconvenient to abstract from trade and circula-

tion. Whilst the deposit is in a bank, the bank may use it, keeping itself at the same time ready to pay when demanded, and it is not withdrawn from the general circulation, as so much money hoarded and withdrawn from the use of the community."

"If in the hands of receivers, they must either hoard it, by keeping it locked up in a strong box, or use it, at their own risk, in private speculation or trade, or they must, for their own security, or on their own responsibility, place it at last on deposit in banks for safe-keeping, until they are called on by the Government for it."

"This temporary use of the money on deposit in a bank, constitutes the only compensation which the bank receives for the risk of keeping it, and for the service it performs. If receivers be employed, they cannot perform any other service than to keep the money, and must be paid a compensation from the Treasury."

These evidences, added to the fact, that upon the question of adopting the sub-treasury plan proposed by Mr. Gordon, every friend of the Administration, save one (Mr. Beale, of Virginia) voted against it, as did a majority of the opposition, I regard as conclusive of the preference of the late Administration for the State bank over any other system. It has been said that the friends of the Administration voted against this scheme with a view of trying the sufficiency of the State bank system, that is, to make an experiment; but General Jackson's, Mr. Woodbury's, Mr. Benton's, and Mr. Polk's assertions are at war with this imputation. Each of them attested that the State bank system had been well tried, and found amply sufficient for all the purposes of fiscal agency, domestic exchanges, and sound currency. I cannot believe that the friends of the Administration would thus have experimented upon such an important and delicate subject as the currency, when there was presented for their adoption a scheme so constitutional, so republican, so wise, and so efficient, as the Treasury scheme is now thought to be.

But, Mr. Chairman, I am not without further evidence from very high authority, although the President of the United States, in his message to this Congress, represents that this is the third fiscal connexion between the State banks and the Government which has failed, yet he certainly did not regard the two previous failures as constituting any serious objection to the system, for in August, 1836, preceding the last Presidential election, in a letter to the honorable Sherrod Williams, of Kentucky, he ably sustained the State bank system. In that letter he used the following language:

"Although I have always been opposed to the increase of banks, I would nevertheless pursue towards the existing institutions a just and liberal course—protecting them in the rightful enjoyment of the principles which have been granted to them, and extending to them the good will of the community, so long as they discharge with fidelity the delicate and important public trusts with which they have been invested."

These, Mr. Chairman, which have been afforded from the foundation of the Government to the present hour of the value of the State banks as fiscal agents, mainly offered by those who now seek to destroy that fiscal agency, and refuse their notes in the receipts of the public dues. This system, which was sound democracy in 1835, is bank rag aristocracy in 1837. While defending this system in 1835, I was a good democrat; but in 1837, for still defending the same system, I have become a bank aristocrat; from this it would seem that democratic principles, like deranged currency, is somewhat fluctuating.

Mr. Chairman, experience, which is the most unerring of all human guides, one truth tested by which is worth a thousand theories, has taught us that credit is a plant of delicate character, and cannot, with safety, be rudely handled; it must be touched as cautiously as you would touch the sensitive plant. Often has the soundest credit, with the most ample, although not immediately available means, withered and sunk beneath the breath of unjust and unwarranted suspicion. No credit, and no credit system can be sustained without confidence—confidence in its very essence, and whenever withdrawn, whether justly or not, seriously affects it. The banking institutions of the country are sustained entirely by confidence, without it their notes would have no circulation, and they would not be able to conduct their business profitably. Want of confidence, then, or withdrawal of existing confidence, must, in the nature of things, greatly prejudice these institutions, and derange and embarrass their operations.

The recommendations of the President and the Secretary of the Treasury to discontinue the present deposit system, and the receipt of the notes of the banking institutions, is based upon the allegation that these institutions have been unfaithful to their high obligations, and therefore not worthy of

continued confidence. The present suspension of specie payments and its consequences, is the ground upon which this recommendation is founded. I propose, Mr. Chairman, briefly to examine whether the present condition of the banks, both as relates to their ability to meet all their liabilities, and the propriety of the suspension of specie payments, justify this charge, and the entire withdrawal of public confidence. That the deposit banks will be able to redeem all their liabilities, and that at no very distant period, is very manifest, not only from the report of the Secretary of the Treasury, but from their actual condition as ascertained and reported to this House. After the cautious and rigid scrutiny instituted into the condition of the State banks when they were about to be selected, I suppose it will not be doubted, that the selected banks were entirely responsible, and in high credit. I have selected eighteen of the principal banks in which the public money was deposited, and three others selected in 1835. The following comparison of their aggregate condition in relation to circulation and specie, when they were at first selected, and now, according to the last returns, proves most conclusively, that in relation to specie and circulation, their condition is materially improved.

Condition of eighteen of the principal banks when first selected, and up to August 15th, 1837, including three of the principal selected banks under the acts of 1835.

	Capital.	Specie.
When first selected -	\$30,725,070	\$14,550,075
About Aug. 15th, last -	44,370,990	18,605,739
	\$14,245,290	\$3,955,664
		\$1,632,258

The circulation not quite three to one of specie.

The annexed table shows their individual condition.

BANKS.	WHEN FIRST SELECTED.		
	Specie.	Circulation.	Capital.
Commonwealth, Boston,	\$41,567	\$105,790	\$300,000
Merchant's, Boston,	30,470	174,100	750,000
America, New York	212,770	375,750	2,100,000

Comparison of exchanges.  
In 1834, exchanges of the Bank of the U. S. - \$225,617,910  
In 1836, by deposit banks - 423,463,211

All other liabilities and responsibilities are improved in nearly the same ratio. I refer to the last returns from the Treasury Department, and those officially published by the different and most important banks, to prove that there has been a general improvement in the condition of near-

ly all the banking institutions. I have before me an official statement of the condition of the banks of Virginia, exhibiting an improved, and improving condition, and entire solvency. I might refer to others; but time will not admit. The Treasury reports prove that, notwithstanding the suspension of specie payments, the deposit banks have rapidly reduced, and have nearly extinguished their debt to the Government. On the first day of January last, there was in the deposit banks to the credit of the Treasury, \$42,468,859 97, of this sum there has been transferred and paid to the States, under the deposit act, \$27,063,430 80, leaving a balance of \$15,405,429 17; of that balance and of all the deposits made since, there now remains only the sum of \$12,418,041 due to the Government, of this there only remains \$8,166,492, 85 subject to draft, drafts having been issued for the remainder; and I do not doubt the amount is now much less. Of this amount, there is due less than \$1,000,000 from the banks in the Atlantic States. Since the 1st of May, about the time specie payments were suspended, according to the report of the Secretary of the Treasury, the deposit banks have reduced their discounts \$20,388,776, their circulation \$4,991,791, their public deposits \$15,607,316, while their specie has diminished less than \$3,000,000. The Secretary further informs us that, "of the number of eighty-six banks employed at the time of the suspension, ten or eleven are supposed to have paid over all the public money, which was then in their possession, to the credit of the Treasurer. In the custody of more than half of the others, an aggregate of less than \$700,000 remains unadjusted. Several of the rest, still possess large sums; but many of them have continued promptly to furnish such payments from time to time, for meeting the public necessities." Mr. Chairman, these payments and these exertions afford, most conclusively, evidences of the frauds and insolvency of the local banks; would to God, all fraudulent and insolvent men would furnish a little more evidence of dishonesty and insolvency such as this, sir. The Secretary of the Treasury from his report, does not expect to lose a single dollar of the public money, so that the disconnection recommended, cannot have any foundation on this ground. But, sir, the Treasury Department affords us another important fact, in its circular to the banks of the 3d of July last, upon the subject of the suspension of specie payments, and additional security for the public dues, he says:

"It affords me much gratification to find, so far as regards the inquiry concerning the payment and security, a great willingness expressed to make the United States amply safe for the eventual payment of all that is due, and a strong conviction entertained by the banks that no loss will be ultimately sustained by the Government."

Again he says:

"Another portion of that circular communicated information concerning the lenient mode which, under the severe losses experienced by many of the banks from mercantile failures, and under the embarrassments to others, caused by panic and want of confidence, was contemplated to be adopted in recalling the public funds. That mode was by such moderate drafts and transfers as the public necessities should from time to time demand; and an earnest request having been made for a satisfactory compliance with it on the part of the banks, assurance has generally been given of a readiness to answer those calls with promptitude, and in an acceptable manner."

Again he says:

"The returns of the condition of the selected banks, which were requested to be continued, have generally been made with promptitude and regularity. But while it is very satisfactory to see, in most cases, a reduction in discounts and circulation, and which course is the most efficient to cure one of the existing evils in banking, and to enable the institutions which have suspended specie payments to resume them at an early day, and with much greater safety, it is regretted that, in a few instances, this course has not been adopted. But whenever departed from in such a crisis, the error hastened, and must tend hereafter, to impair the confidence of the department in the sound management of the institution, and to justify such steps as may lead to a more speedy withdrawal of the public money, or to the procurement of increased security."

From these evidences, I take it for granted, that the deposit banks are solvent, and that the Government will not lose a single dollar by them.

This is not the only evidence afforded by the Secretary of the Treasury of the solvency of many of the deposit banks, and the reliance placed upon them to aid in redeeming the country from its present embarrassed condition. On the 13th of the present month, while the bill authorizing the issue of Treasury notes was depending, the Secretary addressed the following letter to several of these institutions, proposing to them to purchase the Treasury notes which shall be authorized, and to pass the proceeds to the credit of the Treasury

as specie, to be paid as the wants of the Government may require; this is the letter:

"TREASURY DEPARTMENT.  
September 19th, 1837.

"SIR: A bill is now before Congress to authorize the President of the United States to cause the issue of Treasury notes for such sum or sums as he may think expedient; but not exceeding, in the whole amount of notes issued, the sum of twelve millions of dollars, and of denominations of not less than one hundred dollars for any one note, to be reimbursed at the Treasury of the United States, after the expiration of one year from the dates of the said notes respectively.

"I will thank you to state whether, in the event of the passage of the bill, you will agree to take the said notes from the Government, and give the Treasurer of the United States a credit for the amount; to be drawn for as may be necessary, and payable in specie if required; and, if so, to state what amount you will receive, and the lowest rate of interest to be borne by said notes."

"I am, very respectfully,  
Your obedient servant,

"LEVI WOODBURY."

Yes, sir, some of these faithless and unworthy institutions are appealed to, to purchase Treasury notes, and pass the proceeds to the credit of the Government, and hold it until it was wanting by the Government.

Judging from the generally admitted principle, that the soundness of a bank is to be determined by the proportion of its actual specie capital to its circulation, the deposit banks are sounder than the Bank of England, or the English Joint Stock banks. Up to the 25th July last, the relative proportion between the specie capital and its circulation was as follows:

	Specie.	Circulation.
Bank of England	26,150,000	91,305,000
Private and Joint Stock banks	00,000,000	5,362,165
	\$26,150,000	\$96,667,165
	Specie.	Circulation.
United States Deposit banks	\$11,439,012	\$31,779,804

From this comparison it is manifest that the deposit banks in the United States, were in a condition better to sustain a sound currency and specie payments than the English banks, unless some other cause should operate a different effect. Yet, although the same causes which embarrassed the commerce and credit of the United States existed in England, the Bank of England continued specie payments, and the Bank of the United States suspended. Why? Four causes are manifest: 1. The Government of England continued their confidence in their institutions, ours withdrew its: 2. A large debt was due from the American to the foreign merchants, and a necessity for large specie exportations produced: 3. The continuance of the specie circular. 4. The execution of the deposit act of the 23d June, 1836.

From the connexion which existed between the Government and the State banks, growing out of their adoption as fiscal agents, and the general impression which it produced, that the Government was disposed to cherish and sustain them, the slightest manifestation of the want of confidence on the part of the Government, was calculated to produce the most disastrous effects upon their credit, and cripple their operations. It was calculated to impair general confidence, and produce a rush for specie, so sudden and violent, that but few banking institutions could be prepared to withstand it. This want of confidence was clearly manifested in the Treasury circular of July, 1836, in which danger was distinctly announced to the country. This measure of itself, however, could not have exerted any very deleterious influence upon the credit of the banks; but, operating in conjunction with other causes, was calculated seriously to impair public confidence, and to produce serious embarrassments in the monetary system of the country.

The Treasury circular, which required specie for the payment of the public lands, produced an unusual and unnecessary drain of specie from the Atlantic to the western banks, and, of course, it was incumbent on the eastern banks to use the usual precaution of contraction to meet the demand, whatever it might be. Independent of this direct operation, emigrants, who were numerous from the eastern to the western States, sought that kind of currency which was receivable at the Land Offices. Hence, specie being only receivable there, they demanded specie for their notes, which being principally eastern, the eastern banks were bound to pay. These drafts for specie were calculated to produce a corresponding curtailment of the circulation and loans of the banks, which were among the

professed objects of the order. The gold and silver thus drawn from the eastern, was deposited in the western banks, and there kept entirely unemployed, to the great detriment of trade, awaiting the drafts of the Government. In addition to the operation of the specie circular, and about the time of its utmost severity, the pressure of a heavy foreign debt created an additional heavy demand for specie, which was principally to be drawn from the vaults of the banks. The effect of this demand for specie to pay the foreign debt, necessarily produced a contraction of loans and circulation, corresponding with the extent of the demand. We all remember the gloomy period of 1819, when distress and ruin pervaded the whole community, and filled it with dismay, and as it is fair to judge of the present by the past, I have selected the four years preceding 1819, and the preceding four years, with a view to contrast the state of trade then, with its present state; in order, in part, to account for the present revulsion and derangement of commerce, and the effects now, as then, produced. In the years 1815, 1816, 1817 and 1818, the state of foreign trade was as follows:

	Exports.	Imports.
1815	\$52,557,753	\$113,041,274
1816	81,920,452	147,103,000
1817	82,671,569	99,250,000
1818	93,281,133	121,750,000
	\$310,430,907	\$481,144,274
		316,430,907

Excess of importations over exports \$170,713,365 Which, after proper allowance for tonnage and other expenses, left a heavy balance. The effect was, that a bank circulation in 1816, of \$110,000,000 was reduced in 1819, to \$45,000,000; we all recollect during this year, the immense deduction which property, produce and labor underwent. The foreign trade for 1838, 1834, 1835 and 1836, is as follows:

	Exports.	Imports.
1833	\$90,140,438	\$108,118,311
1834	104,336,973	126,521,332
1835	118,955,239	151,030,368
1836	125,663,040	189,980,035
	\$442,095,690	\$575,650,046
		442,095,690

The excess of importations, \$133,554,356 Leaves a large foreign debt; and although the balance now is \$37,000,000 less than in 1819, yet it is sufficiently large to render a heavy reduction in bank loans and circulation necessary to meet it; because exchanges, being materially reduced, it could be met in nothing but specie. The heavy importations of specie from England, through the instrumentality of acceptances of American drafts alarmed the Bank of England for its own safety; and to counteract this drain, it refused to discount for any merchant who accepted American bills, thus making it necessary to demand more specie for the payment of the foreign debt, than would otherwise have been required. This policy was more rigidly pursued than perhaps it otherwise would have been, had it not been supposed, from the declarations of a great portion of the American press, that it was a part of the policy of our Government to prevent the exportation of specie entirely, and continue, as far as possible, the drain from Europe. Combined with these causes, was the execution of the deposit act of June, 1836.

It having been ascertained from the rapid increase of the revenue from the sales of the public lands, and the duties on foreign importations, that there would be a large surplus in the Treasury on the 1st of January, 1837, it was determined to withdraw it from the control of the Federal Government, (to which its possession offered so many strong and dangerous temptations,) and from the custody of the deposit banks, to prevent its being made the foundation of dangerous and excessive issues of bank paper; and to place it in the custody of the State Governments, thus to remain to be employed for the local benefit of the people, (from where it had been unconstitutionally and improperly drawn,) until needed for the legitimate purposes of the Government, a disposition, in my humble opinion, both wise and salutary, both as regards the currency and the purity of the Government. For the purposes of giving the banks timely notice, and to enable them to meet the demands of this law without detriment to themselves or the public, the operation of the act

was not to commence until the 1st day of January after its passage, a period of six months, and then to be met in four equal quarterly instalments. This was ample time to prevent any serious derangement of the affairs of the banks, or the commerce of the country. In a short time after the passage of this act, and long before it was ascertained what would be the amount to be distributed, and of course the first instalment, the Secretary of the Treasury issued his orders to the deposite banks, directing them, by a fixed period, to transfer to specified points, about \$13,000,000, (as well as I recollect,) instead of giving drafts to the States for their several quotas on the most convenient banks to pay the amount on the day it was due; which might have been met, according to the usual mode of commercial exchange, between creditor and debtor banks, and merchants; and by which they would have been performing but the usual commercial functions; whereas, by the operation of the orders of the Treasury Department, the amount to be transferred was abstracted from commercial employment, from the time of the transfer till the payment; and created a demand, in some instances, for specie, which might have been avoided. Thus was inflicted upon commerce an injury from the injudicious execution of the law, which is dexterously ascribed to the provisions of the law itself! This operation was particularly severe upon the New York banks, which held in the neighborhood of \$20,000,000 of the public depositories. The deposite act in itself did not necessarily decrease, or tend to decrease, the active capital of the country; it was taken from banks to be again put into banks. While it reduced the active means of some, it increased that of others. In many instances the credit was only passed from the Federal to the State Governments. There was nothing in it to embarrass the trade and commerce of the country. The effect was produced by its unwise execution, coming in aid of other causes of an embarrassing character. In this opinion I am sustained by the most able and skilful financiers of the country.

At about the time of the suspension of specie payments, there were in the banks, (if my estimate be correct,) about \$155,000,000 of private depositories. These private depositories were generally made in bank notes; yet the depositors had the right to demand specie for them. When the operation of these causes were perceived, and the diminution of confidence on the part of the Government manifest, the private depositors, in place of their deposited notes, began to demand specie. Brokers also began to demand specie for all the notes which they held, or could purchase, and this was no small amount.

The banks in the city of New York, where the storm first began to rage and to produce most serious effects, although ultimately responsible for all their obligations, could not meet this sudden rush upon their vaults, without ruin to themselves, and the people; they therefore suspended specie payments. This suspension, the causes of which were not understood by the country, produced alarm throughout the whole community; and a general suspension of specie payments was the result. By this suspension I do not doubt that the banks have not only saved themselves but the country from utter ruin and destruction. I confidently believe that the withdrawal of the confidence of the Government, so strengthened the operation of all the causes to which I have adverted, that it compelled the banks to a course, which, with the fostering care and continued confidence of the Government, could and would have been avoided: for the banks have no interest, whatever, to embarrass their own operations by an act so destructive of that credit which is so necessary to the successful extension of their business—for sound unsuspected credit is the very soul of their operations, and the foundation of their profits.

The truth of this argument is fully sustained by recurrence to the history of the Bank of England, as well as our own banking institutions. On many occasions the Bank of England has been sorely pressed, yet it retained the confidence, and was aided by the Government, and was enabled thereby to surmount its embarrassment, and recover from its difficulties. In 1793, particularly, its operations were so embarrassed, and the rush for specie so great, that it was compelled to suspend specie payments; and continued the suspension, without intermission, from that time till 1829; many of the causes, which produced the suspension, continuing to exist during whole time. In this state of embarrassment, its course was justified by the British Government, whose confidence, and that of the mercantile com-

munity continued, and its suspension was legalized, until finally, by a prudential course of measures, adopted to its true condition, it triumphed over all difficulties; and, in 1829, resumed specie payments, which it still continues. *The confidence of the Government and merchants enabled the bank thus to sustain itself; to maintain its solvency and its credit; and to perform, with success, its commercial and fiscal duties.*

In 1815, the State banks from the operation of many causes, suspended specie payments, yet the confidence of the Government was not withdrawn. Mr. Dallas and Mr. Crawford, both able and patriotic men, as Secretaries of the Treasury, having sustained their credit by all the means in their power. Mr. Crawford, particularly, made large depositories of public money in many of them, and thereby enabled them to indulge the people, maintain their own credit, redeem their debt to the public, and finally, in 1817, to resume specie payment. *I believe if the same benevolent and patriotic policy had been pursued towards the State banks, at the present period, the existing suspension would not have continued to this time, if it had taken place at all.* Mr. Dallas nor Mr. Crawford, however, had not conceived the idea of a total separation between the Government and the banking institutions of the country as fiscal agents; and, therefore, felt some inducement to sustain and preserve them; but a different feeling seems to prevail with the present Secretary of the Treasury, who can only expect to succeed in his views by the embarrassments and difficulties of the banks. While I do not ascribe to him any design to produce the embarrassment which has overtaken the banks, and, with them, the commerce of the country, yet I am well satisfied that he has withheld from them that confidence, which might justly have been extended; and which would, before this, have redeemed them from their embarrassing difficulties, and have afforded salutary relief to the people, and the commerce of the country.

The charge made by the President, and those who now favor a total separation between the fiscal operations of the Government and the banks, "that they have been guilty of an excessive issue and circulation of their paper," is true—lamentably true. Yet I cannot perceive in all the facts and circumstances, connected with the charge, that they have been actuated by any improper or impure motives. These institutions are conducted by men who are liable to be misled by the same impulses which betray the most prudent and the most cautious of mankind into occasional error. A spirit of speculation had extensively spread itself throughout the country; acted and re-acted from the people to the banks, and from the banks to the people, until all, absorbed by brilliant prospects of immeasurable wealth, were beyond the bounds of prudence and discretion; and ruin, to many, has been the penalty. These impulses have occasionally produced like effects through all periods, and resulted in like catastrophes, whether their currency was exclusively metallic or not.

All these evils carry with them, however, sure antidotes. The current of money has its level; and whenever it exceeds that level, the redundancy runs off, and leaves the current at its proper level. In its reduction, serious and distressing injury is often inflicted; yet the return is gradual and sure. But a question arises, whether the banks are entirely in fault in this matter? Is not the Government itself much in fault? And shall the banks be compelled to take the whole responsibility for an error in which the Government has largely participated? At the time the public depositories were removed from the Bank of the United States, the then Secretary of the Treasury, acting under the impression, that the charter of the Bank of the United States was not to be renewed, and that its extensive circulation and discounts were to be called in, in order that no shock to the business of the country might be sustained, urged upon the State banks, in the following note, the duty which would devolve upon them to supply the vacuum which would be created by this withdrawal, growing out of their fiscal connexion with the Government. This the banks attempted to, and gradually increased their accommodations and enlarged their circulation. He says:

TREASURY DEPARTMENT.  
September 26, 1833.

SIR: The Girard Bank has been selected by this department as the depository of the public money collected in Philadelphia and its vicinity, and the collector at Philadelphia, will hand to you the form of a contract proposed to be executed, with a copy of his instructions from this department.

In selecting your institution as one of the fiscal agents of the Government, I not only rely on its solidity and established character, as affording a sufficient guarantee for the safety of the public money intrusted to its keeping, but I confide, also, in its disposition to adopt the most liberal course which circumstances will admit towards our moneyed institutions generally, and particularly to those in the city of Philadelphia.

The depositories of the public money will enable you to afford increased facilities to commerce, and to extend your accommodation to individuals. And as the duties which are payable to the Government arise from the business and enterprise of the merchants engaged in foreign trade, it is but reasonable that they should be preferred, in the additional accommodation which the public depositories will enable your institution to give, whenever it can be done without injustice to the claims of other classes of the community.

I am, very respectfully, your obt<sup>d</sup> servant,

R. B. TANEY,  
Secretary of the Treasury.

TO THE PRESIDENT OF THE GIRARD BANK, PHILADELPHIA.

This recommendation was repeated by the late President in his succeeding annual message. By the deposite act of June, 1836, for proportions of the public money beyond a specific amount, *the deposite banks were required to pay interest, which made it a principle of self-defence, that they should extend their loans and increase their circulation;* because it was not to be expected that they would lock up, and keep unemployed, the public money, on which they were bound to pay interest! These two causes combined certainly produced an excess in the bank discounts and circulation of the country. This excess has been increased by another cause, which Mr. Taney nor Congress did not, or could not, have anticipated. The vacuum which was anticipated by the refusal to renew the charter of the Bank of the United States, was never produced; for, contrary to all expectation, the capital and stockholders of that bank were subsequently incorporated by the State of Pennsylvania, which continued in circulation its notes, and prevented any material diminution in its discounts.

I appeal, then, to the good sense of this house to say, whether the excessive issues complained of, have not been produced by causes, calculated in their very nature to mislead, and produce the excess complained of, without the slightest imputation of fraud or corruption against the banks?

Mr. Chairman, the connexion which now exists between the finances of the Government and the deposite banks, was produced by the solicitations of the Government itself. The Government found itself engaged in a severe and dubious conflict with the Bank of the United States, which it had determined to overthrow. To do this, it was necessary so to conduct its operations, that the commerce and business of the country might not be materially shocked, and the sensibilities of the people excited. To effect this, it sought the aid, and procured the operation, of the late deposite banks, without whose aid and co operation, I have no hesitation in believing, the Bank of the United States would have triumphed. Yes, sir, I believe that it would have successfully resisted even Andrew Jackson, with all his popularity, his acknowledged firmness and courage. *The State banks came to the aid of the Government, and the Government triumphed.* For this they incurred the undying hostility of the Bank of the United States, which still pursues them. They incurred the denunciations and prophecies of evils of the opposition, who opened upon them all their batteries. This they withstood; but in the hour of victory, which they so signally contributed to achieve, in the very first hour of their difficulties and perils, the very friends whom they rescued from defeat, have taken possession of the batteries of the enemy, and now pour thick volleys upon their devoted heads! Is this generous? Is it magnanimous? Is it liberal? I leave you, sir, to give the answer. I leave you to determine whether, for causes which makes the act not only excusable, but justifiable, these institutions are to be utterly annihilated for their late suspension of specie payments, when they have, upon trying occasions, afforded seasonable relief to the country, and are entirely solvent.

That the State banks are susceptible of such regulations as will secure to the country a sound currency, I do not doubt; for this is clearly proved by experience; and that the revenue of this Government may be so employed as to be a most potent engine in the accomplishment of such a desirable object, by the force with which either their hopes or their fears may be addressed, cannot be reasonably doubted. In 1816, when specie payments were suspended, and the evils of a redundant and deranged currency afflicted the country much more severely than now. Mr. Webster, in a speech delivered in this house on 30th April, 1816, expressed himself thus: "That if these banks, (meaning the State banks,) what engine, he asked, was Congress to use for the remedying the existing evil? Their only legitimate

power, he said, was to interdict the paper of such banks as do not pay specie from being received at the custom-house. With a receipt of forty millions a year, he said, if the Government were faithful to itself and the interests of the people, they could control the evil, and it was their duty to make the effort. They should have made it long ago, and they ought now to make it; the evil grows worse by indulgence. If Congress did not now make a stand, and stop the current whilst they might, would they when the current grew stronger and stronger, hereafter do it? If this Congress should adjourn without attempting a remedy, he said, it would desert its duty."

If then, how much more potently could Congress now operate with the enlarged revenues of the Government? Yet Mr. Webster did not hold over the heads of the banks the terrors of a final and eternal separation. Mr. Biddle, the President of the Bank of the United States, in his triennial report to the stockholders, in 1831, says: "And they (the Bank of the United States and branches) received freely the notes of solvent State banks, with whom periodical and convenient, but certain, settlements of accounts were made."

"By receiving freely the notes of the State banks, within convenient reach of the bank and its branches, and by frequent settlements with them, these institutions are kept in the habitual presence of an accountability, which naturally induces them so to apportion their issues to their means as to secure the soundness of the currency."

I do not doubt the soundness of an opinion, so thoroughly demonstrated by the practice which fell under the observation of him who expressed it; and I do not doubt that the Government, in the employment of its revenues, and the observance of the same rules, may, through the instrumentality of the State institutions, preserve a sound currency, with much more success than the United States Bank did. *Frequent periodical, and certain settlements* are the efficient instruments by which excessive issues may be avoided, and sound currency preserved.

Mr. Chairman, if existing laws, which prohibit the continuance of any deposite bank as a fiscal agent of the Government, and the refusal of their notes in payment of the public revenue, had not sufficient terror to prevent the suspension of specie payment, how much more efficacious do you suppose the adoption of this measure, as the permanent law of the land, will be in restoring specie payments—so much to be desired, and so necessary to the prosperity and tranquillity of the country? Sir, it will not only not hasten, but greatly prolong that important event. During the suspension of 1816, Mr. Dallas, then Secretary of the Treasury, in his annual report to Congress of the 3d of December, 1816, expressing his opinion upon this identical subject, and the propriety of exercising the power of such restriction, said: "The successive attempts made by this department to relieve the administration of the finances from its embarrassments, have been ineffectual. There was no magic in a mere Treasury instruction to the collectors of the revenue, which could by its virtue, charm gold and silver into circulation. THE PEOPLE, INDIVIDUALLY, DID NOT POSSESS A METALLIC MEDIUM, and could not be expected to procure it throughout the country, as well as in cities, by any exertion unaided by the banks. And the banks, too timid, or too interested, declined every overture to a co-operation for reinstating the lawful currency. In this state of things, the Treasury, nay the legislature, remained passive. The power of coercing the banks was limited to the rejection of their notes in the payments of dues and taxes, and to the exclusion of their agency in the custody and distribution of the revenue; but the exercise of that power could not GENERATE A COIN CURRENCY, although it would certainly ACT OPPRESSIVELY UPON THE PEOPLE, and put at hazard every sum of money which was due to the Government. Until, therefore, a substitute was proposed for the paper of the bank, it would have been a measure of impolicy and useless severity towards the community to insist, that all contributions to the expenses of the Government, should be paid in a medium, which, it is repeated, the community did not possess, and could not procure."

In addition to these strong views of Mr. Dallas which apply with irresistible force to the present state of things; I add those of the able, the patriotic and practised statesman, William H. Crawford, who succeeded him in the office of Secretary of the Treasury. In a letter dated Nov. 29, 1816, addressed to Wm. Jones, then President of the Bank of the United States, he says:

Extract of a letter of William H. Crawford, to William Jones, President of the Bank of the United States, dated November 29, 1816.

"From this view of the subject, as well as from a general knowledge of the means with which the Bank of the United States will have to commence its operations, and of the difficulties which it will have to surmount if the State banks do not make a simultaneous effort, it is manifest that, without their co-operation a national currency equal to the indispensable demands of the community cannot be obtained by the 20th of February next, from the efforts of the bank and Treasury, under the existing legal provisions."

Again—in the same letter he says:

"It is, however, most ardently desired by the Government that the necessity of resorting to the issue of Government paper may be avoided, by the resumption of specie payments by the State banks on or before the 20th of February next. As an inducement to this measure, the Government can only aid their operations by withholding from circulation as much of their paper now in the Treasury, or which may hereafter be received, as the demands upon the Treasury during the ensuing year will permit: as the sum which it will be in the power of the Government to retain in the Treasury, will be considerable, it may present a sufficient inducement to change their determination not to resume specie payments before the 1st day of July next."

Again—he says:

"How far the discrediting of their paper, by refusing to receive it in discharge of dues and taxes, will influence their conduct, can only be ascertained by the EXPERIMENT."

These views of these two able and distinguished men, expressed in the midst of a pressure more severe and infinitely more alarming than the present, are entitled to the greatest weight. It was then, so it may now be truly said, that this bill will *not* legislate a coin currency into existence, nor put gold and silver into the pockets of the people! Its only effect will be to prolong the resumption of specie payments; reduce and depreciate the already reduced currency of the country, and ruin and oppress the people. Sir, if you would secure the resumption of specie payments within a short time, instead of crippling, you must encourage and support the banks in their exertions to resume, which we have good reason to believe they are honestly exerting themselves to do. They now only need a little further reduction of the foreign debt, (which presses on them so severely, but which is rapidly being reduced,) and the restoration of the confidence of the Government, to resume specie payments. This I do not doubt they will be able to do by the 1st of April. Let us only imitate the examples, and practise the lessons of Crawford and Dallas, and all will be well; confidence will be restored and commerce resume its usual activity. Even if the scheme proposed by the committee of Ways and Means were wise and practicable, it cannot be carried into execution at this time, without ruin to the whole mercantile community. Until the vaults of the banks are unlocked by the resumption of specie payments, specie in sufficient quantities cannot be procured. The attempt to enforce this law in the present state of the metallic currency, would produce unparalleled distress. The maximum exchanges of the United States Bank in 1832, amounted to \$254,000,000; that of the State Banks in 1836 to \$324,000,000 which proves the capacity of the State Banks, to conduct the exchanges of the country, beyond doubt. From the foregoing considerations I conclude that there is no reason for discontinuing the State banks as fiscal agents of the Government, that did not equally exist against their employment.

Notwithstanding the fact, that the States, from the foundation of the Government, have chartered, and continue to charter banking institutions, and this Government has been in the uniform practice of employing them as fiscal agents, it is now gravely contended by some that institutions are unconstitutional. The argument is derived from the constitutional prohibition upon the States to emit "*bills of credit*." If the States had made the notes of the banks which they have incorporated, a legal tender, then the argument would have been good; but so long as they are not made a legal tender, and every man is at liberty to receive them or not, at his pleasure, then the prohibition of the constitution does not apply. I need not detain the committee by any argument of mine. This question was determined directly by the Supreme Court of the United States, at its last session—a democratic Supreme Court, of which Roger B. Taney is Chief Justice. I will simply refer to the able, lucid, and unanswerable arguments of the judge, the opinion of the court, in the case of *Briscoe vs. the Commonwealth of Kentucky*. But it is contended by some that it is equally unconstitutional to employ State banks as fiscal agents, as to charter a national bank. I cannot see the force of this very recent objection; there is a material difference between creating an

institution which is not authorized by the constitution, and entering into compacts with corporations which are created by governments, having the constitutional power to create them, and imparting to them the express power of contracting. I do not perceive that, because the Government of the United States cannot, by authority of the constitution, incorporate a national bank, that it therefore cannot enter into a contract with individuals, which it is daily in the habit of doing. The State banks, being constitutionally incorporated and having the power to contract, stand to the Government precisely in the same relation as individuals, who have the power, and may contract with the Government. Sir, I have been much surprised to hear an argument so fallacious, so gravely, and so earnestly urged.

I will now, Mr. Chairman, call the attention of the Committee to the scheme presented to the consideration of Congress by the Executive, and offer to its consideration as briefly as I can, my objections to it.

The first objection is, that it will be trying an experiment, to say the least of it, of very doubtful results. My friend from Virginia, (Mr. Jones,) in a very able speech a few days past, seems to justify embarking on this experiment, as he admits it to be, on the ground that the Government itself is but an experiment. It is true that our system of Government, when it was entered upon, was but an experiment, yet it was a necessary one, and in its progress has developed the wisdom of its adoption. But surely my friend would not argue that because the system was originally an experiment, that it would be prudent to abandon that part of the system which has worked well, and adopt one which has no practical result to recommend it. I regard it as the part of wisdom to adhere to every system which experience has taught to be wise and salutary. I am sure my honorable friend would not be willing to surrender our admirable system of government and adopt another which had nothing more to recommend it than that it was an experiment. The system of bank deposits has been tried, and, although there have occasionally been some disorder and derangement, as there has been in all human affairs, has generally worked well—so far as the experiment now proposed has had any practice, it has been unsuccessful, and proved its utter insufficiency.

The second objection which I present is, that the public money will be *unsafe* and its effects demoralizing. The safety of the public funds is an important matter, and should enter deeply into the consideration of Congress in the adoption of any system which may be proposed. We all know that there is no system which human ingenuity and sagacity can devise, that would be entirely safe. Yet reason and experience teach us that there are some *more safe* than others, and that which reason and experience teaches to be the most safe, should be adopted. In view of this question of greater safety, let the present and the system proposed be contrasted. Place, if you please, the estate of any individual who might be selected as the depositor and keeper of the public money, by the side of the capital of any bank which would, in the exercise of a sound discretion, be selected, and how vast the difference in favor of the bank—compare the inducement which the bank has to preserve its good faith and credit, in a mere pecuniary point of view, with that of an individual, and how great the disparity in favor of the bank—compare the force of the moral obligation on the part of the bank with that of the individual, all the officers of the bank, the directors and the stockholders are deeply interested in preserving its faith with the Government and all other depositors. Under the proposed system a single individual is interested—contrast, if you please, the means of detecting fraud, peculation, and defalcation. In the banks the officers are in daily watch and check upon each other. The directors hold weekly sessions and superintend the officers, and the stockholders hold annual meetings and examine and scrutinize into the conduct and management of the whole—as to the individual depositor, there would be only the Secretary of the Treasury, who, residing at the seat of Government, would have but little opportunity to detect defalcation and other malversations. But it is urged by the President that ample security may be taken which will remove all these objections. Sir, whatever collateral security you can take of individuals, you can also take of the banks, which leaves the question of safety still decidedly in favor of the banks, the

best security which can be had is in the adequate responsibility of the depositor, and that in every sense of the word is with the banks. The President seems to be under the impression that the high obligations of official duty which the public officers will feel, will afford strong security against abuses. Sir, however honestly the President may entertain this opinion, I regard it entirely illusory. Official parchment never yet made a man honest who was naturally dishonest; nor did it ever yet protect against the seductive influences of temptation, where without it they would have been yielded to. Nothing, no nothing, sir, will resist temptation but the stern and inflexible principles of integrity which are implanted in the heart of man by the God of nature. Mr. Chairman, we are not without that most unerring of all guides, *experience*, upon this subject, and the result of that experience is decidedly favorable to the banks. There has been, since the formation of the Government, deposited with and disbursed by the banks about \$650,000,000, with but little or no loss, according to Mr. Crawford's estimate about the 45th part of one per cent., while of the money which has been kept by individuals, which is infinitely less, much greater loss has been sustained. Let the Treasury Department open to the inspection of the American people, all its outstanding balances against collectors and receivers, and I do not doubt that it will exhibit such decided evidences in favor of the bank deposit system as to decide this question now and forever. Here, Mr. Chairman, I cannot but recur to the experience of my own State upon this subject, although I do it with much regret. Sir, there was a man many years ago at the head of the Treasury Department of Virginia, who was connected with a family of the highest standing and respectability of the State, in whose integrity every man who knew him had the most entire confidence—he was proverbial for his honesty. This man, under the influence of those kind and benevolent feelings which sometimes dignify and ennoble frail human nature, but yet mislead it, was tempted to divert to his individual use larger sums of the public money than he was afterwards able to restore, and thus became recorded a public defaulter. Although he was a defaulter, he honestly surrendered to the Government and his securities his whole estate, but it was not sufficient to meet the whole defalcation. This man was John Preston, whose fate affords a melancholy proof of the power of temptation over the human heart; for I feel confident in the assertion, that in life as in death, he was an honest man. When this man's defalcation was discovered, the man who became his successor was a member of the State legislature, and was one of the most ardent denouncers of the defalcation, and untiring investigators of its extent—his constant cry was *crucify him, crucify him*. This man, too, who stood high in public confidence, was also overtaken by the same irresistible temptation, and fell a victim to the same fate. He also was at heart an honest man I do not doubt. I do not doubt that the fiscal history of many of the States affords some melancholy examples of this kind. If we descend from high State officers to the collectors in the counties, we find many memorable and melancholy instances of defalcations in collectors and keepers of the revenue. With so many examples, Mr. Chairman, before our eyes, will Congress plunge into a system where the inducements will be greater, and the temptations necessarily stronger on account of the immense sums of money which will be placed within the reach of individual depositors. I trust not. I hope we shall be warned by the dangers of the past, and avoid them for the future. The collateral security which may be taken by the Government will afford little or no relief from the effects of defalcation, because if the collecting officer fails, the Government cannot reach the securities except by a tedious course of litigation, and then it very often fails to recover the money, for it is now generally regarded as a sort of *moral principle*, for a man to secure his estate against liability for security debts, particularly to Government; and it very often happens that before judgment is recovered the securities have, by conveyance and settlements of one description or other, placed their property beyond the reach of execution. Another strong argument in favor of the State bank system is, that if the public money be plundered from the vaults of the banks, the loss falls upon the banks; if from individual depositors, the loss falls upon the Government. This fact increases the vigilance and watchfulness of the banks, and re-

laxes that of the individual agent. Although I feel very great respect for the opinions of the President, yet I cannot agree with him, that this is a question between the strength of a *Treasury* and a *bank vault*; neither of these vaults of themselves would ever, however weak, or however strong, plunder the public money. They are incapable of that; but the question is between those who hold the *keys* of the vaults, between the inducements and opportunities of the one or the other to plunder the public treasure, between their liability to be plundered by one or a hundred hands.

This system, if adopted, will also exercise a very demoralizing influence upon society. Nothing is so well calculated to engender corruption in individuals or Government, as to place within their reach the means of corruption. Let every man inquire of himself, how strong the temptation to plunder, or to speculate upon the immense masses of public money which the operation of the proposed system will necessarily throw into the immediate possession and control of individuals. If lesser sums have produced the melancholy catastrophes to which I have referred, how many more may be expected when the inducements shall be so largely increased. Sir, I do not know, you do not know, this house does not know, who it is that has so much inflexible integrity and firmness of character as to be safely trusted with this immense amount. David is said to have been a man after God's own heart, yet even he was overcome by the power of temptation, and was plunged into crimes of the deepest dye. I might here inquire, who is it that has a proper regard for his own character and that of his posterity, that will trust himself in a situation so seductive, when he has before his eyes so many melancholy instances of human infirmity—few, very few, who are trustworthy.

The third objection which I urge is, that it will increase the difficulty, risk, and expense of transporting the public money, and subject the public debtors to great inconvenience. I regard it entirely unnecessary to detain the committee to prove that which experience has so well ascertained. If the public money is to be transported from point to point throughout our immense territory in gold and silver, its bulk creates inconvenience—its exposure to public gaze begets risk, and the necessary employment of a sufficient guard to protect it against robbery, will incur heavy expenses; all this is avoided by the aid of the banks, for they now transfer public money to any point directed by the Treasury Department, at their own risk and charge. The Treasury Department, which has had the superintendence of this operation from the foundation of the Government, and which can therefore afford the most satisfactory evidence upon this point is uniform and undeviating in its testimony in favor of the bank system, which I should regard as conclusive. But what substitute are we to have for this convenience, safety, and destitution of expense under the proposed system. Nothing, sir, but Treasury drafts, that I can perceive. These will not answer the purpose unless a sufficient amount of money can always be found at every point where it is wanted. This, in the nature of things cannot be so; and to supply the amount necessary, specie must be transported, or Treasury drafts employed as a medium of circulation, which would introduce a system of government paper circulation incapable of adequate restriction, liable to abuse, and at war with the genius of our institutions. This system in the course of time might be perverted to the most dangerous purposes, and become an engine of most potent influence. Sound policy is opposed to the creation of Government paper of any kind as a permanent circulating medium, liable to the catastrophe of the old continental paper system. It would in effect, become a Government bank, which legislation might be found totally incapable of regulating or controlling. If the Government receives and pays out nothing but specie, the inevitable result will be, that its drafts must become not only a medium of transfer, but of circulation also.

The fourth objection which I urge is, that it will indefinitely postpone the resumption of specie payments by the banks. I do not profess, Mr. Chairman, to be skilled in matters of finance, or versed in banking operations, but I am clearly convinced that this increased and continual demand for specie, must operate a heavy drain upon the vaults of the banks, the very moment they resume specie payments. The merchants, who have duties to pay, can only rely upon the banks to supply them, for they have it not themselves. The banks, already suffering under a pressure of which was well nigh exhausting them,

foreseeing the effect of this new demand would forbear to resume, and this would not only seriously embarrass the merchants and the people, but the Government itself; for, as I before remarked, the passage of the bill will neither coin money or put it into the pockets of the merchants or the people. I, then, emphatically ask how is this demand to be met. Sir, you may call spirits from the vasty deep, but calling will not bring them. You may pass this bill, but it will not coin gold and silver. Connected with this objection is that of the derangement of the exchanges, and the general confusion of business which this system will produce. There is no United States Bank in existence which can regulate and supply the exchange demand. Individual sources have been almost entirely destroyed by the banking system. The State banks, then, afford the only certain reliance to the community for the supply and regulation of commercial exchanges. I need not urge upon the committee, that which every man's observation and experience must have taught him, that next to the *means* of commerce, the facility of a sound, well regulated, uniform system of exchanges is essential to its successful operation. The demand for such a system for the accommodation of our widely extended, and constantly increasing commerce, both foreign and domestic, must be manifest to every one. If, then, the policy of the Government shall compel the banks, and this system must necessarily do so, still further to curtail their circulation and loans, and restrict their exchange accommodations, is it not most manifest that the effect will be still more to embarrass commercial intercourse, and paralyze the industry and business of the whole country. By curtailing the already too limited exchange accommodations with a deranged, unsteady fluctuating system of exchanges, commerce becomes embarrassed, and with it the whole business of the country.

The limitation of exchanges below the demands of commerce, the still further reduction of bank circulation, connected with the continued suspension of specie payments, will force upon the importing merchants the necessity of purchasing specie at heavy and exorbitant premiums, to meet the claims of the Government and their foreign creditors, if even they can procure it in sufficient amounts at any premium. These profits, although they are at first paid by the merchants, are generally exacted from the agricultural and mechanical portions of the community, who principally consume foreign goods, in the shape of profits; and in this way a heavy tax is imposed upon them. Thus while the apparent operation is upon the merchant, under the *guise* of an indirect system of taxation, yet the real operation is upon the laboring class, and thus a system proposed for the good of the people, will operate to their serious injury. For, sir, be assured that the people who purchase, are always taxed with these exactions upon the merchants. This system will also exert a very deleterious influence upon the commerce of the country, by diverting from the ordinary channels of trade, the amount of specie which will be in active requisition to meet the demands of the Government, which I think is estimated by the Secretary of the Treasury greatly below the real amount, for I am confident five millions will be greatly inadequate. The almost daily arrival of foreign goods, and purchases of public lands, will restrict the circulation of the Government funds to very narrow bounds, so narrow that they will be of no value to the general commerce of the country.

The fifth objection which presents itself to my mind is, that this system will create a substantial distinction between the currency of the Government and the currency of the people. I have weighed, with great deliberation, and I trust impartially, the argument of the President against the truth of this proposition, as well on account of the source from which it emanates, as the intrinsic importance of the subject itself, and I am decidedly convinced that the proposition is *literally* and *substantially* true. The very fact that the Executive desires to separate itself entirely from the banking institutions of the country, and to restrict their notes from being received in payment of the public dues, notwithstanding they constitute the general circulating medium of the country, proves that the Executive regards the metallic as a much sounder and safer currency than bank paper, although it may possess the essential quality of convertibility into specie. In the proposed scheme, the bank note circulation will be left exclusively to the people; and if it be not so safe or sound as the metallic, then it follows

that the currency less sound, and less safe, is confined to the people. Take this fact in connexion with the fact, that the major part of the circulation is now, and likely will be, bank paper, and upon the principle of the distinction drawn in the message, the conclusion is irresistible that there will be an exclusive metallic medium for the Government and its officers, and a medium mainly paper for the people. The bill now under consideration, as does the message, draws the distinction, and its consequences must follow. Can this be sound policy? Is not the distinction invidious? Does it not make the Government supreme? whereas the people should be, and are supreme? Sir, in my humble opinion, it strikes at the very foundation of our system; it makes the people subordinate to the Government, whereas the Government is subordinate to the people. I know, sir, this is not designed by the President, but it is the inevitable result of the distinction. Mr. Chairman, there is no sound reason for this distinction, *none* whatever; the business transactions of the people are infinitely greater and more extended, and therefore of greater interest than that of the Government, and demands the soundest medium for their operation. If, then, the metallic be the only safe and sound medium for the Government, it is necessarily more important for the people; if the paper medium be safe and sound for the people, there is no reason why it is not equally so for the Government; and, instead of the Government disparaging and discrediting the medium necessarily belonging to the people, it should, by the judicious employment of its immense revenues, aid in preserving its safety and soundness, and extending its credit. This Government is charged by the Constitution with the regulation, the encouragement, and protection of commerce; it could not more successfully perform that duty than by giving full credit to the general circulating medium of the country, so long as it is worthy. Sir, the conviction that the proposed system contains this unjust, and anomalous, and invidious distinction between the Government and the people, is fast riveted in my mind, and, if true, ought on that account, if no other, to be repudiated.

The sixth objection which I urge to the present system is, that it will greatly aid, if not render *indispensably necessary*, a national bank. I assume it as a fact, which the experience of the past well justifies, that, unless this nation and the States of this Union shall abandon its commerce, their systems of internal improvement, so flourishing and so rapidly increasing, and their literary institutions, that the banking system in some form will be maintained; they have increased, and will continue to increase, as the wealth, population, manufactures, agriculture, and commerce of the country increases. The President himself expresses the opinion, in his message, that the States will not abandon their systems of banking. The power of the States to incorporate these institutions, and the want of harmony in the exercise of this power, has rendered it difficult even with the aid of the national revenues, and the advantages of national credit to preserve a sound medium of circulation, and perform the fiscal and commercial duties which have devolved upon them. If, then, they are farther discredited by the passage of this bill, and their operations reduced to narrower bounds, it is manifest that they will not be able, and will not have sufficient credits to supply the country with a safe, sound, and ample commercial medium; for without credit, they are totally inefficient. It is admitted, on all hands, that while gold and silver are safe and sound, they are not ample and convenient, hence the country will demand some other medium to keep pace with its rapid improvement, and that will be a national bank medium. In the necessity of the demand all constitutional scruples will be overlooked, and a national institution incorporated. Sir, I shall not, if here, vote for it; but be assured that the overwhelming influence of public discontent will, as in 1816, drive to this resource, and when again established, it will obtain a hold which nothing can break, and will with all its obnoxious and fatal tendencies be the permanent policy of the country. This brings me to consider whether the passage of this bill will not discredit the bank paper, and impair its value as a circulating medium. If the course already taken by the Treasury Department towards these institutions, the calling of Congress together on account of the suspension of specie payments, the recommendation of the message to discontinue them as depositories, and the receipt of their notes in payment of the public

revenue, if the charge of the Executive that they have been faithless fiscal agents, more so than the Bank of England under like circumstances, and the sanction of these charges by passing the present bill, be not sufficient to discredit and cripple these institutions, then there is no cause whatever but absolute unqualified bankruptcy that would discredit them. We already see the blighting influence which the withdrawal of the confidence of the Government has exerted upon the banks, and we may well anticipate the fatal effects which a blow from the representatives of the people will produce, all of which will ultimately act upon the people, in the great scarcity of money and reduction in the value of their property.

This is not all, Mr. Chairman; this measure, I fear, if adopted, will exert a still more fatal influence upon the banks than any which I have attempted to predict. I fear it will ultimately, if not immediately, utterly destroy them, and produce a state of ruin and desolation, it is appalling to contemplate. The connexion and union between agriculture, manufactures, and commerce is so intimate, that one cannot be affected without, at the same time, affecting the other; whatever cause therefore that impairs the credit of the commercial medium of the country necessarily inflicts a serious injury upon agriculture and manufactures particularly agriculture, for that is the foundation of commerce and manufactures. These banks are an essential and necessary part of the commercial community, and whatever embarrasses them, embarrasses the whole commercial community. This idea is very forcibly expressed by Mr. Calhoun in a speech delivered in 1816 in this house on the bank charter, speaking of the commercial qualities of the then proposed Bank of the United States, he says, "This bank is no more than a part of the commercial community, in which it is established, and any embarrassment of the bank must press, also, on the whole community, *that community would be the first to give way in such a case*, and this would produce a run on the bank, and compel the stoppage of payment." I cannot imagine to myself a more decisive step, in the present embarrassed condition of the country and the banks, than the passage of this bill, to force the banks to continue the stoppage of payments and finally to wind up their business. If such would be the effect what would be the consequences to the people? I let the President of the United States, when he was Governor of New York, answer. In his annual message to the Legislature of New York, Mr. Van Buren, speaking upon the expediency of renewing the charters of many of the New York banks, which were about to expire, portrayed the ruinous effects which their discontinuance would produce upon the State and the people, expressed himself in these forcible and conclusive terms:

"But we cannot close our eyes to the difficulties and pecuniary embarrassments that must result from suddenly stopping the operations of so many and such long established institutions. Of the *thirty millions* that are owing to them the principal part is probably due from merchants, manufacturers, and other large dealers in their vicinity; but they in turn have their demands against persons pursuing similar business in the country, and those again must look to their customers, thus embracing all classes of society, in the liability to contribute towards a general settlement. The amount due from the banks, especially all that portion which consists in bills issued by them, would be found scattered through the whole community. From even this superficial view of the subject, it must be evident to all reflecting minds, that the pecuniary convulsion that must result from a compulsory close of these extensive concerns, would be neither slight in its degree, nor transient in its duration. You will, I am convinced, concur with me in the sentiment, that a responsibility of so serious a character and so fearful in its possible consequences should not be incurred on slight grounds, or from motives of expediency in the least degree questionable."

Mr. Calhoun, in a speech in the Senate, in 1834, speaking upon the subject of the banks and the effects of their sudden suppression, thus expresses himself, "To suppress them (the banks) at once would, if it were possible, work a *greater revolution*, a *greater change* in the relative condition of the various classes of the community, than would the conquest of the country by a savage enemy." This sentiment is true, inevitably true, and by it I propose to test the effects which the destruction of the banks would at this time produce upon the people. In 1834, the people were indebted to the banks \$324,000,000; in 1837, \$591,000,000; if then the suppression of the banks in 1834 would have produced such distressing effects, what would it do now? Ruin the whole community. When the banks are pressed, they press in turn the whole community, and that presses the people, who are the victims, for they have no debtors to resort to, they must re-

sort to their property. Again: If the Government demands specie in payment of the public revenue, the merchants must in turn demand specie of their debtors, *THE PEOPLE*, which, if they cannot procure, will lead to the most destructive sacrifices in the sales of their property. No creditor is bound to receive any thing but specie, and this system will afford a pretext for such a demand; for the creditor may well refuse to receive discredited, depreciated bank paper, and therefore cause immense sacrifices of property.

Mr. Chairman, the bank circulation is already reduced from about 160 to 100 millions of dollars, as is also the active specie circulation greatly reduced; the present circulation is founded upon an adequate specie basis, and cannot, with due regard to the interest of the people, be further reduced. This system will render a further reduction inevitable, and produce a corresponding inability on the part of the people to pay debts, and a fearful depreciation in the value of property, and in this point of view will operate most injuriously upon the debtor class of the community.

The eighth objection which I have to the proposed system is, that it will greatly enlarge the Executive patronage, and fearfully increase its power. Upon this point, Mr. Chairman, I am brought into direct collision with the opinion of the President, who seems to be of the opinion that this measure will not only not *increase* but actually *diminish* Executive patronage. I am not satisfied with the reasoning of the message, and find nothing in it, although ably urged, to change the opinion which I took up in 1834, as to the effect of such a measure. The Secretary of the Treasury seems to think that by the appointment of ten additional officers and an increased expenditure of about 60,000 dollars, will enable that department to conduct this system with success. In this opinion, Mr. Chairman, I differ widely with the Secretary, although I do not doubt his sincerity. All propositions for the creation of new systems are accompanied with the most rigid regard to economy, but after their organization their wants gradually develop themselves, till finally, by legislation after legislation, the officers and the expenses are fearfully increased. All the departments of the Government had small and economical beginnings, yet in the progress of time the number of their officers and the amount of their salaries, and other expenses, have greatly increased, such will be the course of this system. This will be but the germ, and your ten additional officers and \$60,000 additional expense, will swell into hundreds of officers, and hundreds of thousands of increased expenditure. To tell me that all the increase of clerks, house-rent, stationery, and other incidental expenses which this system will require can be met with \$60,000, is to tax my credulity with the belief of an utter impossibility. Sir, the Secretary of the Treasury will find himself utterly mistaken in his estimate, if by the passage of this bill, he shall be authorized to put this system into practice. In considering this question it should be borne in mind that our country is rapidly increasing in population, wealth, power, and commerce, and that necessarily as these progress, increased duties on the part of the Government in all its departments will be unquestionable, and on no department of the Government will these increased duties devolve so materially as on the Treasury department. Hence, sir, I look to the adoption of this system as laying the foundation of an immense increase of the patronage of the Executive in the appointing and disbursing power. Mr. Chairman, the patronage of the Executive is the most dangerous of all its powers, and the most likely to end in the overthrow of the liberties of the country; by the exercise of this power, the Executive ramifies in every section of this widely extended empire, its officers indebted to the Executive for their appointment, and holding them at its will. When we consider their number, the influence which they exercise, and the position which they occupy, we cannot but feel sensibly alive to the mischiefs which they may produce. Their number already exceeds one hundred thousand, and is constantly increasing—add to this immense array of public officers ramified into every section of the country, the amount of money which is annually disbursed by the Executive, and we may form some idea of the already fearful power of the Executive patronage. But, sir, pass this bill, and this power becomes ten fold stronger and more dangerous. Now the Executive has not the actual but the legal custody only of the public purse; barriers hitherto

safe have been interposed. This bill not only places the public revenues in the legal but the actual custody of the Executive; it removes all barriers all restrictions; it places the custody of the public purse in the hands of those who will hold their places at the will of the President, who has the power to remove at pleasure. Sir, will an American Congress place this fearful power in the hands of the Executive? Will they place in the hands of the President, already having the power of the "sword"—the power of the "purse" also? For this bill completely invests him with the power of the "purse." He will hold it in actual keeping. Will they commit their liberties to the keeping of any man? Will they trust such immense and such fearful means of mischief in the hands of any Executive Magistrate?

Mr. Chairman, I shall make no professions of unbounded confidence in any man. I will not say that I have more, or that I have less confidence in Mr. Van Buren than in other men; but, sir, this is a power which I would not have committed to George Washington himself, or any man that ever lived, or now lives. Sir, I will not commit my liberty to the keeping of any man. I fear all. If the people intend to preserve their liberties, they should not commit them to the keeping of any man; but keep them under their own immediate care and protection. A wise man said, "eternal watchfulness is the price which the people pay for liberty." Sir, I warn them to watch, and that incessantly; if they do not, fearful will be the consequences. Mr. Chairman, the patronage of the Executive is already sufficiently large for the safety of our free institutions, and I am not willing to enlarge it. While on this part of the subject, I cannot refrain from recurring to the fact, that when General Jackson's protest to the resolution of the Senate, charging him with a violation of the constitution and the law, in the removal of the public deposits from the Bank of the United States, was construed into a claim for the Executive of the actual custody of the public money, he immediately and indignantly repelled it in a short explanatory message. This bill gives that very custody which General Jackson indignantly repelled, as desired by him. Mr. Chairman, I trust I shall be excused for recurring to my own State, for I assure the house I do not mean it as in the slightest degree invidious. But, sir, Virginia has always been jealous of the exercise of the powers of this Government, and of the increase of Executive power. From time to time, she has raised her voice against it. Even while this constitution was under discussion in her convention, many of her patriotic and distinguished sons resisted its adoption from jealousy of the overwhelming power and influence which it would impart to this Government, and the Executive branch of it. Henry, with the thunders of his eloquence, denounced the constitution as tending to absorb all power into this central Government. Pass this bill, and you take the most important step towards the fulfilment of his predictions. You at once, to use his language, arm the Government with the power of the "sword and the purse," which, I fear, will ultimately prove too strong for the liberties of the people. What might not an ambitious aspirant for despotic, uncontrolled, and unlimited power, nor do with such means in his hands? Sir, if he wants money, he has only to demand it at the hands of its-keepers. If they refuse, he has nothing to do but to exercise his constitutional power of removal, and then every obstacle is withdrawn. And what security have we, that, in the course of time, some such man may not, in the hour of popular infatuation and delusion, be elevated to the Executive chair? None, sir; for history affords the important lesson, that every tyrant, who has ever overthrown the liberties of his country, has done it under the hollow professions of the good of the people, and have often made the people the deluded victims of their own destruction. It is enough for me to see this bill places in the hands of the Executive, powers which may be easily perverted to the most dangerous purposes. To oppose it, although those who propose and those who advocate it, may not have, and I am sure entertain no such design. But, sir, one of the panaceas held out for the dangers which I have adverted to, is the reduction of the expenditures of the Government to its actual economical wants. Sir, this measure has been often read to this body; yet, as often as it has been read, the expenditures of the Government have as often departed to the true principle of economy. From some cause or other our expenditures constantly increase. For these

extravagancies in expenditures, I do not hold Executive responsible. I hold Congress responsible. It has almost uniformly appropriated largely beyond the Executive recommendations. Upon the subject of appropriations, a large number of the friends of the late administration voted for appropriations, at war with its opinions; but whether sanctioned by the Executive or not, these appropriations have been, and will, I fear, continue to be made; and the expenditure, of course, placed in the hands of the Executive, so that the effect is the same, as far as the question of patronage is concerned.

Mr. Chairman, I conclude this part of my argument, by referring to the following extract from Gen. Jackson's message of December, 1835, in which he says:

"IN THE REGULATIONS WHICH CONGRESS MAY PRESCRIBE RESPECTING THE CUSTODY OF THE PUBLIC MONEY, IT IS DESIRABLE THAT AS LITTLE DISCRETION AS MAY BE DEEMED CONSISTENT WITH THEIR SAFE KEEPING, SHOULD BE GIVEN TO EXECUTIVE AGENTS. No one can be more deeply impressed than I am with the soundness of the doctrine, which restrains and limits, by specific provisions, Executive discretion, as far as it can be done consistently with the preservation of its constitutional character. In respect to the control over the public money, this doctrine is peculiarly applicable."

In every word and every sentiment of which I most heartily concur, and shall give earnest of my concurrence by voting against this scheme, which is directly at war with it.

But, Mr. Chairman, in the message of the President, and the report of the Secretary of the Treasury, the dangerous political influence which a connexion between the Government and the banks may exert upon the integrity and liberties of the country, is urged as a reason for discontinuing the connexion which has existed from the foundation of the Government to the present hour. Sir, I am not only surprised at this reason, but the source from which it comes; for, sir, practice disproves the danger, and it is directly at war with the opinions of the late Administration, and those previously expressed by these high public officers. This argument is directly at war with the argument of Gen. Jackson's message of December, 1834, upon this subject, in which he says:

"The attention of Congress is earnestly invited to the regulation of the deposits in the State banks, by law. Although the power now exercised by the Executive department in this behalf, is only such as was uniformly exerted through every administration from the origin of the Government up to the establishment of the present Bank, yet it is one which is susceptible of regulation by law; and, therefore, ought to be regulated. The power of Congress to direct in what places the Treasurer shall keep the moneys in the Treasury, and to impose restrictions upon the Executive authority, in relation to their custody and removal, is unlimited; and its exercise will rather be countenanced than discouraged by those public officers and agents on whom rests the responsibility for their safety. It is desirable that as little power as possible should be left to the President or Secretary of the Treasury over those institutions; which, being thus freed from Executive influence, and without a common head to direct their operations, would have neither the temptation nor the ability to interfere in the political conflicts of the country. Not deriving their charters from the national authorities, they would never have those inducements to merge in general elections, which have led the Bank of the United States to agitate and convulse the country for upwards of two years."

Also, his message of December, 1835, in which he says:

"By the use of the State banks, which do not derive their charters from the General Government, and are not controlled by its authority, it is ascertained that the moneys of the United States can be collected and disbursed without loss or inconvenience, and that all the wants of the community, in relation to exchange and currency, are supplied as well as they ever have been before."

These sentiments were concurred in by the late Secretary of the Treasury, (Mr. Taney,) by the Committee of Ways and Means, of 1834, in their able reports; and by the present Secretary of the Treasury. I would now inquire what new developments have transpired to change these decided and unequivocal opinions? What political intrigue has the banks been engaged in? what elections have they interfered with? what political influence have they attempted to exercise? and when? and has it been since the last session of Congress? I know of none, and I have heard of none. If the opinion is merely speculative, then experience leads to an opposite conclusion. Mr. Chairman, let us simply refer to facts, and draw from them the most rational and direct conclusions; and every man must be convinced that this reason is not sufficient to justify a resort to the system now under consideration: the officers of the banks hold their place at the hands of the directory; the directory, of the stockholders; and the stockholders, at the hands of the State Governments. The bank officers, directors, and stockholders, none of them

hold their place at the discretion of the Federal Executive. The only influence, then, which the Executive can exercise over these institutions, will arise out of the profit which may be derived from the use of the public money, which may, from time to time, be deposited in their vaults: this profit, with but one or two exceptions, will not be sufficient to benefit the banks to hazard the displeasure of the State Governments—always overlooking their operations—and to draw them into any of the corrupt purposes of this Government. Under the system proposed, the tenure of all the officers holding the public money will be at the discretion of the President, without any counteracting influence whatever. Let any man, then, judge where there is most danger of Executive influence, with the banks or the Executive officers. The response is not doubtful.

The next objection which occurs, to my mind, is, that the system proposed, will exert a hostile influence upon State institutions, and be subversive of State rights. Mr. Chairman, no member has intimated the idea, that, for a long period of time of war, the country can divest itself of a paper circulation; if the soundness of the circulation is preserved, there must be some harmony of action. The natural war which paper wages against specie, and specie against paper, must be avoided. This bill, which strikes at the credit of the banks, by excluding their notes from payment of public dues, and thereby necessarily narrows the boundary of their circulation, and lessens their profits, will necessarily produce a counteracting policy on the part of the banks; that policy will be the resort to small note issues, for in this way alone can they drive specie out of circulation to enlarge their own, and thus add to the embarrassment of the country. But, Mr. Chairman, this is not the most serious objection to this bill: it will engender jealousy and hostility, on the part of the States, towards the Federal Government; a state of things greatly to be deprecated, and pregnant with great evils to our institutions. Mr. Chairman, do you think that the States will be passive under the operation of a system which is so blighting to institutions created, nourished, and matured by them; and to which they are so much indebted for their present flourishing condition, and their rapid march in science, wealth, internal improvements, and general prosperity? Will they see these means of their future prosperity sapped and destroyed? I think not. Pass this bill, and then arm this Government with the power of a bankrupt law, in relation to these banks, by which a board of commissioners, appointed by Federal authority, may discontinue any of these institutions, and you at once place them at the mercy of this Government. This, sir, I cannot consent to do.

Mr. Chairman, every State of the Union, I do not doubt, has some interest in the preservation of the credit of its banks. The State of Virginia has invested in stock, in her various banks, one million six hundred and seventy-two thousand dollars. They are the depositories of her internal improvement fund, and her fund for the education of the poor. Think you, Mr. Chairman, she will stand quietly by and see these banks discredited and impaired, to the hazard of these immense funds, and their successful employment, and surrender her systems of improvement and education? I think not. How gentlemen have arrived at the conclusion that the people generally are opposed to the banking institutions of the country, I am at a loss to discern. These institutions were all chartered by the representatives of the people in their respective State legislatures—representatives who are annually elected, and whose conduct is strictly scrutinized. How many have been repudiated by the people for incorporating banks? Few, very few. How many would obtain re-election after voting for their destruction? Not one, I dare believe. This fact alone, sir, conclusively proves, that the people sustain these institutions, however much they may be disposed to correct, and no doubt will correct, abuses. Mr. Chairman, there is another aspect in which I view this subject as highly important, and which I am bound to consider. Sir, none of us can so far look into the vista of time as to see what even to-morrow may bring forth, although every feeling our hearts may linger around this Union with the deepest filial regard and solicitude; yet, on the tide of time, and amidst the storm of events, it may be shivered into atoms. It is prudent, at all times, to be prepared for events, which we most ardently deprecate, but which may,

by possibility, occur. To meet any contingency, then, which coming events may produce, should not the States strengthen their internal resources, improve their strength, and cherish those institutions which might, in coming events, be indispensable to their safety? The States entertaining these views, will not be disposed to submit to any system which may impair their strength and dry up their resources. Mr. Chairman, when in the progress of our history, I saw this Government claiming the constitutional power to charter a national bank, to construct a system of internal improvements within the jurisdiction of the States, and the power of taxing the country for the protection of domestic manufactures, my fears, that all the powers of Government would be concentrated into this great central power, were greatly aroused. But, Mr. Chairman, when the Government not only seeks to disconnect itself from these banks, and then, in the form of a bankrupt law, hold over them a power, which, in its exercise, may destroy every one of them, my jealousy is increased. Now, Mr. Chairman, I deny to this Government the power in this way to interfere with institutions chartered by the States, having the clear and decided constitutional authority to do so. Sir, can it be that this Government is invested with power to impair, or, in any way, embarrass, the operations of the clear constitutional powers reserved to the States? If it has, where is the limitation? What institution may it not reach? What power may not be impaired? These views, Mr. Chairman, have brought my mind to the conclusion, which many of the distinguished friends of the Administration formerly entertained, that this war upon the State banks is a war upon *State rights*. I speak of it as the tendency, not as the design of this proposition.

Mr. Chairman, the Committee of Ways and Means have referred us to the examples of France and England as worthy of imitation in the receipts, safe-keeping, and disbursements of their revenues, and to enlighten us upon this subject, have had a view of their systems printed and laid upon our desks. Sir, their systems are essentially ours, for in their whole fiscal operations the banks are the principal agents. But, sir, I shall look to the monarchies and despotisms of Europe for examples in so regulating the fiscal agency of this Government as to secure the liberties of the people and our free institutions. Sir, the actual custody of the public money in Europe by the governments, is accompanied with the employment of immense standing armies, who suppress and keep down liberal sentiments, and keep unbroken the fetters with which the oppressed people are bound down. Sir, it was left for republican America, for a free people, to devise a plan by which the public purse can be so kept as to be accessible to the Executive for all legal disbursements, and yet so withheld from its actual custody as to place it beyond the power of abuse. Such has been the effect of the system heretofore—such, I fear, will not be the effect of the proposed system if adopted.

I have thus, Mr. Speaker, presented my objections openly and fearlessly, and upon my responsibility to my constituents. I may be mistaken, and time may expose the error; yet, sir, until the fallacy of these objections are made manifest, I must respectfully to all with whom I differ, but firmly and decidedly oppose the plan recommended by the Executive.

Having thus, Mr. Chairman, attempted to prove the safety and capacity of the State banks as fiscal and commercial agents, shown their present solvency, vindicated the propriety and necessity of their course in suspending specie payments, and urged my objections to the *sub-Treasury scheme*, I will now offer to the committee a few brief remarks in support of the proposition which, by the kind indulgence of the house, I have had the honor of laying before it.

The scheme which I have presented is substantially the "currency bill" which passed both houses of Congress at the late session of Congress, and which was retained by the late President under the apprehension that its construction might require the intervention of the judiciary, on account of some supposed ambiguity in its language. The substantial features of this bill, requires the notes of all *specie paying* banks to be received in payment of the public revenues, whether derived from foreign importations, public lands, or any other source, and restricts any distinction between different branches of the revenue, and for the purpose of enlarging the specie circulation of

the country, by such a gradual process as to prevent any shock in the business and commerce of the country. It provides that the notes of no specie paying banks shall be received which shall not immediately discontinue the issue and circulation of all notes under five dollars, and at given periods thereafter, all notes under ten and twenty dollars. It also provides for the continuance of such of the present deposit banks as are sound and in good credit, as depositories of the public money, upon the condition of affording such collateral security as the Secretary of the Treasury, in the exercise of a sound discretion, may prescribe. This bill only presents the general features of a scheme which may be matured by amendments adapted to the present embarrassed and emergent condition of the country.

This bill also proposes a restriction of the number of State banks to be continued as depositories of the public money within such bounds as to make it their interest to adopt the measures of reform in the currency which experience has proved to be necessary for its extension, its credit, and its soundness. This number will be in the discretion of Congress. This plan had the countenance, and was recommended by the late administration, as well as by the present Secretary of the Treasury. It was earnestly and repeatedly urged, and many of the States have adapted their legislation to its principles, and that there is now no just cause for its abandonment—nor has the present state of things stripped it of any of its advantages or benefits. I think I have satisfactorily proved, unless it be necessary to the correctness of the system, that banking institutions should be *infallible*, and conducted by *infallible* men, which is unattainable.

In presenting this scheme, I have done it under the impression which seems generally to prevail, that the banking institutions of the country would not be abandoned, and that their notes, under those modifications and restrictions which experience might from time to time prove to be necessary, would constitute a material part of the currency of the country. If this impression be true, and notes of banks shall continue to constitute a material part of the currency of the country, I regard it as strictly proper, and indeed necessary, that the Federal Government should so regulate its actions in reference to the currency, which the States, in the exercise of their sovereign rights, have thrown into circulation, as to give to it as much credit and soundness as possible, because by such a course the intercourse between the States will be more regular, more uniform, more harmonious, more convenient, and more cordial. But it is said by some that Congress has no constitutional power to legitimize bank notes so far as to compel the Government to receive them. Sir, this notion is of modern origin, and is opposed to the principles upon which this Government has acted from almost its foundation. It is true this Government has no power to emit paper money; it can make nothing but metal "*money*," for that is the standard of value of the world. But there is a material distinction between *coining* money and receiving public dues. I do not see any constitutional restriction upon the Government in receiving a promise to pay in a bank note, or in a merchant's bond. I do not doubt the power of the Government to receive its dues in any thing it may deem most expedient, and such has been its constant and undeviating practice.

The bill which I have submitted, proposes also to enlarge the specie circulation of the country, by gradually retiring the notes of smaller denomination, and introducing in their stead a metallic circulation. This, sir, I propose step by step to do, until the metallic circulation shall be so enlarged, as to confine the material paper circulation to their *legitimate sphere*—commercial transactions. And, until the metallic basis shall assume such a relation to the paper circulation as to secure, without difficulty, the convertibility of the paper into specie. It is an admitted principle, that notes and coin of the same denomination will not circulate together. The superior value of the coin makes it a subject of commerce, and it always seeks distant employment, when there is a local and less valuable currency to supply its local circulation. The plan which I propose, seeks to prevent this effect by restricting the circulation of notes to an amount above the denomination of any coin in circulation, so as to that amount, to render coin indispensable; and if by the operation of this plan it shall be found expedient still farther to restrict bank notes: it can be done by the aid of that

experience, which the progress of the plan will unfold, which will be a sure guide to truth. In the discussion of this subject, I shall not find it necessary to do much more than refer to the experience of two of the most commercial nations of the world, Great Britain and France, and the opinions of some of the most distinguished statesmen and financiers of Great Britain and the United States. The Bank of England in 1793, became seriously and alarmingly embarrassed, on account of the immense reduction of her bullion, and the heavy demands of depositors, the result of which was a suspension of specie payments; up to this time, the bank was not authorized to issue notes of less denomination than five pounds, to prevent driving from circulation coin of small denominations. The suspension was legalized by act of Parliament, and the bank, to supply the vacuum created by the withdrawal from circulation of small coin, which had been exported to the continent, was authorized to issue notes of £1 and £2 denominations. These notes were issued to a large amount, and circulated to a great extent; the result was, what always will be, the expulsion from circulation of nearly all coins of the same denominations. Such were the effects of this act in enlarging the issues of the paper medium of England, and expelling its bullion, that after many efforts, in 1826, this law was repealed, and the bank required in 1829, to restrict its paper to the issue of £5 notes and over. The effect of this repeal, has been so to enlarge the specie, as to secure the convertibility of the paper circulation. The Bank of France is prohibited from issuing notes below five hundred francs, about \$93 of our money. This bank was chartered in 1800, and the restriction imposed in 1804. From that time to the present, notwithstanding the calamities of war, two invasions, and several commercial revulsions, the currency of France has remained sound and uniform, and the paper of the bank in good credit. Austria and Russia, who are making vigorous exertions to enlarge their commerce, have adopted the Bank of France as a model for their imitation, and have incorporated banks upon the same principle. It would seem to me, that with such examples before us, there could be little doubt of the correctness of the principle of the bill, which I propose. But, sir, I will add to this evidence, by citing the opinions of some of the most distinguished statesmen and financiers of Great Britain, who were witnesses of the operation of the bank restriction in England, and its injurious effects upon the currency of the country. The celebrated Edmund Burke, among the last letters which he ever wrote, in one addressed to Mr. Canning, upon the subject of the issuing of small notes, said: "*Tell Mr. Pitt, that if he consents to the issue of one pound notes, he will never see a guinea again.*" This prophecy was well nigh being fulfilled, and was probably only prevented from fulfilment by the repeal of the restriction. Mr. Huskisson, one of the purest and one of the ablest of statesmen, and one of the most skillful financiers of this or any other age, in a speech delivered in Parliament, on the 15th day of February, 1822, upon the agricultural distresses of Great Britain, said:

"In England it still formed a considerable part of our circulation, there being then no circulating paper under five, and only to a small extent, under ten pounds. The first effect of this restriction was, to add to the paper circulation by enlarged issues, not only from the national banks of England and Ireland, but also from all the country banks. This addition continued gradually to increase, and especially in the notes under five pounds. Every increase for the first two or three years was a *diminution* in the value of money, but not a *depreciation*. Why? Because the gold left the country, as the paper became its substitute, and by this process, the exchanges were kept at or near *par*. The effect of this exportation of our coin was every where to lower the value of money, and by so doing, to keep it upon a level with its diminished value in this country."

"In the progress of this operation the United Kingdom was drained of all its gold. There would, however, have been no real depreciation of the paper substituted in its stead, if, by imposing proper limits upon the issues of that paper, the *par* of exchange with foreign countries (which is necessarily equivalent with the standard of the gold coin in this country) had been made the criterion of its value. But the issues of paper not being confined within those limits, depreciation took place."

"The consequence, therefore, of the bank restriction was two-fold;—first, a diminution in the value of money generally, but without depreciation; and secondly, a depreciation specially superadded in this country, the degree of which, at any particular period was the difference between the standard and the market price of gold. By the first result, the price of commodities, including of course all the raw productions of the soil, was raised generally. By the second, this general rise of price, was carried still further in this country, in proportion to the depreciation. The actual depreciation, therefore, as it was not the sole cause of the rise of prices (speaking now of that rise only in as far as it was influenced by changes in the value of money) during the war, so it cannot be taken as the measure of the fall of prices since 1819, unless we could have got rid of the depreciation without recalling into our own use a part of

the gold which had been exported, or in any degree diminishing the extent in which credit had become a substitute for actual payments. That fall must be still greater, if, instead of importing gold for circulation here, the greatest part of it has been withdrawn from circulation in other countries, to be buried in the vaults and cellars of the bank. The proportion of the rise of prices generally during the war, and of fall since the peace, not in England only, but in all other countries, from these alternate operations, may be difficult to estimate; but it must be considerable; and the more so, as other countries, as well as England, had also a depreciated paper, and have since endeavored to replace it by a metallic currency.

In a speech delivered by him on the 10th day of February, on the bank charter bill, he said:

"If they wished for a proof of the value of a steady, unchangeable currency, they had it in the example of France. That country had been twice invaded; twice had her capital been taken possession of; and she had been compelled, in 1816 and 1817, to pay large sums to foreign countries for corn. But she had a steady metallic currency; and however such visitations might have effected the great—however the extensive contractor might have been injured or ruined—the great body of the population remained unmolested. The storm which uprooted the forest tree, had passed over without injuring the humble reed; and this was mainly to be attributed to the permanent footing upon which the currency of the country had been placed.

"If the plan of his right honorable friend was carried into execution, he was satisfied it would have the effect of making the country banker as sensitive on the subject of the exchanges, and as watchful of any unfavorable turn which might take place in them, as the Bank of England now was. He would carefully watch the circumstances which were calculated to bring gold into, or send it out of, the country; and this caution being timely impressed upon him, the danger would, in a measure, be passed. There would then be no fear of any agitation or convulsion in the country, as the interest of every banker would compel him to provide himself for any coming emergency; in other words, every country banker would feel an equal interest with the Bank of England, in watching the state of the currency, and guarding against its fluctuations.

"If, then, it was necessary, for the best interests of the country, that the currency should be established on a sound and solid foundation, and that the country bank should be prevented from drawing the metallic currency out of the kingdom, by the issue of these small notes, the next question was—whether this was a proper time for carrying the measure into execution?—But before he touched upon this, perhaps it would be proper that he should make one preliminary observation respecting the country banks. He was far from being hostile to these banks. On the contrary, he thought they would be of great service to the country, provided they were placed under proper regulations. He wished to save the banks themselves from the consequences of their own proceedings—from the liability of each to be ruined by the failure of the others. But, to effect this, they must be prevented from issuing paper, and also as the highest denomination of the metallic currency of the country. They must not be permitted to issue their one-pound notes—corresponding with the sovereign—the highest denomination of metallic currency. To give them the privilege of making such issues was, in fact, to permit them to assume the powers of the prerogative. Let them continue to issue paper, and to extend an act upon their credit; but let them not issue their small notes, and thereby trench upon the prerogative."

In the same debates these opinions were concurred in by many other distinguished men, and finally prevailed. This bill, as I before remarked, is in strict accordance with the recommendations of the late President, Mr. Taney, Mr. Woodbury, the Committee of Ways and Means of 1834 before referred to, and in fact was the leading policy of the late Administration. To prove this and supply arguments of more force and weight than I am capable of urging, I quote from General Jackson's message of 1834.—Speaking upon this subject, he says:

"These institutions, [the State banks.] have already shown themselves competent to purchase, and furnish domestic exchange for the convenience of trade, at reasonable rates, and not a doubt is entertained that in a short period, ALL THE WANTS OF THE COUNTRY IN BANK ACCOMMODATIONS AND EXCHANGE, will be supplied as promptly and cheaply as they have heretofore been by the Bank of the United States. If the several States shall be induced gradually to reform their banking systems, and prohibit the issue of ALL SMALL NOTES, we shall, in a few years, have a currency as sound, and as little liable to fluctuations, as any other commercial country."

In his annual message of December, 1835, General Jackson said:

"It is also ascertained, that instead of being necessarily made to promote the evils of an unchecked paper system, the management of the revenue can be made auxiliary to the reform which the legislatures of several of the States have already commenced in regard to the suppression of small bills; and which has only to be fostered by proper regulations on the part of Congress, to secure a practical reform, to the extent required for the security of the currency, to the constitutional medium. Severed from the Government as political engines, and not susceptible of dangerous extension and combination, the State banks will not be tempted, nor will they have the power which we have seen exercised, to divert the public funds from the legitimate purposes of the Government. The collection and custody of the revenue being, on the contrary, a source of credit to them, will increase the security which the States provide for a faithful execution of their trusts, by multiplying the scruples to which their operations and accounts will be subjected. Thus disposed, as we find from interest as the obligations of their charters, it cannot be doubted that such conditions as Congress may see fit to adopt respecting the deposits in these institutions, with a view to the gradual disuse of the small bills, will be cheerfully complied with; and that we shall soon gain, in place of the Bank of the United States, a practical reform in the whole paper system of the country. If by this policy, we can ultimately witness the suppression of all bank bills below twenty dollars, it is apparent that gold and silver will take their place, and become the principal circulating medium in the common business of the farmers and mechanics of the country. The ATTAINMENT of such a result will form an era in the history

of our country which will be dwelt upon with DELIGHT BY EVERY true friend of its liberty and INDEPENDENCE. It will lighten the great tax which our paper system has so long collected from the earnings of labor, and do more to revive and perpetuate those habits of economy and simplicity which are so congenial to the character of republicans, than all the legislation which has yet been attempted."

This plan will so imperceptibly retrieve the paper and introduce the metallic circulation as to produce not the slightest shock or embarrassment in the commerce and business of the country, or reduction in the value of property. Property, the value of which has been regulated by the present currency, will retain its existing standard, and the country gradually recover from its depressed and ruinous condition.

It may be argued that the full excess of paper circulation will be kept up by the enlarged issues of notes of the larger denomination—this cannot be so. The commerce and business of the country can only bear a fixed amount of circulation—all excesses must and will be reduced—a fixed amount of money can only be necessary to the commerce and business of the country. Of that fixed amount, as specie is enlarged so must paper be reduced, and as specie is reduced so must paper be enlarged, as the plan which I propose requires a mixed circulation of metal and paper; I propose to reach such a proportion of the metallic, as will make certain the convertibility of paper into specie, which will always secure a sound currency. These are the objects which I have in view, and I confidently believe the scheme which I have offered, will effect it.

Mr. Chairman, this bill I firmly believe, with the aid of some provisions which may be attached to it, adapted to the present emergency, is well calculated speedily to remove the embarrassments of the country. Sir, as I have argued, confidence is all that is necessary to enable the banks in a short time to resume specie payments; this bill extends that confidence, holds out to them a strong inducement to resume, and promises a restoration of their fiscal agency on that resumption. This, sir, is better than all your penalties and all your divorces.

Mr. Chairman, I well know that to effect the objects of reform which all desire, the aid of the State Governments must be invoked. This aid I do not doubt will be afforded, not only from considerations of patriotism, but of interest; for every State is deeply and importantly interested in securing a sound currency; both as relates to their own domestic concerns, and their commercial connection with the other States. They cannot flourish—they cannot prosper without it, and this is a guarantee that as the errors in their systems develop themselves they will correct them. Sir, I do not doubt that they will perform their duty to themselves and to the nation.

Mr. Chairman, I have heard much play, and much emphasis upon the term divorce of Bank and State. It is calculated to call up those feelings of abhorrence against the union of Church and State, out of which so much mischief to the lives and liberties of mankind has grown, which the people of the United States so justly entertain. Sir, are not these institutions the very creation of Government? Did not Government impart to them form, substance, and action; and now we are to divorce the Government from them! I know, sir, that these institutions were created by the State Governments; yet, sir, unless all their powers are buried in the powers of this Government, they were created by Governments having the power to do so. This political connexion, so much desecrated and abhorred in these latter days, is as dangerous to the State Governments; as to this: yet the State do not find it necessary to destroy their banking institutions; and I am sure, will defend them against the reckless war now waged against them. Sir, this term divorce will not take—you had as well talk of a divorce between man and wife, while they are indisposed to it.

One word more in relation to the suspension of specie payments by the banks, to show the propriety and wisdom of the measure. When the suspension took place, it was supposed by many, perhaps by most persons, that upon its being known in England, there would be an immediate prostration of the commercial credit of the United States, and, as a consequence, the destruction of the houses in England, commonly known by the name of the American houses. But no such thing happened. Confidence was not diminished, but improved. They saw the thing at once in its true light—they saw it was a measure of relief to the merchants of the United States, which would give them time to gather

in their resources, and finally make good their payments in England: whereas, if the severe pressure necessary to continue the payment of specie by the banks, had been kept on, they must have been ruined and through them the people who were in debt.— This was a sound view of the subject. In addition to this, the States continue to use them as depositories, and to receive their notes in payment of their taxes. Why, then, should there be so much alarm here?

Mr. Chairman, I admit that there are serious evils connected with our banking system. I admit that there are crying and grievous abuses, which require to be corrected; and I will go as far as any man in applying the knife and cutting these abuses off. Nor, sir, am I disposed, in the slightest degree, to countenance the refusal of the banks to resume specie payments in a reasonable length of time. While the country may be disposed to endure this state of things as long as it is necessary and proper, it will not—it ought not—to bear a wanton and unnecessary delay. The foreign debt is rapidly extinguishing; the elastic energy of the country is rapidly increasing, and overcoming all embarrassments; soon, very soon, all pretext will be removed for continuing the suspension, and the banks will merit the stern and withering rebuke of every patriot, if they persist in their refusal. Sir, my course upon the present occasion is not dictated by any interest which I take for the banks, separate and apart from the people: I only look to their interest and their security, as connected with that of the people, so deeply involved with them. I consider the interest and welfare of the people as deeply and materially concerned, and their prosperity endangered.

I have thus, Mr. Chairman, presented to the committee my views of this deep, this vital, this interesting question to this nation. I have exhibited the opinions entertained by the late Administration, and the prominent friends of the present; and, having done so, confidently and fearlessly appeal to the American people, to determine whether I deserve to be stigmatized as a traitor, or shot as a deserter. Sir, if an adherence to the opinions heretofore entertained by the friends of the Administration, notwithstanding they have abandoned them, is desertion, I am guilty, and I will meet the fate which awaits me without murmur. My opinions are unchanged, and no fear of personal consequences shall change them. My constituents are unchanged, so far as I have learned; at any event, they have not instructed me to vote contrary to my former opinions, and until they do I will vote against your sub-treasury scheme, in spite of denunciation, or any other consequence which may follow. I regard that scheme as containing the elements of destruction to the purity of the Government, the rights of the States, and the liberties of the people. Sir, so obnoxious is it to me, that although there is no constitutional objection in the way, I would infinitely prefer resigning my seat here, to voting for it. I do not call into question the sincerity of gentlemen who have changed; but I protest, that because I cannot change also, I should be denounced.

Mr. Chairman, if I am to be tried on a charge of desertion, the Administration shall not judge me; its friends on this floor shall not judge me—I will be tried by my constituents alone—they know what opinions they sent me here to sustain—they know which I have deserted, and which I have maintained. I will meet them and let them pronounce the judgment; and if that judgment shall be, guilty, they alone shall be my executioners—to them, by their confidence, I came here—by their command I am ready to retire. To them and their justice I commit myself. I will say to them, that,

Bound by no party's arbitrary sway,  
I'll follow truth, wher'er it leads the way.

## APPENDIX.

Comparative statement of the condition of the Farmers' Bank of Virginia and Branches, on the 1st and 8th days of June, 1837, and on the 1st day of September, 1837.

Bills discounted at—	1st June.	1st Septem. 1837.
Richmond	\$2,510,000	\$2,580,766
Norfolk	845,765	767,091
Petersburg	602,299	576,571
Fredericksburg	497,975	526,818
Lynchburg	576,577	584,162
Winchester	119,799	418,500
Danville	492,211	450,129
	\$5,949,763	\$5,477,933

25th Cong....1st Sess.

Making public officers depositories—Mr. Mason.

H. of Reps.

Showing an aggregate decrease of \$372,330, in the outstanding bills discounted between the 1st day of June and the 1st day of September, 1837.

The specie on hand, on the 1st September, 1837, was \$425,234  
On the 8th day of June, it was 412,672

Showing an increase of specie 12,562

The notes of other banks on hand, on 1st September, 1837, was 218,841  
On the 8th of June, 1837, they amounted to 127,842

Showing an increase of 90,999

The aggregate balances due by the other banks, was, on 1st September 45,074  
On the 8th June, they amounted to 20,267

Showing an increase of 24,807

The notes in circulation, on 1st September, 1837, were 2,196,604  
The deposit money, at same time, was:  
Individuals 900,533  
Treasurer of the United States 118,173

\$3,215,610

The liabilities on 8th June, 1837, were:  
Notes in circulation \$1,963,942  
Individual deposits 1,500,076  
Treasurer of the United States 297,047

3,761,065

Showing a diminished liability equal to 545,455

The contingent fund, to cover losses, was, on 1st September 369,771  
It was, on the 8th June 277,412

Increase 92,369

The whole bad and doubtful debts, on 1st September, 1837, were estimated as follows:

At Richmond 59,398  
Norfolk 226,036  
Petersburg 6,100  
Lynchburg 0,000  
Fredericksburg 3,950  
Winchester 17,526  
Danville 1,000

In all 321,010

While the contingent fund is, as above stated 369,771

From the foregoing, the following statement may be made, showing the increased active means, and the diminished liabilities of the Bank, viz:

Increase of specie \$12,562  
of notes of other banks 90,999  
of debts due by other banks 24,807  
of contingent fund 92,366  
Decrease of notes in circulation, &c. 545,455

\*Reduced. †Increased.  
†Reduced, besides paying the dividend of July last, \$97,200.

Since the statement of the 1st June, so far as the President and Cashier are informed, nothing has been added to the bad and doubtful debt. The greater part of the increased suspended debt has been satisfactorily secured, and the residue is in a train of adjustment.

A. ROBINSON, Jr., Cashier.

City of Richmond, to wit:

On this 21st day of September, 1837, Anthony Robinson, Jr., Cashier of the Bank of Virginia, personally appeared before me, a Justice of the Peace for the said city, and made oath that the foregoing statement is truly compiled from the several statements returned from the different departments of the said Bank, according to the best of his knowledge.

Given under my hand on the day and year aforesaid.  
EDWARD BAILEY, J. P.

## SPEECH OF MR. MASON, OF VIRGINIA,

In the House of Representatives, October 11, 1837.—On the bill imposing additional duties, as depositories in certain cases, on public officers.

The bill being under consideration, Mr. MASON said:

Agreeing, as I most cordially do, in the several measures which have so far been presented by the Committee of Ways and Means, for the consideration of this House, it is with the utmost reluctance that I am now brought to differ with those with whom I have heretofore acted.

This difference, however, I am pleased to consider, is at least but one of mere expediency, and in itself contains nothing which should sever those who are united otherwise in the preservation and support of those great and leading principles, which actuate political parties.

Differences of opinion necessarily pertain to deliberation; it is against the constitution of our nature that it should be otherwise; intelligence, reason, and sound judgment, are alike hostile to entire unanimity, nor would our representative government be any thing more than a mere formal acquiescence in the will of some ordained superior; if the doctrine were allowed to hold, that party discipline exacts an unconsidered sanction to every measure, which brings a recommendation from the Executive chair.

Such is certainly not the spirit of our institutions; nor should it be the spirit of any party that would act safely and wisely, or even successfully, in the administration of the Government committed to their charge.

Having thus premised, I will proceed at once to state my objections to the bill under consideration.

Those who have brought it in, address its claims to our favor, as a measure simply intended to provide for the safe keeping of the public money. It is said that the former depositories, the State banks, having proved either inadequate to the duties required, or unfaithful to the trust reposed in them in this branch of the public service, it is necessary that Government now should take care of its own interests; and that this will be most effectually done by a return to what is called the legal currency of the country, and by constituting certain fiscal officers of the Government the keepers as well as the disbursers of the public money.

The machinery is certainly very simple, and if the only end to be attained were, in truth, the safe keeping of the public money, however I might dissent from the expectations of those who have planned its operation, I could not see in it those insuperable objections, which impel me now to remonstrate against it.

The evils, sir, which we are expected to remedy by some adequate law, lie far deeper in the public

mind than any alleged insecurity of the public money—evils for which no remedy is provided by this bill, but which will, in my judgment, be fastened upon the community by its passage—I mean the present degenerate condition of the currency.

What is now the currency of the country? I ask not what ought to be, but what actually now is the sole currency? the only medium having exchangeable value, by which the business of the country is carried on? It consists entirely, from one end of the confederacy to the other, of irredeemable bank paper; every payment that is made, every debt that is collected, every transaction of every kind, whether large or small, into which money enters, is carried on and effected by paper that has been issued by the State banks, and which they no longer redeem with gold or silver. These metals have passed entirely out of circulation; they form no longer any portion of the money of the community; treating money as that only, which, for the time being, serves as the symbol of exchange, of things having merchantable value.

This condition of the currency, is the true and great evil of the times; it affects the people in their business, precisely and in the same manner as it affects the Government in the conduct of its affairs; and there can be no remedy, at all adequate to relieve the Government from its embarrassments, which shall not, at the same time, and to the same extent, relieve the people from theirs.

In considering this subject as I propose to do, it is unnecessary to go at large into an examination of the causes which have operated to bring about this state of things. I do not know that I am, nor do I at all profess to be, equal to this duty. And yet, were I to attempt it, I should certainly differ very widely from those who trace these causes no farther than to a redundant issue of bank paper. That each issue has been to a great extent auxiliary to the present embarrassments, there can be no doubt. But it has been auxiliary only; and I freely admit, that in my very humble judgment, a well founded objection to our banking system, lies in this very thing: that banks of discount, organized as our American banks are, yield the facilities of credit too readily and amply to the demands of trade, without a power of discrimination between such as arise from the extension, or accidental vigor of healthful commerce, and such as have their origin in a wild and gambling spirit of speculation.

Commerce requires credit. From the day that men passed in their dealings beyond the first simple stages of barter, credit, in some form, entered into the affairs of trade. Its agency soon came to be understood, and the winds are not more active in circulating the common air, than credit now is, all over the world, in circulating through every land the productions of every soil.

Trade and commerce then, becoming drunk with prosperity, have drawn too lavishly upon the credit offered them through the banks; or, if you will have it otherwise expressed, the expansible character of bank credit has offered too great temptations to commercial enterprise, and we are now suffering under the consequences of over-action, as well on the part of those who used this credit, as of those who gave it.

In this reasoning, I am borne out by the message of the President; he says—"that our present condition is chiefly to be attributed to over-action in all the departments of business; an over-action deriving, perhaps, its first impulses from antecedent causes, but stimulated to its destructive consequences by excessive issues of bank paper, and by other facilities for the acquisition and enlargement of credit."

I have entered into the subject thus far, only that I may invite you to a more enlarged view of the difficulties to be met than are presented when our inquiry is confined simply to a consideration of the safest custody that we can provide for that portion of the people's money which is to pass into the public coffers.

My great objections to the measures proposed in this bill are, that they are not at all commensurate with the exigencies of the times. They do not meet the real difficulty. The bill simply ordains that the Government, after a limited time, will re-

ceive nothing but gold and silver in payment of public dues, and will intrust its keeping to its own officers alone. Now, if there were a creative power in our law, if by this simple enactment the bank paper could be driven out of circulation, back whence it came, and the precious metals substituted in sufficient quantities to meet the wants of society, as well as the demands of the revenue, the chief ground of my opposition would be at once removed. I can well see, from the experience we have had of the evil tendencies of the banks to excessive issues, (and such, at present, are my decided impressions,) that, whenever the currency is placed in a condition to bear the tribute, the true policy of Government may be found to be to exact its dues altogether in coin; and to withhold its revenue while resting between its collection and its disbursement, from the use of the banks, as a fund to increase their discounts. My reasons for this I will give hereafter, when treating of the proper position which the Government may ultimately assume toward the State banks.

The bill is to operate upon the currency as it now is, for we have not only no guarantee that it will be found in an improved condition at the end of twelve months, (the limited time,) but it is susceptible almost of demonstration, that one necessary consequence from the proposed law, will be to continue the currency in its present debased condition.

The precious metals, all will agree, are now banished from circulation. They are in the country, I grant you, and in sufficient quantities, perhaps, to answer their accustomed duty of circulating in those channels, below the reach of bank paper. But they no longer pass from hand to hand as a medium of exchange. Their former exchangeable value has been converted, by the course of trade to which I have alluded, to a value exclusively marketable; and thus they have fallen back, and are entirely merged in the common and general mass of merchandise. Specie, whether in coin or in bullion, is now merchandise and not money; and those who require it for any purpose, must go into the market and buy it at market rates, as they would do any kind of merchandise whatever. How long, then, is this state of things to continue? How long will this marketable value attach, which detains the coin from its most appropriate function as current money? And by what process can it be restored to circulation?

The answer to the two first inquiries is very simple. Specie will continue to be merchandise, so long as there exists any demand for it greater than that which would invite, or retain it in circulation. It was driven out of circulation by the demand for exportation, after the business of the country had realized the fact, that our exports were insufficient to pay for our imports. The balance must be met, and the precious metals were called out of circulation to answer this new demand. It is a necessary and fundamental law of currency, that where you have two media, of which either answers all the purposes of exchange, and one of them, besides those purposes, will answer another purpose as a subject of trade, the latter will fly at once, to meet the new demand, and leave the duties of currency exclusively to its fellow.

So it was between the paper and the specie, when, by the exigencies of trade, the latter was suddenly called off to meet the new demand created by the necessity in commerce, of extinguishing the balances against our importers. There is no mystery in all this. Imports are to be paid for from those two sources alone. By the produce and labor of the importing nation, or by gold and silver; and whenever the former is found inadequate, the precious metals must make up the deficiency.

Thus stood the country when the banks suspended the payment of specie. They had an agency, and a large agency, I grant you, in bringing that necessity about; pampering, as they did, the pride of commerce. They met all its demands, honored all its drafts, as well in the rage for importation, as in those extravagant speculations to which the apparent prosperity of the age gave immediate birth. But the banks are not alone to blame in this. It is due to the occasion, and will aid us in searching out the true remedy against a recurrence, to admit, candidly and fairly, that the Government itself

saw as little the mischiefs that would follow from the extension of their credit, as the banks did themselves. It is a part of the history of the times, and should be recorded on the same page, that when the deposits were given to the State banks, they were expressly instructed, to make them the basis of new incentives to commercial enterprise.

I do not speak this at all, sir, in the spirit of rebuke; far, very far from it. I adduce it only to show that the Government itself, against whom, as some have said, the banks have committed the unpardonable sin, was itself actively instigating them to that very extension, now so zealously condemned. How far the banks might have gone in extending their discounts, upon the immense deposits thus cast upon them, without this authoritative hint, none can easily tell. But it is fair and reasonable to infer, that this license in advance, did not pass unimproved.

Having stated thus the actual condition of the currency, and briefly traced the causes which have led to it, let us inquire next what will be the probable operation of a law, that takes no account of its enfeebled state, but peremptorily demands, after a given day, that the entire revenue, amounting to some twenty millions of dollars per annum, shall be paid up in gold and silver. One necessary consequence, in my apprehension, would be, effectually to place it out of the power of the banks to resume the payment of specie within any reasonable time. How can it be otherwise? They suspended payment, because of the new demand for coin created by the exigencies of trade. They have not yet resumed, because although that demand has entirely diminished, as shown by the rate of foreign exchange, yet there is still demand enough to warn them of the consequences of an attempted resumption, before the trade of the country is in a fit condition to bear it. Sir, the country is recovering fast from the violent and sudden convulsion into which it has been lately thrown. It cannot otherwise be, when we consider the immense resources of this vast continent, wielded, as they are, by a people whose industry and enterprise acknowledge no other limit than the very bounds of the earth. But the Government must keep its hands off; time must be allowed for the system to re-act, before any new or additional pressure can be borne.

If the necessities of circulation are not strong enough now to bring specie into general use, as part of the currency, because of the existing collateral demand in trade, does it not necessarily follow, that any new demand will have an additional effect in retarding that operation?

You create this new demand by the bill under consideration; pass it, and you at once increase the premium that specie already bears over the ordinary currency; you give it increased value in the market, to the extent of such new demand; and to that same extent, you postpone the day when it can return into use as a part of the circulating medium. Until that day comes, it is impossible for the banks to pay out specie upon their notes; they never can do so, until the demand upon them is reduced to a naked demand for circulation. If I am correct in this reasoning, the best that could be hoped for, under the proposed law, would be, that it should remain a dead letter upon the statute book.

I think I have shown that we could have no return to a circulation of specie under its auspices; and, if this be so, do you believe, does any man believe, that the law could be carried into effect?

What, sir, that the Government alone should be paid in silver and gold, while those who have the payments to make receive nothing but irredeemable paper? How vain and idle it is to expect any such thing. If, by any chance, or lucky accident, over-ruling those stern necessities to which all human affairs are subject, the exigency of the times should have passed by, before your policy begins, then it might thus chance-favored be that the scheme could be carried out. But it becomes us not to legislate upon such improbable contingencies. I want no better evidence of what the Government would be twelve months hence, under the operation of this law, than what is now daily passing before our eyes. There are, it is said, (and I presume with an approximation at least to the

truth,) now in this country, eighty millions of dollars in coined metal. By the existing law, (as there is no bank paper convertible into specie,) Government can now receive nothing but coin in payment of any part of its revenue. I ask confidently, is any part of that revenue so paid? With all this abundance of the precious metals, fully three times as much as we have had at any former period, do we not all know, that none whatever is paid into the Treasury from any source of revenue. I mean none, when compared even with the lowest necessity of the public service. The mint, it is true, does furnish a small supply, barely sufficient, if at all, to meet those demands, which coin alone will satisfy. But this does not come in any shape of revenue; far from it. It is purchased by Government, at market rates, and a premium paid upon every dollar that is brought in. Such is the present state of things, under the operation of a hard money law, while the only money of the country is in irredeemable paper; and such must ever continue to be your condition, under the operation of any laws that you may pass, so long as the money which you require is banished, by whatever cause, from the channels of circulation.

I lay down, then, this position, and defy any refutation. That the Government must, as a permanent necessity, deal in that currency in which the people deal; it is the law of its creation, and inseparable from its condition. It must receive what the people receive, and pay what they pay; a necessity from which Government cannot escape if it would; and ought not, if it could.

I speak of this as a permanent necessity, distinguished from the necessities of immediate want. It is struggling now against this very want, and precisely as any large capitalist might equally do, by using the resources of its credit to supply the temporary absence of revenue. Have we not just passed a law, authorizing an issue of ten millions of treasury paper, for this very purpose? I mean for the single purpose of reserving the Government from the necessity of coming down at once to the irredeemable paper of the banks. And this only to answer the present emergency; for it will certainly follow, unless that medium can be restored, in which alone the Government is allowed to deal, that we must issue at least ten millions more, before we return home from the ensuing session. Sir, I went cordially with you in this use of Government credit; and I will do so again should the emergency continue. But I tell you fairly and candidly, and I tell the people, too, that this treasury issue is all that saves the Government now from coming down at once to bank paper. I say this, sir, because your revenue laws, exacting gold and silver, are not and cannot be enforced. If you collect any revenue, it can only be in that very paper, because there is nothing else to pay with.

Suppose, then, your law passed, and the currency remain, as under such policy it inevitably must, in the condition that it now is; what are you to do? If you could enforce the law then, I ask why do you not do so now?

Why do you not now compel your debtors to go into market and buy specie, in order to replenish the treasury? So far from this, we have a bill now before us, and which it is admitted on all hands must pass, to save the Secretary from the necessity of so idle an attempt. With more than four millions of dollars now due in New York alone, so far from exacting payment, we are about to give further time on all bonds due, and to become due, between this time and the next session of Congress.

I say, then, confidently, pass what law you may, you cannot have your revenues paid in specie, so long as it remains at a premium; and that the very first effect of this law, by creating a new demand, would be to increase the premium, and thus render permanent the very exigencies to which your legislation is now actually yielding.

But take another view of the subject. Suppose the law carried out, what then would follow? The importer, besides all other charges for freight, insurance, duties, &c., is required to pay five or ten per centum for specie to pay the duties. Certainly this latter would be added to the price of the commodity; and thus the whole effect of your policy

would be to tax the people to this extent, in order that Government might deal in gold, while they were left to struggle on, unaided, against all the ills of worthless paper money.

My view of the subject, then, is, that by passing this law now, you postpone to an indefinite period, the resumption of specie payments by the State banks; that until they do resume, the law must be inoperative, and the treasury supplied by loans; or, if enforced, besides creating a new and heavy tax upon all foreign merchandise, the sole effect will be to enrich the office-holders; and all who feed upon the public crib, at the expense of the rest of the community. I know, sir, that this last objection has been scouted as mere slang, as part of a mere "rabble," and unworthy of notice. But I tell you it has never been met, and that it cannot be overthrown. I do not believe (and that disbelief is founded on the experience of the present day) that such a law could be carried out. But if it were, the host of Government dependants would grow rich under it. They would have money worth five or ten dollars more in the hundred, than the money used by the people; and the people would be taxed to the extent of this five or ten dollars in the hundred, to furnish the former with the better currency.

Now, sir, in all this, my sympathies are with the tax payers, and not with the tax gatherers. I go for the interest of those who are to pay, and not for those who are to receive. I cannot agree to any policy which might, and I believe would, lead to these results. It is unwise, unjust, and unnecessary; and it could not, and ought not, to stand one day after those results are ascertained.

I may express myself strongly, but I do not mean to do so harshly. I see mischief and disaster without end, in any attempt to legislate now, as you would have us do by this bill; and it is to save ourselves from utter defeat and shame, that I beg you to pause with me, and consider the consequences of such an attempt.

Let me, before leaving this part of the subject, present another view, which, to my mind, increases the difficulties to be encountered by the proposed law. I have, so far, considered only the demand arising under the accruing revenue, as that which is to retard the resumption of specie payment. But the revenue *in arrear*, that of which we are to postpone the payment, will come heavily in aid, to increase this demand, at the very outset of the new law; to what extent we do not as yet very certainly know, but reasoning from what we do know, the promise is sufficiently appalling. The duty bonds to be postponed, amount in New York alone to more than 7,000,000 dollars, computed to January next, and, including the other cities, to more than 10,000,000 dollars, constituting, to such extent, whatever it may be, an obstacle at the outset, over and above what is to be encountered in its ordinary course.

I have heard it said, however, that this very demand to be created under the law, will have the effect of bringing in specie to meet it; and thus it is alleged that the demand will occasion the supply. I do not deny this, in the least degree. There is nothing more certain in every branch of political economy, than that there will be a supply for the demand. But regard for one instant only what this demand is, and the fallacy of the reasoning will appear at once. It is a *market demand* which is to produce this supply. It is an increase only of the same demand, which has already banished coin from circulation; now it is purchased for exportation, then it will be purchased for Government, and the effect will be precisely the same in both cases. To give a marketable value to specie as merchandise, in lieu of the exchangeable value which it would otherwise have as money. None will pretend that, because Government will pay it out again, it will thereby circulate, unless they can find the term circulation fully satisfied in a constant round from the custom house to the broker, and from the broker to the custom house.

If it be true, then, that Government cannot command the precious metals through its revenue, until they return back to circulation, the inquiry remains to be answered, how that end is to be attained? I would answer first, it will be attained

even before a very long time, if matters are allowed to remain, as far as Government is concerned, precisely where they now are.

Let us keep our hands off, and the banks will resume as speedily as reviving trade will allow; within that period I will not profess to answer: but their course of dealing since the suspension, evinces the strongest purpose to do so, at the earliest practicable day. The Secretary of the Treasury tells us, in his report, that since the suspension of specie payment, "the policy pursued by most of them, has been favorable to an early discharge of their engagements to the Treasury and to a resumption of specie payments." And again, in proof of that position, he says, speaking of the deposit banks, that "since the 1st of May, their discounts, as a whole, have been reduced about \$20,388,776; their circulation \$4,991,791; and their public deposits \$15,607,316, while their specie has diminished less than \$3,000,000." Such is the encouraging account which the Secretary himself gives us, of these institutions. We have already seen the great reduction in exchange since our session began, evidencing the rapid extinguishment of the foreign debt, and the effects manifested by the approaching market for the southern staples. Even the presentation of the bill for an issue of Treasury paper, had an effect, in bringing down exchange. Putting all these things together, we may safely argue, that the evil day is passing by; and all that I urge upon you is, to keep hands off, and let very well alone.

The resolution of 1816, now in full force, had the effect, at that day, of bringing about a general resumption of specie payment by the banks. It will do so again, if its operation be unaffected. I have shown you already the promise under it. But the bill proposes to repeal that resolution, as the first step in the policy of the new law. Then, the attitude of Government towards these institutions was one of encouragement and confidence: It offered inducements to them to resume, and invited back the confidence of the community. The wisdom of that policy was manifested by the result. Now, the very reverse is to be attempted; in lieu of confidence, we present discredit; for encouragement, menaced destruction. I need not add, that the same end cannot be obtained by such opposite means.

But again, sir, there is in this bill an entire departure from the great and leading principles of the administration, on the subject of the currency. It looks no further than to a supply of specie for the Government and its dependants. There is no account taken of the more important object, of infusing specie into circulation for the common use of the people. Then, the great effort was to enlarge the specie basis, by the suppression of small notes. The Government, as the greatest creditor of the banks, sought to effect this by the control incident to its large deposit. The banks were encouraged in every way to co-operate; and the States were appealed to for their aid in the common duty of a reform in the currency.

Many of them, where there was a bank issue under five dollars, met the appeal at once, by a direct prohibition to that extent.

But the State of Virginia went farther. She had long since realized the benefits of a specie circulation below five dollars, by a prohibition of all paper under that amount; and on the very first occasion when the charters of her banks would be reached, so recently as during the last winter, the prohibition was extended to ten dollars, and to take effect at an early day.

These were the measures then contemplated for the improvement of the currency, and begun to be carried out by the powerful aid of State legislation. Why are they to be abandoned now? It was admitted then, and it is beyond all question true, that specie, either in gold or silver, will not circulate by the side of paper. If experience of this were wanting, it is abundant in Virginia, in reference to small notes; as soon as they were expelled by her law, silver took their place. And there is no doubt that if her policy could be carried out, by the expulsion of all paper under twenty dollars, that gold would flow at once into the vacant channels. All this can yet be done, by a simple adherence to the

original plan. But your policy is in utter disregard of all such intent.

The great forcing process now in contemplation, will work the very reverse of what was then so strenuously urged. It will put all our golden dreams to flight, of the halcyon days of hard money, and the States will be compelled, from sheer necessity, to license once more the very lowest issue of bank paper. Seeing these things, as I clearly do in prospect, under the operation of the proposed law, I can have no choice but to raise my voice against it.

As to so much of the bill as constitutes the collectors of the revenue, with the mint and its branches, depositories of the public money, I have but little to say. It is certainly subject to very strong objections, not the least of which is, the very great increase of patronage to which it must give rise; and a patronage of the most dangerous influence, as being so immediately connected with the public money. Neither is this objection at all answered, when it is said that the patronage will be less than that exercised in the intercourse between the Government and the deposit banks; because, by the simple substitute of a special for a general deposit, all patronage will be at once taken away; and on the score of safety, the difference is incalculable.

Whether I regard, then, the pernicious influence which this bill must exercise upon the currency, if now enacted into law, or the inadequacy of its provisions for the safe-keeping of the money, I am equally constrained to withhold my assent. In the first aspect, it has never been submitted to the country, and has had very little consideration here. The innovation is too great, the transition too violent, from all previous usage, to be thus suddenly met.

The people are too deeply interested in the consequences which may follow, to have this usage changed, without the most matured consideration. For myself, sir, I want to go home from this whole subject, *reinfected*. It is a new proposition, presented, for the first time, in an imposing form by the late message, and, before adopted, should be well and thoroughly canvassed before the country. The President himself, in proposing it, invites, and the subject is well worthy of, the fullest deliberation.

Let it be discussed, then, as it will be, and as all great public measures ought to be, by the people themselves in their primary assemblies, and through the press, before it is enacted into law.

No inconvenience can possibly arise from this postponement; first, because the time must necessarily be short, as Congress will be again in session, within six weeks from the adjournment. And, secondly, because the whole system proposed is now, under the late orders of the treasury, in as full and complete operation, as if specially ordained by the law under consideration. The Secretary has already adopted it, in the exigency of the occasion, under the discretion given to him, by the law organizing the Treasury Department. There is no occasion, then, for this great haste, and there is every reason why we should forbear.

We are told, however, by an honorable member from South Carolina, (Mr. Pickens,) that by our opposition to the present bill, we are strengthening the interest of that party which seeks the re-establishment of a national bank. This suggestion, sir, has come from a very remarkable quarter. I do not allude now to the member from Carolina, but to a distinguished statesman from the same State, in the other wing of the Capitol. The sub-treasuries, it is said, must be obtained at once, as the only safeguard against the restoration of a great national banking institution; and this ratiocination seems to be thrown out as a sort of bugbear, to frighten us into instant submission.

Sir, in my humble sphere at home, or in the halls of our State legislature, my opinions on the subject of a federal bank, need no new confession. I have ever been an uncompromising foe to any such institution. I believe the existence of such a bank is inconsistent with the purity, and dangerous to the safety of popular government. I have ever opposed it in every form, on grounds of expediency; and, what is above all, to fix and con-

firm that opposition, I entertain no doubt whatever, that it has no sanction, either in the spirit or the letter of the constitution. Strongly committed, then, to such opinions, and having uniformly acted up to them in every time of trial; in the removal of the depositories, through the panic era, and the Executive veto, I am not to be frightened from what I have taken as the path of duty, by the new born fears, even of so distinguished a proselyte.

I distrust the quarter, sir, whence the denunciation comes. I have no confidence in that counsel which springs from the zeal of recent conversion—opinions that are hastily taken up, are as speedily laid aside, and are worthy of no reliance whatever.

No, sir, in my humble judgment the danger of recurrence to a national bank, is to be looked for in the very opposite quarter. In the immature conception and hurried execution of this sub-treasury scheme. I do not mean to predict it, because I would not be understood as disparaging the judgment of those who confide more readily than I do. But suppose they should fail; suppose it should be found impracticable to carry out the new scheme, that the currency should grow worse; that bank paper should continue irredeemable; and the people become wearied out, with your rigid exaction of coin from them, while nothing but paper is paid to them. I ask you, and I put it to the serious consideration of the country, what remedy would then be found? You could not fall back upon the State banks. They had just been divorced, and common decency would forbid the new espousal. Where then would you find refuge? Why, sir, as was done once before, in the arms of a national bank, and no where else.

I am not at all answered in the objections thus advanced, when I am told that my apprehensions of this failure are without foundation. You relied as confidently when the public money was transferred to the State banks, that they would not fail. Every official report and every state paper was replete with their commendation. We were told that they were equal to every emergency, in the fiscal operations of the Government, and furnished its best and safest reliance. And yet, within two short years, the whole system is denounced as an entire failure. What better assurance can you give us now, than you offered then?

Why may not your new scheme fail? I believe that it must, inevitably must, if attempted now. And when it does fail I can imagine no possible resource left, but that which our new convert so earnestly deprecates. I pray you to excuse me, then, if I do not see with his eyes.

Sir, in attempting these sub-treasuries now, the Government, if I may so express it, is retreating to the citadel at once, in the great battle with a national bank. I see nothing but danger in the attempt—opinions differ amongst your best and ablest advisers, whether you can now make the position good; and if you do not, there is no escape, no choice, but in unconditional surrender.

One word more, sir, to the honorable member from South Carolina, and to those to whom this portion of his address is directed. I understand him as making an appeal to the democrats of the north, to rally around this sub-treasury scheme, as their surest and safest protection against the oppression of northern capitalists. He tells them that they are looked upon as the natural allies of the south, because their labor holds the same position to capital in their country, that our slaves hold to their owners at the south.

How these northern democrats may relish the doctrines of their new ally, I need venture no prediction. I doubt whether they can be brought to rally around the standard of a leader, who denies them any place, even in the common scale of humanity.

Is it upon principles such as these, that the northern democracy is invoked to lend their aid to the measures contemplated by this bill? These are they, I presume, who are appealed to in the occasional addresses of certain newspapers, as the "democracy of numbers," contradistinguished we find now from any democracy of MEN—who hold no place in the thinking, acting part of the community, but are classed as mere dead weight, to be thrown at will into either scale of the political balance.

If there be any such party in our favored land, I thank Heaven that it is unknown in the quarter of the country from whence I come. We have there, sir, I am proud to say, as honest and sturdy a race of democrats as ever the sun shone upon. Of intelligent, thinking, independent, and free men; each doing and acting for himself in all questions of public interest. Having perfect equality of right, and participating to the fullest extent of a free citizen, in the direction and control of all public affairs.

This, sir, is the character of the democracy with which I am familiar; nor I apprehend are our true northern democrats of a texture any whit inferior. But I desire my constituents at least to know to what sort of democracy the merits of this bill are addressed by its friends. Not to intelligent and thinking men, but to a class who are counted only by their numbers, and are estimated to have no influence in public affairs, save as a mass, holding a certain position toward capital.

[Mr. Pickens here asked the floor, and was understood to say, that he did not lay down the proposition as broadly as was stated by Mr. Mason. He meant only to say, that the tendency of the institutions at the north was to organize capital, and to make labor tributary to it; and unless such tendency were checked, would finally reduce labor there to a state of vassalage.]

Having thus given my objections to the passage of any law at this time, which has not for one of its principal objects a reformation of the currency, or, I should more properly say, which will not by its operation, lead back the banks to a resumption of payment, I proceed briefly to suggest what my opinions are of the ultimate attitude which the Government should assume towards these institutions. I have no expectation or belief, notwithstanding the cry which has been raised against the banks, through the press and otherwise, that by any action of this Government these institutions can be destroyed. It is not in your power to do so, sir, if you would; and, if attempted by any means, direct or indirect, every effort that you could make, would eventuate in defeat. They are created by the States—are incorporated, and have life given to them by their separate law—for their being they lean upon the States, and are as entirely independent of you, as you can ever become of them. Most of the States have a large moneyed interest in their stock, and participate largely in their management by the immediate appointment of directors.

Virginia has an immense fund invested in her banks, the income from which is appropriated to education, to internal improvement, and to other favorite objects of her State policy. Besides all which, the banks of each State furnish to each the entire paper circulation within its borders—a source of profit in which the States themselves largely participate. For good or for ill then, these banks are so closely interwoven now, in all their relations with State interests, that they cannot be eradicated, even by the power upon which they depend for existence.

They enter largely into, and influence to a great extent, all the elements which affect the trade of the country; and thus, whether you are connected with, or divorced from them, whenever trade or the course of exchange (in which they largely deal) is deranged or injured, your finances will be immediately affected. You may be divorced from them *a mensa*, and *a vinculis*, and should a period ever occur again, when there is a general suspension of specie payment, your treasury will stop payment in unison with the banks, precisely as it has done now; and the only difference between you will be, that they will stop payment as a measure of precaution, and you from necessity.

I say, then, emphatically, that the present embarrassed condition of the treasury is not owing to its connexion with the banks. You have not now money enough to the credit of the Government, in all the banks north of the Potomac put together, (the quarter where the principal revenue is collected), to carry on the Government for two weeks. The treasury is without money; not because the banks have stopped payment, but because its supplies are cut off. Its revenue is stagnant in the

hands of its debtors, and not in the vaults of the banks. There is money enough due to you, but you can't get it in, and so it is precisely with the banks. You and they are both obliged, being operated upon by the same causes, to give time to your debtors, and to wait for the reaction of trade, the revival of commerce, before you can again get afloat.

Neither is this reasoning at all weakened by the fact, that you have some five or six millions yet on deposit, in the southern and western States, which is styled "unavailable"—meaning that you can't command it for use. You can't command it, simply because you have no use for it in the place where it is. In the northern and eastern States, where you had use for money, you have withdrawn it rapidly since the suspension, and so you would have done, from those south and west, could you have used the money at the place where it was. Suppose then, that this money, instead of being on deposit in the banks, was locked up in sub-treasuries in gold and silver. Five or six millions of bullion, is too large a sum to be suddenly transferred from one quarter of the country to the other, without producing very serious effects upon the trade and business of those places whence it is taken; and yet you would have no other resource whatever, in order to make it "available," but to bring it away in bulk, transporting it at heavy cost across the country, from the place where it was collected to the place where it was wanted.

You could not command a dollar by means of exchange, for the very causes that now make your deposit "unavailable" there, has run up exchange to rather more than the expenses of transportation. And thus that whole fund, even if now in gold and silver, and in sub-treasuries, to boot, would be just as unavailable to Government, in the present condition of the country, as their deposit is, in the banks mentioned. Government would not attempt to bring away the metal. The country would not allow itself to be thus drained—or if it were done, the very operation would open the people's eyes to the working of the machinery, and all would cry out against it. No, sir, if this whole "unavailable fund" in the south and west, were now locked up there in gold and silver, sooner than encounter the cost and risk of transportation, and the clamor that would be raised against it in those States, we should go quietly to work, as we are now doing, and issue treasury notes to answer in its place, until the restoration of trade to its accustomed channels would allow its being made available, by the use of bills of exchange.

Treating the banks, then, as they certainly are, institutions dependant for their being upon the States alone, and yet exercising so important an influence upon the trade and business of the country, it becomes us next to inquire what is the best and safest relation in which the Government can place itself toward them, to avoid, as far as may be, a recurrence of the evils under which we now labor.

In the first place, I see no *prior necessity*, either as regards the welfare of the Government or the banks, for any connexion between them whatsoever. A sudden and violent separation, such as is contemplated by this bill, I have already said, would, in my judgment, be impracticable in the present condition of the country. I believe the transition (from the state of things which such a "divorce" would create,) would be a national bank, as inevitably as from anarchy and confusion, a people always seek relief in despotism.

The process of separation must be gradual after it is commenced. And its commencement must await the entire recovery of trade, accompanied as such recovery will be, by a sound and healthful currency; that is to say, a currency, so far as it is paper, convertible into specie at will.

The Government may, I think, under such circumstances, and at such time, confine its receipts to gold and silver; and withhold its revenue while resting between collection and disbursement, from all use, whether of banks or others.

I am aware that strong objections hold to keeping so much money idle, as would remain permanently on hand, under any system that may be adopted. But my decided impression is, neverthe-

less, that the patronage and political influences, with which its use by these corporations must be attended, together with the great incentive which it offers to overreaching, are objections far stronger. And from such inaction of the public money, I should look for another great practical good. It would invite, in the most urgent manner, as a fixed policy, a scale of revenue reduced to the lowest standard of the most economical administration.

And again by confining its receipts to gold and silver, the collection of the revenue would exercise a salutary control over the issue of the State banks. It would do so, by presenting at their doors, to the extent of that demand, always an inexorable creditor; a curb sadly wanted by the banks in their late career. The receipt by Government of gold and silver only, after the paper medium becomes freely and immediately convertible into coin, presents nothing inconsistent with the position that Government must deal in the same currency in which the people deal, because coin, and paper, immediately convertible, are substantially the same.

But I can see no advantage, and on the contrary, a fruitful source of mischief, in making Government officers the keepers of the cash. Place about them what guards you may, in the shape of commissioners, inspectors, or whatever else, speculation will be endless. There is no security in it, and it will involve heavy and unnecessary expense. The chief and over-ruling objection, however, is the endless source of patronage to which it would give rise. Make the machinery as simple as you may, and open to view, wherever money is, temptation will creep in, and corruption in every form following at its heels. But the money can be safely kept, under the most ample security, and freed from every objection of patronage or political influence, by a simple system of *special depositories* in the State banks—remaining always in specie, the *separate property* of the Government, and paid out in kind, upon drafts from the treasury.

I have thus, sir, stated my objections candidly and fairly to this bill. They go more to its peculiar machinery, and to the time at which it is brought forward, than to its general scope, as a measure of State policy in the subject which it is intended to affect. There is no sufficient reason, as I have already declared, satisfactory to my mind at least, why it should be passed now, at the close of a short and hurried session. And I take leave of it, therefore, in the confident hope, that this great subject of the relations between bank and State will, at a future day, be presented in such form as will unite those counsels which are now so unhappily divided.

### SPEECH OF MR. BAYARD, OF DELAWARE.

*In Senate, October 2, 1837*—The bill imposing additional duties, as depositories of the public moneys, on certain officers of the Government, being under consideration—

Mr. BAYARD of Delaware addressed the Senate as follows:

Mr. President: No one can be more deeply impressed with a sense of the importance of the subject now under consideration than myself, considering, as I do, that it involves in its consequences the welfare of the whole community. In the course of the debate which has taken place, many collateral matters have been introduced, which have diverted the attention of the Senate from the real question, to which I wish again to draw its attention.

The bill now before us proposes three measures; the first of which is, to dissolve all connection with the banks; secondly, to substitute the agency of certain officers, thirteen or fourteen thousand in number, for that of the banks, in keeping the revenues of the Government; and thirdly, to receive, after a certain period, nothing but gold and silver coin in payment of Government dues. The objects which are said to be contemplated as the results of these measures, are, first, to secure the Government against loss in the keeping of its treasure; and, secondly, to provide a currency of gold and silver coin, which is declared to be the constitutional cur-

rency. The measures themselves have nothing to recommend them beyond their supposed tendency to accomplish these objects. Before proceeding, however, to the discussion of these matters, it is necessary to have a just and precise conception of the objects, the accomplishment of which is said to be contemplated.

The first, which respects the fact of security against loss in keeping the public treasure, is easily understood; but the other, and favorite object, of providing a currency of gold and silver coin, requires some explanation. It has been supposed, sir, and I confess I entertained the same opinion, that some of those who advocate these measures were bent on procuring a purely metallic currency for the country, to the exclusion of all paper; while others were aiming only at a larger infusion of the precious metals into the circulating medium, being perfectly satisfied that a considerable part of it should still consist of convertible paper. I am convinced, however, from a closer attention to what has heretofore passed on this subject, that the views of all of us are directed merely to the enlargement of the metallic portion of the currency, by changing the ratio of the mixture of paper and coin, as it existed before the suspension of specie payments. The case is not, therefore, rightly presented by the Senator from Missouri, (Mr. Benton,) when he states it to be a contest between opposite systems of paper and coin; but, in fact, whatever difference of opinion exists in relation to the currency is merely as to the relative proportions in which paper and coin should compose it.

No one, at least to my knowledge, Mr. President, has professed to countenance, much less to recommend, an inconvertible paper medium, except, indeed, the Senator from South Carolina, (Mr. Calhoun,) who seems to think that a Government paper is the only safe one. I shall proceed, therefore, to show what are the different views entertained on this subject, and the probable effect which the different propositions heretofore made for the suppression of notes of a low denomination would have upon the currency. The Senator from Missouri, (Mr. Benton,) who has taken the lead upon this subject of metallic currency, may very fairly be taken as the exponent of the views of those who are most partial to the precious metals. His proposition is to suppress all notes under one hundred dollars, as appears from the speech delivered by him on the 27th January, 1837, on the resolution to rescind the Treasury order, in which he cites his speech on the subject of the District banks, in the preceding session, as containing his views on the subject. The following is an extract from that speech:

"Mr. Benton said that the proposed limit of twenty dollars for the minimum size of bank notes was not an arbitrary assumption or a fanciful designation; but was a limit ascertained by experience, and proven by results to be the lowest that would suffice to accomplish the ends intended; these ends are: 1st. To re-establish the gold currency. 2d. To make gold and silver the common currency for all the small dealings of the country. 3d. To extend and enlarge the specie basis of the paper circulation. 4th. To save the laboring and small dealing part of the community from the effects of contractions and expansions from bank issues. 5th. To save them from the impositions of counterfeiters, from losses when banks fail, and from bearing the whole burden of the wear and tear of small notes. 6th. To save hard money enough in the country to make it safe to have such paper currency as commerce and large dealings may require. These are the objects to be accomplished, and less than \$20 will have no adequate effect. Far better would the limit be of \$100, as it is nearly in France, and where that limit ensures a circulation of nine-tenths gold and silver and one-tenth paper."

It thus appears, Mr. President, that the most zealous advocates of a hard money currency do not contend for the entire expulsion of paper, but desire a larger infusion of precious metals into the circulating medium. We are all agreed as to the odious and unconstitutional character of a mere paper currency, for a mixed currency of coin and

convertible paper can not be denominated a paper currency. The different views, then, which are entertained as to the ratio of this mixture of paper and coin in the circulating medium, may be reduced to three classes: first, of those who, with the Senator from Missouri, (Mr. Benton,) are in favor of a suppression of bank notes under \$100. Secondly, of those who, with the Senator from Virginia, (Mr. Rives,) are in favor of a suppression of all notes under \$20; and thirdly, of those who are of opinion that the suppression of all notes under \$10 will be sufficient to ensure a due proportion of coin in the circulation. Before proceeding to my argument, I think it important to the perfect comprehension of the matter, that we should first settle, as nearly as practicable, the effect which would be produced upon the actual currency of the country by the adoption of either of the above suggestions. Fortunately, sir, we are not without the means of doing so. The report of the Secretary of the Treasury upon the condition of the State banks, made at the last session of Congress, in that part of it which relates to the banks in the State of New York, furnishes some data for that purpose. I take the instance of the New York currency, because it is the only one, the component parts of which are stated, and I presume that those facts which are found to be true in relation to the paper part of that currency, will be found to be nearly so in relation to the paper part of the currency of the whole country, although it is very probable that a difference, more or less considerable, may be found to exist in the currency of some particular States. But so far as my argument is concerned, it is of no consequence whether the statement be precisely accurate or not; the object being to give some definite idea of the practical effect of those views. In that report the entire paper currency, on the 1st of January, 1836, of the State of New York, is stated to be \$21,123,089, which, with the sum of \$4,000,000, the probable amount of the coin in circulation, would make the entire currency of paper and coin about \$25,000,000. It appears from that report, that the whole number of bank notes in circulation of the denomination of \$100 and upwards, amounted to \$5,230,200, which is about one-fifth of the whole currency; that the whole number of notes in circulation of the denomination of \$20 and upwards, amounted to the sum of nearly \$8,000,000, or about one-third of the whole currency; and that the whole number of notes in circulation of the denomination of \$10 and upwards, amounted to the sum of \$12,265,765, or about one-half of the entire currency. It will follow, then, that to suppress all notes under \$100 would give four parts of coin, and one of paper, of the whole currency; while the suppression of all notes under \$20 would give two parts of coin and one of paper, and the suppression of all notes under \$10 would give a currency one-half of coin, and the other of paper.

It is of no consequence to my argument whether these ratios be exactly correct; it is sufficient if they be an approximation to the truth. Let us then apply them to the whole currency of the United States, and observe the result.

The Secretary of the Treasury, in his annual report on the state of the finances, made at the commencement of the last session of Congress, estimated the entire currency of the United States on the 1st of December, 1836, to be \$148,000,000, of which \$120,000,000 were paper, and \$28,000,000 coin. As it is necessary to take some specific amount for the purpose of calculation, we will take that to be the actual amount of the entire currency of the country. The effect upon that currency, of the proposition to suppress all notes under \$100, would, from the analogy of the New York currency, be to give us \$118,400,000 of coin, and \$29,600,000 of paper, as the relative proportions. The proposition to suppress all notes under \$20 would give nearly \$99,000,000 of coin, and \$49,000,000 of paper; while that to suppress all notes under \$10 would give \$74,000,000 of coin, and \$74,000,000 of paper. This view of the matter is entirely distinct from the question of how much coin it is proper for the banks to keep in their vaults as the bases of their paper circulation,

and which experience would seem to indicate to be about one-third.

Now, sir, I propose to show that, whether the object be to increase the ratio of the mixture of coin in the whole circulation as it existed on the 1st of December last, or to provide an exclusive metallic currency, the measures now proposed by the bill before us will not only not promote that object, but defeat it altogether. To do this, it is only necessary to advert to a few simple principles, which are established laws of currency. The purpose of a currency being to effect the aggregate payments of the nation, a given amount in value, less than the amount of those payments, but having a proportionate relation to them, is necessary for that purpose. It is also true that gold and silver are the standards of value over the whole world, and are, at the same time, objects of commerce and materials of currency. From these facts results a law of mixed currency, that paper will expel the coin unless it be restrained in its numerical amount and denomination. Of this fact abundant evidence may be found in the history of every civilized nation. But, sir, I will not trouble the Senate by referring to the elementary writers as authorities upon that point. I shall content myself with authorities nearer home. I mean to forage in the enemy's country; and I will cite one, which I presume will be satisfactory, not only to the Senator from Missouri, (Mr. Benton,) but to those also who are most zealous on the subject of the gold and silver coin, being no other than the speech of that Senator upon than the District banks, delivered in the session of 1835-36, to which I have before referred, and from which I now read the following extract:

"The great evils of a small paper currency are, 1. To banish gold and silver; 2. To encourage counterfeiting; 3. To destroy the standard of values; 4. To throw the burdens and the evils of the paper system upon the laboring and small dealing part of the community. The instinct of banks, to sink their circulation to the lowest denomination of notes which can be forced upon the community is a trait in the system universally proved to exist wherever banks of circulation have been permitted to give a currency to a country, and the effect of that instinct has always been to banish gold and silver. When the Bank of England was chartered in the year 1694, it could issue no note less than £100 sterling; that amount was gradually reduced by the persevering efforts of the bank to £50; then to £20; then to £15; then to £10; and at last to £5; and, finally, to £2 and £1. Those denominations were not reached until the year 1797, or until one hundred and three years after the institution of the bank; and as the several reductions in the size of the notes and the consequent increase of paper currency took place, gold became more and more scarce; and, with the issue of £1 and £2 notes, it totally disappeared from the country. This effect was foretold by all political economists, and especially by Mr. Burke, then aged and retired from public life, who wrote from his retreat to Mr. Canning, to say to Mr. Pitt, the Prime Minister, these prophetic words: 'If this bill for the £1 and £2 notes is permitted to pass, we shall never see another guinea in England.' The bill did pass, and the prediction was fulfilled; for another guinea, half guinea, or sovereign, was seen in England for circulation until the bill was repealed two-and-twenty years afterwards."

The report of the New York bank commissioners, made on the 23d of January, 1836, is to the same effect, showing that the practical experience of our own country corresponds with that of England. The commissioners say:

"The measures adopted at the last session of the Legislature for the suppression of the small bank notes have, so far as they have yet gone into operation, occasioned as little inconvenience as was to have been expected. The effects of the change were not sensibly felt until about the 1st of September, and since that time a large amount of specie has been put into circulation, which will be very much increased after the issues of the three dollar notes shall have ceased. Our Canadian neighbors, however, circulate a very large amount of small bank notes, which are taken as freely on the adjoining

frontier of this State, as our own notes or specie. In a considerable portion of St. Lawrence county, where the intercourse of the inhabitants is chiefly with Canada, the law is entirely disregarded. It is more or less so in the counties bordering upon Vermont, in the extreme western counties, and in the city of New York. It will be found impossible, we apprehend, to enforce the law effectually, so long as the small notes are issued by the banks of the adjoining States."

There can, therefore, I think, sir, be no doubt upon this point, that it is the inflexible law of a mixed currency of paper and coin, that the cheaper material supplants the more costly one, and that the only mode by which you can secure a proper admixture of coin is by the suppression of the small notes. I am thus particular as to this practical truth, because upon it is based the whole structure of my argument. I have before stated that the whole currency of the country is assumed to be what it was on the 1st of December last, as appears from the Secretary's report, \$148,000,000, of which \$28,000,000 was coin, and \$120,000,000 bank notes. The Government furnishes the coin; the banks furnish the paper part of the currency. We are all agreed that, to constitute a sound currency, there should be a larger admixture of the precious metals. Those who are in favor of the suppression of notes under \$10, wish, as I have shown, to raise the amount of coin in circulation from \$28,000,000 to \$74,000,000; those in favor of the suppression of notes under \$20, to raise the amount of coin to \$99,000,000; and the Senator from Missouri, and all who think with him, that all notes under \$100 should be suppressed, wish to raise that amount to \$118,000,000. And yet, sir, what means do they now propose to take in order to accomplish this purpose? Why, sir, to separate the Government from the banks! To divorce the Government from the banks! To leave the banks to themselves! The Senator says, they have fallen into the sea, and he will not assist to angle them out! And this, too, after we have been told by the Senator himself, and the proposition is undoubtedly true, 'that the instinct of banks to sink their circulation to the lowest denomination of notes which can be forced upon the community, is a trait in the system—and the effect of that instinct has always been to banish gold and silver.' No sir, you can not leave the banks to themselves; you can not divorce the Government from them! You must watch over and regulate them, if you mean to accomplish the object which you profess to have in view, namely, the improvement of the currency.

But it is said that, by requiring payments to the Government to be made in coin, you will compel its circulation. Well, sir, to what extent do you compel that circulation? To the extent only of the amount that is absolutely necessary to effect those payments. The President tells us in his message that the amount of coin which would be necessary for that purpose is about \$10,000,000. Then, I say, in the event of the non-resumption of specie payments by the banks, your currency would consist of \$138,000,000 of paper, and, what is worse, of inconvertible paper, without a limit to its extension; and of \$10,000,000 of coin, and that coin would be confined to the channel of Government receipts and Government payments. The currency would submit to the force you put upon it, just to the extent of that force, and no further. Your action would resemble in its effect a proviso to a general law, which is a restraint only to the extent of the proviso; and your coin would circulate only in the channel which you had dug out for it. If, on the other hand, the banks should resume specie payments, and the currency should be again composed, as it was on the first of December last, of \$28,000,000 of coin, and \$120,000,000 of paper, then I say, sir, that as there would be specie, more than enough, in circulation, to answer the payments of the Government, the measure of demanding payment in coin would have no tendency whatever to increase the amount. The reason of all this is apparent, and is to be found in the fact which I have stated, that paper will banish coin from circulation unless restrained, and will always do so up to the point of that restraint.

But it is not necessary to resort to any speculative reasoning in proof of these positions. You have now, sir, in the present state of things, the most positive proof of their truth. Does not the Government at this moment demand payment of its dues, of its duties, its postages, and its sales of public lands, in coin? And yet does that coin enter into the general circulation? Is it not confined entirely to Government debtors and Government creditors, to those who consume the revenues and those who pay them? I say, then, sir, that the result of your measure is this, and this only, to secure coin as the currency for the Government, and leave paper as the currency of the people. It is no unusual thing, Mr. President, to see those at the head of the Government profess one thing and do another.

I come now to the consideration of my second proposition, which is, that Congress is bound to furnish a sound currency of coin and convertible paper for the people of the United States. To any one read in the history of this country, and in the text of the Constitution, it would seem strange that it should be deemed necessary to formally propound such a proposition, much more so to prove it. But the peculiar tone of the Message, and the doctrines of some of the supporters of the administration on this floor, would lead one to suppose that the Constitution had been formed, and the Government created, for no other purpose than to take care of itself. Is it then true, sir, that this Government was created merely that MARTIN VAN BUREN might be President, and enjoy the dignity and emoluments of his office; that you, sir, should be Vice President, and we Senators of the United States, with the privilege of franking our letters and receiving a per diem of eight dollars in gold and silver? Was that the end and purpose of all the anxious deliberation of that band of patriots who assembled in Philadelphia to form the Constitution, and of the session, in that instrument, on the part of the States, of almost all the high attributes of sovereignty? I had hitherto thought the object had been "to promote the general welfare of the people of the United States." I was taught to think that the powers of this Government were trusts for the benefit of the people, and that the end and object of the Constitution was to promote their welfare. It seems, however, sir, that those who administer the Government read that instrument differently, and have come to the enlightened, profound, liberal, and statesmanlike conclusion, that the Government was created merely for their benefit, and that the people have no part or lot in the field of its operations. Let us, then, examine for a moment the soundness of this opinion, so far at least as the currency is concerned, that being the matter immediately under consideration.

Every one familiar with the history of the revolutionary war, knows that we came out of that conflict with a ruined commerce and a debased currency of inconvertible paper; that the States refused to confer on the old Congress the power to levy duties on imports, and were unable to enjoy the benefit of that indirect mode of taxation themselves. That if New York, for instance, sought to raise a revenue from her commerce, New Jersey interfered and defeated her plans by throwing open her ports. That, in the same manner, the commercial regulations of Pennsylvania were at the mercy of the State of Delaware, and were, in fact, frustrated by the legislation of that State; and so of the other States. In the hopeless imbecility of commercial enterprise which grew out of this condition of things, the people saw the necessity of a General Government, which should have the power to regulate commerce, and provide a uniform and sound currency for the country. The main and immediate inducement for the formation of the present form of Government was the desire to escape from these distresses and embarrassments which, from their all-pervading character, could only be cured by a National Government. Hence we find that the express power is given in the Constitution to regulate commerce, as well as the express power to regulate the standards of value and quantity, which are the legs of commerce.

I shall not, sir, after the luminous and powerful argument of the Senator from Massachusetts, (Mr.

Webster,) upon this power to regulate commerce, attempt to say any thing in illustration or support of it. I would not be chargeable with attempting "the wasteful and ridiculous excess of adding perfume to the rose, or gilding refined gold," but will content myself with remarking, that one might fairly conclude that, as commerce in modern times is no longer carried on by barter, but is conducted, in its minuter details, by means of money, and, in its larger operations, by the commercial currency of bills of exchange and promissory notes, the power to regulate commerce gives the right to regulate the means by which it is conducted. I proceed, therefore, to consider other provisions of the Constitution. My proposition is, that Congress is bound to furnish a sound currency of coin and convertible paper for the people of the United States. I say of *coin and convertible paper*, for I consider the latter as equivalent to coin in the matter of currency. If, therefore, any one should be of opinion that Congress is bound to furnish an entire metallic currency, that opinion does not weaken the strength of my argument, the views which I am about to present being applicable to both positions.

In the first place, the power is given to Congress "to coin money." For what purpose is money to be coined? Not that it may be melted down, and manufactured into plate; nor that it may be exported, and pass into foreign mints, to assume some other form, or receive some other impression; nor that it may be hoarded as a matter of curiosity or avarice; but that it may be used for the purpose for which coined money is used, namely, the currency or circulating medium of the country. I say of the country, because, as the power is a trust for the general welfare, its execution must have reference to the end of its existence. In the second place, Congress is authorized to punish the offence "of counterfeiting the current coin of the United States." In the third place, the States are prohibited from coining money; and, in the fourth place, nothing "but gold and silver coin" can be made a tender in payment of debts. As the great business of currency is to pay debts, and Congress has the exclusive power of furnishing the coin in which alone those debts can be legally paid, it follows that it is their constitutional duty to furnish such currency of coin, or, what is equivalent, of convertible paper; for, if they do not furnish it, no other power can; and the whole business of society must be suspended. The purpose of currency is to make the aggregate payments of the country, and its amount in value has reference to the amount of those payments. At the same time, every payment pre-supposes an antecedent debt, though it exists but for a moment; and it is Congress alone that can furnish the legal means of making those payments.

What, then, sir, is the consequence of the existence of this power, and this constitutional duty as regards the existing condition of the currency of this country, composed, as it is assumed to be, of coin furnished by the Government, and paper furnished by the banks? What, I ask, is the consequence of the existence of that duty on the part of this Government? Why, sir, clearly, the obligation so to regulate the issues of paper by the banks as to ensure its convertibility at all times into coin, and thus to provide a sound currency of coin and convertible paper for the people. If it be the duty of Congress to furnish either a metallic currency, or a mixed currency of *coin and convertible paper*, which is equivalent to a metallic currency for the purpose of business, then it is bound to guard against whatever may tend to defeat the performance of its duty; and I have already shown that it is the tendency of banks to extend their issues of paper, which has the effect of banishing the coin from circulation. If Congress does not regulate the issues of bank paper, then the banks control the power of Congress over the currency, and involve it in the violation of a constitutional duty. You can not, then, abandon the banks to themselves without being recreant to that duty. You must watch over them, and regulate their issues of paper, or else they defeat one of the great purposes for which this Government was created. As matters stand at present, you are bound to cause them to return to specie payments, and afterwards, by your

parental care, to guard against another suspension. This duty I have expressed in the phrase "to provide a *sound currency*,"—that is, a currency free from the danger of degenerating into inconvertible paper. As to the question of the proportion of the precious metals which may be necessary to ensure that result, some difference of opinion may and does exist. I have already explained the different views entertained on that subject; but all are agreed that for that purpose there should be a larger infusion of coin into the circulation than existed at the time of the suspension of specie payments.

Then, sir, I ask, if you must watch over the State banks and regulate their issues of paper, why not use them as fiscal agents? The Senator from Virginia (Mr. Rives) proposes to do so. I shall vote, Mr. President, for the amendment, though I am free to say I do not think it the best that could be offered.

It is generally conceded that the currency, whatever it is, should be of uniform value, since the Constitution provides that all taxes and duties shall be uniform; which could not be the case if that in which they are paid is not of uniform value. The plan of the Senator from Virginia (Mr. Rives) is defective in two particulars: First, that it does not secure uniformity of value to the paper part of the currency, from the fact of its not being able to command general confidence; and, secondly, that it does not control the issues of paper from all the banks. It attempts to persuade by insufficient inducements, instead of compelling the deposite banks to limit their issues of paper money by suppressing all notes under a certain denomination. But its radical defect is, that its operation is confined to the deposite banks; instead of reaching all the banks of the country. For, sir, I have already shown from the report of the New York Bank Commissioners, that the measure of suppressing the small notes, with a view to the improvement of the currency, will always be ineffectual, unless it be general. That if any banks are suffered to issue small notes, they will circulate and exclude the coin, notwithstanding other banks may be prohibited from doing so. To perfect his plan, a Bank of the United States is indispensable to give that uniformity of value to the paper part of the currency which can result alone from general confidence, and is proper as the milder means of regulating the issues of bank paper.

From what has been said, it is apparent that it is the constitutional duty of Congress to regulate the issues of bank notes, which can only be done in one of two ways, either by means of a Bank of the United States, or by means of a stamp duty on the notes. As to a Bank of the United States, it is out of the question at this time, and I am free to say, sir, that I consider it altogether inexpedient, in a political point of view. For I hold it to be extremely unwise in a Government constituted like ours to attempt to force public opinion. No system can be successfully administered which is repugnant to the public will; and it is sufficient for me, in this instance, that there is strong reason to believe that the majority of the people are opposed to a national bank. I have no constitutional scruples on the subject; on the contrary, I believe that it is necessary and proper as a fiscal agent of the Government, and the most gentle and effectual means of furnishing a *sound and uniform* currency to the country, composed, as I have before stated, of coin and convertible paper. But, sir, I will not consent to vote for such an institution, until I am satisfied that it is not repugnant to the wishes and feelings of the majority of the people. There is no other mode of suppressing the small notes, in the absence of a Bank of the United States—I mean, of course, by the action, direct or indirect, of this Government—than a resort to the taxing power, by imposing a stamp duty on them. To this there can not, I presume, be any constitutional objection, as it is an *express* power, justified in its use by the great object of promoting the general welfare, but in this instance used to sustain and enforce another express power and high constitutional duty, of supplying the country with a *sound currency of coin or its equivalent*.

In advocating the now favorite measure of the

Government, its supporters, who were lately such zealous friends of the State banks, lauding them for their fidelity, and magnifying and blazoning the extent of their services, have now become their bitter adversaries, villifying them with opprobrious epithets, and denouncing them in the most harsh and unmeasured terms. Why this hostility to their recent friends? In his last message to Congress, in December, 1836, President Jackson uses this language:

"Experience continues to realize the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government, at the time of the removal of the depositories."

After stating the amount of transfers made by the banks for the Government, he proceeds to say:

"These enormous amounts of money first mentioned have been transferred with the greatest promptitude and regularity; and the rates at which the exchanges have been negotiated, previously to the passage of the deposite law, were generally below those charged by the Bank of the United States. Independently of these services, which are far greater than those rendered by the United States Bank and its twenty-five branches, a number of the deposite banks have, with a commendable zeal to aid in the improvement of the currency, imported from abroad, at their own expense, large sums of the precious metals for coinage and circulation."

Mr. Secretary Woodbury, in his report at the same session, speaking of the deposite banks, says:

"It is a source of high satisfaction to be able to add, that while so selected and employed, not a single dollar was lost to the Government by any of them, nor a single failure occurred to transfer promptly and pay out satisfactorily the public money entrusted to their custody. Nor is it believed that the domestic exchanges of the country were ever lower or more regular than during that period."

What is principally wanting in every young country is capital, by which alone its resources can be fully developed, and the want of which, for a long time, caused the subjugation of the infant manufactures of this country by those of Great Britain. It was its vast capital, manufacturing and commercial, which enabled Great Britain to contend, single-handed and successfully, against the gigantic power of Napoleon, whose wild and lawless ambition sought to place its yoke on the neck of the civilized world; whose imperial standard was planted amidst the orange groves of the South and the snows of the North, and whose cormorant appetite for dominion would have gorged not only provinces and kingdoms, but whole continents. It was to the indomitable spirit and vast resources of that great and magnanimous nation that the continent of Europe was indebted for its emancipation from the thralldom of universal monarchy; and it is to its all-pervading capital and industry that Great Britain is now indebted for its control over the commercial exchanges of the world.

These banks, which are now so much abused, have supplied, to an immense extent, that want of capital in this country, and at this moment furnish, for the employment of its industry and development of its resources, more than \$200,000,000. The actual capital paid in, according to the report of the Secretary of the Treasury on the state of the banks, was, on the first of January, 1836, \$251,857,292, while their loans and discounts amounted to \$457,536,089; making, for all the purposes of business, an effective increase of capital to the extent of the difference between those amounts, namely, \$205,648,788. This immense sum, at an average commercial profit of ten per cent. would yield to the country an annual income of more than \$20,000,000.

The deposite banks themselves, which are denounced as having been guilty of the grossest treachery towards the Government, have done wonders. According to the report of the Secretary of the Treasury, presented at this session, they have, in the space of five and a half months, between the first of March and fifteenth of August, collected from their debtors the sum of \$40,689,862; and, in the same time, paid off

\$26,792,006 of public deposits; while their immediate liabilities do not bear to their immediate means a much larger ratio than two and a quarter to one, leaving the entire debt due to them from the community for loans and discounts as a security for the difference.

Banks, Mr. President, are not the authors of commercial distress, although it is true they may, and often do, feed that appetite for speculation which leads to it. Nor, sir, is commercial distress ordinarily connected with the quantity or nature of the currency of the country; it results from the want of capital for the time being, not from the redundancy or from the want of currency, much less from the nature of that currency, whether metallic or mixed. It occurs in all countries, with every description of currency, paper, metallic, and mixed. It is the result of that love of gain which stimulates the enterprise of the merchant, and broods over the projects of the speculator; which leads the one to search in foreign climes for those subjects of commerce which are to be distributed for consumption, and causes the other to dam up the streams of supply, with a view to the augmented profits of an unsatisfied demand, which prevails most where there is most freedom of thought and action, and which ends in those commercial orgasms which, with periodical occurrence, prostrate for a time all commercial energy, by impairing all commercial confidence.

The President, in his late Message, with a sort of twilight perception of the truth, speaks at one moment of the redundancy of credit, and at another of the redundancy of circulation, as the cause of the present commercial embarrassments. There can be no redundancy of circulation where the paper of a mixed currency is convertible. If the paper is not wanted for the purpose of currency, it is returned to the banks. That the fact is so, the elementary principles of the science of political economy would teach us; but we have daily and abundant evidence of its truth in the bank reports. Thus we find, by the reports of the Secretary of the Treasury at the last session, upon the state of the finances, that while, on the 1st day of January, 1836, the gross amount of notes issued by the banks was \$140,000,000, the amount in circulation was only \$108,000,000; making a difference of 32,000,000, which had been returned to them, and remained in their hands. Here I might advert to that inaccuracy in matters of fact which prevails in the President's Message, and which has been so fully and ably exposed by the Senator from Georgia, (Mr. King,) in other particulars, and which is manifested likewise in relation to this very matter of the currency. The Message states the amount of paper circulation to have been \$140,000,000 on the 1st of January, 1836, when, in truth, that was the amount of notes issued, but of which \$32,000,000 had been withdrawn from circulation. The error is the more inexcusable, because the Secretary of the Treasury, in his last annual report on the finances, made at the former session, in that part of it which treats of the mint and currency, explicitly states the fact, and distinguishes between the gross amount of notes issued and the actual circulation. The present commercial distress, the first symptoms of which were exhibited in New Orleans, in the failure of several commercial houses there for an immense amount, owes its existence, without doubt, to the wild spirit of speculation which was prevailing throughout the country, and to the employment of the banking capital of the country in enterprises which were not of a commercial character, but, being in their nature permanent investments, were, in effect, dead loans, and therefore hostile to the interest and purposes of banking. The case of the planters of Mississippi is a complete illustration of the whole subject. They were in the habit of receiving, on loan, large sums of money, with which they purchased lands and negroes, and pledged their crops for the gradual repayment. This was done by drawing bills of exchange on the merchant in New Orleans; and these bills, being accepted, were afterwards discounted by the banks. The planters, from the fall in the price of their great staple, cotton, were unable to furnish the merchant with the means of paying these bills when they came to

maturity, and the merchant, on his part, not having capital enough to carry on his other operations and meet these demands, fails; which disaster deranges and mars the whole web of commercial affairs.

When people engaged in large commercial operations, and enjoying a vast and almost unbounded credit, suddenly fail, a shock is given to public confidence in all men of business, which for a time breaks the charmed circle of credit, and the commercial world falls into a sort of syncope, from the suspended action of the great principle of its vitality, *commercial confidence*. It may be true that the great increase of banking capital led to this spirit of speculation, and to these enterprises and employments, which, not being of a commercial nature, ought not to have been undertaken on the faith of banking capital. Yet who, I ask, is responsible for that increase of banks? Who but the past administration, that, in its lawless act of the removal of the deposits, and the subsequent destruction of the Bank of the United States, gave at once an apology, as well as treated a seeming, if not real, necessity for the creation of new banks in every State of the Union? Let it never be forgotten, that in the year 1830, the second year of the administration of Andrew Jackson, there were but 330 banks, with an estimated capital of \$145,192,268, as appears from the Secretary's report at the last session upon the subject of the banks; and that, in the last year of his administration, on the 1st of December, 1836, there were 677 banks, with 146 branches, and an authorized capital of \$378,421,168.

The immediate cause of the suspension of specie payments, which commenced in New York, the great commercial emporium of the country, was, no doubt, the unfavorable condition of the foreign exchange, growing out of the debt which had been incurred to Great Britain, of forty or fifty millions of dollars. Not possessing the means of paying that debt in the products of the country, nor being able to procure a postponement of its payment, the specie of the country was required for that purpose, as the only article of commerce, which, having universal value, is the only one which is every where exchangeable for all other commodities; and the banks, as the largest depositories of that article, were called upon to furnish it. But what was their condition? They had been crippled in their resources for the supply of that article by the drain which had been made on the east towards the west, by the last measure of the administration—the Specie circular—which had the effect, as was most ably and satisfactorily established by the Senator from Georgia, (Mr. King,) of removing it, contrary to all the laws of trade and of common sense, from the place where it was wanted, to the place where it was of no immediate use, and from whence, in the nature of things, it must be forced ultimately to return. But in the mean time the mischief is done. The banks of New York, not being able to supply the demand thus created, and perceiving that it must end in the abstraction from their vaults of every dollar of their coin, which would have been attended with a compulsory suspension of specie payments from absolute want of means, and accompanied with the entire prostration of their credit, they determined, by an immediate suspension of specie payments, to save that credit, and avoid the stock which its destruction would have given to the whole community. Their suspension, in the nature of things, led to the same measure throughout the country. It is thus, I conceive, sir, most apparent, that if the commercial distress of this country be owing to the increase of banks and banking capital as the proximate cause, the past administration has been the remote cause, the *causa causans* of the whole difficulty; and that it is equally clear, that if the immediate cause of the suspension of specie payments was the state of foreign exchange, and the demand for specie, the remote cause was the Specie circular of General Jackson. We might here be tempted to exclaim "*quam parva sapientia regitur mundus!*" The people of this country have had a lesson, and a severe one, in the throes and convulsions to which it has been subjected under the past administration, never again to trust the helm of Government to the hands of any man

who is not possessed of the competent attainments and training of civil life; and that it is not sufficient that a man should enjoy the reputation of honesty and common sense to entitle him to claim from the American people the important trust of presiding over their welfare, without any familiarity with the complicated interests of a commercial and civilized community.

But why, sir, I ask again, this hostility to the late deposit banks? Why this new experiment? I will tell you, sir. There must be some new rattle, some new straw, to please and tickle the grown children of this nation. I recollect once hearing it said that when the Count Surville, the brother of the late Emperor Napoleon, was introduced to President Jackson, the latter distinguished individual said to the Count, "I have always, sir, taken your illustrious brother for my model in war." This, to be sure, was very modest; and if one should be disposed to think that there was some difference between the campaigns of Italy and those of a Creek or Seminole war, between the invasion of Russia and that of Florida, yet it should be observed that the remark does not import equality, but merely imitation; and we all know that a copy may be more or less humble, according to the means and abilities of the artist. But let us see whether this admiration of the great original may not have led to the adoption of some of his maxims of civil government. I remember, sir, once coming across a passage in one of the works of that celebrated woman, Madame de Staël, which gives a slight sketch of the character and policy of the Emperor; and I remember, too, that upon recently reading it, I was struck with some points of resemblance in the character and policy of the two men. The friends of the late President, who knew him best, will judge how far the resemblance holds; but it seems to me that the passage may be regarded as a sibylline oracle of the events of the last eight years. It may be found in her little work entitled "Ten Years' Exile," and runs thus, in the English translation of that work:

"While we have seen the Christian Kings take two confessors to examine their consciences more narrowly, Bonaparte chose two ministers, one of the old and other of the new regime, whose business it was to place at his disposal the Machiavelian means of two opposite systems. In all his nominations, Bonaparte followed nearly the same rule of taking, as it may be said, now from the right and now from the left; that is to say, choosing alternately his officers among the aristocrats and among the Jacobins. The middle party, that of the friends of liberty, pleased him less than all others, composed as it was of the small number of persons who, in France, had an opinion of their own. He liked much better to have to do with persons who were attached to royalist interests, or who had become stigmatized by popular excesses. He even went so far as to wish to name as a counsellor of state a conventionalist, sullied with the vilest crimes of the days of terror; but he was diverted from it by the shuddering of those who would have had to sit along with him. Bonaparte would have been delighted to have given that shining proof that he could regenerate as well as confound every thing. What particularly characterizes the Government of Bonaparte is, his profound contempt for the intellectual riches of human nature: virtue, mental dignity, religion, enthusiasm—these are in his eyes the eternal enemies of the Continent, to make use of his favorite expression; he would reduce man to force and cunning, and designate every thing else as folly and stupidity. The English particularly irritate him, as they have found the means of being honest, as well as successful—a thing which Bonaparte would have us regard as impossible.

"I do not believe that when Bonaparte put himself at the head of affairs, he had formed the plan of universal monarchy; but I believe that his system was what he himself described it, a few days after the 18th Brumaire, to one of his friends: *Something new must be done every three months to captivate the imagination of the French nation; with them, whoever stands still is ruined.*"

We observe, sir, in the course of the late administration, the same system of fusion. First a little

democracy, and then a little federalism, until we are served up in the end with a ragout of both, but so artfully compounded and seasoned, that the original ingredients are no longer to be discovered. This leads me to say a word or two as to the origin of this piebald party. It took its rise more from individual interests and private views—from partialities and antipathies, than from any other cause.

The old parties into which the country had been so long divided had ceased to have any practical existence under the administration of Mr. Monroe. All the great measures of federal policy had been adopted by their opponents. The navy, a Bank of the United States, internal improvements, the system of light-houses and harbors—all had become favorite measures with the dominant party; and there remained little to struggle about but abstract doctrines of construction, which had not sufficient interest with the multitude to sustain the zeal of party warfare. Notwithstanding this, the federalists, as a body, were proscribed, and the demagogues of the day were disposed to keep alive the ancient animosity, that the favors of Government might be confined to a smaller number of persons; very wisely considering that, as the days of miracles had gone by, and the loaves and fishes could not be made to feed the whole multitude, it was better to limit the number of mouths to be fed. In this state of things, Gen. Jackson's pretensions to the Presidency were brought forward; and as he had proposed, in his celebrated letter to Mr. Monroe, to destroy the monster, party spirit—for it seems there were monsters in those days as well as at present—and had recommended to that gentleman to act as the President of the nation, and not as the President of a party; and to make his appointments indifferently from the good men of both parties, he enlisted at once the sympathies of the federalists in his favor. They hoped, through his means, to obliterate the ancient party names and distinctions, and come in for their share of the honors and emoluments of the Government. Besides, many of them felt a peculiar repugnance to his opponent, Mr. Adams, from the fact of his having left their party; and it was believed that if he should even desire to act liberally towards them, the peculiarity of his position as a convert would not suffer him to do so. It was thus that General Jackson was enabled to substitute for the old parties of the country, one which was founded on mere personal considerations, upon private motives, private partialities, and private resentments, which, while it was quite as intolerant of dissenters as the former dominant one had been, required, at intervals, from lack of any settled principles of conduct, some new toy for its amusement, something to captivate its imagination, and inflame its zeal.

Here, then, sir, we have the solution of those various topics which have been thrown out as riddles to the community. First, *retrenchment and reform*, which ended in augmented disbursements, and increased patronage of the Executive. Secondly, *the payment of the public debt*, which was continued to be represented as the peculiar merit of his Administration, although the natural result of a system which had been organized before he came into power; and to give color to the pretension, the fortifications were neglected and public improvements abandoned, that an event might be accelerated which must speedily occur, and the postponement of which, for a few years, could in no degree affect the real welfare of the country. Thirdly, *the removal of the Indians*, which was conducted without any regard to the laws, accompanied with every variety of fraud and oppression, and has ended in a disgraceful conflict which has brought desolation and ruin upon a large district of country, and absorbed millions of the public treasure. Fourth, *the war on the Bank of the United States*, which has led to the creation of between three and four hundred State banks, now denounced as an evil. Fifth, *the removal of the depositories*, which, in its accompanying circumstances, was a gross violation of the law, and of the spirit of the Constitution, and was followed by the highest commercial distress and individual ruin. Sixth, *the gold currency*, which was to give to labor a solid

reward, instead of an empty promise to pay; and, Seventh, *the State bank system of fiscal agency*, which was to furnish the country with a better currency, and both which latter measures have ended in the disappearance of all coin, and the substitution of an inconvertible paper as the circulating medium; and now, Eighthly, this Footstep Administration proposes the *sub-Treasury scheme*, which is to restore us to the halcyon days of our prosperity; and which, in my opinion, will open the door to more fraud, corruption, and national loss, than any other that could be devised; and will, in its turn, be abandoned for some other novelty, if the People of this country do not in the mean time see fit to dismiss these experimenters from their service.

There have been some minor incidents in this drama, thrown in to heighten the effect, such as the quarrel with the Vice President, the dissolution of the Unit Cabinet, the difficulty with South Carolina, the contest with the Senate, and the rupture with France. The great principle of the party has been blind obedience, and the discipline of the camp was introduced into the cabinet. Indeed, so passive has been that obedience, that the party may lay claim to the encomium which the barber passed upon his parrot. Gentlemen, said he one day to some persons in his shop, my parrot is a bird of uncommon intelligence. I will give you a specimen of it. Pretty Poll, who is the greatest man in the world? Answer—General Jackson. And who is the next greatest? Answer—Pretty Poll. And what does General Jackson say? Answer—Damn the bank. And what does Pretty Poll say? Answer—Damn the bank. You see, gentlemen, said the barber, my parrot understands General Jackson's politics quite as well as he does himself.

I come now, sir, to consider my last proposition in relation to the measure now before the Senate; which is, that this Sub-Treasury scheme is less safe and less convenient and more liable to abuse than the agency of the State banks. Upon this point I have the authority of the Secretary of the Treasury, in a report of his, made during the session of 1835-6, and also the authority of the Senator from South Carolina, (Mr. Calhoun,) who does not appear, in the year 1834, to have been as much enamored of the scheme of individual fiscal agents and specie payments to the Government as he does at present. In his speech, delivered here on the 21st March, 1834, upon Mr. Webster's motion for leave to bring in a bill to continue the charter of the Bank of the United States, he expresses himself explicitly: the point which he is urging is the necessity of restoring the equilibrium between the specie and the paper which composed the currency, and the question is as to the means of doing so. After rejecting the taxing power as odious and unconstitutional, and stating that the mere coining power would have but a limited control over the currency, he suggests that some other must be used, and then states that the most immediate and obvious is, the exclusion of every thing but specie in the receipts of the Government. He then proceeds to express himself as follows:

"But there is, in my opinion, a strong, if not an insuperable, objection against resorting to this measure, resulting from the fact that an exclusive receipt of specie in the Treasury would, to give it efficacy, and to prevent extensive speculation and fraud, require an entire disconnection on the part of the Government with the banking system, in all its forms, and a resort to the strong box, as the means of preserving and guarding its funds—a means, if practicable at all in the present state of things, liable to the objection of being far less safe, economical, and efficient than the present."

Such, sir, were the opinions of that Senator in the year 1834, when he seems to have considered a disconnection between the Government and the banks as an evil to be dreaded, not a measure to be approved; and a resort to the strong box as being liable to the objection of being far less safe, economical, and efficient than the present.

[Mr. CALHOUN here desired to know whether the Senator from Delaware read that extract from his speech for the purpose of convicting him of inconsistencies in his opinions and course of conduct on this subject; for he wished to observe that he could

not admit that his opinions were to be gathered from one extract from a single speech, when he had delivered several others, which, if all taken together would show that his opinions were unchanged in relation to the propriety of disconnecting the Government from the banks.]

Mr. BAYARD replied that it was no part of his purpose to convict the Senator from South Carolina of inconsistency in his opinions; that to do so would not assist his argument, nor be agreeable to the private feelings which he entertained towards that Senator; that if there was any apparent inconsistency, he regretted it; but that he cited him as authority upon the particular point now under consideration, namely, the comparative safety of the public treasure in the two modes of keeping it.

Mr. BAYARD then proceeded. The President of the United States, in treating this part of the subject, does not present the matter fairly; he speaks of the amount of the public funds likely to be on hand at any one time, as presenting an average of not more than thirty thousand dollars in the hands of any one officer. But, sir, it is not a question of average. The receipts of many individual officers will be ten, twenty times that sum, in a very short space of time; and the amount in their hands may accumulate, by delays in payments or transfers, greatly beyond that sum, or twenty times that sum. The President further treats this question of safety as if it were one which depended on the relative strength of the vaults that were to be employed for the safe keeping of the public treasure; whereas the real question is as to the confidence reposed in the officer, and his official fidelity. No one fears open depredation on either. But no reasonable man will pretend to say that there is any comparison between the safety of funds entrusted to a single individual, checked only by his sense of duty, and the penalty of his official bond, and the safety of the same funds deposited in the vaults of a bank under the check of daily supervision and accountability on the part of its officers, and secured by its entire means, the greater part of which could not be the subject of depredation or fraudulent abstraction. But, sir, I am not disposed to be satisfied with any vague conjectures on this subject, or flimsy reasoning about probabilities. I appeal to experience as the only true guide; I call in its light, and I ask what are the lessons which we derive from it? Let me for a moment draw the attention of the Senate to the case of the Receiver at Fort Wayne, in Indiana, reported to the last session of Congress, as furnishing an illustration of the manner in which money may accumulate in the hands of a public officer by a slight neglect of his instructions, and the kind of reasons which may be given for not complying strictly with them.

It appears, then, that this officer, instead of a sum of \$30,000, which the President supposes is the average amount which would be in the hands of any officer at any one time, had accumulated in his hand, between the 7th of March and the first of June, the sum of \$601,380; and that he made no deposits, as in duty bound, from the 7th of March to the 15th of June. That both he and his relative had been in the habit in the office of shaving money; in other words, exchanging money which could not be received for public lands, at a rate of discount varying from three to five per cent. and that he was in the habit of taking in five dollar notes, contrary to his orders; for doing which he received a premium. All this is clearly established by the document to which I refer. Under these circumstances, we find a late Senator of the United States writing to the Secretary of the Treasury in relation to this officer, in the following strain: That he is reputed to be an honest and honorable man, and that the Senator did not think he had intentionally done wrong. And then proceeds to express himself as follows: "It would to some extent produce excitement if he were removed, for he has many warm and influential friends, both at Fort Wayne and in Dearborn county, from which he removed to his present residence. Better let it be."

At a subsequent period we find this officer assigning to the Secretary as a reason for not going to deposit funds in his hands, that his democratic friends thought he ought not to leave the place

until after the Presidential election which was to take place eleven days afterwards. The letter is as follows:

"RECEIVER'S OFFICE,  
"FORT WAYNE, Oct. 27, 1836.

"SIR: This is to inform you that I have forwarded to the deposit bank one hundred and four thousand dollars in silver, there to remain until I arrive with the gold and paper.

"My democratic friends think that I ought not to leave until after we hold our election for President, on the 7th of November, which I have concluded to await, and shall leave on that evening, or the next morning, to deposit, with all the funds on hand up to that time."

Now, sir, it may be asked, why the gold and paper was not forwarded at the same time that the silver was despatched. But without going further into the case, what has been stated is sufficient to show the manner in which the greatest abuses might take place under the proposed system of making the public officers the depositories of the public funds, and the inducements which may exist to practise those abuses, although the officer may be honestly disposed. In this case I do not know that the Government ultimately lost any thing by this officer; but if it did not, that only shows his individual honesty, but does not prove that the system, which would make him not only the receiver but the keeper of the public treasure, is not liable to the abuses I have pointed out. Not only would the officer have to resist the importunity of friends in moments of the greatest necessity and distress, and the temptations of avarice on his own part, but the solicitations of his political friends, in moments of party strife, when his office and means of subsistence might be at stake; and he would be told that his democratic friends required a little pecuniary assistance; that a loan to A, and another to B, and a third to C, would help the cause; and that success would secure him from discovery; or, if discovered, from reproof on the part of his superiors. And, sir, let me add, that if, yielding to the prompting of avarice, the claims of distress, or the solicitations of political friends, he should become a defaulter, we should have some Senator or active partisan hinting to the Government that his removal or punishment would produce excitement, and the matter had better be let alone. Suffer me now to draw the attention of the Senate to the reports made at the last session, of the balances due from the collectors, the receivers, and the postmasters, all of whom are, by this bill, to be made fiscal agents; and let us see what lessons are to be drawn from them. And, first, as to the collectors: there are twenty-seven cases reported, four of which exhibit balances of upwards of \$30,000 each—one case of \$58,000, one of \$80,000, and one of \$109,000. So much for the President's average of \$30,000. As a sample of the practical results of such cases, take the following:

"Andrew Erwin, Tennessee, \$53,397 28. Suit ordered March 17, 1829. Judgment, October Term, 1830, for \$92,635. Execution issued October, 1830. In the marshal's report for November, 1830, he remarks as follows: 'reported insolvent.' In a letter dated January 30, 1837, from the district attorney, he advises that upon the strictest scrutiny of proof by him in this case, he is satisfied that it would be a useless undertaking to file a bill of discovery, as all the responsible parties had previously, in the case of private creditors, denied any indebtedness or liability to Colonel Andrew Erwin," &c.

I will cite one other case:

"Robert Cochran, Wilmington, \$109,232 49. Suit ordered September 10, 1821, for \$143,922 68. Judgment May Term, 1823, for \$145,361 90. Balance reduced by subsequent settlements up to July, 1835, to \$109,232 49. The district attorney advises that he obtained a decree of the court at November Term, 1828, against Wm. Watts Jones, trustee of Cochran, for \$9,725 05, with interest from the 7th of February, 1825, till paid. Balance of claim desperate."

In the instance of the receivers, there are twenty-eight cases reported, of which five are upwards of \$30,000, and one of \$110,000; the details are gene-

rally insolvency of principal, sureties not to be found, or indulgence granted to sureties, and judgments with a return of no property. In the instance of the postmasters, there are 144 octavo pages filled with the names of defaulters, numbering, probably, little short of 2,000; for, sir, I had not the patience to count them all, but estimated the whole from the contents of a few pages. The amounts due from them, respectively, are not generally large, for many of them receive very little, but exhibit an aggregate of \$209,398 40, of which \$110,400 84 is admitted to be "not collectable." This class of officers, too, are to become fiscal agents, and having shown a disposition to keep for their own use the small amount of public money they have heretofore been able to collect, are now each to be entrusted with keeping, for the public, the President's average of \$30,000 of the public revenues. But, sir, there is one case among these which I cannot suffer to pass without more particular notice, exhibiting, as it does, a curious feature in the details of official vigilance. It is that of Francis P. Blair, the editor of the *Globe*, who was the surety of Samuel B. Crockett, of Frankfort, Kentucky. The balance due from Crockett on the 1st of April, 1822, was \$1,395 54, and the following note is appended to the case:

"Suit ordered, and judgment obtained, May, 1824, for \$1,827 01; credited by \$431 47; penalty remitted by Postmaster General, leaving balance as stated; application for relief refused by the Department, December 30, 1825; *fiat* issued and returned, March, 1826; no estate found; information was sought by the Department relative to the parties, November 30, 1835; referred to the district attorney, December 30, 1835; also wrote to him, February 13, 1837."

So that it seems, Mr. President, here is a case originating in 1822, more than fifteen years ago, in which judgment was obtained more than thirteen years since; and we are gravely told that, on the 30th November, 1835, the Department was seeking information relative to the parties; when one of those parties, Francis P. Blair, the surety, was living under the very eyes of the Government, in habits of daily social and political intercourse with the President, and with the head of the Department, and receiving thousands of dollars as the printer to the House of Representatives; and yet the official eyes of the Department could not see him. Such, sir, will be the results of this system, if carried into effect. I do not mean longer to trespass on the patience of the Senate, but allow me, in conclusion, to say, that if this system is adopted, which has nothing on earth to recommend it but its novelty as an experiment, and which defeats its alleged objects in relation to the currency, there will be exhibited a scene of fraud, speculation, and political corruption, which has never been witnessed before in this country, and seldom, perhaps, in any other.

## SPEECH OF MR. HOWARD, OF MARYLAND,

In the House of Representatives, October 3, 1837—  
On the Mississippi Election.

I am not disposed, sir, to repeat arguments which have been already urged with great effect by those who have preceded me in this debate. The points involved in the case have been fully stated, and, indeed, the speech of the honorable gentleman from Virginia, (Mr. Pennybacker,) a member of the Committee of Elections, left but little original matter to be urged by those who might be inclined to follow him upon the same side of the question. The fairness with which he stated the case, and the logical comments which he made as he passed its different branches under review, almost exhausted the argument, and only a little gleanings can be found, here and there, lying upon the field which he traversed. He has reversed the example of the benevolent Jew in scripture, and instead of purposely leaving an occasional handful to be picked up by the humble and industrious gleaner, as a reward for patient toil, he has scarcely left enough to make, when collected, a single sheaf. Unwilling to seize upon the produce of another

man's labor, by appropriating to my own use an entire shock, as is too often done in this House, I should have remained a silent spectator of the scene, if it were not that I have been induced to explore, for myself a corner which has hitherto escaped observation, the result of which inquiry I will bring particularly to your notice, after some general observations upon the subject.

The facts in the case are few and admitted. The Legislature of Mississippi omitted to provide by law for holding an election for members of Congress, in case a special session of that body might be convened by the President before November, and the Governor ordered an election to be held, directing that the persons chosen should retain their seats until the recurrence of the regular election in November, and two members are now in their seats in this body under that proceeding. Are they members of the entire Twenty-fifth Congress, or for a part of it, or is the whole election void? These are the questions which we must consider, and reply to one or other of them in the affirmative. There is no other choice. We must select out of the three positions any one that we prefer, upon which our judgment can rest with the greatest degree of satisfaction. But although we are presented with three opinions, (not concurring in the propriety of the phrase, *three alternatives*, I will not use it,) yet it is remarkable that when we come to vote, we must discard one, and choose between the remaining two. A majority of the Committee of Elections have reported a resolution declaring that the election is valid, and that the members chosen under it must hold their seats for the entire term of the Twenty-fifth Congress; and a minority have reported a resolution declaring the election to have been totally void. No one has proposed to amend either one, so as to obtain a vote upon the proposition that the sitting members are entitled to their seats until November, and no longer; and until some one shall offer such an amendment, there is no basis upon which those who hold such an opinion can express it by their vote, and the House, therefore, must select, according to its best judgment, one of the only two propositions before it. The gentleman from Vermont, (Mr. Slade) who has just addressed the Chair, showed a desire to rest his vote upon this theory, but abstained from drawing it forth from the shadowy obscurity in which it now lies, by presenting it in the form of a distinct proposition. It is not difficult to account for his reluctance to adopt the report of the minority. The high authority of one of the most distinguished jurists that our country has ever produced, and who was known to be a favorite politician with that gentleman, is directly in his path; and I am not at all surprised that his respect for the character and attainments of the late William Wirt was too strong to permit him to run counter to the recorded opinion of that distinguished man. I shall have occasion hereafter to refer particularly to that opinion, and only allude to it now to show its power in driving from a concurrence with the report of the minority all those who attach any value to his construction of the Constitution, even although they take refuge in a theory so unsubstantial that no one will call upon the House for a vote upon it. It is not worth while to consume time by attacking a hypothesis in which its own friends do not appear to have the slightest confidence; but I must be permitted to remark, that the doctrines which would break up the constitutional term of service of the members of this House, into any number of long or short periods, according to the humor or policy of every State, seems to be as new as it is visionary. For wise purposes, which it is easy to see, the framers of the Constitution directed that we should perform the duties appertaining to our stations here, for two years, and we have taken upon ourselves the high responsibility of executing these important trusts in the face of the nation, anxiously watching every step that we take. The obligation rests upon every State in the Union to be represented here, and it can not fulfil it by instalments, by portioning out the debt which it owes to its sister States, and discharging a little at a time. The whole House has a right, the whole nation has a right, to the benefit which the experience of even some months may confer upon the members of this

body. The measures which may be proposed and discussed, must be decided upon by the same individuals who have assisted in proposing and discussing them. We come in together, and must go out together. We resemble, in this respect, the changes of horses in a stage coach; and the idea that a part of us can serve but for a portion of our legislative journey, then to be superseded by fresh comers, is as unfounded as it would be ridiculous to stop a coach at every mile to change a single horse in the team. But, as I have already remarked, whilst members upon this floor are using this theory in debate, no one has sufficient reliance upon its correctness to call for a vote of the House upon it. I will therefore dismiss it from further consideration.

Whilst listening to the arguments by which the friends of the two propositions before us sustained their respective opinions, there was one reflection which pressed itself upon me. It was this. Both sides agree, as they ought to do, in attaching primary importance to the wishes of the people of Mississippi, and profess themselves desirous to carry that will into effect, if they can only find out what it is. One expression of their wish is admitted on all hands. All agree that the people of that State intended to be represented here at this extra session, and made every effort in their power to be so. Those who advocate the report of the minority, and are willing to declare the election totally void, of course intend to shut the doors of this hall upon the sitting members from the moment that the resolution passes. If we adopt it to-day, they can not come amongst us to-morrow, and Mississippi would have no representatives here. So far, then, as the people of that State have expressed a clear desire, about which there is not, and can not be, any controversy, to have a share in the important decisions of this extra session, just so far must we allow that expression to have controlling influence in the vote which we may give, provided that vote be regulated solely by a regard to their wishes. What then is the attitude of the two parts of the House? Let us see how they stand as to the observance of the will of the people of Mississippi. Two gentlemen present themselves here on the first day of the session, having filed their credentials with the clerk, and offer to be sworn in, as usual. No opposing claimant appears. No petition is presented from a single man in Mississippi, contesting their seats. The day upon which Congress was to meet was notorious, known probably to every voter in the State; and yet no voice is heard from that quarter, casting a suspicion upon the integrity of the election. A member of this House, actuated apparently by a greater zeal for the preservation of the elective franchise and laws of Mississippi than was felt by any citizen of that State, rises and interposes an objection to those two gentlemen taking their seats; and that, too, before the facts in the case were known, or could be ascertained by any impartial tribunal, owing to the imperfect organization of the House. The people of Mississippi were supposed to be so indifferent to their own rights, or so incapable of asserting them, that it became necessary to assume a guardianship over them to protect their injured innocence. The House, however, rejected this monstrous interference, and wisely reserved the consideration of all questions that might grow out of the election, until the facts could be settled by a committee. The business of the session went on. Still no competitors for the seats appeared. No petition was presented contesting the election. The people whom these two gentlemen claimed to represent, seemed to be satisfied, as far as silence can be construed into acquiescence; and in these days of freedom of speech, men are not apt to remain silent, where they think there is cause of complaint. At the request of these members themselves, the Committee of Elections were directed to look into the matter, and up to this moment of discussing the two reports which they have given us, not even a half-stifled hum has been heard in Mississippi, expressive of discontent with the election: and yet this spontaneous guardianship continues to be exercised for the protection of the rights of those people, and we are urged, out of great tenderness towards them, to declare an elec-

tion void which they have made, lest, forsooth, we may violate their will by confirming it. Do the gentlemen who thus argue feel with Bassanio, when he is addressing Portia, that they are inclined

"To do a great right, do a little wrong,  
And curb this cruel devil of his will."

Are they dissatisfied with the manner in which the election has resulted and would gladly seize upon any reason for trying it over again? I will not suppose it; but it is a singular coincidence that every member of this House who has addressed it upon this subject, who is of different politics from the two members returned from Mississippi, is in favor of setting aside their election. I can readily understand how there should be a difference of opinion upon the constitutional point involved in the case, upon which I mean to touch presently, but I can not consent that they should place the vindication of their course upon a desire to carry out the popular will. Suppose, sir, that we adopt the resolution of the minority of the committee and declare the election void; and suppose that the people of Mississippi could interrogate us why we had done so. If we answered that we had paid respect to their will, they would reply that their will was to be represented at this important extra session, and that we knew it; for we do know it, and all admit it. If they pressed the inquiry still further, and asked why we had destroyed the political existence of those to whom they had shown themselves wedded, would it do to reply as Richard does to Lady Anne, when she upbraids him with destroying her spouse, that he "did it to help her to a better husband?" Are gentlemen such devoted friends and lovers of the people of Mississippi, that they would put out of the way the object of their choice, in order to give them a chance of making a better selection? I think that they would not be as placable was the lady. They would be apt to reject the doubtful friendship of their self-appointed guardians, who, from a nervous apprehension lest those people may be injured in their rights, at once disfranchise them; and, from a morbid sensitiveness lest their free suffrage may be endangered, turn the acknowledged members of their choice out of this Hall for the remainder of this extra session. Whether we may remain here for a longer or shorter period of time, makes no difference in the argument. It is certain that we shall have to decide some important questions which will be closely contested, and the absence of two members may decide the fate of measures to which the whole country is looking with deep anxiety; and, besides, the question of time can have no bearing upon the point which I am now considering. I am endeavoring to show that inasmuch as it is admitted, upon all hands, that the people of Mississippi have clearly shown their wish to be represented here during this extra session, and those who sustain the report of the minority which sets the election aside, are, of course, for ejecting the sitting members forthwith; it will not do for them to rest the justification of their proceeding upon the ground that they are anxious to carry into effect the will of that State. They are committing the very act which they profess to be anxious to avoid. Whilst they are urging upon us their extreme care to follow the popular will, they are forcibly divorcing the people (as the use of this word finds its way into every subject at this session) from the object of their choice; and, as gentle dissuaves will not succeed, they apply the figurative wedge and sledge-hammer violently to separate those who are living voluntarily in close alliance. Sir, let the supporters of the minority report rest their arguments upon a refined and technical construction of the Constitution, but let them not assume the untenable position that they are acting in conformity with the will of the people of Mississippi. But it is said, that, although it is admitted that an election was held for the present extra session, yet there is no evidence that there was any intention on the part of the people that the term of service of the sitting members should continue any longer than that time. I grant that it is not easy to ascertain how this is; but still there is enough from which to draw a satisfactory conclusion. One of the sitting members has publicly declared, in his place, upon his responsibility as a member of the House, that, during the canvass, no other opinion

was expressed from any quarter than that the election was for members of the 25th Congress; that the candidates and voters universally so considered it. We know, also, that the presses upon both sides spoke of it in the same way; and we have a still stronger evidence of what the public opinion was, and is, in the fact, that at this moment there is only a single candidate in the field for the November election; and his is rather a continuance of the former canvass than the institution of a fresh one. If the general belief was that the sitting members would hold their seats only until November, it is impossible that such a degree of languor should now prevail. On the contrary, the parties who fought so fiercely in August would have already buckled on their armor for another battle in November, more particularly when the victors were enjoying, not their spoils, but their well-earned honors, at this distance from the theatre of action, and when their absence must necessarily paralyze, in some degree, the efforts of their political friends. I rely upon these evidences, slight as they may be regarded, with the more confidence, as no evidence at all is offered to maintain the opposite position, except the mere proclamation of the Governor, the effect of which upon the formation of public opinion is nothing but conjecture. In all cases of contested election, this House has very properly endeavored to ascertain what the intentions of the people were, and has disregarded technical objections as to mere forms. If the two questions of "what did the people mean to do," and "what have they done," can be satisfactorily answered, the decisions of the House have invariably corresponded with those intentions and acts. In this case, therefore, we may sum up the points thus: If we adopt the report of the majority, we place the sitting members in their seats for the extra session, which the people of Mississippi clearly intended, and confirm them in their seats for the residue of the Congress, about which some doubt may exist as to the intentions of the people, and, of course, it becomes a question of evidence. If, on the other hand, we adopt the report of the minority, we eject these members from their seats forthwith, which the people of Mississippi clearly and admittedly did not intend, and put those people to the trouble of another election, respecting their desire for which great doubt must also exist, as it too is a question of evidence. In the former course we are perfectly certain of conforming to their will as to a part of our decision, and in the latter we are equally certain that we violate it. If, therefore, we are guided solely by a regard for their will, can we hesitate which to adopt?

But I concede that there is something more in this case than the single point which I have been considering. My object hitherto has been to show that the ground assumed by the friends of the minority resolution will not bear them out as far as that point is concerned. Let us see whether any other position is stronger.

The Legislature of Mississippi, by some unaccountable oversight, omitted to vest the Governor with the power which all other Governors possess under the laws of their respective States, of ordering an election for members of Congress, where a special session may be called for a day anterior to that designated in the law of the State, as the one on which the regular election is to be biennially held. The Governor thought that he found an authority for so doing in the Constitution of the United States, but thought also that his power under that instrument only extended to filling up the vacancy until the recurrence of the election at the usual time, and issued his proclamation and writ accordingly. As all the arguments of the friends of the minority resolution deny the existence of any power in the Governor, whether he had issued his writs for the entire 25th Congress, or only a portion of it, I shall not consume time in examining the precise effect of the writ which he actually did issue; because, by contesting his authority to order an election at all, the opposite side appear to attach no importance to the mode in which he exercised his power, and therefore seem to acquiesce in the conclusion to which the majority of the committee come in their report, of rejecting a part of his writ as surplage. The question is

then whether the Governor had any authority to order an election.

In the second section of the first article of the Constitution of the United States is found the clause which is the fruitful theme of this prolonged debate:

"When vacancies happen in the representation from any State, the Executive authority thereof shall issue writs of election to fill such vacancies."

It is agreed on all hands that this clause is not a dead letter, but that it confers some power of some kind upon the Governors of States; but it is argued that the power extends only to issuing writs of election to fill vacancies which "happen," and much subtle refinement is resorted to in order to draw the line of distinction between those which do, and those which do not, "happen." And it is further said that the term "vacancy" is not applicable to the condition of the representation from a State when the period of service of former members has expired, and before the election of their successors. With regard to the first position, I will not repeat the conclusive lexicography of the gentleman from Virginia, (Mr. Pennybacker,) but content myself with saying that it certainly has not been, or I believe attempted to be, answered. If the meaning of words is to be judged of by authority, the books which he has produced conclusively show that the word "happen" expresses a genus of which "chance" is only a species. No matter what may be the cause of the vacancy, whether it has occurred by "chance" or "design," or the expiration of a term of service, the generic word equally includes it; and those who framed the Constitution could not, by the most assiduous study, have discovered a word more comprehensive in its signification than the precise one which they adopted. I leave this branch of the argument where that honorable gentleman placed it, deeming it impossible either to make it more clear or refute it.

But it is said, also, that there was no "vacancy" in the representation from Mississippi; that a vacancy can take place only when a member elect dies, or resigns, or removes, and that it can not be created by the expiration of a term of service. For this limitation of the meaning of the word, no grammatical authority is adduced; but it rests upon the arbitrary assertion of those who so construe it. I should rather define "vacancy" to mean the absence of something which ought to be there. The limited meaning which is given to it is contrary to common sense; and indeed, no grammatical definition of it has been attempted to be given. All that is said is, that this case is not included within it. Let us suppose that the resolution of the minority should be passed to-day, and that, on to-morrow, when no person was in the occupancy of the chairs which are now so worthily filled by the two gentlemen from Mississippi, an inquirer should ask of the gentleman from Ohio, for example, where was the delegation from Mississippi; he would be bound to reply, as he has said in his argument, there is no "vacancy" in the representation from that State. But the incredulous interrogator would proceed: there is nobody in those chairs, and they are appropriated to the use of that delegation. Still my learned friend would be obliged to insist upon it, that there was no vacancy in that representation. It is true, he would say, that Mississippi has no members upon this floor in those chairs, or any where else; but I tell you there is no vacancy, because she elected members to the last Congress, and has not elected any to this; therefore, there is no vacancy. Do you not perceive, sir, that this is the inevitable result of the argument upon the opposite side? Because, if there was no vacancy when the Governor issued his proclamation, there is none now; and yet, see how impossible it is to convince the eyes of the truth of the argument addressed to the ears. I say, therefore, that this construction of the Constitution is contrary to common sense, however strongly it may be supported by technicalities, and I am no advocate for adopting refined and scholastic subtleties as the proper means of interpreting an instrument which was intended to be understood by plain men in regulating the business of life.

I wish, however, to refer you to the journal of

the Convention which framed the constitution, in order to show that the meaning which we now give to the clause which I have quoted, is the one which they attached to it, when it received the assent of that distinguished body. But before I do this, let me refer very briefly to the opinions of two gentlemen of acknowledged talents who have, at different periods, filled the office of Attorney General, as there is an entire harmony between the conclusions which they have drawn from a cautious inspection of the Constitution as it is written, and the designs of those who made it, as manifested by the history of their proceedings. I propose to touch very summarily upon these opinions, because other gentlemen have examined them more fully, and I desire to avoid the repetition of what has been already, and no doubt better, said. In October, 1823, and July, 1832, cases occurred in the administration of the Executive authority, which drew from those who occupied, at those times, the situation of Attorney General of the United States, elaborate opinions upon the construction of that part of the constitution which empowers the President "to fill up all vacancies that may happen during the recess of the Senate." It will at once be perceived that there is a strong analogy, although not a perfect identity, between the meaning of this word "happen," in this clause of the Constitution, and the one which we are considering; because, under both, the argument is, that a case where there is no incumbent in office, owing to the expiration of a term, is not included within either clause. But Mr. Wirt says, "The substantial purpose of the Constitution was to keep these offices filled, and powers adequate to this purpose were intended to be conveyed. But if the President (and the remark is equally applicable to the Governor of a State) shall not have the power to fill a vacancy thus circumstanced, the powers are inadequate to the purpose, and the substance of the Constitution will be sacrificed to a dubious construction of its letter."

He comes to the conclusion, that if the vacancy is found to exist, the constitutional power of providing for its being filled is immediately applicable, and adds:

"This seems to me the only construction of the Constitution which is compatible with its spirit, reason and purpose, while, at the same time, it offers no violence to its language; and these, I think, are the governing points to which all sound construction looks."

Mr. Taney, in 1832, concurred in opinion with his predecessor, without knowing, however, that Mr. Wirt had expressed it, because it was not until he had prepared his own, that an examination into the files of the office resulted in the discovery that Mr. Wirt had been called upon by the then President for an opinion in a similar case.

Mr. Taney says:

"The words used in the Constitution do not, I think, by any fair construction, require a distinction to be taken. It was intended to provide for those vacancies which might arise from accident, and the contingencies to which human affairs must always be liable. And if it falls out that from death, inadvertence, or mistake, an office required by law to be filled, is, in the recess, found to be vacant, then a vacancy has happened in the recess, and the President may fill it. This appears to be the common sense and natural import of the words used. They mean the same thing as if the Constitution had said 'if there happen to be any vacancies during the recess.'"

I propose now to show that the framers of the Constitution intended to attach this meaning to the kindred clause which is to govern our decision in the case before us, and this intention is to be drawn from the proceedings of the convention, which I examined for the satisfaction of my own judgment. If it had not been for the purpose of bringing this point before the House, I should not have interfered in the debate, as I stated in the outset of my remarks, but having once taken the field, I must go through the campaign, skirmishing with all those adversaries whom I may "happen" to encounter.

The convention which framed the Constitution, pursued the following judicious mode of proceed-

ing. They first settled general principles in committee of the whole, and then appointed five of their body to revise the style of the articles agreed upon, but without alteration of the meaning, and to arrange them under proper heads. This was the extent of their duty. The committee consisted of Mr. Johnston, Mr. Hamilton, Mr. G. Morris, Mr. Madison, and Mr. King, who reported the revised draft on the 12th of September, 1787, which contained the clause in the first article, word for word as we now find it in the Constitution, viz:

"When vacancies happen in the representation from any State, the Executive authority thereof shall issue writs of election to fill such vacancies."

The argument of the friends of the minority report of the Committee of Elections is, that this is a conditional grant of power or imposition of duty upon the Executive authority of a State, taking effect only when vacancies "happen," and not applying to a case where a vacancy is created by the expiration of a term of service, as it can not then be said to "happen," it not being the work of chance or accident. I find, on looking over the journal, that when the convention was employed in settling the principle which they meant to establish, on the 6th of August, they expressed it in these words:

"Vacancies in the House of Representatives shall be supplied by writs of election from the Executive authority of the States in the representation from which they shall happen."—*Elliott's Debates on Federal Constitution*, vol. 1, page 256.

Every one must see at once that the only difference between these two sentences is, that the latter excludes the construction which the friends of the minority report wish to apply to the former, and that this vexed article is made to express the very idea which Mr. Wirt and Mr. Taney contended should be applied to another clause upon the same subject, coinciding precisely with the interpretation which those who think with me allege should be placed upon it. Without resorting to a strict grammatical analysis, every unprejudiced mind would agree at once, as it seems to me, that the original draft meant to provide for filling up all vacancies, no matter from what cause, or when they might occur; and this inference is impregnable fortified by a closer examination. The word "when," which is considered as drawing after it a limitation of power, by admitting only a certain class of cases, and excluding others, is not found in the first draft; and the word "happen" is detached from the important noun "vacancies," whose comprehensive meaning it is said to control, and made to assume an humble and merely explanatory duty. I repeat that the idea intended to be advanced by the framers of the Constitution is found in the original draft; for I find that the committee of five were appointed "to revise the style of, and arrange, the articles agreed to by the House;" and I can not find that, in a single instance, they departed from this secondary duty. No fault appears to have been found with them on account of any aberration from the principles which the convention had previously adopted; and, in fact, they had only to paint and furnish the House which had been built, without interfering with the order of its architecture. I hold that, as statesmen, we are not only at liberty, but bound, to follow the intentions of those who prepared the Constitution, and think that they are sufficiently manifest, from the authority which I have adduced.

Whilst upon the subject of authority, I beg leave to refer to one quoted by the honorable gentleman from Ohio, (Mr. Mason,) who has read an extract from Judge Story's Commentaries on the Constitution. The part upon which he relied was the following:

"By 'vacancies' they understood to be meant vacancies occurring from death, resignation, promotion or removal. The word 'happen' had relation to some casualty not provided for by law."—*Story's Commentaries*, vol. 3, page 411, book 3, section 1,553.

I have too much respect for the learned judge whose opinion is thus brought before us, to pass it over without notice. But the honorable gentleman made only an extract from an entire passage,

which, when considered as a whole, will be found not to bear upon the question before us. He violently tore off a limb from the body; and I beg leave to replace and bandage it up, binding the bleeding fracture as well as my poor surgery will permit, in order to present to view the unmulatized subject in a perfect form. The entire passage is this:

"The language of the clause is, that the President shall have power to fill up 'vacancies' that may happen during the recess of the Senate. In 1813, President Madison appointed and commissioned ministers to negotiate the treaty of peace of Ghent during the recess of the Senate; and a question was made whether he had a constitutional authority so to do, there being no 'vacancy' of any existing office, but this being the creation of a new office. The Senate, at their next session, are said to have entered a protest against such an exercise of power by the Executive. On a subsequent occasion, (April 20, 1822,) the Senate seem distinctly to have held that the President could not create the office of minister, and make appointments to such an office during the recess, without the consent of the Senate. By 'vacancies,' they understood to be meant vacancies occurring from death, resignation, promotion, or removal. The word 'happen' had relation to some casualty not provided for by law. If the Senate are in session when offices are created by law, which have not as yet been filled, and nominations are not then made to them by the President, he can not appoint to such offices during the recess of the Senate. In many instances, where offices are created by law, special power is, on this very account, given to the President to fill them during the recess; and it was then said that in no other instances had the President filled such vacant offices without the special authority of law."

It will be observed that Judge Story referred to what he supposed to be the opinion of the Senate upon the point whether the President could appoint to an office then created for the first time—a question very wide of that now before us. The office of a representative from Mississippi was not to be created when the Governor issued his proclamation for an election. It had been created some years before, when that State was admitted into the Union, and had been often filled. The point which the judge was discussing, therefore, had no analogy at all to that before the House.

[Mr. ADAMS rose, and stated that it was a mistake in Judge Story, in saying that a protest had been entered by the Senate, in relation to the appointment alluded to. A Senator from Massachusetts had brought forward a proposition, declaring the appointment alluded to illegal and unconstitutional, and the subject was debated to the close of that session, without coming to any conclusion, and was again resumed at the commencement of the next session; and after as patient deliberation as the Senate ever gave to any subject, it was indefinitely postponed by a vote of the majority of the Senate; so that there never was any protest by the Senate against the appointment. And now, if he might be permitted to say one word, he would give his understanding of this word "happen" in cases of vacancies. He believed, in relation to offices, that every one happens to be vacant which is not full, and that he believed was the sense and meaning of the Constitution, whether the vacancy occurred from casualty, the regular course of events, expiration of term, or other cause. In relation to the offices of public ministers, they were not offices created by the laws or the Constitution, but were offices known to the laws of nations, and created by the laws of nations. Ministers were sent to every part of the world by the President, and whenever there is a necessity for the appointment of such minister, that office is vacant. This was what he understood by the term vacant, and he believed this was the understanding of every President of the United States.]

Mr. HOWARD resumed. I am glad, sir, that my remarks have drawn out this opinion from the honorable gentleman from Massachusetts, since his opinion on the subject of vacancies coincides with my own. Perhaps this interpolation may be considered by some as the best part of my speech. But

the honorable gentleman has also, by showing that Judge Story was mistaken as to the fact upon which he built his argument, totally demolished the fabric upon which the gentleman from Ohio (Mr. Mason) reposed in fancied security. It was swept away.

[Mr. MASON explained, and contended that the remarks of the gentleman from Massachusetts had not effected the argument he had used, or the authority he had referred to.]

Mr. HOWARD proceeded. It seems to me that if Judge Story placed dependence upon an opinion of the Senate, without even expressing his own, and if it now appears that the Senate had given no such opinion, there was very little left of the authority which the gentleman quoted with such emphasis. This is a matter for the House to decide upon. I dismiss the subject.

It appears strange, at first view, that this question has never arisen before; and that now, for the first time, a power was claimed on behalf of a Governor of a State under the Federal Constitution. The reason why the case has never happened before, is precisely that which most readily reconciles me to the acknowledgment of the power now. It is, that all State Legislatures have, of their own accord, conferred upon their Governors this very same power, except in the single instance of Mississippi, arising in this case, no doubt, from inadvertence and precipitate legislation. There is surely no ground to fear any unpleasant result, when our decision is in exact conformity with the laws of the States for forty years; when we are manifesting a beautiful harmony between the Constitution of the United States, and the feelings of the people of the States, as shown in their laws. If indeed we were about to curtail the power which the Governor claimed under the Constitution or laws of his own State, we might well pause. But our decision in this case will only place Mississippi precisely where the other States have voluntarily placed themselves, by conferring upon their Governors the power which we are about to admit.

The gentleman from Rhode Island who has just taken his seat, (Mr. Tillinghast,) has touched upon the only point which has caused any embarrassment to my mind. He has said that if a Governor of a State derives the power of ordering an election in a case like this, from the Constitution of the United States, which is the supreme law of the land, and of course paramount to all State laws, he can fix upon whatever time he chooses for the election to be held; and therefore, in every State where members of Congress have not been chosen upon the 4th of March, whether an extra session may be called or not, he can disregard the day which the statute may have designated, and thus overrule the laws. I state the objection as it has occurred to my mind, without recollecting whether I give it the exact shape which he did. I feel and acknowledge its force, and admit that it is difficult to escape from the conclusion; for, if this power is held by the Governor under the Constitution of the United States, no State legislation can take it away. But there are two reflections which disarm this argument of much, if not all, of its force. The first is, that the conclusion will not be found, upon examination, to be as unpleasant as it appears to be upon a cursory view; for it is not to be supposed that the chief agent of a State Government will, without any cause or motive, overthrow the laws of the people over whom he presides. Such an evil is not, in the natural order of things, to be feared; and, besides, these very laws have, in all the States except Mississippi, confided to this very officer the duty of selecting a day for the election in case of necessity. If the Constitution reposes this discretion in him, too, the mere anticipation of a flagrant abuse of the power can not be received as an insurmountable objection to the fair construction of that instrument. The second reflection is, that the Constitution intended to provide, in all cases where it was possible to do so, for its own perpetuation. The Federal Government was meant to be kept up, and so far as it springs from the people instead of the States, power was given to it to preserve its own existence. This House, as a vital part of that Government, was not intended to become lapsed from

a want of power to secure its continuance. I find in the Constitution, therefore, that, although the States are permitted to regulate the elections for members of this body, at their own will and pleasure, yet provision is instantly made for a defective execution of this power in the legislative branches, by throwing upon the Governors the clear and high responsibility of seeing that the members of this House are duly chosen, in the very clause which is the subject of all this debate; and lastly, by way of meeting every conceivable emergency, if the Legislative and Executive branches of a State should both fail to discharge their duty, an ultimate power is reserved to Congress to regulate for itself the elections to this House. Taking these different parts, and deducing the spirit which emanates from them all conjointly, I am led to believe that no vacancy in this body was intended to be long tolerated. In the physical world there is no vacuum. Nature is said to abhor it. Just so in our political system: those who created this artificial state of being equally abhorred a vacancy in this House, and they therefore imposed a pressure upon every point where that pressure could tend to fill it up. This consideration leads us to the very structure of the Federal Government, whether it was meant to be a loose and disjointed fabric, or one firmly knit together, so as to be lasting. This House is bound to the people of the United States by an indissoluble tie. If any one State chooses to loosen the knot, Congress can fasten it again. This is the way in which I read the Constitution, and I shall not be deterred from coming to a conclusion corresponding with this interpretation, by a misplaced fear that Governors of States will rush madly from their spheres for no other purpose than to introduce confusion and disorder. I shall, therefore, vote to sustain the report of the majority of the Committee of Elections.

## SPEECH OF MR. BOND, OF OHIO,

*In the House of Representatives, September 26, 1837*  
—On the bill to postpone the payment to the States of the fourth instalment of the surplus revenue.

Mr. BOND, of Ohio, said he felt constrained to protest against the proposed bill, which, if passed, would not only disappoint the hopes of his constituents, but he feared must greatly affect the interests of the State which he had, in part, the honor to represent. In doing this, he said, it was not his purpose to detain the committee long.

Ohio, with other western States, had participated but very little in the benefits of that vast expenditure of public money which had characterized this country for some few years past. The system of internal improvement by the General Government had been abandoned, except in such shape as to render it odious. Mr. Bond said he was free to confess that he would sooner see that system utterly abandoned than retained with that alarming feature which surrendered the exclusive regulation of it to the President. Sir, said he, it has been the studied policy of the party in power, for the last eight years, to strengthen the Executive arm! All means, and every construction, both of the constitution and law, have been seized in aid of this power, whilst a deceitful reluctance to use it was avowed. Internal improvements were tolerated, if of a general nature: but who decided this? The President. A tariff was lawful, if judicious; but the President alone could determine whether it was judicious or not.

Add to this the unqualified right of removal from office which is claimed for that officer, and I appeal to you, Mr. Chairman, if, in these latter days, there is not a fearful concentration of power in one man! His will, his *sic volo sic jubeo*, controls all the great measures of the country.

Coming into power with professions of economy and reform, as the present dominant party did, does it not occasion just surprise to see a system of appropriations adopted, extravagant in amount beyond all former history, and exceedingly partial in their operation? The interior States, and those in the west in particular, have enjoyed but few of these favors. One object alone in the city of New York, I mean the custom-house, involves an expenditure of about two millions of dollars.

But, sir, in despite of this unexampled system

of extravagance, our Treasury, in the year 1836, was overflowing; and it became a question of interest to decide how, even after meeting all the vast expenditures of the Government, we should dispose of the surplus. I was among those who thought it should, in some way, be placed, in just proportions, at the disposition of the States.

We thought it unsafe to leave it in hands already too powerful, and that it might be safely and beneficially employed by the several States. This measure was proposed; but how was it received by the Administration? Again and again it was denied that any surplus existed. The Chairman of the Committee of Ways and Means (Mr. Cambreleng) boldly asserted on this floor that the exigencies of the country required every cent of the public money; and so hostile was he to any division of the surplus among the States, that he declared he preferred seeing it sunk in the mighty deep.

I need not remind gentlemen of the reiterated opposition of the Administration print in this city (the Globe), which, at this time, poured forth violent editorials, condemning the measure, coupled with studied denials that any surplus would exist.

In another part of the Capitol, a distinguished Senator from New York (Mr. Wright) declared, in his place, that the Treasury would not be more than adequate to the demands of the Government. I find, sir, among the publications of that day a speech of that gentleman, in which he arrayed, and presented in solid column, as if to alarm the timid, a most imposing category of all the different bills which the extravagance of the party had presented for consideration at that session, in either House. It was, indeed, a fearful list, and furnishes an apt commentary on the pretensions of those who came into power on that deceitful and greatly-abused hobby of economy and reform! One of these bills, I recollect, was introduced by a committee, whose chairman said, on this floor, in reference to it, that it was so universal in its provisions as to have some appropriations in favor of the district of almost every member of the house. I believe, sir, that it was never expected that all these bills would pass; but they were used as an available means of defeating the passage of the deposit bill.

Coupled with these measures, inquiries were gravely sent from the Senate Chamber to the different Departments, to ascertain the *maximum* which they could severally expend. Yes, sir, not how little, but how *much* of the people's money they could use. And another member of the Senate (Mr. Benton,) by way of finding employment for this money, proposed to institute a most magnificent scheme of military defence, which would have given but little to the west, and, in the end, might have entailed on this country, as one of its consequences, a large standing army, and subjected us to an odious and oppressive system of taxation. I rejoice, sir, that all these attempts to defeat the division of the public money were foiled. After appropriations enormous beyond all past experience, the Administration had finally to admit that there would be a residuum. But still they were unwilling to send it to the people.

Next in review, and from that same Senator, who was for absorbing the treasure in his array of bills before alluded to, we see a proposition to invest the surplus in stocks! Yes, sir, it was seriously and gravely proposed that these United States should turn broker, and enter into competition with certain gentlemen who have obtained for themselves the unenviable cognomen of *bulls and bears* of Wall street! What answer will be made to this by the worthy gentleman from Virginia, (Mr. Jones,) who addressed the House a few days since on this subject? He could not consent that the Government should now sell the bonds which it holds for the deferred instalments on the sale of its stock in the late bank of the United States, when it was the wish of "the party" to subdue the bank and bring it into public odium. It was openly declared that it was unsafe either to retain the stock held by the Government, or continue to make the deposits in that institution. A confidential friend of the President was empowered, by him, to investigate the state and business of the bank, with a view to action on these points. The agent was a highly honorable, intelligent, and just man, and, withal, a strong personal friend of the President. He made this examination without limit or restraint. The result was creditable to the bank, but disappointed its enemies. The attack was, however, renewed before Congress by message, and a verdict equally honorable to the bank returned. Regardless of all this,

the public money was withdrawn, and placed where the law never authorized it. That same party who had declared the stock held by the Government in that bank to be in danger, at length obtained a law for its sale, and then actually declared it to be worth, not only its par value, but fifteen per cent. beyond it, and sold it at that advance to the Pennsylvania State Bank of the United States, taking the bonds for its payment, to which allusion has been made. In despite of all the violent and harsh means taken to depress the institution, these bonds could be sold for cash, and without loss. If, then, the Government really needs money; but, above, all, if you are sincere in your avowed purpose to be clear of all connexion with banks, why not dispose of these bonds instead of issuing Treasury notes, or borrowing money? Why not do so, and apply the means to the preservation of your pledged faith to the States under the deposit law? The gentleman from Virginia (Mr. Jones) says he is unwilling to do so because it will subject the Government to the imputation of acting in the capacity of broker! I cannot see the occasion for this fastidious delicacy. In what does it differ from the sale it did make of the stock of the bank, or from raising money on its own scrip, as it has often done, or from what it now proposes to do on Treasury notes?

But if the objection of the gentleman be sound, it carries certain condemnation to the Senator from New York. These gentlemen are of the same political party, and seem to act with great identity of feeling in all the leading measures of the Administration. The proposition of the Senator in question not only subjected the Government to do the office of broker, but would have made a vast addition to the power and patronage of the Executive. Stocks were to be bought and sold, and the President, wielding, as he would have done, some forty millions of dollars, would have held the place of giant broker and unrivalled regulator of the stock market. The stocks of an offending State could be depressed, whilst those of a more subservient sister were elevated. But, sir, here again I rejoice that this monstrous project was defeated. During a long and protracted session of Congress the attention of the people was drawn to the subject, and a unanimity of feeling from all parts of the country demanded the division of the money among the States, and received the obedience of Congress.

The bill passed, sir, but it had not the willing support of the Administration—it was extorted by the united and loud acclamation of the people. It was, indeed, obstinately and to the last, voted against by those who so signally exerted themselves to defeat it. But, Mr. Chairman, strange as it may appear, the organ of the party, (the Globe,) the very instant afterwards, claimed the credit of the measure! Let us now see how it has been executed. The provisions of that bill are familiar to us all, and this house was informed at the last session, by the Secretary of the Treasury, that he had set apart, on the 1st of January, 1837, the sum of \$9,367,214 98, to be deposited with the States as required by that law. Each State has been expressly notified by the Secretary of her respective share of that sum, and of the time when the several instalments would be paid. The States have solemnly legislated on the subject, and have agreed to accept the money; they have done more—they have appropriated and pledged it to high and benevolent uses, at least many of them have. We, in Ohio, have done so: a leading object with her has been, to derive from this fund permanent means of securing general education to her rising and future generations. Engagements have been made upon the faith of this law, and this fund permanently pledged for these great and sacred trusts. The law has been partially executed; three-fourths of the promised sum has been already paid. And, Mr. Chairman, gentlemen may, if they please, refer to the letter of the deposit act, and say it was not intended as a measure of distribution. The manner in which the different States received that act, and the permanent uses to which they pledged that money by their legislation, give the best interpretation of the sense in which it was viewed by the people. But even in its execution the Secretary of the Treasury did, in my judgment, deprive the States of a part of the sum which, under that law, they were justly entitled to. In his late report, he says that the actual sum reserved in the Treasury on the 1st of January, 1837, was \$6,676,157 52. The deposit law only authorized him to reserve five millions; but he went beyond it, and thus deprived the States of more than one million six

hundred thousand dollars. The Secretary explains this by saying that he did not receive the returns from the banks until after the 1st of January. That may be; but still, when received, they proved the money to have been in the Treasury on the 1st of January, 1837, and he ought to have reserved it accordingly. The Treasury accounts must be greatly confused, if the amount referred to was omitted. These accounts are, it is true, rendered mysterious, and we are told by the chairman of the Committee of Ways and Means, (Mr. Cambreleng) that they have become a science, and that we must study them. Indeed, he adds, that after fifteen years' constant application on his own part, he still finds it no easy task! I fear that the chief difficulty in the whole affair results from the mystery unnecessarily thrown around these matters, rather than any intrinsic perplexity in the subject itself. The report of the Secretary was certainly designed by the law, requiring it to be so stated as to be easily understood.

But to return to the amount which the Secretary, from some cause, did not discover to be in the Treasury, though, in effect, it was there on the 1st of January, 1837. It was clearly embraced both in the spirit and letter of the deposit law, and it was the duty of the Secretary, the moment he discovered the omission, to have added it to the amount before set apart by him, and notify the States and Congress of the fact. My own belief is, sir, that he would have done so had he been a friend of the deposit law.

But, Mr. Chairman, I fear every occasion has been seized to defeat and disappoint the wishes and hopes of the friends of this measure. And not only was the sum of one million six hundred and seventy thousand dollars improperly excluded, as I think, but the Secretary has, without authority, used a large part of the fourth instalment now due, and urges the passage of a law withholding or postponing that entire instalment!

Sir, the Secretary of the Treasury had no right to use one cent of the money, which he had set apart for the States under the deposit law. That money was specifically and sacredly pledged and appropriated; no subsequent act of appropriation was designed or intended to conflict with that measure. Neither the letter nor spirit of any other law did conflict with it; and I cannot now discover any reason for postponing the payment of this fourth instalment to the States, unless it be that the Secretary, having improperly used the money, wishes to make good his retreat, and escape the censure of that act, by extorting the present bill from Congress, on the allegation of an exhausted Treasury. I am unwilling to afford him any such shield; he has transcended his power; he has seized the money of the people, and diverted it from those great and benevolent objects for which it was designed, and on him and the President let the responsibility rest.

It is admitted by the friends of this bill that it is their duty to assign reasons for its passage. What do they urge? They say the Government wants the money. Yes, sir, and so they said before the passage of the deposit law. But of what use will this fund be to them, admitting even that the Treasury is impoverished, of which, after all explanations, I do honestly doubt? The fund in question, I mean that poor pittance of it which the Secretary has not used, is not in a condition for immediate use by the Treasury, at least the Secretary says he cannot use it, because it will not be paid in what he calls "legal funds." How, then, will the passage of this bill aid the Treasury? This reason is deceptive; and it does seem to me to be highly inexpedient to disappoint the States in the fulfilment of their just expectations. Gentlemen may indulge themselves in believing that they do not violate a contract, and that the mere letter of the deposit law admits of the proposed bill.

The gentleman from New York (Mr. Taylor) admitted that the deposit act and its acceptance by the States did amount to a contract, so far as the same had been executed by the payment of the three first instalments. But he added, with some apparent exception, that, though he was no lawyer, it was clear to him that the law in question did not constitute any contract for the fourth instalment, that being yet unpaid. I mean no disrespect to the gentleman when I say that, in my judgment, the absurdity of this position confirms the fact stated by him, that he is no lawyer. The law is entire, and contemplates the payment of a gross sum, but divides it into four instalments. If valid as a contract at all, it is so for the whole. I cannot agree that, so far as we perform an engagement, we are bound,

but that we are discharged from the executory part by our own want of faith. I beg to enquire why the payment of this money to the States was provided for in instalments? Was it to accommodate the Treasury? By no means. The true secret is this, sir: The public money had been improperly withdrawn from the Bank of the United States, and placed in certain State banks. It was proclaimed that these banks would render the same, or even greater, fiscal aid to the Government than the Bank of the United States did. In the party newspapers of the day, and in the official papers of the then Secretary of the Treasury, these State banks were openly stimulated to discount on and lend the public money. When the deposit bill passed, it was admitted much of this money had been lent, and could not suddenly be recalled. As the Government itself had, in a great degree, prompted the use of the money, it was thought unjust to recall it suddenly. Hence, sir, the provision for the deferred instalments. If it could have been controlled, the whole amount would have been required to be paid on the passage of the law.

I will not dwell on the argument which, I think, fully establishes these laws as constituting a contract. It has been well illustrated and sustained by other gentlemen. Those who wish now to withhold this money from the States, may, if they please, rely on the technical letter of the law. I go for the spirit of the case, and for meeting the just expectation of the country. I call the attention of the House to the laws passed by the different States on this subject, by which the whole amount of each instalment has been appropriated in advance. It is said that the State of New York entered into solemn engagements for the disposition of this fourth instalment, which she must now in good faith keep, and, to do so, will obtain the means elsewhere, if you disappoint her in this payment. Ohio, too, my own, my favorite State, has, by her legislation, looked to this fund as furnishing permanent means of general education within her borders. Will you now disappoint the hopes of her people? Will you take from her the means of lighting the lamp of genius in the humble cottage? Is the demand for your countless and extravagant appropriations so urgent that this poor pittance must be withheld? Is it not rather a pretext seized by those who originally opposed the distribution now to defeat its execution? The uniform character of the legislation of the several States on this subject fully expresses the understanding which the people had of that law.

Do you suppose, sir, that the States would have thus acted, if they had imagined the money was to be recalled, much less if it was not even to be paid over to them? I wished then, as I now do, for an opportunity to vote on a proposition for its direct relinquishment. I am against any postponement of the payment. It is better to settle this question at once, than to reserve it in such manner as to bring a periodical debate into Congress. Gentlemen say they object to collecting money to be divided among the States, and allege that is but taking money from one pocket to put into another. Sir, I would not myself raise money for such express purpose, nor was this money collected with that design. The case is this: The States united in government for a common purpose, under one Constitution. On looking into their Treasury, they find that, under their system of finance, a greater sum collected than the wants of their Government require. Is it safer to leave this money where patronage is already too great, where it may lead to the abuse of power, and tempt to the violation of trusts; or shall it be divided among the States on some just principle of apportionment, and applied by them to great and benevolent objects, over which the General Government disclaims power? I preferred the latter. A few gentlemen, some forty or forty-two, came to the other conclusion; and you now find such of them as are here, desirous of establishing the propriety of their opposition to that bill by their zeal for the present measure. I, sir, am less inclined to credit the necessity for this measure, by the very circumstance that it emanates from, and is chiefly sustained by, the pertinacious enemies of the deposit law. It is well questioned, whether, if the true state of the Treasury were ascertained, this fund would be needed, even if not already pledged to the States. But, be the state of the Treasury what it may, I cannot pass over the inconsistency of the Secretary in invoking to his present aid a fund which he intimates is not in a condition to avail him. The Secretary tells you,

too, that this measure will disappoint the States. Then why do so, when you have not even the hope of relief to the Treasury to justify you? Besides, among other measures of relief now proposed, is the bill for the issue of Treasury notes. Why not, if you will pass such a bill, issue these to an amount sufficient for all purposes, and relieve yourselves from the imputation of violated faith?

And now that I have named the Treasury note bill, I will express my astonishment that, after such repeated professions of dislike for all paper money, the administration should itself be the means of giving it currency. Have you not promised the people that you would give them hard money—a gold and silver currency? Why issue notes, then? If your Treasury is exhausted, create a loan; borrow the money. The issuing of Treasury notes is but creating a loan by indirect means. Then why not do it directly? Advertise for a loan, to be taken in gold and silver, and thus let the people plainly see what you are at. The truth is, it is not designed to carry out what you profess.

Mr. Chairman, for what purpose are we now here? Why has the President convened us at an extra session? His proclamation gave us to understand that we were to have great and weighty matters submitted for our consideration. I knew, indeed, that the whole country had been overtaken by a common disaster, and was suffering; that its currency and exchange were wholly deranged; and that we had, by the measures of our own Government, been deprived of the most uniform and best circulating medium in the known world. I was aware that a sudden shock had overspread the land, and was willing to suppose that it had occasioned the very abrupt change of opinion in the President, who, in one short week after telling the New York committee that he saw no reason for an earlier convocation of Congress than the constitutional period, issued his proclamation, under which we have now assembled. I cannot, therefore, express my surprise at having offered for our earliest consideration, at such a crisis, the bill to which I have directed my remarks.

Is it true, sir, that this Congress has been assembled here a few days before the first of October, in order that they might withhold from the States the paltry sum which the Government had pledged its faith then to pay them?

Then comes the Treasury note bill, to which I have already adverted; next, the bill extending the time of payment on merchants' bonds; a bill in relation to the deposit banks; a bill affecting the banks in this District; and, lastly, a bill with a very innocent title, imposing additional duties on officers in certain cases, but which is your Treasury bank in disguise. These, I believe, are the leading measures proposed, and we have been required to confine our attention to them for a few weeks, and go home! These bills have been severally reported to us in broken doses, by the chairman of the Committee of Ways and Means, (Mr. Cambreleng,) and I am constrained to animadvert on the fact, that they have all been brought forward unaccompanied by any report. This has been the usage of that committee. No longer ago than the last session, when the gentleman just alluded to, proposed to reduce the tariff, by way of depleting the Treasury, and in utter disregard of the compromise act on that subject, we all remember what an elaborate and subtle report was produced and scattered over the land. But now, when the state of the country is such as to require a special session of Congress a studied silence is observed on all subjects reported for our consideration. See how the numerous memorials of the people on the subject of a Bank of the United States have been disposed of. A resolution of two or three lines puts them all at rest. Sir, though the committee may have come to the conclusion indicated by the resolution, they should have accompanied it with a report, which, however opposed to the prayer of the petitioners, would tend to show they had been heard with respect, and in its reasoning, perhaps, reconcile them to the refusal of their request. I beg not to be misunderstood. I do not propose a Bank of the United States; those in power, with the President at their head, say the people shall not have it. The people themselves, therefore, must come to their own relief. If they wish the country to have such an institution with a modified charter, improved by all the lights of past experience, they must speak out and demand it. I am now ready to vote, if the subject is presented for my consideration, and will always, if I can ascertain it, vote in obedience to the will of the

people whom I represent. But it would be in vain at this moment to urge before this Congress a Bank of the United States, especially as the President has already prejudged the case. If the people want it, they will in due time send those here, and with clear instructions, by whom it will be granted. Until this be done, I do not believe the country will be restored to a healthy state in all branches of its business, currency, and exchange.

The President in his message affects to believe that the Bank of the United States, chartered by the State of Pennsylvania, has even greater strength than the institutions of that name which expired in 1836. And assuming this position, he infers that the present evils of the country cannot be attributed to the absence of such an institution, because that bank did not avert them! In this he is uncandid and disingenuous. He well knows the Pennsylvania institution is but a mere State bank, and that it is not in the power of that State, or any other, to confer such a charter as the late Bank of the United States had. The power to establish branches throughout the United States, and the receivability of the paper of the bank for the revenue of the country, constituted the great means of controlling the number and inordinate issues of State banks, and of regulating the exchanges. The United States Bank of Pennsylvania has not those privileges. I will not stop longer to refute a position so evidently insincere.

But this subject of exchange which so intimately connects itself with all our commerce, foreign and inland, is now abandoned, in all its chaotic irregularity, on the pretext that the Government of the United States has no constitutional control over it! Washington thought differently; so did Jefferson; and so did Madison; and in fine, so did Jackson himself, and ever other President of the United States.

From the origin of our Government under the present constitution to this time, covering a period of fifty years, an anxious desire to regulate the currency and exchanges was cherished by each successive administration, with an admitted constitutional control over the subject. It remained for Mr. Van Buren to discover that all his predecessors had been violating the constitution, and that he alone sustained it in its strict purity! But it was unfortunate for Mr. Van Buren that an attempt was so recently made by the General Government to control and regulate exchange. If no power existed over it, why was the matter undertaken? I call the attention of gentlemen to the exultation felt and so vauntingly expressed in the Globe, and in the reports of Mr. Secretary Taney and his successor, the present incumbent, Mr. Woodbury, when they told the country that they had succeeded in their pet-bank system, and by it were giving to us an improved currency, and more moderate and uniform rates of exchange than we ever before had! But now, sir, when it is found they have deceived the country, and that by their tinkering nostrums they have reduced order to chaos, instead of having the magnanimity to confess their error, as they ought to do, and retrace their steps, they disclaim all constitutional power over the subject, but propose another experiment! The original and genuine democratic party did not act thus. That same patriotic republican phalanx, who, with the illustrious Madison at its head, sustained the country in the war of 1812, were brought by lessons of experience honestly to admit their error in refusing to reincorporate a bank in 1811; and they, sir, established the bank of 1816. The experiment has been again tried, and we are in the midst of its sad consequences: but the remedy prescribed is not that prompted by experience. It is yet proposed to test another wild and unknown experiment. The country, by means of its youthful vigor and strength, may sustain itself, but its prosperity will, I fear, be greatly retarded.

Mr. Chairman, I was utterly opposed to the management of our financial concerns through the agency of State banks. I could consent to it only as a choice of evils. I am not here as a defender of these banks. Indeed, I openly condemned many of them for indiscreetly lending themselves to the uncalled-for and unhappy measure of removing the public deposits from the Bank of the United States. They have now to "flee from the wrath" of their friends, the very democratic party by whom they were seduced from the even tenor of their way. Yes, sir, those who used them to pull down the Bank of the United States, and held them up to the people as trustworthy agents, now turn from them with uplifted arms, and cry "unclean! unclean!"

And in this way an attempt is made to create an

impression that we of the opposition are the exclusive bank party. After uniting the financial destinies of this country with the State banks, proclaiming yourselves their friends, and forming with them a solemn league and covenant, by means of which you robbed them of their virtue, you now abruptly demand a divorce, and wish to throw your cast-off victims upon those who forbade the banish. I will also refer to another evidence of that discrepancy between profession and practice, which has so signally characterized the partisan power for the last eight years. In New York, Virginia, Alabama, and perhaps other States, known to be governed by the self-styled democratic party, laws have been passed authorizing the suspension of specie payments by the banks, and releasing them from forfeiture of charter and other penalties. This is done by those who tell the people they are in favor of an exclusive hard-money currency, and against all banks. In Ohio, Pennsylvania, and Maryland, whose Executives are known to be opposed to Mr. Van Buren, it was determined to put the banks on their good behavior, and thus prompt them to a wholesome and prudent course, believing that the people themselves would extend any indulgence which the occasion called for, if the conduct of the banks was honest and prudent. And the proclamation of the Governor of Pennsylvania, assigning reasons for refusing to convene the General Assembly at the moment of alarm, will constitute an abiding evidence of his wisdom and forecast. Now, Mr. Chairman, which of these classes of States, judging by their respective measures just alluded to, is most in favor of the banking system?

I do not desire to discuss, at this time, the merits of the several bills reported for our consideration. It will be time enough to do so as they shall be called up.

But, I must declare my opinion, that they do not singly, or together, constitute a sufficient reason for the special convocation of Congress. Surely it was not necessary to bring us here to extend the time on merchants' bonds. As the President did extend this time three months, he could have done so for six, and that period would have found us here at the usual session.

I am equally incredulous as to the urgent necessity of the Treasury for money, especially as the Secretary informed us that he had and could, without public injury, suspend some fifteen millions of appropriations. With the admitted means on hand, and our current revenue, the operations of Government might surely have been continued until December.

As for the proposed bill adjusting the accounts with the deposit banks, that was not important enough to authorize the proclamation; for, the Secretary admits that he has already used a considerable part of all their balances; and, if they would not pay, the laws and courts were open to him, quite as wide as it is in the power of Congress to place them.

What measure remains? The famous act for the safe-keeping of the public money. We shall have no occasion for this law before December, if what the Secretary of the Treasury says is true, that the Treasury is empty!

I must, however, notice a single bill on the business of this District, for which Congress is a local legislature. It is proposed to forfeit the charters of the several banks in this District, if they do not resume specie payments in some very brief period from this time.

The people of the District do not complain to us of any grievance, but the Committee of Ways and Means, by their chairman, report a harsh and highly penal law. I do not mean to defend these banks, sir. I know nothing of them. But I cannot resist the comparative view of the legislation on the same subject in the State of New York, from which the chairman of the Committee of Ways and Means (Mr. Cambreleng) comes, and that which he now purposes for this District. We are to commence here, I suppose, to try the hard money experiment. This poor District is to be made the scapegoat to expiate the sins of the States; or, which is more probable, is to constitute the hapless subject for the experimenting doctors in this new system of Treasury finance to operate on. After the manner of the curious and cruel experimenters in prussic acid and other poisonous drugs, with a view to test what, if any, remedy will arrest their destructive powers, the poison is first administered to a dog or rabbit, for the future benefit of man. Just so here. The District of Columbia is to be made the experiment-

ing subject of the hard money theory. All its banks may be utterly ruined, and its people put to serious inconvenience: but, in the meantime, the party will have the benefit of all its political influence, and it will not cost any thing to the banks nor the people of the State of New York. Sir, we have gone far enough with these Treasury nostrums; it is now proposed to give No. 6. I am unwilling to see or consent to have it administered.

Finally, Mr. Chairman, I do sincerely believe that the President has not made to us the suggestions which he designed to submit, when he first issued his proclamation, and that they are withheld because he found he could not make them without at least partially admitting the past errors of his party, which he had not the firmness and magnanimity to do.

The bill on which we are now to vote does not deserve the primary consideration of Congress at such a crisis. I am unwilling to postpone the payment of any part of the money promised to the States even for a day; and, if it is now withheld, I trust the States will keep up "a continual claim" until this Government redeems its violated faith.

### SPEECH OF MR. TALLMADGE, OF NEW YORK,

*In Senate, September 22, 1837.*—On the bill imposing additional duties, as depositories in certain cases, on public officers.

MR. PRESIDENT: The bill on your table proposes to establish, for the reception, safe-keeping, and disbursement of the revenues of the Government, what is generally termed the SUB-TREASURY SYSTEM. This measure has been brought forward in pursuance of the recommendation of the President of the United States, in his recent Message to Congress. I do not flatter myself that I can add much to the arguments which have been so ably and so eloquently urged by my friend from Virginia (Mr. Rives) against this measure. But, coming from a State where its practical operation, for good or for evil, must be so sensibly felt, I deem it my duty to give frankly to the Senate the views which I entertain in relation to it.

Sir, I have bestowed upon this subject all that reflection which is due to it, from the high source from which it emanates. Every consideration, both personal and political, would incline me to its support, if my judgment could be satisfied that its adoption would promote the great interests of the country. Natives of the same State and of the same country, the President and myself have been, from my first entrance into political life, down to the present time, on terms of intimacy. In his political career, he has, on all occasions, received my cordial support. It has been my fortune to be placed in situations, at certain trying periods of his history, which have enabled me to render him, "some service." It is with no ordinary sensation, therefore, that I find myself constrained, by higher considerations than those of political attachment or personal friendship, to differ from him on the question now before us—considerations of public duty which involve the public weal. But I have the satisfaction to know that he neither expects nor desires me to support this or any other measure merely because it bears the stamp of an Executive recommendation. In submitting this Sub-Treasury system, the President has only obeyed an injunction of the Constitution, which he is sworn to support, and which declares that "He shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient." This is one of those measures: the President has discharged his duty in recommending it to our consideration, and I trust we shall discharge ours, by giving to it that calm investigation and free discussion which are so well calculated to produce correct results in regard to measures that involve the great and vital interests of the people.

The President himself anticipated much diversity of sentiment on this subject. He anticipated, also, that Congress might, in its wisdom, adopt some other system, and he gave the assurance of his co-operation in any other plan which might be "ultimately established." He says:

"With these views, I leave to Congress the

measures necessary to regulate, in the present emergency, the safe-keeping and transfer of the public moneys. In the performance of constitutional duty, I have stated to them, without reserve, the result of my own reflections. The subject is of great importance, and one on which we can scarcely expect to be as united in sentiment as we are in interest. It deserves a full and free discussion, and can not fail to be benefitted by a dispassionate comparison of opinions. Well aware myself of the duty of reciprocal concession among the co-ordinate branches of the Government, I can promise a reasonable spirit of co-operation, so far as it can be indulged in without the surrender of constitutional objections which I believe to be well founded. Any system that may be adopted, should be subjected to the fullest legal provision, so as to leave nothing to the Executive but what is necessary to the discharge of the duties imposed on him; and, whatever plan may be ultimately established, my own part shall be so discharged as to give to it a fair trial and the best prospect of success."

I trust, then, that the friends of the Administration will view this question as one of expediency, and not suffer any difference of opinion between themselves to become a difference of principle upon which they are to divide. If it be not so viewed, who will take the responsibility, and who will vouch for the consequences of a contrary course? It is a subject on which men may honestly differ; and it is for that reason, amongst others, that such difference should be expressed with perfect frankness, and with the utmost freedom. My mind has long been made up against it; and the reasoning of the Message, whilst it has not convinced me to the contrary, has only served to confirm my previous opinions. I am, therefore, bound to say, from a sense of the most imperative duty, that, in my judgment, this measure is fraught with more mischief than any scheme which has heretofore been broached in reference to the finances of the Government, and the currency of the country. In saying this, I certainly intend none other than the most profound respect for the distinguished individual who has, in an official form, brought it to our notice.

Neither is this scheme new to the democracy of the country. It has once been passed upon by them, through their representatives in Congress, and received their unqualified condemnation. It was brought forward in the House, in the session of 1834-5, by a member of the opposition. After an animated debate, it was most signally defeated. It was put down by every administration vote save one. It is, however, due to the opposition to say that it was received with so little favor by them as a party, that only thirty-three members could be found who were willing to record their names for it on the journal. The defeat of this measure, at that time, was a matter which every friend of the administration, from President Jackson down, had very much at heart. We all took a deep interest in it. We all looked upon it as calculated to undermine our free institutions; as subversive of the very principles of the party to which we belonged; as accumulating power and patronage in the hands of the Executive, to which we had always been opposed; as uniting in his hands the purse and the sword, about which so much had been said on a then recent occasion, and which we had repelled in a manner and with a spirit which became those who were honestly desirous of preserving the powers of the Government as they were originally intended to be distributed by the Constitution. "Nay, sir, we went further; we denounced it as a "proposition disorganizing and revolutionary, subversive of the fundamental principles of our Government, and of its entire practice, from 1789 down to the present day." We denounced it as a scheme which would "bring the public treasure much nearer the actual custody and control of the President than it is now, and expose it to be plundered by a hundred hands, where one can not now reach it." The party was never more unanimous on any occasion than this. Their abhorrence of the scheme was universal. So powerful were the arguments against it, both in and out of Congress, by the republican representatives and by the republican press, that it received no favor in any quarter. Even the opposition, notwithstanding they were

against the State banks as depositories of the public money, could not be brought to the support of this measure, although it was introduced and urged by one of their own number. So mischievous in its tendency, so unsound in principle, did they deem it, that they united with the friends of the administration to defeat it. But what do we now behold? Whilst they, as a party, are still against the measure, we, as the friends of the administration, are called upon to support the same proposition now which we, as friends of the administration, put down then; put down, did I say? which we denounced as "disorganizing and revolutionary," and as exposing the public treasure to be "plundered by a hundred hands, where one can not now reach it." The objections to it then were inherent in the system, and, being so, no state of things has since occurred, or can hereafter occur, which can remove those objections. Still, we are now asked to change our ground, and to adopt a proposition as a matter of expediency, which received our decided disapprobation, at that time, as a matter of principle. No question was ever better settled on principle than this; and no state of things can make that expedient now which was wrong in principle then.

Sir, at that time, the adoption of the State banks as depositories of the public money was the favorite measure of the administration. Whilst the contest with the Bank of the United States was going on, this was the ground taken by the whole party. It was openly and publicly avowed by President Jackson, and by every friend of his administration. Sir, in the Senate Chamber the question was frequently and pertinently put by the friends of the United States Bank, to those who were opposing it, what will you do for a substitute for this institution if it be not re-chartered? The answer invariably was, the State banks are the substitute. They are equally adequate to the reception, safe-keeping, and disbursement of the public revenue. They will equalize the currency and facilitate the exchanges of the country. In truth, the leading friends of the administration deemed the State banks competent to perform all the duties to the Government and to the country which the Bank of the United States had performed. For my own part I never believed they could perform those duties, in all respects, as well. They lacked the capital and the concert of action necessary to render them equal to an institution which had its branches at all the great business and commercial points of the country; and which, by one common interest, and by one common impulse, could operate more successfully, and with more facility, than the State banks could do, with less means, and with less concert. But I conceived there were other objections to that bank, which more than counterbalanced any supposed advantages which it possessed over the State institutions. Be that, however, as it may, they were put forward by the administration as the only practicable substitute for a Bank of the United States. After the deposits were removed from that institution, they were placed with the State banks, which entered into an arrangement with the Government to perform all the duties which had been required of, and had been performed by, the Bank of the United States. They entered upon those duties—they performed them to the entire satisfaction of the President and the Secretary of the Treasury. The annual messages of the one, and the annual reports of the other, bear ample testimony to their competency and fidelity. For three successive years was the whole nation congratulated on the entire success of this experiment upon the finances of the Government and the currency of the country. Nay, the people were congratulated upon the "better currency," which had been introduced, and upon the reduction of the domestic exchanges from one end of the Union to the other, by reason of the superior advantages and the wiser management of the State banks, to which these duties had been entrusted. If such were the result of the experiment with the State banks, why are we now asked to abandon them, and to try the "untried expedient" of the Sub-Treasury scheme? Why are we asked to adopt a measure which we declared, when it was formerly presented, was "an effort to en-

large Executive power, and put in his hands the means of corruption?" Why are we asked to substitute it for a system which the Secretary of the Treasury at that time declared was "much superior to individual agents of the United States?"

The answer to all this is, that the experiment has failed. Does the failure of the experiment remove the objections which were so strongly urged against the scheme which we are now called upon to adopt? Does it make that scheme less "disorganizing," less "revolutionary?" Does it render the public treasure more safe and less liable to be "plundered?" Does it cease to "enlarge Executive power," and does it take from "its hands the means of corruption?" No, sir, it does no such thing. These objections stand in full force against it. They can not, in the nature of things, be removed from it. Then why insist on its adoption? These objections forbid it, even if the experiment of the State banks had failed. But it has not failed. It has never been fairly tried. The pecuniary pressure and embarrassment which have been felt throughout the United States are without a parallel in the history of our Government. Every class in the community, but more especially the mercantile class, has suffered from the great derangement of the monetary concerns of the country. This derangement has not been confined to us. It has pervaded Great Britain, and, in a greater or less degree, other countries of Europe. Intimately connected as England and the United States are in their commercial relations, any cause which materially affects the one can not fail, in some sort, to affect the other. It is not my intention, on this occasion, to trace the causes of the pecuniary embarrassment which has pervaded both countries. I intend merely to advert to some of the more immediate, and which might, perhaps, be termed secondary causes, so far as they have a bearing upon the alleged failure of the experiment of the State banks. Whilst I agree with the President in some of the causes assigned by him, I do not think he has taken as comprehensive and enlarged a view of them as further examination and reflection would have enabled him to do. But enough has been said to show that the banks could no longer hold out against the pressure which was made upon them, from whatever causes it may have originated. Public confidence had become impaired. Confidence, the very basis of bank credit, as well as commercial credit, was taken from them. The suspension of specie payments was the inevitable consequence. It was without fault on their part. I know they have been charged from a high source with treachery and bad faith towards the Government and the people. Sir, I regret, more on account of the source from whence such a charge comes, than for any other reason, that it should have been made against them. It must have been made from misconception or misapprehension, and not from a real knowledge of their situation, or of the causes which led to the catastrophe so much deplored. Sir, there was no proper effort, on the part of those who could have done most towards it, to maintain the confidence of the community in them. On the contrary, every thing was done to impair it. No sooner had the war against the Bank of the United States ceased, than a war more violent and more unrelenting was waged against the State institutions. Every means was employed to impair the public confidence. They were denounced in our legislative halls and by the public press. They were denounced at public meetings by those who advocated an exclusive metallic currency. The Jacobinical terms of "rag barons" and "rag money" were familiarly introduced into our highest legislative assemblies, and adopted by our highest political journals. The levelling resolutions of ward and town meetings were responded to by men in high stations, who were thereby tacitly assenting to and encouraging the anti-bank as well as anti-social doctrines put forth on such occasions. To cap the climax, the "Specie circular" was issued by the Executive, directing that gold and silver should be received in payment for public lands, instead of the notes of specie-paying banks, as authorized by the joint resolution of 1816. By this act, on the part of the Executive, the confidence of the Government was

withdrawn from the banks, and was a signal to the people to withdraw theirs also. It can not be expected that the community shall maintain its confidence in any institutions when the confidence of the Government is once withdrawn.

The manner in which the Specie circular was issued was another item in the want of confidence which prevailed through the country. It was issued by the Executive after a decided expression of one branch of Congress against the propriety of its adoption. The proposition was introduced by the Senator from Missouri (Mr. Benton) in the shape of a resolution, in April, of the session of 1836, and was rejected by an almost unanimous vote. It was again brought forward the latter part of June, near the close of the session, in the shape of an amendment to some public bill, and was again rejected, and with the same unanimity. Such was the opinion of the Senate, at that time, on this measure, and such was its decision, twice distinctly made. It was considered by every one, too, as a subject for legislative action. What was our astonishment, then, when, immediately after our adjournment, and before we reached our homes, we saw the same measure adopted by Executive authority, which had twice been rejected by the legislative action of the Senate? It is not my intention to examine the power by which the Executive issued this order, and thereby created a distinction between the kind of medium in which different branches of the revenue were to be received. I do not doubt that the Executive acted from the most honest and patriotic motives; and there are those who believe the order operated well, although I am not one of that number. It was intended to diminish the amount of the proceeds of the sales of the public lands. Before its adoption, the amount of sales had rapidly declined, and would have declined still more rapidly without any interference of this sort. But, when this circular was issued, speculation, which had begun to flag, again revived; and I have heard of several well-authenticated cases, where associations and companies, seeing this attempt to shackle the sales of the public lands, and believing that, at the then next session of Congress, the President would recommend to limit the sales to actual settlers, determined to avail themselves of the present opportunity, and purchase more than they otherwise would have done. Such purchases were more extensively made than they would have been if the order had not been issued. No, sir; it did not effect the object of diminishing the sales. They had already begun to fall off rapidly, and would have fallen off still more but for the Specie circular. These large associations and companies had no difficulty in commanding the specie for all their purposes, and with almost as much facility as they could have commanded the notes of specie-paying banks. It was no great hardship on them; but it fell with peculiar force upon the individual purchaser who had merely means sufficient to buy a quarter section. He was compelled to pay a premium for specie, which, according to his means, rendered it oppressive to him. I say then, sir; that this order did not answer a single purpose for which it was issued, but, on the contrary, was productive of great and incalculable mischief. I speak not now of the hardship to individuals; I allude to the general derangement produced by it to the moneyed concerns of the country. The withdrawal of specie from the Atlantic cities, where it was wanted, to the Western and South-western States, where it was not wanted, was the cause of general distrust and alarm. It was ordering it to move against the current. It was commanding it to flow up stream. It was deranging all the concerns of the business community at the East, without producing any corresponding benefits at the West. It was, in fact, injurious to the West. Any effort to force gold and silver from one part of the country to another, contrary to the regular course of business and the laws of trade, is ever productive of injury. Gold and silver, like water, will always find their level. They will go where trade and commerce call them; and if impeded in their regular channel, like a cataract which has been obstructed, instead of irrigating and fertilizing the lands through which it naturally flows, it will carry desolation and destruction to

the whole country, from the accumulated force and pressure which it has acquired. There was scarcely a bank, in city or country, in the Northern and Eastern States, but what felt this constant drain. It thus became the source of alarm, and the lack of confidence thus manifested by the Government became the fruitful source of distrust in the community at large.

This Specie circular became the subject of political discussion at the elections which took place that season. The public mind was agitated. Congress assembled, and immediately took measures to rescind this order, which had been issued against the clear and almost unanimous expression of the Senate, at the previous session. The currency bill introduced by my friend from Virginia, (Mr. Rives,) was intended to rescind it. Sir, it is not necessary for me to recapitulate the circumstances attending the progress of that bill. They are familiar to most of us. Suffice it to say, that it passed the Senate with only four dissenting votes, and in about the same ratio in the House. This bill was retained by the late Executive in the manner and for the reasons which have heretofore been given to the country. I will not dwell on them. There is to my mind no pleasure in the contemplation of them. I could wish that the whole transaction were blotted from my memory. I only allude to it for the purpose of showing its effect on the public mind in reference to public confidence, and for no other purpose. I desire to speak of it in no other light. The attention of the whole country was turned to Congress, and was watching the progress of this bill; and when it passed both Houses by such a powerful vote, new light seemed to beam upon those who were looking to it as the source of relief in maintaining and restoring confidence which had been so much impaired by the issuing and continuance of the original order. But those who expected this relief were doomed once more to disappointment. They had seen that the object was one which peculiarly belonged to Congress; that the only power the Executive had over it was derived from the joint resolution of 1816; and whenever Congress saw fit to resume that power, in whole or in part, they anticipated no obstruction from the Executive branch of the Government. They had read the Constitution as it was understood by its original framers. They had heard Executive power defined as one "*giving effect to the behests of other powers which have a right to command.*" They supposed that the will of Congress, on a subject peculiarly belonging to the legislative powers of the Government, would have prevailed, and that the country would have been relieved from the embarrassment of a measure, about which, whatever difference of opinion might have existed as to its inception, there was none as to its continuance. In this, I repeat, they were grievously disappointed. They nevertheless, clung to the only hope that remained. The citizens of New York, who felt the most intense interest in this matter, knew that on the 4th of March their "favorite son" was to assume the reins of Government; and they believed that in this eventful crisis he would not be unmindful of his native State, whose fate was suspended by the brittle thread of confidence which remained, although attenuated by the adverse action of the Chief Magistrate who had just retired. Sir, after the adjournment of Congress, and when, on my way home, I reached the city of New York, I found "expectation stood on tip-toe." Inquiries as frequent as they were anxious, were made of me as to the probable action of the President in reference to this order. I assured them, from what I deemed satisfactory authority, that it would be rescinded, or would be modified in a way equivalent to rescinding it. Joy and satisfaction beamed on every countenance. Life and animation were restored. Confidence was revived, and the whole business population of the city were ready to exclaim.

"Now is the winter of our discontent  
Made glorious summer by this sun of York."

Sir, whilst thus elated with the prospect of relief, the cup of confidence was again dashed from their lips. The President declined to interfere with the order, which had been handed down by his predecessor as a legacy to him, and left an anxious community in that condition where "hope never comes

that comes to all." Far be it from me to blame the President for the course taken by him. He, doubtless, had reasons satisfactory to himself; and it is not for me to censure, where one acts according to his own judgment, and the dictates of his own conscience.

Sir, I would not be understood as supposing that the rescinding of the Specie circular would have been a panacea for all the evils which then afflicted the community. I know that there were many other causes operating to produce the pecuniary embarrassments under which the country then labored; and I believe, if public confidence had been maintained, the country would have borne even a greater pressure, without the necessity of a suspension of specie payments by the banks. Is this not evident, from what the Secretary of the Treasury states in his report? He says:

"As a whole, their specie, compared with their circulation, continued to be almost as large in May as in November. It averaged more than one to three, or much more than has been customary with the banks in this country, and was over double the relative quantity held by all the banks in England at the same period, and was in a proportion one-fourth larger than that in the Bank of England itself. Their immediate means, compared with their immediate liabilities, were somewhat stronger in November than in May, but were at both periods nearly one to two and a half, or greater than the usual ratio, in the best times, of most banks which have a large amount of deposits in possession."

Where, then, was the necessity of suspension, but from the want of public confidence? With all the elements of prosperity around us, with more than eighty millions of dollars in specie, it is difficult to conceive, notwithstanding any over-action in trade, or in other branches of business, how such a necessity should exist. Confidence may be destroyed or sustained by imaginary, as well as real, causes. It was not material, therefore, whether the rescinding of the Specie circular would in itself have produced the beneficial effects which were anticipated from it. It is sufficient that it was looked to as a source of confidence; and as long as it answered that purpose, it was of no consequence whether it was a real or an imaginary cause of the confidence which it created and sustained.

Sir, I might illustrate my idea by what is generally termed the panic session of 1834. It is now conceded that the causes of the pressure at that time were imaginary—that the removal of a few millions of dollars from one place to another could not, of itself, produce the alarm and distress which followed. The community, however, believed there was sufficient cause for it all, and that was the same as if it actually existed. The distrust which prevailed was extended to our State institutions. There was great apprehension of their suspending specie payments. In this crisis the State interposed and loaned its credit to the banks to the amount of six millions of dollars. No sooner was this done than confidence was again restored, and the State never had occasion to issue a single dollar of the six millions thus proffered for their support.

Had the large amount of specie, about which so much has been heard, been governed in its movements by the regular course of business and the laws of trade, we should not have encountered the evils which are so loudly complained of—confidence would have been maintained, and a suspension would not have followed.

I know, sir, that the banks have been charged with treachery and fraud, and of stopping for sinister purposes. In regard to the banks in my own State, I feel bound to repel the imputation thus cast upon them. I speak from personal knowledge and observation when I say, they stopped not from choice, but from the most imperative necessity. In the city of New York, they were amply prepared to meet all the demands of bill-holders, but they could not answer the demands of alarmed depositors—alarmed not as to their eventual responsibility, but lest, in case of suspension, their funds should be put beyond their control until the liquidation of the concerns of the banks in the hands of receivers. Sir, they held out till the last mo-

ment that prudence dictated, and when they suspended, it was with the approbation of every class of the community. The Legislature of the State, which was then in session, by an almost unanimous vote of both Houses, sanctioned the suspension, and relieved the banks, for one year, from the forfeiture of their charters.

I maintain, then, that these banks suspended specie payments from causes entirely beyond their control, and without fault on their part. If they have over-banked, they have been stimulated to it by the action of the Government, and by the unusually and extraordinarily large surplus in their possession, the evil effects of which were intended to be remedied by its gradual withdrawal under the deposit act. They were urged by the Secretary of the Treasury to be liberal in their accommodations to the merchants, and through them to benefit every class in the community. The public deposits were the means by which these accommodations were to be made. They were used as the Secretary of the Treasury desired, until the banks themselves became alarmed at the consequences which might result from an over-extension, and from the political agitation which would follow it. The evil effects of this large surplus, and which was constantly increasing, were seen by the banks. They were desirous of averting them. And when the question of depositing it with the States was before Congress, some of the principal ones were in favor of the measure. In the course I pursued, I acted under the advice of some of their principal officers; and the very proposition which I submitted to the Senate, in the shape of an amendment, and which was adopted with great unanimity, was suggested by one of them. He said that as long as the moneyed concerns of the country were made the subject of political discussion, so long would the business and mercantile community be in constant agitation and alarm—that this surplus ought to be disposed of, and thus restore peace and harmony in our money matters, which could not be anticipated whilst it remained in its present position. The proposition for disposing of it was that of a business man. It was to deposit it with the States in the ratio of representation; to take their certificates of deposit, in the nature of a stock, redeemable at their pleasure; and that the Secretary of the Treasury should, at any time, for want of other money in the Treasury to meet appropriations made by Congress, be authorized to sell these certificates in the market, and in the hands of the purchaser they should bear an interest of five per cent. This would have been a regular business transaction. It would have required no legislation on the part of Congress or the States to reach the money. It would have been always within the power and control of the Secretary of the Treasury. The States would have had the benefit of it without interest, until it was required for the wants of the Government; and then would have merely provided for the five per cent. interest on that which was sold, and redeemed the principal at their pleasure. It was in this shape that the bill passed the Senate. It was amended in the House for reasons familiar to all who were here at the time, and which it is not necessary for my present purpose to repeat. Had the bill passed as it went from the Senate, we should not now be called on to replenish an exhausted Treasury. The Secretary would, at this time, have at his control the three instalments already deposited with the States, amounting to some twenty-eight millions of dollars. These certificates could, at any time, have been sold, and, once in the market, would have gone very far towards liquidating our foreign debt.

Sir, I am aware that the execution of the deposit act was a source of inconvenience, and, in some instances, of embarrassment, at those points from which large sums were to be transferred. But much of this inconvenience and embarrassment arose from the manner of its execution. I will not undertake to say how far the Secretary of the Treasury, under the provisions of this act, and under the general authority of this Department, could have made the transfers other than he did. But I will say, if they had been made as a mercantile man would have made them, they would have materially aided the domestic exchange of

the country, and would have promoted, instead of deranging, the regular business of the community. I am aware, too, sir, that some were opposed to this act, on account of the necessary withdrawal of a portion of these funds from places where they had been loaned out by the banks. Such do not reflect that, if this law had not passed in 1836, thus giving a year to the banks to make their arrangements to comply with its provisions, the next Congress would have made a similar disposition of the surplus, which proved to be much larger than many had predicted or anticipated. The inconveniences of such a disposition of it, after the banks had used the accumulated fund for another year, would have been much greater than those which were experienced under the law as it passed. But I do not intend to go into the merits of that measure. I have merely alluded to it from its connection with the banks, and to show, that if the use of this surplus was one cause of the suspension of specie payments, by reason of its alleged over-issues on their part, they were stimulated to it by the action of the Government itself. The suspension, therefore, was not the result of treachery or bad faith on the part of the banks, but was the result of circumstances over which they had no control, and of the destruction of confidence produced by no fault of theirs.

These banks are now as able, with the aid and confidence of the Government, to perform all the duties required of them, as they were before. We have the testimony of the President and of the Secretary of the Treasury that they performed them as well as the Bank of the United States. They are capable of doing the same again, in the same way. I am not, therefore, prepared to say that, on account of the calamity which has befallen the country, the experiment has failed, and they ought not to be employed a second time. No, sir. Such a catastrophe may not occur again in the course of a century. One reason assigned for it now was the existence of an enormous surplus in the Treasury. This cause is not likely to exist hereafter, for every man is willing to bring down our receipts to the measure of our wants, and under that, as a general rule, such a catastrophe might never happen again. The banks have abundance of means to meet all their engagements. Such being the case, all that is necessary is to create confidence, to restore confidence, and they will be found able to perform all that is required of them. Let that confidence be extended to them by the Government in good faith, and let them be placed on their former footing. Let the Government pursue a system which has been tried, and which we know will prove effectual, instead of attempting an "untried expedient," the disastrous consequences of which can not be anticipated, and which I fear imagination can scarcely depict.

This new experiment consists in a "divorce of Bank and State." This is a mere catch phrase, which was originally introduced by artful and designing politicians, to impose upon the credulity and honesty of the people. Many have adopted it without reflecting or inquiring as to its import, or its consequences. First impressions are favorable to it; it summons to our recollection our early impressions of a "divorce of Church and State." But it is the duty of wise statesmen and discreet politicians to consider well the evils which must follow the adoption of any system heretofore untried and of doubtful policy, however euphonious the phrase may be which designates its character before the people.

The proposition contained in these few catch words strikes at the very foundation of the credit system of the country. It does not stop with the destruction of bank credit, but strangles in its withering grasp commercial credit also. It establishes a depreciated paper currency for the people, and an appreciated specie currency for the incumbents of office, and for Government contractors. It gives the baser currency to the master, and the "better currency" to the servant. In a Government like ours, it is impossible long to preserve our institutions or our liberties if such distinctions are to prevail. It separates the Government of the people from the people themselves, as if those whom the people have chosen to direct their affairs

were of a superior order, or distinct class in society, endowed with peculiar privileges beyond the rest of the community. It has a tendency to alienate the affections of the people from the Government. They will come to consider it not as a Government identified with their feelings and interests, but as something foreign to them. This is not all. The Government itself will lose, in a measure, the idea of dependence on the people. This want of dependence is too much felt already. Put this additional power into its hands, and the identity of interests which exists, or ought to exist between them, is done away.

The Senator from North Carolina (Mr. Strange) admits that the people will, under this system, have a depreciated currency, whilst the Government will enjoy the benefits of gold and silver, whatever they may be. But he says they make that currency for themselves—they need not take it except at their own option. Sir, it is the common, ordinary currency of the country. It has hitherto been good enough for the Government, for the people, for us all; but now, by your own act, you depreciate it, and, after making it the worse currency, you leave it to the people, and take the gold and silver to yourselves! The result is, that you give to the servants of the country a kind of money worth more than the people's currency. You isolate the Government, so that it becomes no longer a part of the people. You reverse the relation which has always existed between them. The Government becomes the master, and the people become the servants. By this means the salary of every officer is raised several per cent. according as specie is more valuable than paper; and this difference, too, created by your own act! Sir, it is a distinction which will not be tolerated; and those who undertake to make it will find in the end that they have presumed too far on the want of intelligence, and on the subserviency of the people of this country.

But the project does not stop here. It does not merely give to the people a depreciated currency, but, by and by, they will be deprived of any currency which will be adequate to carry on the business of the great and diversified interests of this community. Under this system the specie of the country will be drawn from circulation, and from the vaults of the banks, where it is the basis of circulation and of confidence, and deposited in these Sub-Treasury vaults, till the country is left without a sufficient circulating medium to transact its ordinary business. The farmer, the merchant, the manufacturer, and the mechanic, will be unable to command the means to pursue their ordinary avocations. No matter what their property may be; they may be rich in houses and lands, in goods and merchandise, in manufactures and machinery, in materials, in tools, and implements of trade; nay, they may possess the best of bonds and mortgages, and every species of stock which has heretofore been deemed equivalent to money, and still they will be unable to carry on their ordinary business for want of a circulating medium by which to transact it. Credit is the poor man's capital, as well as the auxiliary of the rich. Deprive him of this, and his habits of industry, his character for probity, his good name and reputation, avail him nothing. He has no means by which he can rise above the ordinary occupation of a day laborer. With a growing family, and the increased expense of living, he is doomed to abject poverty, without the slightest hope of ever gaining that standing and condition in society which a "well-regulated credit system" always holds out to the enterprising, the honest, the industrious portion of the community.

Sir, this Sub-Treasury scheme strikes at the very root of our prosperity. It not only separates the Government of the people from the people themselves, but, in its practical operation upon the credit and currency of the country, it reduces the price of labor—it depresses every species of property. The farmer who has given \$5,000 for his farm, and paid \$4,000, will have it sold from under him to pay the \$1,000 which remains due on it. The day laborer will be compelled to receive shillings where he formerly received dollars. Such will be the practical effect of this scheme if carried out to its legitimate consequences. Why then adopt it, when it must result in disasters which no

imagination can paint? It will carry home to the business and bosoms of the community "a spectacle of horror which can not be overdrawn." Let no one be deluded with the vain hope of better times under such a system. The scenes of trial through which the country has passed are mere holidays compared with what will follow its adoption. The great distress has hitherto been confined to our commercial cities and manufacturing towns. Those scenes will be renewed. That hope which has hitherto sustained them will become extinct. That little confidence which remained will be taken from them. By the action of the Government the banks will be compelled in self-defence to call on their debtors. They will be unable to give farther indulgence. Business must, of necessity, be brought to a stand, and one universal bankruptcy ensue. The distress which has heretofore prevailed in the large towns will extend to the country. The farmer will find no market for his wool, his grain, and other products, or, if he does, it will be at a price which will not pay the cost and labor of production. The merchant will be compelled to suspend business, the manufacturer to close his establishment, the mechanic to dismiss his hands, and the laborer to go without employment. I warn the country, and the farming interest in particular, against these Utopian schemes, which will sap the very foundations of their prosperity and of their hopes. By this scheme, the confidence of the Government is not only withdrawn from our banking institutions, which furnish a currency for the people; but, by receiving nothing but gold and silver in the payment of public dues, the very basis of the currency which remains is withdrawn also. Thus the people are left to return, comparatively, to a state of barter, whilst their servants are enjoying a currency vastly increased in value by the very depreciation and deprivation of the other. It is a scheme to make the RICH RICHER, AND THE POOR POORER.

But, sir, why this warfare against the banking institutions of the country? For, disguise it as you may, it is no more or less than a war upon the whole banking system. Gentlemen may not be willing to avow this; they may not intend it. I feel well assured that the President does not so intend it. But, I will venture to say, that if a scheme was devised for the express purpose of subverting the entire banking system of the country, it could not be more skillfully planned than the one which is now under consideration. It meets the cordial approbation of those who have all along been in favor of abolishing all banks—and for the very reason that it is so well calculated to accomplish that object. I shall endeavor, at the proper time, and before I conclude my remarks, to show how this is to be effected.

Sir, I am aware of the prejudices which honestly exist with a portion of the community against any thing like "associated wealth." I am aware how easily those prejudices may be wrought on by demagogues and designing politicians. But those who are sent here to legislate for the great interests of the country should be extremely careful how they minister to such prejudices. Whilst it is admitted that the banking system has its evils, its superior benefits nevertheless recommend it to the candid consideration of every statesman and patriot. It should be his object to correct the evils and retain the benefits. "Preserve and regulate, but not destroy," should be his motto. It has existed and been recognised from the earliest foundation of the Government down to the present time. It has been identified with the interests of the Government. These institutions, in some shape or other, have been employed by the Government during that whole period. It is through their agency and instrumentality that these much abused and despised merchants have been enabled to pay into your coffers the vast amount of revenue which has sustained you in peace and in war. Yes, these very merchants who have been represented as men not to be relied on in times of peril—whose patriotism is in their ledger, and whose field of glory is their counting-room—men who are the most forward in the pursuit of gain when all is peace and quiet, but who shrink from responsibility when danger presses. Sir, I have for a long time looked

with horror upon the the ruthless warfare that has been carried on against the mercantile interest. I have seen with alarm the attempts which have been made to set up other portions of the community against them. I have heard them branded as swindlers for collecting their honest dues at home, and as traitors for paying their honest debts abroad. Sir, the interests of all classes in this country are reciprocal. Neither the farmer, the manufacturer, the mechanic, nor the merchant, can get on advantageously the one without the other. But it is to the merchant more especially that the Government must look for the immediate means of support. It is the merchant that stands between the Government and the consumer. It is the merchant that shoulders the responsibility, and pays into the Treasury the enormous amount of revenue which keeps the whole machinery of Government in motion. It is the merchant that maintains the credit of the country abroad, by the scrupulous fidelity with which he endeavors to meet all his engagements. In short, the character of an American merchant is a passport through any country in the world. And still this class of citizens, that command universal respect abroad, can not be relied on in times of peril at home! Sir, in what period of our history have the merchants been obnoxious to this charge? None were more patriotic during the revolutionary war: none contributed their means more largely or more freely. And who, let me ask, occupied a prouder position during the late war? When the credit of the Government was at its lowest ebb, who furnished the means to carry on the war? The merchants. When the Government wanted money, and could not command it on its own responsibility, who stepped in to its assistance, and provided a credit on which it could be raised? The merchants. Yes, sir, when your troops were famishing for want of supplies, and disheartened for want of pay; when you could not raise a dollar on your own credit, it was the merchants, through these much traduced and vilified banks, that took your depreciated paper which had no currency with the people, and gave their own in exchange, in which the country had confidence. Sir, I am tired of these incessant efforts to excite one portion of the community against the other. There is no class to whose patriotism you may not appeal when the country requires their services. The agricultural interest, from the very nature of their employment, will always stand pre-eminent. But it is to the merchants, more than any other class, that you are to look for the ready means to aid you in time of war. Sir, they have always responded to your call. They were never found wanting in the most perilous periods of your history. Whatever of glory, or of honor, or of prosperity this nation enjoys, it is indebted in no small degree to the patriotism of the merchants. They have contributed their full share towards establishing your national character at home and abroad. They will continue to sustain it, until their broken and subdued spirits shall think it no longer worth preserving.

Sir, the great desideratum in this as well as in every new country is CAPITAL to carry on its business. This can not be found to the extent that it is desired. In our own country we have all the substantial elements of prosperity: with an extent of territory surpassing the proudest kingdoms of Europe, with every variety of soil and climate; with popular institutions, and a free Government, and combining all the advantages which make up the sum of a people's happiness and a nation's greatness; we lack but the capital necessary to bring all these elements into life and being. This can only be obtained by well regulated banks and by paper credit—credit is the only substitute for capital in a new country. Old countries, where capital has been accumulating for ages, may more easily dispense with it; but a new one, like our own, can not do without it. Look to western New York for its magic influence. See it in a few years converted from a wilderness to fruitful fields. Look to the western States, now exhibiting the proud evidences of a rapid and progressive improvement, where but a few years since there was no trace of civilization. By its means the whole country is more than half a century in advance of what it would have been without it. This system of cre-

dit has heretofore been appreciated by our own people, and I trust it will continue to be appreciated by them, notwithstanding the efforts that are making to undervalue it, and eventually to prostrate it. It has been, perhaps, still more appreciated abroad than by us. It has become the admiration of all Europe. For a time the infant strides of our young and growing Republic astonished the world. The old Governments of Europe saw us springing at one bound from childhood to the manhood of our existence. They saw that credit was the nurture of our infant growth, as well as the support of maturer years. To this cause some of the ablest writers of Great Britain attribute our unparalleled improvement in all that renders a people prosperous and a nation powerful. I can not forbear, on this occasion, to quote the language of one of them:

"Every body knows that the States of the Union embrace a territory, most of it of the highest fertility, equal to the surface of all Europe, including Russia, on this side of the Ural mountains, about eighteen times the whole area of France, and thirty times that of the British Islands. In this immense territory there is a population of about twelve millions of men, almost all active, industrious, and energetic, doubling every thirty years, and capable, if sustained at the same rate of increase, of producing, in two centuries, two hundred millions of human beings, in comfort and happiness. What then is wanting to sustain the fortunes of a State in such unparalleled circumstances of abundance? Nothing but CAPITAL. This, however, is indispensable; and it is obviously impossible, even with the most industrious, saving, and active population in the world, that the existing wealth can be proportioned either to the boundless extent of waste land capable of cultivation, or the constantly increasing wants of a growing and indefatigable People. It is in such a State that the utility of banks and paper credit is most strongly felt, and that a paper circulation, based on sound principles, becomes an indispensable element in the progress of social improvement.

"Banks are the great instrument by which integrity and talent supply the want of capital; by which prudence and industry, setting out on the basis of paper credit, attain, at length to the solid advantages of substantial capital. Such a system quadruples at once the active capital of the country, by producing a paper capital based on credit, which, as long as that credit remains unshaken, answers all the purposes of encouraging industry just as well as the metallic treasures of Mexico and Peru. It prevents a large portion of the national wealth from being absorbed in the unprofitable and unproductive form of a metallic currency, and provides for the necessary circulation at a fifth part of its cost. Old States, in which capital is redundant, and all home employment nearly filled up, may dispense with a paper currency, just as the finished scholar may discard the rudiments, or the accomplished equestrian forget the lessons of the *manège*; but till that last stage has arrived, it is the greatest act of national insanity to destroy or restrain, except within those limits which the public safety requires, the invaluable ally of a paper circulation. It has quadrupled, in the last half century, the wealth of Scotland, and multiplied tenfold that of America. But for the powerful impulse given by the advances of bankers, and the large capital which they put in motion, the industry of the United States, instead of having long ago crossed the Alleghany mountains, and given birth to four millions of men in the valley of the Mississippi, would have been still slowly advancing along the shores of the Atlantic, and not yet have pierced the profound solitudes of the Ohio or Missouri."

"And it is apparent that such establishments, if rightly understood, are eminently favorable to the progress of freedom, and the real interests of the working classes. Capital—solid wealth—is ever essentially aristocratic. It never can be very generally or widely diffused, at least in large masses; and, therefore, banks which lend a helping hand to enterprise and activity in the earlier and more eventful periods of their career, and enable them to maintain the struggle with other establishments,

having the advantage of long-tried connections and realized wealth, are eminently favorable to the popular classes, and the best support to the cause of liberty. Without banks, a commercial State must ever speedily fall, and has fallen, under the domination of a few overgrown mercantile establishments; industry and activity can never maintain their ground in the competition from want of capital. The banker with his notes has done as much for the cause of freedom, as either the printer with his printing-press, or the schoolmaster with his grammar."

To this authority permit me to add that of the philosophic and liberal democratic French traveller, Mr. CHEVALIER:

"Credit is the primary element of life in the United States; they literally live on it. Without credit, those populous towns which arise on all sides, as if by enchantment—those rich States which fringe the margin of the Atlantic, which stretch to the west of the Alleghany, and extend along the course of the Ohio and the Mississippi, would have been still savage forests and bottomless morasses. \* \* \* \* The banks have acted as the lever which has enabled the Americans to establish among themselves, to their own great profit, the agriculture and industry of Europe, and which has covered their territories with cities, canals, railroads, manufactories, and fertile fields; in a word, every thing which constitutes civilization. Without the banks the cultivator would have been destitute of capital for his most necessary advance; he would have had no instruments for the clearing of his farm; and if the system has led in many cases to absurd and gambling speculations, it is the same system which has enabled the farmer to purchase land for two dollars the acre; which he afterwards sold for ten or a hundred. The mechanics who are now so loud in their condemnation of the banking system, forget that it is to that they owe the industrial activity which has enabled them to earn from five to eight shillings a day of wages. They forget that it is it which has furnished them with the means, of which so many have availed themselves, of rising to opulence and comfort; for, in America, every enterprising man who can give the guaranty of a tolerable character, is sure of obtaining credit, and thus has the means of making his fortune."

Such are the views of enlightened foreigners in regard to the banking institutions of our country. I know the system may be abused. No one is more desirous or more anxious to correct those abuses than myself. No one would go farther to throw around it additional restraints. No one is more solicitous to enlarge the specie basis, and thereby render more stable our paper circulation. But it is this indiscriminate assault upon the whole banking system of the country to which I object. It is this attempt to excite the prejudices and passions of the people in regard to them to which I am opposed. It is this spectre of an exclusive metallic currency which still flits the vision of certain gentlemen, against which I protest. For, disguise it as you may, "to this complexion we must come at last," if the schemes which are now on foot can be carried out. But they can not be carried out. There is a physical impossibility to their success in a country like ours. Still I am unwilling that the country should pass through such an ordeal. I am unwilling that the present generation shall be killed off for the sake of making a doubtful experiment for the benefit of posterity.

Sir, I was surprised to hear the Senator from North Carolina, (Mr. Strange,) condemn our whole banking system as an utter absurdity, and which he predicted would be looked upon, by those who come after us, with as much astonishment as we look upon the South Sea bubble. In this enlightened age, at this late period of our history, after what we have seen of the effects of the credit system upon the country, with the evidence, of our own senses, and the testimony of all Europe in favor of it, I confess my amazement at hearing such sentiments uttered on this floor. I have not language, consistent with the high respect which I entertain for that honorable Senator, (Mr. Strange,) to express my astonishment; and I, therefore, can only say:

"'Tis Strange, 'tis passing Strange!"

The tendency of this scheme is to bring the country, virtually, to an exclusive metallic currency. Whatever gentlemen may say on this subject, this wild and visionary theory is gaining ground with a certain portion of our population. It is propagated by reason of the countenance which it is supposed to receive from men in high places. Meetings have been held in New York and elsewhere, at which an exclusive metallic currency has been resolved on as the only true policy. All paper money of every description has been repudiated, as contrary to the genius of our Government and the spirit of our institutions. In the same resolutions, men in elevated stations have been applauded by name for maintaining the same doctrines. The proceedings of such meetings have been responded to in terms of approbation, thereby tacitly acquiescing in all the principles set forth in them, and thus giving currency to them with the people. It is the belief that such principles are recognised by those to whose approval they are submitted, that excites the alarm and apprehension which pervades the rational and thinking portion of the community. It is this, too, which gives countenance to the idea that the Sub-Treasury scheme is intended to bring about an exclusive metallic currency. The suggestion of the Secretary of the Treasury may also go far to confirm it. He says:

"The people of the whole United States do not, in a sound state of business and prices, need over one hundred and ten millions of an active circulating medium for all their currency. This would be a larger proportion of currency to our present population than the average has been from the adoption of the Constitution; and, if an *exclusive metallic currency* could be deemed desirable, would require only about thirty millions more than the specie which is supposed now to exist in the country."

It is true, the Secretary does not recommend this, but, under the present state of things, thinks "some paper will, probably, always be found convenient for commercial operations." Still it will be perceived, that if, by this scheme, or any other, banks can be dispensed with, then, in the opinion of the Secretary, we should, with thirty millions more of specie, be able to transact the thousands of millions of business of this rapidly increasing and enterprising country. Those who make such estimates seem to overlook the fact, that the notes of banks and specie together form but a small part of our actual circulation; for, in one sense, domestic exchange is a portion of the circulation, and a very large portion too, very far exceeding the aggregate of bank notes and specie. This kind of circulation is essentially promoted by bank facilities and bank credits. So that, by dispensing with banks, although you should have the hundred and ten millions of specie, you would curtail, to a most destructive extent, the domestic exchange, which, after all, forms the principal circulation.

But whether an exclusive metallic currency be intended or not, this scheme will, if adopted, virtually accomplish that object. I will take the city of New York, for example. My remarks will apply, in the ratio of business, with equal force to every other portion of the Union. New York collects about three-fifths of the whole revenues of the Government accruing from customs. They have amounted, in some years, from fifteen to eighteen millions of dollars. But let us assume the year 1834, which the Secretary takes as the criterion for future years. In that year, the receipts at New York for customs amounted to some twelve millions of dollars. Now, I ask, how is it possible for the merchants of that city to pay that amount in specie? In what way can they command it? Even if they could procure it, it would be by withdrawing it from circulation from other parts of the country, or by taking it from the banks where it is the basis of circulation, as well as the basis of confidence to depositors. If this amount of specie was to be disbursed immediately after its receipt, that would, in a measure, obviate the difficulty, so far as New York is concerned. But it is not so disbursed. We all know, as a general rule, that of the appropriations for the year, there remains sometimes one-half of the amount in the

shape of "unexpended balances," at the close of the year. Of course there must remain a large amount of the money which is received into this Sub-Treasury unexpended. This amount, therefore, is taken out of circulation, or from the banks, and does not again go into circulation nor into the banks. The receipts are much greater and more rapid than the disbursements. So that there must remain a large sum on hand which can not be disbursed. Let no one, then, be deluded with the idea that this is to be a constant round of receipt and disbursement. It is no such thing. I have examined the statements of the amount standing to the credit of the Government in the deposit-banks in 1834. I find the permanent average balances to be about five millions of dollars; when, at the same time, there was not half that amount of specie in the vaults of all the banks in the city. Here, then, we see five millions of dollars, in the shape of permanent average balances, beyond all disbursements, "salted down" in this Sub-Treasury vault, of no more use to the Government or to the people than if it was cast "into the bottom of the deep, where fathom line has never reached the ground." Sir, it is impossible that this system can be carried into effect in the city of New York. The merchants can not command the specie; and, if they could, it would be drawing it from distant parts of the country, and the vaults of the banks, by which the whole course of business would be disturbed and deranged, from New York to the remotest points of the Union. I have said that about five millions of dollars would remain as a permanent average balance in deposits beyond the disbursements of the Government. Of the amount of twelve millions collected at New York, according to the above estimate, about seven millions would be disbursed. But even this disbursement is not made where the money is collected. In 1834, in the whole State of New York, only \$1,650,000 was disbursed within its limits. We here have the astounding fact, that while the city of New York pays \$12,000,000, and \$7,000,000 of that sum is disbursed, only \$1,650,000 is paid out within the State. I am not complaining that a larger sum is not expended there, for those expenditures must be made where the interests of the country require them; but I am complaining of the proposed system, by which you require this enormous amount to be paid in specie, when so small a portion of it is paid out where it is collected. But it is better that it be disbursed elsewhere than not disbursed at all. And we have already seen that about \$5,000,000 must remain in permanent deposits, beyond the amount disbursed, and thus be buried, like the talent of the unprofitable servant, where it is of no use to the Government nor to the people, but of detriment to both. But once adopt this burial system, and where will you find the resurrectionary power that can call back to life the hourly increasing deposits in this fiscal charnel-house?

It is said, however, by gentlemen, that this money belongs to the Government, and that the people have no right to the use of it. Is this not an additional evidence of the attempt to separate the Government from the people? Is this not the money of the people? How does it become the money of the Government, as contra-distinguished from the people? The Government or the officers of Government are the agents and servants of the people. They are mere trustees to execute certain powers committed to them; this money is collected from the people by direction of the people themselves, not for the purpose of being hoarded up, but to be used for their benefit in the disbursements of the Government, and to promote the great interests of the country. To hoard it is contrary to the spirit of our institutions, and more especially when its custody and control are given to Executive officers, where it may be used for sinister purposes by unworthy incumbents. Such a principle has never attained before in this country; the surplus revenue collected from the people, beyond the wants of the Government, has always been placed in a situation to be used for the benefit of the people. This has been done by depositing it with the banks, which have undertaken, in consideration of it, to perform certain duties to the Government, in the way of collections, transmissions, and disbursements, without

charge. This fund thus deposited, beyond the regular disbursements of the Government, became, through the banks, a useful agent in the regular commercial business of the country. It is collected from the merchants, and it is perfectly proper that they should, in this indirect way, have the use of it in their regular business transactions. By this means the whole community feels the benefits; for, whatever aids the merchants in their operations, must of necessity aid, in the regular course of business, every other class in society. The merchants are the mere factors or distributors for the other classes. They are the agents, and any benefits extended to them are for the advantage of their principals. Sir, this idea of locking up this money is a new one. It has not prevailed heretofore; its adoption now, however, is no more strange than the proposed system which is under discussion. It naturally results from it, and the one can not be carried out without the other. President Jackson, and all the friends of his administration, opposed the Sub-Treasury scheme in 1834; and in 1836, President Jackson, in his Message, expressed his opinion as to the use of the public money, in which all his friends acquiesced. He said:

"To retain it in the Treasury unemployed in any way is impracticable. It is, besides, against the genius of our free institutions to lock up in vaults the treasure of the nation. To take from the people the right of bearing arms; and put their weapons of defence in the hands of a standing army, would be scarcely more dangerous to their liberties than to permit the Government to accumulate immense amounts of treasure beyond the supplies necessary to its legitimate wants. Such a treasure would doubtless be employed at some time, as it has been in other countries, when opportunity tempted ambition."

Has any thing occurred since 1836, which has altered the nature of our free institutions, so that it is now in accordance with their genius to lock up the treasure of the nation, which was so contrary to it then?

Sir, I feel humbled to hear such principles avowed. I feel mortified to see some of my political friends taking a position directly the reverse of the one we have all along occupied in relation to this whole subject. If we were not committed on the record, we might more easily change our ground; or, if it was a mere matter of expediency, we might tack about without such an accumulation of obloquy and reproach as must now rest upon us. We have heretofore treated these questions as matters of principle. We put ourselves on the record, in some shape or other, against the very doctrines for which we are now contending. And from President Jackson down to the humblest member of the party, we are committed, in the most explicit manner, against the whole scheme and all its consequences, which we are now called upon to support. No party, I will venture to say, ever placed itself in so unenviable a light. How can we expect to be sustained by the people, when our solemnly expressed and established principles one day are repudiated the next? How can we expect the people to embrace one set of principles one day, and the reverse of them the next? Sir, it can not be. You must appeal to their reason. You must satisfy their judgment, and adhere to your principles when once established. The great body of the people are honest. They ask nothing—they want nothing but wholesome laws, and a faithful administration of them. But they will not be content with such fickleness of purpose as requires them to maintain opposite doctrines at every alternate election.

Sir, I need not describe the effect of this measure on the whole country. If the banks in New York are embarrassed in their operations by it, every branch of business must be embarrassed. Those portions of the country where there is the least capital, but which have substituted credit in its place, will feel it most sensibly. To western New York, and to the western States, it will be like a mildew. What would have been the situation of those regions, but for the free use of credit? What will their situation when credit shall be withdrawn from them? Let western gentlemen look to it. Those States are to come in for the full share of suffering in the course of this new experiment. The money collected for public lands is to be paid in specie; but very little of it is disbursed there. There will, therefore, be a constant drain upon the western States for their specie in the disbursements of the Government; thereby deranging all the regular business operations of the country, and keeping the public mind in constant agitation and alarm. If the money was disbursed at the places respectively in the same proportion as it is received, the evil would not be so great. It would still be deranging the natural flow of specie by arbitrary regulations, and taking it from the banks, where it is the basis of circulation.

The effect of all this upon the general credit of the country can not be fully appreciated. Our currency has generally been of about the same character and value with that of England. We should endeavor to keep it of the same value. England is the great money market, and the great money regulator of the world. Our institutions assimilate more to this than to the other portions of Europe. We are intimately connected with England in our commercial relations, and our intercourse with her is more frequent and more easy than that between many portions of our own country. Her currency, therefore, has an important bearing upon ours. The prices of property depend much upon it. It would be the height of folly for us to adopt any measures which should curtail or sink our currency below hers. It would bring on a ruinous depression of prices, and affect the interests of every owner of property throughout the country. You might as well attempt to establish a metallic currency in one of the States of this Union, whilst all the others maintained a paper circulation, as to do any thing which should materially change ours from what is the general currency of England. I know, sir, that appeals are made to the prejudices of the people against paper money. But see what it has done for England. It has enabled her to fight the battles of the world; for a quarter of a century she relied on an irredeemable, inconvertible paper currency, and successfully resisted the conqueror of Europe. It has given her a moral influence which is felt throughout all nations. It has secured to her own people more practical liberty than is enjoyed in any

other country except our own. In time of war, the banking institutions of England, like our own, are identified with the interests of the country. Ours are dependent on the people, and so is the Government. In such a time, we are all embarked in the same bottom, and it is idle to say that there is any diversity of interests between the Government, the banks, or the people. In the experience of this country, during the late war, our banks fought our battles as much as the Bank of England fought the battles of Europe.

Sir, I can not but look at the effects of this system upon the city of New York as of the most fatal tendency. It must tend to curtail the operations of the banks, and add to the general stagnation of business. Already are more than fifty thousand of her population out of employment, with all the horrors of an approaching winter before them. Unless something is done to revive the business of that city, that number will be doubled, and no one can forego the consequences of such a state of things. Nothing is now wanting but the favorable action of the Government to change the whole face of things. But the evils to that devoted city do not end there; they necessarily extend to the country. If you cripple the operations of the banks there, and thereby cramp the business of the city, the same effects must be felt by the banks and business of the country. For you can not strike a blow at New York without its being felt in a greater or less degree in every State of the Union. New York is the grand commercial emporium; like the heart, its pulsations are felt to the remotest extremities; and whenever it ceases to beat, the whole limbs of this great body politic will become cold and lifeless.

These effects will be felt by the local banks of the several States, the stock of many of which belongs to the States themselves. If gentlemen, then, have no regard for individual stockholders, they ought to look to the interests of their respective States where the stock of the banks is thus held. This remark would apply to Pennsylvania, North Carolina, Alabama, Mississippi, Louisiana, Tennessee, Kentucky, Indiana, Illinois, and Missouri. [Mr. BAXTON signified dissent.] The Senator from Missouri (said Mr. T.) shakes his head. He may have a system of banking there different from all the rest of the world, namely, that of issuing only one dollar of paper for one specie in the vaults of the bank. If this be so, I would not willingly deprive him of the benefits of his system! But, whilst I will not object to such a Procrustean bed in Missouri, I will not consent that it shall be transferred to New York, and that the honorable Senator shall stretch our man upon it, and lop him off at both ends, in order to fit him to his standard.

Sir, another serious objection to this measure is, that it will postpone, perhaps indefinitely, the resumption of specie payments by the banks. There is no portion of the community more anxious for such resumption than the banks themselves. They have done every thing in their power to enable them to do it at the earliest possible day. They have determined that, as the stoppage was no fault of theirs, so neither shall the omission to resume be charged to their account. All that is required to enable them to resume by next spring, is the confidence and co-operation of the Government. Our foreign debt is estimated by some at about twelve millions of dollars at this time. This will be liquidated by the coming crop, and then there will be nothing in the way of the resumption by the banks, but the want of confidence on the part of the Government and the people. Without the co-operation of the Government, this confidence can not be anticipated. If you make your collections in gold and silver, it seems to me impossible that they can resume. I have heretofore shown your current receipts into the Sub-Treasury in New York to be, in ordinary years, about twelve millions of dollars, and that about five millions, after all the disbursements of the Government, will remain as an average balance in deposit. Let it be remembered, too, that, at about the time proposed for them to resume, there will be due on the merchants' bonds some five millions more, and which, under this "experiment," is also to be paid in specie! Now, sir, let me ask, how is it possible, under the present state of things, that the banks can resume, when, by the last returns, the aggregate amount of specie in their vaults is less than \$1,800,000; and, in addition to the accruing revenue, there is to be five millions provided for the merchants' bonds? If this scheme shall be adopted, they can not resume. Let it therefore be distinctly understood, that it is the fault of the Government, and not theirs, if they do not resume by the time I have indicated. They can not command or retain the confidence of the community, as long as the Government not only withholds from them the legitimate means which it possesses in the restoration of confidence, but withdraws from them their specie, which is the very foundation of confidence when once restored.

But, even if the banks should resume, they will be compelled, under this system, to stop again. The drain of specie from them to meet the exactions of the Government would render it impossible for them to continue. They must either suspend all business, or they must suspend specie payments. Either event would be equally disastrous. In either case, it would be death to the whole business of the country. If they should suspend specie payments again, after having resumed, the Legislature would be appealed to grant no farther indulgence, but forthwith to forfeit their charters, and put their concerns into the hands of receivers. If the prejudices of the community could be sufficiently wrought on, such would be the consequence. Any one who foresaw the effect of such a course last spring, if the Legislature had not interfered, can judge of the disastrous results of such a proceeding now. And that such would be the inevitable result, if this measure of separating the Government from the banks and the people be persisted in, no one can doubt. I will not say that gentlemen who advocate this scheme design to accomplish that object, but I do say that, if a scheme was devised for that express purpose, it could not be more adroitly planned.

If the banks do not resume—and it is certain they can not and will not—if this system is carried into effect, what will be the consequence? It is alarming to contemplate! The worst passions of ignorance and men, of men waked up to a blind fury by false views and false representations, will be let loose, and they would be called upon to destroy the "little monsters" which would be made to appear to their maddened zeal as the nuisances of the community! The banks throughout the country, though sound and solid institutions, will be obliged to fall under the violence of the tempest which will be made to rage against them. This will be the inevitable effect of such measures as are now proposed. If it should so happen that the State Legislatures do not come to their aid, exhibiting more wisdom to wards them than Congress seems disposed to exhibit, the results I have pointed out will inevitably happen, and they will have to wind up their affairs! Again, let me ask, what would be

the effects of this unhappy result? The effects are too alarming, too distressing to make it creditable that there exists the man willing to inflict so much suffering upon his countrymen! The people of the State of New York, for example, are indebted to the banks more than sixty millions of dollars: there are abundant means to pay; but in the hands of receivers all would be sold, and the property would be sacrificed; the receiver would buy the whole, as no one would have the means to buy. Can it be believed that gentlemen wish to see a scene such as this? My State (said Mr. T.) is so deeply concerned in the effects which will flow from this measure of the Government, that I can see already as plain as the sun at noonday, that it would even be better for the country that a tornado or an earthquake should spread its desolation around, than that we should have this scheme inflicted upon us!

Why bring forward such a system as this, when, by the testimony of the President himself, and this Secretary of the Treasury, the State bank system worked so well? Such a crisis as the present may never again occur: it is an exception to a general rule; and who will not acknowledge that a worse guide for legislation than exceptions to general principles could not be procured? Again: what is there in this new system better than in the State bank system? What improvement has it met with since the day when it was held in the utmost abhorrence; when it was denounced by the party, and when it would only command thirty-three votes in the other house? How is it now suddenly discovered to be so much better than a system which, by the declaration of the best authority, answered all our anticipations? When this very same scheme was brought forward in 1835, we all of us believed that the public money would not be safe in the custody of officers of the Government: what reason is there now to change our minds, and to think that it will be safe there? But the President says we can construct a vault as firm, as strong, and as solid, as the vault of a bank. Yes, certainly, (said Mr. T.) we have no deficiency of mechanical means to make such a one; but who are to be its guardians? And though the vault may be secure, can we be certain that the guardians will be as solid and secure, and as well to be trusted, as the vault? What security, sir, can we have for individuals? Whereas, when the money is deposited in banks, all the credit and capital and resources of those banks are pledged for the safety of the deposits, and are a certain guaranty of their safety! Such is the security afforded by the banking system; but by the Sub-Treasury system, we have nothing but the naked, bare security of individuals! And who can tell, sir, what sort of an individual this may be? What honest man will be eager to throw himself into a situation of such danger, such temptation, and such immense responsibility? Who that has a proper appreciation for his family and children, would be willing to assume duties of such a dangerous character? If the vault was plundered, he, let him be ever so innocent, will be immediately pronounced guilty: though once he is a ruined man, his family ruined, his name a mark for disgrace, and himself an object for the finger of scorn to be pointed at! No prudent man, who has a proper regard for his character and reputation, would be found ready to accept such an invidious and dangerous post.

But the President informs us that, on an average, there will not be above thirty thousand dollars as the sum to be placed in the custody of each officer. This is a most fallacious idea. It is true, if you take all the officers, and then strike an average, it might be that no more than that sum would fall to the share of each to take care of; but there must be large amounts concentrated at a few particular points, and it is not in the nature of things possible to spread out the whole revenue in such equal portions throughout this extensive Union. Or, if the average was to be forcibly maintained by removing the excess above the thirty thousand dollars from one officer to other officers in other places, who can tell the disturbing effects which would follow from such transfers? I am surprised, therefore, that any one for one moment could linger upon this idea, as affording an argument for the safety of the public money under this system. We are told again that we have other pledges for the safety of the funds, in the sureties which each officer will be required to give to the Government, for the funds committed to his care. I look upon the sureties to be given as affording no security whatever. Men will not be found ready to sacrifice their property, and abandon it all to the Government, in payment for what they have neither eaten nor drunk; and when they put their property out of the reach of Government, they will only be praised for their care and prudence, by the people of their neighborhood. What security, then, is afforded on this ground? Not an atom!

Gentlemen are very anxious, apparently, for this divorce, as they are pleased to term it. I would remind them, however, that whilst they are talking of a divorce, they are getting up an incestuous union between members of the same family—a marriage which is unlawful, and which, I would say, comes within the Levitical degrees, and, therefore, ought to be forbidden.

This union which is now proposed is a most unsafe and dangerous one. It reminds me of an anecdote of a captain of a packet with whom I was acquainted, who informed me that he always found it indispensably necessary for the safety of the ship's stores, to have his cook and his steward of different families, and if possible, of different colors, and if he could get up a fight between them, it was all the better; for if they were connected together in a common bond of interest or affection, the stores were apt to be wasted. So here, I think, our stores, the stores of the ship of State, will not be safe if a union takes place between the Government and the public Treasury, which ought to be separated in different sets of hands, and those, too, antagonistic hands.

The officers to be employed under this system, so far from being antagonistic to the Government, are officers appointed by the Government, entirely dependent on it, and who may be removed by its fiat at any moment from their offices. There is positive danger in the scheme. All the deposits of the public money, all the Treasury, together with the other Executive powers, will now be united in the same family, and in the same hands. I see no security, but absolute insecurity, absolute danger, in the proposed system. But let us consider the chances of security which the system offers for the safety of the public moneys. The Senator from North Carolina tells us the public funds will hardly fail to be safe, for if the officer should appropriate them to his own use, he may be hung up by the neck, until, to use the forcible repetitions of that gentleman, he is dead, dead, dead! What security is there here, sir, when the money is already gone? Will the dead body answer any of the purposes of security? Or does the gentleman really imagine that the penalty of death itself will prevent the possibility of defalcation? Does not

the experience of all countries show that the severest penalties do not operate as preventives of crime of any kind? We have only to look to our own country for illustrations of the insufficiency and insecurity of the proposed system. What, for example, is thought to be the best system for the collection of the tolls on the New York canals? It is the system of deposits with the banks. The money is rapidly brought into the banks, and the least possible means are left in the power of the collectors. The great mass of the funds collected are, therefore, always on deposit in the banks, which credit the government with the amount. It is owing to this system of removing responsibility for such large sums of money from individuals, and reposing it upon banks, that, from the very first period of the formation of the canals down to the present moment, the State has not lost one single dollar of the canal funds, though millions and millions have been collected. If the system were proposed in the State Legislature to take the personal responsibility of the officers employed in the collection, together with security, such as is proposed to be done by the present scheme, it would not be able to command a single vote! How, then, can it be here maintained by gentlemen that such an objectionable plan, rejected altogether by prudent and experienced legislators, is the best plan, and ought to be adopted? There is a law now on the statute book that certain discharging officers shall deposit whatever public funds come into their hands in the bank nearest to them, until required to be paid out. Whence comes the necessity of such a law? Why does the law exist, if penalties and securities make the money as safe as when deposited in the banks?

The truth of my position is illustrated by the financial history of the Government. In 1820, Mr. Crawford, then Secretary of the Treasury, reported that the amount of revenue from customs, from the commencement of the Government to the end of the year 1819, exceeded \$351,000,000. He also states that the amount of revenue lost by the insolvency of those who became bound for the payment of duties, together with the amount at that time doubtful, was not quite equal to forty five hundredths of one per cent. upon the aggregate revenue which had accrued since the organization of the present Government! Yes, sir, the whole loss to the Government upon merchants' bonds and their sureties in the collection of more than \$351,000,000, was less than one-half of one per cent. and this enormous amount was principally collected through the agency of the banks. Yet, it is these merchants and these banks that have been so much disparaged in our public discussions, as well as in the public prints. Mr. Crawford also states in the same report that the amount of loss from the collectors of revenue from imports and tonnage, from the collectors of the internal revenue and direct tax, and receivers of public moneys, nearly equals that which the Government sustained on the collection of more than \$351,000,000 from the merchants! He also estimates that the losses, by the misapplication of the public money by officers of Government employed in disbursing it, greatly exceed those which have been incurred in the collection! Sir, these statements present a most appalling forecast of what we are to expect under this Sub-Treasury scheme. If collectors and receivers, and disbursing officers, have swindled the Government of such enormous amounts, whilst the money was merely passing through their hands, what are we to expect when they become the permanent depositories?

Every fact goes against the system as proposed by this bill, and at the same time every fact goes in favor of the system which it is now suddenly proposed to cast aside! Can it be possible that gentlemen wish to expose the Treasury as it will be exposed by this scheme? I do not wish to disparage our public officers or those who may be employed under this system. But, I look at human nature as it is. I look at the temptations to which they are exposed. The confidence of individuals in their own integrity may be unbending, and they will never suspect it till put to the test of such temptations as will be presented under this system. I mean no unnecessary or improper disparagement when I say I have no faith in the safety of the public money if this scheme goes into operation. There is danger in every stage of it, and no opportunity will pass unimproved where the temptation is sufficiently presented. There is no safety in it.

"You may as well spread out the unsund'd heaps  
Of miser's treasure by an outlaw's den,  
And tell me it is safe, as bid me hope  
Danger will wink on opportunity."

So far from there being no danger in the plan, there is no safety in it. But, in the other, there is the absence of danger.

It has been argued that the public money, by being placed in deposit with the banks, goes to assist them, and the gentleman who has advanced this idea thinks that it ought not to be so. But I affirm, on the contrary, that it is right and proper that the public money should answer so useful a purpose—should go to promote and assist the objects of the commerce of the country. The people are entitled to this benefit. But if you take away all the specie from the vaults of the banks, you take away their means; they will not be able to do any thing; and not only will they lose the advantage of operating with the amount deposited, but you take away confidence from them, and they can do nothing.

It is objected against the system of depositing the public funds with the banks, that they operate injuriously as a means of stimulating to speculation and overtrading. There is, however, a bill before you which will effectually prevent overtrading. I mean the warehousing system bill, by which merchants will pay the duties in cash, not on long credits, but on receiving their goods from the public warehouses. The danger of over-action, in reference to importations, will be by this system removed, as the merchants will have to pay the duties, not, as under the existing system, after the goods have been thrown into market and disposed of, but at the period of bringing them into the market, so that they will not import fresh quantities of goods before the duties are paid on former importations.

Why do gentlemen wish, after the experience of a good system, to adopt a new experiment? For, let it be remembered, the banking deposit system has worked well, and the present crisis is truly an exception to a general rule. You might as well say, when a steamboat had burst its boiler, that we ought in consequence to abandon the use of steam, and in place of it try the experiment of balloons. The consequences would be, we should come down again to our mother earth with broken bones, or with a broken neck. Such, indeed, will be the result of the adoption of this scheme.

There is no other mode to enable the banks to resume specie

payments than the mode proposed by the Senator from Virginia, (Mr. Rives.)

This amendment will create confidence, and when confidence is revived, they will be able to resume. That time is not far distant, if the confidence of Government was not withdrawn from them; but if the measure of this bill is carried into effect, it will be impossible for them to resume.

With respect to the subject of Executive patronage, it is not my intention to detain the Senate with any remarks upon this part of the scheme. What the Senator from Virginia has said upon it is forcible and conclusive on this point. Let us, however, bear in mind that we are not now legislating either for the present or for the past, but for the future. I apprehend no danger from the present Executive. In him I have perfect confidence. I have known him from early manhood, walking within the bounds and limits of the Constitution. But the day may arrive when the chair of the Chief Magistrate may be filled by an individual ready to abuse his trust, and then our action will have furnished him with the means and the power.

Mr. President, this is a most important crisis in the affairs of the country. I wish other gentlemen could appreciate it as I do. We might then avert the evils which are impending over us. Sir, we are asked to adopt a system which, I fear, will prove most disastrous in its results, if carried into execution; but which I apprehend it will be physically impossible to execute. I will not attempt to describe the consequences of such a state of things. I hope my anticipations may not be realized; but I look forward to the consummation of this measure with the most painful forebodings; and I shall be happily disappointed if it does not involve the people, the country, and its institutions, in one great and common calamity.

### SPEECH OF MR. LEGARE, OF SOUTH CAROLINA.

*In the House of Representatives, October —, 1837—*  
On the bill imposing additional duties, as depositories in certain cases, on public officers.

MR. LEGARE said:

MR. CHAIRMAN: I do not know how I can more appropriately begin the remarks I am about to make, than in the very words with which a most able English writer, addressing himself to the causes and character of the recent crisis, concludes his: "The events, (says Mr. Samuel Jones Lloyd, in a pamphlet published last spring,) which have occurred in connexion with the late pressure upon the moneyed and mercantile interests, are full of instructive illustrations of the effects, both beneficial and otherwise, of our present system; and the evil consequences of this pressure will be as nothing, compared with its benefits; if, amongst these, we shall be enabled to reckon an increased degree of intelligence upon subjects connected with currency, and a nearer approximation to sound principles in the management of our paper issues." The revolution, it is true, has been far more disastrous on this side of the Atlantic than in England; and yet even at its darkest period—now, as I confidently believe, passed away to give place to returning prosperity—I found consolation in the idea, that dearly as we were buying our experience in this important matter, the price would not be too high for the benefits we should ultimately derive from our reverses. A national visitation ought to be considered as a great providential lesson. It teaches the most momentous truths, and it teaches them in the most impressive manner, and what we have recently seen and felt will dispose us—if any thing can dispose us—to look the difficulties, with which this subject is surrounded, fairly in the face.

Sir, it is surrounded with difficulties. Even in England, as you perceive from the citation I have just made, they are felt and acknowledged by the most able men. I have upon my desk many other proofs of the same fact. They abound, for instance, in the minutes of evidence taken before the committee of the House of Commons on the renewal of the charter of the Bank of England, in 1832. You will find there, that while high authorities\* agree in thinking that there should be but one bank of issue for the capital, at least, if not for the whole country; the representatives of the great commercial and manufacturing interests, on the contrary, protest against the continuance of a monopoly to which they impute the most sinister influences over their immense business; and demand a system of joint-stock banks, regulated by principles more agreeable, as they contend, to the course and policy of trade. A third party insists upon the

necessity of compelling all banks of issue to give adequate security to the public, (in Government stock, &c.) for the redemption of their issues; while every stockholder or partner shall continue to be, as at present, responsible for all the debts of the company, to the whole amount of his private fortune. A fourth, (and I have just received from London a little volume in which that opinion is most plausibly maintained,) urges the most unlimited freedom in banking; and sees no more danger to society from perfect liberty in this, than in any other branch of business; the supplying, for example, the market of a great capital with the necessities of life. § In this complexity and distraction of English opinion upon this subject, however, all parties agree in one thing, and that is, in adhering to the paper system. Nobody there thinks of any thing so extravagant as the overthrow of that system, whatever defects may be seen or supposed to exist in it, or whatever projects may have been imagined to purify, to correct, and to improve it.

But if such is the state of English opinion in regard to this subject, how must it be with us, when to all the intrinsic difficulties of the thing itself, we add those arising out of the complicated structure of our political institutions? It would be hard enough to say what ought to be done, in the present emergency, were this a simple consolidated Government, but how much harder is it to advise the administration of a Federal Government as to the course it ought to pursue, where one happens to doubt its possessing all the power necessary to give complete relief, without a co-operation of others? For, sir, at the risk of being set down in that category of "tiny politicians," of whom the gentleman from Maryland, (Mr. W. Cost Johnson,) in a very amusing speech, in the course of which, however, he uttered some grave and important truths, spoke last night with such profound contempt, I must confess I agree with the Executive in the general principles of constitutional law involved in the message. In the division of the attributes of sovereignty between this Government and the States, it may and must happen, that we should experience sometimes a chasm, and sometimes a conflict of powers. More is taken from the States, perhaps, than has been given to the confederacy; neither can do enough, while each can do too much, for perfect harmony; defects, discrepancies, and contradictions, exist in the scheme itself, detected only in a long course of practice; and which nothing but practical skill, the wisdom called for and called forth in the management of great affairs, especially political affairs, can reconcile and rectify. Undoubtedly the task is an immensely difficult one—but it must be undertaken, and it must be done. The subject before the committee is an example of the high and difficult duties I refer to; nor can I imagine an occasion better fitted than this to awaken the house to a lively sense of its infinite responsibilities to the country.

Judge, then, sir, with what deep disappointment and regret, I learned that the bill on the table was to be pressed upon us at this short session. It is quite enough for me, that it proposes a great innovation upon the whole course of the Government, from its foundation up to the present moment, and upon all the habits of our people. They who see deeper or clearer into such matters than I do, must pardon me for declaring that I cannot, conscientiously vote for the measure in such haste. If I had no positive objections to it, it would be quite enough for me, that I have not had sufficient time to reflect on it. During this extraordinary session, (for so it has been in every sense of the word,) fatigued, harassed, exhausted, by incessant attendance, by night and by day, in this hall, it has not been in my power to inform myself on any subject as I could have wished to be able to do. I have had absolutely no time for minute research, hardly a few hours for calm reflection. Under such circumstances, I cannot vote for the bill. I must go home to my constituents and talk with them. Many, perhaps most of them, understand these

matters better than I do; but when I left them, although this subject had been discussed, and ably discussed, here and there, by an individual or two, public attention had not been awakened to it; and nothing like an opinion—certainly no opinion favorable to the principle of the bill—had been formed in regard to it.

And here, sir, I might take my seat again, if I had risen only to explain my own vote, or to influence those of others, on the proposed measure. But the true issue seems to me very far to transcend, in importance, that single measure, important as it unquestionably is. It involves, in my opinion, the whole CREDIT SYSTEM of the country. I do not say that the bill on your table presents that issue, still less that the Executive message presented it, or propounded any principle or opinion that should lead to it. But no one who has watched the progress of this discussion, in this House or in the Senate—in or out of this Capitol—will deny that it must soon come to that. Sir, if there is any truth, at all, in what has been urged with great ability and all the zeal, I had almost said, the fanaticism, of the deepest conviction, by men accustomed to influence, nay, even to control public opinion in different parts of this country—if they have any idea of rigorously carrying out the principles they profess, to their logical consequences, in practice—if what they say in the highest places, on the most solemn occasions, is not such idle declamation as such men are not to be suspected of—they mean that, and nothing short of that. Doctrines have been uttered, with all the authority which can be imparted to paradox from talent ripened by experience, which seem to me inconsistent with the constitution, not only of American, but of all modern society, with its whole spirit and tendency—with all its wants and all its ways. I have, sometimes, in the course of the debates, looked around me to see where I really was—whether the shade of some old lawgiver, some Minos or Lycurgus, had not been evoked, to bring a degenerate age back to the stern principles of Dorian polity, to an agrarian equality of property, to iron money and black broth; or else, if it were not, the spirit of Benedict or Bernard, returned to the holy solitudes of Monte Casino, or Cluni, or Cîteaux, to preach to a world lost in vanity and pleasure, the blessings of poverty and mortifications of the flesh. Now, sir, it may be true that luxury, according to the old saw, is the ruin of States, and that sumptuary and agrarian laws are necessary to maintain your true Spartan discipline. But I am excessively disinclined to try any such experiment upon my constituents; at least without receiving an express instruction, to that effect, from them. I am afraid they have no taste for black broth; that Spartan discipline will be irksome, and even revolting to them. In short, sir, I have reason to believe, that without being as deeply imbued, perhaps, as other people are, with the spirit of the age, they do still partake too much of it, to be willing to forego the many agreeable objects that principally engage and excite it.

Sir, I am far from denying, that in the eyes of a stern reformer, with opinions of a certain complexion, this generation is a perverse and crooked one. We love money, I admit, as much as men ever did—certainly as much as they did in the Augustan age, nearly two thousand years ago. The committee will excuse my quoting a very common piece of Latin to prove it, after the example of other gentlemen in this debate.

*Querenda pecunia primum est;  
Virtus post nummos—Hæc Janus summus ab imo  
Procedit.*

Make money by all means, and before all things. Washington street certifies it to Wall street, and Wall street declares it to Broadway, and Broadway proclaims it to Chesnut street, and Chesnut street publishes it to the whole country. We have the same strong thirst for gold which has unhappily afflicted mankind in other times, and especially in very civilized ages; and the only difference is, that we have learned how to acquire, by honest means, a thousand times more of it. I will add, however, in justice to the age, that it has made a great discovery in social philosophy. We have found out that, what I would call physical civilization—a demand for the conveniences and accommodations of

\* Messrs. Horsley, Palmer, Tooke, Rothschilds, &c.

† Messrs. Burt, Smith, and Dyer, of Manchester. It is worthy of remark, that these remonstrances were admitted to be well founded by the change which, in consequence of them, was made in the law, in reference to joint-stock banks beyond 65 miles from London.

‡ Messrs. Ricardo, Macculloch, Norton, (the minutes, &c., just cited.)

§ Money and its Vicissitudes in Value, by the author of the *Rationale of Political Representation*, and *Critical Dissertation on Value*, &c. (Mr. Francis Bailey.)

life, and an abundant supply of them—is, and must be, the basis of all other civilization, that is intended to be high, solid, and lasting. Every real improvement in the condition of mankind springs out of, or leads to, the elevating of the *standard of comfort* among a people. Sir, this is the grand work—the mission—of modern commerce, which, in my opinion, is just beginning to develop its mighty resources—to pour out the inexhaustible fulness of its treasures, and its blessings. A great revolution is taking place—has taken place, in human affairs. War is every day becoming a more and more remote contingency. I do not say an impossibility. I know human nature too well for that. I am fully aware, too, how many disturbing causes, growing out of the history of the past, still exist to prevent the realizing, all at once, of the great end of Christian civilization, the dream of Henry IV, and of Sully—the union of all nations in a state of peace under the protection of law. I know, especially, what is to be dreaded in this respect, from that dark power that hovers over the confines of Europe and Asia, and throws its vast shadow over both. But during my last residence of four years abroad, I saw sufficient grounds of quarrel, to have led, under the old order of things, to twenty wars, as spreading and bloody as the thirty years' war, or the seven years' war—and yet these threatening differences passed harmlessly away, cloud after cloud dissolved as they rose above the horizon, leaving the sky more serene than before. Sir, it is a favorite phrase of those who boast of what is called the "march of intellect," that things are thus changed because the "schoolmaster is abroad." But I tell you that something far more effective than the schoolmaster, a mightier than Solomon, is abroad. It is the STEAM-ENGINE, in its two fold capacity of a means of production and a means of transport—the most powerful instrument by far of pacification and commerce, and therefore of improvement and happiness, that the world has ever seen; which, while it increases capital, and multiplies beyond all imagination the products of industry, brings the most distant people into contract with one another—breaks down the barriers which exclusive legislation would oppose to the freedom of mercantile exchanges—effaces all peculiarities of national character, and promises, at no distant period, to make the whole Christian world, at least, one great family. Sir, the social effects of this great instrument of modern improvement, have been singularly promoted by a branch of industry in which the part of the country I have the honor to represent is most deeply interested; and I will avail myself of this occasion to call the attention of the committee to a view of our southern institutions, that may not have occurred to it before, or made the impression it ought to make upon them. I beg you, sir, to believe that I do not speak in what is called a "sectional" spirit; for I protest before God that nothing can be further from my heart. But, let not those whose minds have been recently so much inflamed, against what they consider as the abomination of domestic servitude, shut their eyes to the truth. Sir, I allude to the cultivation of cotton, and its effects, through the commerce it fosters, upon the condition of society. Whoever shall write the political history of that invaluable plant, will have a more important work to perform than has ever fallen to the lot of a biographer of statesmen or philosophers. I will venture to say, without going more into details, that the single circumstance of bringing the wonderfully cheap fabrics produced by modern machinery, within the reach of even the humblest of the laboring classes, of substituting decent and comfortable raiment for the few scanty and filthy rags—the squalid exterior, which makes poverty not only more painful, but at once more humiliating and degrading to its victim, and more disgusting to others than it ought to be, will signally contribute to elevate the condition of the poor in the social scale—to raise their self-esteem, and to increase the sympathy of others for them—in a word, to make them feel themselves men; entitled to a place among men, not pariahs and outcasts, whose contact is contamination. A people well clad and well housed will be sure to provide themselves with all the other comforts of life; and it is the diffusion of these com-

forts, and the growing taste for them, among all classes of society in Europe—it is the desire of riches, as it is commonly called, that is gradually putting an end to the destructive and bloody game of war, and reserving all the resources hitherto wasted by it, for enterprises of industry and commerce, prosecuted with the fiery spirit which once vented itself in scenes of peril and carnage.

But, sir, the result of all this is, that very inequality of wealth, that accumulation of vast masses of it in a few hands, against which we have heard so much said lately, as if it was something inconsistent with the liberties, the happiness, and the moral and intellectual improvement of mankind. Gigantic fortunes are acquired by a few years of prosperous commerce—mechanics and manufacturers rival, and surpass the princes of the earth in opulence and splendor. The face of Europe is changed by this active industry, working with such mighty instruments, on so great a scale. I have travelled in parts of the continent which the spirit of gain, with its usual concomitants, industry and improvement, has invaded since the peace, at an interval of fifteen years, and been struck with the revolution that is going on.

There is a singularly beautiful, though rather barren tract of country, between Liege and Spa, where, in 1819, my attention had been principally attracted by the striking features of a mountainous region, with here and there a ruin of the feudal past, and here and there a hovel of some poor hind; the very haunt of the "Wild Boar of the Ardennes," (see *Quentin Durward*) in the good old times of the House of Burgundy. I returned to it in 1835, and saw it covered with mills and factories, begimed with the smoke and soot of steam-engines; its romantic beauty deformed, its sylvan solitudes disturbed and desecrated by the sounds of active industry, and the busy hum of men. I asked what had brought about so great a change, and found the author of it—a man having a more numerous band of retainers and dependants than any baron bold of the fourteenth century, and in every respect more important than many of the sovereign princes on the other side of the Rhine—was an English manufacturer, who had established himself there some twenty years ago, without much capital, and had effected all this by his industry and enterprise. Such, sir, is the spirit of the age; of course, in this young and wonderfully progressive country, it is more eager and ardent, and therefore occasionally extravagant, than any where else. But it is in vain to resist it. Nay, I believe it worse than vain. It is evidently in the order of nature, and we must take it with all its good and all its evils together. The great design of Providence, in giving to the most active and enterprising of all races, a new world to possess, to build up and to adorn, are not to be thwarted by our policy, even if we thought it good policy to thwart them; all the instincts of that race would revolt at a system which would disappoint its high destiny.

Mr. Chairman, I have made these general remarks, because, as you will have perceived, they have a direct and important bearing upon the collateral issue presented by the advocates of this bill, though not in the bill itself, as something to be accomplished hereafter. In a country so much governed by opinion, it is all important that opinion should be enlightened; and errors uttered by distinguished men in high stations, and surrounded with whatever talent can contribute to render them seductive and imposing, cannot, without public detriment, be suffered to pass unnoticed. On this occasion, as I have already intimated, it is far less the measure proposed, than what I consider as the *quo animo* of its advocates here and elsewhere, that has excited my alarms and my opposition. But I have objections, which I will now proceed to state, to the policy of the bill itself.

There are two very distinct questions presented to the committee. The first is, shall the revenues be collected only in gold and silver; the second, how shall they when collected, be kept and disbursed; shall *sub-treasuries* be established by the Government, or shall banks be employed for that purpose as heretofore—and if the latter course be preferred, then shall the banks be allowed the use of the public deposits, or shall special depositories

only be made with them. It is very evident that these propositions have no necessary connexion with each other, and that either of them may be approved or rejected, by those who do not reject or approve the other.

As to the collection of the revenue in specie, my objections are by no means so strong, or I should say so vehement, now, as they were at the opening of the session, when gold and silver were selling at a premium of nine or ten per cent. At that time it appeared to me that such a measure would have been a mere wanton act of oppression upon the people of the States, for no earthly good purpose whatever. It would have been simply authorizing usurers and money brokers to lay upon the importers, and, through these, upon the consumers of foreign goods, that is to say, upon the public, and especially upon the planters of the south, a tariff of duties, in a good degree arbitrary, for their own benefit, and that of the functionaries of the Government. Believing, as I did and do, that the paper circulation of the country, from the great and sudden contraction in consequence of the panic, was rather too much reduced than redundant, I confess, as I said on a former occasion, I could not see that justice, at least that equity and good conscience, made it imperative upon us to resort to so stern a measure; especially, as the idea of furnishing, by that means, a broader metallic basis for our circulation, had proved itself to our very senses, to be completely fallacious. We all now see, that not a dollar collected by the Government, and disbursed by its creditors, circulates for one moment as money, but is carefully hoarded, and sold as merchandise; and that it will continue to be the case, so long as, from any cause whatever, exchanges shall be unfavorable to the country, is equally evident.

I admit, that since the fall of the price of gold and silver to five per cent., this objection loses somewhat of its weight, but it loses none of its truth. The same law of currency now operates, though in a mitigated degree, to make it an objectionable measure to repeal the act of 1816, and so to discredit, *pro tanto*, all bank notes in perpetuity. Yes, sir, to organize panic and perpetuate distrust, so far as your example has any weight. And why do so? What apology have you to make for an act that certainly requires one? What public occasion, what pressing exigency requires it? The message puts the subject, I admit, in a very specious and captivating form; it supposes the case of a war, and the Government to find its whole treasure suddenly turned into bank credits; and we are asked whether such a thing could be borne. But admit that, in case of war, the Government would be driven to that, and any other measure, of equal or even greater severity. What then? Does it follow that such a system should be unnecessarily adopted in time of peace? But the truth is, that even in time of war, it would make less difference to the Government, than is generally supposed. Certainly, some of its operations, distant naval expeditions, and the like, would require gold and silver, and they must be had, at whatever price, from within or from abroad; but, after all, with such credit as that of the United States now is, it is impossible to imagine that the nation should be embarrassed, even for a single moment, by the failure of its banks to pay some millions in gold and silver. Look at England, in the eventful period between the suspension of payment in '97, and the peace of 1815. It is now universally confessed, that that measure, and that measure alone, boldly empirical as it was once thought, enabled her to sustain the burdens of that terrible conflict, and to achieve a triumph worthy of her generous constancy under misfortune. I do not, therefore, see how even the necessities of war would compel Government, abounding in such resources of public credit as no other Government ever enjoyed, to resort to a measure so novel, so harsh, so inconsistent with the established order of things in the country, and with all the habits of the people.

But the great objection with me, is that which appears from a passage quoted by the gentleman from Virginia, (Mr. Garland,) to have presented itself to Mr. Dallas, in 1815. You will do some harm by refusing bank paper; considering how

little specie there has ever been in this country, you may, by requiring it to be paid to you in a large amount annually, make it always an article of merchandise; you will thus permanently discredit bank notes, and render impossible the restoration of their convertibility. But that is not all; even should this mischief not ensue, you at least, by thus rejecting them, to the whole extent of your transactions, abandon the currency to its fate, under the administration of the States. You make no efforts, you exert no influence, to maintain its purity and uniformity, by distinguishing between corporations which redeem their notes, and those which are notoriously insolvent. You proclaim your distrust of all of them alike; you write it in your statute-book; however disastrous the condition of the monetary concerns of the States may be, through want of skill, or want of concert, you leave them to themselves, and that, when standing in the most intimate and the most commanding relation towards them, you might, if you gave yourselves the least trouble about the matter, exercise a most salutary control over them, and remedy those great inconveniences for the benefit of us all. For, sir, it is not enough to say you have no power, strictly so called, under the constitution, to regulate the currency. I admit that you have none. What then? Have you no influence—influence of example—influence of precept—influence of authority—influence of patronage—influence of connexion and custom in business, in the use of these very depositories? Has not the constitution provided that all defects in our institutions shall be corrected by amendments regularly recommended and introduced, and is it not one of your duties so to recommend and introduce them?

Why do you not urge upon the States any reform you may judge necessary in the matter? I appeal to every one that hears me, what he should think of an individual, who, possessing immense influence in a community, with an income of many millions a year, should, in a time of trouble, coolly withdraw himself from society, and hoard his money, like a usurer in a commercial panic, waiting until the extreme necessities of his neighbors shall throw them upon his mercy? Is this the morality we are taught in our private relations? Shall nothing be expected from him to whom so much has been given? Shall he hide his light under a bushel? Shall he bury his ten talents in the earth, and escape condemnation as an unprofitable servant? And shall that be right in a Government, which, in a private person, shocks the moral sense of all mankind? in a Government standing towards the people of this country in relations so very peculiar? Sir, what answer would you have to give to the States, if, in a moment of public calamity, like that which is just passing away, feeling their distresses aggravated through your harsh exactions of what their people had not to give, appealing in vain to you for succor or for counsel, they were to hold to you the language which indignation and astonishment would naturally inspire, under such extraordinary circumstances? If they were to say to you, "We have done every thing to exalt and to magnify you—we have clothed you with authority and awe—we have armed you with mighty powers, with the axes and fasces of supreme jurisdiction—we have surrounded you with all the glorious equipage and pomp of empire, endowed you with a vast treasury, with fleets, armies, senates, judges—that palace, these gorgeous domes—this *capitolium fulgens*—what for? that you should renounce all community of interest, all sympathy with us? that there should be no ties of affection or of duty between us? that you should ostentatiously proclaim yourselves, as your worst enemies have sometimes alleged that you are, a *foreign* Government in the midst of our country, and even avail yourselves of a moment of cruel revulsion and calamity, to make us feel that you are so in spirit and in truth?" Sir, I do not know, I cannot conceive, how such a course should fail to strike every body as a perversion of all the eternal obligations of morality, which are, and ought to be, as binding upon communities, as upon the individuals that compose them; how gentlemen can, at such a moment as the present, entertain, without emotion, the strange proposition, that this Government should

bury itself, like Sardanapalus, in a selfish repose, a degenerate and inglorious indifference to all the interests of the country: or, if I can make such a comparison without shocking them too much, that, like Nero, it should fiddle while Rome is burning.

Agreeing, then, sir, with the Executive in the principles laid down in the message, I differ with it in the practical inferences deduced from them. In the division of power between the Government and the States, I think with it, that all that is required to meet this emergency, has not been given to the former. But the inadequacy of our powers is no excuse for not exerting them to the uttermost for the public good, especially as there is reason to think that the convention did not foresee the present state of things. We can do much, if we cannot do every thing. The occasion calls only for a good will, and a moderate share of practical ability; and I have no hesitation in saying, that among the existing banking institutions of the country, can be found ample means of accomplishing the two great objects of restoring specie payments, and maintaining hereafter, in all ordinary times, a convertible currency, which is all that we can expect to do.

Sir, I do not wish to be misunderstood. It is of the utmost importance that the paper of the banks should not only not in fact be depreciated, (as I believe is actually the case,) but should be able to stand the only sure, and, to the public at large, satisfactory, test of that fact; I mean *convertibility* into specie. I am fully aware that the accident of a failure in the means of making their payments in the precious metals, is one against which, according to the course of modern commerce, there can be no complete security; and that nothing can be more absurdly exaggerated, than the importance attached to that occurrence, by persons not familiar with the principles of banking, when it happens in consequence of an extraordinary demand from abroad, or a sudden panic within. Nay, more: I admit that the most usual effect of a great revulsion in trade, is, to throw much paper out of circulation; to contract the currency, and so to bring down exchanges and prices, and raise the value of the money that remains in the hands of the public. But a suspension of specie payments, though it may not be a present evil, is always fraught with danger. It is the indispensable duty of a statesman to put an end to it as soon as possible, either by encouragement or by compulsion. It is for this, among other reasons, that I so cheerfully acquiesced in the issuing of Treasury notes; inasmuch as it relieved us from the necessity either of directly refusing to take the paper of the banks at par, or, by receiving it, (as we might otherwise very safely have done,) of betraying those companies into an impolitic enlargement of their issues, before the balance of payments had been turned in our favor—as I hope it will be, by the coming crop. I regarded it as an excellent temporary expedient, for avoiding, at present, this choice of evils. So far, I think nothing more unfounded than the general charge of insolvency against all our banks, which is so inconsiderately uttered by the press, and in debate, as well as the assertion repeated over and over again, on this floor, that the country is laboring under an excessive and depreciated currency. It is not yet so; but it will, I fear, very soon be so, if the banks do not make an effort to return to specie payments in the course of a few months. Now is the time to do so: now that their issues are contracted; that importations have been checked; that exchanges are become more favorable; and that the great southern crops are about to be sent forward to make them still more so. Let every one interested in the fate of these institutions, as well as in the commercial prosperity of the country, exert whatever influence he may possess, to bring about that result; and to deliver the banks from the temptations to dangerous excess, to which the return of an active and prosperous business will inevitably expose them, if they do not, once more, lay themselves under the restraint of convertibility.

Sir, should they unhappily take a different course, and should this Government, after using all its influence and authority, to establish the currency of the country on a better footing, fail of success in

its most zealous endeavors, I admit that it may be driven to the necessity of taking care of its own business and creditors, by independent legislation of its own. There is no doubt that a variously depreciated currency cannot be tolerated as the settled system of the country. The ports of one State cannot be preferred to those of another, in this way, any more than by an express statute to that effect. Nor can the public creditor be justly paid in money really depreciated.—I mean not in reference merely to gold and silver, which are themselves liable to great fluctuations in value, but to the general mass of commodities that compose the conveniences and necessities of life. The effects of a redundant currency, when once they begin to be distinctly perceived, are counteracted by a general rise of prices. Money is twice as easy to be got, but you have to pay twice as much for every thing which it buys. But there is one class of persons who have no means of indemnifying themselves by raising the nominal value of their property or their claims. It is the class of those who live on fixed incomes—annuitants, fundholders, functionaries of States, pensioners. They are paid a certain sum, and with every diminution in the value it expresses, they lose just so much of what they are fairly entitled to. In this view of the subject, therefore, it is quite clear, that Government is under the highest of all moral obligations to see that their dues be not paid them in what is really worth a great deal less than it purports to be.

What I have hitherto said relates to the first question propounded by the bill on your table—shall gold and silver only be received in payment of Government dues. As to the second inquiry, sir, whether the revenue shall be kept by officers of our own, or by the banks; and if the latter, whether in the shape of special or general deposite, so much has been said, and so ably said, upon that head, against the system recommended by the message, that I am very little disposed to trouble the committee with any additional remarks in regard to it. Were I driven to make a choice between the two plans referred to, I should, as at present advised, greatly prefer that of a special deposite, on a small commission, as at once the safest, the cheapest, and most simple—as departing less from our previous customs, and not being so liable to the great practical objection of going permanently to increase the already enormous and disproportionate influence of the Executive power, which, beyond all doubt, far exceeds any thing that was anticipated by the founders of the Government, and seriously threatens to disturb, if not to subvert, the whole balance of the constitution. I need not say that I have no reference whatever to the present, or any other individual incumbent. I speak of the operations of great general causes, and of a system, whose effects are almost entirely independent of the will of man. Another very grave objection to the scheme reported by the committee, is its resemblance, or, at least, its fearful leaning to that of a great political Bank of the United States, of which a justly celebrated report of one of my predecessors, upon this floor,\* demonstrated, some years ago, the dangers and inconveniences, as I have always supposed, to the universal conviction of the people. But although I should prefer the special deposite system to that of the Committee of Ways and Means, I am not yet prepared to adopt it. That immense benefits have been conferred upon the country, by adding to its productive capital, the large amounts of public money which would otherwise have lain dormant in the Treasury, does not admit of a question. I will venture to say that in the course of the half century that has elapsed since '89, countless millions have been the fruit of this truly paternal and beneficent system. Our predecessors, Mr. Dallas among them, seem to have been deeply impressed with

\* Mr. McDuffie. Report of the Committee of Ways and Means, in 1831. Mr. Gallatin remarks of this system of sub-treasures, presented as an alternative to a Bank of the United States, in his celebrated pamphlet on that subject, that "with the exception of the power of receiving private depositories, the object of which provision is not perceived, this is precisely the species of national bank which has been suggested in the President's last message, (1820)." The question whether the purchase of drafts would, as we think, be a charge on the Treasury, or prove, as seems to be expected, a source of profit, is one of secondary importance. It is sufficient to observe that the issues of the State banks could not, nor indeed is it expected that they could, be checked by this plan.

this view of the subject. They seem to have felt themselves bound to render our system of taxation, which, even in its mildest form is, in fact, a *confiscation* of private property for public uses, as little burthensome as possible to the community. Sir, what ever we may think of the policy pursuing their footsteps any further, no one can deny that they are entitled to the gratitude of the country for the past; and I, for one, am too sensible of the benefit, to throw it away without very mature consideration, unless under the pressure of a cogent necessity.

But we have been told, sir, that far from being an innovation, this mode of collecting the public revenues was universal from the earliest times until the beginning of the last century—that is to say, until an age of philosophic light and diffusive civilization, at which another good old plan, established from time immemorial, the burning of witches and heretics, unhappily ceased too. This coincidence certainly appears to me to be entitled to some consideration; the committee will see, that in the matter of innovation, going back too far is at least as dangerous as going forward too rapidly. But there has been another reference to the examples of the past which struck me still more forcibly as a most extraordinary perversion of the lessons of experience. Sir, I do confess to you, that before any discussion had taken place in either part of this Capitol, on the subject before you—long before I had heard of that allusion to the *Quæstor*, referred to the other day by my eloquent friend from New York, (Mr. Hoffman)—at the bare stating of this project in its first conception and most general outlines, certain images presented themselves to my mind, and have ever since haunted it, in spite of all I could do to banish them. They were ideas that in my simple way of considering such matters, shocked and alarmed me—ideas of Roman conquest and Asiatic despotism. I thought of that most fearful of all things, a vast empire, with power centralized at its capital, with commerce centralizing by the inevitable course of trade, which always and every where tends to centralization, at some great emporium, with its revenues collected only in gold and silver, to be hoarded, as was the way at Rome and Babylon or Persepolis. I fancied I could see one of the Proconsuls or Prætors—the Bashaws of the Republic, as Montesquieu so justly calls them—Verres, for example—going forth with that same *Quæstor*, surrounded with an army of *publicans* or farmers of the revenue, to gather the dues of Rome in some devoted province—another Sicily—as dues were wont to be gathered by the satraps of that military commonwealth, that is to say, wrung with their blood from subjugated nations, whose pleasant places were laid waste, without remorse to glut the rapacity of conquest. Sir, I little imagined that such a system would have been cited, nay, alluded to, in this age, except with a view to inspire the horror and execration it is so well calculated to excite. Roman example! “The Demon city,” (as it has been well called by a writer of genius. *Herder*,) whose whole history, from beginning to end is a tragedy far deeper and more dreadful than the tale of *Œdipus* or the *Atridæ*, and leading to a catastrophe of an awful political justice. Why, sir, there is nothing in the annals of Mongolian conquest, worse than the ravages perpetrated by her consuls—by *Mummius*, *Paulus*, *Æmilius*, *Sylla*—in some of the fairest and most civilized portions of the earth. There were flourishing countries, whose fertility and population were exhausted by a perpetual drain of corn and gladiators to feed her lazy and licentious populace, and amuse them with the utterable atrocities of her amphitheatre. And what was the end of all this misrule? Weakness, poverty, desolation, barbarism—the Goth, the Vandal, the Hun. Yet long before the footstep of a barbarian had been impressed upon the soil of the empire, as *Gibbon* has well remarked, long before that scourge of God, under whose horses’ hoof the grass was said never to grow again, had been sent to avenge the wrongs of mankind, in the course of half a century after *Constantine* had founded a new Rome, whole tracts of fertile country had been completely depopulated and abandoned. Even of that paradise of all this earth, on which poetry and panegyric have been

exhausted in every age, in all languages, the *Campania felix*, a very considerable portion was become a waste. Nor, sir, was this owing to the depotism of the *Cæsars*, as an excellent writer has well observed, (*Jacobs*,) in reference to this passage of the “Decline and Fall,” and as this committee will do well to remark. There co-operated with that misgovernment, a curse which has been said, and is thus proved, to be worse than “the inclemency of the seasons and the barrenness of the earth,” (*Ad. Smith*,) a decreasing currency. The supply of the precious metals had been for upwards of two centuries continually diminishing, while the quantity of them sent in quest of luxuries to the East, to return no more, had been increasing in the same proportion, and a revenue of £15,000,000 or 20,000,000 was constantly levied in gold and silver, to be expended at a distant capital, or on the frontiers. This important fact speaks volumes to us on this subject. It is unquestionably true that one of the greatest calamities of the declining empire, was a circulation diminishing so frightfully that the pay of a general in the third century was nominally not higher than that of a private had been in the reign of *Augustus*, (*Herder*.) So much for the ROMAN SUB-TREASURY SYSTEM, and the example of the *Quæstor*!

But, sir, another objection to the present system is that it lends to *fluctuations* in the currency; and that brings me to consider the general effects of the CREDIT SYSTEM upon the prosperity of the country.

I begin by admitting that there is something in this objection, but by no means as much as is thought by persons who have not very attentively considered the subject. Undoubtedly if your revenue, instead of being uniform, or at least varying very little from year to year, be permitted to fluctuate extremely—if a great surplus like that of which you disposed last year is to be allowed ever and anon to accumulate, and then to be withdrawn from one depository and scattered among many others; to be again suddenly withdrawn from them, and ultimately distributed without reference to the wants of commerce and the course of business, but on merely arbitrary principles, among the States—if such financial blunders are to be repeated often in our future policy, we should do well to confine the effects of them within as narrow limits as possible, and even a system of hoarding might, in such a case, perhaps, do less harm than all this vexatious irregularity, and uncertainty. But in the first place, whose fault was that? Whose legislation occasioned that preposterous accumulation? Whose unequal and oppressive tariffs extorted from commerce the vast sums which were afterwards to be lavished upon it with such intoxicating effects? Yours, sir,—this house, this Congress is responsible for whatever mischiefs grew out of that strange anomaly. Let the blame light upon the heads of the guilty. I trust in God we are not destined soon to see another such surplus—and if we should, most certainly I should expect proper precautions to be adopted to prevent its operating again so powerfully to derange the business of the country. But what sort of argument is it against the comparatively moderate deposits made in the ordinary course of things by the Government, to recompense the banks for their services as fiscal agents, and make taxation less oppressive, that an enormous accumulation like that referred to, so capriciously disposed of, so violently transferred from one place of deposit to another, produced much evil? And here, sir, I beg to ask gentlemen, whether it has ever occurred to them to imagine what would have been the effect—what would always be the effect—of such an accumulation, if it had been in gold and silver? What if our revenues should ever again amount to what they were in 1815? Will any man undertake to say, that the abstraction from the circulation of the commercial world of so large a sum as forty or fifty millions of specie, would not, at any time, occasion a serious derangement of business and fall of prices abroad, attended with all the usual evils of such an event? I shall advert hereafter, more particularly, to the important subject of the supply of the precious metals for the purposes of commerce; but I here call the attention of the committee to a view of it, that is

entitled to their profound consideration. If I do not greatly err, in all the conclusions to which I have been brought by my researches in this matter, no calculation can be made of the effect which the adoption—I will not say of the “hard money system,” but of any system whatever, calling for a much greater demand of the precious metals—might have upon the state of trade.

Sir, I have said that the importance of these fluctuations in the paper currency of a country, have been very much overrated. Some people seem to think an expansion in the circulating medium must always be attended with a sudden rise in prices, and a spirit of extravagant speculation. But it is not so. Mr. Tooke has shown that these two things have in fact very seldom coincided—that speculation depends in the first instance, upon moral causes wholly unconnected with the state of the currency; and, although an abundance of money may, and does aggravate the evil where it exists, yet, by itself, it never leads to any excitement. Take any example of a commercial crisis you please, and you will find that there were extraordinary circumstances which acted on the imaginations of men—florid pictures of general prosperity, bright visions of possible success in new channels of trade, and adventures as yet untried. There is a remarkable proof of this in the terrible convulsion in England in 1825, the most serious perhaps that she has ever passed through. In 1822 there was a most depressed state of prices below the cost of production. The lowering of the interest on an immense amount of Government stock in 1823 and '24, engendered an impatient desire of more profitable investments. Then came the acknowledgment of the independence of the South American States, with hopes of advantageous loans to the new Governments, of great mining speculations, and of a vast extension of all branches of trade, upon which that great political event, it was supposed, could not fail to produce sudden and incalculable effects. The spirit of adventure thus awakened, soon spread itself abroad over every department of commerce: and, a moral epidemic, as it has been well termed, broke out, such as no policy of Government, of free Government at least, could possibly control. But the same excitement would have occurred had the circulation of England been metallic; and, sir, a proof of it is to be found in the fact that owing to a long series of good harvests, and to the preparations which the Bank of England had been making to substitute gold for the small notes which still circulated in 1824, her treasure was unusually large, (something like £13,000,000, instead of £10,000,000, its regular maximum,) and so far as her issues had any thing to do with exciting the spirit of circulation, it was not a deficiency, but an excess of bullion that occasioned the mischief—just as was the case in this country during the last two years. I say, sir, this spirit of speculation is incident to the adventurous operations of commerce, and it makes no difference whether those operations be carried on in specie or in paper. The gentleman from Pennsylvania who sits near me, (Mr. Sergeant,) anticipated me in citing the example of the famous bubble year in England, (1721,) when, as he justly remarked, the circulation of that country might be considered as almost exclusively metallic, for the issues of the bank were what they had been for some years before, only about £2,000,000, and not more than half what they were in a few years after, in a state of perfect calm. But I will add another instance, a most memorable and instructive one, from our own history. If this country has ever been blessed with a purely metallic currency, it was shortly after the peace of '63, and from that epoch, until the establishment of the first Bank of the United States; and, sir, if a man were called to point out that era in its history in which its pecuniary condition was most deplorable, he would, without hesitation, name that. There was a want of money, even to transact the ordinary business of life; a good portion of the little trade left us was carried on by barter; industry was languishing for want of the means of exchanging its products; nobody had any credit; all was embarrassment, despondency,

\* Washington's writings, Vol. IX. Hamilton's Report on the Bank in 1790.

and gloom. In the midst of all this distress, there was a cry, not for hard money, as in the present crisis—they had enough of that, in one sense, at least—but for the good, old fashioned paper money issued by the States—and the discontents of some of the boldest and most active spirits of New England broke out into open revolt against society, and seriously threatened its overthrow. Sir, never since we have been a people, have we passed through a period so full of perils of all sorts! Never was the morality of the nation put to so severe a trial; or its peace and its institutions, and its destinies brought so near to the very edge of the precipice. And what was the immediate cause of all this intense pecuniary distress? Speculation, sir, far wilder, in proportion, than any that has since occurred. We had imported in the two first years after the peace, a large amount, \$30,000,000, against exports of some eight or nine millions. Look into Pitkin's statistics. And yet with a fact from our own history, so important, so authentic, so full of instruction on all the points involved in this discussion, you hear able and leading men speak of the spirit of speculation, as something inseparably connected with paper money alone. No, sir, it results from what is called the "course of trade," in its perpetual round of quiescence—improvement—increasing confidence—prosperity—excitement—overtrading—convulsion—stagnation—pressure—distress—ending in quiescence again.† Nor is it by bank issues, even where banks most abound, that it is supplied with the means of compassing its object. In 1825, it is said that mercantile paper, to the amount of near \$600,000,000, was negotiated in London. Mr. Rothschild mentions that his house received in the course of two months, bills to the amount of a million and a half,‡ while the circulation of the Bank of England, and the country banks together, did not exceed thirty millions. It is commercial credit and private loans, that at such periods encourage and sustain those great and perilous operations—not banks, not bank notes, not redundant currency, strictly so called.

But if banks do not occasion such excitements, they, on the other hand, greatly mitigate the effects of the revolution that follows. We had no banks in this country in '86; to help the people in their distress, as the Bank of England aided and saved the commercial community of England in 1825.

But let us look a little more closely into the causes of the late excitement in the moneyed and commercial interests of this country. In my opinion, they have been too partially considered, and we have added to our other misfortunes, mutual reproaches, which are certainly, (I speak it with the profoundest deference for the very able persons with whom I differ,) not all of them well founded. The merchants, as a body, have been censured for imprudent and profligate speculation. They, in turn, accuse the Government, of a wanton and even wicked tampering with the great interests of commerce, which governments seldom touch without doing some mischief. Sir, I do not think this a fit occasion for angry recrimination, and having been absent during the conflict, to which I allude, I desire to mingle as little as possible in the passions of the past. I must say, however, that I incline to believe, more importance has been attached to the *specie circular*, in a mere economical point of view—I say nothing of its political character—than it deserves. I do not mean to affirm that it had not its share in adding to the embarrassments of the money market after the revulsion had begun. But the tide had turned before. That paper was issued here on the 11th of July, 1836. Now, as early as the 1st of July, the Bank of England had felt itself constrained to adopt a course which led to an instant fall of prices, and this fall of prices was in a short time as much as 20 or 30 per cent. Mr. Horsley Palmer, in the pamphlet already alluded to, admits the fact, and justifies the proceeding. *Habes confitentem reum*.\* Now, sir, be pleased to consider what frightful havoc a loss of 20 or 30 per cent. on 1,500,000 bales of cotton alone, would occasion in the commercial world, especially when such a

terrible deficit happens to be accompanied by a contraction of bank issues, and great scarcity in the money market, at a period of prodigious excitement in every branch of trade, (for it is then only that contractions are dangerous,) and of speculative investments in every sort of enterprise. The Bank of England, through its deputy governor, alleges in justification of its course, that its treasure, which was just beginning to recover from the drain occasioned by speculations in Spanish and Portuguese funds, during the year 1834—another phrenzy of the times, that led to a catastrophe which I witnessed in the spring of 1835, and in hard money countries, too—was again reduced by drafts made upon it, for various purposes, in America, to the amount of £2,600,000. Of this amount, £1,200,000 was borrowed for the Bank of the United States; the rest came over to be laid out, no doubt, in canal and railway, or bank stock; or, to supply, as Mr. Palmer supposes, the vacuum in our circulation, occasioned by the prohibition, in some of the States, of small notes, or the new demand for gold consequent upon the change introduced by the gold bill, in the session of 1835. Sir, as the guardian of the currency of England, the bank was, no doubt, on strict principle, justified in pursuing that cautious policy, in imposing a salutary check upon speculation; but I have very great doubts whether it did not go too far; and whether its sudden and rather violent interference with the natural course of things, has not been attended, in England as well as in this country, with evil consequences that might have been avoided, or at least very much mitigated, had exchanges been left to correct themselves, as they have a natural tendency to do. It is a circumstance worthy of the particular attention of the committee—and I advert to it to show that nothing can be more unjust than the charge of profligate speculation made against the great body of our merchants, (however individuals may deserve censure,)—that, from 1831 until late in the autumn of 1836, exchange with Europe never fell below, and was often much above *par*, although the apparent balance of trade was, during that period, steadily and greatly against us. Sir, this singular phenomenon is now satisfactorily explained. We know that it was owing to immense investments of British capital (much of it, no doubt, sent over in the shape of goods,) in the United States, quite independent of the ordinary commercial balance. For example, a run was made upon the Bank of England, in May, 1832, during the agitation that accompanied the passing of the Reform Bill, to the amount of £2,000,000; which never returned to the bank, and was supposed to have been hoarded, but which I believe came hither. This circumstance was, at the time, attributed to a political trick, to prejudice the minds of the people against the great measure then before Parliament. I have reason, however, to know, that the panic was by no means feigned; that apprehensions of revolution were seriously entertained by many of the higher classes in England; and, as the payment of our national debt, and our immense prosperity, had called the attention of European capitalists to this country, large amounts were sent hither, not only in quest of higher interest, but as a safer investment than could be made at home; for, in the present state of the world, capital will go abroad, in spite of all the contrivances of Government, recommended, I regret to say, by Mr. Palmer, to prevent its seeking more profitable employment there. We know all this *now*, and we see what this vast influx of British gold and British credit had to do with prices and speculation here; but who saw it then? How was the merchant to know what was at hand? That the ground upon which he stood, or thought he was standing, covered an abyss that was so soon to open and swallow him up; that the scene of most flattering prosperity which had for five years excited and entranced his senses, was to vanish like a dream, at the touch of a foreign power?

A great many circumstances conspired to keep

up the delusion, and even some which one might have thought would produce the very opposite effect. Thus the removal of the deposits, and the panic and contraction in 1834, consequent upon that measure, led to further importations of the precious metals, and accordingly it appears that there was an accession of nearly twelve millions of specie in that single year. A metallic basis was thus formed for the inordinate number of banks chartered by the State legislatures, to supply the place of the United States Bank; and still greater aliment was added to the spirit of speculation, already excited by the high prices of produce in England, and the unprecedented demands for the public lands in the West, by emigration from abroad. The idea that an excessive circulation was the sole cause of all the mischief, an idea encouraged both by the friends of a national bank, and by the enemies of all banks, appears to me entirely fallacious. It is vain to state, as is so continually done in such discussions, the amount of currency at one period, and to compare it with that amount at another, without any reference to the amount or the prices of the commodities it has to circulate. No sound inference can be drawn from the naked fact of such a difference. For instance, had the price of produce not fallen in the English market—had the cotton crop been worth 80 or \$90,000,000, instead of being fallen to half the former sum, it is manifest that it would have required, *ceteris paribus*, twice the amount of circulation to effect the usual exchanges in it. Not only so, but in periods of great excitement, it is not merely the products of our industry that we sell, it is not simply the annual income of the land, and labor of the country, that is exchanged, but the very soil itself; the whole country, with all that it contains, is in the market. (This, to the extent to which it is carried, is a peculiarity of our people. Sir, I do not mention this as a very prepossessing, or honorable, trait in our character; I mention it simply as a fact. We have no local attachments, generally speaking; nothing bears the *pretium affectionis* in our eyes. If an estate, a residence in town, a country seat, rises a little beyond what we are accustomed to think its value, it is sold without any hesitation. Accordingly, there is in such times a capacity for absorbing an expanded currency in this country, greater, perhaps, in proportion than was ever known in any other country. I am of opinion, therefore, that prices in the United States were, in general, not relatively much higher than elsewhere, during the last two years, except in cases where, on the usual relation of demand and supply, it was easy to account for their being so. By far the greatest amount of speculation, too, no doubt was carried on in private paper. But of course, as soon as a fall took place in that great leading staple commodity in which we pay our foreign debts, and of which the value effects that of almost every thing else in the country, and that, too, to so fearful an amount as 30 or \$40,000,000, the currency became (before the late contraction) at once redundant. It was precisely as if property to the value of 3 or 400,000,000 had been swallowed up in the sea, for it destroyed the income of property to that amount.

From this view of the causes that led to the present distress, I do not see what interference can be drawn from it, unfavorable to the connexion that has always subsisted between the Government and banks. It is one of those extraordinary revulsions, to which the adventurous spirit of commerce will always be exposed, organize your currency as you will, and take what pains you please to diminish the sources of excitement. In this country, especially, holding out so many temptations to foreign capital, so many hopes to enterprise, such dazzling prizes to fortunate speculation, with a people distinguished above all others by their intelligence, sagacity, activity, and boldness in affairs, such periods of crisis and convulsion are inevitable, and no mischiefs which they can possibly do would be half so bad as the only preventive that would insure us against their occurrence, the entire extinction of the spirit that leads to them.

Sir, to the general declamation against banking, we have to oppose the experience of the most prosperous nations in the world. There is a country, for instance, whose whole currency is of paper, a where one seldom meets with a piece of gold

England, from the 1st of October, 1833, to the 27th of December, 1836, by J. Horsley Palmer, Esq. London, 1837.

\*"The fall in prices of almost all the leading articles of raw produce, (sugar, coffee, tea, silk, cotton, &c.) from the 1st of July last, when the rate of interest was first advanced, has not been less than from 20 to 30 per cent." p. 23.

† Mr. S. Jones Lloyd. ‡ "Minutes of Evidence," &c. in 1832.

\*"The Causes and Consequences of the Pressure upon the Money Market, with a statement of the action of the Bank of

whose banking companies, whether with or without charter, subjected to no restraints or control, but such as spring out of the vigilance of a free and eager competition, have for upwards of a century together conducted their affairs with so much skill, integrity, and prudence, as not only never to have occasioned any loss either to the public or the parties interested; but, on the contrary, by the confession of all competent judges, to have conferred the greatest blessings upon both—to have contributed more than any single cause, perhaps, than all other causes put together, to bring out and develop completely all the resources of the land, to foster industry, to animate enterprise, and by an abundant supply of the means, of exchange, to turn its capital and labor to the greatest possible account—where, in addition to these economical advantages, they have contrived to exercise a high moral control, a sort of censorial authority, over the community, and especially the humbler classes of it, by bestowing rewards in the shape of credit upon industry and economy, and lending upon good personal character, as if it were solid capital, and through a system of cash accounts and interest upon small deposits, have given to the deserving laborer the combined advantages of a savings bank and a friendly endorser—a country which has made greater progress within the period mentioned, than any other in Europe, with an agriculture second (if second) only to that of Flanders, with a flourishing commerce, with manufactures of the greatest extent and the most exquisite refinement—whose cities have almost kept pace with ours, whose whole face in its gladness and beauty bears testimony to the spirit of improvement that has animated her—what country is that? Scotland, sir. Every body has heard, or ought to have heard, of the Scotch system of banking; and I ask if any thing can be more irreconcilable with the theories so confidently advanced here, than facts connected with its history? I know, sir, what may be said in reply to this otherwise triumphant example. I am aware that the Scotch banks have, in times of pressure, been compelled to lean upon the Bank of England—that objections have been made by high authorities, to the principles on which they have been conducted, and that other persons, admitting their unquestionable usefulness and success, have ascribed it to circumstances which render the system an unfit model for imitation elsewhere. Be it so. But still it is banking—banking on the English plan, with a very inadequate supply, scarcely any supply of bullion; banking without limitation or control, without any reference or responsibility to Government—banking, in a word, with all the defects imputed to that system, in their most exaggerated forms.

But if this example be not satisfactory, let us look at the experience of the two other countries in which the system exists, and exists, as we are told, in its most vicious state—England and the United States. Look at the results. I have no faith at all in speculative politics. A theorist in government is as dangerous as a theorist in medicine, or in agriculture, and for precisely the same reason—the subjects are too complicated and too obscure for simple and decisive experiments. I go for undisputed results in the long run. Now surely a philosophical inquirer into the history of the commerce and public economy of nations, if he saw a people pre-eminently distinguished in those particulars above all others, would be inclined to ascribe their superiority to what was peculiar in their institutions; at least whatever might be his ideas *a priori* on such subjects, he would be very slow to deny to any remarkable peculiarity in those institutions its full importance as one of the probable causes of the success which he witnessed, unless he could clearly show the contrary. Then, sir, by what example are we to be guided in such matters if not by that of England—by far the most magnificent manifestation that the world in any age of it, has ever beheld, of the might and the grandeur of civilized life. Sir, I have weighed every syllable that I utter—I express a deliberate conviction, founded upon a patient inquiry and a comparison, as complete as my limited knowledge has enabled me to make it, between the past and present condition of mankind, and between the great nation of

which I am speaking and those which surround her. Sir, there is a gulf between them—that narrow channel separates worlds—it is an ocean more than three thousand miles wide. I appeal to any one who has been abroad, whether going from England to any part of the continent, be not descending immensely in the scale of civilization. I know, sir, that that word is an ambiguous one. I know that in some of the graces of polished society, in some of the arts of an elegant imagination, that in the exact sciences and in mere learning and general intellectual cultivation, some nations have excelled, perhaps many equalled, England. But in that civilization which, as I have said before, it is the great end of modern political economy to promote, and which is immediately connected with the subject before you; which at once springs out of, and leads to, the accumulation of capital, and the distribution of wealth and comfort through all classes of a community, with an immense aggregate of national power and resources—that civilization which enables man to wield these elements, and arm him with the force of all their legions," which gives him dominion over all other creatures, and makes him emphatically the Lord of the Universe—that civilization which consists not in music, not in playing on the flute, as the Athenian hero said, but in turning a small city into a great one; in that victorious, triumphant, irresistible civilization, there is nothing recorded in the annals of mankind that does not sink into the shades of the deepest eclipse by the side of England. I say nothing of her recent achievements on the land and the sea; of her fleets, her armies, her subsidised allies. Look at the Thames crowded with shipping; visit her arsenals, her docks, her canals, her railways, her factories, her mines, her warehouses, her roads, and bridges; go through the streets of that wonderful metropolis, the bank, the emporium, and the exchange of the whole world; converse with those merchants who conduct and control, as far as it is possible to control, the commerce of all nations, with those manufacturers who fill every market with their unrivalled products; go into that bank which is the repository of the precious metals for all Europe; consider its notes as well as the bills of private bankers, at a premium every where, more valuable than specie, symbols not merely of gold, but of what is far more precious than gold, yea, than fine gold, of perfect good faith, of unblemished integrity, of sagacious enterprise, of steadfast, persevering industry, of boundless wealth, of business co-extensive with the earth, and of all these things possessed, exercised, enjoyed, protected under a system of liberty chastened by the law which maintains it, and of law softened and mitigated by the spirit of liberty which it breathes throughout. Sir, I know, as well as any one, what compensations there are for all this opulence and power, for it is the condition of our being that we "buy our blessings at a price." I know that there are disturbing causes which have hitherto marred, in some degree, the effect of this high and mighty civilization; but the hand of reform has been already applied to them, and every thing promises the most auspicious results. I have it on the most unquestionable authority, because, from an unwilling witness, that within the memory of man, never were the laboring classes of England so universally employed, and so comfortably situated as at the beginning of the present year.\*

But I said that there was another nation that had some experience in banking and its effects. Sir, I dare not trust myself to speak of my country with the rapture which I habitually feel when I contemplate her marvellous history. But this I will say, that on my return to it, after an absence of only four years, I was filled with wonder at all I saw and all I heard. What upon earth is to be compared with it? I found New York grown up to almost double its former size, with the air of a great capital, instead of a mere flourishing commercial town, as I had known it. I listened to accounts of voyages of a thousand miles in magnificent steamboats on the waters of those great lakes, which, but the other day, I left sleeping in the primeval silence of nature, in the recesses of a vast wilderness; and I felt that there is a grandeur and a majesty in this

irresistible onward march of a race created, as I believe, and elected to possess and people a continent, which belong to few other objects, either of the moral or material world. We may become so much accustomed to such things that they make as little impression upon our minds as the glories of the Heavens above us; but looking on them, lately, as with the eye of the stranger, I felt what a recent English traveller is said to have remarked, that, far from being without poetry, as some have vainly alleged, our whole country is one great poem. Sir, it is so; and if there be a man that can think of what is doing in all parts of this most blessed of all lands, to embellish and advance it, who can contemplate that living mass of intelligence, activity and improvement as it rolls on in its sure and steady progress, to the uttermost extremities of the west, who can see scenes of savage desolation transformed, almost with the suddenness of enchantment, into those of fruitfulness and beauty; crowned with flourishing cities, filled with the noblest of all populations; if there be a man, I say, that can witness all this passing under his very eyes, without feeling his heart beat high, and his imagination warmed and transported by it, be sure, sir, that the raptures of song exist not for him; he would listen in vain to Tasso or Camoens, telling a tale of the wars of knights and crusaders, or of the discovery and conquest of another hemisphere.

Sir, thinking as I do of these things—not doubting, for a moment, the infinite superiority of our race in every thing that relates to a refined and well ordered public economy, and in all the means and instruments of a high social improvement, it strikes me as of all paradoxes the most singular, to hear foreign examples seriously proposed for our imitation in the very matters wherein that superiority has ever appeared to me to be most unquestionable. The reflection has occurred to me a thousand times in travelling over the continent of Europe, as I passed through filthy ill paved villages, through towns in which there is no appearance of an improvement having been made since the Reformation, as I have looked at the wretched hovel of the poor peasant or artisan, or seen him at his labors with his clumsy implements and coarse gear—what a change would take place in the whole aspect of the country, if it were to fall in the hands of Americans for a single generation!

But is it paper money and the credit system alone that have achieved all these wonders? I do not say so, sir; but can you say, can any one presume to say, that they have not done much of all this? I know that the cardinal spring and source of our success, is freedom—freedom with the peculiar character that belongs to it in our race—freedom of thought, freedom of speech—freedom of action, freedom of commerce, freedom not merely from the oppressions, but from those undue restraints and that impertinent interference of Government in the interests properly belonging to individuals, which stand in the way of all improvement in the nations of continental Europe. It is this vital principle, the animating element of social equality, tempered and sobered by a profound respect for the authority of the laws, and for the rights of others, and acting upon that other prominent characteristic of the Anglo-Norman race, the strong instinct of property, with the personal independence and personal comfort that belong to it—that explains our unrivalled and astonishing progress. But of this rational, diffusive liberty, among a people so intelligent as ours, the credit system is the natural fruit, the inseparable companion, the necessary means and instrument. It is part and parcel of our existence. Whoever heard of credit in a despotism, or an anarchy? It implies confidence—confidence in yourself, confidence in your neighbor, confidence in your government, confidence in the administration of the laws, confidence in the sagacity, the integrity, the discretion of those with whom you have to deal; confidence, in a word, in your destiny, and your fortune, in the destinies and the fortune of the country to which you belong; as, for instance, in the case of a great national debt. It is the fruit, I say, of all that is most precious in civilized life, and to quarrel with it is to be ungrateful to God for some of the greatest blessings he has vouchsafed to man. Compare Asia with

\* Westminster Review for January, 1837. Some ascribe the fact to an ample circulation.

Europe; hoarding has been the usage of the form<sup>r</sup> from time immemorial, because it is slavish, oppressed and barbarous; and it is curious to see the effect of English laws in breaking up (as they are doing,) that system in Hindostan. Depend upon it, sir, all such ideas are utterly alien to our way of thinking—to all the habitudes of our people, and all the interests of the country. My friends from beyond the mountains are familiar with the great principle, the magical effect of credit in a young and progressive country.—They know what miracles are wrought by a small advance of money to enable enterprise and industry to bring into cultivation a virgin soil. They know how soon the treasures of its unworn fertility enable them to pay off a loan of that sort with usurious interest, and make them proprietors of estates rising in value with the lapse of every moment. Compare the great western country now, with what it was twenty years ago—sell it *sub haste*—and compute, if the powers of arithmetic will enable you to do so, the augmentation of its riches. Sir, this is one of the phenomena of our situation to which attention has hardly ever been called—the manner in which the mere increase of population acts upon the value of property. To be struck with the prodigious results produced in this simple way, you have only to compare the estimated taxable property in Pennsylvania and New York, when it was returned for direct taxation in 1799, with the returns of the same property, for the same purpose, in 1813, after an interval of 14 years\*—you will see how it is that our people have been enriched by debt, and “by owing, owe not”—how with a balance of payments almost continually against them from the first settlement of the country, they have grown in riches beyond all precedent or parallel.—You will appreciate all the blessings of the credit system—and imagine, perhaps, how this wonderful progress could have been impeded and embarrassed by the difficulties of a metallic circulation.†

But the fluctuations of the currency—the ruinous irregularities of bank paper! Why, sir, I have already shown they belong to commerce itself, not to the means which it employs, and that there is no remedy for them. But, after all, what is the sum of the evil? Look again at general results. Tell me not that re-actions produce fewer disasters, or less extensive derangements of money and circulation in countries whose business is principally metallic.—It may be so; but what does that prove? If you never soar, you will be in no danger of falling, certainly.—But then,

*Serpis humilitas mimium timidus que procella.*

A go-cart may be a very safe contrivance for the tottering footsteps of infancy—but is it thus that manly vigor is to be trained for the dust and heat of the Olympic race? Sir, it is the condition of all that is grand and awakening in nature, to be somewhat wild and irregular. In the moral world, especially, peril and difficulty are the price which Providence exacts of us for all great excellence, and all eminent success. It is in struggling with them that the heroic virtues which elevate and purify humanity, are called forth and disciplined; and it is precisely because our people have been trained in that stern school, that they have effected more, and are now able to effect more, with equal means, than any other in the world. Sir, it is not our currency only, that is obnoxious to the imputation of irregularity. What is democracy, popular government itself? How often has it fallen to my lot to defend it by the very considerations which I now urge on a kindred topic, when foreigners have spoken to me of the disorders that have occasionally checked our history. When they exaggerated the importance of such events, I have reminded them that all human institutions must have their imperfections; and that it is by their general effects in a long course of experience, not by occasional accidents, however striking and important, that they are to be judged. That the absence of restraint, which leads to occasional licentiousness, fosters that bold, robust, energetic, and adventurous spirit, and that habit of haughty self-reliance, and independent judgment, which are the very soul of republican government; which have rendered

that form of government wherever it has existed, so illustrious for heroic achievements, and has made every era of liberty in the history of mankind, even in its most imperfect form, an era of flourishing prosperity and progress. Sir, such a people, as has been said of beings of a higher order, “live throughout, vital in every part.”

All head they live, all heart, all eye, all ear,  
All intellect, all sense.

This is the great secret of our superiority, and of that of every free people—not the forms of a constitution, not the outlines of a system, not mere organization—but the principle of *life*, the all-pervading animation and vitality that informs the whole body politic, and gives it the warmth, and strength, and activity—the winning graces and expressive countenance of a man, instead of the cold and repulsive stillness of a painted corpse. Jury-trial is another of these irregularities—liable, undoubtedly, to much criticism in detail, scarcely susceptible, as a judicial institution, of a strict defence in theory—yet what should we think of a reformer that should propose to us, the abolition of a system so full of practical good, because it was unknown until recently, any where but in England, and often leads, as it certainly has often led, to great abuse and injustice.

But, then, it seems, our banking system is an innovation, introduced only a century and a half ago, and deviates from the primitive model of the bank of Amsterdam,—the *honest* system, as it is called—and that instead of lending money, it lends merely credit.

As to the idea of its being an innovation, I would just remark, that it had its origin at that great epoch of human improvement, as I must still be allowed to call it, when mankind ceased to cut each other's throats for differences in religion, and began to make war for colonies and commerce—an era perfectly familiar, as such, to envy one that has studied history philosophically. But there is something more in the historical reminiscence than the mere fact just referred to. If the comparative effects of Dutch and English banking are to be judged by the event, what an instructive lesson is to be drawn from a parallel between those two powers, at the close of the 17th century, and their relation towards each other now! Where is Van Tromp? Where is de Ruyter? What is become of the mighty fleets which disputed the dominion of the seas with England and France? Poor Holland! her defenceless ports, blockaded by British squadrons—her court browbeaten by British diplomacy—shorn of all her strength and glory, she seems almost sinking again into the waters out of which she merged. So much for the innovation. But what is the objection to the system? Let us understand each other. I will put a case. The quantity of the precious metals required in any transaction, or any number of transactions, between two countries, (or two individuals, for it comes to the same thing,) depends not only upon the balance of payments between them, but also in the confidence they have in each other. Thus, Hamburg imports corn for England in a season of dearth, from Prussia. If trade be prosperous and the world at peace, she will probably pay for this corn by a bill at six months, with interest, and when the time comes for meeting her engagement, she will do so by sending to Dantzic a cargo of colonial produce. (Thornton.) But should the times be such (from war, commotions, &c.) as to make commerce uncertain, or to impair credit, the purchase can be made only for cash, and paid for in gold and silver. Now, sir, commerce being a mere exchange of commodities, every body must see, at a glance, that it is very much more promoted by a state of peace and order, than by one of war and commotion by a state of confidence, than by one of distrust, by a state of things that admits of payments in bills, than by one that requires payments in cash. In a simple operation, like the one described, this is quite manifest, and yet the whole theory of money and of banking, is contained in that simple operation.

Sir, it explains at once why it is that in countries very far advanced in commerce and civilization, the precious metals, for all purposes of currency, are superseded by commer-

cial paper, as is particularly the case in England, whose paper circulation, of all sorts, is something like two hundred millions, resting upon a basis of only thirty millions of specie.\* Money is nothing more than what is called by the brokers “a bought and sold note;” it is a token, which shows that its holder has parted with commodities to that amount, and that he is entitled to receive their equivalent in other commodities, whenever it shall be his pleasure to do so. Why should that token be of gold? Why should a mere title or evidence of debt, be itself of a material as costly as the thing of which it is the symbol and the evidence?

It is clear, that were there any means of insuring society against excessive issues of paper, besides its convertibility into gold and silver—were not that the only practical test hitherto discovered, by which prices in different countries can be compared—all commercial nations would dispense with the precious metals as a medium of exchange. But, as yet, there is no such means, and the currency, theoretically the most perfect, is for the present impracticable. The nearest approximation to it has certainly been made occasionally in the United States, where the specie basis has just answered the purpose of ascertaining that our currency was on a level with that of other nations.

But there is another step in the commercial operation just mentioned. The holder of the bill of exchange, received in payment of coin, stands in need of some other commodity, which his own credit does not enable him to procure. He applies to a broker, or any other capitalist, for the cash, or, what will answer his purpose just as well, his credit, in the shape of a note payable on demand, or at a short date, for which the original bill, at six months, is given in exchange, with a reasonable discount. This last operation is what is considered as the great abomination of banking. The bank receives a discount on giving its own bill, payable on demand, or one at a short date, (for which, therefore, it is compelled to reserve or prepare a fund,) for a bill payable at six months, of which, of course, payment cannot be demanded until the expiration of that term. And now I ask, where is the difference between the first operation, which every body must perceive is eminently conducive to the extension of commerce, and the last? What objection can be made to it, that does not lie equally against the drawing and discounting of bills of exchange, an improvement of which Europe has been boasting for at least six hundred years, and of which the advantages have never, to my knowledge, been questioned before? Why is not a credit founded on property, as good in the one case as in the other? And why should gold and silver be used in either, when they are not wanted?

The banking system, sir, is only one form of that division of labor, which takes place in all opulent countries. It leads to a great economy, both of time and money; of the former, because the business of a whole community, in receiving and paying away, can be transacted by the clerks of a single institution, as well as by one hundred, or one thousand times the number, in the separate employment of individual merchants; of the latter, because, instead of each individual in a community reserving the quantity of gold and silver necessary to meet our current demands, a much smaller proportional amount, kept by a banking-house, has been found to answer the wants of the whole society. But the utility of that system is not confined to the advantages just mentioned. It appears to me very clear, in the first place, that the credit system, carried to the extent in which it exists in England and the United States, could not possibly be made to rest upon anything so liable to be disturbed by a foreign demand, and by other contingencies, as the metallic basis, and of which a given quantity cannot, therefore, be counted on at any given time. What is commonly called the currency of a country, that is to say, bank paper, and the precious metals, really constitute a very small portion of it; but it may be considered as the *test or touchstone* of all the rest, and if engagements in bills of exchange, &c., be not met according to their tenor, in what is considered as cash, it is difficult to cal-

\* Pitkin's Statistics, 1835.  
† Mr. Gallatin's Pamphlet, p. 68.

\* Mr. Burgess, in the Minutes of Evidence, &c. before the Committee of the House of Commons, in 1832.

culate the effects of the alarm that may ensue. But there is another point of view in which banks appear to me quite essential to our commercial system. It is that, according to the remark of an excellent writer,\* the appreciation of the credit of a number of persons engaged in commerce, has become a *science*, and to the height to which that science is now carried in Great Britain, (and in this country,) that country is, in no small degree, indebted for the flourishing state of its internal commerce, for the general reputation of its merchants abroad, and for the preference which, in this respect, they enjoy over the traders of all other nations.

Sir, I have been driven to this elementary way of considering the subject, by the course which the argument has taken here and elsewhere, and because, in solemnly reviewing, as we are now compelled to do, the whole monetary system of the country, it is of the very last importance that the subject, in all its aspects, should be fairly presented to the people. I shall, therefore, proceed briefly to consider the question, how far it is practicable or desirable to substitute a metallic currency for bank paper, or even very materially to widen the metallic basis of our present circulation.

I presume it will hardly be disputed that, by a general return to the precious metals, as the only medium of exchange for the whole commercial world, the operations of trade would be every where embarrassed and impeded, and the value of money enhanced; or, which is the same thing, the prices of commodities reduced in an incalculable degree. How far a similar effect has already been produced, by the diminution of the supply from the Mexican and South American mines, within the last twenty years, is one of the most difficult and controverted questions of the day. This is not a fit occasion for stating the arguments advanced by the advocates of different views of that subject, but I will mention to the committee, that in a very able work, to which I have already referred as having been recently sent to me, the author, who examines this point with perfect candor, advances the opinion, that thousands have, within the period alluded to, been precipitated into embarrassments from that cause alone.† If it be true, as is alleged by Jacobs, that the whole stock of coin in circulation in 1829, was less, by upwards of \$60,000,000, than that which circulated in 1809; and if any thing like the supposed diminution of the actual quantity by abrasion, by loss, by consumption in manufactures takes place, (one per cent.‡ a year,) it becomes matter of serious speculation, what means shall be adopted to obviate so great an inconvenience as a continually decreasing metallic basis, at a period when commerce and its productive powers are so immensely on the increase. Sir, that question is infinitely more interesting in a highly *progressive* country, than in any other. In such a country, the currency must be regularly enlarged, with the growth of its population and of its productive power, or it is subjected to the most terrible of all evils, *falling prices*. Every body that has ever treated of such subjects, has dwelt upon the effects of an increasing currency, as wonderfully favorable to industry. No more striking example of this truth can be desired than what was witnessed in the 16th century, after the importation of gold and silver from America, began to produce a decided effect upon the distribution of wealth. It is admitted on all hands to have been the period of the greatest improvement in society that has occurred in its history; and of all countries, be it remembered, England benefitted most by the general rise of prices, because so large a portion of her farmers held leases for long terms of years, and paid money rents; the increase of the circulation operating to reduce the real value of the returns made to the landlord in favor of his tenant. The great benefit of a full and especially an increasing circulation thus consists not only in quickening and facilitating exchanges, (itself an immense stimulus to industry,) but in securing to the industrious classes rather a larger *proportion* of the income of society than they would otherwise enjoy. Every

thing which they buy to sell again advances in price; while it is in their hands, and this unquestionable truth is of itself a total refutation of all that is said concerning the oppressive operation of bank paper upon the productive classes, by the very persons who, in the same breath, speak of its excess and depreciation.

With a population, then, increasing at the rate of 4 to 5 per cent. a year, and with an accumulation of capital and productive power proportionably greater. I hold it to be utterly absurd to talk of any thing like a metallic currency in the United States. There is no possible means of procuring it, and if by means it could be procured, I venture to affirm that our people would get rid of it in the course of a few years, though all the penal laws of Spain against the exportation of gold and silver should be re-enacted here—laws which were passed with no other effect, even in that country, but to show the utter futility of such legislation. I say, sir, that with their present habits of active enterprise and strict economy, the American people would export the precious metals as fast as they were imported, beyond any amount of them which might be absolutely necessary for the domestic exchanges of the country, and they would do so because gold and silver would be of no use abroad in purchasing commodities, and would be wholly superfluous at home where paper would do as well. If you put down "the banks," it would have no effect but to set up something worse in their place, in the shape of private paper. There are some things over which the most despotic law-givers are unable to exercise any control, and one of them, as all experience shows, is this commerce in bullion.

Sir, it has been said that the only advantage of a paper currency over the precious metals consists in its cheapness. I am, by no means, as you may gather from what I have said, ready to admit this; but supposing it to be true, is that saving really an unimportant matter? Mr. Gallatin, in a pamphlet of signal ability,\* has, I conceive, fallen into a grave error on this subject, which it is so much the more important to rectify, as I perceive that he has misled others more disposed than himself to turn a speculative error into a practical mischief. He states the whole benefit derived from the use of paper instead of the precious metals in the United States in 1830, including, under the name of circulation, private deposits in the banks, as they ought undoubtedly to be, at about five millions of dollars a year. It is true, that according to principles admitted by Mr. Gallatin, the progress of the country, both in wealth and population, in the last seven years, would require a very considerable addition to be made to this estimate in order to a correct application of it to our actual condition. But, sir, it appears to me that the estimate was made on data altogether erroneous. In the first place, the quantity of currency, if it were metallic, necessary to the circulation of this country, was prodigiously underrated. For reasons that need not be stated here, it is found that a given amount of metallic currency does not circulate as rapidly as an equal amount of paper, and therefore, that more of it is, *centis paribus*, required to do the same business. But without going into such minute inquiry here, why should the United States, with sixteen millions of inhabitants, and relatively the most active trade both foreign and domestic in the world, and with extraordinary productive power of all sorts, not need at the very least half the circulation necessary in France, with only double their population, and not half their industry? The stress that ought to be laid on this latter circumstance may be illustrated by comparing Asia with Europe in this particular; double the population in the former, possessing, according to the most accurate researches, only one-fifth the quantity of gold and silver, which in addition to paper of all sorts, is required in the latter. Now, the circulation of France was, before the first revolution, set down by Neckar at £88,000,000—and Thiers, in his history of that event, makes a similar estimate.† It present amount ought in reference to the increase of her capital and population, to be at

least, 600,000,000 of dollars, and accordingly, as was observed by one of my colleagues, (Mr. Thompson,) it is stated at that, on good authority,‡ Mr. Rothschild, in his examination before the Committee of the House of Commons in 1832, mentions the paper circulation of the Bank of France as amounting to 750,000,000 of francs. According to this, then we should require on the footing of population alone, at least 300,000,000 of dollars. So much for the amount; now for the loss upon it.

Mr. Gallatin considers it only as so much *interest* on dead capital, and even the interest he puts at an exceedingly low rate. But I apprehend the difference to the country, between having a vast inert mass of gold and silver as currency, and turning it into *productive capital*, must be determined, not in reference to *interest* merely, but the *profit* of stock laid out in active industry, which is no where in this country less than ten per cent., and in the great majority of cases, the new States and all included, nearly double that amount on an average. You see, then, sir, what an enormous loss a metallic currency would be to the nation, without taking into account its wear and tear. Look back at the half century that has passed away, and say what that loss would have been, on principles of compound interest, from the beginning up to the present day. Why, sir, it exceeds all powers of calculation, nay, of imagination. Do not suppose, for a moment, that so important, so palpable a truth, although never stated in abstract terms, as a general proposition, has not occurred to the people of the United States. They have *felt* it, without *perceiving* it; they have acted upon it, without reasoning about it; they have perfectly well comprehended the real uses of money, without studying the principles of currency; and they have preferred paper as a circulating medium, to gold and silver, because it was better for their purposes than gold and silver, on the simplest maxims of prudence and economy. You may depend upon it, this conclusion is as deeply rooted as it is just. You will never be able to shake it. All your policy will be of no avail, as all legislation is forever vain which comes into conflict with the genius of a people, especially in matters so deeply and visibly affecting their private interest. The barbarian, who, in his impotent rage, threw fetters into the Hellespont, and scourged its foaming billows, did not wage a more insane war against the nature of things.

But we are told that if it is an *experiment* that has been proposed us; we need not be alarmed at it, because we are accustomed to experiments, and successful ones; that our constitution itself is a mere experiment. Sir, I deny it utterly, and he that says so shows me that he has either not studied at all, or studied to very little purpose, the history and genius of our institutions. The great cause of their prosperous results—a cause which every one of the many attempts since vainly made to imitate them on this continent or in Europe, only demonstrates the more clearly—is precisely the contrary. It is because our fathers made no experiments, and had no experiment to make, that their work has stood. They were forced by a violation of their *historical hereditary rights under the old common law of their race*, to dissolve their connection with the mother country. Their external, their *federal* relations were of course changed in that respect, and in that respect only, they were compelled to do their best in the novel situation in which they stood. What relates, therefore, merely to the union of the States is all that gives the least countenance to this superficial idea of an "experiment" which has done so much to misguide the speculations of some visionary minds upon these important matters. Even in this respect, however, an attentive study of our history will show that strong federal tendencies existed and had, frequently, on former occasions, manifested themselves.\* But the whole constitution of society in the States, the great body and bulk of their public law, with all its maxims and principles; and all that is republican in short, in our institutions, remained after the revolution, and remains *now*, with some very subordinate modifications, what it was from the beginning. Our written constitutions

do nothing but consecrate and fortify the "plain rules of ancient liberty," handed down with Magna Charta from the earliest history of our race. It is not a piece of paper, sir, it is not a few abstractions engrossed on parchment, that make free Governments. No, sir, the law of liberty must be inscribed on the heart of the citizen; the word, if I may use the expression without irreverence, must become flesh; you must have a whole people trained, disciplined, bred, yea, and born, as our fathers were, to institutions like ours. Before the colonies existed, the petition of right, that Magna Charta, of a more enlightened age, had been presented in 1628 by Lord Coke and his immortal compeers. Our founders brought it with them, and we have not gone one step beyond them. They brought these maxims of civil liberty, not in their libraries but in their souls; not as philosophical prattle—not as barren generalities, but as rules of conduct; as a symbol of public duty and private right, to be adhered to with religious fidelity; and the very first pilgrim that he set his foot upon the rock of Plymouth, stepped forth a LIVING CONSTITUTION! armed at all points to defend and to perpetuate the liberty to which he had devoted his whole being.

It only remains for me to advert briefly to one or two additional topics, and I have done. It has been argued as if the currency given to bank paper in this country, were due almost exclusively to the countenance which government affords it, by receiving it in payment of public dues. Certainly, sir, the patronage of Government is an important concurring cause of this credit; but it is not true that it is essential to it. What does the house of Rothschild owe to the Government of Europe—that house to which all the Governments on the continent are obliged to have recourse in their financial exigencies? And here let me call the attention of those who declaim so vehemently against the agency of banking corporations, to the fact, that this mighty house, with its scarcely less than royal influence and splendor, like most of the other establishments of the same kind in Europe, is no corporation at all, but a mere private partnership, and to the additional fact, that this colossal fortune has been amassed in little more than a single generation, by an obscure person, born in a corner of the Juden-Strasse of Frankfurt on the Maine, and his four sons. Do you not see, then, sir, that the odious common places about "the money power," and the political powers, either have no meaning or apply with all their force to every accumulation of capital, and all the great results of modern commerce? The "money power," I presume, signifies "the power of money," which is widely diffused in this country, thanks to the protection of equal laws, and which will exist and continue to have its influence, so long as those laws shall protect it from confiscation, whether it shall borrow the credit of the Government, or the Government shall borrow its credit. It is scarcely necessary to notice an idea, analogous to the last, which has been very much insisted on, and that is, that the commerce of New York has been built up by Government credits. Why, sir, this does appear to me too extravagant to need exposure. New York has been built up by her unquestionable natural advantages, and there is no measure of this Government—there is only one event that can possibly deprive her of immense commercial ascendancy,—the dissolution of the Union—that, and nothing but that, can do it. Commerce, as I have already remarked, leads every where to centralization: look at Liverpool—look at Havre, the last, in a hard money country. But on this head there is a very important consideration, which has been urged with all his admirable eloquence, by one of my colleagues in the Senate, (Mr. Preston.) If this concentration of commercial business at that city be injurious to the others now, what will it become, if, by collecting the revenue in gold and silver, and thus making gold and silver mere merchandise, you add to the disadvantages of centralization, all the difficulties of procuring coin—make New York the great specie market—and render the whole country tributary to the money changers of Wall street?

Sir, a word more to the south, and for the south. When your system of protection was still in all its

vigor, we, (I mean the people of South Carolina,) sent you a protest against its principles and tendency, which contained, among other objections to it, one that deserves to be repeated here. We told you that we depended absolutely upon commerce—commerce on the largest scale—commerce carried on as it has been for the last half century, with an ever increasing production, provoking and creating an ever increasing consumption, and permitting us to send a million (now a million and a half) of bales of cotton into the market, without any danger of a glut. We told you the staple commodities, especially the principal one which we produced, were among the very few in the production of which slave labor can enter into competition with free. We reminded you that great revolutions in trade sometimes arose from apparently slight causes, and that however far it might be from your purpose, or even your apprehensions, it was possible that your legislation might occasion us the loss of our foreign market, our only resource—that the result of that loss to us would be poverty and utter desolation; that our people in despair would emigrate to more fortunate regions, and the whole frame and constitution of our society would be seriously impaired and endangered, if not dissolved entirely. And we adjured you not to persist in a course of legislation of which the benefit to yourselves, even were they unquestionable, were nothing in comparison of the danger to which they exposed us—a danger which, however contingent or remote, involved our whole existence, and could not be contemplated without well founded alarm. Sir, I repeat to you now—I repeat to the representatives of the whole south on this floor—the words then addressed to the house on a different subject. Let well alone. Resist this uncalled for innovation, of which no one can foresee the whole extent nor the ultimate results. Mark what your Secretary of the Treasury has told you in the very paper in which he reveals the project on the table—you produce TOO MUCH COTTON. Go home, gentlemen of the south, and tell your people that their successful industry is a vice—that the fertility of their soil is a curse—that their excessive production occasions disorders in the state—and that the remedy for our troubles, is that they should live on short commons.

Let them co-operate with our political economy, by depriving themselves of the little mercantile capital they have—let them abolish those corporations to which people, who cannot themselves do business with the widow and the orphan, have contributed their means for the accommodation of commerce—let them but do this, and their docility will be admirable, and shall have our approbation.

Sir, before I take my seat, there is one other topic that I feel it my duty to advert to—I mean to the supposed injurious effects of banking institutions upon the laboring classes of society. Although I have no doubt but that there are many defects in the constitution, as well as the management of those institutions in this country, and should be most willing to co-operate if occasion served, in reforming them, I have no hesitation in acquitting them at least of this charge. Who that has ever heard of the relation between capital and labor, between wages and profits, but must see at once that it is unfounded; and, accordingly, Hume objects to banks that, by their issues, they raise wages, and so hurt the manufacturing interests of a nation. I have already remarked, that one of the effects of an increasing currency is to make a distribution of the wealth of society more favorable to the industrious classes of it—to confiscate, in a manner, the property of those who live on fixed incomes, for the benefit of those who produce the commodities on which those incomes are laid out. It is for this reason that the radicals of England—Mr. Atwood, for example—are all strenuous advocates of paper money, and even of inconvertible paper. The idea that the poor are to gain by a return to a metallic currency, is, so far as I know, confined to their friends in this country, whose zeal is certainly greater than their knowledge. It is true, sir, that among other disadvantages attending frequent fluctuations in the currency, it is said that wages are the last thing that rises in a case of expansion. And that may be so in countries where the supply of labor is greater than the demand, but

the very reverse is most certainly the fact here, where the demand—especially when stimulated by any extraordinary increase, real or fictitious, of capital—is always greater than the supply. All price is a question of power, or relative necessity between two parties; and every body knows that, in a period of excitement here, wages rise immediately, and out of all proportion more than any thing else, because the population of the country is entirely inadequate to its wants. During the last year, for instance, the price of labor became so exorbitant, that some of the most fertile land in South Carolina, rice fields, which have been cultivated for a hundred years, were in danger of being abandoned from the impossibility of paying for it. Sir, as a southern man, I represent equally rent, capital, and wages, which are all confounded in our estates; and I protest against attempts to array, without cause, without a color of pretext or plausibility, the different classes of society against one another, as if in such a country as this there could be any natural hostility, or any real distinction between them—a country in which all the rich, with hardly an exception, have been poor, and all the poor may be rich—a country in which banking institutions have been of immense service, precisely because they have been most needed by a people who had all their fortunes to make by good character and industrious habits. Look at that remarkable picture—remarkable not as a work of art, but as a monument of history—which you see in passing through the Rotundo. Two out of five of that immortal committee were mechanics, and such men!\* In the name of God, sir, why should any one study to pervert the natural good sense, and kindly feelings of this moral and noble people—to infuse into their minds a sullen envy towards one another, instead of that generous emulation which every thing in their situation is fitted to inspire—to breathe into them the spirit of Cain, muttering deep curses and meditating desperate revenge against his brother, because the smoke of his sacrifice has ascended to Heaven before his own! And do not they who treat our industrious classes as if they were in the same debased, wretched condition as the poor of Europe, insult them by such an odious comparison? Why, sir, you do not know what poverty is? We have no poor in this country, in the sense in which that word is used abroad. Every laborer, even the most humble, in the United States, soon becomes a capitalist; and even, if he choose, a proprietor of land; for the west with all its boundless fertility is open to him. How can any one dare to compare the mechanics of this land, (whose inferiority in any substantial particular—in intelligence, in virtue, in wealth—to the other classes of our society, I have yet to learn,) with that race of outcasts, of which so terrific a picture is presented by recent writers—the poor of Europe? A race, among no inconsiderable portion of whom famine and pestilence may be said to dwell continually—many of whom are without morals, without education, without a country, without a God! and may be said to know society only by the terrors of its penal code, and to live in perpetual war with it. Poor bondmen! mocked with the name of liberty, that they may be sometimes tempted to break their chains, in order that after a few days of starvation in idleness or dissipation, they may be driven back to their prison-house, to take them up again, heavier and more galling than before; severed, as it has been touchingly expressed, from nature, from the common air, and the light of the sun; knowing, only by hearsay, that the fields are green, that the birds sing, and that there is a perfume in flowers. (Michelet.) And is it with a race, whose perverse institutions of Europe have thus degraded beneath the condition of humanity, that the advocates, the patrons, the protectors of our workmen, presume to compare them? Sir, it is to treat them with a scorn at which their spirit should revolt, and does revolt! Just before I left Charleston, there was a meeting called for some purpose, which was regarded by the people of that city as unfavorable to public order. There was something, I suppose, in the proceedings, which looked to the inviolable distinction of which I have been speaking;

\* Franklin and Sherman, signers of the Declaration.

for it led, as I have heard, to an expression of sentiment, from one of our mechanics. (*Mr. Harby*.) which struck me as noble beyond all praise. He said he wondered what could be meant by addressing to the industrious classes, particularly, all inflammatory appeals against the institutions of the country—as if they were not a part of the community as much interested in its order and peace as any other—as if they had no ties of sympathy or connection with their fellow-citizens—above all, as if they had not intelligence and knowledge enough to take care of their own interests, but were reduced to a state of perpetual pupillage and infancy, and needed the officious protection of self-constituted guardians! Sir, that was a sentiment worthy of a freeman, and which may be recorded, with honor, among the sayings of heroes.

Mr. Chairman, I thank the committee for the attention with which it has honored me. I have detained it long: but I was full of the subject which appears to me to be one of vast importance, in all its bearings. I have spoken what I felt and thought, without reference to party. But I will say one word to those with whom I have generally acted on this floor. I have heard that some of them disapprove this measure, but are disposed to vote for it to oblige their friends. Sir, this is a strange and a great mistake. A true friend ought to be a faithful counsellor. Let them remember the deep reproach which the great poet puts in the mouth of one of his heroes:

Hadst thou but shook thy head, or made a pause,  
When I spoke darkly what I purposed;  
Or turned an eye of doubt upon my face!—

## SPEECH OF MR. WISE, OF VIRGINIA,

*In the House of Representatives, September 27, 1837*  
—Against the postponement of the fourth instalment under the deposit act of 1836.

MR. WISE said he was in no sense prepared to discuss this bill; and were it not that he alone of the opposition voted, the vote was proverbially 43 democrats and Wise! against the distribution bill—distribution bill it was; and was there not a seeming inconsistency between the vote he then gave and the one he now should give against this measure, he would remain silent. But (said Mr. W.) I am peculiarly situated, and must explain my position. I shall vote against this bill to postpone the fourth instalment under the law of 1836; and, inasmuch as I voted against the law to create that instalment, I must explain.

What a change has "come over the spirit of our dream!" Sir, this all does seem like a dream to me. But *yesterday*—as it were, *last week*—we were debating and deliberating upon the great and solemn question, *What shall be done with our immense surplus revenue?* We were told by the President, by the party, by the press, that the nation was in a state of the most exuberant prosperity; that the Treasury was overflowing with millions, and countless streams of revenue were still pouring in from customs and from lands. We saw one of the strongest friends of the Administration in the Senate (*Mr. Benton*) proposing bills of appropriation for the most extended works of extravagant expenditure, and providing for the most magnificent outlay of a splendid Government. In two sessions of Congress we saw more than eighty millions appropriated by law, and we saw an opposition, jealous of Executive power, striving to curtail Executive patronage by putting a nominal surplus of more than thirty-seven millions out of the Executive hand! All this was but a year past—in June, 1836; and a year in the existence of a Government is but a day. What hear we, what see we now? What do we hear and see in September, 1837? Sir, we are now called together, at an unusual time, under the most extraordinary emergencies, by an official proclamation of distress—distress among the people, and distress in the affairs of Government. What are the recommendations of the President? What are the propositions of the Committee of Ways and Means? Yesterday, sir, yesterday there were sixteen millions of unexpended balances of appropriations for 1836, thirty-seven millions and a half of surplus, five millions reserved for contingencies, sixty millions, or more, in the Treasury; and now, sir, though the States have been paid but three instalments, though appropriations to the

amount of fifteen millions have been suspended, we are told that the Treasury is bankrupt! Sir, look at the bills on your table. After all this prosperity, so soon after all this richness and superfluity of means, of a sudden we see a bill to postpone the fourth instalment to be paid the States; a bill to issue ten millions of incontrovertible Treasury notes; a bill of bankruptcy proposed; a series of acts, like fishing nets, put out to draw in your small remnants of resources to replenish our exhausted coffers; a series of measures to rake together the *small change* of Government, which lies scattered in the places where the bulk of our treasures were supposed to be! How came this change? What means this immense and sudden vicissitude? What has produced this scene of loss and ruin and confusion? Sir, it may surprise some, it does not surprise me. It is exactly as I always thought it would be—it was all humbug. You never had the money; it was a delusion; the people were deceived and imposed upon. One reason why the Government opposed the deposit act was because it was sure, in the end, to expose the fact that we had all along been toppling on the giddy height of a delusive and false prosperity, ever verging upon an overwhelming catastrophe!

The catastrophe has come and overwhelmed us; we are now bankrupt; and we are asked to take back this gift we made to the States in the moment of our delusion and folly; to *postpone* the fourth instalment *until further provision by law*. I will not vote to do it. I will vote against this bill for the same reason, the very same reason, I voted against the deposit act itself.

This bill is, as was that, in fraud of legislation. I will say it boldly; that every word said by the young gentleman from Kentucky (*Mr. Menefee*) is true. That act was a *distribution* bill, not a *deposit* act, and so understood by most who voted for it. It was openly advocated as a *distribution* bill, and opposed by me on this floor as a *distribution* bill. By the *leaders*, at least, of parties, it was never intended as any thing else than as a *distribution* bill, and they never expected that a dollar deposited with the States would ever be returned to the General Government. It was a disguised measure, and therefore I opposed it. It said one thing and meant another; it was a deposit bill on its face, and a distribution bill in the intention of its legislators.

It is true the great question was, *What shall be done with the surplus revenue?* It was a great source of corruption; most of the opposition feared that so great a money power left with a corrupt Executive would enslave us; the plans to dispose of it were numerous, almost infinite; there was a great and irreconcilable diversity of opinion among most of us; the land bill had failed. It was at such a moment when I, as well as many others, began to be willing to dispose of it in almost any way, to take it from the hands of power and its parasites—hands which seemed to grasp it with an iron hold—it was then, I say, I saw that truly gallant and great man, who is always wide awake, and always knows when to strike for his policy, who has always been consistent and constant in one line of policy, HENRY CLAY, who, if he be the father of the American system, has ever supported it with a master hand. I saw him convert the word *distribution* into *deposit*, and the public money into the public lands. I saw him bring forth that deposit act, and though oft baffled, though comparatively weak in the numbers of his party, clearly in a minority, yet it seems impossible to resist him; he will be felt, will be heard. I saw him carry his measure, in spite of all, successfully, triumphantly! He carried the substitute for his land bill in a way most surprising to me. I saw the State rights men, of the strongest calibre, carried along with him, and aiding in the support and success of the *distribution* bill.

Sir, I regarded that bill as the very acme of the American system. I was astonished to see how the strait-jacket politicians were caught by it. Every effort was made to obtain my vote for it; some of my State rights friends endeavored most strenuously to prevail on me not to vote against it. No, I told them they were exceeding the most ultra-latinudinarians; I could not vote for it; it was unconstitutional.

It went beyond the system of internal improvements by the General Government, and beyond the tariff; it went not only to buy up sections and districts, but it was at once a wholesale purchase of every State in the Union. It went to buy up the bodies politic, which were the only, if they were any, checks upon this mammoth central Government.

I contended with my then State rights friends that a distribution bill went to fix tariff and internal improvements both upon our policy. We would divide out some thirty or forty millions to the States, and they would return to the crib, and forever hereafter seek the hand that fed them. I reminded gentlemen that the States had not the unobtrusive and silent means of laying and collecting taxes, by duties and imposts, which this General Government has; that they all had large schemes before them, and it would corrupt them at once, if they were permitted to taste of the bait which the deposit act laid in their way; that it would enable them to complete their works of internal improvement, and the act was but an indirect mode of carrying on internal improvements by the General Government; that the system of distribution insured at once a high tariff and an immense revenue. The States having once tasted of the sweets of millions, easily collected for their various uses, would cry like leeches for more, more, until taxes would become intolerable, and the Government become consolidated. Nor would the constant demand of the States for more Treasury paper diminish the wants or stint the supplies of the General Government. The largest possible revenue would be raised, infinitely beyond all reasonable wants here; and a constant scramble would certainly occur among the large and small States in Congress for appropriations of as much as could possibly be got by each State before the day of distribution came, and then each would come in still for an equal share of what was left. Thus would the most extensive and alarming scheme of high revenues and of extravagance of which the mind of man had ever conceived be fastened both upon the State and Federal Governments; and it was useless to contend for strict construction and limited powers, if such a measure was to prevail.

I urged other objections in vain. This measure of distribution was inserted in a bill to regulate the deposit of the public money, which recognised and sanctioned every principle which had been relied on by Mr. Taney for the removal of the public deposits from the Bank of the United States. The bill, so far as it was a deposit bill, left the entire custody and control of the public money to the Executive. You know, Mr. Speaker, for then you were chairman of the Committee of Ways and Means, that the Administration proposed, the very next session after the removal of the deposits, a bill to regulate the public deposits precisely similar, with the exception of the distribution feature, or deposit of the surplus with the States, and the opposition then would not touch such a bill. Mr. Binney, a distinguished representative from Pennsylvania, then offered an amendment, *requiring the deposit banks to have at least one-fifth of the amount of their deposits in specie*; the "metallic currency" party refused to adopt that amendment; that bill was not passed, and the public deposits remained three years in the State banks, without regulation by law. Yet, in 1836, when the same bill was proposed, with this bait in it, all went for it *en masse*—without scruple, without requiring any specie security from the banks, and leaving the Government funds and five millions excess wholly at the discretion of the Secretary of the Treasury. Sir, the people had become dissatisfied with the unregulated state of our finances; they had begun to clamor for some regulation by law, and, being unable to regulate the public deposits under proper limitations and restrictions in respect to their safety and the power over the public money of the Executive, my policy was to leave the public money wholly in the hands and at the will of the President, and to hold him responsible for that condition of things before the people, until it could be placed under the custody of law by proper legislation. If we had returned to our constituents with the report that the Executive still held the public purse without the sanction of Congress, they would have remedied the disease of the country before this day, and this day of distress would never have come. That deposit act, in part, caused the Treasury circular, and other Executive measures, which have produced the catastrophe of these times. You passed that act; the public mind became quieted, because all the leaders seemed to unite and acquiesce in the wisdom of its policy, and all complaints to the people concerning the insecurity of the public money were unheeded, and its custody and control became vested in the Executive by general consent.

Another reason why I opposed that bill was its unjust and unequal mode of distribution. Dela-

ware got just three times as much as she was entitled to, and Virginia, instead of getting about one-sixth, what she was entitled to by the federal ratio, got about one-eighth only of the amount distributed.

Sir, the bill passed the Senate. I had heard that the President would not sign it. When it came to the House of Representatives, I urged all the objections, and more than I have named. I then predicted that we should hereafter hear the very doctrines which we are now hearing, in support of the States' claims to this money; that we should never get a dollar back into the general coffers; that the States would seize it as their own. I have every reason to believe that this was all intended by some of my State rights friends, who now say this act was never intended by them otherwise than as a deposit act. They persuaded me to vote with them; this I could not do; and they then prevailed on me not to publish my objections to the bill; this I consented to, and have regretted it ever since. I then warned some gentlemen, who are now blaming the national republicans for voting for large appropriations, that they were consummating the American system; portrayed the evils, the very evils which we now see, and preached against it, so long as my preaching was worth the pay. When the bill was carried out of that door by the engrossing clerk, or messenger, I said, "there goes the death warrant of State rights!" I was sure the President would veto it; and if he had done so, I would have forgiven him for a multitude of his sins. I had heard him myself say, "When the General Government moves in its sphere, and the States move in their proper spheres, all goes on smoothly; but when this General Government becomes a great central tax gatherer for the States, they will be bought up, and the whole will result in consolidation. I never will sanction a bill tending to such a result!" But he did sanction that bill. How came he to do so, after having vetoed it in anticipation? You, Mr. Speaker, know how his sanction and signature were obtained. Mr. Butler, the Attorney General, can tell how. Sir, you changed *tweedle-dum* into *tweedle-dee*, tickled the old man with a straw, and he, at last signed the bill, though he had sworn, in his wrath, that he never would. He understood the bill as well as I. The bill passed; it became a law, against my will, and against the will of the President. It was, in form, constitutional, in intention unconstitutional.

What have been the consequences of passing that bill? The States of the Union have taken the money as their own. They have taken it just as the Secretary of the Treasury told the deposit banks to take what was deposited with them as their own—for loan, for use, for trade, for commerce. They have appropriated, used, and expended what has been given them, and have entirely anticipated the amount of the fourth instalment, yet to be paid here.

The proposition for this measure came from no State in the Union. You gratuitously passed a law giving them this money; and you have, by your own action here, unsought and uncalled for, induced them to incur large expenditures and heavy contracts. If you have not made strictly a contract with them, you have, wisely or unwisely, caused them to make contracts with others. Your gratuitous promises have caused them to enter into solemn obligations, which they must keep in good faith, though you fail to keep your faith and to enable them to comply with their obligations. The case is submitted to me as a chancellor. A father promises to advance his son; the son, on the faith of the promise, makes a purchase. Shall the father not comply? Yes, sir, so saith equity; and so I say. I will not put the States, by my vote, to the least inconvenience, even on account of promises gratuitously made by the General Government, and on the faith of which the States have proceeded to act or contract. Although I do not consider this a contract between the General Government and States, yet, sir, I am for decreeing, under the circumstances, for the States to take the money.

I have said I shall vote against this bill to postpone, because it is just like the bill it means in part to repeal. It provides that the fourth instalment shall be postponed until further provision by law. Now, sir, does any gentleman who will vote for this bill intend that the States shall ever receive or be paid this fourth instalment? No, he does not. By the word "postpone," you mean the word "repeal." You either mean to repeal, or you do not. If you do, why not say so? Why say one thing and mean another? If the bill means to repeal, it

means to do so fraudulently, and therefore I cannot vote for it. If it means what it says, to postpone until further provision by law, it means still further to pledge the faith of this Government to distribute this portion of the fourth instalment—a measure to which I was always opposed, and therefore I cannot vote for it in either aspect. If you have never before committed yourselves to pay this money, you will have done so by this bill. Do you not plight the faith of the nation hereafter to distribute this amount? Postpone is not the right word for a measure of repeal; and to postpone until further provision by law is to say you will at sometime do what I was never willing should be done at any time.

But I have other objections. This bill is in aid of the sub-treasury scheme, and it tends to put the State banks, which hold the balance of surplus revenue, into the power of an Administration whose policy is to discredit and to destroy them.

Sir, let me ask those who call themselves conservatives especially, how they can vote for a bill which every body understands as part of an entire system of warfare against the local institutions of the country? Every bill on your table tends to this one great point; to make all banks odious and insolvent; to put the screws upon them, and to check them up with the reins and stiff bits of Government. These bills are all mere precursors of a Treasury bank, which can only be made tolerable in the public mind by making every other sort of bank intolerable. Credit must be destroyed to destroy the credit system. Is not this plain? Is it not obvious that this loco-foco administration is courting the people and tanning the opposition to force upon it either a national bank or a Treasury bank? What is a Treasury bank, but a national, a United States bank, in its really odious form? Have we not the clearest evidence that an unrelenting war is commenced against the State banks—Jackson *duce*? Has not, "the Greatest and Best" denounced them even with more venom than he ever denounced the great monster and Old Nick himself? Has he not denounced the local bank system of deposit as the most base and perfidious? And, sir, if any link in the chain is stronger than another to bind the local banks to the car of the Federal Executive, it is this bill. The gentleman from Kentucky (Mr. Chambers) has, by a very able speech, relieved me from the trouble of demonstrating this. But he will not publish his speeches, though he delivers among the ablest we hear in Congress. I require of him to publish that speech, and I here rebuke him for not publishing others. He has demonstrated, sir, that this bill will call on the banks, and the banks will call on the people, for more than seventeen millions of specie. The banks are to be made to groan and call out in their distress upon the Executive for relief. Sir, I should think we would all remember other evidences of enmity from a certain quarter to the local banks: the evidence has not all been published. The chairman of the Committee of Ways and Means, (Mr. Cambreleng,) we are told by the newspapers, wrote to a friend in Albany that they then had the banks "on the hip." Now, sir, that is an old Virginia phrase in wrestling, and I tell the conservatives that if they do not "mind their eyes," the deposit and local banks will all be "cross-hopped" and laid flat on their backs!

[Mr. Cambreleng here interposed, and made some remarks to the effect that he was glad his letter had been alluded to, and that he was thus afforded an opportunity to publish it. He said a copy was at the service of the gentleman from Virginia, and he would be happy if the gentleman would publish it.]

Mr. WISE continued. Sir, I do not pretend to be certain of the contents of that letter. I will not say it will be found to contain the expression "we have 'em on the hip," but I will risk its publication. Where there was so much smoke, there must have been some fire. It made, as it was said, Governor Marcy mad, and, at all events, will be found, I expect, to exult highly in the probable triumph of loco-foco principles and events over sound credit and currency.

[Mr. CAMBRELENG. If he had thought there was any thing worthy of publication in the letter, he would have published it. Governor Marcy condemned the suspension of specie payments. But I never went so far as the gentleman from Massachusetts; why don't you wage war on him?]

Mr. WISE. Sir, I mean the Flagg letter. Let there be no tricks—give me the real letter. I'll publish it, and risk the advantage the gentleman has

of furnishing me with whatever letter he pleases. If it be not found to contain the old Virginia wrestling phrase, I think it will be found to declare war, relentless and savage, against the local banks. Now, be it distinctly understood that I am no advocate of the deposit banks, or the State banks generally. I opposed the deposit pet bank system as inefficient and corrupt. I have been engaged the last two years in exposing its vices. I cannot bring my mind to choose between the pet bank system and the sub-treasury. I am a friend to neither, and I shall oppose both; but I cannot consent to aid the Executive of the Federal Government in waging an exterminating war against the institutions of the States of the Union. I deprecate an alliance of State banks with this central power, no more than I do an Executive war upon them. The rights of the States and the interests of the people of the States are too intimately blended with these institutions for me to consent either that they shall be corrupted and used for political purposes, or be prostrated and crushed by the General Government. They now have ceased to be "pets." Some gentlemen seem goaded by that appellation of them now, and I am not willing that they shall become *victims*, like almost all our institutions, to be sacrificed at the shrine of an overweening federal power, which now, more than ever, darkens the land. The funds now in the deposit banks are not to be transferred to the States. The banks are not to be left to the mercy of their creators, but they are to be ground down by the tender mercy of this administration, which brought them to the very condition which is now calculated to render them odious and to furnish the pretext for oppressing them and their debtors. Whose interest is it now to show that they have been "base and perfidious?" Sir, I wish that my honorable colleague (Mr. Garland) was here. I would remonstrate with him, as a true conservative, against his remarks in favor of this bill. This is not a conservative, but a loco-foco—a destructive measure. Sir, we are told that the funds in the deposit banks are not available. If they are not available to the General Government, they may be available to the States. And, if not available, why should they be withheld from the States when they cannot avail the wants of the Treasury? The local banks can pay the States, whilst they cannot pay the General Government. The States, where-in they are located, will take their notes. With their local currency they can pay the laborers on the works for which they have contracted on the faith of this deposit.

And, sir, if these banks can pay the States, and not us, they can thus pay debts to us which are now, we are told, in jeopardy. Sir, if you give this administration fair scope at these banks, I doubt whether they ever will be able to pay their debts. It is the interest of this administration to make the suspension of specie payments perpetual until they carry out their favorite project of a Treasury bank, founded upon the prostration of credit in all the forms in which it now has, or ever has had, existence in this country. Indeed, sir, these funds are, it appears to me, more available in the local banks than they will be in any other condition in which they can be placed. By the protested warrants, as they have been issued by the Secretary of the Treasury since May last, you may make one million of funds pay ten millions of debts. This is an invention of these times of necessity; necessity is the mother of invention, as Mr. Secretary has proved from his schoolboy days, when he copied from the plate, up to this hour of financial distress, he being at the head of affairs. He has unavailable funds in the deposit banks; he draws his warrants upon them; they are protested, are bought up by public debtors, come into the Treasury in payment of dues and then expire as receipts. Again and again this process may be carried on. He has issued about two and half millions of these checks or warrants; one and a half millions are supposed to be in the hands of the monster Pennsylvania bank, and one million are outstanding, or have been paid into the Treasury. At one moment we are told these funds are chargeable with these warrants, and in the next we ascertain that the warrants die in the hands of public debtors. Thus, sir, we may draw on these funds *ad infinitum*, and if they be left in banks, and are transferred to the States, they will enable the States to fulfil their contracts with their creditors. Besides, when they are transferred to the States, the States become security for the banks; they become the depositories in fact, and may save the public money. If the money is never to be repaid to

us, in the name of God let it go to the States, and do some good, whatever it may.

But, sir, though we are told these funds are unavailable, yet we are at the same time told that the Government cannot get on without these funds. If the funds are unavailable, how will they enable the Government to get on? Now, sir, I freely confess that I cannot comprehend this alleged deficit in the Treasury. I, like other pumpkin-headed gentlemen on this floor, cannot understand the Secretary's report. I figured upon its data until I threw down my slate in despair. But, sir, I have been struck with this singular spectacle—such an one, I venture to say, has never been exhibited before; it is a perfect commentary upon the misrule which has brought us to this scene of misery and distress. We see on one side the opposition to a man striving to demonstrate that the Government *has fun's and can pay its debts*. And we see the administration, on the other side, those who were bound to see that the Treasury was not exhausted and the public credit preserved, to a man, from the Secretary down, striving to prove that the Treasury in their hands, and under their sole superintendence, has suddenly, from an overflowing state, become bankrupt!! Sir, I call public attention to this utter profligacy. I ask, I implore the people to consider this spectacle, to contrast it with scenes which transpired before their eyes but yesterday. A moment ago we had a surplus—the party boasted of our means—they claimed the credit of an unexampled prosperity; to day, they come in to take the benefit of the insolvent law—they are ready to swear they have not, of all this surplus, left one dollar to pay our honest creditors! Such is their effrontery; the case speaks for itself, and I would speak to them. Sir, I would say to them, you must quit trading, you must give up the concerns of Government, you have proved yourselves incompetent from knavery or folly. "*No man should trade on borrowed capital.*" You have brought the Government to bankruptcy and borrowing; you have three years to wind up your affairs; we will give you that time in which to settle with the People; and then we require you to give up their Government to safer and honest hands. Yes, sir, let us call to mind the scene exhibited here in March last, when the Greatest and Best was retiring from office, and his successor was installed, with his high approbation, under a solemn pledge to carry out his hallowed policy, big with national prosperity and grandeur—when the flow of milk and honey was promised to the land—when gold was to glitter on our very streets—when the great chief and the little protégé were drawn on the fragments of the Constitution by four white horses, as the kings of old, the horses almost pawing down the crowd, and the crowd shouting hosannas to their great benefactors. Sir, let us remember that scene in the east portico of the Capitol! All was well! The nation was prosperous and happy on the 4th day of March, 1837! Sir, I was a miserably discontented man; the old chief had told us the same story in his last message; I joined issue with him; I was guilty of sacrilege for daring to deny his statements. He said the Treasury Department had been well conducted. I drew Mr. Woodbury and Reuben, and the whole pack, before a committee of investigation; they all swore that all was right—the deposite banks, the Treasury, the whole Department, all, all was safe and sound. Sir, look at Mr. Woodbury's examination and the report of the committee last spring, as late as the third of March last; the delusion was kept up to the very instant of time, the 4th of March, the inauguration day, when the pet banks tumbled down one after another, like so many bricks on their ends in a row.

Truly, truly, it may be said, sir, that the evil which General Jackson did lives after him. He was the most fortunate man that God ever permitted to riot in success, and to triumph over much that was good! He warred without ceasing against the Bank of the United States; he rendered it an odious monster, and killed it in the confidence of men; yet, all the time that he was in power and wielding that power against that institution, it was fructifying the nation, sustaining exchange, maintaining credit, a sound currency, regulating, in a measure, excessive bank issues, meting out to labor, its reward, insuring confidence in trade, keeping prices steady and advancing, and in every way warding off the evil day until after General Jackson's term of office expired. His monster lived to keep him and his power and popularity alive, until it was too late to rebuke him for the mischiefs we

now endure. It gave us a seeming prosperity which was all ascribed to General Jackson, and verily his enemy was made to praise him. Sir, it was the most signal instance of good fortune in his whole life, that the bank continued in existence until within one year of the expiration of his reign, and that the effects of its death could not be felt until one year after the expiration of its charter, and one day after his political career ceased! It was wonderful in the coincidence of events. No one thought that disorder would so soon arrive—it waited not a moment after Jackson ceased to be President. You may look through his whole life, I say, to the cock-pit, the horse-race scenes, to his hair-breadth 'scapes in war, and to his glorious victories, and not find a parallel instance of good luck with this. We were told that the bank would fall like the oak in the forest, crushing every tender shrub in reach of its giant trunk and branches. Not so; it died like a good man, quietly, and almost in silent prayer. The earth shook not at its fall; and yet, in one year from that event, the credit of the Government and the trade of the people are crushed. Sir, when it died, the arterial blood dried up; its bills of exchange, which it kept at the lowest rate in market, were that blood—it circulated in the great arteries between the exporting and importing points—between northeast and southwest, New York and New Orleans. The bank was your importing and exporting agent; the artery of internal exchange was cut, and the nation now lies bleeding to death! None of this happened, because it could not, until after Jackson ceased to reign. Now, oh! ye, the people, contrast the "last annual message of the Chief, and his farewell address," with the first extraordinary message of his successor! Sir, the Administration either knew of all these results which we have witnessed, so ruinous and disastrous, or they did not. They may take which horn of the dilemma they choose. If they did not see the operation of causes and the coming of events almost touching their noses—events which were predicted for years—events which have followed so suddenly upon their boasts of prosperity, upon times when the Administration party was for voting away millions for every species of extravagance; upon times when, instead of withholding appropriations, they were making the most numerous and extensive Government contracts—contracting away millions in a month—I will not be harsh; I will not say if they did not know and did not consider, they must have been fools; or, if they saw and knew what was coming, they did not warn the people, and they must be knaves. A friend the other day said he would put forth horns upon them, and make the beast complete! I will not say they must be both knaves and fools, but I do say there has been most shameful, wilful, blind, and gross mismanagement, and mal-administration; and if there be no hope of reform, all hope of preserving the Government and its freedom and purity must cease! Their great panacea, their deposite bank system has signally, woefully failed; it was recommended and defended but yesterday as the best substitute for the Bank of the United States; it was to supply exchange, and perform every financial and commercial function; and we have seen, in a day, in what it has resulted. They now recommend another sovereign remedy, another king cure all, a sub-treasury system. Are they to be confided in? Are they and their plan not to be distrusted? Are the people not sick of experiments? But, sir, this part of the discussion I must reserve for the time when the sub-treasury system comes up; though I do not believe it will ever be presented, in good faith, to the decision and action of this house.

To return to the subject of this bill. The chairman of the Committee of Ways and Means says the question is as to our ability to *deposite*, not to *pay* this fourth instalment. The amount of the instalment is unquestionably in the deposite banks. If this, as I contend, be a *deposite* only with the States, it will not in the least diminish the funds in your Treasury. Sir, according to my construction of the deposite act of 1836, you may every day give thirty days' notice, and call in the amounts allowed under the act, upon giving such notices. And, if this be to *deposite* merely with the States, the objection to depositing the fourth instalment, urged by the gentleman from South Carolina, (Mr. Pickens,) that if the fourth instalment should not be postponed the burdens of tax-paying people must be increased, vanishes. If a deposite merely, the money still remains in the Treasury, and there will

be no necessity for raising revenue or increasing taxes.

But, if we will not postpone the fourth instalment, we are asked how we will relieve the Treasury, and furnish it with funds? We reply, suspend your enormous appropriations; stop your extravagant expenditures. We are answered, that contracts have already been made for most of the appropriations. Sir, I do not believe the fact asserted. The Secretary has been called on for a report of amounts contracted for; he has not yet furnished the house with the information. Have the departments all been striving to make contracts as fast as possible, and to an extent and amount unheard of, in order to make out a deficiency in the Treasury? Sir, I believe they have, and this of itself is a serious instance of mismanagement. Let the information come from the Secretary, and you will find millions uncontracted for. But, sir, before the information comes, we will have acted on this bill. You rush your bills through the committees, and in the house you will not wait a moment to obtain the light necessary for us to vote understandingly. I now see my friend over the way (Mr. Cushman) ready to move the previous question; when I am done, he will pop up like the striker in a piano forte.

[Mr. Cushman here interposed.]

Mr. Wise. Sir, I did not know the gentleman had resigned his office. I mean to complain that just as we get a bill through, generally, the proper information comes in and is printed; and we are left afterwards to wonder how so many mistakes and so much mischief could have happened! This information now wanting is most important. Who can answer how much of your enormous expenditures are contracted for?

Sir, my friend from Tennessee has been asked why he does not bring in a bill to repeal appropriations? We answer that there is no necessity for such a bill. Sir, if you withhold means for all this extravagance, some of the appropriations must be expended by the Executive. The Secretary himself tells us that he has taken the responsibility of suspending fifteen millions. Why cannot he suspend more? Does the gentleman from South Carolina (Mr. Pickens) desire the responsibility to be taken off the shoulders of the Executive, and does he wish to see a scramble in this house between the different delegations who have favorite objects of expenditure, as to which shall be suspended? Does he desire to set us by the ears, to determine whether the reduction shall be made on harbors of New York or Ohio, or whether it shall be made on such objects as the exploring expedition? By the by, I would ask the gentleman from Ohio, (Mr. Hamer,) what has become of that beautiful project? I would inquire of that good old bachelor, the Secretary of the Navy, who studies botany, I am told, how many vessels Captain Jones has at Norfolk; how long have they been there; in what state of preparation are they for sailing to the south pole; how much it will take yet to fit them for sea? Some half of a million perhaps has been expended, and Captain Jones has not been enabled by the Department, I believe, to sail further than from the Norfolk navy yard to Hampton roads\* and back. I wonder if he met any of the South Sea Islanders! But the gentleman from North Carolina (Mr. McKay) tells us that all the ordinary appropriations are as small as those under the condemned Administration of the ostracised gentleman from Massachusetts (Mr. Adams.) He says the enormous appropriations are all "*extraordinary*!" And, sir, verily they are. It is of their being extraordinary that we complain. Sir, the gentleman shall not escape in that way. Are *extraordinary* appropriations to be tolerated simply because they are *extraordinary*? I should think, sir, that would be the best reason for suspending them. And, in these very extraordinary times I should think Mr. Secretary would be very justifiable in suspending some of them. He should know the most proper objects of expenditure, and he should know best where the reduction should be made. I will insure it, sir, that he finds out very certainly if left to himself, how to get along without this postponement of nine millions to the States, and without giving him, in addition, ten millions of Treasury notes.

But the gentleman from South Carolina has rather turned upon his old party associates in the opposition, and complains, if a bill to suspend appropriations was brought in, the national republic

\* Captain Jones has since told me he has never got below Craney Island.

cans would vote against it, and go, as they have ever gone, for the utmost extravagance. I am sorry, sir, the opposition, just at this crisis, has been divided; a part of us, it seems, has gone over to the enemy—or the enemy, as the phrase is, has come over to them. Sir, I know that I was side by side with the gentleman last spring, and both side by side with national republicans, fighting manfully, shoulder to shoulder, to reform this Government. I expected to find that gentleman with us again. Is there a fear that the national republican camp is becoming too strong—or, rather that the opposition is becoming too strong too fast?—That our power is not tending in the right direction? I hope not sir; I hope not. I claim to be of the State rights party myself, and I am far from being ashamed to unite with nationals, or any party of men who are at heart patriots, to pull down a rotten dynasty which has disgraced the Government and ruined the people, and which, as a party, transcends infinitely, in principles and in practice, any latitudinarian party which ever existed in this country. True, the nationals, when in power, did advocate and adopt systems of tariff and internal improvement; but does the gentleman from South Carolina (Mr. Pickens) find his company improved? Are not his new friends infinitely worse than his old ones? Yes, sir, if the nationals contend for strong powers in a strong Federal Government, they place those powers where they belong if they exist—they balance them and check them—they give them to the legislative department—to kings, lords, and commons. But your patent Jackson-Van-Buren party goes for the same powers, and even for stronger, in "the Government," and "the Government," is the king alone with them! All power they give to the Executive, and are now bent on transferring to the President, not only the custody and control of the public money, but the regulation of the value of money, and of the entire currency! Such is the difference between the gentleman's new friends and his old ones. Will his new friends not go for extravagant appropriations also? Does the gentleman not remember the harbor-bill case, when the Van Buren party shows that its principles against internal improvements are exactly in proportion to its interests! [Here Mr. Wise related the case of striking out the \$30,000 dollar item from the harbor bill, &c.] Sir, the gentleman's new friends are worse in every point of view than his old.

[Mr. Pickens interposed. He had not taken company with any but the State rights party of South Carolina. The administration had come to him.]

Mr. Wise. I suppose, then, sir, the opposition has left the gentleman from South Carolina, for certainly he was with us. My colleague from Virginia (Mr. Garland) is in a somewhat similar, though opposite, predicament. The administration has left him. It is the same thing, sir, as if he had left the administration. They will tell him, that a man abandoned is an abandoned man! Sir, if the gentleman does not follow the party round every turn, however short the angle, they will kill him off—shoot him as a deserter, just as soon as if he refused to follow them in a straight line.

But, sir, to my last objection to this bill. If you demonstrate that Government cannot get along without postponing this fourth instalment, I will vote for the bill. Why? Because it is a part of a patching system, which violates all Scripture. You are adding new cloth to an old garment, and making the rent worse. I am not for patching up the tattered garment of your Treasury. I want a new garment entire. The Government is able, I contend, to hide with a new suit its present nakedness. I desire to take up some measure for permanent, radical relief. I know not what is to be the effect of these little detached bills. They all through seem to be parts of one great whole, which I dread.

I am afraid, sir, at every step, that I am voting for a mammoth Treasury bank. I will support no bill for the relief of the Treasury until I know what is the general system of finance to be proposed. I do not believe that any such general system will be proposed in good faith. I believe you have called us to pass these bills to add to your power of mischief—to appropriate millions more to that disgraceful Florida war; and then you intend to prostrate Parliament—to send us home. No, sir; I shall wait until you propose your sub-treasury scheme. I desire to join issue with the first message of the successor, as I did with the last message

of the predecessor. I desire to discuss whether this Government shall draw its life-blood from the people, and then if the people are to be told that they have no right to demand of this Government relief! What relief? A grant of money? No! They deign not to come to you as beggars. They demand of you the discharge of duties, and the faithful exercise of trusts. They demand that you shall so exercise your legitimate powers, and discharge your Government duties, in collecting taxes, raising revenue, in paying your debts, in performing all your functions, that you shall not ruin and oppress them; that you shall, in one word, so regulate finance as not to destroy commerce! These issues and more I desire to discuss on the sub-treasury bill; but it will never come up. Some gentlemen will find themselves deceived; they should have taken bond and security that the administration meant to carry out its policy recommended before they committed themselves fully to it. I promise my friend (Mr. Pickens) that I will unite with him to have that scheme discussed and acted on, but I warn him that he is to be left in the lurch.

Sir, gentlemen still harp upon the issue of bank or no bank. This only convinces me of the truth of my apprehensions, from the fact which I see daily before my eyes. Why does the administration still, Falstaff like, pierce the thrice-smitten corpse of the monster, which now, like Lazarus, stinketh in the sepulchre? Why press this issue on Congress? Sir, a friend wrote to me the other day, from Baltimore, inquiring, what would be done? I replied: nothing; because, at this time the administration has not the force to be willing, and not the willingness to be forced. I meant—to charter a national bank! The friends of that measure—I mean those who look to it in the end—will not now stand up to be knocked down; and why does the administration insist on raising us up to prostrate us? Sir, is it not monstrous that, in times like these, when we are convoked by the President himself to heal national calamities and diseases, when the Government, we are told, is bankrupt, and the people are certainly suffering, the administration itself should be proposing negative propositions? Instead of urging a bill or resolution which will provide relief, that they should be pressing upon the time and attention of this short, called session, a resolution—imply to condemn a measure which is not proposed as one which will not give relief? Was ever such a proposition before heard of? Is not this mockery—mockery—cruel mockery of the public distress? And this too by the only true friends, the only true lovers of the people! By a party to which the people have been so kind, indulgent, and confiding, to a fault! Great God, sir, I am sick—I go to a physician—I cry for relief from sickening pain—I ask, what will cure me? He folds his arms, and, with sang froid, most murderously replies, "*rhubarb will do no good; calomel is inexpedient!*" He gives no cordial—applies no balm that will cure—but names numerous useless remedies that will not cure! Why do gentlemen not go through the whole catalogue of useless and inexpedient remedies, of negative propositions? Is the Bank of the United States the only inexpedient remedy? If not, why name it alone? By naming all inexpedient means we may arrive at what means are expedient. But, sir, we are not thus to be trifled with and taunted by paltry politicians. We cry for relief!—relief!—a remedy!—speedy remedy!—the patient is now suffering, and requires immediate aid! Sir, to turn from grave to comic—the gentleman from New York reminds me of the wood-cutter, in the "*hare story*." My friend from Tennessee, (Mr. Bell,) who has a wondrous penchant for anecdotes, thinks it the best story he ever heard: A sportsman was pursuing his game, a rabbit, he came up with a wood-cutter; "did you see a rabbit run this way?" "Ha!" "A rabbit?" "Was it yellow?" "Yes." "Had it large eyes?" "Yes." "Did you see it?" "Long ears?" "Oh, yes!" "Did you see it?" "Had it a white tail?" "Yes, did you see it?" "Did it jump when it run?" "Yes." "Had it a white tail?" "Yes! do tell me, did you see it?" "No—a—I never seed it!" So, sir, we have been chasing a remedy, like the sportsman the rabbit, and, coming up with the chairman of the Committee of Ways and Means, we ask him if he has seen it. After describing the very thing wanted himself—he says, "no, I never seed it!" Yes, sir, he and his party have seen it; they know very well what it is like; it has all the ear marks of the Bank of the United States; and

gladly, gladly would they take that remedy, and acknowledge it as their own, if they dared. By this negative proposition they have put out "a feeler," to ascertain whether they dare. Is such a party to be trusted by the people?

Sir, we were told by my colleague from Virginia, (Mr. Jones,) that the legislation of Congress has worked injuriously to the south; he cited the tariff and the bank. Sir, I deny that the bank ever injured the south. At the proper time I am ready to argue that proposition with my colleague. I admit that the north has derived the most benefit, but I deny that the south has sustained the least injury, from the credit system. They have, by all means, internal improvements and every encouragement of trade, enlarged their capacities for receiving the benefits of the credit system. We have been waiting for the waters of the stream to pass on before we cross over. We have been backward and tardy in improvements; they have built cities and brought to them western worlds for a back country. We have always regarded the agricultural as inimical to the commercial and trading interests; the north has always treated them as mutually dependent and identical. We have practised upon the theory that we must have capital before we have trade; they have reversed the maxim, and said they must trade before they have capital, and internal improvements before they can have either! The credit system makes them rich, it is true, without making us poor. And let me ask my colleague, if legislation by Congress has injured the south, what has Executive legislation done for the south? Admitting that the north is most benefited by the credit system, yet what of the converse? What has the destruction of the credit system done for the south? Upon what section has the loss fallen? The Executive war upon the credit system has cost the south this year forty millions on cotton! The curse has fallen on us, as it ever will when credit is impaired. The northern manufacturer may stop his loom, the northern merchant cease to import, but the cotton is growing, or in bale, and is sure to be under the dead-fall of the money market. The experiment has cost the south more than ever the justly odious tariff did. Yet, sir, my colleague still urges another experiment. He says our Government is but an experiment, and one yet destined to make despots tremble on their thrones. Sir, let me warn my colleague if the party goes on experimenting, experimenting as they have been experimenting for the last four years, they will place a money despot on our Executive throne, whose political and purse power will make the liberties of this country tremble and totter from their base! He may go on, and go on accumulating these immense revenue powers in the hands of the President, he may denounce a *United States Bank* as inimical to civil liberty, and then think to secure that very liberty by a *Treasury Bank*; but if the folly of his course is not eventually demonstrated in tears and in blood, I will confess that my present alarms and dreadful apprehensions of a moneyed despotism have been causeless and senseless. Sir, these experiments will seat a despot firm fixed on his throne; if you part with your money power, you can never reclaim it. You will arm power with the power of retaining power. I trust in God gentlemen do not mean to carry out their schemes. The President very meekly disclaims, voluntarily disclaims, his Cæsar-like aversion to putting on the imperial purple and the crown—to assuming this awful money power; and I do fervently pray that the people will be still more disinclined to yield than he is to take upon himself this tremendous union of the money with the political power of the Government!

NOTE.—Below is the letter furnished by Mr. CAMBRELENG.

NEW YORK, MAY 10, 1837.

MY DEAR SIR: I have just learned that some of our friends (I heard the Bank Commissioners named) were to go to Albany this afternoon to get the legislature to suspend or repeal that part of our bank law relating to the suspension of specie payments. Such a measure, it seems to me, would be bad in every point of view. The bank party have inflicted upon themselves as a party a fatal blow, and have established a commercial precedent, which, if sanctioned in any manner by the legislature, will lead to a suspension of specie payments at the commencement of every pressure, which would be very different in its effects from that which has now occurred, after credit, prices, banking, and every kind of trade are reduced so low that our city bank paper and specie are nearly on a par for all the purposes of trade.

Very truly, yours,

A. C. FLAGG, Esq.

C. C. CAMBRELENG.

# SPEECH OF MR. CUSHING, OF MASSACHUSETTS.

*In the House of Representatives, September 25, 1837—*  
On the Message of the President of the United States, at the opening of the Twenty-fifth Congress.

The House being in Committee of the Whole, and having under consideration the state of the Union generally, and particularly the bill from the Senate postponing the fourth instalment of the surplus revenue to be deposited with the States—

Mr. CUSHING addressed the committee substantially as follows:

Mr. Chairman: I am not prepared to vote for this bill. Various reasons for opposing it have been adduced by different gentlemen, in many of whose arguments I concur. I have another reason, particular to myself.

The clauses of the deposit act, which appertain to the present question, seem to me to possess all the features of a contract. It provides that the whole surplus revenue of the United States, beyond a certain sum which may be in the Treasury on a certain day, shall be deposited with the several States; which deposit the States are to keep safely, and to pay back to the United States, whenever the same shall be called for by the Secretary of the Treasury in a prescribed time and mode, and on the happening of a given contingency. Here, it seems to me, is a contract *in honor*; and, so far as there can be a contract between the United States and the several States, a contract in law; there being reciprocal engagements, for a valuable consideration on both sides. It is, at any rate, a quasi-contract. They, who impugn this view of the question, argue on the supposition that the act, performed or to be performed, by the United States, is an inchoate gift of money to the States. Not so. It is a contract of deposit; and that contract is consummated and made perfect on the formal reception of any instalment of the deposit by the States.

Now, entertaining this view of the transaction, I am asked by the Administration to come forward and break this contract. True—a contract made by the Government of the United States can not be enforced in law. Does that make it either honest or honorable for the United States to take advantage of its power, and violate its pledged faith? I refuse to participate in any such breach of faith.

But further. The Administration solicits Congress to step in between the United States and the States as a *volunteer*, and to violate a contract, as the means of helping the Administration out of difficulties, into which its own madness and folly have wilfully sunk it, and which press equally upon the Government and the people. The object of the measure is to relieve the Secretary of the Treasury from the responsibility of acting in this matter, as he has the power to do. Let him act. I will not go out of my way to interpose in this between the Executive and the several States, until the Administration appeals to me in the *right spirit*. This it has not done. The Executive comes to us with a new doctrine, which is echoed by his friends in this House, namely, that the American Government is not to exert itself for the relief of the American people. Very well. If this be your policy, I, as representing the people, will not exert myself for the relief of your Administration.

Let me re-state the question. The doctrine of the Executive is, in short, that, in their mutual relations towards each other, all the Government has to do is to be supported by the people, and all the people have to do is to support the Government. Now I say that, under such circumstances, for an Administration professing such tenets, I will do just that which my public duty to the country requires, and no more. I will, if the public necessities require it, vote for its Treasury note bill, that is, grant it a loan, not for the sake of the Administration, but for the sake of the public creditors to whom the money is or will be due, and of the Government as such, which must not be allowed to suffer, whatever may be the faults of the Administration. But I will not, as a member of Congress, volunteer to take on my own shoulders the responsibility of revoking or withholding the

surplus revenue from the States, in order to lighten the burden of responsibility, which the existing law imposes on the Secretary of the Treasury. Let him untangle his own snarl. I will not raise a finger to do it. The Administration has got itself and the people into these desperate straits. It now proposes to cut loose from the people, and abandon them to their fate; but ask of us, the House of the people, to take upon us the propitiation for its sins; and to do this, by the violation of a contract between the Federal Government and the States. I will not do it.

Sir, I submit these brief remarks, on this particular bill, by way of preface to the more extended line of argument, which I am about to pursue.

This debate, like others in Committee of the Whole on the state of the Union, has been rather unequal in character. Some gentlemen have confined themselves to the bill; others have taken a wider range. The course of the Committee of Ways and Means, who reported the bill, has been worthy of note. They have introduced into this House a series of remarkable measures, deeply affecting the public interest; but they have submitted no report, or other formal exposition of the subject. They leave nothing on the record justificatory of the measures they propose. I understand this. I see the art of it. Their argument is the general system of the administration in the present contingency, as unfolded by the President in his Message. That committee came here with the advantage of a case made out for them by the President of the United States. Their case has not been fully met by the opposition. So far as regards the general policy of the administration, of which this is a part, a link in the chain, it has not yet been argued in detail. This I mean to attempt.

Intimations have been thrown out concerning the necessities of the Government, as a reason for hurrying on this bill. I reply, that this bill does not give money to the Government. Not a dollar. If the Government is in urgent want of money, let the chairman of the Committee of Ways and Means bring forward his loan bill, and have it passed. It is not my fault that he keeps this bill in advance of the others. And if he does, he must bear the responsibility of the consequences. We came here, expecting to be gagged in the House; and, for aught I know, to be *gouged* under the gag; but, in Committee of the Whole on the Union, we will not be choked off, by any such management, from discussing the state of the Union.

It was the original usage to reply to the communication of the President at the opening of Congress. That course has been discontinued; and the consequence is, that political discussion can take place only in connection with bills or resolutions in themselves of limited scope. But there is no want of pertinency in such discussions here. The Message is confined to one subject. That subject is the party-point, and at the same time the business-point, of all the existing agitation of the country. And I propose, on this occasion, to enter into a full examination of the Message.

The President himself invites thus. He says that the subject "deserves a full and fair examination, and can not fail to be benefited by a dispassionate comparison of opinions." In undertaking this, I design to discuss the Message fairly, as a mere State paper, and in the spirit of proper respect and courtesy due to the Chief Magistrate. It is a well digested, carefully written, argumentative document, promulgating and advocating certain opinions. The other side should be heard; and this can be done only by subjecting the Message to scrutiny, and discussing it directly, as well in as out of Congress.

## CONVOCATION OF CONGRESS.

Mr. Chairman, this is an extraordinary session of Congress. We are called here by the proclamation of the President, induced by great and weighty considerations. Nay, he deems the circumstances of the time so remarkable, that, in the Message he recommends, I will not say commands, Congress to attend to nothing else. He withholds from us information as to all other departments of the public business. What are these "considerations," as developed in the Message? They are,

1. The alleged inability of the Executive to carry into effect the provisions of the deposit act, so far as respects the public deposits, in consequence of the suspension of cash payments by the banks.

2. The apprehension of a diminished or deficient revenue, and consequent embarrassment of the Treasury.

3. The question of the time of forbearance to be conceded to the debtors of the Government.

4. The liability of Government to encounter difficulties in the payment of the fourth instalment of the surplus revenue engaged to the States.

These are, in substance, the special inducements assigned for the convocation of Congress. The public distress of the country is not stated as one of them. The President does, indeed, barely hint at this, in saying that he was desirous to enable us to exercise our "full constitutional powers for the relief of the country." Wherein does the country need relief? This we are not told. We are instructed as to the difficulties of the Government. We are not instructed as to the prostration of the active business of the country, the bankruptcy of its merchants, the embarrassments of its banks, the cessation of manufactures, the stagnation of trade, the fall of our staples, the universal distress and alarm which pervade the commercial interests of the whole Union. The difficulties of the country and of the people are not so much as the subject of a suggestion. The Government is to be taken care of, as if it were a foreign conqueror, revelling at free quarters in the heart of a vanquished nation, but nothing, absolutely nothing, is to be done for the general relief of the people.

The Executive cannot find specie-paying banks to receive the public deposits. Well, could he from May to September, four months? If he could regulate the deposits for that time, why not three months longer, until December? Especially, if there is *no revenue*. Especially, if Congress is to do, what the President recommends, leave the whole public treasure in the very hands of the Executive.

A deficit in the Treasury? Very well. What is the remedy? Draw on the surplus revenue? It is all subject by law to the call of the Secretary. Issue Treasury drafts? The Executive has done it already, without the aid of Congress.

Forbearance to the public debtors? If the Executive could extend their obligations, first to September, and then to October, it can do so until December.

Specie payments? The Message does not recommend anything for the public relief, in this respect, either of the country or of the banks, unless it be a special bankrupt law for the demolition of corporations, a measure not of relief, but of additional distress.

Thus, comparing the alleged inducements with the remedies proposed, there would seem to be little reason for an extra session of Congress. We might as well be at home. The difficulties propounded to us are *Executive* difficulties, for the Executive to worry along with; the ordinary drawbacks on the enjoyment of place and power. Is it not paltering with Congress to tell us only of the difficulties of the Executive? Is it not a mockery of the sufferings of the people? I say, either Congress should not have been convoked, or, if convoked, something should have been proposed for the substantial relief of the country, rather than exclusively of the Government.

Sir, the secret, the true secret of the extra session of Congress, is, in my judgment, the *bankrupt condition* of the Treasury. But this, the Administration, which has lauded itself so extravagantly on the discharge of the national debt, this the Administration shrank from looking frankly in the face, and avowing to the people. Accordingly, what do we now see? Why, we are daily goaded into the hurrying forward of this bill, by the allegation that the Treasury is empty. Yet the Administration, instead of manfully meeting the contingency, by asking for a loan, asks us to pass a Treasury Note Bill. What are these ten millions of Treasury notes? Nothing more or less, in plain English, than a NATIONAL DEBT, a Government loan, and, if issued without interest, a Government loan in that worst possible form—old Continental paper money.

Glory to the gold-currency men who have plunged themselves into the quagmire of a Government paper money system, and in the first year of the administration of President Van Buren, exhibit to us a bankrupt Treasury, to be relieved only by contracting a national debt!

## PUBLIC DISTRESS.

Mr. Chairman, not only does the President propose nothing for the relief of the people in their overwhelming distress, but he proceeds to speak of the public difficulties as "the revulsion through which we have just passed." Is it a revulsion through which we have passed? Is the Government at ease? Have the banks resumed cash payments? Has the exportation of specie ceased? Has trade revived? Has cotton regained its old price? Are the manufactures and the commerce of the country restored to their former prosperous activity? If not, why are we told that it is a revulsion which we have passed through?

Let us look into this revulsion. It is now September. On the 4th day of March last, only six months ago, the late President of the United States, in language of seemingly well-grounded self-gratulation, told us, in his Farewell Address, of the happiness and prosperity of the United States. How stand things now? Beginning with insolvencies among the merchants, and proceeding to the stoppage of specie payments by the banks, the country has gone through a series of commercial and financial disasters unexampled in the time of peace, in the history of this or any other nation, until we are brought here, to be told by the Secretary of the Treasury that the Government of the United States, which at the beginning of the year possessed a clear surplus treasure of forty-two millions, is now utterly destitute of funds, and can not get on without a breach of contract with the States, and the issue of ten millions of paper money to meet the daily exigencies of the Treasury.

Such are the facts on the face of things. Now what, in the first place, are the causes of all this, so elaborately expounded in the Message?

## CAUSES OF PUBLIC DISTRESS.

The President says, and I believe him, that in spite of "the passions and conflicts of party," these causes can not fail to be fairly understood, sooner or later. They will be. They can not be disguised now, from any one who chooses to see. How does the President himself explain the matter?

His exposition is remarkable. Chiefly "over-action in all the departments of business," stimulated by "excessive issues of bank paper," and by other facilities of credit, and bringing in its train, the evils of speculation and extravagance; this "over-action," aggravated in its effects by the great conflagration in New York, the transfer of the public deposits under the deposit act, and the conduct of the Bank of England.

"Over-action" in business, then, produced by excess of bank issues, that is the cause, upon the showing of the President. Now I do not undertake to adopt the President's explanation as *wholly* true; for if the question of "over-action" were examined on its own proper merits, it would be perceived not to be so plain a matter. But I argue upon the premises presented to me by the President. "Over-action," we assume, if you will, as the immediate cause of the existing financial and commercial disorders of the United States. Then what is the cause of the cause? The *causa causans*? For the President himself tells us of "ANTECEDENT CAUSES." And what are these antecedent causes? How came the bank issues to be excessive? To talk of over-action and to stop there, is only telling half the facts. A magazine is blown up. You say it is by an explosion of gunpowder. Be it so. I demand—who laid the train? Who applied the match? What produced this "over-action?"

Every body knows, the President himself knows, he is too wise a man to deny, the real facts of the case. The Message tells us that, in the two years from 1834 to 1836, bank capital in the United States increased from 200 to 241 millions, notes in circulation from 95 to 140, and discounts from 324 to 457 millions. Now, what induced this rapid augmentation of bank capital, bank issues, and

bank discounts? For these are the evils which constitute the burden of the Message.

It is all matter of unquestionable history. The fact is notorious, that the increase of bank capital began simultaneously with the indication of a disposition on the part of the late President to obstruct the recharter of the Bank of the United States. Bank capital went on augmenting alongside of the removal of the deposits and the progress of the Executive war against the bank. In 1811, the number of State banks was eighty-eight, with a capital of \$42,610,601; in 1816, the number had risen to two hundred and forty-six, with a capital of \$89,822,422. In 1830, the number was three hundred and twenty-nine, with a capital of \$110,192,268; in 1837, the number (branches included) was eight hundred and twenty-three, with a capital of \$378,421,168, (Ex. Doc. 1836-7, no. 65, p. 208.) In the long period from the foundation of the Government to the beginning of the last administration, the whole number of banks created was less, in the proportion of 329 to 494, with capitals less, in the proportion of \$110,192,268 to \$268,223,900, than were created in the seven years of that administration. Nor is this a mere casual coincidence of facts. They belong to each other as cause and effect. That this augmentation of bank capital was occasioned, or at least accelerated, by the adversary action of the late President against the United States Bank, is a thing beyond dispute. It was done professedly to supply the vacuum in the money market anticipated to follow the death of that bank. It was urged as necessary to the success of the late President's policy. Rival institutions sprang up under the auspices of his "experiment," in the expectation of advantage from the Government deposits, which were even begged as a party boon by minions of the administration.

Not only do we know this to be so, looking back upon the past in the certainty of actual experience, but the progress of events was distinctly foreseen at the time, and the result unerringly predicted by the great men who opposed the wild schemes of the late President. In the debates of that day, Mr. Webster said: "Under a pretence of a design to return to a currency which shall be all specie, we are likely to have a currency in which there shall be no specie at all. We are in danger of being overwhelmed with irredeemable paper, mere paper, representing, not gold and silver; no, sir, representing nothing but broken promises, bad faith, bankrupt corporations, cheated creditors and a ruined people." Mr. BINNEY said: "The project of the Secretary of the Treasury astonishes me; it has astonished the country. \* \* \* It is the clearly avowed design to bring a second time upon this land the curse of an unregulated, uncontrolled State bank paper currency. \* \* \* If the project shall be successful, we are again to see the paper missiles shooting in every direction through the country, a derangement of all values, depreciated circulation, a suspension of specie payments, then a further extension of the same detestable paper, a still greater depreciation, with failures of traders and failures of banks in its train." Mr. ADAMS said: "Your President has usurped legislative power. He has laid his hands upon your treasure: he has seized it, and now wields it as a weapon of power to himself, and of plunder to his partisans. \* \* \* His chosen State banks are to be his depositories, and engines to restore a metallic currency. With what intuitive sagacity are the means adapted to the end! Sir, his State banks would hurl the nation—they are already hurling it—into universal bankruptcy. His hand must be stayed, or the nation is undone."

All these, and similar predictions, were scoffed at by the friends of the administration at the time, as *panic* speeches. How strikingly have they been verified by the event!

That the administration is *exclusively* responsible for these disasters, I do not contend. Other causes may have contributed, and doubtless did, to the same end. But this I do say, that whatever tendency there may have been to improvident speculation, and to excessive creation of bank capital, was fostered and aggravated by the action of the administration. It fed and fanned the flame: it forced on that monstrous expansion, which has ter-

minated in the present crash. Who can forget the late President's self-satisfied addition to his "EXPERIMENT?" With what headlong rashness he assumed "the responsibility" of the disastrous consequences, which he was warned would ensue upon it? Or the blindfold reckless of coming events, under the influence of which, in his farewell address, he spoke of his "humble efforts" to improve the currency of the United States?

But the direct warfare of the administration against the bank was not the only particular in which it served to bring on the existing state of things. I am well persuaded that the removal of the public deposits from the Atlantic States, where the money had been collected, and where, in the course of trade, it belonged, and its transfer to State banks in the West, to be there discounted upon, was partly instrumental in producing the fever of speculation in public lands, which the late President thought it necessary to check by the Specie circular, and it was the unexampled demand for public lands which filled the Treasury with a surplus, for the revenue from customs alone has held an average of about twenty millions annually for twenty years, and has not equalled the expenditures of the Government.

The importations of gold by the direction of the Executive were also pernicious every way. Being forced importations, contrary to the current of trade, they increased our foreign debt, and so contributed to raise exchange, and to depress our staples. So far from diminishing the paper circulation of the country, as it was fancied the operation would do, it increased the amount, by merely serving to enlarge the basis of bank issues, instead of taking their place. It contributed to alarm the capitalists of Great Britain, and to produce that panic action of the Bank of England, to which the President justly refers as one of the immediate causes of our commercial embarrassments.

Another of the conspiring acts of the Administration has been its loud cry against banks and bank paper; the clamor of its presses and its public men against merchants; their attempts to band the poor against the rich, and to strike down every form of the investments of property; their schemes for the overthrow of charters; all the radicalism and jacobinical projects of disorganization, which are so rife at this time, to the discouragement of that confidence between man and man, and that trust in the stability of business, which are the very life-blood of commercial prosperity.

## BANK OF ENGLAND.

Sir, I do not justify, in any respect, the conduct of the Bank of England in this affair. That company had a direct agency in producing the present crisis. England tempts us to buy, to incur a debt on the credit of our crop, and then all at once abruptly cuts off that credit, and so strikes down the price of our staples to a degree which deprives us of our ability to pay. This, I admit, was iniquitous, if done with sinister motives, and was unwise and impolitic in every point of view. The Bank of England, it may be, in a moment of panic, exploded the bubble. But who blew up the bubble? Who caused that panic?

The Bank of England saw the Executive of the United States embarked in a mad scheme to overturn the credit system of this country, and to drive us back into a specie currency. To accomplish this, the Executive was causing the indemnities due the United States from France and Naples to be remitted in cash. Meanwhile the United States had passed a law, in prosecution of the same policy, changing the relative value of gold and silver. Previously, silver bearing a higher legal value in the United States, relatively to gold, than it did in Great Britain, was the *practical* standard of value in this country; and the importation of it did not injuriously affect the money market of England, or the trade relations between England and the United States. We had in fact, each a separate and distinct specie basis for our respective paper circulations; she gold and we silver. Our late law, changing the value of gold, reversed the old state of things, and rendered the bank and business paper of each country more indissolubly connected with that of the other than ever, and subject to precisely the same fluctuations. When, therefore,

the Bank of England saw all these things, especially the crowning act of the Specie circular, and perceived that its cash was rapidly flowing out for exportation to the United States, it very naturally became alarmed for its own safety, and thereupon adopted, precipitately and inconsiderately, injudicious measures of self-defence.

#### CONDITION OF OTHER COUNTRIES.

Without dwelling upon these and other pertinent considerations, I proceed to a part of the Message which seems to me singularly inaccurate in its facts and deductions. To escape the conclusion that the existing evils are ascribable to the acts of the Government, the President proceeds to say that "evils, similar to those suffered by ourselves, have been experienced in Great Britain, on the continent, and, indeed, throughout the commercial world. This I confidently deny. I challenge any gentleman to produce proofs of the existence of similar evils any where else in the world at the present time.

What are these evils? The President produces no specifications of facts out of Great Britain; and well he might not; for as the bug-bear of the day is "bank paper," he could not venture to suggest any excess of this on the continent of Europe, or among the semi-barbarian communities of Asia and Africa. The commerce of the world is, as it were, a great lake. The water, disturbed at one point, is gradually disturbed at every point. There can not fail to be uneasiness in Europe—nay, in the remotest India, when the vast commerce of the United States is shaken to its foundations. I concede to the President, for the sake of a fair view of the whole case, that recently, very recently, there have been commercial embarrassments in parts of Europe and Asia. But these embarrassments have been limited in scope, and comparatively trivial in amount, as every merchant in the United States knows; they have been the direct consequence of the derangement of our own trade, to which they have chiefly been confined; and they have not constituted a state of facts in any degree corresponding to that which now exists in the United States.

Now, for Great Britain. What are the evils, the "similar evils," existing there? Are the domestic exchanges in England all in confusion? Is the foreign exchange between her and us against her? Does she owe us a commercial debt which she can not pay? Have her banks universally, or any of them, suspended cash payments? Are there any widespread bankruptcies among her merchants? Is the island flooded with a depreciated, unequal, irredeemable paper currency? Has her treasury, in the space of six months, passed from redundancy to insolvency? Not at all. None of these things have occurred in Great Britain. It is a delusion to imagine it.

But, says the President, "a reference to the amount" of paper credit issues in Great Britain, during the years 1834, 1835, and 1836, "will show an augmentation of the paper currency there, as much disproportioned to the real wants of trade, as in the United States." I am constrained, with all due respect to the President, to say, that such a reference will not show any such analogy. It is, however, a remarkable fact, and gentlemen are welcome to the benefit of it, that, during the last few years, there has been a bank controversy in England, not wholly unlike to the contemporaneous bank controversy in this country, between the friends of the Bank of England and the friends of provincial banks, which has led to the multiplication of the latter, and has tempted the latter into errors, somewhat analogous in nature, but nowise analogous in degree, to those committed by the banks in some of the different States of the Union.

But as for "similar evils" in Great Britain, as compared with the United States, there is no such thing. Commercial embarrassments have been chiefly in the American trade, and have reached other departments of business only by the usual sympathy of all the commercial operations of a great mart like London. Money is at this moment a drug there. And it is a most extraordinary proposition to speak, as the President does, of there having been in both countries "nearly the same

overwhelming catastrophe." The British Government will smile at this. With all imaginable gravity and simplicity the Message proceeds to say, that "The most material difference between the results in the two countries has only been, that, with us, there has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments, occasioned by the suspension of specie payments by the banks." As if he had said: here are two men equally sick, with only this material difference, that one has scratched his finger, and the other is in a collapse of cholera.

#### OBJECTS FOR CONGRESS.

Having thus endeavored, with what success the committee will judge, to shift from the shoulders of the administration that "responsibility" for existing facts which the late President had assumed for it in advance, and which it must now be content to bear, the Message proceeds to designate the objects calling for our immediate attention, in these words:

"They are, to regulate by law the safe-keeping, transfer, and disbursement of the public moneys; to designate the funds to be received and paid by the Government; to enable the Treasury to meet promptly every demand upon it; to prescribe the terms of indulgence, and the mode of settlement to be adopted, as well in collecting from individuals the revenue that has accrued, as in withdrawing it from former depositors; and to devise and adopt such further measures, within the constitutional competency of Congress, as will be best calculated to revive the enterprise, and to promote the prosperity of the country."

All the objects specifically mentioned, you perceive, are in aid of the Government. Even the indulgence to the public debtors is of the same description; for it is impossible for the merchants and banks to obtain all at once the requisite cash to pay their bonds and deposits; and to drive them, is to deprive the Government of the whole debt. Measures "to revive the enterprise and to promote the prosperity of the country," are impliedly admitted as things to be considered by us; but no such measures are specified or recommended.

Conscious of the disappointment which the people must experience when they came to see this, the President abruptly proceeds to discuss the various means of carrying on the business of the Treasury, and incidentally the effects of each upon the commerce of the country.

He begins, by alleging that a desire exists among the people of the United States to separate the fiscal operations of the Government from those of individuals or corporations. Whether such a separation is really desirable, whether it be practicable, and, if so, how to be effected, and what the thing really is, I shall consider hereafter in connection with another part of the Message.

#### NATIONAL BANK AND POPULAR WILL.

He then starts with the proposition that "to create a national bank, as a fiscal agent, would be to disregard the popular will twice solemnly and unequivocally expressed," which will, he considers to be "deliberately fixed."

Twice, we are told, has the popular will solemnly condemned a national bank. It has done so, first, in 1811; and a second time, in 1834. Let us examine these two decrees of condemnation.

In 1811, Congress refused to renew the charter of the first United States Bank. The "popular will" chose to try the "experiment" of State banks. How did the "experiment" work? It commenced with a great multiplication of banks. Between 1791 and 1811, twenty years, the period of the existence of the old bank, the number of banks had increased from 11 to 88, and the amount of capital from \$8,935,000 to \$42,610,601. Between 1811 and 1816, five years, banks increased in number from 88 to 246, and, in capitals, from \$42,610,601 to \$99,822,422. (Ex. Doc. 1836-7, No. 65, p. 298. The experiment marched on, with suspension of specie payments, floods of paper trash, tender laws, relief laws, commercial revolutions, and all but revolution, in its train, and wound up in 1816 with a new bank of thirty-five in lieu of ten millions capital.

Again. The bank of 1791 expired in 1811. The question of renewal was a party question. The renewal was opposed by the democratic republican party, and lost in the House by a majority of one vote, and in the Senate by the casting vote of the Vice President. In three years, the circulating medium was disordered, the finances deranged, and the public credit impaired to such an extent

that the very same party, becoming sensible of its error, came forward magnanimously, and itself proposed and carried through the act chartering the second United States Bank. It was even a cabinet measure, introduced by the Secretary of the Treasury, carried twice by a decisive majority of the democratic party, and finally approved by Mr. Madison. Never did any set of public men make a more solemn recantation of a political error than they did, in abjuring their party hostility to a national bank. So much for the first condemnation.

The second experiment is still in the full tide of success. We have gone through its early stages, in the multiplication of banks, the circulation of a depreciated and unequal State bank currency, the suspension of specie payments, and the commercial convulsions which surround us. What more is to come I know not. But I do know that what has been is no proof of the "popular will." Quite the reverse. The refusal of the late President to sign the bill rechartering the bank, like the removal of the deposits, was in defiance and violation of the popular will. The bill of recharter, passed by the representatives of the people in both Houses of Congress, was met by the veto of the Executive. The removal of the public deposits, disapproved in advance by both Houses, condemned afterwards by vote in one, and in reality by both, was perpetrated, arbitrarily, without legal authority, by him, with characteristic contempt of the popular will as expressed by Congress. In a word, this "experiment," instead of being any expression of the popular will, was, in despite of it, forced upon the country by the wilfulness, the unbridled passions, and the personal popularity, of Andrew Jackson.

Besides, the party in power is a party of personal coalitions, not a party of principles. The late President himself was distinguished, while in office, by a want of consistent identity of political principles. In yielding up the bank to his vengeance, in re-electing him, the people did not substantiate any thing except their devotion to General Jackson. Least of all was it a decision against a national bank. So far as the events of that day constituted any precise issue, it was not against any bank, but only against the bank. Gen. Jackson repeatedly recommended a national bank in messages to Congress.

What fixedness there may be in this pretended popular will, remains to be proved. It depends upon this: Whether men are patriots, and capable of acting as such; or whether they will obstinately persist in error, for the sake of being consistently wrong. To those of the men of to-day, who think it well to plunge on in reckless desperation from folly to folly, regardless of the good of their country, rather than to retrace their steps into the right path, I commend for study the conduct of the men whom they profess to revere as the ornaments of the democratic faith, from the speech of one of whom on this very question—I mean William H. Crawford—I quote the following:

"Sir, I had always thought that a corporation was an artificial body, existing only in contemplation of law; but if we can believe the rantings of our democratic editors in these great States, and the denunciations of our public declaimers, it exists under the form of every foul and hateful beast, bird, and creeping thing. It is a hydra; it is a cerberus; it is a gorgon; it is a viper; it is a viper."

What should we, at this perilous and miserable stuff? We should, we at this perilous and momentous crisis, abandon a well-tried system; faulty, perhaps, in the detail, but sound in its fundamental principles? Does the pride of opinion revolt at the idea of acquiescing in the system of your political opponents? Come, and with me sacrifice your pride and political resentments at the shrine of political good. Let them be made a propitiatory sacrifice for the promotion of the public welfare, the savor of which will ascend to heaven, and be there recorded as an everlasting evidence of your devotion to the happiness of your country."

So much for the condemnation of a national bank by the people. If it had twice been put down by them, so by them it has twice been put up.

Can the President, when he speaks of "the popular will, twice solemnly and unequivocally expressed," mean to refer, as some have supposed, to the re-election of General Jackson and the election of himself? I will not impute so poor an argument to him.

#### UTILITY OF A NATIONAL BANK.

Next, the President proceeds to argue that a national bank would not, and could not, have pre-

vented the catastrophe which has occurred. Now, I will not undertake to say that the Bank of the United States could have prevented the effect, after the causes were allowed to exist and to operate; but it could have prevented the existence of the causes. No such enormous expansion of bank capitals, and with it all the sequence of evils alleged by the President, would have existed, as I have shown, but for the measures of the administration, including the overthrow of the bank.

The President thinks that the Bank of England has not saved that country from similar disasters. Is not the fact notoriously otherwise? Has it not stepped in to relieve and sustain the merchants and the provincial banks?

He thinks the late United States Bank did not, in fact, prevent similar embarrassments. This opinion assumes, what surely is not the fact, that exactly such a state of things had place in the time of that bank.

He contends that a bank created by the United States would be prone to over-issues, just as much as the banks of the States. This is a question of fact, which the fact disproves. We have had money-troubles at various times, differing in degree; but the two great convulsions, overtopping all others, and distinguished each by that most fatal symptom, a stoppage of specie payments by all the banks, have been during those two very brief periods in our history, when the experiment of dispensing with a national bank has been undergoing trial.

#### EXCHANGES.

Much is urged in the Message on the subject of domestic exchanges, under special reference to the question of a national bank. The President denies that it is the duty of the Government of the United States to aid in or to regulate exchanges. Upon this point I shall have some other things to say in the sequel, in connection with another part of the Message.

At the same moment almost that the Executive disclaims this as a duty of the Government, he admits the propriety of its being done by the United States incidentally, so far as its own fiscal operations contribute to that end. This admission gives up, it seems to me, the whole question, both of the constitutional power and of the official duty of the Government. I do not contend for a national bank, simply as the means of regulating exchanges. It would, I think, be the best fiscal agent the Treasury could have; and, at the same time, it would incidentally be the best regulator of exchanges. The example of the late United States Bank proves it. We all know at how cheap a rate, and how regularly, it performed the functions of an exchange agent. Can private individuals do this? Can State banks do it? We see they have tried to do it, and have failed; and the notes of the United States Bank continue even yet, after the extinction of its charter, in circulation, as a currency of more pervading equality of value than any others.

But the Federal Government has express power, by the Constitution, to regulate commerce, and to provide a standard of currency and exchange. The same power is not given to the States. Does not this conclude the question of authority? The President, indeed, suggests, that it is no more the province of the Government to aid people in the transfer of their funds, than in the transportation of their merchandise. Well, the Government, in virtue of its commerce power, does aid people in the transportation of their merchandise. It provides navigation laws, it constructs light-houses, it regulates pilotage, it improves harbors, it clears out rivers, as in the case of the Mississippi and the Red river. All these are aids of transportation. Under the same power, it precludes the States from impeding the transportation of merchandise, by State monopolies or otherwise. What distinction in principle is there between these cases and exchanges, which are, equally with the other things spoken of, a medium or instrument of commerce? Nay, this administration, and the preceding one, have expressly favored plans of Government aid to exchanges, as in the case of the Treasury bank recommended by the late President, in the "humble efforts" so pertinaciously made by him to im-

prove the currency; and, more recently, in the ambitious aspirations of the Post Office Department.

The President refers us to the way these things are done in Europe. I thank him for the illustration. Exchanges, like many other operations covering the whole of Europe, are conducted in part by private houses, having correspondents in each separate country. But, even there, each principal nation has a great chartered bank, which materially aids in the process of exchange. In addition to which, as fortunes accumulate by primogeniture, a rich banking-house lasts generation after generation, and acquires a permanency and generality of credit which can not easily be attained by private houses in this country. But, with all this, it is not a system to be received as a model for us. First, exchanges are carried on at greater charge than they would be in this country with a national bank. Then, exchange, either on paper or on specie, is to be paid more frequently than here, owing to the existence of a separate coinage and currency in each country. Nor is this all. This question is but the particular under a general question. The traveller in Europe, in passing over a region of country no larger than the United States, must at every hundred miles exchange one coin or credit for another, just as he must pass inspection or pay duty at numerous frontier custom-houses, have his passport changed or *vised* continually, and, it may be, make his way through the ranks of hostile armies. Is this a state of things to commend to the imitation of an American? Our Government is a federal union of States previously independent of one another. This union of States had for its primary objects to provide internal peace, and combination of force in foreign war. Subsidiary to these are unity and uniformity of custom-houses and duties, of mails, of domestic intercourse, (as evinced by the disuse of passports,) and of currency, coin, and exchanges, which, as I contend, are all *one thing* in principle. Our currency consists of 1st, metal, as the constitutional standard of value; 2d, bank notes, legalized paper, received as a practical currency in local dealings by retail and cash; and, 3d, drafts or bills, either of Government, banks, or individuals, and either local or otherwise, the medium of contracts on time or distance. Now, the Constitution contemplates, and the interests of the people require, equality and uniformity of our currency. In proportion as the currency is *local only* in its circulation, in proportion as it is of unequal value in different parts of the country, in proportion as the citizen or the merchant is obstructed in this respect, in the same proportion is the spirit of the Constitution infringed. We can get along, as we do now, subject to the necessity of buying specie, or of exchanging bank notes half a dozen times, in travelling over as many States. We could get along, with different coins, with local banks, with custom-houses on the frontier of each State, and bands of custom-house inspectors, with jealous passports to be *vised* at every change of stage, as they do in Europe; and with distinct sovereignties and consequent wars, which belong to the same category of facts. But is it *wise or well* to get on thus? What is it, but simply the old question, *Union or not?*

#### THE BANK CONTROVERSY.

The President refers to the controversy on the subject of a national bank, which exists out of doors, and the supposed opinion of a majority of the nation, as bearing on the merits of the question. I can not admit this. If it were a free, spontaneous controversy—a controversy unbiassed by the Executive—it might be entitled to consideration. Who made this controversy? Who got it up? Did the bank? Surely not. It was in no respect for the interest of the bank to become in conflict with the Executive, or to be the subject of party contention. It is a controversy which the late President drove the country into; a political device; an engine of party in the hands of the administration. It is easy for the administration, possessed of its vast power and patronage, to create a controversy on any point. Is it fair then, to cite the existence of a controversy, so got up, as evincing the justness of the controversy? Congress passed Mr. Clay's land bill, which would have prevented an accumulation of surplus revenue,

and many consequent evils; and the bill was met with the late President's veto. So Congress re-chartered the bank; and he vetoed the bill. Congress refused to remove the deposits; and he did it, by a high-handed stretch of arbitrary power. The Senate refused to entertain a bill requiring specie in payment for public lands; he exacted it by the Specie circular. Congress rescinded the circular; and he suppressed the rescinding bill. In fact, the people, and Congress representing them, have had all these political agitations forced upon them, like the convulsions of the money market, by the manoeuvres and the violence of the administration. Gentlemen have asked us in this House, whether we are ready to meet them on the issue of *bank or no bank*. I reply, give me a fair field, and I am ready to meet such an issue. But what is to be expected, on this, or any other question, when all the power and popularity of the hero of New Orleans, all the rabid fury of the party presses, all the influence of the paid agents of Government, all the army of office holders scattered over the country, are employed to lash the passions of the people into frenzy, and to mystify, delude, and alarm the public mind, by heaping every epithet of odium and of ribaldry on the head of the bank? And shall the President now appeal to the dispute itself as any evidence of the true sentiments of the people?

#### THE PRESIDENT'S PLEDGES.

Sir, in conclusion of this part of the Message, the President alludes to the pledges he gave, previous to his election, in reference to this subject. He is pledged: I see and lament the fact. It is a misfortune, I think, as well to the country as to himself. There is a mistaken idea prevailing, as to the *non-committalism*, so called, of the President. I think his opinions, on topics of public controversy, have been as distinctly avowed as those of other statesmen. Nay, I think that, in various ways, he has committed himself more absolutely upon party questions, than was wise. Perhaps he was impelled to this by the language of his opponents. He gave pledges in his reply to the North Carolina Committee, in his letter to Mr. Williams, in his Inaugural Address. Doubtless, also, he is yet more deeply pledged to the late President, and to those who surrounded that personage here; as may be inferred from the very significant letters of General Jackson, lately published in the Globe.

Other Presidents, also, have come into office, whose opinions were sufficiently known, at least, by their acts, writings, or speeches. The late President, like his successor, gave formal pledges on many points, such as non-re-election, repudiation of party influences, purity of elections, non-interference with Congress, retrenchment and economy, and reform of public abuses; and his administration of public affairs was a standing violation of every one of these pledges, on the faith of which he was made Chief Magistrate. I should be sorry to see Mr. Van Buren thus false to all engagements. But, if General Jackson, after pledging himself to do so many things which were *right*, forfeited his pledges by going over in each respect to the worse alternative, it would seem that Mr. Van Buren, having pledged himself to do certain things which are wrong, might, with wiser inconsistency, change for the better; in doing which, he would but follow the example of Jefferson and Madison, who, while in office themselves, adopted some of the very measures, which, in the time of Washington and Adams, they were the loudest to condemn. Indeed, men rise to supreme power, not unfrequently, by the help of professions, honestly made, which further experience teaches them are *impracticable*. Nay, parties occasionally use up their own professions, just as troops do their ammunition, by the very process of victory. For Mr. Van Buren to sign a bill chartering a national bank would not be a greater change of opinion or policy, than it was for Mr. Madison to do the same thing. And the time may yet come when he, like Mr. Madison, shall perceive it to be the dictate of honor and of patriotism to sacrifice his prepossessions in this matter on the altar of his country's good. I will not contend, nor will I admit, as the arguments of many of his partisans

on this point would seem to imply, that he is or can be insensible to such exalted considerations.

#### THE PET BANKS.

Upon the next leading topic of the Message, the value of the State banks as fiscal agents of the Federal Government, I have very little to say. The President admits that they have failed to discharge the duties expected of them: General Jackson has denounced them in the harshest terms. It is a family quarrel, in which I will not interfere. I never anticipated that the pet-bank system would succeed; and I have no disposition to triumph over it, now that it has had its trial and been condemned. There is one thing, however, connected with the subject which deserves explanation, especially as it bears directly on the bill now before the committee.

Allusion is made in the Message, much has been imputed out of doors, to an alleged unfavorable operation of the deposit act upon the interests of the deposit banks. Now, I have nothing to say in favor of the mode in which the Secretary of the Treasury executed that law. But it seems to me very strange for those banks, or the administration which adopted them as public depositories, to complain of Congress for calling on them to pay over the deposits into the hands of the States. The argument would amount to this: the deposit banks are good and safe depositories, so long as they are never called upon to pay over; but when that is done, they must fail. Besides, whatever responsibility belongs to the passage of that law, attaches equally to the administration and the opposition. In the Senate, as the journal shows, *all but six* of the friends of the administration voted for it. In the House, it was amended, on motion of Mr. Anthony, of Pennsylvania, a friend of the President, so as to render it acceptable to the latter; and it was confidently said here at the time, and I have never seen it denied, that the amendment he offered was prepared by the Attorney General; and when so amended, the bill received the votes of nearly *two-thirds* of the friends of the administration in the late House. Nay, such a measure had once been expressly recommended to Congress by the Executive. It is too late, now, to seek to impute the sole responsibility of that law to the opposition.

#### DIVORCE OF BANK AND STATE.

Entertaining these views, then, that the establishment of a national bank is out of the question, and that the connection of the Government with the State banks has proved "unsatisfactory"—for with this gentle term does he dismiss them—the President proceeds to recommend the repudiation of all banks as fiscal agents of the Government, and the disuse of bank paper in the dealings of the Treasury. To the latter point I shall refer in the sequel; and I will now consider the former, they being perfectly distinct questions.

The repudiation of banks as fiscal agents of the United States—this is the new scheme, the "untried expedient," the fresh humbug, to be imposed upon the people, under cover of the cry: divorce of Bank and State. This phrase is somewhat ambiguous. It may have different meanings. In the true and legitimate sense of the words, I am for a divorce of Bank and State; and I should rejoice to be able to believe that the administration was sincerely for it. I abhor that close association, that *marriage* of Bank and State, which characterized the system of the late deposit banks, those *pets* of the Government; banks, some of them confessedly the mere tools of the administration; banks, earning the use of the deposits, like the seventh Ward Bank in New-York, by walking on their knees to a despotic Executive. To prevent this marriage, has ever been a favorite object of the whig party throughout the country, North, South and West. To effect this always has been, and I solemnly believe is at this hour, if not the favorite purpose of the administration, at any rate the sure tendency of its measures.

Sir, this is no new question. Do we forget that the late President deliberately proposed to Congress the establishment of a national bank founded on the funds of the Treasury, and conducted by the Government? Do we forget that the unpardonable sin of the late United States Bank was *its independence of the Government*—the refusal of that bank to be *married* to the administration? This, from beginning to end, was the point of that controversy. Do we forget that afterwards, at a later period, when the regulation of the public deposits was under discussion at the second session of the Twenty-third Congress, the friends of the administration, to a man, voted and spoke against this very proposition of a divorce of Bank and State, then made by Mr. Gordon, of Virginia? Nay, that they refused even to consider the subject, when Mr. Robertson moved a reference for inquiry concerning it? And now this, the desperate heresy of 1835, is the orthodox doctrine of 1837. I repeat I am opposed to the union of Bank and State; I am in favor of the separation of Bank and State, if these words have any meaning which I can comprehend. I would have the Government deal with citizens doing business under the style and firm of a bank, as with other citizens—employ them, on proper terms, so long as they are honest and true—otherwise, not. I would have the Government do with its depositors just as I do with mine—selecting a suitable depository, and each contracting fairly with the other for their mutual advantage.

The President infers the inexpediency of employing banks as fiscal agents of the Government, from the fact of the existing embarrassments of the banks, and the inconvenience it occasions the Government. But do individuals never fail to pay? The argument assumes this. The case of war is supposed, and the difficulties we should encounter at such a time, under the present state of things. The supposition is not a fortunate one. It is in time of war that a resort to bankers becomes more especially serviceable, not to say necessary, to all Governments, as the President seems to admit in another part of the Message. Besides, are not individuals just as much subject to pecuniary involvements in time of war as corporations? It is not three years since the present Secretary of the Treasury put forth an elaborate paper, maintaining, and successfully, too, that banks ARE, AND ALWAYS HAVE BEEN, the safest and most trustworthy agents or depositories of the Government.

#### PRACTICE OF OTHER NATIONS.

Nor is the Message very happy in its reference to the practice of other nations in this respect. Ours is the only one, except some of the hard money military despots of Asia and Africa, which ever has a surplus treasure. In most of the countries of Christendom, that revenue is anticipated, and is mortgaged to the bankers, (that is, banks,) by whom the means of daily expenditures are advanced to the Government. A document has been placed on our table, purporting to come from the Treasury, and undertaking to show how the public revenue is collected and kept in England and France. This paper is a sufficiently amusing one, if it is designed to support the recommendations of the Message. It disposes of France with an "it is believed;" and I will not stop to argue that. It is more specific in regard to England. After sundry learned citations of old black-letter laws of the Edwards, which recognise the existence of receivers general, the obvious design of which is to prepare the way for certain snug new offices for the benefit of the faithful, the document brings us at last to the plain English of the whole matter, which is, that, in Great Britain, the revenue is collected, kept, and disbursed by and through the Bank of England, and in Bank of England notes, under regulations of proper accountability of the bank to the Exchequer, and (which is quite as material, since the Government is always in debt) corresponding accountability of the Exchequer to the bank; for, in England, the Government and the bank both endeavor to consult the welfare of each other, and of their common country. No such preposterous folly ever entered into the head of the English Government as to get up a crusade against the industry, capital, and commerce of the nation itself. And if it were worth while to go into the usages of other nations, I could show that all of them, from France, the most enlightened, to Turkey, the least, entertain much closer association with banks (or bankers, which is the same thing) than I desire to see practised in the United States.

#### USE OF GOVERNMENT DEPOSITORIES.

The President proceeds to dwell on the idea that the public depositories are injurious to the banks themselves, and, through them, to the community at large. It is curious to observe that the facts upon which he relies to prove this are the train of evils brought on the country by General Jackson's "humble efforts" to reform the currency. Indeed, the President very candidly declares that the evils he refers to were "strikingly exhibited during the operation of the late deposit system." They were so. But did they exist while the deposits were in the custody of the United States Bank? Never. They are the fruits of the "experiment." Now, I will not concede that the value of banks as the fiscal agents of the Treasury, or the proper disposition of the deposits, or the expediency of allowing them to be discounted on by the banks, or anything else, is concluded by that "experiment," except it be the incompetency of the administration to conduct the affairs of the Government.

I wish to have the Government depositories so placed as to preclude the existence of those evils of Executive favoritism, competition for the deposits, and competing issues for profit, which the President justly reprobates; and the plain and obvious remedy is to establish a well-organized United States Bank.

If the use of the Government depositories by the banks were an evil, it would be no reason for discrediting the banks. The alternative is a very simple one. You would only have to place the public funds in a bank as a special deposit for safe-keeping. But the idea of locking up the treasures of the Government in strong boxes, and keeping so many millions an idle dead capital, is absurd. The bare suggestion of the idea is another example of the facility with which the party now can veer about on every question. It is not a year since General Jackson, in his last annual Message, speaking of the evils of a large revenue, said: "To retain it in the Treasury, unemployed in any way, is impracticable. It is, besides, against the genius of our free institutions to lock up in vaults the treasure of the nation." And yet this is the very thing which the administration now propose to do—that is, "to lock up in vaults the treasure of the nation." The funds in the Treasury, during the interval between their receipt and their disbursement, are the money of the nation, and should be so kept and managed as to be useful to the nation. We tax the people for the necessary service of the country. Why augment that tax, by converting the proceeds into a permanent dead capital? This would be nothing better than the hoarding system of the Barbary States.

#### UTILITY OF CREDIT.

But, while the President objects to the use of the public depositories as a fund for bank discounts, and would thus renounce one of the clear principles of the credit system, he can not venture to dispute the value of the system itself. He admits it in the strongest language. He could not do otherwise. It is the distinguishing feature of civilization and of barbarism, of liberty and of despotism, of simple governments, like the military monarchies of the East, and mixed or republican ones, like those of Christendom.

Doubtless, there are fluctuations incident to the credit system. They belong to business as such; and they are extensive in proportion as that is extensive. It may be pushed to excess, like every thing else. But to condemn the valuable use, because of the incidental abuse, would be very poor wisdom. Banks are to money dealings what shops are to dealings in merchandise. To put down shops, or to put down banks, because of fluctuations of trade, would indicate the same good sense as to prohibit seaboats because of occasional explosions. I have read a book, which scrapes together all possible evil that ever was done by, or happened to, or was said of, banks; and this book is thrust into every body's hands as a treatise on banking. As well might you make a collection of all the shipwrecks and other disasters of the sea, and

present it as a view of maritime commerce. Imperfection belongs to every thing human; and he is but a shallow reasoner, who looks only to the evils, regardless of the advantages, of any of the useful arts and inventions of civilized society.

This great country exists, in all its prosperity, by the combination of character with credit. By the application of credit, were the military means of securing our independence obtained; by it were the territorial resources of the country developed; our mines, agriculture, commerce, manufactures, our public improvements, all bear testimony to the value of credit.

Looking to the case of individuals, credit is the means by which the poor but industrious compete with the rich, and without which, all the business of the country would go into the hands of mere capitalists.

The Government deposits in bank are just as much a proper and useful basis of commercial credits as the deposits of individuals; and for the same reasons, since it would be the extreme of wasteful profusion to hoard up, and keep unproductive, the cash capital, either of individuals or of the Government.

The release of the precious metals from hoards, and so far as may be from circulation—the employment of paper and credit in their stead—in a word, the credit system, which Great Britain and the United States have practised so much more than other countries, is one of the instruments of their superior commercial and general prosperity. Enterprising and cultivated men; free institutions to foster enterprise; credit to supply the capital it needs, and ample territorial resources to act upon; such are the elements of the pre-eminent rapidity of growth and actual greatness of the United States.

#### SUB-TREASURIES.

Admitting, upon such facts, which the President perforce does, the utility of the credit system, what then is the application he makes of it? Is it not singular that he steps at once from a statement of the value of the credit system, to the development of a new policy of administration directly adverse to the premises?

Hereofore, the public treasure has not been in the very hands of the Treasurer of the United States, or of any deputy of his. It has been deposited in bank, to be drawn out only by warrants, countersigned, registered and recorded, and so guarded as to render the actual money wholly inaccessible to the immediate agents of the Treasury. To avoid the evils of bank connections, the President recommends that this public money, instead of being kept on deposit in bank, shall, FOR GREATER SAFETY, be kept in the pockets, chests, or vaults of collectors, receivers, general sub-treasurers, or some other denomination of agents of the Treasury. Such, in plain terms, is the scheme.

#### COMPARATIVE SAFETY.

If the clerks of a rich merchant, or other person using a great deal of money, were to make a similar proposal to their employer, that is, a proposal that large sums of cash of his on hand should be kept in their pockets or chests, instead of being deposited in bank, he would have good reason to suspect their honesty; but if the employer himself were to propose the plan to his clerks, and propose it as a plan of peculiar safety, they would be sure he had lost his senses.

But, demands the President, are bank vaults any stronger than Treasury vaults? Are bank agents any honestier than Treasury agents?

I reply, let. Individuals may abscond with the public money in their pockets, but a bank corporation can not. *Non est in rebus* is a pretty frequent entry on the books of the Treasury Department against the names of individuals entrusted with public money; but I never heard of such an entry against the name of a deposite bank.

2d. There is great difference between the case of money passing at once through the hands of a man, and that of money kept for an indefinite period in his actual custody, especially when there is a stream of it continually coming in; and he can pay over out of the new receipts, so as to conceal for a long time a past defalcation.

3d. A deposite is not dependent on the strength of a bank vault, or the honesty of bank officers. He has the bank, that is, the stockholders, for security. If the bank vault is robbed, or the bank officers commit a fraud, the depositee does not bear the loss; the bank bears it. But if the Government vaults be robbed, or its agents embezzle the money entrusted to them, the deposite is gone, it is absolutely lost to the Government. When the Government depositories in bank, it has all the security of moral honesty, strong vaults and penal bonds or laws, (for bank officers are usually under bond and are indictable for malfeasance,) which it possibly can have with Sub-Treasuries; and it has the additional, and much greater security, of the stock and stockholders of the deposite banks.

4th. There is greater supervision in banks, with directors and stockholders always on the spot, vigilant over their personal interest, and having careful arrangements of inspection; none of which things could by any possibility be, to the same degree, attainable in the Sub-Treasury scheme.

5th. Finally, specific facts are full of evidence to corroborate these views. It appears by a document recently sent in from the Secretary of the Treasury, (Ex. Doc. no. 2.) that the Government sustained no loss by the use of either of the two United States Banks as fiscal agents; none by any of the State banks until 1816. Since that time, there have been some losses by means of State banks. But, in another document, emanating from the same Secretary of the Treasury, being the report to which I have already referred, on the system of keeping the public money, presented to Congress in 1831, (Ex. Doc. 1831-5, no. 2.) I find the following conclusive statement in regard to losses inflicted on the Government by banks:

"It is a singular fact, in praise of this description of public depositories, the selected banks, that there is not now due on deposits, from the whole of them which have ever stopped payment, from the establishment of the Constitution to the present moment, a sum much beyond what is now due to the United States from one mercantile firm that stopped payment in 1825, or 1827, and of whom [which] ample security was required, and supposed to be taken, under the responsibility of an oath. If we include the whole present dues to the Government from discredited banks, at all times and of all kinds, whether as depositories or not, and embrace even counterfeit bills, and every other species of unavailable funds in the Treasury, they will not exceed what is due from two such firms."

Now, in the face of such facts, can the administration have the face to talk of the superior safety of individuals over banks, as depositories of the public money?

#### DEFAULTERS.

But this, being a moral, as well as a political, question, a question of pecuniary trust, may be illustrated by other facts,

25th Cong....1st Sess.

President's Message—Mr. Cushing.

H. of Reps.

There is a statute, of long standing, which requires that all balances due the Treasury from its agents, and remaining unsettled for three years, shall be reported to Congress annually.

Looking into the latest of these documents, I find, in the Executive Document, 1836-7, No. 22, a list of defaulting paymasters, contractors, and Indian agents, reported by the Second Auditor. No. 27, from the Third Auditor, gives one hundred pages of defaulters in army concerns of all sorts, with such edifying entries after their names as *Desperate*, *Non est inventus*, *Nulla bona*, in great abundance. No. 37 contains thirty-seven pages of navy defaulters, with similar annotations affixed to their names. No. 131 gives a list of defaulting custom-houses. No. 144 exhibits the "private concerns"—as these things would be called if attempted to be brought before a committee of investigation—of the land office receivers. If you entertain a doubt as to the truth of the statements made in the passage quoted from the report of 1834, examine these documents.

But further. There is a document on file, showing how this individual responsibility works in the Post Office Department, which professes to be so fully competent to the present exigency. It is Executive Document, 1836-7, No. 185, exhibiting the balances over-due to that Department. It does not include those which are considered absolutely desperate. Nevertheless, you will find that, in the last eight years of the statement, there were upwards of 1,600 defaulting deputy postmasters, which, supposing the average number at any given day of that period to be 10,000, is nearly one sixth part of the whole personnel of the Department.

I do not know what sums the Government has lost by its debtors, strictly speaking; that is, individuals owing it money, without standing in any relation of special trust to the Treasury. Judging from the specimens of such cases, referred to by the Secretary in the report of 1834, the amount must be very large; and yet most of these debtors were bound to the Government in bonds with sureties, the mode in which it is supposed the fidelity of the new agents of the Treasury is to be secured.

Again: This question, in many of its relations, is a mere question of insolvency. Which are most likely to be defaulters to the Government, individuals or bank corporations? That is, which is most liable to insolvency? Now, it is difficult to reckon the number and amount of the cases of individual insolvencies in the United States. There are no means of accurate judgment on this point, within my reach. There is on file, however, one very significant document, appertaining to the city of Washington, if that may be taken as any criterion. By the Executive Document, 1836-7, No. 24, it appears there were 2,001 commitments for debt in this city during the two preceding years. How many cases of insolvency were there without commitment? Doubtless many. Now, compare this evidence of the frequency of individual insolvencies in the United States with the instances of bank insolvencies, which, as we all know, are relatively so rare as to be a sort of portent in the commercial world. By bank insolvencies, I mean actual insolvencies; not mere suspension of specie payments. But, if that were taken into the view, it would not weaken the force of the argument as to the greater comparative frequency of individual insolvency; for, if the suspension of specie payments by the banks is insolvency, then the same suspension by the whole community is insolvency on their part; and the relation will continue the same. Besides, no deduction prejudicial to the general solvency, the solvent capacity, either of banks or of individuals, is to be drawn from the occurrence of this all-pervading calamity, brought on the country by the mal-conduct of the administration.

#### FINANCIAL OPERATIONS.

The Message anticipates facility in the transfer of public money under the new system. It may be so. If it were, it would be a very subordinate consideration, being a mere question of Government convenience. But I doubt the fact of facility, upon the premises assumed by the Message. Either the Government will be subject to the continual transportation of specie to and from under a convoy of a body of troops—a *conduite*, as it is called in some of those half-barbarous communications, in which I myself have seen Government thus clumsily carrying on the domestic exchanges of the country; which would be the pure, simple, hard-money way of doing the thing, and the proper accompaniment of the specie-currency and hoarding system; and which would be perpetually unsettling private business, by forcing specie in one direction or another, contrary to the current of exchanges; or, which is more likely to be the *finale* of the administration scheme, the new agents of the Treasury would draw and redraw upon each other, and become a vast organization of exchange-brokers, overshadowing all the business of the country; in other words, a mammoth Treasury bank.

The President refers to the report of the Secretary of the Treasury, for details of the practical working of this plan, under the experiment of it, which we have had for the last four months. The administration has dealt in this matter of Sub-Treasuries, as it did in that of the deposit banks; it first establishes a system by Treasury edict, and then calls on a supple Congress to ratify the edict. For, an administration which is perpetually disclaiming power, but always usurping it, this course is in true keeping. But there is little in the facts themselves of which the administration can boast itself. The business of the Treasury has been conducted, during the summer, by means of dishonored drafts—drafts dishonored and protested in the first place, and then sold to the brokers and note-shavers, and so put in circulation as a currency. Is not this a beautiful illustration of the golden age so long promised us by the juggle-masters of the administration? Not, it would seem, is this the device of an accidental necessity merely, adopted by the Treasury, in default of a better legal means; for now, with Congress here assembled, ready to receive, and perhaps to sanction by law, whatever the administration may recommend, it is in affectionate companionship with this very thing, inconvertible Treasury paper, issued for sale on the stock exchange, that we are desired to usher into legal being the new financial system of the Government!

In this part of the Message I remark several incidental suggestions, which seem to me singularly fallacious. For instance, to show the fiscal safety of the new scheme, the President assumes a constant balance in the Treasury of only five millions, and says that this, averaged among all the Treasury agents, will be a small sum to each. To which it is obvious to reply, that no such average ever did or can exist in fact. There will be a collector at our post in the custody of millions; one at another, who seldom sees hundreds. Not only is the average a supposititious one, but so likewise is the security. These Treasury agents are not each jointly and severally bound for each other. If they were, there might be force in the suggestion. Furthermore: the average balance he as-

sumes to be only five millions, though, for several years past, it has notoriously been much larger, rising to twenty, thirty, and even forty millions.

Another fallacy. The Message argues in favor of the safety of Sub-Treasuries, from the assumed smallness of sums on hand. In the same breath, it continually argues against bank depositors from the assumed largeness of the sums on hand. This is not just reasoning. In comparing the two methods, the same premises of fact should be assumed for each; if small, equally safe and harmless in banks, if large, equally dangerous and unsafe in Sub-Treasuries.

#### THE POST OFFICE.

It is assumed in the Message, and such is the report of the Postmaster General, that the new system harmonizes fully with the existing organization of the Post Office, which professes to have conducted its business, during the summer, wholly in "the legal currency of the United States," as it is called. If the President affixes to the expression "legal currency," the meaning I do, so as to embrace in it *paper credits*—paper of banks, private individuals and public agents—as well as gold and silver, which are the constitutional standard of value, but in no sense the exclusive "legal currency of the United States"—then doubtless he is correctly informed as to the successful conduct of the affairs of the Post Office Department. But if, by a "legal currency," he means gold and silver, then I take leave to question the fact. It does not correspond with my own observation. And the committee is aware how distinctly and circumstantially the fact has been denied by one of the principal administration journals of the State of Virginia. Add to which the consideration, that the payments made to the Post Office consist of small sums in each individual case; which fact distinguishes its dealings from those of any other branch of the Government.

#### PATRONAGE.

In considering whether the Executive is to gain or to lose patronage by the new system, the President discusses the question mainly on the premises furnished him by the late vicious deposit bank system. He unfolds the political favor tism, the underhand influences; the deep and wide ramifications of secret power, which characterized that alliance between the Treasury and the selected State banks. I accept his testimony on this point. It is just what the opposition have always alleged, and which used to be as constantly denied by the administration and its friends. Doubtless the President understands the true facts of the case. I concede his premises, but I deny his conclusion. The late deposit bank system is not the alternative. If it were, the question might not be so easy to solve, which were the best course to pursue. I wish, as I have said before, to divorce the Government from the State banks. The marriage was pernicious to both. But I do not wish them to be enemies, each of the other. Give to them proper business relations. Let it not be a connection of power and patronage on one side, and of wretched dependence on the other. Compare such a state of things with the Sub-Treasury scheme, and you have a ready answer to the arguments of the Message.

Build up this Sub-Treasury system, and you raise over the head of all the money affairs of the country a mighty money-monster, banking—not like the United States Bank, on a capital of thirty-five millions only, equal to about two millions per annum—but on the sum of thirty millions per annum, that is, on the whole revenue, and all the pecuniary dealings of the United States, and on a capital incalculable, that is, all the resources of the United States. Would not such a mass of money, so held by the agents of the Treasury, be a greater engine of indirect power? It would be the last infatuation, either of blind servility to party, or of self-satisfying one-sidedness of view, not to discern the vast accumulation of power which this plan would throw into the hands of the Federal Government.

The President does not advert to the facilities of speculation which this plan involves, and the attractions it will offer to the activity of the thousands of adventurers and pretenders to Executive favor, with which all communities abound.

Nor does he do justice to the ability of the agents of the Treasury to exert their influence, and to apply the public funds, to purposes of political corruption. The administration seems to be blessed with a most unsophisticated purity, a single-minded simplicity of heart, in regard to the evil doings of the world, which is particularly remarkable, considering all it has gone through.

Nor does he disclose the multitude of new agents of deposit, transfer, and supervision, which the scheme will require. His argument supposed that the requisite agents will be few, and the cost of them small. To say nothing of the costliness of speculations, I think I can see, in the documents emanating from the Treasury Department, the germs of not a few, and those not uncouth, new offices. Such is the paper which so carefully collates the old English statutes about receivers-general. Such, also, is the sly allusion in the report of the Secretary of the Treasury, to an old paper of Mr. Hamilton, in which—prior to the establishment of the United States Bank, and as a means of aiding the Treasury under the imperfect and experimental state of things which existed in 1790—such receivers-general or supervisory agents of the Treasury are spoken of. It is curious to see this administration, which affects such holy horror of the principles of Mr. Hamilton, recur to him on occasion, as authority for the institution of new offices.

Something has been said as to the mode in which the affairs of the Treasury are conducted in France. It is certainly true that the French Government employs a greater number of individual agents in the collection and custody of its revenue, than we do. Such is, and long has been, the fixed policy of the French Government—to associate around itself a vast combination of persons, dependent upon it, as *employees* in its military or civil service, by and through whom to maintain its power. It is a system of administration, also, greatly centralized in all respects, and emphatically described by the well-known name of *bureaucratic*. Is this a system for the United States?

#### TREASURY BANK.

Notwithstanding the disclamations of any desire for added patronage, under cover of which this project is introduced to us, and notwithstanding my unwillingness to suspect the President of insincerity in this matter, still I can not exclude from my mind the conviction that a bank, a national bank, a national Treasury bank, is "the be all and the end all" of the new experiment. We begin with a large issue of Treasury drafts, having circulation as a currency. We proceed with yet larger issues of Treasury notes, expressly framed to be a currency. All these have got to be funded hereafter. Un-

imately they may be of large amount. They not only constitute in themselves the basis of a Treasury bank, but a sort of introduction to the use of Government paper as the paper medium of the country. Advocates of the new scheme admit that Government paper is to be the alternative and the substitute for bank paper. The Sub-Treasuries themselves, when they are put in full operation—drawing back and forth on each other, issuing and receiving large sums of money, and still more frequently issuing and receiving one kind or another of paper credit, based on the Government deposits—will be a genuine bank in every thing but the name.

#### THE ADMINISTRATION COMPUTES ITSELF.

Before dismissing this part of the Message, I can not forbear to contrast the views, now expressed by the administration and its supporters, and those which the same set of persons avowed heretofore. It will be found they have absolutely changed front, chopped short about as the wind, on all the questions involved in the general subject under discussion. Indirect references to it occur in the official papers of General Jackson, which are, also, very express and very full on the points favorable to banks as Treasury agents. When the reputation of banks as fiscal agents began to be talked of in some parts of the country, under a sense of alarm created by the deposit bank system, the objections to the scheme were most pointedly and most ably stated in the principal organ of the administration. Thus it was (truly) said:

"It is as palpable as the sun, that the effect of the scheme would be to bring the public treasure much nearer to the actual custody and control of the President, than it is now, and expose it to be plundered by a hundred hands, where one can not now reach it."

Again: "Had such a suggestion come from General Jackson, it would have been rung through the Old Dominion with the reiterated falsehoods about the proclamation and the protest, as conclusive proof of all the aspirations which have been charged to the Hero of Orleans! 'See (they would say) here he wishes to put the public money directly into the palms of his friends and partisans, instead of keeping it on deposit in banks, whence it can not be drawn, for other than public purposes, without certain detection. In such a case, we should feel that the people had just cause for alarm, and ought to give their most watchful attention to such an effort to enlarge Executive power, and put in its hands the means of corruption.'"

I have spoken already of the action of the House upon this very question, when brought into discussion by Mr. Gordon; as, also, of the report of the Secretary of the Treasury. That report, I repeat, demonstrates the superior fitness of bank corporations as the fiscal agents of Government, to individuals; saying, as the result of the whole matter, that the latter "will probably be found less responsible, safe, convenient, and economical." One or two sentences only, as a further specimen of the spirit of that document:

"These circumstances, with the preference, in case of failure, belonging to depositors and holders of their bills over the stockholders, united with the security, if not priority, given to the Government, render them, in point of safety, generally much superior to individual agents of the United States."

"It is gratifying to reflect, that the credit given by the Government, whether to bank paper or bank agents, has been accompanied by smaller losses, in the experience under the system of State banks in this country at their worst period, and under their severest calamities, than any other kind of credit the Government has ever given in relation to its pecuniary transactions."

Indeed, the whole of that paper deserves to be carefully read, and compared with the conclusions, so singularly different, of the Treasury report laid on our tables the present session.

And I refer to it as I do to other official acts, and to the debates and paragraphs of the time, not so much to show the inconsistency of the administration—although this is glaring enough—but rather to fortify my own position, by calling in aid of its arguments so elaborately deduced, and so forcibly expressed, as those which I have cited.

#### FUNDS RECEIVABLE BY GOVERNMENT.

I can not think that, as appears to be implied by the arguments and language of the Message, the framers of the Constitution, in refusing to insert in it express power to create corporations, had any particular eye to bank paper. It was not bank paper, which made up the depreciated currency of the time, but Government paper. There were but three or four banks in all the United States; and their paper was not, in quality or amount, an evil. But the Government paper was an evil. The people well knew, by bitter experience, what to think of Continental money, bills of credit, Treasury notes, or whatever else you please to call it—for the substance is one, under all these names. Bank paper was rapidly growing into credit, but of its convertibility into specie, and its consequent superiority to the paper of Government.

Now, I do not contend for the receivability of bank paper by the Government, unless it be convertible into specie on demand. If so convertible, it is equally for the convenience of the Government and the country that it should be thus receivable at the Treasury. I deny the wisdom of attempting, or the power of maintaining, one currency for the country, and another for the Government, in this country. Gold for the office holders, and bank rags, as they are called, for every body else. You can not do it.

The President says that such a discrimination is a measure of restriction, not of favor; that is, of restriction to the public agent, as he further explains. This argument, certainly, is a very singular one. Restriction, and no favor to the public agent that he shall receive nothing but gold? Try it now, and see whether it is a restriction or a favor to be compelled to receive gold in payment of a debt. It is a very unwelcome favor to the debtor to be compelled to pay it. But here is the same fallacy, which runs through the Message, and which arises from looking at all the circumstances of the times only in the relations in which they affect the interests of the Government.

#### GOVERNMENT PAPER.

The alternative of bank paper, the admitted alternative, the alternative advocated by the friends of the administration, the alternative proposed in the bill before Congress, is Government paper. It seems to be conceded that the golden dreams of the last four years have vanished before the light of day, and have yielded place to a waking reality of bitter disappointment. We ought not to have, we shall not have, we can not have, a mere metallic currency. This point is now given up. The

25th CONG.....1st Sess.

President's Message—Mr. Cushing.

H. of Reps.

foolish pursuit of a specie currency has come to nothing but the total banishment of all specie from circulation as currency. We are to have a paper currency, recognised by the Government of the United States, and employed in its dealings, but it is to be irredeemable Government paper. This is the newest new humber. The fever fit of gold money has had its day. That of paper money succeeds it.

If the scheme were not too laughably absurd to spend time in arguing about it seriously, if the mischiefs of a Government paper money currency had not had an out and out trial both in Europe and America, I might discuss it as a question of political economy. But I will not occupy the time of the committee in this way. I am astounded at the fatuity of any set of men, who can think of such a project. Has Law's Mississippi bubble—have the bills of credit of the colonies—has the continental money of the confederation—have the assignats of the French Republic—imparted no warning lesson to the present generation? It is notoriously, of all the means by which a Government can raise money, the most liable to abuse—of all the currencies, the most impossible to maintain conformable to any fixed standard of value. We, in the time of the colonies and of the confederation, did every thing we could do to give to the paper of the Government the qualities of money. Did we succeed? You know that in spite of all Government could do or say to prevent it, our paper money went on perpetually depreciating in value, until a hundred dollars of it would scarcely pay for a breakfast. Did the colonies not adopt vigorous means enough to check this depreciation? Well, the French convention did. At the period when that convention governed France, and when it possessed and exercised more power over the lives and fortunes of men than any other Government that ever existed, ancient or modern, it exerted mercilessly the whole of its enormous power to keep the assignats in circulation as money; it did not scruple to apply the guillotine to those who paid or received it for less than par; but it sunk in its proper worthlessness in defiance of all the efforts of that despotic and remorseless convention. Have we power to enforce the experiment with any better prospects of success?

## CURRENCY AND BANK QUESTION.

Amid all the difficulties which environ this question, there are some points, which seem to rise up visibly from the surrounding obscurity.

Bank paper, convertible into specie on demand, is the medium between an exclusive gold currency on the one hand, and mere paper money on the other. For three or four years past, they, whose business, it is to swing the pendulum of popular agitation, have been pushing it one way, towards a purely metallic currency. That was to go backward towards the barbarism of uncivilized countries, or ages anterior to civilization; and keeping on in the same direction, we should have gradually reached the iron money of old Sparta, the cowries of Africa, or the wampum-peag of our own Indians. We are now in danger of sweeping over to the opposite extreme, that anarchy of revolutionary frenzy, which sometimes seizes upon the most highly civilized communities.

To make war upon the State banks, *en masse*, is, in its effects and consequences, to make war upon the States and the rights of the States. Whatever doubt there might be as to the power of the States in this particular, provided it were now an open question, is set at rest by the long acquiescence of the whole country in the exercise of the power, and the impossibility of retracing the ground passed over. Mr. Madison bears witness that he difficulties which have since grown up on this point, or rather the facts which involve those difficulties, were not anticipated by the framers of the Constitution, and were not provided against. Mr. Van Buren himself, in his letter to Mr. Williams, referring to the point, says: "That matter, so far as relates to the mere question of power, must be regarded as settled in favor of the continued authority of the States." To the same effect is a recent decision of the Supreme Court.

Now, gentlemen of the administration, before you enter upon a conflict with the States, on a question of the rights of the States, and that question of right intimately connected with questions of interest and of power, I counsel you to count well the cost of the struggle. When you buckle with all the weight of all the States, you have an antagonist to deal with very different from the late United States Bank.

Furthermore: the United States Bank was a single corporation, having no allies in State pride or State power, its stockholders many of them foreign, and many of its domestic stockholders men of the richer class. Not so with the State banks. The property in them is not, for the greater part, the property of the rich. Certainly it is not in Massachusetts. Having investigated this point for myself, I know and can prove the fact. They are, for the greater part, the property of those not rich, and especially of the earnings of the industrious, the investments of females or other persons desiring safe investments of their small property, and trust funds. As an example of the fact, I give the following exhibit, abstracted not long ago from the books of a State bank:

203 proprietors are men, owning	shares 4919
117 are women, in their own right	1492
54 are trustees or guardians	1242
12 are insurance companies	1413
10 are churches and academies	249
5 are savings institutions	585
406 stockholders.	shares 10,000

And of these only 34, holding but 1,561 shares, are, in any sense of the term, capitalists. I have another similar exhibit, the general result of which is, that of 783 persons interested, all but 59 are either females, guardians, trustees, or persons of small means, by or for whom investment is made on the same principle. I have taken these two corporations at random, and as having nothing peculiar in their character pertinent to this inquiry, except the magnitude of their capital. I presume that similar facts exist in the composition of such companies in other States.

It would carry me too far to go into examination of the relations of banks to the business of the community. The fact is apparent. If you couple this with what I have proved of their composition and ownership, I think you will perceive that you can not overthrow the bank corporations of the States, without disturbing pretty effectually the whole community. They are hallowed with its entire faith. It is this circumstance, and not the power of banks, which has occasioned the suspension of specie payments to take place throughout the

land, from one end of it to the other, without any conflict or collision between the banks and the people. By destroying the banks, then, you will revolutionize the property of the country; not that of the rich only or chiefly, but that of the farmer, the mariner, the mechanic, the manufacturer; and in revolutionizing the property of all these, you revolutionize society. Such an upheaving of society from top to bottom, may be very convenient to the idle and the bad, the needy adventurers, who would like to have all the good things of this world thrown into common stock for a general scramble, every Saturday night, because they are either above or beneath a life of labor. But how would it suit the virtuous and the frugal, who compose the great body of the people of this country, and who see themselves gradually rising into competency and respectability by means of honest industry and enterprise?

But banks commit errors, sometimes frauds; they act from interested motives; they issue too much paper; they do things injurious to the public welfare. That is one side of the facts. But suppose they do. Banks are associated men. Other men, in other relations of life, do wrong. Are we to sweep from the land every thing, in the management of which men err? Is that your rule? If so, what will be left standing? Surely it is mischievous and absurd to give in thus to a blind recklessness of headlong overthrow.

It can not be disguised, there is a jacobinical radicalism of temper, occasionally running through society, as different from true democracy, as darkness from light. Its obvious tendency is general confusion. What are we to deem of the objects of men, who would put an end to legal indebtedness, abolish institutions of religion, have no protection of life or property by law, and whose warfare against banks is but an item in their general warfare against all good order? And yet such there be at work in society. And will not the same desperate spirit which strikes at one form of property, strike at another? It ravages the North, will it spare the South? Can law, order, property, be torn down at one end of the country, and stand untouched or unshaken at the other? Will not anarchy in half, be anarchy in the whole? It seems to me to become every part of the country, north as well as south, and not least of all the south, to guard well the conservative elements in the social organization of these United States.

## OBJECTS OF LEGISLATION.

Mr. Chairman, I have now reached that part of the Message, in which the President, after giving a particular account of the several objects he commends to the attention of Congress, proceeds to apologize for the fact that all these objects appertain to the interest of the Government exclusively, or, like the extension of merchants' bonds and of bank debts, are for the relief of the country only accidentally as it were, and in subordination to the administrative convenience of the Treasury Department. To account for this apparent abandonment of the people, in this their hour of trial, the President favors us with a new theory of Government as the exposition of his conduct.

In the views of the President on this head, I admit there is some plausibility. Nay, it is due to candor to say, that I cordially agree in several of the general principles he lays down. I am ready to go heart and hand in a fair application of them, perhaps further than he himself.

## CEDED POWERS.

The Federal Government, the President suggests, is to be confined to the powers ceded to it by the people of the States.

Well, who proposes to depart beyond these? To be sure, different men entertain different views of the Constitution; but no one thinks of infringing it. For instance, some find authority in the Constitution for a special bankrupt law, aimed at the single heads of the State banks. Others think this a very latitudinarian and questionable reading of the Constitution. Again: some see in the fiscal power, in the commerce power, in the coin power, the authority and duty of Congress to regulate and equalize the currency. Others do not. Again: most of our eminent public men have at one time or another perceived in the Constitution, authority for the establishment of a national bank; and then occasionally a season comes, when they can not find the passages. Again: some of the strictest constructionists read the Constitution in such a way as to find a clause in it somewhere, giving to any one of the States power to veto an act of Congress; which way of reading it, others think to be a marvelously strong case of extreme latitudinarianism of construction. And so we differ.

Take the case of a national bank. I, for instance, think the constitutional power is conclusively established by the arguments of Alexander Hamilton, of Chief Justice Marshall, and others. I think with Mr. Madison that, supposing there was any good cause of doubt on this point originally, it is just as unwise and unstatesmanlike to revive the question, after we have had two banks, for twenty years each, as it would be to deny the right of Louisiana, Arkansas, and Missouri, to be in this Union, although Mr. Jefferson himself thought that the annexation of Louisiana to the United States required an amendment of the Constitution. There should be, at some time or in some way, an end of question about these things. We, in this country, in our management of our institutions, too much resemble the child, who, in his tender care of the growth of his corn, dug it up every morning to see what progress it had made during the night. We seem unwilling to give any thing time fairly to take root in the soil.

But, it is objected, there is no express power in the Constitution to create corporations. Very well—there is no express power to build this edifice in which we are assembled; there is no express power to construct an arena or a frieze; there is no express power to establish SUB TREASURIES; and I suppose if any motion had been made in the convention to insert expressly these, or a thousand other admitted powers which I could instance, it would have been rejected. Indeed with all due respect to this argument, which has been so much relied on, it seems to me, like an insect, to escape the hand that would crush it, only by its smallness. The Government needs certain fiscal agents. Those agents must of course be men acting in concert, and associated under some provision of law. Whether they be associated in that form of law called a corporation, or that form of law called Sub-Treasuries, or that form of law called selected deposit banks, or any other form of law, seems to me a mere question of form, totally devoid of material substance. Each of the Executive Departments possesses many of the essential qualities of a corporation: especially, if some of the grounds of defence, taken in the recent application for a *writ of mandamus* at law against the Postmaster General, be well taken.

Then, I accept the premises of the President on the point of

power. And as I see in the Constitution ample power to enable Congress to exert itself beneficially in the present crisis, I wish to have this done.

## EQUALITY.

So, also, in regard to the duty of a good Government to observe an equality of legislation, I agree in the premises laid down by the President; I do not admit his conclusions. True, it was not the object of the Federal Constitution to confer special "favours" on classes or individuals. Nor was it established to inflict disfavours on classes or individuals. If "to make men rich" is not a legitimate object of good government, no more is it a legitimate object to make men poor. You shall not elevate classes at the expense of others, nor shall you depress classes for the benefit of others. Let the Government "give security to us all in our lawful pursuits." Let it cease to make war upon the merchants, the bankers, the corporations, the business of the community.

But shall there be no such thing as "specific aid" to the citizen on the part of the Government? Is that a just inference from the doctrine of equal laws? By no means. Thus, in ordinary cases of justice, the law is to be equal to all within its purview; but it is a "specific" law for a "specific" set of facts; and the application of the law must of necessity be in any given instance limited or individual, in the very nature of things. So in greater things. Suppose an assault to be made, unconstitutionally, upon the freedom of the press or speech, or upon any given public right. Will you refuse to guard it, because of its being an exigency calling for "specific aid"? All questions of Government come up in specific cases. It would be a disastrous crisis, indeed, if it were one of equal universality of evil. Will you not apply specific remedies to specific evils? If not, then it is impossible ever to remedy any given evil. Accordingly, the President himself recommends to Congress measures of "specific aid," as the extension of custom-house bonds, for instance, to the deposit banks, a bankrupt law for bankers, which last, it seems to me, one of the most specific of all specific measures. What labors at the present time is the currency, and the business of the country, in its various commercial relations. Why not apply to the case such remedial legislation as the particular nature of the subject demands?

## NON-INTERFERENCE OF GOVERNMENT.

Once more. I welcome the general idea that Government should not be over-prone to interfere in the private pursuits of the citizen. One of the mischiefs of the times has been the meddlesome interference of General Jackson in the business of the country, his prurient tampering with the currency under pretext of reforming it. This is the very thing I would prevent. It is one reason why I am against a marriage of Bank and State. I wish to have banks the business agents, not the party banks, of the administration. I oppose the Sub-Treasury scheme for the same reason. If adopted, it would enable the Government to put up exchange or put down exchange, and to produce fluctuations in the money market at will. It would place the whole commerce and business of the United States at the arbitrary mercy of the Government. That is a state of things which I do not wish to see; and I hold the President to his professions and his pledges on this point.

At the same time, I deny that, because Government is "to avoid every unnecessary interference with the pursuits of the citizen," therefore Government is never to do any thing, or attempt any thing, for the relief or advantage of the people. It has powers given it for the express purpose of those powers being beneficially exercised.

General Jackson's idea seemed to be, to spare no occasion to deny, dispute, and fritter away the powers of Congress; but he had no scruples in the exercise of power by the Executive. That was his doctrine of constitutional limitations. All the professions of limited powers, made by the late President, were of this description; they were practically applied only to the action of Congress. He had no opinion of Congress powers; but a very broad one of President powers. Thus it was that he removed the deposits, and established the State bank system, by Executive legislation, and then called on Congress to ratify it. That is the way he understood the Constitution.

Mr. Van Buren seems, in one respect, to be treading in the same path. He first establishes Sub-Treasuries, and then calls on Congress to accept and legalize them.

But, whereas General Jackson could never leave meddling with the currency, Mr. Van Buren, it would appear, has adopted a theory the reverse of that of the former; namely, that, in regard to the currency, the Government of the United States and the people of the United States are to have separate and adverse interests. All the anxiety of the administration in the present crisis is for the Government; it has no cares, no thought, it absolutely disavows all powers in reference to the good of the people.

Each of these opposite courses of policy is wholly unwise, unjust, and pernicious to the public weal. General Jackson was for stretching the finance powers of the Constitution—the Executive finance powers—until they snapped, throwing the country, and all its fiscal and business concerns, into the most deplorable disorder; while his successor, confounded at the spectacle of ruin which surrounded him, proposes to abandon and to repudiate those powers altogether, and to leave the currency and the business interests of the country to their fate. But the administration will find it impossible to shrink. In this way, like a tortoise into its shell. It must act. Inaction is, to all practical purposes, action. Government can neither move, nor decline to move, without deeply affecting the interests of the people. The act of Congress in chartering the bank, the veto of that act by the late President, the transfer of the public deposits to the State banks, the Treasury circular, the proposition to divorce bank and State—all these are, in their visible effects upon the business of the country, pertinent illustrations of the impossibility of separating the Government and the people.

## THE TRUE ISSUE.

And the question for the people now to decide is, whether their Government is to be active in the perpetration of mischief only? Potent as it is for evil, shall it be suffered to make itself utterly impotent for good? Shall it, in the hour of public distress and peril, coward-like, shrink into a corner, in wilful neglect and abandonment of its public duty? Shall it stand upon its safe elevation, and bated on to mischief all the forces of rapine and disorder, which the evil times have drawn forth from their lurking places, re-using meanwhile to stir a step itself for the welfare and happiness of the country, amid the disasters which its own misrule has brought upon us?

Doubtless it is true, as the President suggests, that the country will, in time, recover itself. It has elastic and recuperative energies within it, which no power on earth can subdue. Our forests and our fields, our oceans, lakes, and rivers, our enterprise, industry, and intelligence, our free institutions, the favor of Providence which has never forsaken us—these are elements of greatness and prosperity which baffle and defy all the errors and faults of misgovernment. But, is it any apology for your striking off my arm, that its bones and muscles are endowed with a natural power to knit together again, and regain their pristine health and strength? Doubtless the country will recover itself; but if the recommendations of the Message be followed, it has got to recover, not only without aid from the Federal Government, but in spite of the Government.

Will the people sanction such a doctrine? In the concluding paragraph of the Message, the President reminds us that we are fresh from the people; that we know their embarrassments, and the relief they need. We do so. We have submitted this question to the arbitrament of the people. We cheerfully abide their decision. We tell you that North Carolina, Tennessee, Kentucky, Indiana, Rhode Island, Maine, have pronounced judgment upon the administration. I congratulate Maine, especially, on her emancipation from the thralldom of degrading assentation to every caprice of the Executive, to which her own peculiar interests have so long been sacrificed. We hail the auspicious omen of the bright star in the East. Maine has rung the knell of radicalism. Well may she hold up to the eyes of her sister States the *DRAGON* in her escutcheon. The people have spoken out, and in a voice of thunder, which should be re-echoed by their representatives in this hall, until it penetrate into the innermost recesses of the White House. And if the assembled representatives of the nation do nothing else for the public good in this emergency, if all the power and influence of the Executive are to be exerted as a drag on the wheels of legislation, to preclude the adoption of any measures of general relief, this at least we may and we will do; we may and we will enter up an appeal to the people, against the conduct now pursued, and the purposes professed, by this administration.

### SPEECH OF MR. MERCER, OF VIRGINIA.

*In the House of Representatives, September 26, 1837—*  
On the bill to postpone the fourth instalment of deposits with the States.

The house having resolved itself into a Committee of the Whole, and resumed the consideration of the bill from the Senate to defer indefinitely the payment to the States of the fourth instalment (\$9,367,214 98), to become due on the 1st of October, under the deposit act of the 23d of June, 1836.

Mr. MERCER arose and addressed the committee in substance as follows:

Our days, Mr. Chairman, are numbered. The refusal of the house, this morning, to lay on the table the resolution of the Senate to adjourn on the 9th of October, and the bare majority by which the committee consented to rise, at a very late hour last night, admonish me of the extreme anxiety which exists to close this discussion. It is with no little embarrassment, therefore, that I venture to address the committee.

I am, Mr. Chairman, of late years, (said Mr. M.) unused to debate. My labors in this house have long been confined to the humble path of legislation prescribed to me by the allotment of its committees. Content to aid in the development of the resources, by means of the internal improvement of our common country, I have studiously avoided mingling in the strife of party, that I might more successfully promote those peculiar interests confided, in some small degree, to my charge.

For ten years I have not put pen to paper with a view to report any speech of mine, and have arisen in debate only when impelled by the hope, however groundless, of shedding some light on the question to be decided. As I cannot speak to empty chairs, and find a sufficient reward in the circulation at home of what I utter here, it is the more necessary that I should have your attention, though I may fail to repay it.

That I may not, however, forfeit all title to your indulgence, I will proceed, without further apology, to examine the various Treasury estimates which furnish the basis of the bill on your table.

How little reliance is to be placed on these estimates is made manifest, not only by the conflicting results with regard to the present state of our finances, which have been deduced from the Secretary's first elaborate report by the various gentlemen who have preceded me, but by a palpable misstatement, in the very brief answer returned, in the last week, to a special inquiry of the house.

Taking them collectively, I am compelled to regard the reports of this officer, during the present session, whenever intelligible, as alike defective, erroneous, and inconsistent with each other.

In that which immediately followed the President's message, no information is afforded to this house of the final settlement, which, by one of the last acts of the twenty-fourth Congress, he was empowered to make with the Bank of the United

States. The entire resources of the Treasury to meet the expenses of the last half of the current year, are wrapped up in an obscure paragraph of this report, which furnishes, as the result of his estimate, nine millions and a half, without disclosing the sources from whence this sum is expected to be drawn.

We now discover from the answer returned to a special inquiry of this house, that the Secretary disposed of the Government stock in the Bank of the United States for near eight millions of dollars, and holds the bonds of that institution for this amount, payable, with interest from the third of March, 1836, in four equal annual instalments of \$1,986,539 04. The time of payment is the month of September of the present, and of each of the three succeeding years. The rate of interest to be paid is not furnished by the Secretary, but on personal application at the Treasury, I learnt that it is six per cent.

The first instalment, therefore, will, on the 3d of next month, equal \$2,175,260 24.

But of the whole consideration receivable from the bank, the Secretary apprizes us that "\$741,561 28 is on account of the navy pension fund," and has, to use his own language, "partly been paid, and the residue will be out of the first instalment, when received." It is a portion, he adds, "of a trust fund, and not applicable to general purposes." So that the sum of the first instalment, applicable to public use, would seem to be but \$1,363,250 64.

In the last Treasury estimate, however, that of the 21st of this month, this sum is carried to the credit of the unexpired year, as about a million and a half. Why it is raised to that amount, if, as we are expressly told, the sum of \$741,561, the whole interest of the navy pension fund, is to be paid out of the first instalment received from the bank, or whence the obligation arises to make so large a deduction on account of this fund, we are left to conjecture. A word or two as to the history of this fund. When it amounted to \$656,000, the present chairman of the Committee of Ways and Means proposed, with a view to its enlargement, to permit by law, its investment in a part of the Government bank stock at par; the stock being then fifteen per cent. above par. The humane purpose of the fund, to provide for the destitute widows and orphans of deceased naval officers, out of whose pay the fund had been reserved, prompted the house to acquiesce in this proposal.

Having, at the commencement of this session, looked to the United States bank stock held by the Government as an available and appropriate resource in the present condition of the Treasury and of the currency of the country, I applied to the Treasury office, and there learnt that 6,416 shares of 68,752, the residue of 70,000, originally held by the United States, belonged to the navy pension fund; that a sale of the whole stock had been made to the new Bank of the United States on the 4th of March last, at a premium of \$15 58 per cent., and four bonds of equal amount received in payment.

The sale, thus effected, was obviously for the mutual benefit of the United States and the navy pension fund. The consideration was common and uniform; and the claimants became entitled to a ratable proportion of the several bonds; the navy pension fund to a share of the first bond, equivalent to one-fourth part of its entire interest in the whole consideration.

Instead of \$741,561 29, this fund is, therefore, entitled to claim out of the first instalment due from the bank, \$185,390 32, which, with 19 months' interest, will amount on the 3d of October to \$203,002 40. Deducting this sum from \$2,175,260 24 and the balance of the first instalment to be carried to the credit of the Treasury will be, on the 3d of October next, \$1,972,257 84, instead of a million and a half, at which it was estimated by the chairman of the Committee of Ways and Means, or the sum of \$1,363,250 64, to which the Secretary would seem to reduce it by his letter of a subsequent date. By such reduction, his last estimate excludes the sum of \$609,007 20 from the resources of the fourth quarter of this year, while it continues to omit any allusion whatever to the aid which the Treasury might derive, in its present exigency, from an anticipation, by loan or otherwise, of the payment of the three remaining bonds of the bank; amounting in principal to very near six millions, and with the accruing interest, to a much larger sum.

That this omission has resulted from no desire to favor the credit of the Bank of the United States by withholding its bond from market, will be readily

conceded by all who know the hostility of the Secretary to that institution. To what, then, can it be imputed but to the design manifest upon the face of all the estimates of this officer, by diminishing the resources of the Treasury, to create an apparent necessity for passing the bill on our table?

Further and stronger evidence of such intention will be found by comparing a very short paragraph of his first report with the facts subsequently disclosed by a letter of the Treasurer and a printed document transmitted to this house, from the Senate, but a few days ago.

After appraising us that the public expenditures will exceed the balance remaining in the Treasury on the first of January last, together with the revenue of the current year, by near six millions, (\$5,875,565,) "in order," says the report, "to discharge that excess, and retain of the money reserved on the first of January, one million, which is the smallest sum deemed proper under the acts of Congress for the efficient operations of the Mint, and at least three or four million more, to answer sudden and contingent calls, there will probably be a necessity to resort to the deposits now with the States, and to the deposits destined for them in October, or to some other resource, for a sum equal to ten millions."

Allow me to say, Mr. Chairman, that among the many deceptive estimates of the Secretary there is not one more extraordinary or culpable than this.

The "acts of Congress," to which the Secretary alludes, are comprised in the 31st section of the act of the 18th of January last, (a.) Comparing this paragraph with the provisions of the act, it is obvious that the Secretary assumes the largest sum which the law permits him to employ in the operations of the Mint, "as the smallest deemed proper under those acts," to use his own language. The maximum extent of his discretion he thus makes the minimum; disregarding alike the express reference of the law to the convenience of the Treasury; the authority as expressly given him to withdraw the whole deposit or any part of it; and the alternative left at his discretion, of exchanging, from time to time, coin for bullion, as had been the successful practice of the Mint for a series of years.

It becomes us next to inquire how the authority of the Secretary over this million has been exercised, and to infer from its past, its future use, should it be again intrusted to his discretion.

From a letter of the Treasurer, which accompanied the Secretary's letter to the house, of the 15th instant, it appears that there had been deposited in the Mint, on the 1st of May, one million of dollars; and that, on the 13th of the present month, there yet remained, of this sum, \$776,535; the residue of the million having been recently withdrawn.

Turning to the statement furnished by the Senate, of the operations of the Mint since the 1st of January last, we have, for the fruit of the first eight months of the year, a gold coinage of the value of \$853,825. The least sum coined in any two months, subsequent to January last, falls short of \$41,000 a month. The greatest product of any one month, that of May, is \$268,000, while the average monthly coinage of the whole period is less than \$107,000; and does not, during the last three months, exceed \$87,000. So that, in virtue of a discretionary power, carefully guarded by law, to employ, "if expedient," a sum "not to exceed a million," the Secretary has actually employed that amount in a vain attempt to add \$107,000 a month to the gold coin of the country. He has pushed his authority to its utmost limit, while the fact was staring him in the face, as his report admits, that, (b) as fast as the gold received the impress of the die, it passed abroad, to be again converted into bullion, for the payment of a part of that foreign debt, to the pressure of which upon our currency, and, through it, upon the banks, the Secretary justly ascribes the derangement of the former and the insolvency of the latter.

I need scarcely remind the committee that the coinage of gold does not augment its exportable value; nor need I remark how inadequate is the seigniorage charged for that coinage at the tardy rate of \$87,000 a month, to reimburse the ordinary expenses of the Mint, and the interest of the million abstracted from an embarrassed Treasury. Is it not, therefore, most extraordinary, that the Secretary of the Treasury, with the experience of eight months, should ask of us a million of dollars, for the purpose of repeating so losing a game? Is this committee prepared to grant it? Will they not rather restrain than accelerate an operation so extravagant, by requiring this officer to apply the r

maining deposit in the Mint to the current expenses of the Government; to pay, in good faith, to its creditors, without discrimination, the full value of their just demands, instead of putting a part of them off with the depreciated paper of those banks whom his policy has contributed to break, or with Treasury drafts, which, when issued, he very well knows, will be protested?

Leaving a few thousand dollars in the Mint, for the purchase of copper bullion, according to the former usage of the Government, if the views which I have presented to the committee be correct, \$750,000 of the sum remaining in the Mint may be added to the estimated resources of the present year; and an entire million deducted from the proposed charge upon the Treasury, for the year next ensuing. There does not, indeed, appear to exist any adequate reason for a special appropriation of any large amount to this object, since the surplus of two millions, allowed by the long-settled policy of former years to remain in the Treasury at the end of each, would yield ample means of extending, when expedient, the coinage of gold and silver bullion.

But the Secretary requires, it has been seen, besides the million for the Mint, "at least three or four millions more," to answer sudden and contingent calls. He has underrated, as I trust I have already shown, by more than a million and a quarter, the funds now placed at his disposal, and totally excluded from his estimate near six millions more, that might be derived from the bonds of the Bank of the United States, to meet the current expenses of the year. And what does he now require at our hands? That we shall grant him a clear surplus of *at least three or four millions more*, over and above the amount of his own estimate of all those expenses.

The Secretary would, it seems, avail himself of one of the provisions of the much-abused deposit act, which reserved five millions of the surplus that might be found in the Treasury on the first of January, 1837, to ground a permanent charge upon the country, at war with all the antecedent recommendations of the Treasury Department, and the long settled usage of the Government (*c.*) Permit me to call your attention to the origin and extent of the surplus which every Secretary of the Treasury till the present, and Mr. Woodbury himself, until his late report, has deemed sufficient to maintain the public credit.

Shortly after our last war with Great Britain, when the Treasury was oppressed by a heavy public debt, Mr. Crawford, then Secretary of that Department, recommended, for its speedy extinction, an enlargement of the sinking fund from eight to ten millions, and the further addition to it of all sums beyond two millions of dollars, that might at any time exist in the Treasury, beyond the money required for the service of the year.

This two million surplus he proposed to reserve for contingencies; leaving the current expenses of each year to be met by the current receipts of the Treasury.

To the salutary provisions incorporated by Congress in the act of March, 1817, we owe the final extinguishment of a national debt exceeding one hundred and twenty millions. Since the discharge of that debt and the increased ability of the Government to obtain loans on short notice, the wisdom of continuing to keep inactive so large a surplus as two millions, in order to provide for contingencies which may never happen, might well be questioned. But a permanent extension of this surplus to four millions, at the expense of a new debt, to be contracted by the issue of ten millions of Treasury notes, whether with or without interest, is a position, so preposterous and extraordinary, as to be reserved for the present Secretary, unless indeed, the deposit act, an act temporary in its nature, and the result in all its features of compromise, may be deemed to supply a higher authority.

I appeal to the venerable member from Massachusetts, who composed part of the same cabinet with Mr. Crawford, if I have not correctly stated the origin and extent of the policy of preserving a fixed surplus in the Treasury.

One attempt to reduce it below two millions, I well remember to have failed. It was when, in conjunction with a distinguished chairman of the Military Committee of this house, from South Carolina, (Col. Drayton,) I sought to apply a part of the two millions to the armament of the fortifications on our seaboard. My argument was, that as our fortifications were then defenceless, and as war was the most alarming of those contingencies, for which a surplus revenue was reserved, a part of it

could not, in peace, be better applied, than in arming those forts, on the strength of which, the security of our fleets and seacoast might depend. The metal of the cannon upon their ramparts would be as imperishable, at least, as the coin in the Treasury, and if both were suddenly required by the exigencies of war, money could be more speedily provided, than arms.

But although abortive attempts have been made to reduce this surplus, and it has, at the expiration of the year, often fallen below two millions, no member of this body has, I will venture to say, ever heard its augmentation recommended, as a permanent policy, till the commencement of this extra session, when, if at any time, a reduction of all unnecessary demands upon the currency of the country might have been expected, from those especially, who have so greatly contributed to its derangement. Shall we, Mr. Chairman, depart from the usage of twenty years, by placing at the discretion of the Executive or his agents "a surplus of at least three or four millions, to use the words of the Secretary, and that, too, as he intimates, by a "resort to the deposits with the States, and to the instalments destined for them in October, or some other resource," subsequently explained to be the issue of Treasury notes?

It cannot, Mr. Chairman, (said Mr. M.,) have been unknown to the present Secretary of the Treasury, that his immediate predecessor estimated the balance which would remain at the expiration of 1834 at less than three millions; of which, near a million and a half then consisted of unavailable funds; the notes, and long outstanding balances due from the insolvent banks, which fell amidst the crash of our currency during the last war. Mr. Woodbury's own report of December, 1834, shows that the actual balance in the Treasury on the 1st of January, 1835, including those unavailable funds, scarcely exceeded two millions; yet, in his annual report of December, 1834, so far from complaining of any embarrassment of the Treasury, from the extinction of this surplus, he expressly enforces the policy of the act of March, 1817, which prescribed the limitation of two millions. The same Secretary now requires twice that sum to meet the contingencies of but ninety days, and this, too, along with a special appropriation of more than a million and a half for the Florida war.

Nor should it escape observation, that in the very next paragraph of the report which I have quoted, this officer urges, in favor of the limitation contained in the act of 1817, that "it would leave the bank agents of the Treasury, as its other fiscal agents from the foundation of the Government have been left, wholly disconnected, as far as practicable, with the dangerous relation of borrowers from the Treasury, for relending, and for private gain."

Why the Secretary has discarded the commendable jealousy which he manifested less than two years ago, of the misapplication of the public money in the hands of the disbursing officers, who at this moment hold, with his permission, more than four millions and a quarter, exclusive of three-fourths of a million in the Mint, he has afforded us no explanation whatever. (*d.*)

I come next, Mr. Chairman, to consider that item of his late estimates, for which he has received the eulogy of his friends. It is the deduction of fifteen millions from the estimates for the residue of the present year, on account of the balance of former appropriations which will remain unexpended on the 1st of January next; and for which, therefore, he asks of us no immediate provision.

This deduction is, I perceive, imputed to an actual suspension of the extravagant appropriations of the last Congress, through a spirit of economy. A word or two, Mr. Chairman, as to the origin of those appropriations, of which the Secretary complains in his late letter, as exceeding his estimates, and his friends, as a cause of the present embarrassment of the Treasury.

An honorable member from South Carolina, (Mr. Pickens,) to my great astonishment, charges the national republican party with being responsible for those appropriations, one of which he especially denounces, as an "effort to locate marine hospitals on the rivers and creeks of the west, where it would be difficult to fill them, unless by collecting the bears and wolves of the forest." Would it be believed that the only sites prescribed for the erection of those hospitals are the southern shore of Lake Erie and the banks of the Mississippi and Ohio, and that their object is the preserva-

tion of the lives of the many thousand boatmen engaged in the most extensive inland commerce on the globe, a large proportion of whom are occasionally exposed to a climate of all others most fatal to health?

For the rest of those appropriations, those who seek their origin must look to the reports of the Committee of Commerce, which had, for its chairman, a gentleman from Pennsylvania, of whom, in his absence, I will say no more than that he was, and had been, a most zealous friend of the late administration. The light-house and harbor bills both emanated from this committee, whose encroachments on the province of the Committee on Roads and Canals were sustained by the dominant party of the day, to the utter disregard of one of the positive provisions of a standing rule of the house; and the wholesome condition repeatedly, though vainly, urged by the chairman and other members of that committee, that no appropriation of public money should be made to any object of internal improvement until its national character had been established on the basis of its general utility, and its probable cost ascertained by a careful examination, survey, and estimate. To a departure from these salutary restrictions, may be imputed, the number of those appropriations which the War Department reports its utter inability to expend, because their objects are unknown or unattainable.

A full share, let me add, of the responsibility for all those appropriations rests, immediately, with the present Secretary of the Treasury and the Executive, which sanctioned his annual reports of the last and the preceding years, as their inspection will undeniably prove. For, while the labor of this officer has been directed, during the present session of Congress, to an augmentation of the surplus in the Treasury, far beyond the bounds of any former necessity, under color of providing for contingencies, it appears to have been his constant study, since, as well as prior to the deposit act of 1836, to reduce that surplus by lavish expenditures. Hence, in his report of December, 1835, where he prescribes the most "judicious course to pursue" in using the surplus, which he estimated at "between six and seven millions only," he tells us in so many words, that "in order to reduce it, there might be judiciously authorized, for purposes not enumerated in any of the estimates, other beneficial expenditures, for objects clearly lawful and useful."

As late, indeed, as his last annual report, in treating of the proper disposition of the surplus in the Treasury, which he distinctly intimates, would be likely to continue, he reminds us that "various objects, of a national and constitutional character, were recommended in his prior report, as suitable for the application, by way of extraordinary appropriation, of any surplus funds for which the General Government should happen to have no other immediate use." "Liberal and useful appropriations," he says, "were fortunately made to many of them, which will save expense in the end, and prove to be the soundest economy." "The reasons," he subjoins, "for a continuance of the same wise policy, while our resources remain so ample, have lost none of their original force." Such was his language in December last. That no misconception may exist as to the character of the objects which he regarded as "lawful and useful," the succeeding paragraph to that which I have quoted expressly comprehends among the proper objects for the application of such surplus, the following: "Completing with it, sooner than had been contemplated, the projected fortifications and naval establishments of the country; improving more rapidly the navigation and security of its commercial bays and rivers; and while its imports and exports were prosperous beyond all example, erecting, where needed, appropriate custom and ware-houses, as well as suitable marine hospitals, court-houses, and post-offices." Immediately following this enumeration, will be found an earnest recommendation of the repeal of certain duties on imports, to the extent of "three millions and a half"—a measure which undoubtedly indicated no want of confidence in the revenue of the present year.

It may, therefore, be confidently affirmed, in opposition to all that we have heard in the course of this debate, and to those complaints of the Secretary himself, in the first of his late letters, that he not only entertained no apprehension that the revenue of the current year would fall below his estimate of twenty-four millions; but that he desired a continuation of those very appropriations, by which the expenditures of the year have been made to exceed

his estimates to the extent of five millions. It would be a sufficient answer to his inconsistent reproach of the extravagance of the last Congress, which I am not bound to vindicate, as, I trust, I have shown, that four and a half of these five millions consisted of appropriations for the Florida war and the payment of the outstanding claims of certain volunteers, which originated *subsequently* to the date of those estimates.

I desire not to be misunderstood by the gentleman from South Carolina or any other member of the Committee.

I beg, Mr. Chairman, not to be considered as denouncing the past expenditures of this Government, where they have been discreetly applied to the internal improvement of our country. On the contrary, when I recollect that twenty years ago, the spirit, which now animates this vast republic, from its centre to its remotest extremes, had scarcely penetrated south of the Potomac, I glory in the reflection that, through its beneficent agency, the resources of our common country have been explored, and its capacity for improvement demonstrated; that its loftiest mountains have been subdued, and the navigation of its noble rivers unlocked by the inspirations of science and the labors of art; and, above all, that our people, once severed by natural barriers, have turned these very impediments into facilities of intercourse and bonds of perpetual union. Sir, in whatever party I may be ranked by others, claiming, as I do, independence of all, and asking favors of none, I am no nullifier; and I most truly rejoice, that the State which the honorable member from South Carolina so ably represents, is about to derive from the accomplishment of an enterprise, worthy of the age, a new attraction to that union, in a commercial connexion of her great southern emporium with the noblest rivers and the fairest cities of the west.

The power of this Government to make internal improvements, I consider of diminished value, when I behold the alacrity and zeal with which the several States are superseding the necessity of its exertion. Whenever its great purposes are accomplished, I will abandon its use with far greater pleasure than I have felt in sustaining it; but, until then, I am prepared to meet any reproaches which it may bring upon its friends, from whatever quarter they may proceed.

I am at all times ready to vindicate the mode in which this power has been exercised, by that committee, of which I have so long been the drudge. I aver, sir, without a fear of contradiction, that, so far from the power of internal improvement having been abused by that committee, as an instrument for the partial distribution of the public benefit, which it is designed to dispense, there never has been a moment when an effort, so unworthy, would not have been spurned with disdain.

The committee will pardon a digression provoked by a charge which I could not but regard as applicable, in part, at least, to myself, since the small appropriation of the last Congress, to the purchase of sites for marine hospitals in the west, sprung from a report of the Committee on Roads and Canals, pursuant to an instruction of the late House of Representatives.

In returning to the path I had left, I have to invite the earnest attention of the committee to a palpable disagreement between the Treasury estimates of the probable necessities of the Government during the last quarter of the current year. In his letter of the 5th instant, Mr. Woodbury computes the "outstanding balances at the expiration of the year" to amount to "about sixteen millions," a sum which, he adds, "does not differ much from their amount at the close of the last year;" and this amount, I discover, from his letter to the Senate of the 14th of January last, to have been \$16,862,670, an amount obviously much nearer seventeen, than sixteen millions. But, in reply to a resolution of this house, inquiring what objects of public expenditure may be wholly dispensed with, or will bear a material reduction, during the present year, the Secretary expressly tells us, that "a minute and critical examination, on this point, was instituted in May last, and the result of it was, that enough could and would be postponed, till next year, to amount to fifteen millions;" "consequently," he adds, "the expenditures during the present year were estimated, in my recent report, upon that basis." To exclude any possible misconception of the grounds or extent of his estimate, he subjoins that, "after every delay which the public expenditure would permit, it is, therefore, expected that of the outstanding appropriations,

now exceeding twenty-four millions, not much over nine millions will be necessarily required to be expended during the residue of the year; the result cannot be necessarily varied from that to which the Department arrived last spring."

Thus, within a fortnight of each other, and from the same data, the Secretary deduces two estimates of the wants of the Treasury during the residue of the year, varying from each other to the extent of a million of dollars, or, as might be justly contended, a million and a half.

In the early age of this Government, Mr. Chairman, a million of dollars was a sum sufficient to engage the serious attention of this house, the constitutional guardian of the public purse. Are we to look for an explanation of this palpable inconsistency, between the contemporary estimates of the same officer, to carelessness in the discharge of his duty? The extraordinary length of the Treasury reports, since he has been at the head of that Department, precludes so unjust a surmise. Are we, then, to seek for it in an unexpected opposition to the bill on your table, which, after gliding speedily through the Senate, has been so long obstructed in this house as to require greater urgency to pass it through?

Sir, I have again to complain of palpable omissions, as well as contradictions, in the elaborate reports of this officer. In reply to the late direct inquiry of this house, we had every reason to expect that the Secretary of the Treasury would correctly appraise us, not only of the sum of the balances of former appropriations which would remain unexpended at the end of the year, but of the part of those balances which might be ultimately dispensed with. A heavy cloud is allowed to rest over the prospects of the ensuing year, without the slightest effort to dispel it. And yet there will not be found in the annual reports of this officer for a series of years, a similar omission.

In his report of December last, in which he underrated, by more than two millions and a quarter, the balances of appropriations which would be unexpended at the end of that month, he computes the part of those balances which could be applied in aid of the appropriations of the ensuing year, without a re-appropriation, at more than three millions, and the part which would be carried to the surplus fund, under a provision of the existing laws, to very near two hundred thousand dollars. The two sums, together, constituted nearly one-fifth of the total estimated balance. The actual balances of the appropriations of former years unexpended on the 31st of December last, is stated in the Secretary's communication to the Senate of the 14th of January last to have been, as we have seen, nearly seventeen millions, and no just reason can be assigned for computing those which will exist at the end of the present, or the portion of them which may be carried to the account of the ensuing year, at a less amount.

That I may be better understood by a part of the committee, allow me to remark that those balances of appropriations arise from no superior economy on the part of the Executive, as the large amount which they had reached on the 1st of January last, combined with the desire, manifested by the Secretary, to expend them, sufficiently demonstrates. To some extent, they must ever exist, since they spring from the nature of the objects to which the public revenue is applied.

The present Chief Justice, when Secretary of the Treasury, stated that those balances had averaged about five millions three hundred thousand dollars for the four years preceding his report of December, 1833. In estimating the balances of appropriations at the end of 1834, he assumes that "a portion of the expenditures," for which he submits an estimate, "will not be used during the year; that balances of appropriations, equal to the amount at the close of the current year, will, in like manner, remain in the Treasury at the end of the succeeding year;" and he wisely suggests that "it is not necessary to raise money for the public use sooner than it will be needed."

During the frugal administrations of Washington and his immediate successor, the elder Adams, these balances were inconsiderable compared with their present extent. Their augmentation has, doubtless, been promoted by a favorite doctrine of the opposition to those administrations, a doctrine which contributed, in no small degree, to its triumph in 1801. It had been the practice to distribute the estimates, and the correspondent appropriations for the maintenance of the Government, under a few general heads of expenditure, and to allow the excess of

an appropriation, under one head, to supply any unforeseen deficiency that might arise under any other head of analogous character. The balances of appropriations, under this system, were few in number, and inconsiderable in amount.

This usage was condemned for its supposed tendency to diminish the responsibility and enlarge the power of the Executive. It was charged upon particular officers that, under cover of the protection which it afforded for the misapplication of the public money, speculation had arisen; and one of the earliest measures of the successful party was an inquiry into the conduct of the ex-Secretary of State, Mr. Pickens. This inquiry was instituted and conducted by a distinguished member of this house, from Virginia. It ended in the complete vindication of the officer, but led to the practice of multiplying the specific objects of appropriation, and restricting the disbursements for those objects to the sums severally appropriated. As the excess of one appropriation was no longer permitted to supply the deficiency of another, however close might be the affinity between them, and the precise sums required for each could not be foreseen, it became indispensably necessary to enlarge each of the numerous estimates to which the new usage gave rise, so as to guard against any possible deficiency of means. Hence an unexpended balance would be found at the end of every year, under many, if not all, of the numerous heads of appropriations. The aggregate of these balances became larger as the public expenditure increased with the expansion of the revenue and the multiplication of its objects. As some merit is, moreover, implied in keeping the expenditure for any object within the estimate of its cost, so both the estimates and the appropriations have been gradually and proportionally enlarged.

Whether economy in the public expenditures has been promoted by this modern and still popular system of appropriation, I shall not stop to investigate: my present purpose will be answered, if I shall render intelligible the objections I have made to the estimates on our table.

Before I return to them, I would further remark that the balances of appropriation at the end of each year, which have been so much augmented of late, may be distributed under two distinct heads. The first embracing all such balances as may yet be required for the attainment of the objects to which they are appropriated. The second, those balances ascertained to be unnecessary for the purposes for which they were originally designed, because, those purposes have been already attained, or found to be wholly unattainable, or to be attainable at less than their estimated cost. By a standing law, all such balances as have stood over for two years or more, from the date of their appropriation, pass to what is called the surplus fund, and, since the discharge of the national debt, are mingled with the unappropriated mass of the public revenue.

Without availing myself of the express admission of the Secretary in his letter of the 5th September, that the unexpended balances at the end of the present year will not differ much from those at the close of the last year, ascertained to have exceeded sixteen millions and a half, I shall not err, I trust, in the opinion of the committee, if I set them down at that amount. The Secretary himself expressly states that the appropriations of the last year exceeded his estimates, as they certainly did the appropriations of the year next preceding; and it is obvious that the magnitude of the balances, which remained uncalled for at the end of a year, must bear proportion to the number, variety, and extent of the antecedent appropriations.

Deducting sixteen millions and a half from the twenty-four millions of outstanding balances, comprehended in the Treasury statements of the 11th of September, and we have seven millions and a half for the full measure of the probable demands on the Treasury for the residue of the year, exclusive of the sums required for the Florida war, and the expenses of the present session of Congress.

With regard to the new appropriation asked for this disastrous war, a part of it will doubtless remain to be expended after the close of the present year, and the remainder may be deducted from the annual contingent fund of two millions; since war is not only one, but the chief, of those contingencies, for which this fund is designed to provide, and since three-fourths of the year have, in fact, nearly expired, and to that extent limited the field of contingencies during the current year.

The chairman of the Committee of Ways and Means arrived at his estimate of the expenses of

the last quarter, by averaging the monthly expenditures of the past year, which, on the submission of his first estimate, he made two millions and a half. Why his second estimate extends this average to three millions, I am not apprized; but he cannot consistently extend the average for the three months of the last quarter, as he proposed in both estimates, by adding one million six hundred thousand dollars for the continuation of the Florida war, since four million and a half of the expenses of the three first quarters are ascribable to the prosecution of this very war, and, consequently, included in the aggregate from which his monthly average is deduced.

On the principle upon which his estimate is made, the sixteen hundred thousand dollars now called for, if to be expended in the ensuing quarter, should be deducted from his monthly average. Such a deduction would make the total expenses of the last quarter, exclusive of this new appropriation, according to his former estimate, less than six millions, exclusive of his claim of a million for the Mint, and a surplus of four millions for contingencies.

It would be impossible to fortify the conclusion at which I have arrived, that the sum required for the residue of the year will not exceed seven millions and a half, by recurring to the actual expenses of the corresponding quarter of prior years; when no disorder of the currency or prostration of the industry of the country required a reduction of the public expenditure; and every incentive which the Secretary of the Treasury, the organ of the Executive, could offer for its augmentation, was supplied by the unvarying tenor of all his reports, down to that of the 5th of this month.

Discarding the worse than useless provision of one million for the Mint; the unprecedented and absurd retention of four million for contingencies; allowing three hundred thousand dollars for the extra session of Congress, and assuming, in other respects, the corrected estimate of the chairman of the Committee of Ways and Means, the aggregate of all the expenses of the ensuing quarter will amount to less than eight million of dollars, exclusive of the fourth instalment due to the States under the deposit act of June, 1836.

To provide these eight million, I propose to withdraw three-fourths of a million, now deposited in the Mint, leaving a small sum to purchase copper bullion, and permitting the coinage of gold and silver to proceed as in the year 1835, but without taxing it, as the Secretary recommended in his annual report of 1834. (d)

I propose, moreover, to pay to the navy pension fund that portion only of the first instalment due from the Bank of the United States, to which it is justly entitled, applying the residue of that instalment to meet the public exigencies. In further aid of those sums, for other and higher considerations, which I shall hereafter take occasion to explain, I propose to raise, by a sale and transfer of the three remaining bonds of that bank, the further sum of five million nine hundred and eighteen thousand and thirty-three dollars—their par value on the 3d of October next, after deducting from them the remaining interest of the navy pension fund. The aggregate amount of these specific sums, added to the balances that may be in the hands of the collectors of the customs and the receivers of the proceeds of the sales of the public lands, on the 1st of October, would alone be more than sufficient to provide the eight million required for the last quarter of the present year.

What the receipts of that quarter may amount to, including repayments by disbursing officers and agents, it is impossible now to predict, nor do the Treasury reports afford any certain guide by which to ascertain them. Hitherto, the actual revenue of the year has, in every branch of it except the customs, exceeded the Treasury estimates of the 5th of December last. That from the sales of public lands, during the first half of the year, surpassed, by near half a million, the estimated receipts for the whole year. The chairman of the Committee of Ways and Means computes the revenue from this source, for the last quarter, at a million, which would make the total excess for the year very near \$1,900,000. (e) The estimated receipts from the customs, in the last annual report of the Treasury Department, exceeded by a million and a quarter, the corresponding estimate for the year next preceding. The actual receipts under this head, for the first two quarters have been \$7,234,451; those, for the two last quarters will doubtless fall short of that sum, though no further indulgence be granted on the custom house bonds due, or to become due in the course of the

year; and if indulgence be granted, the magnitude of the sum to be received will depend on the extent of that indulgence.

The receipts from miscellaneous sources have already exceeded their estimate for the whole year; and, restoring to the Treasury the sum improperly paid to the navy pension fund, the actual revenue from all other sources, than the customs, will be found, by the expiration of the year, to have exceeded the estimates by two millions at least.

A passing observation is here due to the prophetic sagacity, claimed by the Secretary of the Treasury in his report of the 5th instant, it is that, however "reluctant" he may have been to estimate the receipts for 1837 "at only twenty-four millions," he did not advert to the fact, that this estimate actually exceeded that which he gave us of the revenue of the very prosperous year next preceding by four millions and a half: the estimate of December, 1835, of the revenue of the following year, having been but \$19,750,000, and the part of it anticipated from the customs but fifteen millions and a quarter. The receipts of that year, we may remember, amounted to fifty millions.

I shall be excused, I trust, after a careful consideration of a series of Treasury reports, so replete with error and so marked by every species of inconsistency of fact and argument, if I allow their author the power of expanding and contracting his estimates, to suit every political emergency of the party with which he has so zealously co-operated.

Amidst all the confusion of ideas necessarily attendant upon so arduous a duty, enough is yet apparent upon the face of the last reports of this officer, to manifest that, without relying on the sums which may remain to his credit with the late deposit banks, on the 1st of October next, resources may be devised, without incurring a new public debt, to carry on the necessary expenditures of the Government to the end of the current year.

I have purposely discarded those sums from my estimate of the resources of the Treasury for its ordinary or current expenses, because, in truth, they were appropriated and set apart, by positive and solemn enactment of law, for a distinct purpose. To the extent of the fourth instalment of the surplus revenue, to be distributed on the 1st of October next, under the act of June, 1836, all authority of the Secretary to dispose of those sums, for any other purpose, ceased on the 1st of January last.

Whether, in his preparation for the execution of that act, by transferring those deposits which it directed him to ascertain and to set apart for the States, the Secretary has transcended, or omitted to exercise his lawful authority, is not, now, a question before this committee. Nor is it material to that which we have to decide, whether those deposits be available or not. They are to become, on the 1st of October next, to the full extent of the sum of \$9,367,214 98, the limited property of the several States, according to their respective proportions, and under the express conditions set forth in the deposit act of June, 1836, which gave to the Secretary of the Treasury no other power than to obey its mandates.

If he has rendered such obedience impracticable, if he has reduced the amount, or impaired the value of the surplus fund intrusted to his care, and set apart by law for a special purpose, the responsibility rests with him.

It cannot be doubted, however, that those States, whose banks are depositories of this fund, will cheerfully accept, for their remaining share of it, the drafts of the Treasury on those banks, for whose credit, they are in some instances, at least, responsible to the public, either as guaranties or as stockholders. The States from whose banks these deposits have been already withdrawn, may, indeed, scruple to accept Treasury drafts on the banks of other States, for their remaining proportion of this surplus fund, on the terms upon which it has been set apart for their common benefit; but they have a right to decide for themselves, whether to accept them or not. If the banks shall tender, in their discharge, ample security for their principal, with the lawful interest accruing upon it until it be paid, such drafts may be made, by negotiation, to subserve all the purposes of money, especially to those States who would prefer an investment of their proportion of this fund in productive stocks, to its immediate expenditure, or any other application of its principal.

The present condition of this fund does not, therefore, furnish, of itself, a sufficient ground for

the passage of the bill from the Senate, for the indefinite postponement of the fourth instalment.

Are there, Mr. Chairman, any other adequate grounds for the passage of such a bill? Will its passage involve a violation of the public faith towards the several States?

Mr. Chairman, said Mr. M., had an intelligent stranger listened only to the various and contradictory arguments of the advocates of this bill, I would cheerfully abide by his decision upon its merits. The *argumentum ad absurdum* is a legitimate mode of reasoning and as applicable to the development of moral and political, as of physical science.

One gentleman has contended that the deposit act, which this bill proposes to repeal in part, was unconstitutional, and therefore not obligatory; although he admits that more than twenty-seven millions of the public money have passed under its provisions from the Federal Government to the States, who have unanimously agreed to receive, and plighted their faith, on certain conditions, to return it.

Another gentleman has contended that no legislature can bind its successors, and, therefore, the act of 1836 is repealable at pleasure.

A third insisted that the deposit act does not pledge the faith of this Government to the fulfilment of its stipulations, because they do not amount, in terms, to a contract; or, as a fourth has argued, if a contract, it is a *nudum pactum*, or without an adequate consideration.

Some of the advocates of this partial repeal of the act have found a solution of their scruples of good faith, in the mere title of the act; others in its context. One gentleman relieves himself from any embarrassment that might accompany his vote, by severing the two provisions of its most important section from the section itself; and regarding them as conveying a mere instruction to the Secretary of the Treasury as to the mode of distributing, and withdrawing the sum to be deposited.

One gentleman, after vindicating his vote for the act of June, 1836, against the very unmerited attack upon it, of one of his colleagues, made quite an original discovery, that the Federal and State Governments are, in truth, identical, being governments of one and the same people, and, consequently, incapable of contracting with each other. Many of the advocates of the bill have, with more truth, admitted the right of those Governments to contract, and that the act in question, if not in itself a contract, authorized a contract to be made between the General and State Governments; but they claim for the former, a release of the obligation arising under it, upon the legal or equitable grounds of mistake, unforeseen accident, or unavoidable necessity.

I do not propose, Mr. Chairman, a separate reply to arguments which, in general, so remarkably serve to answer one another; but shall content myself with such an exposition of my own views of the merits of this bill and such brief notice of the views of others, as may excuse me from yielding assent to a measure inconsistent with the faith of this Government, and calculated to inflict a deep and wanton injury upon the States of this Union.

I most readily concede to the honorable gentleman from Virginia, (Mr. Jones,) who rose early in this debate, that the act of 1836 is to be construed, not as a penal statute, strictly, but liberally; according to its obvious intent and meaning. I cannot, however, infer that intent from its title alone, nor affirm, as two of my colleagues have done, (Mr. Jones and Mr. Garland,) that it is not a distribution act, merely because it is called an act to regulate the deposits of the public money.

It is, in truth, as its context discloses, both a *deposit* and a *distribution* act, since it expressly provides for a *distribution* of a part of the surplus funds of the General Government among the several States, according to a fixed ratio; to be held by them in *deposit*, and returned when called for, after a prescribed notice, in limited proportions.

Both my colleagues (Messrs. Jones and Garland) have contended that the right to use did not pass, with the *possession of the deposits*—the contract authorized by the deposit act being for the *safe-keeping only of the public money*.

If such be the sound construction of the act of 1836, what motive, I would ask, had the States, for accepting, in *deposit*, the sums which it tendered them? Why were the sums so tendered, proportioned to the respective representation of those

States in the two houses of Congress, and the obligation to restore them, when called for, limited in the same ratio? each call confined to so small an amount of the deposits, as not to exceed, in relation to the most populous State in the Union, \$10,000 in any month, unless with a further notice of thirty-one days for every additional sum of \$20,000 that might be called for? No, sir, every provision of this act had reference to the benefit which the several States were to derive from the use of the public money, until required by the necessities of the Government; necessities which, when the act was passed, no man anticipated.

Had the safety of the public treasure, its value, or the facility of its use by this Government, been the sole or even the chief ends of the deposit act, why did it not provide for the special deposit of the entire surplus revenue, where the far greater part of it had been collected, in the mysterious vaults, and beneath the marble roofs of the banks of the great cities of the north, whence it could be drawn on the shortest notice, by bills vendable at par, or at a premium, whenever the public necessities might require its expenditure. Has it been for the security, or readier use of the public deposits, that a considerable portion of them has been transferred to States on the Indian frontier, occasionally the seat of war, and a still larger portion to States in the interior, within whose limits scarcely a dollar of the public money is expended in the year?

Sir, every feature of the deposit act, and all the circumstances which preceded or accompanied its enactment, demonstrate that it empowered the Secretary of the Treasury to enter into contracts with the several States for the mutual advantage of the parties, but especially for the benefit of the States themselves.

The deposit of the surplus money of this Government has ever been a subject of contract, either express or implied. Such, in truth, is ever special or general deposit in a bank; and for forty of the forty-eight years that our present constitution has been in force, the unexpended revenue of this Government has been the subject of special contract with a bank of its own creation.

On the removal of the deposits from the Bank of the United States in 1833, formal articles of agreement for their safe-keeping, on specified conditions, by the selected State banks, were drawn up by the present Chief Justice, then Secretary of the Treasury, and subsequently ratified, sealed with the corporate seal, and subscribed by the proper officers of the State banks. So valid were the obligations of these contracts regarded to be, by that eminent lawyer, that he expressly stipulated for the right to discharge the several banks "from the service of the Government whenever, in his opinion, the public interest might require it."

In the very act which we are considering, the 7th section provides that it shall be lawful for the Secretary of the Treasury to enter into contracts in the name and behalf of the United States with the banks selected as depositories of the public money, and the terms of those contracts are prescribed by the act itself.

Were those contracts made for the mere safe-keeping of the public money? Would the deposit banks have accepted so barren and unprofitable a trust, connected as it was with an obligation, on their part, to give security for the administration of such trust; to permit their books and accounts to be inspected, and their money to be counted by the Secretary of the Treasury, or his agent; to make weekly returns of their condition, subject to periodical publication; to pay, at sight, all warrants which the Treasurer might draw on them; and make all such transfers of the public money to other banks, as he might require, and supply foreign bills of exchange, at cost, without any fee, premium or commission whatever; and, moreover, a part of the expenses of such agents as the Secretary might depute to watch over their fidelity? Would those banks, I say, have entered into obligations so multiplied, embarrassing, and onerous, for the mere credit of keeping the public money, without the liberty to use it for the profit of their stockholders? Their contracts with the Treasury, like that which the deposit act tenders to the several States, are silent as to the use which they may make of the public deposits. The right to use them might be implied from the character of the agent. But a letter from the Secretary of the Treasury of the 26th of September, 1833, to the president of the Girard Bank, contemporaneous in

date with those contracts, and designed to induce their acceptance, avoids all necessity for implication, since it expressly intimates that the "deposits of the public money will enable" the bank, to which his letter was addressed, to "afford increased facilities to commerce, and to extend its accommodations to individuals." "As the duties payable to the Government arise from the business and enterprise of the merchants engaged in foreign trade, it is but reasonable," Mr. Taney adds, "that they should be preferred in the additional accommodation," which the public deposits will enable the banks to give.

A reference to the vast amount of the surplus revenue, designed to be transferred by the deposit act, from the vaults of the banks to the treasuries of the States, forbids the belief, that the friends of that act, or the States who have complied with its conditions, imagined, for a moment, that the sums so transferred were not to be used. The sudden withdrawal of more than thirty-seven millions from the currency and business of a country, whose currency did not exceed, if it equalled, thrice that amount, would have been a measure of such wanton mischief, that no man in his senses could have given it his sanction, and it cannot be imputed to the very large majority of both houses of Congress, by whose vote the act was passed. (f)

How the States have understood it, we are not left to conjecture, although I much regret that the resolution of an honorable member from Massachusetts, (Mr. Adams,) designed to procure for this house copies of the several acts of the State Legislatures accepting and disposing of their respective shares of the public deposits, remains yet unexecuted. Enough, however, has been told us by the Representatives of those States, who have taken part in this debate, to enable the committee to perceive how they have construed the act of June, 1836, and what inconvenience they must suffer from its partial repeal.

Mr. Chairman, said Mr. M., it was my anticipation of the beneficent use which the several States might make of those deposits, which recommended to my favorable regard the act of 1836. I foresaw the noble purposes to which the public money might be applied through their agency, and my heart exulted in the glorious anticipation. I saw the ties of our happy Union multiplied and confirmed by the improvement of old, and the opening new channels of commercial and social intercourse. I beheld the spires of colleges, academies, and village schools glittering on the distant forest, and a wide-spread system of popular education elevating our social condition, augmenting the intelligence, refining the manners, and above all implanting in the hearts of our people the knowledge, and with it the love of our admirable constitution of Government. In order to avoid an Executive veto, which had been prepared, as I was informed, for the act of a former Congress, to provide for the distribution of the proceeds of the sales of our public lands, I most reluctantly, and, as it eventuated, fruitlessly, assented to strike out the three limitations, which the Senate had provided, of the use of the sums to be distributed. Popular education constituted one, and the dearest of them all, in my conception. I wish, Mr. Chairman, to behold a system for this object pervading the Union. But wherever it may exist, if confined to one State or to a small district, I shall hail it as an additional safeguard to the rights of the people I represent. To them, my opinions here are not of more avail than those of any other member of this body, and the security of their freedom and happiness rests upon that public sentiment to which each member of this House is amenable at home, whether he be from Maine or Georgia, from the shores of the Atlantic or the banks of the Mississippi.

We are apprized, Mr. Chairman, that North Carolina, Ohio, and several other States, have consecrated their share of the public deposits to this and other liberal purposes, and my reluctance to pass the bill on your table is augmented, in a ten-fold degree, by this intelligence.

We learn that other States have entered into very solemn engagements, founded upon an anticipation of the receipt of the instalment of those deposits which we are now invited, by the Senate, to withhold, or to postpone indefinitely. Can we, in good faith, withhold it? Let those gentlemen who regard the deposit act as the promise of a mere gratuity, ask themselves the question, whether they would violate the sanctity of their word, when once it had been plighted to the humblest individual in

society, to the beggar at their door? What man can do so, and retain the respect of his fellow men? Who is prepared to set a price on the faithful observance of his word, and to commute his reputation for money? Let him come forth, and sustain this bill.

It is objected to this appeal to the sentiment of honor, that no man can bind himself to perform impossibilities; that mistake or unavoidable necessity absolves us from our obligation to the States; that we have not the money to comply with our engagements, and the continued ability to do so was an implied ingredient of our original contract or promise. It is not pretended that the entire sum of thirty-seven millions was *not in the Treasury* on the 1st of January last, when the appropriation took effect—it is known and admitted that the total amount subject to distribution, after reserving five millions for the immediate necessities of the Government, exceeded *thirty-nine millions*; a million six hundred thousand dollars having been subsequently reported to the Treasurer, by the distant collectors and receivers of the public money, to have been in their hands on that day.

Was it necessity which swelled, at the instance of the Executive organ of the Treasury, and the majority of the last Congress, those excessive appropriations which have caused our present financial embarrassments? We cannot plead a necessity, *created by ourselves*, as the justification of a breach of faith.

The States, it has been urged, had no right to enter into engagements dependent on the receipt of the instalments, prior to their day of payment; and the embarrassments, to which their precipitancy has exposed them, afford, it is said, no additional claim upon the public faith.

Could it have been designed, Mr. Chairman, that the States, who were to receive our deposits and to use them for the public benefit, should make no preparation for their use, prior to their reception? The spirit and the letter of the act which we are construing forbids any such conclusion. Timely notice was given, by it, to the deposit banks, that they were, at fixed periods, to surrender up their trust, and to the States, that they were then to enter upon it. The very instalment of the debt of the banks to the Government, and the uses to which they had applied the public money, with our knowledge and approbation, enjoined it upon them gradually to provide for its withdrawal, and upon the States to renew, as speedily as possible, its active and beneficial employment. The greatest injury which either the banks or the States could have done to the people at large, was to permit their money to lie idle in the vaults of the one, or the Treasury of the other. (f)

If it be contended, that no use of the vast sum committed to their custody should have been devised by the States, inconsistent with their plighted faith to return it to the Government when demanded, I reply that the law itself, as well as the known intention of those who enacted it, guarded the States from any such demand. The far greater part of the majority who voted for the deposit act contemplated no such return, and the last proviso of its thirteenth section rendered the demand for it impracticable. No more than ten thousand dollars of the sum deposited with the State having the largest share of the public money, as from New York, whose proportion would exceed five millions, can be called for in any one month, without thirty days' notice, and but a ratable part of the sum called for, in any one year, can be lawfully demanded of any State. So that when New York should be called upon to pay ten thousand dollars, Virginia would have to provide about a moiety of that sum; and if a larger amount be required, an additional notice of thirty days, for every additional twenty thousand dollars, is to be given. The proportions of the total sum called for from the several States, is to be in the same ratio with the original distribution. In no one year, therefore, could more than a very inconsiderable part of the deposits be demanded under this construction of the deposit act. If such a construction be inconsistent with the title and letter of the act, it is not with its history; for, while a large proportion of those who voted for it, wished and designed to make it a *simple distribution* of the public money, among the people to whom it properly belonged, we were distinctly informed that, unless we introduced those incongruous and absurd provisions, it would encounter the Executive veto.

Mr. Chairman, I was one of that majority, and

would not have given my vote for this act, had I not understood it as I have now expounded its meaning and explained its history. I well remember that, when our public lands were sold on credit, a debt of six millions became due to this Government from the inhabitants of a single State, and my attention was turned, with that of both branches of the National Legislature, of one of which I was then a member, to the impolicy of creating between the people and their Government the relation of debtor and creditor. No man looks with favor, though he may with fear, on his creditor. Debt is a source of dependance, rarely of affection. I have felt its obligation, and have ever preferred indebtedness to banks, which, being incorporeal bodies, I can never see, to individuals whom I must see.

But, if it be impolitic to permit the people to be indebted to the General Government, it is yet more inexpedient to extend this relation to the States. A debt, from a State, to the Union is, to its extent, a bounty offered to nullification—to disunion. I sought, therefore, early in the last session of Congress, to free the deposit act from this objectionable feature, by releasing the several States from any supposed obligation to return the public money in their keeping. I had one other object in view, to liberate them from all restraint in giving to their respective proportions of this money, the most beneficial application. The education of a people should never be dependent on those accidents of war or commerce, which occasionally derange the finances of a State, however well administered, and should, above all, never be the sport of wanton or wicked experiments.

As to any constitutional difficulty in the way of such a distribution, I have been incapable of perceiving it. To tax the people for the mere purpose of distributing a surplus revenue among the States or the people themselves, I should unquestionably regard as alike inexpedient and unconstitutional, if, indeed, a measure can ever be deemed as expedient which is not constitutional. The highest expediency being ever found in reverence for that organic law, which is the guardian of all our rights, liberty, and happiness.

I regard the several States as fairly entitled to claim a distribution of those proceeds of the sales of public lands, which occasioned a surplus to be carried to the Treasury from year to year, till it amounted to a sum dangerous to leave at the disposal of any Government, however pure. The mode of distribution was suggested by the complex theory of our Government; and, although not accordant with the ratio I would have preferred, it increased the portion of those States unduly, which most needed the use of the distributed fund, and, as a compromise, I submitted to it.

I am aware that it is usual to reduce the surplus revenue, arising from the sale of the public lands, by charging upon it the expenses of Indian wars and treaties, and the sums paid for the acquisition of Louisiana and Florida. But I regard the extension of the sovereignty of the United States over the acquired territory as an ample consideration for the sums which it has cost; and, since the discharge of the public debt, the States have become entitled to claim that surplus, under the express terms of the compact, by which so large a portion of that territory was ceded to the United States. I must totally forget the blood and treasure which my native State so freely lavished, in extending her dominion from the Atlantic to the Mississippi; that the entire country between that river and the Ohio was once the Virginia county of Illinois, the theatre of the exploits of her Clarke and his gallant companions in arms, before I can regard, with any doubt, her just title to her full proportion of the revenue which the bill on your table proposes to withhold from her Treasury, in wanton disregard of the twice plighted faith of this Government.

A more efficient argument in favor of this bill may possibly arise, in a part of this committee, from an assurance given by the Executive to the representatives of particular States, that, if the fourth instalment be withheld, their banks will receive an indulgence which the States may not be willing or able to grant. I have in my eye a friend from Alabama, (Mr. Martin,) from whom I should be glad to learn whether any such assurance has been given. (Mr. Martin rose in reply, and said he had none.) The honorable member will not suppose that I imagined he had received any intimation from the Executive, which it would be improper for him to disclose. On the contrary, were

my constituents situated as his, I should not hesitate to inquire how far the deposit banks might rely on the indulgence of the Treasury?

I hold in my hand, Mr. Chairman, two bills, one, apparently originating in the Senate; the other, in this house. They have the same title, are identical in all their provisions, and have evidently proceeded from the same source—the Treasury Department. The banks of this District, Mr. Chairman, are seven in number, and if the clemency of the Executive towards the several deposit banks may be inferred from the tenor of these bills to revoke the charters of the banks of this District—their bitterest foe could not wish them in worse hands. To say nothing of the new criminal offences created by them, in what terms shall we denounce an attempt to coerce the banks of a District, ten miles square, to resume specie payments in the centre of twenty-six States, whose six hundred banks have ceased to do so, and alongside of a Government, which, while it attempts to coerce them to pay specie, does not comply with its own engagements? The President and the Secretary of the Treasury have suggested to Congress the expediency of passing a bankrupt bill, to operate on all banks; and especially on those employed by the Treasury. (g) The bill which lies before me is, or may be presumed to be, a sample of the proposed legislation; and, as such, it well merits the careful examination of the representatives of the southwestern States; the condition of whose banks is least favorable to the speedy resumption of specie payments. Whether those banks are in a condition to wind up their affairs, the representatives of those States are most capable of deciding.

I discover, however, from the late returns of the various deposit banks, annexed to the letter of the Secretary of the 5th of September, that the five deposit banks of the States of Alabama, Mississippi and Louisiana, with a circulation of more than \$6,158,000, and Government deposits to the extent of \$3,547,000, had in specie, a month ago, but \$709,000, while their loans and discounts, together with their bills of exchange, exceeded \$27,292,000, and their suspended debt, six millions and a quarter.

I repeat, it may be well for the representatives of all those States to examine the true character of this District Bank bill, since it cannot be supposed that the Executive would recommend to Congress a harsher measure towards a people, with whom they and we daily associate, than for the constituents of gentlemen who reside in remote districts, west of the Alleghany.

One of the sections of the bill, a part of the title of which is, to "revoke the charters of such banks in the District of Columbia as shall not resume specie payments within a limited time," requires, under the penalty of a forfeiture of their charters, that "they shall resume the payment of specie for all their bills under ten dollars within sixty days, and of all others in six months from the passing of the act;" and, that "they shall, within thirty days, cease to pay out the notes of any corporation or individual which shall not redeem them, on demand, in specie." Another section of this bill provides, that "in case of failure of any of the banks to comply with these conditions, their charters shall be revoked, and the Secretary of the Treasury shall appoint three commissioners for liquidating and settling their accounts and affairs; and, as if this were not enough, this section further ordains, "that such prosecutions shall be instituted by the Attorney of this District, for any violation of their obligations to the Government or the community, as the facts and the law applicable to the case may render proper, beyond what is contained in the provisions of their charter and of this act."

It is but rational to infer that these are some, at least, of the provisions which the Executive would comprehend in the bankrupt law which the Secretary's letter suggests, for the coercion of specie payments by the banks in general. Would the committee desire to know the condition of the seven banks of this District to which those provisions of this bill are to be applied? Their loans and discounts, the Secretary states, in his letter of the 3d of January last, to amount to \$3,157,782; their deposits to \$1,385,523; their circulation to \$961,793; their notes and debts of other banks to \$849,222; their debts due to banks within and without the District, to \$460,768; their specie to \$843,532.

What portion of their circulation consists of notes of a denomination under ten dollars, I have no certain data to determine. Surrounded, as this

District is, by five towns and cities within fifty miles, which have their rival institutions, the proportion of large notes in their circulation must be small. A report of a bank of Ohio, the Clinton Bank of Columbus, the capital of that flourishing State, makes its notes of the denomination of five dollars and under two-thirds in value of its whole circulation, and its notes of five dollars comprehend about one-half of that amount. How fatal a blow the passage of such a bill would give to the credit and property of this District, I leave it to the committee to imagine; but I desire the representatives of the deposit banks, in general, to look to the temper which such a proposition discloses, on the part of the Executive branch of this Government, before they vote for the measure we are considering. Sir, said Mr. M., I represent a people interested in whatever concerns the ultimate prosperity of this District. They find in its three cities their most convenient market; and among its citizens, persons to whom many of them are closely allied, by the ties of consanguinity, and habits of social and friendly intercourse. In their behalf, I protest, in advance, against the rash experiment contemplated by the bill on my table. The report of such a bill, by a respectable committee, wherever it may have originated, is calculated to excite uneasiness, to awaken just alarm. If it be not intended to press the adoption of such a measure, the attempt to do so is a wanton cruelty, meriting the severest reprehension. If it speak the deliberate purpose of its rash inventors, all who feel an interest in the fate of the deposit banks should rather trust to the amity of the States, who may become their creditors, States having one common interest, than to a Government which has flattered those banks in their prosperity, only, as it would appear, more effectually to work their ruin.

Mr. Chairman, I have hitherto considered the bill on your table apart from the great end for which, when I read the President's recent proclamation, I supposed we were to be suddenly convened in this city, at this unusual season of the year. I had not imagined, until I heard his message read from that desk, that this end would be regarded as of subordinate magnitude, and the necessities of the Government exalted above the wants of the people. It has been truly said, that a disordered currency is, next to war, pestilence, and famine, the greatest calamity which can afflict a civilized, and, especially, a commercial nation; and, although the Executive has thought proper to recommend to our adoption, a system of measures which, he tells us, should have no reference to the chief cause of the general distress of the country, I cannot consider any one of them, solely, in the light in which he is pleased to regard them all.

This message contains the outlines of a scheme of finance, which, whether borrowed from the Secretary of the Treasury, or itself the type of the disordered speculations of that officer, partakes, in every quality but its style, of the defects and errors of the Treasury reports.

The President claims a million for the operations of the Mint, without adverting to the fact, stated in another part of his message, that the coinage had been most successfully conducted, prior to the conditional appropriation of that sum to its aid. He insists upon having a permanent surplus of four or five million, in contradiction of the settled policy which, for twenty years, under the sanction, if not the requisition, of law, had limited that surplus to two millions only. He not only omits to compute the debt of the Bank of the United States among the available resources of the Treasury, but, while his Secretary recommends, in a letter accompanying his message, the issue of Treasury notes to the amount of ten millions, bearing an interest not exceeding six per cent., he denounces "a new loan" as a measure "which would scarcely be sanctioned by the American people."

Sir, the great evil of which the American people complain, is the suspension of specie payments by the banks, and the consequent disorders of their currency. They are afflicted and perplexed, but they do not impute their misfortunes to the banks alone; looking beyond them, to the remote cause of their embarrassments, they expected relief from measures which shall operate in favor of the banks, as well as themselves.

The resumption of specie payments cannot be promoted by any of the measures which the President's message recommends. There is not one of them that does not directly tend to retard, rather

than to accelerate, the restoration of a sound currency.

The withdrawal of the fourth instalment of the State deposits, by embarrassing the States themselves, and occasioning, in many instances, the prostration or suspension of their internal improvements, will reduce the demand for money of any description, and force home upon the banks a further portion of their depreciated notes.

The issue of ten millions of Treasury notes will produce the same effect, by a different operation; by superseding the use of bank paper to a certain extent, if the views which prompt their issue be accomplished, and they supply a part of the currency. It is proposed to limit the denomination of those notes, it is true, to sums of not less than \$100. But, in an abstract which lies before me, from the reports of eighty-nine banks of the State of New York, of the 1st of January, 1836, designating the various denominations, and respective amounts of the bills issued by all of them, with the exception of two only, the paper circulation of the banks of that State amounted to \$21,000,000, (the sum was \$21,123,089,) of which the bills of \$100 and upwards, exceeded the aggregate of \$5,000,000, (5,015,600,) constituting near one-fourth of the entire paper circulation of that flourishing State.

The Treasury notes to be issued will scarcely maintain the identical value of the notes of the several banks of a like denomination. If bearing an interest, calculated daily to change their value, it surpasses that of the rival bills of the banks, those Treasury notes will be bought up for investment till they become due. If without interest, and of either equal or inferior value, they will displace a corresponding amount of the bank bills in circulation, and occasion to the banks on whom they are returned, a new demand for specie.

No truth is more consonant to reason, or more firmly established by experience, than that two currencies of unequal value cannot co-exist in the same country. The worse will be used in preference to the better, for the same reason that in the boyish game of "Jack lives in my hand and dies in yours," the burning straw is pushed from hand to hand, until it is consumed, or the flame expires.

The third measure of the Executive, the Treasury bank scheme, strikes at the banks and their currency, a blow yet more fatal, since, if it prevail, it will imply, on the part of Government itself, an absence of all confidence in their fidelity as its fiscal agents, at a time when they need its utmost aid.

Mr. Chairman, whatever may have been the causes of the suspension of specie payments by the banks, two obstacles only interfere with their immediate resumption: the pressure for specie from abroad, and the absence of confidence at home. The former is ascribable solely to the existence of a foreign debt, and can be removed in but one of two modes: by the payment of that debt, or the renewed indulgence of the foreign creditor.

The payment of the debt, if it be as large as the Secretary of the Treasury conjectures—for a mere conjecture is all that can be furnished—if it has amounted to thirty millions of dollars, and but a moiety of it has been paid, or extinguished by insolvencies, the discharge of the residue must be the work of time. The economy of the future, a diminished consumption of foreign commodities, must gradually pay for the lavish expenditures of past years. To suspend the residue of the foreign debt while this process is maturing, the confidence of the foreign creditor in the American merchant must be renewed. But what prospect is there for such renewal, while he stands condemned and unsupported by his own Government, and the very officers of that Government are holding out to him an invitation to violate the faith which binds him to the honest fulfilment of his engagements? Sir, there is a turpitude in such advice, which I have not language strong enough to denounce, and I congratulate my country that it has been spurned with indignation and scorn, by those to whom it was addressed. The credit of a merchant is the life and soul of his occupation, and he who would seek its ruin, acts with a demoniac inspiration.

A Spanish monarch, during a war with England, absolved his subjects from the payment of their British debts. The merchants of Spain were ready to pour out their blood and lavish their treasure, to attest their loyalty, but the pride of Castile revolted from dishonor. They paid their debts. And every dollar which has left our shores for a like office, since the suspension of specie payments, has gone to redeem the most valuable stock in all

our mercantile capital—the credit of our merchants—who will never yield in reputation to those of Spain or Britain.

Whatever may be the condition of the banks to the north and west, specie payments cannot be, every where, immediately resumed. They may, and I believe they will be, in the northern States of this Union, at no distant period. In those States, the payment of specie was not suspended amidst all the commercial distress and embarrassment of our last war with Great Britain. It may not be generally recollected, that, immediately after the close of that war, the State of Virginia required her banks to resume specie payments, prior to the action of her sister States or of Congress, on the same subject. A distinguished member of her Legislature, who has since occupied a seat on the floor of the other house, (Mr. Tazewell,) predicted that, on the day when the law requiring specie payments should be enforced, the main street of Richmond would be rendered impassable by the mob which would gather around the doors of the Bank of Virginia. The day passed, and so little was it regarded, that inquiries followed whether it had arrived. And how could it be otherwise, since the staple commodities of Virginia were never in greater demand nor at a higher price, than at this period? A favorable balance existed in her commerce abroad; and with her sister States. The merchants of Virginia needed no specie to remit; and, without her limits, those who stood indebted to them preferred the notes of her banks to specie, for an obvious reason. Such is not the present condition of the staples of the United States, of their foreign exchange, or paper currency. One aspect of the condition of the deposit banks, made manifest by the tabular statements laid on our tables at various periods, does not seem to have attracted the notice of the Secretary of the Treasury in his elaborate report at the commencement of this session. He says, speaking of their "prudence and ability," "that, between last November and May, their specie had been reduced only from fifteen to thirteen millions, and their calculation fell from forty-one to thirty-seven millions," to which he adds, that "many of them have reduced their discounts; that their reduction, as a whole, since the first of May, has amounted to more than twenty millions."

I deduce very different conclusions from the facts furnished by this officer. In November, 1836, the loans and discounts of those deposit banks amounted, in the aggregate, to one hundred and fifteen millions. At their last returns, in August, they fell short, but one hundred thousand dollars, of one hundred and thirteen millions; so that the entire reduction, between the 1st of November and the latest returns we have, scarcely exceeds two millions. And how has this reduction been effected? By calls upon their debtors, which, in reducing their discounts two millions, have swelled their suspended debt to twelve millions three hundred and eighty-three thousand dollars! Of this sum, as I have already stated, the suspended debt of five of those banks, situated in three of the southwestern States, amounted, in August last, to more than six millions and a quarter, while their entire loans and discounts were near twenty-three millions and a half.

The debtors to those banks, a part only of the banking institutions of those three States, have my sympathy; they have purchased the property of my constituents, at enormous prices; and I wish all possible indulgence, consistent with the public interest, to be extended to them. They are not in a condition to supply specie to the various banks who are their creditors, five of which have not \$709,000 to sustain a circulation of \$6,158,000, and have to pay a deposit, due to the Government alone, of more than three millions and a half.

Are they, with their associates in affliction, the deposit banks of other States, proper objects of the vindictive feelings of the late and present chief magistrate's feelings, to which I cannot but impute the various Executive recommendations on our table.

It is impossible, Mr. Chairman, to leave this topic, without glancing briefly, at least, towards some of the causes of the present public calamity, the derangement of the currency.

Four years ago, we had a currency unsurpassed by that of any other nation on earth; and, considering the vast extent and various productions of our wide-spread territory, the uniformity of that currency constituted one of the most striking manifestations of the wisdom of our free institutions, and of the value of that Union, from which they resulted, and which, in its turn, gave to them an assur-

ance of perpetuity. We were not content with our happy condition; and in seeking to improve it, we tampered with the currency of other nations as well as our own.

By removing more than forty-three millions of the public money from the Bank of the United States, and diffusing it among the various States of the Union, we invited the multiplication of their banks, the extension of the accommodation which those banks afforded to their customers, and, as a necessary consequence, a vast increase of their paper circulation.

While the banks to the north of the Potomac, collectively taken, maintained a circulation at the rate of six and a half dollars of paper for every dollar of the precious metals in their vaults, those to the south of that river maintained, in like manner, an average of five and a half to one: the compound of those proportions give, as the basis of the paper circulation of the Atlantic States, one specie to six paper dollars.

The confidence of the people, notwithstanding this extension of the currency, a fact known to few of them, sustained the credit of the banks. The Executive, by reiterated commendations of the "prudence and ability of the deposit banks" confirmed the general faith in their solvency. (f) A popular President, whose will was law, sought to do more—to increase the ratio of their specie to their paper circulation, not by a reduction of the latter, but by a speedy and great extension of the former. New mints for the coinage of gold were established, and bullion was invited from every quarter by all the influence of the Executive over the banks which it favored with the use of the public money. Congress co-operated in this policy, by augmenting the relative value of the gold compared with the silver coin of the United States, so as to induce the importation of gold in preference to silver, and to retain the former whenever the rate of foreign exchange should warrant the importation or exportation of either. The effect of this measure was distinctly foreseen, with his characteristic sagacity, by a member from Massachusetts, (Mr. Gorham,) who traced its future operation with that simplicity, and perspicuity, which ever distinguished him in debate.

Our currency had been silver coin. We identified our currency with that of Great Britain, by the act regulating the value of gold and silver coins, and hung up, "in Leadenhall street, a barometer to measure its rise or fall." We entered into an immediate competition with England, for gold bullion. The Neapolitan and French indemnities, due to our citizens under existing treaties, were imported in gold, when the subsisting rate of exchange did not warrant the insurance, freight, and charges of such importation.

Every dollar in value, thus imported, afforded to the banks, by increasing their specie basis, the means of extending their paper circulation in a threefold proportion. The Executive Government, by pouring gold into their vaults, literally pumped out, for every dollar of specie deposited, three, four, five, and, in some instances, six dollars of paper.

Not content with a process so tardy, the Executive gathered up, by the notorious specie circular, without intending it, the specie of the seaboard, to constitute the basis of a circulation where the only commodity in the home market was wild lands, and the only product for exportation abroad, except schemes on paper for rail-roads and canals, maps of harbors unknown to navigation, and plats of cities without inhabitants, was that very specie furnished by the Executive, and daily, nay hourly, exchanged for the paper of banks established to receive it and profit by its use.

Two provisions of the deposit act of June, 1836, contributed not a little to the nominal, in some cases doubtless to the real, augmentation of bank capital, and to swell the current of paper circulation. One allowed the use of the public deposits, *without interest*, where they did not exceed *one-fourth* of the capital of the bank to which they were intrusted, and another, required that the sum deposited in any bank should not exceed *three-fourths* of its capital.

By turning to the tables (see page 32,) which have been transmitted at various times to the house, it will be seen that, between the passage of the act of June, 1836, and the ensuing November, in the brief course of five months, the capitals of the deposit banks had been augmented by the addition of no less than thirty-one millions.

It cannot be doubted, unless we discard all consideration of the usual springs of human action, but

that this augmentation of their real or nominal capital was designed by the banks to accommodate themselves to those provisions of the deposit act; and, accordingly, in the same period, their deposits to the credit of the Treasurer were extended from thirty-seven to forty-five millions, and those on behalf of the disbursing officers of the same Department, from three millions seven hundred thousand, to four millions one hundred thousand dollars, and the discounts and loans of the banks from seventy-one to one hundred and fifteen millions.

Such, nevertheless, was the confidence of the Treasury in the security of these deposits, that this circumstance passed unheeded, and as late as his annual report of December last, the Secretary informed Congress that "the prospect of the currency is on the whole becoming more satisfactory even without further legislation."

It became the boast of the Executive Government, as this Treasury report announced and the message echoed, that it had augmented the specie in the country by forty-three millions, consisting chiefly of gold, yet gold was scarcely anywhere visible in the hands or pockets of the people: continuing to serve, in all its uses, as the basis of a constantly increasing paper circulation. By common consent, the precious metals constitute the standard of value throughout the civilized world; but while they impart a certain degree of uniformity and stability to the currency of the world, they constitute, of themselves, but an inconsiderable part of the medium of exchange in any highly commercial country.

The money exchanges of the city of London, alone, were, more than thirty years ago, computed, by a highly respectable member of Parliament, (*Henry Thornton*), to amount to between four and five millions sterling a day. To these, were to be added all the dealings of a hundred other city and country bankers, and of a people spread over the surface of the greatest manufacturing country in Christendom. But when, on the 26th of February, 1797, the Bank of England was authorized to suspend specie payments, the whole value of the bullion in the possession of the Bank, added to the amount of their bills discounted, was, in a statement of the Bank to a Committee of the House of Commons, reported to amount to about seven millions. In this report, the bullion of the Bank, corresponding in its uses, to our specie, is not distinguished from its loans; but no computation extended the former beyond a moiety of the whole amount, or to three and a half million sterling, which, according to our present legal rate of exchange, was less than seventeen millions of dollars.

The Secretary of the Treasury, in his letter of the 5th instant, speaking of the condition of the deposit banks, tells us that, as a whole, their specie, compared with their circulation, averaged, in May last, more "than one to three, or was over the relative quantity held by all the banks in England at the same period," and "was, in proportion, one-fourth larger than that in the Bank of England."

When it is considered that of the fourteen or fifteen hundred millions sterling of exchanges in London, seventy private bankers are parties to a share of them, and when bank paper is required, which is seldom, use it alone, issuing no paper themselves, that they keep their gold in the vaults of that bank, it may well be conceived how small a portion of specie or bullion sustains the credit system of England. The specie currency of France is, I know, computed at a much larger proportional amount, and its ratio is undoubtedly much greater, though I do not believe that it equals the half of six hundred million of dollars, its estimated amount. It is easier, by far, to count a people, than the money in their pockets, and, as to the numbers of mankind, we have only to consult Wallace and other writers prior to the institution of a regular census any where, to perceive how loose and uncertain all calculations are.

But, in proportion to the very small ratio of specie, to bank paper, and of the still smaller ratio of both, to the actual evidences of debt, and instruments of exchange, which suffice to sustain the business of the wealthiest and most commercial countries in the world, is the danger resulting from the sudden reduction of the specie of such a country as England.

That this consideration should not have struck the late Executive Magistrate, in the midst of those efforts of which he often boasted, to increase, by artificial and extraordinary means, the specie of the United States at the expense of that of Europe and of England, especially, is more a subject of regret

than of surprise. But its effect has been very apparent. The common currency is the lifeblood of the commercial world. Its circulation cannot be impeded or accelerated greatly in one country, without its effects being sensible to all. Not England alone, but France, (*h*) and even China, distant as that country is from us, could not but feel the effect which the sudden addition of forty three millions to the specie of the United States occasioned upon the currency of the rest of the commercial world.

Its operation on England we have realized in its most disastrous, though most natural and inevitable reaction upon our currency—in the ruin of the first American houses in London, and the utter, though transient, as I hope and believe, prostration of all confidence in the commercial intercourse of two nations who were gradually becoming more and more assimilated by interest and affection.

I have carried my views, Mr. Chairman, of the causes of the present public distress, farther than I designed, and, forbearing other details of its nature and extent, return to a brief consideration of its appropriate remedy.

I have said that the impediments to a resumption of specie payments are to be found in the existence of a heavy foreign debt and the absence of confidence at home. The specie that sustained our paper circulation still remains: to restore its agency, we need only the restoration of the confidence of the people at home, and of the creditors of our merchants abroad.

What should be the study of every branch of the Government in such a crisis? Undoubtedly to restore that confidence by every measure in its power. Let us take lessons from the conduct of other States if we are debarred by insurmountable prejudices, from availing ourselves of the natural suggestions of our own experience. Laying aside all consideration of the agency of the Bank of the United States in preserving, and restoring when unsound, the currency of our country, let us look to the course pursued, under like circumstances, with our own, by a foreign Government, not less sensitive to public opinion, but less free than ours; a Government with a real not a nominal monarch at its head, and with a Parliament, one branch of which is hereditary, and the other elected for a period of seven years.

The failure of the banks in the west of England, in 1793, spread consternation throughout that ancient kingdom from Land's End to the Tweed. The Parliament of England assembled, not to study the relief of the Crown, but of the people, and the result of their measures, I will read you from the author whom I have already quoted, and whose work has been, for several weeks, in my drawer, awaiting this occasion for its use.

In adverting to the events of the year 1793, this writer says, that "through the failure of many country banks much general distrust took place. The alarm (the first material one of the kind which had for a long time happened) was extremely great.

"The success of the remedy which the Parliament administered, denotes what was the nature of the evil. A loan of exchequer bills, was directed to be made to as many mercantile persons, giving proper security, as should apply. It is a fact worthy of serious attention, that the failures abated greatly, and mercantile credit began to be restored, not at the period when the exchequer bills were actually delivered, but at a time antecedent to that era. It also deserves notice, that, though the failures had originated in an extraordinary demand for guineas, it was not any supply of gold which effected the cure. That fear of not being able to obtain guineas, which arose in the country, led, in its consequences, to an extraordinary demand for bank notes in London; and the want of bank notes in London became, after a time, the chief evil. The very expectation of a supply of exchequer bills, that is, of the supply of an article which almost any trader might obtain, and which it was known that he might then sell, and thus turn into bank notes, and, after turning into bank notes, might also convert into guineas, created an idea of general solvency. This expectation cured, in the first instance, the distress of London, and it then lessened the demand for guineas in the country, through that punctuality in effecting the London payments which it produced, and the universal confidence which it thus inspired. The sum permitted by Parliament to be advanced in exchequer bills was five million, of which not one-half was taken; of the sum taken, no part was lost; on the contrary,

the small compensation of extra interest which was paid to Government for lending its credit, (for it was mere credit, and not either money or bank notes that the Government advanced,) amounted to something more than was necessary to defray the charges, and a small balance of profit accrued to the public. For this seasonable interference, (a measure at first not well understood, and opposed at the time, chiefly on the ground of constitutional jealousy,) the mercantile as well as manufacturing interests of the country were certainly much indebted to the Parliament and to the Government."

Under very different circumstances, when the Bank of England was threatened, as was generally believed, with embarrassment from various causes, occurring during the continental war of 1797, the British Parliament interposed for its relief, by authorizing a suspension of its issues of gold and silver. Instead of dispensing with the use of its notes, which might have been expected to sink in the money market below par, the suspending act authorized the private bankers to issue them in lieu of the precious metals, and made them a legal tender in all pecuniary transactions within the kingdom.

The consequence was, that, although the war continued four years longer, and with such disastrous consequences to the allies of England, the danger which threatened the bank blew over; and, although two millions of small notes were issued under the authority of the same act, to supply the place of gold and silver coin in the smaller dealings of society, both metals mingled in the daily currency with specie, at par value.

It was not till three years after the revival of the war with France, following the short peace of Amiens, or nine years from the date of the suspending act, that any public notice was taken of the depreciation of bank paper, which the policy of Napoleon occasioned, by deranging the commerce of England with the continental nations controlled by his councils and his arms.

This interposition of Parliament to protect the bank, unnecessary as it for a long time proved to be, has been imputed wholly to the connexion subsisting between the bank and the Government.

The writer, to whose treatise I have before referred, demonstrably shows that this supposition is without foundation. The entire capital of the bank, it is true, was vested then, as now, in three per cent. Government stocks to the amount of more than eleven million and a half.

But this investment was made and continued for the benefit of the bank itself, since the stock was at all times convertible into specie, and produced a profit that mere bullion or specie could not yield; while the Government annually negotiated with the private bankers of the kingdom loans to the extent of thrice the capital of the bank, in order to supply the means of prosecuting a protracted and perilous naval and continental war.

In one interest, indeed, the bank and the Government, as well as the people of England were most intimately allied—in preserving public and private credit from the shock of a suddenly deranged paper currency.

This Government, unlike that of England, has no direct authority over the paper currency of the United States, and I do not propose, Mr. Chairman, a direct loan from the Government, to our merchants; unhappily, it would now be too late to save from ruin the many, who have already sunk beneath the rage for experiment that has agitated our currency for the last four years; but I would protect the occupation of the survivors from the unfavorable exchange which is draining our currency of its specie, and has prompted the banks, universally, to lock up from general use, that which they retain.

Shall I be asked how can this be done? I reply,

"The commissioners named in the act state in their report, that the knowledge that loans might have been obtained, sufficed, in several instances, to render them unnecessary; that the whole number of applications was three hundred and thirty-two, for sums amounting to £3,856,634; of which two hundred and thirty-eight were granted, amounting to £2,202,000; forty-five for sums to the amount of £1,215,100 were withdrawn; and forty-nine were rejected for various reasons. That the whole sum advanced on loans was paid, a considerable part before it was due, and the remainder regularly at the stated periods without apparent difficulty or delay."

"They observe that, the advantages of this measure were evinced by a speedy restoration of confidence in mercantile transactions, which produced a facility in raising money that was presently felt, not only in the metropolis, but through the whole extent of Great Britain. Nor was the operation of the act less beneficial with respect to a variety of eminent manufacturers, who, having in a great degree suspended their works, were enabled to resume them, and to afford employment to a number of workmen who must otherwise have been thrown on the public."

by creating abroad the necessity of sending specie to the United States; by balancing, in other words, the demand now setting against us, by one in our favor; and this I would effect, either by instituting a temporary loan, the securities of which might, and would go abroad, or by a sale in London of the bonds of the Bank of the United States, which we now hold.

The rate of exchange which at present exposes the specie of our mixed currency to a foreign drain has varied in five and twenty years forty per cent.; foreign bills which have recently been twenty per cent. above, having been, in 1812, twenty per cent. below par.

Since our arrival here, foreign exchange has fallen 5 per cent., and the premium given for converting current bank notes into specie has fallen, in amount one-half. The price of the bank notes of this District, which were 10 per cent. below specie, in value, are now within 5 per cent. of par.

From the best intelligence we have received, though all information on such a subject is liable to great uncertainty, between five and six million of specie have been exported to England in payment of the foreign debt of our merchants; and has contributed, with other causes, to produce that improvement of the foreign exchange to which I have referred. Instead of causing a further depreciation of our paper currency, this large remittance of specie, or gold bullion, by helping to restore confidence in the integrity and solvency of our merchants, has relaxed, as might have been expected, the pressure of their creditors from abroad, and diminished, to that extent, the demand for specie.

With this evidence before us, it cannot be doubted that a loan of six millions, by supplying the means of remittance; or a sale in Europe of the bonds of the Bank of the United States, which we held to that amount; would most essentially contribute to the same happy result.

If it be objected that the first expedient, which is the more simple of the two, and more likely to prove efficient, would create a new national debt, I reply that we are reduced to a choice of evils; and the issue of Treasury notes, either with or without interest, is the creation of a debt to the extent of their nominal sum, whether they are made to bear interest or not. They are, some time or other, to be redeemed by their reception in discharge of the public dues, or their payment in specie.

So far as they may serve for a currency at home, they will directly interfere with the resumption of specie payments, by supplanting that of the banks. If the subject of speculation, and not, therefore, current in the course of exchange, they have every quality of the mere evidences of a national debt, without a capacity to be used for remittances abroad.

The proposition to issue such notes, it is remarkable, the late executive message recommends, in the same breath, with which it denounces, as unpopular, the creation of a new debt; and the friends of the administration follow in the cry, and talk of a party, who regard "a national debt as a national blessing."

This is but a revival of a stale slander upon the first Secretary of the Treasury, which was without the slightest foundation in truth, was both contradicted by his friends, and denied by himself, but, nevertheless, uttered by his enemies, until it was believed.

But the sale of the bonds of the Bank of the United States, amounting to near six millions, and bearing an interest of six per cent., is free from any conceivable objection, except that of one of my colleagues, (Mr. Jones), who charges the motion of my friend from Kentucky, (Mr. Underwood,) with an attempt to convert the Treasury into a "shaving shop;" I quote his words. Has the honorable member forgot the recommendation of the Secretary of the Treasury, in December last, to invest the unexpended surplus revenue, in State stocks; or does he not remember, that for more than forty years of the forty-nine, which have elapsed since a solid foundation was laid for the public credit, the Chief Justice of the United States, the Vice President, Secretary of the Treasury, and Attorney General, as Commissioners of the Sinking Fund, were empowered by law, to purchase daily, in the money market, evidences of the public debt, which arose from loans negotiated in the same market, by one of those officers, acting with the approbation of the President? To the epithet which my colleague has applied to those ordinary operations of every Government, I have only to reply, that an epithet is not an argument, though it often conceals the want of one.

Mr. Chairman, I believe that confidence at home, would result from the establishment of confidence abroad, and as remittances to the amount of five millions, have raised our depreciated paper currency to within five percent. of par, the sale of the bonds of the United States, by creating a foreign credit of six millions, would raise that currency to par, in all the Atlantic, and the greater part of the Western States. It would injure no public interest, since the Bank of the United States has, for a similar purpose, offered for sale in the foreign market, similar securities, having a shorter time to run. They are now, as I understand, selling in London, within two per cent. of their nominal par value, which is six per cent. above the real par of exchange. If objected, that the bonds which we should offer in the same market, are each of a very large amount, let an effort be made, with the assent of the bank, to reduce their sums by increasing their number.

The president and directors of the bank could have no hesitation in so far aiding the Government, to effect a purpose so important to their institution and to their country at large, with whose prosperity their own is so intimately blended.

Such a transfer would not place their bonds in hands more unfriendly than those which now hold them, and the foreign being much lower than the domestic rate of interest, should the bank desire to prolong their time of payment, such indulgence could be more readily purchased, and on cheaper terms, in England, than at home.

Viewed in every aspect, and I have long contemplated the measure I now urge upon the committee, I cannot resist the conviction that it would lead, in a few months, to the restoration of specie payments by the greater part of the banks in the United States; and the more especially, if it be accompanied by the manifestation of a temper, on the part of Congress and the Executive, friendly to the banks and the mercantile class of the community.

It does not follow, because a part of those banks have been imprudently conducted, that their debtors should be punished. So far as I have been able to learn their history, they have been led astray by the action of their own Government; they are the victims of a policy which originated with the Executive, and has been countenanced by Congress.

A leading motive to the substitution of the measure which I have labored to recommend, for the bill on our table from the Senate, is, that the latter is part of a system adverse to the currency, the banks, and the country.

To sum up the whole of my objections to this bill, in a few words; it involves a breach of faith as wanton and reckless in its motives, as it will prove pernicious in its consequences.

#### NOTES.

(a) Thirty-first section of the act of January 18, 1837. "That, for the purpose of enabling the Mint to make returns to depositors with as little delay as possible, it shall be the duty of the Secretary of the Treasury to keep in the said Mint, when the state of the Treasury will admit thereof, a deposit of such amount of public money, or of bullion procured for the purpose, as he shall judge convenient and necessary, not exceeding \$1,000,000; out of which, those who bring bullion to the Mint may be paid the value thereof, as soon as practicable after the value has been ascertained; that the bullion so deposited shall become the property of the United States; that no discount or interest shall be charged on moneys so advanced; and that the Secretary of the Treasury may, at any time, withdraw the said deposits or any part thereof; or may, at his discretion, allow the coins formed at the Mint to be given for their equivalent in money."

(b) Among the causes and remedies of the present embarrassments, the report enumerates, in the 27th page, "a foreign debt, merely commercial, whose balance against us, after all proper deductions for freights, profits, and similar considerations, probably exceeded the aggregate of thirty millions of dollars."

On the 19th page of the same report, the Secretary says, that "the objection usually urged against an early resumption of specie payments by the banks, that the unfavorable balance of trade against this country would, in that event, cause some of the specie in the banks to be drawn out and shipped, will, however true in point of fact, possess much less force when it is considered that the delay has not prevented the export of specie. On the contrary, considerable sums which were in ordinary circulation, have, since the suspension, been withdrawn, and a portion of them sent abroad, while their place is badly supplied with depreciated paper."

(c) Of former surpluses in the Treasury, the Secretary says, in the 28th page of his letter of September 5, 1837, "That surplus was often depreciated; and the only sound and legal preventives still appear to this Department to be the measures before enumerated, for preventing its accumulation; and after it had undesignedly happened, the wisest disposal of it was supposed to be, to expend as fast as useful, on proper objects of a public character; and, in the mean time, not to leave it in the deposit banks, but to invest it in State stocks."

Those measures are pointed out in Mr. Woodbury's report of the 6th of December, 1836, in the following language:

"As the present surplus had chiefly arisen from an earlier

sale of larger portions of the public lands than had been expected, it seemed to this Department judicious to suggest completing with it, sooner than had been contemplated, the projected fortifications and naval establishments of the country; improving more rapidly the navigation and security of its commercial bays and rivers; erecting, where needed, appropriate custom and warehouses, as well as suitable marine hospitals, court houses, and post offices."

In the preceding annual report, of the 8th of December, 1836, speaking on the same subject, Mr. Woodbury lays down two general principles, which are suggested as proper to have a material bearing on the whole subject:

"First. That whatever mode may be adopted, it would conform to the spirit of the act of March, 1817, which has been in successful operation ever since the surplus became likely to be large and frequent, and which required, before the investment of them in purchase or extinguishment of the public debt, that enough should be left in the Treasury to meet all outstanding appropriations, and two millions more to secure facility and promptitude in its various and distant operations."

"And secondly. That, following the analogy of the above act, which separates the investment of any surplus from pecuniary profit, entirely from the management of the public deposits, and the deposit banks, it would leave the bank agents of the Treasury as they and all its other fiscal agents from the foundation of the Government have been left, wholly disconnected, so far as practicable, in regard to their agencies with the dangerous relation of borrowers from the Treasury, for reloading and for private gain."

By the "outstanding appropriations," mentioned in the first of his two principles, Mr. Woodbury meant, it is presumed, as Mr. Crawford is known to have done, such outstanding appropriations as would require disbursements within the year. The fourth section of the act of the 3d of March, 1818, provided: "That, after the year 1817, whenever there shall be, at any time after an adjournment of Congress, in any year, a surplus of money in the Treasury, above the sums appropriated for the service of such year, the payment of which, to the commissioners of the sinking fund, will leave in the Treasury, at the end of the year, a balance equal to two millions of dollars, then such surplus shall be, and the same is hereby, appropriated to the sinking fund, to be paid at such times as the situation of the Treasury will best permit; and shall be applied by the commissioners thereof to the payment of the public debt."

The balances in the Treasury, after the end of 1819, was \$2,079,992; and of each of the years 1818, 1820, and 1821, was less than \$2,000,000, as it again was at the end of 1824. Within the eight years of General Washington's administration, the balance at the end of the year exceeded a million but twice, and never reached a million and a quarter.

(d) To disembarass an argument already overlaid with quotations, the following paragraph from Mr. Woodbury's report of December, 1834, relative to the Mint, is here inserted in a note, designed to confirm the views already presented of the gross mismanagement of that institution under color of a legal sanction:

"The new coinage has, as yet, been confined principally to the half and quarter eagles, and has equalled, in all, about three million one hundred and fourteen thousand and ninety dollars, or in four months, more than four times the annual average coinage of gold for many years past."

"The demand for other coins has also been promptly met throughout the year. To aid in carrying the new law into efficient operation, this Department, last August, placed in the hands of the Director of the Mint, under the act of April 2, 1792, twenty thousand dollars, and ten thousand more in September, as it was needed, and could be, without inconvenience, spared from the Treasury. By this course, many have been enabled, at once, to realize funds from their deposits of bullion or coin, and the Mint to continue its operations uninterruptedly, and to supply promptly, when desired, coins already prepared for circulation."

"But it is considered proper to invite the attention of Congress to a change in the law respecting the organization of the Mint establishment, so as hereafter to prevent its operations in refining and coining for others from being a tax on the Treasury, and any longer swelling the large amount of our annual expenditure. This could easily be effected by imposing a duty or seigniorage of about one per cent. on the prompt coinage of silver, and one-fourth per cent. on that of gold; the present coinage of copper now defraying its own expense. This would be no more burdensome to the persons holding bullion than the delay now allowed for the recoinage; and which delay of forty days, (or one-half per cent. discount if delivered in five days,) and consequent loss of interest, could, with such a seigniorage, and the advances now authorized from the Treasury, be, without inconvenience, reduced to eight or ten days, and the whole establishment be thus sustained by its own earnings, without much, if any, increased cost to either individuals or the public. But, in such case, if the cost should ever be increased to individuals, some additional inducement will be held out to prevent either the exportation or melting of our coin, which have been so great, before the late change in the law, as to have left in deposit and circulation, in this country, an amount of it not exceeding that struck in two or three out of the forty years during which the Mint has been in operation. The expenses and labors of the Mint, equalling, on an average, about twenty thousand dollars a year, or eight hundred thousand dollars in all, excluding buildings, have thus, except for about two years, been entirely lost to the country."

Let the reader contrast this with the "smallest sum deemed proper" by the Secretary, in his letter of September the 5th, and the amount of gold coined in the present year by the employment of a million of dollars.

(e) The receipts for the first six months were \$5,472,482 72, and the total receipts down to a period in August, as far as intelligence had been received, amounted to \$5,888,815 41. The estimate for the year was five millions only.

The situation of the deposit banks on the 1st of November, 1836.

*(f) President's message of December 6, 1836.*

The President's message of the 6th of December, 1836, opened with a congratulation of Congress "on the high state of prosperity which our beloved country has attained."

"With no causes at home or abroad to lessen the confidence with which we look to the future for continuing proofs of the capacity of our free institutions to produce all the fruits of good Government, the general condition of our affairs may well excite our national pride."

"The expenditures for all objects during the year," then about to expire, "are estimated," he told us, "not to exceed thirty-two million, and will leave in the Treasury, for public purposes on the 1st day of January, about \$41,723,959. The sum, with the exception of five millions, will be transferred to the several States, in accordance with the provisions of the act regulating the deposits of the public money."

"Under our present revenue system there is every probability that there will continue to be a surplus beyond the wants of the Government, and it has become our duty to decide whether such a result be consistent with the true objects of our Government."

"Should a surplus be permitted to accumulate beyond the appropriations, it must be retained in the Treasury as it now is, or be distributed among the people or the States."

"To retain it in the Treasury unemployed in any way is impracticable."

"It is, besides, against the genius of our free institutions to lock up in vaults the treasure of the nation."

"A distribution to the people is impracticable, and unjust in other respects."

"Experience continues to realize the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government at the time of the removal of the deposits."

"It is now well ascertained that the real domestic exchanges, performed through discounts of the United States Bank and its twenty-five branches, were at least one-third less than those of the deposit banks for an equal period of time."

"Independently of these services, which are far greater than those rendered by the United States Bank and its twenty-five branches, a number of the deposit banks have, with a commendable zeal to aid in the improvement of the currency, imported from abroad, at their own expense, large sums of the precious metals for coinage and circulation."

*(g) The Secretary of the Treasury here reiterates the message, as the following extract from the latter plainly manifests:*

"In the mean time, it is our duty to provide all the remedies against a depreciated paper currency which the constitution enables us to afford. The Treasury Department, on several former occasions, has suggested the propriety and importance of a uniform law concerning bankruptcies of corporations and other banks. Through the instrumentality of such a law, a salutary check may doubtless be imposed on the issues of paper money, and an effectual remedy given to the citizen, in a way at once equal in all parts of the Union, and fully authorized by the constitution." *President's Message, Sept. 5, 1837.*

*(h) The following extract from a report recently made by the Governor of the Bank of France to a general meeting of the stockholders, furnishes the grounds of the allusion to France. That to the money market of China is derived from a late English newspaper:*

"During the second half of the year 1836, the security of commerce appeared shaken, confidence was, for a moment, weakened. From the month of July some symptoms of a partial distress had begun to manifest themselves. The march of our manufactures had been so rapid, that there could not have failed to arrive a period of reaction. Some exportations of coin, the importance of which was exaggerated, and which are now insensibly reduced, excited a certain degree of anxiety, when a crisis rather severe overtook the United States. The scarcity of specie raised the interests of money there to an exorbitant rate. It was at London that the reaction of this crisis was first felt. The Bank of England, notwithstanding the power of her means of action, and her well known skill, found herself obliged to raise the rate of discount from 4 to 4½ per cent., and subsequently to 5. The Bank of Amsterdam imitated this example. France could not withdraw herself entirely from the influence of these events, for the commerce of the whole world is more or less responsible for all its parts."

"Although this commercial reaction only reached us second hand, and consequently enfeebled, it could not fail to develop the seeds of embarrassment which I have just now alluded to. Thus, in many towns of the kingdom, the interest of money rose to 5 and 5½ and even for a moment to 6 per cent. Money became scarce; demands for specie were addressed to Paris from different points of France and from neighboring countries. The coffers of the bank alone could furnish it. She had then to administer simultaneously to the wants of the capital and to those of the departments, as well as to those of the adjoining States. If the bank had shown the least hesitation, fears would probably have become general. The public funds, which had already declined, would, perhaps, have experienced a much heavier depression; this momentary pressure might have been converted into a real crisis."

"The bank, in this situation, restricted neither the length of

time which paper had to run, nor diminished the amount of her discounts. She delivered up to the circulation 105 million of specie, and discounted 450 million in six months. She maintained, at 4 per cent., the rate of her interest, when this limit had been exceeded by a great part of Europe. It was thus that she was able to arrest or to check a movement which seemed to be assuming a serious aspect."

SPEECH OF MR. J. Q. ADAMS,  
OF MASSACHUSETTS,

[As revised by himself, and reported in the Nat. Intelligencer.]

In the House of Representatives, October 14, 1837.—

In Committee of the Whole on the state of the Union,

UPON NOUNS, PRONOUNS, VERBS, AND ADVERBS.

The following bill from the Senate being under consideration, in Committee of the Whole:

An ACT for adjusting the remaining claims upon the late deposit banks.

Be it enacted, &c. That the Secretary of the Treasury be, and he is hereby, authorized to continue to withdraw the public moneys now remaining in any of the former deposit banks, in a manner as gradual and convenient to the institutions as shall be consistent with the pecuniary wants of the Government, and the safety of the funds thus to be drawn; and that no further interest than that required by the deposit act of the twenty-third of June, one thousand eight hundred and thirty-six, under which those deposits were made, shall be demanded of any bank which has met, and shall hereafter meet, the requisitions of the Department. This provision shall also extend to such public moneys as may remain in any of the said banks, whether standing to the credit of the Treasurer of the United States, or of any disbursing or other public officer of the Government.

Sec. 2. And be it further enacted, That, in case of neglect or refusal by any of the said banks to comply with the requisitions of the Secretary of the Treasury, as he shall make them, in conformity with the first section of this act, suits shall be instituted, where that has not already been done, to recover the amounts due to the United States, unless the defaulting bank shall forthwith cause to be executed, and delivered to the Secretary of the Treasury, a bond, with security to be approved by the Solicitor of the Treasury, to pay to the United States the whole moneys due from it, in three instalments: the first to be paid at the expiration of four months from the passage of this act, the second at the expiration of six months, and the remaining instalment at the expiration of nine months from the same period; and interest thereupon, at the rate of six per cent. per annum, from the time of default, together with any damages which may have accrued to the United States from protests of drafts drawn upon it, or from any other consequence of its failure to fulfil its obligations to the public Treasury.

Passed the Senate, September 19, 1837.

ASBURY DICKINS, Secretary.

To this bill Mr. LOOMIS, of New York, had moved, in Committee of the Whole House on the state of the Union, the following amendment to the first section:

"Providing that all banks give security for the payment of four per cent. per annum on all sums of money remaining in their possession as depositors."

Mr. ADAMS rose, and said he had some inquiries to make in regard to the meaning of the first section of the bill. He would ask the chairman of the Committee of Ways and Means to what banks the following words were intended to apply: "And that no further interest than that required by the deposit act of the twenty-third of June, one thousand eight hundred and thirty-six, under which those deposits were made, shall be demanded of any bank which has met, and shall hereafter meet, the requisitions of the Department."

Mr. CAMBRELENG replied, that the gentleman from Massachusetts had answered his own interrogatory, by reading from the bill itself. The section simply meant to hold the deposit banks to the performance of their obligations.

Mr. ADAMS resumed. He could not perceive the need of any law at all on the subject, unless there was some particular allusion in this provision of the bill to delinquent banks. According to this reply of the chairman of the Committee of Ways and Means, the banks that have paid every dollar they owed the Treasury, and faithfully complied with their engagements, are to be treated precisely as defaulting banks are.

Mr. CAMBRELENG remarked that the act would hold out inducements to comply faithfully with their engagements.

Mr. ADAMS. But of what earthly use is it to make such an inducement for those banks which have already and always done this? This was somewhat insulting to such institutions. The question was not answered; and he conceived that if the bill were to pass in its present form, it would not operate as any relief to the deposit banks, being simply an act declaring that the Government will not charge with unlawful interest any institution which has always faithfully performed its engagements. The law would be a perfect dead letter. And here Mr. Adams referred again to the language of the bill. It provides, he said, that the money was to be positively drawn—in a gradual manner—with no further interest chargeable thereon than that provided by the deposit act of 1836, to any bank which has met, and which shall meet, its engagements. If a bank had not complied with its engagements, though the default should be ever so small, this section has no application to the case. It simply says to those which have fulfilled all their engagements, we will not play the Shylock with you, because you have been true to your engagements. The next section of the bill proposes to put the claims described in the first section in suit. This certainly could not be done, inasmuch as the only banks to which any direct allusion is had in that section are those which have met, and shall meet, all their engagements. This was the first inquiry Mr. Adams wished to make. The committee could decide for themselves how far it had been answered, and what necessity there was for the passage of any such law as is now proposed.

The second question he would propound (and he asked pardon of the gentleman from New York, Mr. Cambreleng, for troubling him, but he confessed that his faculties of comprehension did not permit him to understand the phraseology of the bill) was, what is meant by "no further interest" in this section? He would ask what "further interest" could be demanded than that contemplated by the act of 1836? The object

of a law was ever to remedy some existing evil; but in this case the terms of the law itself deny that any evil exists.

Mr. CAMBRELENG rose quickly, and remarked, that at so late a period of the session, the last working night, he could not waste his time in discussing nouns and pronouns, verbs and adverbs, with the gentleman from Massachusetts.

Mr. ADAMS resumed. Well, sir, as language is composed of nouns and pronouns, verbs and adverbs, when they are put together to constitute the law of the land, the meaning of them may surely be demanded of the legislator, and those parts of speech may well be used for such a purpose. But if such explanation be impossible, it certainly ought not to be expected that this House will consent to pass a law composed of nouns and pronouns, verbs and adverbs, which the author of it himself does not understand.

But, sir, the act goes on to provide as follows: "This provision shall also extend to such public moneys as may remain in any of the said banks, whether standing to the credit of the Treasurer of the United States, or of any disbursing or other public officer of the Government."

Mr. ADAMS would ask what suit could be brought on the first section of this bill against any bank or corporation? It operates on nothing. It is a dead letter, and ought not to be adopted by this committee.

Mr. A. presumed that the bill was susceptible of amendment; and if the chairman of the Committee of Ways and Means, or any other gentleman, would move such a one as would make the bill operative for some end or object, he would go for such an amendment, although he should afterwards vote against the bill. He should not himself offer any such amendment. He would suppose that it was generally believed by members, who had not particularly noted the phraseology of the bill, that it was intended to relieve delinquent deposit banks—banks which had suspended specie payments—banks which had not met the requisitions of the Department—banks which had dishonored its drafts, and thereby become liable to the demand of some further interest than that required by the deposit act of 23d June, 1836; which further interest it is the purpose of this provision of the bill to relinquish, on the part of the United States. But this section has no reference to any such bank. It applies solely and exclusively to banks which have met, and shall meet, all the requisitions of the Department—which have not suspended specie payments—which have punctually paid, and shall hereafter pay, every dollar of draft due by them; and with exquisite absurdity this section provides that no further interest shall be demanded of them than that required by the deposit act of June, 1836; that is, that the Government will not demand of them that which it has not the shadow or pretence of a right to demand. Now, Mr. A. said, he would suppose it intended to apply to the delinquent banks, and he must ask another question, which, in the opinion of the chairman of the Committee of Ways and Means, might seem to betray great ignorance on his part, and that was, what was the true import of the proviso contained in this bill, that "no further interest shall be demanded of the banks, though delinquent, than that required by the deposit act of 23d June, 1836?"

It was necessary to presuppose, in order to give any meaning to this passage, that the Government have a right to demand something more than this; and, although the chairman of the Committee of Ways and Means was so unwilling to answer his questions, he must still hold him responsible to the committee for a proper explanation of his own proposition. And what does the Government, in this section, resign by this promise? What is the substance of this promise? What right have we to demand what this bill makes us promise to resign? Mr. A. took it for granted that it was some penalty incurred by the delinquent banks, in not meeting the demands of the Government, that was intended hereby to be relinquished, on certain conditions. By the charters of most banks, so far as he knew, the suspension of specie payments forfeited their charters, or subjected them to the payment of extraordinary interest. The charter of the late Bank of the United States required the payment of twelve per cent. per annum interest after refusal to pay specie; and the banks of his own State (Massachusetts), by suspending specie payments, incurred the penalty of paying twenty-four per cent. interest. Mr. A. took this section to apply to such provisions as these in the charters of the deposit banks; and he demanded again for whom this relief was intended? What is relinquished in each of the contemplated cases? The country should know. It was not our own claims that were to be given up or compromised, but those of the people of the United States. It was their money which these banks were refusing to pay. Now this bill promises to relinquish every thing—the penalty, whatever it may be, in each case—the extra interest—every thing, in short, if the banks will only pay the Government what they owe, in a reasonable time. Now, will the chairman of the Committee of Ways and Means tell this committee what it is which he proposes to give away, and relinquish to these banks, in the name of the people?

Mr. CAMBRELENG said he had but one way of responding to the gentleman from Massachusetts. He would call for the consideration of some other bills before the committee.

Mr. ADAMS called the chairman of the Committee of Ways and Means to order, and the latter resumed his seat.

Mr. LEXON, of Alabama, remarked that, by a provision in the charter of one of the banks alluded to, the Bank of Alabama, no penalty for the non-redemption of its notes in specie could be demanded by the United States of that institution.

Mr. ADAMS asked how it then happened that the Secretary of the Treasury had confided the public money to an institution in which it was not protected by the liability of such institution to the same penalty as in other cases? It was the duty of Congress to see that justice was done to this Government as to the keeping safely of the public moneys. If the Secretary of the Treasury had acted thus, he had wasted, and risked the safety of the money of the people.

But the section referred to does not apply even to the Bank of Alabama. Even though that institution has failed to comply with its obligations to the Government, it is not held by any penalty in the act before the committee to answer for its delinquency. It is perfectly clear, and may safely continue in such delinquency, for this provision of the act is, to all intents and purposes, even if passed, a dead letter. And thus gentlemen are in a dilemma. Either the bank has subjected itself to the payment of extra interest by refusing to pay specie, or the Secretary of the Treasury has made with that bank a ruinous bargain (so far as the country is concerned), by which it escapes with impunity. And, by the way, it might be remarked, said Mr. A. that this answers another gentleman who had com-

\* Of which \$7,761,000 are due to the deposit banks of six States.

plained of the bill before the committee as an *ex post facto* law, and oppressive and cruel in its operations upon the State he came from. Certainly there was nothing cruel in the terms of the act; but, on the contrary, it was excessively indulgent to all the delinquent banks.

Mr. A. remarked, that the committee now perceived the relation in which the Bank of Alabama stood to the State itself: the bank itself being the State. But it had been said by a gentleman from Kentucky, (Mr. Chambers,) that it was impossible, in this particular case, to raise the money required. What, sir, (asked Mr. A.) is the credit of the State of Alabama worth nothing? Sir, could not the State of Alabama raise by her credit, in twenty-four hours, a loan of one million of dollars, and pay off this debt of her bank?

[Mr. CHAPMAN, of Alabama, said, "Yes, at five per cent. interest."]

It was, then, perfectly possible, and it was natural that the gentleman from that State should feel indignant at the imputation that it was not, especially when, as had been said by one of them, (Mr. Chapman,) that that State could, at any moment, raise a loan of a million of dollars! And where, then, (asked Mr. A.) would be the charge of cruelty, on the part of this dead letter law?

As to the second section of the bill, Mr. A. did not know any very strong objections which could be brought against it. He referred to the provisions of the law of June, 1836, depositing the surplus money in the Treasury with the States, and adverted to the facts that three of the instalments authorized by that act of Congress, had been paid over, and that the fourth instalment, payable on the first day of the current month, had been postponed, by a recent act, until January, 1839. In connection with these facts, Mr. A. took a comparative view of the amounts to which the States were severally entitled on the first of October, 1837, under the deposit act of June, 1836, and of the amounts of public moneys actually on deposit with the several States in July and August, 1837, observing that he derived these statements from the report of the Secretary of the Treasury.

Mr. Speaker, (continued Mr. A.) there is one point of view in which this bill, together with that to which it is a mere supplement, or rider—I mean the bill for the postponement of the fourth instalment of the deposits with the States—is so deeply interesting to my immediate constituents, to those of my colleagues, and to those of many other members of this House, that I deem it my indispensable duty to expose it to the House and to the country, in minute, though in dry and tedious detail; as a preliminary to which, I must read so much of the deposit act of the 23d of June, 1836, as prescribes the payment of the deposits to the States. It is in these words:

"Sec. 13. And he further enacted, That the money which shall be in the Treasury of the United States on the first day of January, 1837, reserving the sum of five millions of dollars, shall be deposited with the several States in proportion to their respective representation in the Senate and House of Representatives of the United States, as shall by law authorize their treasurers or other competent authorities to receive the same on the terms hereinafter specified, &c."

"Sec. 14. And he further enacted, That the said deposits shall be made with the said States in the following proportions, and at the following times, to wit: One-quarter part on the first day of January, 1837, or as soon thereafter as may be; one-quarter part on the first day of April; one-quarter part on the first day of July, and one-quarter part on the first day of October, all of the same year."

The conditions were accepted by all the States. The pledge, you will observe, was positive and unqualified. The surplus (reserving the five millions) actually in the Treasury on the first day of January last, was all positively and expressly devoted to be deposited with the States. The word appropriated was not used, because it was to be a deposit; but the identical money was as specifically denoted as it could have been by a direct appropriation.

Accordingly, on the third day of January, 1837, the Secretary of the Treasury reported to the Speaker of the House of Representatives that the balance in the Treasury on the first day of that month, subject to be apportioned among the different States, had been ascertained to be thirty-seven million four hundred and sixty-eight thousand eight hundred and fifty-nine dollars ninety-seven cents; and appended to that report was a statement of the sums payable to each of the several States of the Union, in the fulfilment of that act in the course of the present year.

The first, second, and third instalments have accordingly been paid; excepting a part of the third, which yet remains *in transitu*: and on the first day of this month the sum of \$9,267,214 99 cents should have been paid to the several States in the same proportion as the three previous instalments had been paid, and as had been specified in the report of the Secretary of the Treasury to the House of the 3d of January, 1837.

The money was, on the 1st of October, all in the deposit banks selected by the Secretary of the Treasury himself. It was to have been expected that with the ample notice which he had enjoyed of more than fifteen months since the enactment of the deposit law, he would at least have taken care to place in the deposit banks of each State a sum adequate to the payment of the instalment payable to that same State. By this simple operation, when the 1st day of October came, the instalment due each State would have been deposited in its own banks, ready to be passed to the credit of its treasurer, or other officer duly authorized to receive the money.

Instead of this, what had the Secretary of the Treasury done with it? I held in my hand a comparative statement of the sums which each of the States was, by the deposit act of the 23d of June, 1836, entitled, on the 1st of October, 1837, to receive, with the sums in actual deposit, in the late deposit banks throughout the Union, at the commencement of the present session, and again with the balances due by the same deposit banks on the 4th of October, three days after the fourth instalment of the deposit with the States should have been paid.

It is a very curious paper; and, as the chairman of the Committee of Ways and Means laid before the House, and obtained an order for the printing of a statement by himself of the condition of the Treasury, if I possessed as much as he does of the favor of the House, I would solicit the same privilege for this statement of mine, all drawn from the reports of the Secretary of the Treasury himself. But I shall not make that request. I shall merely publish it for the information of the people, and I commend it to the special attention of the members upon this floor, of what used to be called the good old thirteen States; above all, to the representatives of the six New England States, that they may see how naturally the mo-

ney of this Union flows to the North or to the East. And, as some of them have been taught, by sundry learned statistics of the Globe, to think that the payment of the fourth instalment of the deposits ought to be repeated because it would require a new tax upon the people, I respectfully ask them to perform the simple process of arithmetical subtraction of nine million three hundred and sixty-seven thousand two hundred and fourteen dollars and ninety-nine cents, the whole sum which should have been paid to the States on the first of October, from the sum of nine million eight hundred and one thousand nine hundred and twenty-one dollars and forty-nine cents, which on that very first of October was actually deposited in the favorite depository banks so cordially cherished, and so often eulogized by the profound calculator of the Treasury Department. The money was all there. At least it had been all there; and if it had been, at the special recommendation of the Secretary of the Treasury, scattered abroad in discounts among the people, to purchase friends to the administration, he was at least responsible that the money should be forthcoming when it should be wanted for the payment of the fourth instalment. He had, I say, more than fifteen months' notice of that coming day—more than ten months' notice of it before the suspension of specie payments by any of the banks. The specie circular was issued within twenty days after the enactment of the deposit law. Nothing but the constitutional currency, gold and silver, was, with a trifling exception, to be received at all the land offices for the proceeds of sales of the public lands. Why is it that the Secretary had not, before the first of October, 1837, placed in deposit in the banks of each State in the Union a sum sufficient to pay the instalment due to that State on that day? Why is it that after draining the Atlantic States of their gold and silver, to pay at western land offices, and into western banks, for all the wild speculations in western lands, when the day of payment comes for the fourth instalment, the funds are found all or nearly all drawn off from all the deposit banks in the Atlantic States, and millions upon millions, not of constitutional currency, but of unavailable funds of rags and shillings, are heaped up in those very western and southwestern States, where the land was sold, and where the specie circular was to prove a mine, "outstriking far the wealth of Ormus or of Ind?"

[Mr. A. referred to the following statement, which he held in his hand:]

Comparative Statement of the sums which each State of the Union was, by the deposit act of 23d June, 1836, entitled to receive on the 1st of October, 1837—with the sums which were actually in deposit in the Deposit Banks of each State, in July and August, 1837, as appears in the Report of the Secretary of the Treasury on the Finance, at the commencement of the session—and with the balances still due by the said banks on the 4th of October, 1837, according to the Treasurer's weekly statement of that date, appended to the Report of the Secretary of the Treasury to the House of Representatives, of 6th October, 1837; showing the sums drawn from the Deposit Banks between August and October.

TABLE.

Deposites due to the several States on the 1st of October, 1837.	Actual deposits, July and August, 1837.	Balances still due 4th October, 1837.
Maine	10 \$318,612 5	\$117,042 3
New Hampshire	7 223,028 6	114,026 8
Massachusetts	14 446,057 4	84,278 3
Rhode Island	4 127,445 2	6,433 2
Vermont	2 253,820 2	5 8 2
Connecticut	8 254,890 2	31,642 3
New York	42 1,338,173 15	1,336,919 14
New Jersey	8 254,890 2	95,606 3
Pennsylvania	30 955,538 2	255,445 3
Delaware	3 95,568 1	2,906 1
Maryland	10 318,612 5	280,192 2
Virginia	23 732,509 4	401,136 3
North Carolina	15 477,019 1	146,050 1
South Carolina	11 350,474 2	111,690 2
Georgia	11 350,474 3	174,639 3
Alabama	7 223,028 6	1,020,873 1
Mississippi	4 127,445 2	1,744,873 2
Louisiana	9 139,360 2	1,450,377 2
Missouri	4 127,445 2	589,377 2
Kentucky	15 477,019 1	813,246 2
Tennessee	15 477,019 1	514,616 2
Ohio	21 669,068 8	1,127,977 8
Indiana	9 226,761 5	743,129 5
Illinois	6 159,306 1	39,795 1
Arkansas	3 95,568 1	39,323 1
Michigan	3 95,568 1	998,050 2
	\$9,267,214	\$12,385,300
		\$3,801,921

\* Number of Electoral votes. † No. of Banks. ‡ No. of Banks.

[In the above table, Mr. A. was so particular as to calculate not only the cents, but the fractions of cents, in the proportion of the surplus due to each State; but, for the sake of compressing the table into the width of the newspaper column, we have omitted both the cents and the fractions.]

Let us now compare the three columns of this comparative statement with each other, and see how the different States of the Union have been treated, first by the deposit law, the act of Congress, and secondly by the Secretary of the Treasury and the Executive administration.

The first column shows the sum which each State of the Union was, by the deposit act of 23d June, 1836, entitled on the 1st of this present month of October to receive.

The second column shows the amount which the deposit banks in each State had received from the Secretary of the Treasury, and was due from them at the commencement of the present session of Congress.

The third column shows the amount of balances still due from the same deposit banks on the 4th day of the present month, that is, precisely at the time when the fourth instalment should have been paid.

Examine this statement, and you will find that on the first of this month the State of Maine was entitled to receive \$318,612 dollars 75 cents; that at the commencement of this session

there were in the five deposit banks of that State only \$117,042 dollars 95 cents; and that on the 4th of October that sum had been reduced to \$117,042 dollars and 92 cents. Maine, therefore, was entitled to receive largely more than 200,000 dollars. She had received in deposit in her banks on the first day of this session, \$117,000 dollars; and this scanty sum had, on the 1st of October, been reduced to \$117,042 dollars 92 cents. Little short of two hundred and eighty thousand dollars has thus been filched from the people of the State of Maine, and given, for the present at least, to the States at the south and western extremities of the Union.

The State of New Hampshire was entitled to receive \$223,028 dollars and 92 cents. She had in six deposit banks at the commencement of the session \$1,426 dollars and 31 cents; out of which were squeezed before the 4th of October so much as left only \$63,635 dollars 93 cents. Her contribution to the south-western banks was only about one hundred and sixty thousand dollars. The Secretary can not be charged with partiality to his native State. How is it with mine? Massachusetts was entitled to receive \$446,057 dollars and 85 cents. At the commencement of the session she had in four banks \$1,278 dollars and 0 cents; which on the 4th of October was reduced to \$2,891 dollars and 30 cents; but, in the last return of the Treasurer's accounts, several new columns are introduced, one of which is of *overdrafts*, and two of the Massachusetts banks are credited with these over-drafts to the amount of \$13,006 dollars, which, if subtracted from the balance still charged against them, will leave it less than \$30,000 dollars. It is indeed doubtful whether at this day, there is a dollar due from the late deposit banks of Massachusetts to the Treasurer of the United States. Her present loss by the postponement of the fourth instalment is at least equal to the whole sum which she was entitled to receive, little short of \$40,000.

Rhode Island, Vermont, Connecticut, may also well make up their accounts for a present total loss.

Rhode Island was entitled to receive \$127,445 dollars and 10 cents. She had in two banks at the commencement of the session \$4,433 dollars 6 cents—reduced on the 4th of October to \$1,133 dollars 41 cents.

The portion of Vermont on the 1st of October was \$253,820 dollars 92 cents, the same as New Hampshire, and the same as Alabama. But the amount of balance due from the two deposit banks in Vermont was, at the commencement of the session, \$583 dollars 64 cents, and on the 4th of October \$466 dollars 83 cents; while the balance due from the single deposite bank of Alabama was, at the commencement of the session, one million and twenty thousand eight hundred and fifty-six dollars (twenty-six cents, and on the 4th of October nine hundred and six thousand three hundred and seventy-nine dollars 23 cents; and this Bank of Alabama is the property of the State. I have seen lately some vain boastings in certain public journals, that the administration was going ahead, and growing popular in the State of Vermont. I should like to hear what the Green Mountain boys will say to this administration mode of settling parallel accounts. The State of Connecticut was, on the first of this month, entitled by the deposit act to the receipt of \$254,890 dollars and 20 cents. The balance due from her two deposit banks at the commencement of the present session was \$1,629 dollars 18 cents; and from her three deposit banks on the 4th of October current was \$7,409 dollars and 2 cents. How it happened that there was on the 4th of October one more deposite bank in the State of Connecticut than there had been at the commencement of the session, I do not know; but as the aggregate amount of the balance due from the three banks was so much decreased from that which had been due by the two, the

addition of one to the deposite banks was, in the last account scarcely forms a sufficient cause for inquiry how it has happened. I heard a distinguished member from the State of Connecticut on this floor deliver an able and very earnest speech in favor of the postponing bill, as it came from the Senate, because he considered it, as it was, a repeal, a total and final repeal, of the fourth instalment, which would have replenished the Treasury of his own State with a sum of about two hundred and fifty-five thousand dollars; he decried the idea that it would be necessary to raise this sum, if the instalment should be paid, by taxation. Now I put it to the consideration of that gentleman and of his constituents, that there can be no possible need of taxation to raise this sum at all. It exists as it existed when the Secretary of the Treasury announced the deposite surplus in the Treasury on the first of January last. It is all as it was then in balances due from the southwestern and western banks; those very balances, the prompt payment of which the bill now before you is about to relinquish. Sir, I have pointed out the comparison between the sums which each of the New England States separately was entitled to receive on the first of this month in deposit, and the sums which their banks then actually had in deposit, first, at the commencement of the present session; and, secondly, one month later, that is, on the 4th of October. Let us now make the same comparison in the aggregate.

The sum which the six New England States were entitled to receive on the first of this month by the deposit act was one million five hundred and thirty-three thousand and sixty-three dollars and seventy-seven cents.

The whole amount of the balances due from all their reputed deposite banks at the commencement of the present session was three hundred and forty-nine thousand nine hundred and ninety-eight dollars and fifty-four cents, nearly one hundred thousand dollars less than the State of Massachusetts alone was entitled to receive.

And the whole amount of the balances due from the same banks one month later, on the 4th of October, three days after the fourth instalment should have been paid, was one hundred and forty-seven thousand two hundred and forty-five dollars and fifty-six cents, nearly one hundred thousand dollars less than the State of Connecticut alone was entitled to receive for her portion of the fourth instalment.

Now for the other side of the account.

On the first of this month, the State of Mississippi was, by the deposit act of 23d June, 1836, entitled to receive the sum of one hundred and twenty-seven thousand four hundred and forty-five dollars and ten cents, precisely the same portion as that of Rhode Island.

The balances due from the late deposite banks in the State of Mississippi, at the commencement of the present session, were one million seven hundred and forty-four thousand three hundred and seventy-three dollars and seventy-one cents.

The balances due from the same banks on the 4th of October, three days after the fourth instalment should have been paid, were one million six hundred and sixty-six thousand three hundred and sixty-seven dollars and thirty-three cents.

If you deduct from the whole amount payable to the six

25th CONG....1st Sess.

Upon Nouns, Pronouns, Verbs, and Adverbs—Mr. Adams.

H. of Reps.

New England States for the fourth instalment the whole amount of the balances due from all their deposit banks, there will remain due one million four hundred and thirty thousand eight hundred and eighteen dollars and thirty-one cents payable to them.

If you deduct the whole sum payable for the fourth instalment to the State of Mississippi from the whole amount of the balances due on the 4th of October by her late deposit banks, there will remain due from them the sum of one million five hundred and twenty-eight thousand nine hundred and twenty-two dollars and twenty-three cents.

The balances due, therefore, from the deposit banks, in the single State of Mississippi, a State with four electoral votes, are nearly one hundred thousand dollars more than adequate to pay the whole fourth instalment receivable by herself, and by the six New England States.

Suppose we state the two cases in the form of accounts current:

<i>Dr. United States of America, in account with the six New England States.</i>		
1837. 1st Oct. To fourth instalment	\$1,593,063 77	Cr.
By balances in all their deposit banks	157,246 46	
Due to the six States	1,435,818 31	

<i>Dr. United States of America, in account with the State of Mississippi.</i>		
1837. 1st Oct. To fourth instalment	\$127,445 10	
To balances due by her	1,523,922 23	

By balances in her deposit banks	\$1,656,367 33	\$1,656,367 33
----------------------------------	----------------	----------------

Sir, I hope we shall hear no more of the necessity of raising, by taxation upon the people, the sums necessary for the payment of the fourth instalment.

I will not pursue this comparative review of the sums due to each State for the fourth instalment, and of the sums due from the deposit banks in each State through the whole twenty-five, (for it seems there was no deposit bank in Arkansas) but if any indifferent person or philosophical observer will compare the relative amount of the three several columns against the name of each State, in this table, and then mark the names in the lists of yeas and nays upon your journal, first on the passage of the act to postpone the fourth instalment, and then on the passage of this act, I do assure him that he will discover secrets worth knowing. He will find in these elements a key to the system of measures prepared by the present Executive for the action of Congress, in this emergency, for relief to the distress of the country. He will see how these measures were adapted in advance of each other—how the excessive balances due from one set of States were to be made easy, by withholding from another set of States the fourth instalment, to which they were entitled. He may chance to discover some insight into the art magic of application to motives. He may trace the cause of that uneasy solicitude manifested by more than one member from the *DEBtor STATES*, when the postponement bill was on its passage, to set it aside and take up *this bill*, before they should be compelled to vote *ay* or *no* upon that.

This bill, as it came from the Senate, was not sufficiently indulgent to their delinquent banks. Instead of four, six, and nine months of delay before they should be called to disgorge their millions upon millions of the public spoils, nine, fifteen, twenty-one months of time, were to be granted them, without even the payment of interest to the plundered sister States. And here, on this floor, we beheld a pledge demanded of the chairman of the committee, and given by him, in the face of the House, that when that bill should have passed, and this one should be taken up, a liberal indulgence of time should be allowed to the over-burdened and discarded depository banks. That bargain was not only concluded in the presence of the House, but was signally and indignantly rebuked at the time by two members of the House, one from Georgia (Mr. Dawson) and one from Ohio, (Mr. Samson Mason); yet we are now witnessing its consummation. This bill is the equivalent for the votes indispensable to carry that—this amendment is the *premium pudicitia* for the wear and tear of chastity in the accomplishment of that.

Sir, when that bill came from the Senate, and through that body from the Treasury, it came with fraud upon its face.

Mr. CAMBRELENG called the gentleman from Massachusetts to order, observing that that was not the first time that gentleman had thus transgressed the rules of order.

The CHAIR (Mr. Howard of Maryland) could not see the relevancy of Mr. A's remarks to the subject before the committee.

Mr. ADAMS. Am I not permitted to refer to a bill, and to the manner in which that bill passed the House, without which, as I contend, this bill now before the committee would not be here, at all? [Cries from all sides of the House, "Go on! go on!"]

Mr. ADAMS resumed the thread of his remarks. Yes, sir, it came with fraud upon its face. It professed to be a bill to postpone the fourth instalment: it was, in fact, a bill to repeal it. It was, in fact, a bill to raise revenue; and, as such, not having originated in this House, ought never to have been entertained by it. A member from South Carolina (Mr. Pickens) proposed an amendment, which made it what it professed to be, a bill to postpone the fourth instalment to a day fixed—the 1st of January, 1839; to which I proposed an additional amendment, appropriating these balances due from the delinquent banks, and a supplementary fund if it should be necessary, for punctual payment at the day fixed by the amendment of the gentleman from South Carolina. With those amendments I pledged myself to vote for the bill.

I was fully aware of the sacrifice of the just rights and interests of my own constituents to which I must assent by voting for the bill in that form; and I knew that I hazarded incurring the displeasure of some of them by yielding so much. But I knew they were a generous people. I came here knowing that the executive administration was reduced to great straits for the means to perform the pecuniary engagements of the nation. In their distress, however brought upon themselves, I saw only the distress of the country, and trusted that my constituents would sustain me in giving up a portion of their just claims for the general benefit of all. These were the sentiments with which I came to Washington, and, as a pledge of their sincerity, I offered, with these amendments, to vote for that bill, and how was this disposition received and returned? The chairman of the Committee of Ways and Means, substantially the representative of the Executive in this House, would neither accept

my amendment, nor that of the gentleman from South Carolina. He forced the bill, with all its imperfections on its head, as it came from the Senate, to a third reading; and he carried it in the fullest vote ever taken in this House by yeas and nays, 119 to 117; and of the 119, one was the gentleman from South Carolina, who so voted, as he declared at the time, for the express purpose of moving a reconsideration of the vote; which he immediately did. The real vote, therefore, was a tie, 118 to 118; and if the bill was to be carried at all, it could only be by the casting vote of the Speaker. The chairman of the Committee of Ways and Means did not venture upon that experiment. He voted against the reconsideration himself, but he suffered it to be carried by his friends. My amendment, which was nothing more than a pledge that the bill, as amended by the gentleman from South Carolina, should be executed in good faith, he still refused to accept. Ninety-four members of the House voted for my amendment. I can not vouch that every one of them would have voted for the bill, if the amendment had been adopted; but I would have voted for it myself. I have reason to believe that a majority, if not all, of my colleagues would have voted for it; and I have no doubt that sixty or more affirmative votes would have been for the passage of the bill, beyond the meagre majority of twelve, which was secured only by accepting, as a forlorn hope, the previously rejected amendment of the gentleman from South Carolina.

Mr. Chairman, I impeach the sincerity of no man upon this floor. But when I saw the chairman of the Committee of Ways and Means cling so tenaciously to that bill as it came from the Senate; when I saw him, at the last gasp, permit the amendment of the gentleman from South Carolina to be carried against his own vote, to save the life of the bill; and when I saw him still inflexibly excluding my amendment, and spurn a majority of four-fifths of the House, on the passage of a bill so immensely important to the administration as that was, it was impossible for me to divert my own mind from the inquiry why it was that so feeble a majority, purchased by so humiliating a concession as had been extorted by the gentleman from South Carolina, should have been preferred to an almost unanimous vote, obtained by the mere mite of additional concession, yielded by a pledge of faith that the promise of that amendment should be performed; and I could account for this preference no otherwise than by the belief that it is still not intended that the fourth instalment shall ever be paid; that the promise to pay it on the first of January, 1839, is a deception, and that the amendment of the gentleman from South Carolina will fare no better than the 13th and 14th sections of the deposit law of June 23, 1836.

How far this apprehension is prophetic, we shall see in the course of the ensuing year; and I now predict that the present postponement will be succeeded by another. That, as the first of January, 1839, shall approach, new disclosures will be made of the rancid nakedness of the Treasury; and then the argument, now merely fictitious, may be urged in sad reality, that the instalment can not be paid without a new tax upon the people. If the money now in the defaulting deposit banks should be collected by the Government, and applied to other purposes; to be sure, in that case, the fourth instalment can not be paid without taxing anew the people to raise the money; and that is precisely the reason why I anxiously wished to appropriate the money while it was there. Was it the reason why the appropriation was so stubbornly refused by the chairman of the Committee of Ways and Means? Sir, we have been told, over and over, that the late deposit banks in Louisiana, in Alabama, in Mississippi, in Ohio, in Kentucky, in Indiana, are all sound, all solvent, all able and willing to pay every dollar of their debt, give them but reasonable time. Then the money is there. The balances in those States due from those banks is amply sufficient, and more than sufficient, to pay the fourth instalment due to themselves, and that due to all the other States.

Let us now resume the comparison in this tabular statement between the amount which by law, that is, by the act of 23d June, 1836, should have been deposited in each of the several States, and the amount which was actually deposited in the same States at the commencement of the present session of Congress and on the 4th of October, one month later. We have gone through the New England States, and have there found the deposits *de jure* more than a million and a half of dollars; the deposits *de facto* less than a tenth of that sum—less than one hundred and fifty thousand dollars. We next came to New York—the *Empire State*; her proportion of the fourth instalment would have been one million three hundred and thirty-eight thousand one hundred and seventy-three dollars fifty-seven cents. The sum which her banks actually had in deposit at the commencement of the session was one million three hundred and eighty-six thousand nine hundred and nineteen dollars and eighty-two cents. There, sir, was something like a set-off; no injustice was done to the great State of New York. The deposit of fact was about fifty thousand dollars more than the deposit of the law. But the Secretary of the Treasury has been most industriously occupied during the whole month of September, in drawing off from the New York deposit banks the balances due by them. By the last returns of the Treasurer's accounts, it appears that on the fourth of October there remained in balances due from all the deposit banks of the State of New York only eight hundred and three thousand five hundred and seventy dollars and seventy cents; nearly six hundred thousand dollars has been drawn from them in the month of September. And further, I have seen a series of resolutions very recently adopted by a highly respectable and numerous assembly of citizens of that city, in one of which it asserted that the banks of that State have paid off almost the whole of the balances due by them. Sir, our compassion has been appealed to in behalf of these southwestern banks. We have been told it would be cruel to exact payment from those banks; that it would be an *ex post facto* law to charge them with interest for the public moneys, which they have received in deposit, and refuse to pay at the requisition of the Treasury Department; that they can not themselves pay without exacting payment from their debtors; and that indulgence must be granted to them, that they may be enabled to grant indulgence to the people. Sir, how stands this argument, in its application to the banks and people of the North? They, too, were and are indebted to their banks. Were they not in need of indulgence, as much as the people of Louisiana, of Mississippi, of Alabama, of Kentucky, Ohio, Indiana, Missouri, and Michigan? But what has the Secretary of the Treasury been doing with them? Has he not been draining them almost to their last dollar, as long as he could claim a dollar of balance from them? And have they not been obliged to put the screws upon their debtors, that they might be enabled to pay the balances due by them, at the requisition of the Secretary of the Treasury? Sir, the people of the North

have endured, they are now enduring, that very cruelty and oppression which you are told the people of the Southwest and the West can not bear. You are straining from them their last cent to pay their balances, while at the same time you have wrested from them their fourth instalment, which your Secretary of the Treasury has transferred to the State banks of the Southwest and the West, there to be locked up for six, fifteen, and twenty-one months, without payment of interest, because it would be a *cruel ex post facto* law to call upon them for any consideration for the use of the money.

Let us pass over the State of New Jersey—no longer a doubtful State—and come to the Keystone State of Pennsylvania. The portion of the instalment which she ought on the first of this month to have received was nine hundred and fifty-five thousand eight hundred and thirty-eight dollars and twenty-six cents. The sum actually deposited in all her deposit banks, at the commencement of the session, was \$255,445 92; and on the 4th of this month, it had been reduced to \$131,571 17. Eight hundred and twenty-five thousand dollars is the tribute of Pennsylvania to the State banks of Alabama, Louisiana, and Mississippi, to promote the multiplication of the blessings of slavery and the cultivation of sugar and cotton. Great and glorious as have been the exertions and sacrifices of the State of Pennsylvania in the cause of internal improvement, and in that career she has not been surpassed by any State in the Union, not even by the Empire State, yet, if I understand the character of her hardy yeomanry aright, not even their partiality to the democracy of numbers will reconcile them to the application of her property to the multiplication of slaves and slavery, for the cultivation of sugar and cotton, by abstracting it from the appropriations of her own Legislature to internal improvements within her own domain, rather more congenial to the principles of her heraldic motto—*Virtue, Liberty, and Independence*.

Maryland! Your own State, Mr. Chairman. The sum which on the first of this month she was entitled to receive was \$318,619 75. The sum which her deposit banks held in deposit at the commencement of the session was \$250, 93 25; which, on the fourth of this month, was reduced to \$212,102 54. Your State, Mr. Chairman, has been marvellously well treated, for one of the old thirteen. Her contribution to the southwestern State banks is not much more than 106,000 dollars.

But, ah! *Virginia! Old Virginia! The Ancient Dominion!* Beware, Mr. Financier of the Treasury, how you tread upon her toes! She has no fancy for a divorce of bank and State. Her State banks are bone of her bone, and flesh of her flesh; and when she releases them from the payment of their debts, she only releases herself from the performance of her own engagements. Deal tenderly with her, Mr. Secretary, or like Hannibal, she will carry the war into Africa. Sir, on the 1st of this month the State of Virginia was, by the deposit act of 23d June, 1836, entitled to receive seven hundred and thirty-two thousand eight hundred and nine dollars and thirty-three cents. At the commencement of the present session, the whole amount of balances due from her deposit banks to the Treasury of the United States was 403,136 dollars and 97 cents. This was not enough, sir; and, accordingly, on the fourth of this month, the balance due from her deposit banks was 739,302 dollars and 19 cents, not quite seven thousand dollars more than she was entitled to receive for the fourth instalment. She loses nothing by the postponement, and this bill gives her the use of the money for a term at least equivalent to the loss by the delay of the postponement to the 1st of January, 1839. Virginia, therefore, is propitiated to secure the suffrage of her members in Congress for the passage of both the bills—the postponement bill and this bill; and you find most of them voting accordingly. By what art magic it has happened that, while the balances of all the other old thirteen, but one were, between the commencement of the session and the 4th of October, so severely reduced, hers were so largely increased as to be nearly doubled, I know not, and am only left to conjecture. My table is taken from the returns of the Treasurer's accounts, communicated to this House by the Secretary of the Treasury himself. I merely state the facts as I find them.

But North Carolina has not been so favored. Her portion of the fourth instalment, payable on the 1st of this month, was 477,919 dollars and 13 cents. The balance due from her one solitary deposit bank at the commencement of the session, was 146,030 dollars and 12 cents, which, on the 4th of this month, was reduced to 64,638 dollars and 61 cents. The loss of Virginia by these two bills—these *Slamie* twins—is nothing. The loss of North Carolina, like that of the six New England States, is almost total.

South Carolina and Georgia are not much better treated, though with this difference: the sum that each of them was entitled to receive was the same, three hundred and fifty thousand four hundred and seventy-four dollars and three cents. The balances due from the South Carolina ex-deposit banks, at the commencement of the session, were one hundred and eleven thousand five hundred and ninety dollars and one cent; those from the banks of Georgia were one hundred and seventy-two thousand two hundred and sixty-nine dollars and sixty-nine cents. On the 4th of this month the balances of South Carolina had increased to one hundred and twenty-five thousand four hundred and thirty-three dollars and eighty-nine cents, while those of Georgia had diminished to one hundred and nineteen thousand seven hundred and six dollars and forty-one cents. The banks of South Carolina, like those of Virginia, have enjoyed the special privilege of increasing their balances of debt, while all the rest of the old thirteen have been inexorably held to contract theirs. The increase of the South Carolina balances is not large. It discloses only a relaxation of the rigor of exactions, and was happily, simultaneous with a conciliatory settlement of old political balances here at the seat of Government, which, to those who took a good deal ahead, has furnished the materials for much speculative animadversion.

And now, sir, that we have seen how, by the postponement, which was intended to have been, and still threatens to be, the repeal of the fourth instalment, the old thirteen States have been, with the single exception of Virginia, stripped of the spoils of the public Treasury which had been allotted to them—now that we have seen how, with the same exception of Virginia, they have been, during the month of September, fleeced by Treasury drafts, like sheep in the hands of the shearer, of their remaining balances, let us look beyond the borders of the old thirteen, to that teeming mother of nations, the valley of the Mississippi, and that storehouse of embryo republics bordering on our Mediterranean sea—the Northern Lakes. We begin with the State of Alabama, geographically the first, and entitled, further, to the distinction, inasmuch as her deposit

bank is wholly the property of the State, and the debts of the bank are the debts of the State. The portion of the fourth instalment payable on the first of this month to her was, as I have already stated, two hundred and twenty-three thousand twenty-eight dollars and ninety-two cents, the same with that of the States of New Hampshire and of Vermont. But the sum which her bank at Mobile had in actual deposit, at the commencement of the present session, was one million and twenty thousand eight hundred and fifty-six dollars and twenty-six cents; and, on the 4th of this month, it was still nine hundred and six thousand three hundred and seventy-nine dollars and twenty-three cents.

The portion of the State of Mississippi of the fourth instalment was one hundred and twenty-seven thousand four hundred and forty-five dollars and ten cents, the same as that of Rhode Island. The balance due from her banks at the opening of the session, was one million seven hundred and forty-four thousand three hundred and seventy-three dollars and seventy-one cents; and on the fourth of this month they were still one million six hundred and fifty-six thousand three hundred and sixty-seven dollars and thirty-three cents.

The sum to which the State of Louisiana was entitled for the fourth instalment was one hundred and fifty-nine thousand three hundred and six dollars and thirty-seven cents. The debt of her banks at the commencement of the session, was one million four hundred and fifty thousand and twenty-three dollars and three cents; and on the fourth of October, nine hundred and eighty thousand seven hundred and forty-nine dollars and three cents.

And so it was with all the southwestern and western States, excepting Arkansas; which, having no deposit banks, could have no debt, and excepting Illinois, for what reason I know not, unless it was to secure the fidelity of Missouri at her expense. The share of Missouri of the fourth instalment would have been one hundred and twenty-seven thousand four hundred and forty-five dollars and ten cents. The debt of the agency of the Commercial Bank of Cincinnati, at St. Louis, Missouri, at the commencement of the session, was five hundred and eighty-nine thousand three hundred and twenty-seven dollars and forty-three cents. On the fourth of October it was reduced to two hundred and thirty-nine thousand four hundred and twenty-two dollars and fifty-five cents; but there was an additional deposit in the Bank of the State of Missouri, a specie-paying bank, of one hundred and fifteen thousand eight hundred and fifty-eight dollars and four cents; making the whole sum in deposits there three hundred and fifty-five thousand two hundred and eighty dollars and sixty-nine cents. The actual deposit in that State is yet nearly three times the amount of the rightful deposit in her banks by the deposit law; but as the Bank of the State of Missouri is not one of the late deposit banks, but is one of those which has met, and will meet, all the requisitions of the Department, it is presumed that no further interest will be required of it than that provided by the deposit law, and that it will be able to pay its balances due to the Treasury without needing a delay of nine, fifteen and twenty-one months to collect them.

Kentucky and Tennessee were entitled to the same sum for the fourth instalment, 477,919 dollars and 13 cents. Neither of them loses any thing by the postponement; but their profits, by the withholding of the instalment from the northern and eastern States, are not exactly the same. Tennessee is, indeed, something of a loser by the alacrity with which the Secretary of the Treasury has withdrawn from her banks the balances due by them at the commencement of the present session. They were then 514,516 dollars and 48 cents. On the fourth of October they were reduced to 182,932 dollars and 18 cents; while those of the banks of Kentucky, which, at the commencement of the session, were 813,245 dollars and 74 cents, on the fourth of October had increased to 845,013 dollars and 31 cents. What is it that has procured this remarkable good fortune? Is it that she is a daughter of the Old Dominion, or that she has a representative superintendency in another part of this Capitol?

Ohio, too, has shared largely in this bounty of the Secretary of the Treasury, to one section of the Union at the expense of the other. Her portion of the fourth instalment, rightfully paid on the first of this month, would have been \$669,086 dollars and 78 cents. At the commencement of the present session, her banks held in deposit, without owing to them the balance of the agency at St. Louis, Missouri, one million one hundred and twenty-seven thousand nine hundred and eighty-nine dollars and fifty cents, and on the 4th of October, they still held 660,061 dollars and 98 cents—still three hundred thousand dollars beyond her rightful instalment. Can we wonder that most of her representatives have been willing to postpone it? There is, however, one consolation, which is, that we have the warrant of the members from that State that all their banks are safe, sound, solvent, and able to pay all their balances in reasonable time, though it is admitted that their specie is at a discount of from ten to fourteen per cent.

Then, again, Indiana was entitled to receive for her fourth instalment 588,761 dollars and 48 cents. At the commencement of the session her banks had in deposit seven hundred and forty-three thousand one hundred and twenty-nine dollars and sixty-three cents; and on the 4th of October they were 660,723 dollars and 51 cents.

As to Illinois, I think the Secretary must have mistaken her for a New England State. She has at least the same step-mother's fate. She was entitled to receive for her portion of the fourth instalment 150,306 dollars and 37 cents. The balance due from her single deposit bank was, at the commencement of the session, 39,795 dollars and 90 cents; and on the 4th of this month it was within a few hundred of the same, that is, 39,223 dollars and 51 cents.

But, lastly, Michigan is a prodigious favorite. Her portion of the fourth instalment was 95,583 dollars and 82 cents, the same as that of Delaware. But the balances due from her banks at the commencement of the session, were 998,050 dollars and 81 cents; on the 4th of October they were still 882,994 dollars and 15 cents.

When the Secretary of the Treasury, in his report to Congress, of the 31 of January last, announced the amount of the surplus in the Treasury two days before, and the proportional sums in which it was to be deposited among the several States, he intimated no inconsiderable doubt whether Michigan was entitled to any proportion of the deposit at all, and he declared her portion for the final decision of Congress upon her right. Harshly, indeed, had Michigan been treated in the terms prescribed for her admission into the Union. I had fought her battles, and maintained her rights upon this floor, till she deserted her own banners. I had raised my voice to claim justice

in her behalf till she accepted, however reluctantly, an equivalent. While her fate was pending, this rod was held over her head by the Secretary of the Treasury, as if her right to the deposit of her portion, among her sisters, of the public treasure, was to be purchased by her unconditional submission to the most humiliating terms prescribed by power, forgetful of right. Sir, she did submit, and accepted the proffered equivalent; that was her concern, not mine. But did that equivalent still not heal the wound that had been inflicted upon her; and is this gushing torrent of the public moneys poured out at her feet, as the gorgeous East showers upon her kings barbaric pearls and gold; was this profusion of the public funds substituted for the stingy doubt whether she was entitled to receive of the public deposits any portion whatever; was it to appease her anger, to soothe her resentments, to implore her forgiveness, to court her favor? If so, there may be some excuse for the partiality; a tarnished atonement for a pure tribute that was due.

Sir, we have gone through, with a few exceptions, the detail of this comparative statement between the amount of deposits which the law had prescribed should be committed to each of the States of the Union, and the amount of deposits which the Secretary of the Treasury had actually made among the same States when the fourth instalment should have been paid. Such is the detail; and was ever such a monstrous scene of partiality and inequality beheld among men? The late President of the United States had made it a charge against the deposit law of the 23d of June, 1836, which he himself had signed, that the principle of its apportionment was a perfectly equal. I admit that it was not so: an apportionment according to the representation of the people in this House would have been more equal as well as more favorable to the Commonwealth, a part of whose people I have the honor to represent. But the apportionment according to the number of electoral votes was more favorable to the small and to the new States, and I thought there were considerations of equity, and even of justice, to sanction this, which I trusted my constituents would approve, although it might diminish to some extent their own portion. I said so at the time on this floor, and accordingly voted for the bill. But if there was inequality in that apportionment, in the name of the Heavenly Balance, what is there in this? Look at this tabular statement; take the fifteen Northern States—that is, the old thirteen, with the addition of Maine and Vermont, which in the revolutionary times composed a part of them; take them on one side, and the ten new Southern and Western States on the other, and what a comparison have we?

By the deposit act of 26th June, 1836, the fifteen northern, being the thirteen original, States were, on the first day of this month, entitled to receive in deposit - \$6,467,838 92  
The ten new Southern and Western States were by the same act entitled to receive - 2,399,376 07

Making in the whole - 9,867,214 99  
On the 4th day of September, 1837, the balances of what the Secretary of the Treasury had actually deposited in the fifteen Northern States were - 3,204,002 91  
He at the same time had deposited in the ten Southern and Western States - 9,071,299 76

Making in the whole - 12,275,302 67  
And on the first of October, the day when the fourth instalment was by the law required to be paid to all, how stood the account?  
In the 15 Northern States, which by the law should have received \$6,467,214 99, there were towards paying it, \$3,204,002 91 and no more.

While in the ten Southern and Western States, entitled by the law to receive only \$2,399,376 07 cents, there were actually deposited balances - 7,407,885 31

Making in the whole - 9,801,921 49  
So you see, Mr. Chairman, there were, on the first of October, and thirty thousand dollars more than enough to have paid the fourth instalment to them all—every dollar—every cent.

But observe that, through the whole month of September, although the deposit act of 23d June, 1836, was in full force, the Secretary of the Treasury continued to draw from the banks of the North to the amount of more than eight hundred thousand dollars of those balances which ought to have been applied towards the payment of the fourth instalment to the States of the North; while, at the same time, he left in the hands of the Southern and Western States nearly seven millions and a half, nearly five millions more than the fourth instalment which they were entitled to receive.

And, throughout all these transactions, is it not worthy of the highest admiration to remark with what address the single State of Virginia, of the old thirteen, is the only one shielded from all inconvenience by the postponement of the instalment. The payment of the fourth instalment is not postponed for her. She has it already, and seven thousand dollars more, in her banks; and while the postponement act now puts her off as it does her Northern sisters, till the 1st of January, 1839, to receive the instalment, this act gives her an average of precisely the same time to pay the balances already in her banks—and without interest, if the amendment of the gentleman from Louisiana, (Mr. Johnson) to the exclusion of that of the gentleman from New York, (Mr. Loomis) should prevail.

And is it expected, Mr. Chairman, that the people of the fourteen Northern States (the voice of Virginia being hushed with a sugar plum) will put up with this prodigy of fiscal invention? Is it expected that they will hail with shouts of hosanna this expunging of their fourth instalment, this evanescence of their funds from their treasuries; that they are to be humbugged out of their vested rights by a bowl of frenzy against Nicholas Biddle and the Pennsylvania Bank of the United States? That they are to be mystified out of their moneys and out of their senses, by a bare fallow against all Bank and State? It may be so; but it shall not be with my consent. Here are fifteen, or rather fourteen, creditor States, and ten debtor States, as my friend and colleague, (Mr. Lincoln) has justly denominated them—made so by the Secretary of the Treasury—made so by an unwarrantable transfer of the funds devoted to the payment of the fourth instalment. The ten debtor States have received not only their own portion of the fourth instalment, but the whole portion of the fourteen creditor States. And you are now passing two laws—one to withhold from the fourteen creditor States the moneys which you had solemnly promised to deposit with them; and the other to

authorize the debtor States, not only to retain the fourth instalment promised them, and which they have received, but to keep for nine, fifteen, and twenty-one months, the fourth instalment due to their creditor sister States. Such is unquestionably, such will be, under these two acts, their relative condition towards each other. By the fiscal incantations of the Secretary of the Treasury, consummated by these two bills, reeking from his Department, the State of Mississippi is indebted to the six New England States in the sum of nearly one million and a half of dollars; the State of Louisiana is indebted to the State of Pennsylvania nearly eight hundred thousand dollars; the State of Alabama owes to the State of New York from six to seven hundred thousand dollars; the State of Ohio owes to the State of North Carolina three hundred thousand dollars; and the whole ten Southern and Western States are indebted to the fourteen Northern and Atlantic States the whole of the fourth instalment, which they were by law entitled to receive. The postponement law has no operation in the ten debtor States; they have received in advance not only their own fourth instalment, but that of all the others; and so unequivocally are the ten States indebted to the fourteen, that, if the same transactions had happened between individuals, there is no question that the fourteen could recover, by process of law, their fourth instalment, by the common action for moneys had and received to their use.

And let me now inquire why the Secretary of the Treasury has not seen fit to account for this most extraordinary state of things in his annual, or in any other report to this House. I have asked, why, armed as he was with the specie circular of 11th July, 1836, from the very passage of the deposit act—why, notified as he was from that time that he would be required to have in the fifteen original States, in deposit on the 1st of October, 1837, a sum of six millions and a half of dollars, in readiness to pay the fourth instalment to those States, he had, in fact, on that day, within those States, less than two millions and a half of dollars—four millions less than was required for the fulfilment of the promise and the redemption of the pledge of the public faith to those States by the deposit act. I have inquired why, on that same 1st of October, he had hoarded up in the ten Southernmost and Western States, armed as he had been with the specie circular, seven millions and a half of dollars, when those ten States were entitled to receive, for the fourth instalment, less than three millions of dollars. The excess hoarded up in the ten favored States was four millions and a half. The deficit in the fourteen despoiled States was four millions. Had the whole sum required for the payment of the fourth instalment been deposited in the banks, where it ought to have been, the instalment would have been paid to the last dollar, and half a million of surplus would still have remained in deposit to the credit of the Treasurer of the United States in the extreme South and the West.

Mr. Chairman, if there be any duty more sacredly incumbent upon the Executive Government of the United States than all the rest, it is, in the execution of the laws, to render equal and impartial justice to the people of all the States. The vitals of the Union are there: legislative partialities in favor of one portion of the Union at the expense of another, if any such should creep in, will never be of long duration. The established equality of representation of the people in this House, and of the States in the other, will soon correct any deviation from the golden rule of right, upon which the obstinacy of party spirit, or the undue influence of individual talent or popularity, may occasionally infringe. The pendulum will range alternately to the right hand and to the left, but will return from short and equal distances to the centre. But if a President of the United States, in the administration of his official trust, divides the people under his care into a best and worst part of the population—if the father of the land has in the common family one set of children favorites, and another set of children castaways—if he divides the people into a favored and an unfavored class, or into a privileged and a despised class, and for the democracy of numbers, a part for the whole—if a Jesuitical and sophistical axiom that the end of good government is the greatest good of the greatest number, without regard to the equal rights of the smallest number, I say if these transatlantic, spurious, and heretical creeds of late years are to be substituted for the primitive faith and maidenly rights of the Declaration of Independence, the days of our Union itself are numbered. The people of no one part of this nation will submit, for any length of time, to be the thralls or the dupes of another portion.

What could have been the motive for this array of the three geographical divisions of the Union against each other as debtor and creditor States, with that most extraordinary exception of the State of Virginia, is yet to be, and I hope at the next session of Congress will be explained. If the demon of disunion himself had invented and inspired it as an experiment, to excite heart-burnings, ill-will, and hatred between the members of the family, he could not have contrived a device of more odious ingenuity. I had supposed that this enormous accumulation of funds in the extreme South and West had been one of the fruits of the specie circular. But then where was the specie? It was to be supposed that the circular had at least produced that; and what has become of it? It has all vanished; or what is left of it is detained in the vaults of the same deposit banks, which yet refuse to pay in specie the drafts of the Treasury Department upon them.

These accumulations in the banks of the South and the West are the more unaccountable, inasmuch as on the 4th of July, 1836, an act of Congress supplementary to the deposit act was passed, expressly authorizing the Secretary of the Treasury to make transfers from the banks in one State to the banks in another, whenever such transfers might be required in order to prevent large and inconvenient accumulations in particular places, or in order to produce a due equality and just proportion, according to the provisions of the said act. Here was a law expressly made to prevent accumulations, to restore proportions; and no small part of the Secretary's annual report in December, 1836, consists in detailing the laborious fidelity with which he had carried that supplementary act into execution. What a commentary upon that law and its execution is my tabular statement, the act for postponing the fourth instalment, and this bill now before the committee.

That the transfers might have been made with perfect ease, and the balances in the southern and western banks reduced, even after the suspension of specie payments, I will now undertake to prove.

It will be recollected that the deposits of the public moneys were removed from the Bank of the United States towards the close of the year 1833. It will also be remembered that this was precisely the time of the extinction of the national debt. Until that time there could be no considerable accumulation of public

moneys in deposits, because, whenever any surplus occurred, it was immediately applied by the commissioneers of the sinking fund to the purchase of the public debt. The irresponsible agents behind the scenes, who instigated the removal of the deposits, selected with instinctive sagacity their time. They had other passions to gratify besides their vindictive malignity. They saw the uses to be made of large and long continued surpluses, and that the moneys of the nation might be lavished for the conjoint and united prodigality of political plunder and private speculation. That they might not want the countenance of the administration in this laudable pursuit, the Secretary of the Treasury spurred them to it with the eagerness of a huntsman panting for his prey.

"The depositors of the public money," said the Secretary of the Treasury to the president of the branch of the Bank of the State of Alabama at Mobile, in his letter selecting that bank as one of the new depositories, "will enable you to afford increased facilities to the commercial and other classes of the community, and the Department anticipates from you the adoption of such a course respecting your accommodations as will prove acceptable to the people and safe to the Government."

The Branch of the Bank of the State of Alabama at Mobile had been chartered in December, 1832. Its capital of two millions of dollars consists of the proceeds of sales of the bonds of the State, irredeemable for thirty years. Its 14 directors are all annually chosen by the Legislature. There is no penalty prescribed for their suspension of specie payments, but the faith of the State is pledged for the final payment of their liabilities. This bank, in October, 1833, was selected as one of the depositories of the public funds, instead of the Branch of the United States Bank at Mobile.

On the 1st day of October, 1833, there were deposited in the Bank of the United States \$6,475 4 5 82, which had been accumulating from the first quarter of the year, some small fragments of public debt still remaining to be paid, but not enough to arrest the tide of the public revenue flowing into the Treasury.

On the 1st of January, 1834, this sum had been reduced to less than one million of dollars, and in the mean time the Branch of the State Bank of Alabama had become a depository for \$231,614 35;

which sum continued increasing from quarter to quarter, with one exception, till April, 1835, when the deposit in the State Branch Bank of Alabama, at Mobile, was \$1,309,738 65. Since which time, that is, for more than two years before the suspension of specie payments, there has been in that bank a permanent average deposit of twelve hundred thousand dollars—never reduced so low as \$900,000, and once swelling to upwards of sixteen hundred thousand dollars—little short of the whole capital of the bank.

I have been desirous of ascertaining, and shall be obliged to any of the members, especially from the States of Alabama, Louisiana, or Mississippi, if they can inform me what were the semi-annual dividends of the deposit banks in those States, from the time when they became depositories of the public moneys until their suspension of specie payments; but this is a secret. On the 3d of January last, a resolution of this House called on the Secretary of the Treasury for this as well as other information, if within his power; but on the 12th of that month he reported that it was not within his power. It seems that the amount of dividends declared, of surpluses retained, and of contingent funds reserved, is not understood to be a part of their condition, of which they are required to give account from time to time to the Secretary of the Treasury. He says that by none of the agreements made with them by him either before or since the deposit act of the 23d of June, 1836, has it ever been stipulated that they should furnish this specific information, and that they have not furnished it. Sir, it was precisely the most important of all possible information to show their actual condition; and the omission to call for it would be inexcusable, but for the reason pleaded by the Secretary, that it was not required by law. The omission was the fault of the law, and not of the Secretary, and yet it would have been just and judicious if he had required it. There can be no honest reason for the banks to refuse it, and it would now be the best of all evidence to show what profit was derived by those banks from the deposits. We must, therefore, be content with an estimate; and a permanent deposit of twelve hundred thousand dollars for more than two years may be fairly estimated at ten per cent. or one hundred and twenty thousand dollars a year; and as it is to be continued for nine, fifteen, and twenty-one months longer, the whole sum is in such deposit equivalent to a gratuity to the State of Alabama of four hundred thousand dollars at the expense of her northern sisters.

Mr. ADAMS was proceeding to comment on this statement, when

Mr. CAMBRELENG rose, and appealed to him to permit the question to be taken on the bill before the committee. He thought the gentleman was going to talk all night, (he said,) and it was late.

Mr. ADAMS was sorry the gentleman from New York did not relish his remarks.

Mr. CAMBRELENG assured the gentleman from Massachusetts that he had not listened to a single word he had said.

Mr. ADAMS pursued his remarks. He argued from the facts he had been commenting on, that the accumulation of the public moneys in certain States had been permitted for political effect, and that this had been used as an argument with gentlemen from those States, to induce them to sustain other measures of the administration; and was proceeding on this view of the subject, by adducing facts, when he was called to order by

The CHAIRMAN, who intimated that he was wandering from the question immediately before the Committee of the Whole.

Mr. ADAMS observed that this was the first time any gentleman had been called to order in Committee of the Whole by the Chairman, for not confining himself strictly to the question immediately before the committee. It would be impossible to enumerate the different subjects which had been discussed under questions to which they had no relevancy; and he gave, as an instance, the brilliant speech of the gentleman from South Carolina, (Mr. Legare.) The amendment of a gentleman from Georgia had been under the consideration of the committee, when that gentleman had delivered a philosophical, historical, admirable discourse upon finance, to which the House had listened with great pleasure, but which did not in the remotest manner relate to the particular motion before the committee, and had not been interrupted. The chairman of the Committee of Ways and Means himself had made a speech the night before upon the same amendment of the gentleman from Georgia, which gave rise to a dialogue between himself

and a colleague, (Mr. Hoffman,) and which induced a dispute which had, doubtless, been settled to the entire satisfaction of both those gentlemen. It was a skirmish instigated by the private personal enmities and passions of the chairman of the Committee of Ways and Means himself, and he was not restrained by the Chair from wandering from the subject of debate; while he (Mr. Adams) had been pronounced out of order for connecting with the subject before the committee such allusions to another bill as tended to show the influence that the manner in which that bill passed would have upon his vote. [Cries from the House, "Go on!" "Go on!"]

From the time of the passage of the deposit act of June, 1835, it was obviously the duty of the Secretary of the Treasury to withdraw from the bank at Mobile all superfluous deposits necessary to pay the whole of the four instalments to which other States were entitled. The supplementary act of July 4, 1836, made it most emphatically his duty to do so. The Specie circular, if it had any practical effect at all, by pouring specie largely into that bank, afforded every facility necessary for that operation. In his annual report of December, 1836, he recognises that duty, and enlarges with no equivocal self-complacency upon his vigorous assiduity in performing it. And what has he done?

In the fourth quarter of 1836, there was in deposit of public funds in that bank \$1,000,246 30. The four instalments of the deposits payable to the State of Alabama in the year 1837, amounted to \$922,115 71.

What had the Secretary of the Treasury to do but to require of that bank to credit the Treasurer of the United States with the four instalments due to the State of Alabama as they became payable, and there would have yet remained upwards of one hundred thousand dollars in that bank to be accounted for. That the Secretary himself understood this to be his duty, is apparent from the fact which appears in his report of the 25th of September last to this House, that he did actually so pay off the first second and third instalments, amounting to \$669,357 50.

Who, then, could have imagined that, after all these payments, when Congress came together on the fourth of last month, the debt of the Branch Bank of the State of Alabama, at Mobile, was still \$1,008,836 27? That from the fourth quarter of 1836, in eleven months, and after a set-off of nearly seven hundred thousand dollars, the debt of the bank had not been reduced so much as forty thousand dollars? It can possibly have happened only by the Secretary's permitting the funds of the nation, devoted to other objects, to flow into this bank as fast as they went out by the payment of the three instalments.

I find in the reports of the Secretary of the Treasury no correspondence with the Branch Bank of the State of Alabama, at Mobile, concerning the payment of the instalments to the State, nor respecting the warrant for two hundred and thirteen thousand nine hundred and thirty-two dollars and fifty-nine cents, entered in the column of not yet paid, though payable. I have selected this Bank of the State of Alabama, at Mobile, as one of those, the relations of the Treasury with which are marked with a wilderness of confusion. The case of the Agricultural Bank at Natchez is still more extraordinary. That bank got the start of all the rest in the suspension of payments, not merely of specie, but of others. A Treasury draft upon it, which the holder of it was willing to receive in decent rags, was yet protested for non-payment on the second of May last. By the last return of the Treasurer's accounts, there was a balance still due from that bank of upwards of eight hundred thousand dollars. Their correspondence with the Secretary of the Treasury, communicated with his report of 25th September, is truly edifying. The whole correspondence with the late deposit banks in that document, is scarcely less instructive. The Secretaries of the Treasury, since the removal of the deposits from the Bank of the United States and its branches, year after year, have lectured Congress upon the transcendent wisdom of that measure; and the present Secretary, in his annual panegyric upon the deposit State banks, informed us, I think, that this measure was no longer an experiment. Its success was unqualified: its triumph was complete. In looking over the Secretary's fiscal reports to Congress, and especially the correspondence with the deposit banks, I could not but wish that this correspondence could be printed in parallel columns with the correspondence between the former Secretaries of the Treasury and the President of the Bank of the United States, from 1816 to 1833, particularly relating to the payment of large sums for the public, in short time, or on sudden emergencies. With the Bank of the United States, when the former Secretaries of the Treasury had large sums to pay, to transfer, or to borrow, they used no circumlocutions, made no timid inquiries when and how it would suit their convenience, offered no apologies for drawing upon them beyond their means; no promises that he would not for an indefinite time draw upon them again; nor did the president of that bank ever answer heavy drafts or warrants from the Treasury with excuses and entreaties and excuses, and discourses about the pressure of the times, the multitude of bankruptcies, the want of long notices before his drafts; and still less with inquiries whether he could not suspend them from March till the next January, or with proposals to borrow a million of dollars from an appropriation for an Indian treaty, and pay off the Indians with rags, because they preferred them.

The result of all this, sir, has been the twin evils with which this session of Congress began, and is to close: one to postpone for fifteen months the payment of the fourth instalment of the deposit act of 23d June, 1836, to sixteen States of this Union, and the other to authorize the ten other States to retain in their banks, effectively, for the same term of time, not only the fourth instalment which they were themselves entitled to receive, but the portion of the sixteen others, which the Secretary of the Treasury has suffered to flow into their banks, and which their banks refuse to pay. As the immediate representative of a part of the people of one of the plundered States, I have felt it my duty to expose this system of measures in both its parts, and even to repeat it in these last hours of session to expose it in all its nakedness. If the chairman of the Committee of Ways and Means will not hear me, I hope that his constituents and mine will. I have laid the whole system bare to the bone. The question of further postponement of the fourth instalment will come up again at the next or the succeeding session of Congress. I am determined that whatever pretences may then be alleged for that postponement, or for the total repeal which even now was intended and too thinly disguised, not a shadow of the pretence shall be left that the fourth instalment could not have been paid without a new tax upon the people. Every man woman, and child, conversant with the four rules of arithmetic, who will look at this my tabular statement, will see that when this session of Congress commenced, there were in the deposit banks of the ten South-

most and Western States balances due to the Treasury sufficient not only to pay off the whole fourth instalment to the whole twenty-six States, but to leave still balances of millions for the lawful expenses of the nation; that even on the 1st of October, when the instalment should have been paid, and when, after the session commenced, more than two millions and a half had been extracted from those balances, there was still left of them an amount adequate to pay the whole fourth instalment, and to leave half a million of surplus for other exigencies of the Treasury.

Mr. Chairman, when I first observed in the statement annexed to the report of the Secretary of the Treasury at the commencement of the session, the enormous disproportion between the balances due from the Northern and those from the most Southern and Western banks, I attributed this pernicious engorgement of the public funds, the proximate cause of the ostensible necessity for postponing the payment of the fourth instalment, to the far-famed specie circular. By that document, all the receivers of public moneys were required to annex to their monthly returns to the Treasury Department the amount of gold and silver received by them respectively, and each deposit bank was required to annex to every certificate given upon a deposit of money, the proportions of it actually paid in gold, in silver, and bank notes. The object of this order could be no other than to keep the department at all times apprized of the aggregate amount of the gold and silver which had been received, and where it was all deposited. There was no use in requiring the returns, unless the returns as they came in were continually digested by some subordinate clerk of the Department, to keep the Secretary constantly advised of the aggregate amounts, and where they were to be found. This information was precisely what I wanted, and the House, at my motion, on the 30th of last month, adopted a resolution calling upon the Secretary of the Treasury for copies of these returns required by the Specie circular. I hold in my hand the report of the Secretary in answer to the call. It is, that the returns and certificates will amount in the aggregate to near one thousand five hundred documents, and that it would not be in the power of the Department, without a great addition to its clerical force, to have them all copied in season to be submitted during the present session of Congress.

The purpose of the call must have been perfectly obvious to the Secretary. It was a summary abstract of the amount of gold and silver received by virtue of the Specie circular; the names of the officers by whom it had been received, and of the banks in which it had been deposited. If he had not, as I think he should have, such an abstract constantly before him, he surely has not in the Department a thousand dollar clerk, who could not have made it out from his fifteen hundred documents in two days. But he seems to have thought that this labor could be more easily performed by a deliberative assembly of two hundred and forty members in session, than by one of his clerks, for he adds, that "if the information contained in them is wanted at an early day, the Department (clerks and all) would respectfully propose, at once, to lay the original returns and certificates of deposits before the House for examination, should that course meet with its approbation."

Mr. Chairman, the Department might as respectfully have proposed to send up to this House the whole mass of its records and files, as these fifteen hundred original documents. I reminded me of a caricature which, in my youthful days, more than half a century ago, amused me in London. It was on the occasion of Charles Fox's famous India bill, which proposed to take from the East India Company the government of that country, and transfer it to commissioners appointed by Parliament. It produced a prodigious excitement throughout the kingdom, and ended in the total overthrow of the coalition ministry of Fox and North. There was a large majority for it in the House of Commons, but it was detested by the King, and excessively odious as a violation of chartered rights to the people. I was then in London, and remember seeing, at the print shops, a caricature of Charles Fox, with the immense pile of buildings called the India House, in Leadenhall street, upon his back, staggering up with it to Saint Stephen's chapel. The respectful proposal of the Department reminds me of this caricature. Methinks I see the Secretary with the Department on his back, upheaving its vastness to mount the Capitol, and break its way into this Hall. I should be sorry to give him the trouble, and prefer to lack the desired information.

Mr. Chairman, I can not vote for this bill in any shape; not that I am unwilling to afford relief to the people of the States where these delinquent banks are situated, or even to grant every reasonable indulgence of time to the banks themselves. Rash and reckless as the directors of these banks must have been to involve themselves and their institutions in such an enormous mass of debt, upon the credit of deposits of funds belonging to the nation, as to be unable, without a letter of license, for years, to restore the trust, as they had pledged themselves to do, on demand, I hold this Government, and especially the last administration, nor can I except the present, swamped in a far deeper responsibility, for the delinquency of these banks, than the banks themselves. "Lead us not into temptation," is the daily prayer which the Founder of our religion has taught frail and feeble man to address to his Maker—and it is founded upon the principle that from the constitution of our nature, the leader into temptation is responsible for the fall of him who is led. Under whatever form of government the human being is associated, the most sacred duty of the ruler is not to lead the subject of his rule into temptation. The administration which wilfully and wantonly took away the custody of the public moneys from the institution to which it had been committed by law, shivered the trust into tatters, and thus encouraged it, in broken fragments, to irresponsible State banks, committed the double wrong of robbing the nation in violation of its right, and of leading its new trustees into temptation, and as if that was not enough, it prompted, it philtered them into seduction. I can not have the heart to visit with severe punishment the weakness of the victim, while the tempter is beyond the reach of my power, and still glories in his shame; while the successor to his authority still clings to the leeks and onions of Egypt, and is not ashamed to tell this suffering nation that the people of Europe—the people of England—are afflicted at this time with the same calamity, and springing from the same causes, as themselves.

I feel with deep sensibility the distresses of the people of Alabama, of Louisiana, of Mississippi, and of the whole debtor States, and can have no possible animosity against their banks; but my own immediate constituents are suffering still more intensely from the same heartless experiment—more intensely, because the Department, smooth as the down of thistle to the Southern and Western banks, has been sharp as the thistle

itself to the banks of the North. The only reason, the only necessity, for withholding the fourth instalment from the fourteen creditor States is to postpone the payment of the balances due by the banks of the ten debtor States. To this I can not consent.

Nor is my opposition to these two bills prompted by the mere consideration that they are unwise and unjust in themselves, but that they are the pioneers of a system of policy to pervade this commencing administration throughout its whole career—a system of sacrificing the rights and interests, as well as the feelings, of the North, to the overwhelming influence of southern theories, southern interests, and southern domination. This is but the first step of a long line of march; and the preposterous divorce of Bank and State, so delicious to the taste, and so cheering to the hopes, of nullification, is undoubtedly the second. This measure, too absurd for serious reasoning, too alarming for scornful derision, so absurd that it was impossible to believe it proposed with sincerity, so terrible to the future of this nation, if really sincere, after floating triumphantly, in its passage from the Department, through the Senate into this House, has this day, by a timid and almost despairing resistance, been deferred till the winter session, for the scary and the wavering to go home and feel the pulse of the democracy of numbers. With the winter session it will come back, and nullification, under the rankest exhalation of whose pestilential breath it poured forth its first fetid infusions into this Hall, will again make her harpy feast upon its officials. That it will ever receive the sanction of this House, may a merciful Heaven forbid! In the interval, at least, I will cherish the hope of better things, and catch every gleam of brighter prospects to illuminate the auspices of the coming year.

## NOTE.

Immediately after Mr. Adams concluded, Mr. Cambreleng moved the Committee of the Whole on the state of the Union to lay aside this bill, without taking the question upon either of the amendments proposed by Mr. Loomis of New York, or by Mr. Johnson of Louisiana, and to take up the general appropriation bill. This was accordingly done. That bill was debated between two and three hours, and Mr. Cambreleng moved it should be reported to the House. It was so reported, and the chairman (Mr. Howard) added, that the committee had had the bill for adjusting the balances remaining due by the late deposit banks under consideration, and had come to no resolution thereon. The appropriation bill was then debated, amended, and passed in the House. Just before the House went into Committee of the Whole on the state of the Union again, Mr. Smith of Maine, a member of the Committee of Ways and Means, moved to discharge the Committee of the Whole from the further consideration of the bill for adjusting the balances of the banks. This movement had the effect of stifling all further debate in committee, not only on the bill, but on the amendments proposed by Mr. Johnson and by Mr. Loomis. It was made by Mr. Smith, doubtless because Mr. Cambreleng was aware that, if made by him, it would have been opposed; the committee having taken no order upon the proposed amendments. The motion of Mr. Smith, probably not understood by the House, passed without opposition. The House went again into Committee of the Whole on the state of the Union; reported, without debate, a bill appropriating one million six hundred thousand dollars for the suppression of Indian hostilities. The House passed it with equal expedition, and then the bill for settling the balances of the banks was called up again. Mr. Johnson forthwith presented his amendment, which was to strike out four, six, and nine months, the time allowed by the bill as it came from the Senate, and insert 1st July, 1838, 1st January, and 1st of July, 1839, for the times of payment by the banks of their balances. This amendment was at once adopted, and Mr. Cambreleng instantly moved the previous question, thereby depriving Mr. Loomis of the opportunity of moving his amendment in the House: which amendment was, that the banks should pay interest at the rate of four per cent. per annum upon all balances remaining in deposit with them. By this series of manoeuvres, the promise made by Mr. Cambreleng to the members of the debtor States, when the postponement bill was laboring in its passage, that if that bill should pass, a liberal indulgence would be extended to their banks, was faithfully, as to them, performed. The bill was thus driven through the House, with the time for settling the balances of the banks extended, and without even requiring interest of them for the time of defalcation. The manner in which Mr. Arphaed Loomis's amendment was extruded from the consideration of the House was peculiarly remarkable. The bill soon came back from the Senate, agreeing to the amendment of the House, (extending the time for settlement) with an amendment, as follows:

"And the default mentioned in this act, on which interest is to commence at the rate of six per cent. shall be understood to be the neglect or omission of said banks, or any of them, to answer the drafts or requisitions of the Secretary of the Treasury, made on them according to the provisions of the first section of this act."

When this amendment came back to the House it was near midnight, and there was no quorum of the House present. Mr. Howard of Maryland moved that the House should *non-concur* with the amendment of the Senate, with a view to a conference between the two houses. The question was taken on Mr. Howard's motion, when there appeared 61 for *non-concurring*, and 22 against it. No quorum. Mr. Thomas of Maryland observing that, as it appeared from the vote just taken, there was a large majority of the members present, and a majority of a quorum for *non-concurring* with the amendment of the Senate, a vote should now be taken, and if a majority of a quorum should vote for *non-concurrence*, it should be considered as a vote of the House, and it would leave this question just where it was before many of the members had withdrawn from the House.

To this Mr. Adams objected, and at one o'clock, Sunday morning, moved to adjourn, which a majority of the members present refused. The same motion was afterwards made by another member, and the question being taken by yeas and nays, there appeared 38 for, and 50 against, adjournment.

A call of the House was moved, but it was apparent that in less than four hours a quorum could not have been collected; and at a quarter before two in the morning, the House adjourned to meet again at eight o'clock Monday morning.

At that time the rules prescribing the order of business were suspended at the motion of Mr. Cambreleng. The House took up the amendment of the Senate; and instead of the question moved by Mr. Howard on Saturday night, that the House should *non-concur* with that amendment, and upon which the

ote had stood 61 to 22, and upon which Mr. Thomas had urged that a majority of a quorum had voted to *non-concur*—instead of this, the motion now substituted was to *concur* with the amendment of the Senate.

Mr. Adams repeated his objections to the bill; to the promise made by the chairman of the Committee of Ways and Means, on the 29th of September, at the passage of the deposit postponement bill, that further indulgence should be extended to the delinquent banks, if the postponement bill should pass; and to the indecent manner, as he thought, in which that promise was performed by the proceedings on Saturday night. While making these objections, Mr. Adams was repeatedly called to order by the chairman of the Committee of Ways and Means, for referring to what had passed in Committee of the Whole, and the Speaker twice decided that the deposit postponement bill, not being now before the House, could not be discussed at this time. Two members from the debtor States, Mr. Garland of Louisiana, and Mr. Chapman of Alabama, called upon Mr. Adams to say whether, by charging the chairman of the Committee of Ways and Means with a bargain of further indulgence to the delinquent banks, he meant to allude to them. Mr. Adams disclaimed all intention of alluding to any individual. He considered the promise of the chairman of the Committee of Ways and Means as a pledge given to the members of the debtor States to purchase their votes for the postponement bill; and the transactions of Saturday night as a redemption of that pledge. Mr. Garland earnestly entreated the House to permit him to answer what he considered as a most unjustifiable attack of Mr. Adams upon the members of Louisiana, but the House, that is, the majority, would not listen to him. Nothing was more remote from Mr. Adams's intentions than an attack upon the members from Louisiana, both of whom he highly and sincerely respects and esteems. He deeply regretted that the House refused to hear Mr. Garland, not only because it was Mr. Garland's desire to be heard, but because he knew that if the House would hear him, it would give Mr. Adams the right and the opportunity, in reply, to unfold, at full length, the two transactions of the evenings of the 29th of September, and of the 14th of October—of the pledge given, and the pledge redeemed. These were memorable days in the history of this country, and chiefly memorable as characteristic examples of the means to be used by this incipient administration to influence legislative action. The States by Executive agency, had already been divided into two classes, of debtor and creditor, and now the creditor States were to be deprived of their fourth instalment by the votes of the members from the debtor States.

The debate of the 19th of September has never been fully reported. The speeches of Mr. Dawson, of Georgia, and of Mr. Sampson Mason, of Ohio, signifying the bargain at the very moment when it was concluded in the face of the House, have been suppressed.

The bill to postpone, till further order of Congress, that is, for ever, the fourth instalment of the deposits, as it came from the Senate, had been forced to the third reading by a vote of 119 to 117. This vote had been reconsidered at the motion of Mr. Pickens, of South Carolina, to let in an amendment proposed by him, limiting the postponement to the 1st of January, 1839, which was found indispensable to secure the passage of the bill. It had then, by the application of the previous question, been again forced to the third reading by the meagre majority of 118 to 106 votes.

Mr. Garland, of Louisiana, then moved that the further consideration of that bill should be postponed to the ensuing Tuesday, to take up, in the mean time, and pass the bill for adjusting the balances with the delinquent banks, on the avowed plea that the bill ought not to be permitted to pass till the banks of the debtor States should have the pledge of a longer indulgence of time than they would have by the settlement bill, as it had come from the Senate.

Mr. Cambreleng opposed the motion of Mr. Garland to postpone the postponement bill, but gave the pledge, for himself, to deal as generously with those banks as circumstances would admit; for, though no friend to the banks, yet he was willing to afford them every indulgence for the sake of the people who were indebted to them.

So says the report of his remarks in the Globe, very prudently condensing in a few words what was much more largely said in the House. The Globe adds: "Mr. Dawson and Mr. Mason, of Ohio, designated this as a bargain between the two gentlemen," and made some strictures thereon, and then again very prudently suppresses those strictures.

Mr. Dawson and Mr. Mason did not designate it as a bargain between the two gentlemen. They designated it as a bargain tendered by the chairman of the Committee of Ways and Means to the members from the States of the most deeply indebted banks, of longer indulgence of time to those banks as an equivalent for the votes of those members to postpone the payment of the fourth instalment to the creditor States.

That this was the phenomenon designated by Mr. Dawson and Mr. Mason; and that it was the bargain actually concluded, any one may perceive who will read the remarks of Mr. Gholson, of Mississippi, which are reported at full length, and very correctly, in the Globe. No one can doubt of the bargain, after reading them.

But the consummation of the bargain was accomplished on Saturday evening, the 14th of October. The deposit postponement bill had been sledge-hammered through the House by the previous question and the votes of members from the debtor States, on the 29th of September. The promised equivalent of every indulgence to the debtor State banks was to be granted on the 14th of October, and it was done. The dexterous discharge of the Committee of the Whole on the state of the Union from the consideration of the bank settlement bill, while the amendments of Mr. Johnson of Louisiana, and of Mr. Loomis of New York, were pending; the adroitness with which the amendment of Mr. Johnson of Louisiana was then squeezed into the House, and the instantaneous start of the previous question, to cut off the amendment proposed by Mr. Loomis of New York, were exemplary specimens of legislative legendmaking; and although the final amendment of the Senate somewhat discomfited the desperate fidelity of the chairman of the Committee of Ways and Means to the redemption of his pledge, yet that untoward event was not fairly imputable to him. If he could have kept a quorum together on Saturday night, he would have *non-concurred* the amendment; and then, at a conference, the Senate would have receded from it. But Monday morning it was too late. If he had *non-concurred* then, his quorum might have chanced to slip from under him while he was holding his conference with the Senate, and so he was obliged to call upon his majority of a quorum to toe the mark again. Right about face, and vote to *concur* in that amendment, which on Saturday night they had stubbornly voted to *non-concur*.

If the chairman of the Committee of Ways and Means could get over his aversion to a discussion upon nouns, pronouns, verbs and adverbs, he might find an edifying text for a lecture upon the literary composition of statute law, in his act for the adjustment of the bank balances, as it now stands among the rolls of the Department of State, signed by the Vice President of the United States and President of the Senate, and by the Speaker of the House of Representatives, and approved by the President of the United States. Besides the absurdity in the first section, pointed out by Mr. Adams, of providing a relief for delinquent banks, by an exclusive application of it to banks not delinquent—banks which have met and shall hereafter meet all the requisitions of the Department—besides this, the last amendment of the Senate has got stowed away in a wrong place. It should have been added to the end of the bill, for it evidently refers to the last clause of the bill; but as it was presented by the Senate as an amendment to an amendment of the House, inserted in the body of the bill, the engrossing clerks seem to have thought that an amendment to an amendment must hold its location with the amendment itself, and could not be transposed. This may be a good general rule, but this case manifestly required an exception. The amendment, as it stands in the act, precedes a clause which it was undoubtedly intended to follow; and the whole section looks like a broken pane of glass, repaired by thrusting into it a worsted stocking. The whole act, taken together, forms a fine specimen of the figure of rhetoric commonly called *Calimachus*. It will puzzle the philological committee of the Secretary of the Treasury himself to give it an operative rational construction. Whatever construction he may give to it, it should ever have to pass through the ordeal of a judicial grammatical investigation, the strongest argument of the Secretary for construing it into a relief law will be to address the judges in the words of the poet—

Be to its faults a little blind,

Be to its virtues very kind,

Let all its ways be unconfin'd,

And clap the padlock—on the mind.

The report of the proceedings of the House of Representatives, on the morning of the 16th of October, in the National Intelligencer of the 18th October, is as correct as could be expected in the hurry and confusion which always attend the close of a session of Congress. There are in it, however, several mistakes, which it is necessary should be corrected. Mr. Adams did not charge the chairman of the Committee of Ways and Means with consummating a bargain with certain gentlemen from Louisiana. This mistake becomes more aggravated by the report which represents Mr. Chapman of Alabama, as saying, "I am the only other member from Louisiana." Mr. Rice Garland erroneously supposed that Mr. Adams's charge applied to the members from Louisiana, and especially to himself, because he was the member who, at the third reading of the deposit postponement bill, had moved to lay it aside until the bank settlement bill should be taken up and passed with a lengthened indulgence of time to the delinquent banks. This was the occasion of the memorable pledge of every indulgence to the delinquent banks, given by the chairman of Ways and Means—then signalled by Mr. Dawson, and Mr. Mason of Ohio—and redeemed on the evening of the 14th of October. But the bargain was not with "certain gentlemen from Louisiana," for Mr. H. Johnson voted against the deposit postponement bill, and Mr. Garland did not vote upon it at all. Neither was the bargain with Mr. Chapman, who, though he voted for the deposit postponement bill, disapproved, and it is believed, voted against the bank settlement bill. The appliance of the promise of every indulgence to the delinquent banks was to all the members from the debtor States. Their banks were the only banks that needed indulgence. The fourth instalment was not to be withheld from them: They had it already, and three times as much more of the public moneys, which should have been paid to the creditor States, and which could be withheld from them only by postponing the payment of the fourth instalment.

A third mistake in the report is that which represents Mr. Adams as saying that the bargain was pointed out at the time when it took place by a gentleman from Missouri. It was by a member from Ohio, Mr. Sampson Mason.

The following is a copy of the act as it finally passed, with the words in the first section upon which Mr. Adams commented, printed in Italics; and with the amendment of the Senate to the amendment of the House, in the second section, also printed in Italics, and enclosed within brackets:

AN ACT for adjusting the remaining claims upon the late deposit banks.

Be it enacted, &c. That the Secretary of the Treasury be, and he is hereby, authorized to continue to withdraw the public moneys now remaining in any of the former deposit banks, in a manner as gradual and convenient to the institutions as shall be consistent with the pecuniary wants of the Government, and the safety of the funds thus to be drawn; and that no further interest than that required by the deposit act of the twenty-third of June, one thousand eight hundred and thirty-six, under which those deposits were made, shall be demanded of any bank which has met, and shall hereafter meet, the requisitions of the Department. This provision shall also extend to such public moneys as may remain in any of the said banks, whether standing to the credit of the Treasurer of the United States, or of any disbursing or other public officer of the Government.

Sec. 2. And be it further enacted, That in case of neglect or refusal by any of the said banks to comply with the requisitions of the Secretary of the Treasury, as he shall make them, in conformity with the first section of this act, suits shall be instituted, where that has not already been done, to recover the amounts due to the United States, unless the defaulting bank shall forthwith cause to be executed and delivered to the Secretary of the Treasury, a bond, with security to be approved by the Solicitor of the Treasury, to pay to the United States the whole moneys due from it in three instalments. The first to be paid on the first day of July next, the second on the first day of January, eighteen hundred and thirty-nine, and the remaining instalment on the first day of July, eighteen hundred and thirty-nine: [and the default mentioned in this act, on which interest is to commence at the rate of six per cent. shall be understood to be the neglect or omission of said banks, or any of them, to answer the drafts or requisitions of the Secretary of the Treasury, made on them according to the provisions of the first section of this act:] and interest thereon at the rate of six per centum per annum, from the time of default, together with any damages which may have accrued to the United States from protests of drafts drawn upon it, or from any other consequence of its failure to fulfil its obligations to the public Treasury.

# SPEECH OF MR. HALSTEAD, OF NEW JERSEY.

*In the House of Representatives, September 23, 1837—*  
On the bill to postpone the fourth instalment of deposit with the States.

MR. HALSTEAD, of New Jersey, addressed the house as follows:

Mr. Chairman: I regret that I am compelled, at this late stage of the debate, to trespass upon the attention of this committee, while I present to their consideration some of the reasons which have operated upon my mind to induce me to withhold my assent to the passage of the bill upon your table.

Sir, I consider the passage of this bill as *unnecessary and inexpedient*; and, under these two general heads, I shall endeavor to comprise the observations I have to submit to this committee.

The friends of this bill have advocated it as necessary, upon the alleged ground of a deficiency in the Treasury to meet the current expenditures of the Government. It is incumbent on those who, in this day of calamity, would take from the People the sum of \$9,367,214 98, to prove that deficiency beyond all doubt. I have carefully read over the report of the Secretary of the Treasury; and it might seem arrogance in me to say that I understand it, after so many gentlemen in this house, older and abler than myself, confess themselves unable to comprehend it; and when the Chairman of the Committee of Ways and Means informs us that to understand Treasury reports is a science, and that he, after sixteen years' service in this house, could not understand it; but that he went to the Treasury himself, and there, from the records of the Department, made out his explanatory statement of the state of the finances, which has been laid on our tables. But so far as I do understand the report of the Secretary, it does not appear to me that there is any deficit in the public Treasury. The statement and calculations of the honorable member from Tennessee (Mr. Bell) are entirely satisfactory to my mind to prove that there is no deficit. But it will, I think, be conceded, after the various views and calculations which have been made by honorable gentlemen who have preceded me, all differing as to the amount really in the Treasury, that it is at least doubtful whether there is or is not any deficiency to meet the public expenditures. Then, sir, if a doubt rests upon this subject, that doubt ought to be solved in favor of the People. As guardians of the money of the people, when we are asked to unlock their coffers, and take out \$9,000,000, and place it in the hands of the Government, prudence, as well as true democratic principle, of which we have heard so much in the course of this debate, requires that something more than a doubtful case should be made out. The advocates of this bill appear to have taken it for granted, that if they proved the existence of a deficit in the Treasury, they had proved the necessity of passing the act. The conclusion does not follow, that they must go one step further. They must not only prove there is a deficiency in the Treasury, but they must prove that there are no other available funds within the power of the Government, to which it may resort to supply that deficiency. For if there are other sources from which to supply all deficiencies to meet the exigencies of the Government, without resorting to the fourth instalment required by law to be deposited with the States, then I cannot vote for this bill. I will, for the sake of the argument, admit that the excess of expenditures over both the receipts and the balance in the Treasury at the commencement of the year is \$5,876,565, and that \$1,000,000 more will be required for the efficient operations of the Mint; and three or four millions to answer sudden and contingent calls on the Treasury; the aggregate sum thus required by the Government for all these objects is \$10,000,000, which the Secretary tells us must be obtained either from the deposits or some other source. The question then is, cannot the Government make up this sum, without withholding from the States \$9,000,000 and upwards, to which they are entitled under the deposit act? I undertake to show that it can; and I would make up this sum from the following sources: First. It appears that there are \$5,000,000 in the hands of disbursing officers of the Government. This money is just as much within the

power of the Government as if it was in the Treasury. I see no reason why this large sum should be left in the hands of disbursing officers; it might just as well be applied to the purposes of the Government as to be lying idle in the coffers of the officers or the vaults of a bank; and \$3,000,000 of this sum, at least, may be withdrawn from their hands without any detriment to the public service. Secondly. The Government is in the possession of the bonds of the Bank of the United States to the amount of \$3,000,000. The whole of these can be sold at once, if necessary, and thus the whole deficiency can be supplied. But this is not the only source to which I would resort to supply the deficiency; for, in the third place, I would repeal some of the laws passed at the last session, making unnecessary appropriations. The President in his Message, (page 19,) accounts for the fact that the receipts of the current year fall short of the expenditures more than was anticipated, by saying that "it is to be attributed not only to the occurrence of greater pecuniary embarrassments in the business of the country than those which were then predicted, and consequently a greater diminution in the revenue, but also to the fact that the appropriations exceeded by nearly \$6,000,000 the amount which was asked for in the estimates then submitted." If the Government did not ask for these appropriations, and do not want them, surely the money appropriated to these unnecessary objects may, without any detriment to the public service, be now diverted from such unnecessary objects, and applied to the more urgent demands of the Government. The items of unnecessary appropriations made at the last session of Congress, which may be dispensed with for the present, were fully enumerated by the honorable member from Tennessee, (Mr. Bell.) They consisted of appropriations for the construction of additional Mints and machinery; for public works in this city, such as a new Patent Office and Treasury; for armories; for the armament of fortifications, arsenals, canals, equipping the militia, building vessels of war, light-houses, clearing out rivers, public roads, custom-houses, and the exploring expedition. The amount appropriated to these items is \$6,376,734. Three or four millions might be saved to the country, and taken to meet the present exigencies of the Treasury, by repealing some of these appropriations. The honorable member from South Carolina (Mr. Pickens) characterized these appropriations as not only extravagant, but many of them fantastic and useless. And, sir, in looking over the "act making appropriations for building light-houses, light-boats, beacon-lights, buoys, and dolphins," I could hardly withhold my assent to his remark; for I saw in that act appropriations for almost every variety of name and object, from "Saddleback ledge" to "Whaleback light," from "Black Boy's reef" to "Papoose Squaw point." But, among other appropriations, I found one which I thought very necessary, and which I would by no means repeal, and that was an appropriation of \$2,700 to build a light-house at Van Buren harbor. I only regret that this appropriation had not been made sooner. The light-house ought to have been erected previous to the last Presidential election. Had there been a beacon-light erected at the entrance of that harbor, the good ship United States might have avoided the perilous position she now occupies. Sir, there are shoals and sand-bars in that harbor which threaten the safety of that noble vessel and her gallant crew. There are currents and counter-currents, eddies and undertows, sunken rocks and hidden reefs, which render its navigation difficult, and still more difficult to moor a vessel in safety. I think it high time a beacon-light was erected at the entrance of that harbor. I am for running it up immediately; and I would have it so high that it should enable the crew of that gallant ship to see she is driving fast upon a lee shore; that there are breakers ahead, and that they are surrounded with rocks and with reefs on the right and on the left; that they should be enabled to see that there is no safe anchorage in Van Buren harbor; that their only safety now is to slip their cables, about ship, and crowd all sail out of that harbor, and not to drop anchor again until they can find a good Clay bottom.

But, sir, if there is a deficiency in the Treasury, if (as it is said) there is not money enough to pay this instalment, then this law is unnecessary. The argument of the honorable member from Virginia (Mr. Robertson) struck my mind with great force; "Why pass a law to postpone the payment of this fourth instalment, when, if there is no money to pay it, it is postponed as a matter of course?" If the only object of this bill was to *postpone* the payment of the fourth instalment, (as the title imports,) the argument of the honorable member would be absolutely conclusive. But, sir, that is not the object of the bill. Its title is deceptive. Let gentlemen examine the sixth line of this bill, and see what pregnant meaning lurks in the following words: "postponed *till further provision by law*." Do not gentlemen perceive that they might as well vote to take the deposits from the States at once, as to vote for a bill containing this clause? When will further provision by law be made for the distribution of these deposits? While the present incumbent of the Executive chair is at the head of the administration? No, sir. Let gentlemen read the letter of the present Executive to the honorable Sherrod Williams, (dated 8th August, 1836,) and they will there see that he is hostile to the deposit act. His language is this: "In my opinion, Congress does not possess the power, under the constitution, to raise money for distribution among the States; and if a distinction can be maintained between raising money for such purpose, and the distribution of an unexpected surplus, of which I am not satisfied, I think it ought not to be attempted without a previous amendment of the constitution, defining the authority and regulating its exercise." The present Executive will never sign a bill to make further provision by law for the distribution of the deposits; he will apply to it the exercise of his veto power. How, then, can the friends of the deposit act vote for this bill, without abandoning the hope of obtaining this fourth instalment? The honorable member from Tennessee (Mr. Bell) well said that the present measure was proposed by those who were hostile to the deposit act; and permit me to add, by way of caution to the friends of that act, "*Timeo Danaos et dona ferentes*." The proposers of this measure belong to that class of politicians who are for uniting the purse and the sword in the same hands. The gentleman from Ohio, (Mr. Duncan,) told us money was power. No administration ever understood that maxim better than the present.

Gentlemen deprecate the idea of incurring a national debt. I concur with them in that sentiment; but I do not perceive the force of its application to the present bill. If this bill passes, we are still to create a national debt. The Secretary of the Treasury tells us (in page 8 of his report) "if the fourth instalment be deferred, yet, being chiefly in the custody of banks not paying specie, it is manifest it cannot be immediately realized in funds suitable to meet existing appropriations;" and he therefore wishes to have authority to issue Treasury drafts to the amount of \$10,000,000. And the Committee of Ways and Means concur in the suggestion of the Secretary, and have introduced a bill for that object. If, then, we are to be subjected to a national debt, we may as well incur the debt for \$20,000,000, and pay the fourth instalment to the States, as to create a debt of only \$10,000,000, and withhold the fourth instalment. The odium of a national debt, if it be an odium, will exist in both cases.

But, sir, there is another objection to this bill, more formidable, to my mind, than any which I have yet urged. It is, that the passage of this bill involves a violation of national faith. For I regard the deposit act of 1836 as containing in it a proposition to the States, which proposition, when acceded to by the States, by the passage of the necessary acts for the acceptance and safe-keeping and return of the surplus money, according to the terms and requisitions of that act, became binding upon the United States, and constituted a firm and valid contract. The terms of the thirteenth section of the deposit act, and the acceptance of those terms by the Legislature of New Jersey, by the act accepting those deposits, contain all the essential elements of a contract. These are, parties able to contract; a subject-matter about which to contract;

a valid consideration, and the *aggregatio mentium* of the parties. Some gentlemen have contended that there is no contract between this Government and the States respectively; because there is no such agreement as can be enforced in a court of justice. But it is no part of the essence of a contract that it can be enforced in a court of justice. There are many contracts which cannot be enforced in a court of justice. A contract between a sovereign and a subject cannot be enforced in a court of justice, for it is a part of the royal prerogative not to be sued; the only redress of the subject is by petition. But would it not be highly derogatory to the royal dignity to evade the performance of its contracts, by sheltering itself behind the *ægis* of royal prerogative? Again, it has been said that there can be no contract between the United States and the States, in reference to the payment of this fourth instalment, because there was no consideration passing between them. The honorable member from New York (Mr. Sibley) showed, conclusively, in the very able argument which he delivered yesterday, that there was a good consideration for a contract; and that there was an actual valid contract. I will not detain the committee by reiterating his argument; and I would only add to the authorities to which he referred, the authority of the Supreme Court of the United States, in the case of *Fletcher and Peck*, and the case of the *Dartmouth College*. In the former case, it is decided that a grant of a State, in its own nature, amounts to an extinguishment of the right of the grantor, and implies a contract not to assert that right; and that it is sufficient to form a valid consideration for a contract, if it import a damage, or loss, or forbearance of benefit, or any act done, or to be done, on the part of the grantee. I am, therefore, decidedly of opinion that the United States have entered into a firm and valid contract with the several States, to pay over to them, on the first of October next, their respective portions of the surplus revenue; and that the withholding the fourth instalment would be a violation of the national faith solemnly pledged under the sanction of law. On the faith of that pledge, some of the States have actually anticipated and expended this fourth instalment; and others have made contracts based upon its reception; and it would be cruel now to disappoint them. Our pledged faith should be redeemed. I am not one of those who believe that a change in the state of the public finances will authorize a violation of national faith; on the contrary, I believe that good faith is a goddess, that ought to be worshipped at all times, and under all circumstances.

This fourth instalment has been treated by some gentlemen as a claim by the Government against the States, as if the States stood to the United States in the relation of a debtor to a creditor. It appears to me that this is not the relation in which they stand, or ought to be placed. I do not view the money divided among the States as creating a debt to the United States. I concur with the honorable member from Kentucky, (Mr. Underwood,) in believing that the States, in receiving their shares under the deposit act, only received what justly belonged to them. Much the greater proportion of that surplus was derived from the sales of the public lands—lands which were won by the States in a common cause; from a common foe, or purchased by their common treasure. And, sir, no State paid more dearly for their portion of the proceeds of the sales of the public lands, both in blood and treasure, than did the State of New Jersey, whose every field almost was fertilized, and every stream discolored, by the blood of her patriot citizens.

But, sir, even if the United States had a valid claim against the States for the immediate return of the money to which they are entitled under the deposit act, it appears to me that gentlemen present this Government in a most unfavorable attitude, when, *Shylock* like, they would have it exact the full penalty of its bond in this crisis of our public calamity, though in so doing it should cut its pound of flesh nearest to the heart of the people. Gentlemen seem to consider this Government like some ancient feudal barony, whose powerful lord, intrenched within his frowning battlements and moated ramparts, has no connexion or sympathy with the people, and hardly knows of their exist-

ence except when he wants their aid to fight his battles, or sends out his purveyors to plunder their crops. My opinion of a Government is, that the attitude which it ought to hold to the people should be rather the attitude which a parent holds to a child, or a guardian to a ward, than that of a hard-hearted creditor to his debtor, or a feudal baron to his vassal. The good of the governed is the main end and aim of all government. One of the very objects which conduces to the formation of the Constitution of the United States, is stated in the preamble to that instrument to be "to promote the welfare of the people." Such laws only should be made as will confer the greatest permanent good on the greatest number of the people. Will the passage of this act effect this object? This brings me to the consideration of the consequences which will result from the passage of this bill, and to consider the inexpediency of this bill. Will it not add greatly to the distress of the people? An honorable member from Ohio, (Mr. Duncan,) has told us that there is no distress among his constituents. I am happy, sir, to hear that the constituents of the honorable member are not suffering the distress in which some of my constituents are involved. To show to the honorable member, and to this committee, the extent of that distress in one of the cities of my native State—a city renowned throughout this country for the enterprise, activity, and intelligence of its inhabitants—I mean the city of Newark—I will read an extract from a letter recently received, which gives the following description of that once flourishing city:

"In 1836 the population of Newark was 20,736; and it is believed by citizens of intelligence and observation that at this period it does not exceed 15,000. In 1836, the number of men and women (including apprentices) engaged in mechanical employments exceeded 7,000; at the present time the number does not reach 1,500; and one-half of these receive only partial employment, barely sufficient to keep their families from starvation. During the greater portion of the summer, the number has not exceeded 400. To such an extent has the distress extended, that the city authorities have employed for several months 300 men to work on the roads, at fifty cents per day, out of the class of citizens whom the city would otherwise have been obliged to support as paupers. A once flourishing city, last year containing a population of 20,000 souls, manufacturing largely in fourteen different branches of mechanical business, full of the hum of industry and other indications of prosperity, whose business men were possessed of unlimited credit and undoubted wealth, reduced in nine months to two-thirds of its former population, its manufactories stopped, its citizens out of employment, and many of them brought to extreme want! This is sober reality. I have seen many of our most respectable mechanics hired at fifty cents per day to work on roads, who, but one year ago, were receiving from fifteen to twenty dollars per week for their labor. More than three times that number of dwelling-houses have been abandoned, and are now to let. Tenants are unable to pay; and landlords will scarcely realize sufficient in cash to meet their taxes and insurance."

Sir, this is a description of some of the distress which exists in a portion of the State which I have the honor to represent. Sir, if I could take the honorable member from Ohio, to that city, I could show him scenes of distress which would rend the heart of the most obdurate. And, sir, that distress has not been occasioned by the causes to which the President, in his message, seems to be disposed to attribute them, viz: "to the rapid growth among all classes, and especially in our great commercial towns, of luxurious habits, founded merely on fancied wealth, and detrimental alike to the industry, the resources, and the morals of our people." The people of the State of New Jersey are a temperate, industrious, and a moral people. Let not the President lay to his heart the flattering unctious, that the distress which has struck down the enterprise and prosperity of that once queen of manufacturing cities to which I have alluded, and which has paralyzed the business of the whole country, is to be attributed to the causes which he has assigned. No, sir, it is to be attributed to the

insane and ruinous experiments of the last and present Executive.

But, sir, what is to be the effect of this bill? Will it afford to the suffering people any relief? No, sir. That it will tend greatly to aggravate all the evils under which they now labor, I think perfectly demonstrable, even from the report of the Secretary of the Treasury itself. What does the tabular statement, (letter Q, page 63,) annexed to that report show us? It shows us that on the 1st of March, 1837, the whole amount of specie in the deposit banks was \$15,312,802, and the amount of discounts at the same period was \$171,287,054; and that on the 15th of August last, the amount of specie in these banks was \$10,580,413, and the amount of discounts was \$104,720,750; so that, while the specie in these banks has been diminished, in five months, \$4,712,479, the loans and discounts have been diminished \$40,689,862, or within a fraction of ten dollars to one; for every one dollar in specie which has been withdrawn from the vaults of these banks, they have been obliged to call in from their debtors ten dollars. (These deposit banks, it will be observed are generally in a better condition than other banks, having a larger proportion of specie.) Now, sir, if the progress of the reduction of loans and discounts is to go on, and to bear the same ratio to the reduction of the specie which this table exhibits, what is to be the condition of this oppressed and suffering community? These banks in order to place themselves in a condition to pay the \$12,944,666, which, on the 15th of August, was standing to the credit of the Treasurer of the United States on their books, (as appears by the same tabular statement,) would be obliged to reduce their loans and discounts to \$120,000,000. This would be grinding the people of this country to the dust.

But again: let us take another view of this subject, in reference to the circulation of these banks, as represented in this same table. On the 1st of March, 1837, their specie was \$15,312,610, and on the same day their circulation was \$44,827,595; on the 15th of August their specie was \$10,580,413, and their circulation is then reduced to \$32,626,004, a reduction of \$4,712,479 in the specie and \$12,201,591 in the circulation; so that for every one dollar of specie withdrawn from their vaults they have had to withdraw nearly three dollars from their circulation. And this is about the average which the circulation bears to the specie, as we are told by Mr. Crawford, in his celebrated report on the currency, made to this house in December, 1820. Then, sir, to enable these deposit banks to pay in specie (for nothing else will be received by the Government,) this \$12,944,666, which was due to the Treasurer of the United States on the 15th of August, from these deposit banks, they must curtail their circulation \$36,000,000. Your poor suffering patient, already in a state of complete exhaustion by your miserable quack remedies and system of depletion, for the purpose of carrying out your *Sangrado* theory, is to be subjected to the operation of the lancet until the last drop of blood is drawn from his veins.

One other remark, and I shall dismiss this topic. The specie, I have said, was on the 15th of August \$10,580,413; the amount due to the Treasurer of the United States on that day was \$12,944,666; that is, the specie in the deposit banks will fall short by \$2,444,253 of the amount due the Treasurer of the United States, (without taking into consideration the \$4,574,076 deposited therein to the credit of public officers, and who must be equally entitled to draw the specie.) Now, sir, how is this balance of \$2,444,253 to be paid? It must be drained from the people, or the banks must fail. But while the banks owe the Government \$12,944,666, they owe to private depositors \$29,492,113, and to the holders of their notes \$32,626,004, and to other banks \$25,083,891; why should the Government receive in specie the whole amount of their debt, while the other creditors of the bank receive nothing? I see no equity or propriety in such a discrimination. If banks are not able to pay all the demands against them in specie, it should be divided equally among their creditors.

But it may be said that the banks have already curtailed their discounts, for the purpose of meeting

the payment of this fourth instalment in specie. This view may, perhaps, be partially correct, and I hope it is so. But that would constitute, in my mind, a stronger objection to this bill; for I should see in that circumstance some prospect of relief to the people. I should perceive a source from which that relief might flow, which this Government appears so unable or unwilling to afford. Sir, if for every dollar in specie these banks may discount to the amount of ten dollars, as soon as it is ascertained that this \$12,944,666 is not to be withdrawn from them, they may extend their discounts to an additional extent of \$120,000,000. This sum, sir, distributed among the people in loans and discounts, would diffuse a beam of joy and gladness over the business community. Yes, sir, with one-half of this sum, those great public improvements, whose progress has been so suddenly arrested, might be recommenced and carried on to their completion. The shuttle and the loom would resume their wonted motion. The water-wheels of your factories, which are now rusting upon their axles, would again revolve under the propelling power of the liquid element. The din of business would again be heard in the streets of your cities; industry and enterprise would at once spring into activity, and the dark cloud of distress which now lowers over our once happy country would be dispelled, and the sun of prosperity again shed its cheering and refreshing beams over our whole community. But, sir, in this day of our calamity, when the hopes of a mighty nation are centred upon us, when our deliberations are watched by many a tearful eye and many a throbbing heart, what relief does the Administration propose for this suffering people? It is a relief somewhat similar to that proposed by the tyrant Dionysius, when he said "it behooves us to take care of Jupiter," and then stripped his statue of a robe of massy gold, and substituted a cloak of wool, saying that "gold was too cold in winter, and too heavy in summer." So this Administration proposes to relieve the dear people by taking the golden robe of the currency into their own possession, for their own use, and covering the people with a tattered cloak of cotton or woollen rags. Or, sir, it is like the conduct of the captain and officers of a ship, who, having by their ignorance and mismanagement, run the vessel ashore, take to the long-boat to save themselves, while they leave the whole crew to the mercy of the waves.

Sir, I have thus stated briefly, some of the objections which compel me, and those associated with me, in representing the State of New Jersey on this floor, to withhold our assent to the passage of this bill. Before I take my seat, permit me to advert to some matters which have been introduced into this debate, altogether foreign to the subject-matter under discussion, but to which, since they have been introduced, it may not be improper in me to reply. We have heard much, sir, in the course of this discussion, about democracy. It would appear as if the majority of this house thought they were entitled to be considered as the exclusive democrats, and that the members who compose the minority had no pretensions to the name. Sir, this term "democrat" has become very indefinite of late. I should like to know what is the court definition of the term. Some of those gentlemen who visit the White House can no doubt give it to us. I should like to hear it from them, that we may have it *ex cathedra*, and may know what is necessary to constitute a real Simon Pure. If we are to follow the Executive standard, I should like to know which set of the opinions of the present incumbent we are to adopt. Is it those he held when he was against the tariff, or when he was for it? Those he held when he was against internal improvements, or for them? When he was against the United States Bank, or when he was for it? When he was against the New York Canal, or for it? When he was against De Witt Clinton, or for him? When he was against Mr. Adams, or for him? When he was against General Jackson, or for him? Sir, if to be a democrat is to be constantly chasing the caprices of Executive opinion, then I am no democrat; nay, sir, if to be a democrat it is necessary to be continually trimming my sails to catch every momentary breeze of popular favor, then I am no democrat. But if by a democrat is meant a man

who is in favor of protecting the rights and interests of the people—a man who is in favor of reforming existing abuses, and "particularly those abuses which have brought the patronage of the General Government into conflict with the freedom of elections"—a man who is in favor of reducing public expenditures, and thereby, as General Jackson tells us, "counteracting that tendency to public and private profligacy, which a profuse expenditure of public money is too apt to engender"—a man who is in favor of sustaining the just rights of the representatives of the people against Executive encroachment; of upholding the just powers of all the co-ordinate departments of this Government, and of maintaining in all their original strength and purity those powers and privileges which are guaranteed to us by our glorious Constitution, and transmitting them unimpaired to those who are to come after him—then I aver myself to be a democrat; it is a faith in which I have always lived, and in which I hope to die.

But, sir, we have always been told that the People of these United States have sanctioned all the principles of the last and present Executive. To this assertion I take the liberty to dissent. I deny that all the monstrous principles of the last or present Executive have been sanctioned by the people of the United States. For the State of New Jersey, I take leave to say that many of those principles have been repudiated. Yes, sir, in that same gallant little State, where, in the winter of 1776, the American eagle perched proudly victorious over the prostrate British lion; in the fall of 1836, the eagle of the American Constitution rose triumphant over the roaring lion of Executive encroachment. But, sir, New Jersey is not the only State where these principles have been repudiated. Look, sir, at the gallant State of Kentucky; she, too, has rallied in defence of the Constitution; her representatives in this hall present a solid and impenetrable phalanx—an undivided "front they form." I cannot say, in the language of the poet, that they are all "still as the breeze," but I can say they will prove themselves "dreadful as the storm," to the minions of Executive power. Ay, and look to the State of Rhode Island; she, too, has repudiated those principles. And last, though not least, look to the State of Maine; with the vigor of an infant Hercules, she has burst the chains by which she was bound to the Executive car; and, even now, the notes of the glorious victory, wafted upon the wings of the wind, are carrying joy and gladness to every lover of the Constitution throughout our wide-extended country.

But, sir, the President has for our instruction, thought proper, in his message, to read us a homily upon luxury and extravagance. I take the liberty of commending to his perusal the reply which the people of Maine have sent to this message. I think he may find a moral there which may be of service to him. And what is that moral, sir? It is that there are limits, in the political as well as in the moral and material system, to the dominion of evil. There are limits to the injustice and oppression, the extravagance and corruption, of Governments, as well as individuals. There is a time when cunning ceases to delude, and hypocrisy to deceive; when the cant and cunning of this Administration is unmasked; when the cup of its political iniquities is full, and the people will drink of the poisoned chalice no longer; when the people are rising in their might, and seizing the massive pillars of the temple of Jackson idolatry; and that the time is not far distant when the idolaters and the idol will be buried together in one undistinguished mass of political ruin.

## REMARKS OF MR. BUCHANAN OF PENNSYLVANIA,

In Senate, October 3, 1837.—On the bill imposing additional duties, as depositories in certain cases, on public officers—in reply to Mr. WEBSTER, of Massachusetts.

Mr. BUCHANAN said he had not flattered himself that the remarks which he had made some days ago, in answer to the Senator from Massachusetts, would have called him out in reply. It

has, sir, been already reported over the whole country, by a portion of the newspaper press, that the blows which I aimed at him with a feeble hand, had been repelled by his adamant armor, without leaving the slightest impression. Besides, (said Mr. B.) I have since been utterly prostrated, according to the same reports, by the Senator from South Carolina, (Mr. Preston,) and so belabored after I was down, that I can scarcely now be recognised by my most intimate friends. Under these painful circumstances, it affords me a ray of comfort to find that the Senator from Massachusetts has deemed my argument worthy of a studied reply. I hope it may not be considered presumptuous in me to say a few words by way of rejoinder.

Heaven forbid (said Mr. B.) that I should be forced to lie down in the same bed with the Senator from Massachusetts, the Senator from South Carolina, (Mr. Calhoun,) and the Secretary of the Treasury. For a man of peace like myself, the bed of Procrustes would be mercy compared with such a fellowship. Never were there more ill-assorted and heterogeneous materials brought together. If my argument has made the three gentlemen lie down together in the same bed, as the Senator has asserted, there let them lie as best they can. I beg to be excused from becoming a partner with this triple alliance, conscious that in that event my fate would deserve to be pitied. I shall endeavor to sustain myself alone.

I have not contended that the Government might not, under the Constitution, draw in favor of public creditors upon its own revenue in the hands of its own depositories, and that these drafts might not circulate as currency between their date and the time of their presentation for payment. Neither have I contended that the Government had no power to borrow money, and issue Treasury notes for the amount, in order to meet appropriations made by Congress. Such drafts and such Treasury notes, whilst limited in amount to the actual wants of the Government, are necessary for conducting the business of the Treasury. Did the Senator from Massachusetts understand me to have maintained that such an exercise of power would be a violation of the Constitution?

[Mr. WEBSTER answered that he did not so understand the gentleman. It had been his purpose to maintain that it was both the right and the duty of the Government to establish a paper currency as a medium of commerce for the country. He did not confine himself to the limits prescribed by the gentleman.]

The Senator and myself (said Mr. B.) understand each other perfectly. What, then, is his proposition? That Congress possessing the express power "to regulate commerce with foreign nations and among the several States," there results from this power, by implication, a power to create a paper currency of sufficient amount to furnish a medium for our foreign and domestic exchanges. Now, sir, can such a vast power be derived, by any fair construction, from this provision of the Constitution? That is the true question. The gentleman soars far above the disputed power to create a national bank, and incidentally, through its agency, to furnish a paper currency for the country. He leaves this at an immeasurable distance behind, and contends that the Government possesses the general power to create such a currency for the people by its own direct action, and without the agency of any bank whatever.

I did say, and I now repeat, that the sturdy patriots who formed the Constitution, and who conferred power upon the Government with a jealous hand, would have been greatly astonished had they been informed that such a power to create a paper currency as that now contended for could be found lurking in concealment under this grant to regulate commerce. The Senator has again appealed to the authority of Mr. Madison; and, in my opinion, again appealed to it in vain. He must call some other witness into court before he can establish his position. The point to be maintained is that the Fathers of the Constitution, or any of them, had ever held that a general power to create a paper currency was incidental to the exercise of the power to regulate our commerce,

Does Mr. Madison any where express any such opinion? Has the Senator shown that any of the Fathers of the Constitution had ever asserted any such proposition? No, sir. Of all the important powers conferred by the Constitution upon Congress, the history of the times will prove that the power over commerce was considered the most simple and easily understood, and the least liable to misconstruction.

I shall not read to the Senate the passage from Mr. Madison's Message of December, 1816, which has just been read by the gentleman. The circumstances under which it was written, as well as the language employed, will clearly point to its meaning. Specie payments had been suspended throughout the country; and our currency then, as now, was composed of inconvertible bank paper. Mr. Madison had waived his constitutional objections to a Bank of the United States, and in April, 1816, had approved the act to charter that institution. Besides, Congress had, in the same month, adopted a resolution to compel the payment of the public dues in specie, or in the notes of specie-paying banks. Mr. Madison is evidently speaking in reference to these two measures in this extract from his Message. It is true, he asserts that the Constitution has entrusted Congress exclusively with the power of creating and regulating a currency of equal value, credit, and use, wherever it may circulate; but does he not here evidently refer to the power "to coin money, and regulate the value thereof?" Is there any other clause of the Constitution to which he could refer? He calculated much on the power of the Bank of the United States "as an important auxiliary" in restoring this constitutional currency, and banishing irredeemable paper; but does he any where suggest, or even intimate, that Congress possesses the general power to create a paper currency for the country, as a means of regulating commerce? This is the point which the Senator must prove, or that part of his argument which rests upon authority must fall to the ground. No, sir, the Senator himself is the first individual, since the adoption of the Constitution, who has asserted this proposition. It is original with himself. He has produced no authority to prove that any of the Fathers of the Constitution ever held such doctrine.

The Senator contends that a power to regulate commerce, by implication, confers the power to create a paper circulating medium by which commerce can be conducted. Now, if I were even to admit this inference, contrary, in my opinion, both to the letter and spirit of the Constitution, still the gentleman would be far from establishing his proposition. And why? Because, when the Constitution confers an express power, and provides, in express terms, the means by which it shall be exercised, it would be a violation of every sound rule of construction to call in the aid of implication to create another and a different means of accomplishing the same end. Now, the Constitution has provided gold and silver coin, and no other currency, as the medium by which commerce is to be conducted; how, then, can the gentleman create a paper currency by implication? Congress have established mints to coin hard money in execution of this power; how, then, can he establish paper mints to manufacture paper money for the very same purpose? To use a law maxim, the expression of the one is the exclusion of the other. If the framers of the Constitution had intended to confer such a power, they would have added to the power "to coin money and regulate the value thereof," that of issuing paper money. Now, sir, can any person, at all acquainted with the history of those times, believe that such a proposition would have received a single vote in the Convention.

Is there a word in the English language which has a more precise signification than the word "regulate?" Does it not necessarily imply the previous existence of something to be regulated? In this sense it has been used by the framers of the Constitution themselves, in conferring the coining power. They first give the power "to coin money," and after money has thus been created, then they add the power to "regulate" its value. They thus clearly mark the distinction between the two

words. In respect to commerce, it had existed in this country from its first settlement. From the mode in which it was regulated by thirteen independent sovereignties, it became absolutely necessary, in order to produce uniformity and to prevent perpetual collisions, that this power of regulation should be transferred from the States to Congress. The subject matter on which this power was to operate, was the commerce then in existence, and all which might be called into existence in after times by the energy and enterprise of our citizens. A mere power to regulate, not to create, was therefore given. If the Senator's argument be well founded, then, by a much less strained construction, Congress possesses the power to create or build ships—to embark in the carrying trade—to construct roads and canals throughout the different States, without or against their consent—and to assume jurisdiction over these improvements. This clause, in the hands of the gentleman, would indeed become a prolific source of federal power. No, sir, we possess no such power to create paper money. If we do, the jealousy of those who framed the Constitution was vain, and the powers which you may confer on this Government, by implication, vastly transcend those which have been expressly granted. The Constitution may be made to assume any form and any feature at pleasure. It contains no guarantee for liberty, none for the reserved rights of the States.

What, sir, is its obvious meaning when construed by common sense? Would a plain man, of sound understanding, ever imagine that an unlimited power to create paper money could be inferred from the power to regulate commerce? Can any two things be more remote from each other than these two subjects? It requires a chain of metaphysical reasoning even to make them seem to approach each other. And yet they are made cause and effect, according to the Senator's argument.

I am sorry, sir, that upon this subject the gentleman has not shown his entire hand. He has cut himself loose from the Bank of the United States, and all bank paper. This we know; but we are left in ignorance as to what kind of paper money he desires to create.

["Give me the power," (said Mr. Webster,) "and I will then tell the gentleman."]

Mr. B. I desire to know, in advance, how the Senator would execute this power. He has kept his plan entirely in the dark. The Delphic oracle never was more mysterious. Who, sir, or what is to issue this paper money? It is not a Bank of the United States—nor is his paper medium to be bank notes. I wish to know what kind of a paper mint he intends to establish, and what will be the nature of its issues. Then, and not till then, can the question be fairly discussed, and the issue, which he so much desires, be made before the people of the country. They demand something tangible. They do not deal in abstractions. They must be able to judge in advance as to how the system will probably operate, before they give it their approbation. If the Senator ever expects to be elevated, by popular suffrage, to a higher station than the one he now occupies, he must no longer clothe himself in mystery, but make known his plan in detail. A general assertion of the power, without any statement of the particular mode in which it is to be exercised, will never satisfy the people of this country. I confess, for one, I should be glad if he would be more explicit on the subject, and inform us what kind of paper he intends to issue.

After all, the manner in which the Senator has attempted to sustain himself, in deducing the power to create paper money from that to regulate commerce, considering his great abilities, has been of such an unsatisfactory character, at least to my mind, as to confirm rather than to shake my former convictions.

#### SPEECH OF MR. C. H. WILLIAMS, OF TENNESSEE,

In the House of Representatives, September 25, 1837.—  
On the bill to postpone the fourth instalment of deposits with the States.

Mr. C. H. WILLIAMS, of Tennessee, addressed the house as follows:

Mr. Chairman: It was not my intention to have addressed this house, until, in my opinion, the time had arrived for the political friends with whom it is my pleasure and my pride to act, to make an effort upon the political board to bring into successful operation the policy that I believe would restore this country to its wonted prosperity. Still, sir, owing to the manner in which this discussion has been conducted, I cannot forbear indulging in a few remarks. I beg permission to premise, with due respect and deference to the honorable gentleman from Virginia, (Mr. Garland,) who has just taken his seat, that the political war that is now waging between the two divisions of the administration party, is the first I ever witnessed with perfect indifference of feeling; for I do most honestly and sincerely believe, that the only difference between the political questions that have given rise to the war, is this: one of them, the State bank system, has been fairly tested as the fiscal agent of the Government, and has most signally failed, and brought overwhelming distresses in its train; and that the modern sub-Treasury scheme has only to be tested, to produce the same result, and, in all human probability, add to the misery of pecuniary distress, the loss of liberty. I believe, with the honorable gentleman from New York, (Mr. Cambreleng,) that the time will come, and that speedily, when this nation will have to decide between a United States Bank, and your modern sub-Treasury scheme. I, for one, stand ready to act my part; and I would hail with delight the introduction of any measure calculated to test at once, whether this house intends to circumscribe its action within the narrow limits of taking care of the Government alone, or whether, in the arrangement and management of the moneyed concerns of this vast and growing republic, a due regard will not be had to the domestic exchanges of the country. Can it be possible, Mr. Chairman, that any attempt on the part of Congress, indirectly to assist the exchanges necessary to the successful operations of commerce and trade, would be a departure from the spirit and genius of democracy, as indicated by the President in his message? If so, sir, I trust the wisdom of Congress will save the country from the blighting effects of democracy. The President of the United States has convened the American Representatives; and, owing to the distress that pervaded this nation, from one extreme to the other, strong and confident hopes were entertained, that measures calculated to relieve the country from the difficulties that must ever, in the nature of things, flow from a confined local circulating medium, would be presented by the President to the consideration of Congress. But far otherwise is the case. We are told that Congress has as much right to pass a law to assist the transportation of merchandise, as to pass a law affecting exchanges; and that we can only take care of the Government. It is with regret, sir, I have witnessed that, in obedience to the President's suggestions, the grand scheme of relief has made its appearance in the shape of bills from the Committee of Ways and Means, which, when summed up, amounts to nothing more nor less than an effort to revive the depressed state of the finances of the Government; and gives completely the go-by to the suffering condition of the country. Hence we have a right to infer, that the lecture on economy, given by the President in his message to the American Congress, is amply sufficient, in his estimation, to save the sinking fortunes of the people. How just will be the indignation of the country, when it is recollected that the self-same Government that now contents itself with a lecture on improvident and unnecessary expenses, is the identical party and Government who, but a few months ago, cheered and sustained the people in their onward course of speculation and extravagance, and hailed the seeming prosperity of the times with rapturous delight; and proudly pointed to this delusive appearance of prosperity, as conclusive evidence of their superior skill in managing the vessel of State. And its friends, from Maine to Louisiana, continued to shout the praises of the glorious experiment, up to the very moment when, as unexpected (to them) as a clap of thunder in a clear sky, the bubble burst, and scattered ruin and calamity around. Now, sir—as if the world was fond of experiments—it is now proposed to rush from one extreme to the other; from the wildest and most profligate paper currency, down—to the metallic standard. And all for what? Simply

because the political jugglers who have ruined the currency of the nation, love office more than they love their country! And the partisan presses of the day, with an impudence unsurpassed in any age, are endeavoring to impose upon the intelligence of the community, by placing the whole catastrophe to the account of over-trading; as if there was not sagacity enough in the country to investigate the subject, and charge the over-trading to its true causes. It is true, sir, that the world was not only mad, but it is a notorious fact that the first symptoms of overaction and insanity made their appearance simultaneously with the removal of the public deposits; and perfect derangement followed Mr. Secretary Woodbury's circular letter addressed to the pet banks, requesting and desiring them to discount freely on the public revenue. It is now universally believed in the west that all this overaction, insanity, and derangement, is chargeable to the great experiment; for, sir, about the time your late President referred in his message to the immense sales of the western lands as an evidence of the prosperity and happiness which had flowed from his administration, it did indeed seem as if day had dawned never to close. Hence the cup of misfortune is doubly bitter.

I am not one of those who believe that the people ought to be encouraged to look to either the General or State Governments, in the hour of pecuniary distress, to pay their debts for them; but, sir, I do contend that it is a high moral duty, and a delegated power that belongs to Congress, to provide some circulating medium that would enable the officers of your Government to manage the finances of the nation without loss or injury to the Government; and that can only be done (as the past history of your country abundantly proves) by giving to the people a currency uniformly good—a currency that will pass co-extensively with the Government under which we live. This is the relief that the country expected; this is the relief that the country wants. And call you this an unconstitutional measure? It is as much the duty of Congress to benefit the mercantile interest of the country in that incidental way as it is to give incidental protection to any other branch of industry.

Mr. Chairman, it is an unfortunate omen for the liberties of the country that efforts have been made to create a prejudice and array one class of the community against another. The interest of the farmer and that of the merchant are intimately connected, and no sophistry can separate them; and all attempts of the kind, no matter from what source they may come, will recoil, sooner or later, with indignation and overwhelming contempt upon the authors of them.

Mr. Chairman, much reliance seems to be placed, by several of the honorable gentlemen who have addressed the committee, upon the argument that has been adduced—that Congress has no power to lay taxes in order to raise money to give to, or to deposit with, the States. That is an attempt to put this question upon a false issue. No such doctrine has been contended for by any member upon the floor of Congress. But, sir, when your General Government had collected, by an odious tax, from the pockets of her citizens, thirty-seven millions of dollars, over and above the wants of the Government, notwithstanding the wildest and most extravagant appropriations; because Congress, in order to stop an unholy struggle that was here waged for the spoils, ordered the surplus revenue to be deposited with the States, does that authorize the inference, that, when the law passed which gave the means that enabled the Government to make the deposit, the object with Congress was distribution among the States? By no means. Then, sir, the argument is wholly inapplicable to the subject under consideration; for suppose you, at this moment, had in your Treasury thirty millions of dollars collected by the Government, in anticipation of a war, by a special direct tax levied with that view, and it so happens that you have no war, and you have no use for the money, it is impossible for you to return to each man his penny, or shilling, as the case may be; but by giving it to the States, the Legislatures, respectively, could so dispose of the money thus returned, that it would be the same in principle as if you had returned it to the pockets of those from whom you had mistakenly and unnecessarily drawn it. Then, sir, it is possible that any gentleman can believe, for one moment, that such a course would violate the Constitution, prostrate State rights, and corrupt the people? If so, sir, it would seem to me that but a poor estimate is placed on the virtue and intelli-

gence of the people—that a simple return of their own property, which you had improperly exacted, would corrupt them. I did hope, sir, that the old argument of corrupting the people would not have been revived in the discussion of this question. It would be just as much a violation of an agreement to withhold the fourth instalment, under the law of June, 1836, as if it had been a direct and positive gift to the States; the principle is the same. Thanks to my political friends who have preceded me in this debate, I am relieved from the trouble of discussing this part of the subject.

The mode of reasoning, Mr. Chairman, which has satisfied me that the bill under consideration ought not to pass, is something like this; cannot the future expenses of the Government be so curtailed as to enable it, in addition to its other necessary disbursements, to fulfil its obligation or liability to pay over the fourth instalment to the States, and thus meet the just expectations of the latter; and, in the end, the liability so created be discharged without any additional taxation; as, for instance, by issuing Treasury notes, or by a loan; no matter which, in this view of the subject?

That this can be done, no gentleman will take upon himself to deny, unless it is contemplated to keep the expenses of the Government up to the high-water mark of thirty odd millions per year. I appeal to this committee to know if it would not be far better for the country to draw upon the anticipated future income of the Government, than to disappoint the States, who have (or at least a portion of them) used the promised deposit in advance? For myself, I do not believe the condition of the Treasury, although it is at present in a pitiable situation, requires, at the hands of Congress, an abandonment of the deposit law. If Congress will relinquish their wild and extravagant mode of appropriations, and go to work honestly and earnestly to retrench, instead of annually enlarging the expenditures of the Government, there will be no necessity for disappointing the States. May I not confidently appeal to that portion of the members of this house, who, when the expenses of the Government were only thirteen millions, cried aloud and spared not for retrenchment and reform, to assist in the effort, and let a searching inquiry be had to ascertain how it is that these expenses have increased to such an alarming extent; and see if they cannot be lessened without detriment to the public good? I would be glad to know how it has happened that we are now called upon to suspend the operation of a law for the want of means to comply with it, when, during last winter it was so confidently believed that there would be a surplus in the Treasury on the 1st of January next, that a motion was made, and a provision attached to the fortification bill, that provided for the deposit of the contemplated surplus! And such was the dread of corrupting the people, by scattering money among them, that some of the distinguished individuals in the other wing of the Capitol were horror-struck at the idea, and resisted the amendment with such pertinacity, that the whole bill was lost. Surely the extravagance and mismanagement of the finances must have been great to produce such an unexpected result; and a Presidential lecture on Governmental as well as individual improvidence would have been quite appropriate. But not one word of condemnation has reached us, nor any recommendation in favor of retrenchment, notwithstanding the acknowledged distress of the times. What has become of the forty odd millions that were in your Treasury on the 1st day of January last? I am for applying the individual lecture given by the President, in his message to the Government; and I am not disposed to arrest the fourth instalment, and thereby assist in placing the means in the power of the administration to continue the same mode of extravagance. I am aware of the argument that is contended for on the other side, that it is folly to create a national debt, in order to obtain money to deposit with the States for safe-keeping. If the gentlemen who used the argument would only recollect that there is already a bill upon your table for that purpose, their dread of a national debt would cease; for come it must, it seems, with or without the passage of this bill.

It is strange that, only a few months ago, this house—nay, this nation—seemed to be shaken to its centre by the contest that was here waged as to what should be done with the surplus revenue; now, we are called upon to create a national debt, and that without any one condescending to give (to my mind, at least) any satisfactory reason how it has happened. Is that, too, chargeable to the account of Governmental over-trading? If so, the adventurous politicians should

be exposed to the American people. I entreat this committee to pause, and calmly take into consideration the grand scheme of relief as proposed by the organs of the President in this house, and ask themselves what it is we are called upon to do for the relief of the country? First, we are called upon to postpone, until doomsday, the fourth instalment, under the deposit law of June 23, 1836; secondly, to give indulgence on the merchants' bonds; thirdly, to cut loose the Treasury from all banks, and rush into the golden age, and make the pockets of your officers your Treasury—which would increase, by the President's own showing, the already enormous expenses of the Government, sixty thousand dollars per year; and, fourthly, (as if conscious that the measure proposed would produce universal bankruptcy,) a bankrupt law, as a winding-sheet for the deposit banks, is asked for—an apt and appropriate provision in the catalogue of relief proposed by the Executive. We have come to a beautiful state of things, that your President asks you to do that which would disgrace an individual to do. I will prove the assertion. If a man, who had heavy dues owing to him, would refuse to take any thing but gold and silver in payment, under the present embarrassed state of things, and use the advantage which the occasion gave him to fatten at the expense of his neighbors, when he had only a short time before declared that the money he was now refusing would be good, nay, be better than United States Bank paper, no man would hesitate to pronounce him an unprincipled scoundrel. Sir, it is possible that what would disgrace an individual would be right in your Government?

But, sir, to my mind, the measure that rises superior in point of importance to all others proposed, is the one that contemplates issuing Treasury notes. I have felt an anxious wish to vote for the bill, for the reason that I am satisfied some active means are wanting by the Secretary of the Treasury to carry on the wheels of Government; but, sir, when I look at the consequences that may possibly flow from a precedent of the kind, I cannot vote for it. I am constrained to believe that it is designed ultimately to convert it into a Treasury bank. If not, I ask its friends why they did not introduce a bill simply to borrow money? If nothing else is intended but to raise means on the credit of the Government, why not call things by their right names? If you issue ten millions of Treasury notes this session, bearing interest, it will be the best of currency, so far as mere value is concerned; but have you any security that, at the next session, ten millions more will not be issued, and so on, until the entire circulation, by which exchange is managed will be in Treasury bills? They will be good, and much sought after. If so, is there not great danger that Congress will, in the end, attempt to supply the place of a United States Bank by large and heavy issues of Treasury notes, and in that insidious way lead the people on, step by step, until a Treasury bank becomes the order of the day? Once get it into full and successful operation, and the sun of American liberty, in my humble opinion, has set forever! Add to the powers of your President a Treasury bank, and then compare his powers with those of the British Queen, and you will find (to borrow an expression) your "republican simplicity" shocked. You will further find that the only difference worthy of notice would be this: your President is elected to his station, the Queen was born to hers. Then, sir, surrounded as this administration is with strong suspicions that a Treasury bank is one of its desired objects, I, for one, will not vote for any measure that can by possibility be considered even to squint that way; though it is not my intention to detain the committee with my objections, in detail, to a Treasury bank, particularly after the able and masterly view taken of that subject by the honorable gentleman from South Carolina, (Mr. Thompson.)

On several occasions, honorable members have expressed their hope that we had met here in the spirit of compromise. I must confess, circumstances and situated as the two parties are known to be, that I do not see the force of the expression *compromise*. What, sir! Do you not know that the opinions of the two contending parties are as far apart as the east is from the west? How, then, are they respectively to act, but by rearing aloft the banner under which they sail, and gallantly charging the ranks of their opponents with the weapons of reason and the past experience of their country, and indignantly throwing down all the weapons of dishonorable warfare, such as impugning motives, and accounting for an honest difference of opinion on the grounds of cor-

ruption alone? I am for doing this, and meeting it once, so far as I am concerned, the main question, and decide it, and let the country know on what they have to depend. But, notwithstanding I believe a compromise is impossible, if any gentleman will trouble himself so far as to explain what he means by that term, and if I view it in the light he does, most gladly will I disentangle myself from all party associations, and march up and sacrifice upon the altar of my country's good a due proportion of my long-cherished opinions; but until this is done, sir, I feel it to be a duty which I owe to the distressed and suffering condition of my fellow-citizens, boldly to avow my readiness to pursue the course that I believe will not only save the vessel of state, (which is now buffeted about by the billows of an angry and uncertain ocean,) but save this country from the tender mercies of a broker's shop, whenever one of your citizens wishes to travel out of the limits of his own State. When I recollect that the party now in power unhesitatingly declared that the State banks, with the assistance of the public deposits, would give to the moneyed operations of your Government, and to the exchanges of the country, the same facilities, nay, even greater, than the late United States Bank did, and contrast their statements with the result, I am not, sir, in the least surprised that the President, in his message, has thought proper to resort to the arguments that were made use of by the opposition, in order to exhibit the necessity for his sub-Treasury scheme. Can it be possible, when the ship of state is launched upon a new and untried sea, contrary to the advice of the most experienced seamen, and, when launched, she becomes stranded, that the same thoughtless imprudent seamen who did the mischief, and who have not the moral courage to acknowledge their error and to return, can expect to be supported in their onward course of mischief by simply making an able *exposé* of their first error? Who, sir, that does not bow to the unanswerable argument of the President against the State banks as suitable fiscal agents? But, unfortunately for the country, it comes too late. Had the same just view of the rotten-wood system been taken up by the ruling party three years ago, how many hundred of our fellow-citizens would have been saved from ruin, in all human probability?

When, Mr. Chairman, I suffer myself to take a calm survey of my country's political history, the fact that strikes me with the most force is this; that since the organization of your Government, we have been but eight years without a national bank; and five years of that time, from 1811 to 1816, millions of dollars were lost to individuals and to the Government, for the want of some lever power to circumscribe and hold in due bounds the issues of your State banks; and the difficulties and distress, since the late United States Bank has been put down, are too fresh within the recollection of every body to require at my hands any comment. Now, sir, contrast these circumstances with the fact that, during the thirty-eight or forty years that the United States Bank was the fiscal agent of the Government, not one dollar was lost to the nation. Is it not due to the public that the reasons of the modern democrats for having left the old, safe, and well tried mode of keeping the public money should be made known? What, Mr. Chairman, are the arguments resorted to, in order to induce the people to continue in the course that has produced such unfortunate results? Nothing more nor less than these; that an institution of the kind is dangerous to the principles of liberty; and that the late United States Bank in her struggle for a recharter, carried the war into Africa. I am speaking of those gentlemen who oppose it on the ground of expediency alone. Admit, for argument's sake, (which I, as the undeviating friend of a United States Bank, most freely do,) that the directors often erred; what does it amount to? Simply this, that all human institutions are liable to err.

Then, sir, when I see gentlemen opposing a national bank, and taking shelter under the misdeeds of the late United States Bank, I feel as if the prosperity and happiness of my country is jeopardized by a false issue. The same mode of reasoning would exhibit, as plain as sunbeams in mid-day, the necessity of abandoning the plan of salvation, and all republican forms of Government—two of the dearest and most inestimable privileges that belong to man. I will illustrate my assertion. The bank is opposed because it interfered in elections, and endeavored to sustain itself by overturning the then existing administration; hence all institutions of the kind are unfit to be trusted, and dangerous to the principles

of liberty. A church is established in a certain section of country; the members, by doing wrong, disgrace themselves and the cause of religion; is that any reason, sir, that in all time to come the people in that section of country should abandon the plan of salvation, and rush headlong to perdition? Again, sir, suppose this house were now assembled for the purpose of forming a constitution for the twenty-six States: with what indignation and contempt would you look down upon any member upon this floor who should rise and tell you that mankind was incapable of self-government, and refer you to the history of Greece, Rome, and the other ancient republics, on the ruins of whose liberties despotisms of the darkest hue have been reared, and tell you we must have a king? Does not your own historical information satisfy you that a long list of follies, foibles, and damning corruptions, could be adduced to sustain the position? How, let me ask, did your illustrious ancestors act, when they assembled for the purpose of forming our inestimable constitution? Did they look back through the long vista of time for such ignoble purposes? No, sir; but, like patriots and statesmen, they examined the page of history for a far different purpose—to see when and how those ancient republics came to lose their liberties; thereby enabling themselves to ingraft, in the instrument they were forming, provisions that would enable us to escape the rock on which they split. Can we not, Mr. Chairman, in part, imitate their illustrious example, by chartering a new bank, with such alterations as experience has proved to be necessary, without endangering the liberties of our country? Can it be possible, notwithstanding the fact that we have been sailing down the stream of time for the last sixty years, enjoying as much freedom as is consistent with the formation of a good government, that a bank which would enable your countrymen to pass and repass from Maine to Louisiana, without loss or injury to their purse, would, by corrupting the people, prostrate their capability for self-government? If so, sir, liberty is but a dream that dwells in the disordered imagination of man while in the arms of sleep; and I would advise my countrymen, when the fourth of July again returns, and a dreamer mounts the rostrum, and proudly contrasts our Government with those of the surrounding nations of the earth, and boasts of the capability of man for self-government, to take him down and thrash him, for inculcating the principles of his distempered imagination. I am one of those, Mr. Chairman, that hug to my bosom, with fond delight, the belief, that man is capable of continuing the onward march of improvement, by lopping off all well-founded objections, and ingrafting such new provisions as the lights of experience prove to be necessary; including, in the range of improvement, constitution, laws, and corporations. Then, sir, although I accept, as one of the opposition, in the name of my suffering country, under disadvantageous circumstances, the wager of battle which the gentleman from New York (Mr. Cambreleng) vauntingly threw down a few days ago, yet, sir, in imitation of an illustrious example set me. I take the responsibility, and join issue prospectively with the honorable gentleman; and allow me, sir, in the name of my immediate constituents, to nail my colors to a United States Bank, and, sink or swim through good or through evil report, they shall continue to float in the breeze—nailed there—from the unalterable conviction that a well-guarded United States Bank can alone rescue my country from the difficulties with which she is surrounded. And, although the tide of battle is now raging two to one against us, yet, sir, the notes of victory which have reached us from the east and the west speak trumpet-tongued, that ere long the banner under which the opposition sail will be borne in triumph through this house; and the country, in the language of another, will stand redeemed, regenerated, and disenthralled, through the irresistible influence of the ballot-box, from all future tinkering with the currency.

Mr. Chairman, I considered it my duty to my constituents to say thus much. The clear and unequivocal avowal in favor of a United States Bank has been drawn from me in consequence of the manner in which this debate has been conducted; and not that I believe this is the proper period for the friends of such an institution to endeavor to charter a bank; on the contrary, I concur with them, that now is not the time.

I desire, sir, before taking my seat, to compliment the honorable gentleman from New Hampshire for the moral courage that he displayed a few days

since, in paying a passing tribute of respect to the late President of the United States, for the free use he made of the veto power. I had fondly hoped, that when the exciting scenes which the exercise of that power had given rise to, had time to cool, and reason had again resumed the place of partisan feelings, all would unite in declaring that, whenever a President of these United States dared to assume the bold, high-handed, and anti-republican position, that he understood the interest of his country better than its assembled representatives, and vetoed a measure on the grounds of expediency alone, that it was an assumption of power incompatible with the spirit and genius of our free institutions. But, sir, I see I was mistaken.

## SPEECH OF MR. UNDERWOOD, OF KENTUCKY.

In the House of Representatives, September 20, 1837—

On the bill to postpone the fourth instalment of deposit with the States.

Mr. UNDERWOOD, of Kentucky, addressed the Committee as follows:

Mr. Chairman, (said he.) I have listened to the debate with surprise. It seems that the Secretary of the Treasury is unable to make a plain statement, unfolding the present condition of the national finances, or that we are incapable of understanding it. In either case there is cause for regret. It is a national calamity that a man should be placed at the head of the Treasury whose confused and involved statements leave doubts in regard to the correctness of his reports. On the other hand, if the fault is ours—if the Secretary has been clear, discriminating, and definite, and we cannot comprehend the facts, it is a serious misfortune that the people are so poorly represented.

I will not enter into a critical examination of the Secretary's language, nor stop to censure and abuse him for statements admitted to be erroneous. It is my purpose to collect from the documentary mass, and present to the committee, those facts which cannot be denied. My object shall be to exhibit the actual condition of the Treasury, to ascertain its liabilities, and then its means of discharging them. In so doing I must necessarily take as true the statements of the Secretary, where they are not inconsistent with each other.

The Secretary's Report, dated the 14th inst. (Dec. 17,) states that the balances of appropriations, on the 31st December, 1836, amounted to - - - \$16,752,283 09

That the appropriations made for the present year, exclusive of the Post Office Department, (the expenses of which establishment are defrayed by its own revenue,) amount to - - - 28,575,837 10

And that the specific and indefinite appropriations, made by former acts of Congress, amount to - - - 2,824,250 40

Thus the charges against the Government, founded upon former acts of appropriation, are no more than - - - \$48,152,370 59

There can be no mistake in this estimate of our liabilities. We are now to see how they have been and can be met and discharged.

In the first place the Secretary tells us that he had actually paid, prior and up to the 11th of September, - - - 24,077,031 22

Deduct the payments, and there will remain a balance of - - - \$24,075,339 37

In the next place the Secretary tells us that, in May last, he determined that of existing appropriations there "could and would be postponed until next year about" - - - 15,000,000 00

Deduct the amount which the Secretary determined to postpone,

and you leave the charge against the Treasury for the remaining part of the present year only \$9,075,339 37

The true question is, can we meet and pay this balance without depriving the States of the fourth instalment of the surplus revenue, to which they are entitled under the deposit act of June, 1836?

The fourth instalment, required to be paid on the 1st of October, amounts to \$9,867,214 98

If to this be added the above balance for the remaining part of the year, - - - 9,075,339 37

The aggregate will be - - \$18,442,554 35

Now, if it can be shown that our resources will enable us to meet the demand thus stated in the aggregate, without contracting a national debt, or borrowing money, surely not a member on this floor will raise his voice to deprive the States of the money, which, in 1836, we solemnly set apart for their use. I will prove, sir, that our means are ample, and that it only requires an honest and faithful application of them, under suitable acts of legislation, to relieve the Treasury from all embarrassment, and to preserve inviolate our engagements with the States.

The Secretary says, that "by a report of the Treasurer of the 30th ultimo, it appears that the balance in the Treasury, including what was in the custody of banks, the Mint, and collecting officers, was then \$14,596,311." He moreover states, that of this sum "only \$8,928,072 was subject to immediate draft," thus leaving \$5,668,239 not subject to "draft," or not applicable to the immediate demands upon the Treasury. Why it is that so large a sum could not then be used is not explained; nor are we told when, if ever, it will be subject to "draft." We are informed by the Secretary's report, dated the 14th inst., that the payments, up to the 11th of the month, amounted to \$24,075,339 37; but we are not informed how much, if any, the money in the Treasury, on the 30th of August, was diminished to make the payments up to the 11th of September. If the receipts during these eleven days equalled the expenditure, the amount in the Treasury remained the same at the latter date. But concede that the receipts fell short half a million, there would still remain in the Treasury, including money in banks, in the Mint, and in the hands of collecting officers, on the 11th of September, the sum of - - - \$14,096,311 00

Add to this the Secretary's lowest estimate of receipts for the balance of the year, - - - 4,500,000 00

And we have a total of - - \$18,596,311 00

But to this must be added the first instalment due from the Bank of the United States, amounting, with interest, to - - - 2,175,314 00

Constituting an aggregate of means amounting to - - \$20,771,625 00

Thus, sir, we have and will have, before the end of the year, more than twenty millions of dollars, with which to pay eighteen. In the foregoing view of the subject, after satisfying all the demands of the year, we shall have a balance to facilitate the operations of the Mint, and to meet contingencies, amounting to \$2,329,071, a sum amply sufficient for these purposes, although it has been usual to provide a larger. If from this we deduct \$741,561, the reported amount of the navy pension fund, it will leave a surplus of \$1,587,510, after discharging all claims upon the Treasury during the year.

It may be contended that I have erred in considering the \$5,668,239, "not subject to draft," as a part of the available means of the Treasury during the year. If it be an error, it has sprung from the indefinite character of the Secretary's report. Had he given the reasons why it was not *now* available, and shown when it would be, my calculation might have been different. But, in the absence of all such reasons, and knowing as I do the settled hostility of the late and existing Administrations to the act of 1836, requiring the deposit with the States, and their manifest purpose to render it odious among the people, I take the want of a full explanation

on the part of the Secretary as a tacit acknowledgment that he can draw upon all the money in the Treasury in the course of the year. But, sir, let us suppose that he cannot, and that this sum ought to be provided by Congress: shall it come out of the fourth instalment going to the States? Shall we take the whole of that instalment to make good this unavailable sum of \$5,668,239? No, sir. How then shall it be supplied? Must we borrow the money or issue Treasury notes for it? No, sir. I will tell you how to get it. We hold \$7,000,000 of stock in the late Bank of the United States. The institution of that name chartered by Pennsylvania agreed to pay us \$115 48 for each share of that stock, in four equal annual instalments, with interest, making the principal amount to \$7,946,356 16 cents upon a final settlement, for which we hold four bonds. After deducting the first instalment, or bond, there will remain \$5,959, 767 12 cents. Put this stock in market. Your Secretary has manifested great anxiety in his report to become a buyer and seller of stocks. Indeed, he gives it as his opinion that "it is impossible, with sources of revenue so fluctuating as ours, and so dependent on commercial prosperity, that any fiscal operations should be long continued with ease, vigor and uniformity, without some such regulator as a power to issue and redeem Treasury notes, or to invest and sell the investment of surpluses." Now, although I do not concur in one word of all this, I am willing to see the Secretary try his skill in selling our claims upon the bank; guarding against sacrifices, by fixing a minimum below which he should not sell. In this way the money can be raised as easily as by issuing Treasury notes, and without creating a dollar of debt upon the country. You can supply the deficiency of \$5,668,239 (if in truth there be such deficiency) by selling this stock; and, by so doing, you may provide two or three hundred thousand dollars more, in aid of the Mint, or to meet contingencies.

It must be clear to every mind unprejudiced by the influences of party, that nothing more is required to meet the demands on the Treasury for the residue of the year, than the passage of a law authorizing the Secretary to sell our claim upon the Pennsylvania Bank of the United States. It has been objected that the money standing to the credit of the Treasurer in the deposit banks will be unavailable in making the transfer to the States, so long as these banks refuse to pay specie. The objection is futile. Kentucky will receive a draft on her banks in discharge of her portion of the fourth instalment. All the States will do the like with their banks respectively. Those States in whose banks there is no money, or not sufficient to pay them, may make arrangements with the banks out of their limits, to receive interest until they can obtain payment. If the money was paid them, they would invest it so as to get legal interest, and be content. By allowing the banks to retain it, and pay by instalments, with interest, the banks and their debtors would be relieved, and the States receive all they could in reason require, regarding the general embarrassments of the times.

Instead of adopting a course so obvious, what is the Administration attempting? Only look at the proceedings of the Committee of Ways and Means, the thermometer which indicates the precise state of Executive temperature, and you have the answer. That committee has reported a bill authorizing the issue of Treasury notes to the amount of - - - \$12,000,000 00

The bill now before us takes from the States a fourth part of the money actually on hand on the first day of this year, and which, in June, 1836, was set apart for the use of the States, amounting to - - - 9,367,214 98

\$21,367,214 98

We are thus seriously asked to increase the means of the Treasury more than twenty-one millions, and for what purpose? If you refuse to pay the States, the entire charge on the Treasury for the balance of the year is \$9,075,339 37 only, and to meet it you have all the money now on hand, and all that will be collected before the end of the

year, amounting, as has been already shown, to more than twenty millions of dollars.

I may be told that the object of the Administration is to provide in season for the \$15,000,000 of appropriations which the Secretary has postponed until another year. If that ground is assumed, I should like to know whether these \$15,000,000 could not be postponed without detriment to the public service until 1839—ay, and forever thereafter? We have no report from the Departments on the subject, and my friend from Tennessee (Mr. Bell) has satisfactorily shown that there can be a great reduction in our expenditures—that we can save the half or the third of the \$15,000,000, if no more. But suppose the whole must be met in the course of the ensuing year, it can be done by a rigid economy, aided by the collections of revenue bonds, upon which we are about to grant indulgence, and the accruing revenues of the ensuing year. Yet if it could not be, I would prefer meeting the deficiency by issuing Treasury notes, to withholding the fourth instalment from the States. You have no right to withhold it. You have contracted that they should have it, and you will violate faith if you do not let them have it.

Mr. Chairman, when the States acceded to the terms prescribed in the deposit act of 1836, a clear contract was formed between them and the General Government—just such a contract as would entitle an individual to damages in similar circumstances, if the contract was not performed. Suppose you had a surplus quantity of work-horses, and you were to propose to me to keep them for you, that I might have the use of them as long as I retained them—that I should insure their lives, and return them in good order when called for—and that you would deliver to me a certain number at four several times, a week or a month apart; provided, however, that you should not reclaim more than one horse in any one month without thirty days' previous notice. Suppose I assent to all this, and go on and erect stables, purchase provender, and employ hands to take care of the horses, and to work them so as to remunerate me for all my trouble and expense. Suppose you deliver me the three first portions at the times stipulated; but a few days before the last are to be delivered, you say to me that I shall not have them—that you find you have use for them yourself. May I not answer, "I want them likewise; I have made my arrangements, looking to the fulfilment of your promises. I have agreed that my neighbors' children shall go to school over the mud upon the backs of a part of the horses, and I need the rest to help me about improvements in progress on my farm. I have been at expense and trouble in preparing to take care of them. I have assumed risk by insuring their lives; and now, sir, if you don't comply on your part, I will sue for damages." There never was a plainer case of contract between individuals than the one supposed; and yet, sir, it is precisely the case between this Government and the States. So far as legal and moral principles are concerned, there is no distinction between the cases. There is but one difference: individuals could appeal to the judiciary for redress; this Government is amenable to no such tribunal. But, sir, the perpetrator of wrong, who violates principle because he knows that he can do it with impunity, more deserves the scorn of mankind than if the dungeon or the gibbet were the penalty. I beg the members of this house not to flatter themselves that they are irresponsible for voting to violate the faith and contract of the nation. There is a political tribunal before which they must account. They may hear the verdict of an incensed people proclaimed in a voice of thunder, "Depart from our service, ye workers of iniquity." You had better not be the first to violate the contract, lest the States imitate your example, to punish you.

The member from Ohio (Mr. Hamer) supposed that no one would claim the money for the States upon the ground that it belonged to them as a matter of right. I, for one, claim it in behalf of the States on that ground. I do not mean that they have a legal title, but they have a claim in equity, (which, were it a case between individuals, could and would be enforced by the Chancellor,) to all the money arising from the sales of public lands ceded to the General Government by the States. I

will not go into the argument in support of this claim now. The subject was fully considered during the last Congress. I place the proceeds of the sales of lands not ceded by the States upon the same footing as if they had been ceded. I voted for the deposit act of 1836, regarding it as a distribution of the money arising from the sales of the public domain, and I now regard it a duty to release all pretences of claim upon the States for its repayment. My policy will be to divide among the States the proceeds of the sales of the public land, and then support this Government by a discriminating tariff, having in view the protection of domestic industry, and limiting the revenue to the economical wants of the Government. I look upon a national system of internal improvement, except in its most partial and objectionable form, as abandoned. I shall give it up without regret, provided you will furnish the States with the means which they are justly entitled to, and thereby enable them to carry on their public works. Indeed, sir, so far as the destruction of the system diminishes Executive patronage, I rejoice in its downfall.

I have shown the ability of the Treasury to pay the States and meet all other liabilities, since the Secretary has postponed \$15,000,000, but I am not willing to stop the discussion here. We have been convened by the President at an extraordinary period, and one of admitted public and private embarrassment. We are the physicians called on to prescribe for the diseases of the times, and to consider the remedies the President has proposed. We must trace the disease to its source, and understand its original causes. The President attributes our present condition "chiefly to overaction in all the departments of business; an overaction deriving, perhaps, its first impulses from antecedent causes, but stimulated to its destructive consequences by excessive issues of bank paper, and by other facilities for the acquisition and enlargement of credit." The President's statement is far from being complete. In the discharge of his constitutional duty, he should have explained the "antecedent causes" which gave the "first impulses." If you, Mr. Chairman, were to arrive at a place covered with the bodies of dead and dying men, mingled with dirks and pistols, rifles and muskets, your first anxious inquiry would be into the causes of the destruction before you. You would hardly be content, if some one should gravely tell you that it was to be attributed chiefly to overaction in all the departments of buck-shot and leaden bullets, stimulated by excessive explosions of gunpowder, and to a few stabbing facilities, very destructive to human life. Such a statement, however true, would be altogether unsatisfactory. You would desire to know the subject of quarrel—how it began, and who were the aggressors—in every stage of the controversy, down to the final and bloody issue. Without such knowledge you could never arrest the guilty and bring them to punishment.

That "excessive issues of bank paper," and other "facilities of acquiring and enlarging credit," were the immediate causes which produced "overaction in all the departments of business," cannot, I think, be doubted by any one. But what caused the "excessive issues of bank paper?" Who created those "other facilities" which produced the mischief? I will answer. It was the illegal, unwarranted assumption of the "responsibility" by President Jackson, of controlling the Secretary of the Treasury in matters confided by law exclusively to the Secretary's discretion and judgment. It was the removal of the deposits, and the veto of the recharter of the Bank of the United States, whereby that institution was crippled, and ultimately destroyed. These are the "antecedent causes" (about which President Van Buren is silent) that produced overaction in trade and business. Do you ask me how they operated? I will answer. When President Jackson withdrew the public money from the Bank of the United States and deposited it with State banks, and when he placed his veto upon the recharter of the Bank of the United States, it was manifest to the Legislatures of the several States, that the Bank of the United States could not survive the powerful opposition of the Executive. It was further manifest that the Executive designed trying an "experiment" to give

the nation a "better currency," through the instrumentality of State banks, than that furnished by the Bank of the United States. It was apprehended that the withdrawal of the capital and notes of the United States Bank from business and circulation would produce a mischievous vacuum, unless filled by substituting State banks. It was seen that the Executive control of the public money, assumed by President Jackson, would enable him to increase the profits of those banks which he might be disposed to favor. These, and other reasons of a party character, put the ball in motion, which created State bank after State bank in its progress, until, from 329, in 1830, the number has more than doubled. The President contrasts the situation of the country at two different periods, for the purpose of showing the great increase of banking capital, bank notes, and loans and discounts. He says: "At the commencement of the year 1834, the banking capital of the United States, including that of the National Bank then existing, amounted to about two hundred millions of dollars; the bank notes then in circulation to about ninety-five millions; and the loans and discounts of the banks to three hundred and twenty-four millions. Between that time and the 1st of January, 1836, being the latest period to which accurate accounts have been received, our banking capital was increased to more than two hundred and fifty-one millions; our paper circulation to more than one hundred and forty millions; and the loans and discounts to more than four hundred and fifty-seven millions."

Here is evidence of the rapid increase of banks and bank paper. The banks invited the people to borrow, and the people borrowed greedily. Each endeavored to use the money lent so as to make a profit, and enable him to repay the bank. Those productive pursuits which create property were abandoned by thousands, who thought they could do better and get rich faster as traders and speculators. Money was plenty, competition among purchasers contentions, and prices rose. The people, encouraged by high prices, fearlessly contracted debts, expecting to pay without difficulty. Merchants sold rapidly, and imported largely. Seeming prosperity drew us into extravagance, and when most involved, we were called on for payment.

The report of our commercial operations for the last fiscal year shows a balance of trade against us of sixty-one millions of dollars. The paper of our local banks had no credit abroad, and would not be received in payment. Specie was demanded; the banks were called on, and foreseeing the inevitable result, they suspended specie payments, leaving us with a depreciated paper currency from one end of the republic to the other. I have stated, in a few words, the race we have run. The fact that we are assembled here, proves its miserable termination. Its "first impulses," its remote "antecedent causes," are to be found in Executive experiments upon the currency; in illegal and arbitrary measures by which the deposits were removed, and in the existence and exercise of the veto power, which, as now established by the Constitution, makes your President practically a monarch. As the Constitution now stands, it requires two-thirds of each house to pass a bill in opposition to the Executive veto. If a majority only had been necessary, the bill rechartering the Bank of the United States would have been passed, notwithstanding the opposition of President Jackson. No one now doubts the salutary influence that the recharter of that bank would have exercised in preventing the enormous increase of State banks, and the "excessive issues of bank paper." But the veto power triumphed over the interests of the country; and it will, sir, in all time to come, place the President above the representatives of the people, and make him the master over all, unless the Constitution can be amended in the manner proposed by me during the last Congress.

[Here the CHAIR interposed, and told Mr. U. he was talking too wide a range; that constitutional questions could have no bearing on the bill before the committee. Many voices cried "go on, go on," and Mr. U. proceeded.]

I deem it essential, sir, to trace the stream to its source; I have done so, and the great efficient rem-

edy for existing evils, and for those which may visit this nation in consequence of the arbitrary acts of the Executive, in all time to come, is an amendment of the Constitution, by which the President shall be controlled by a majority of the Representatives of the people. But for the veto power, I should entertain strong hopes that the present Congress would restore the currency and the public prosperity. As it is, I have no hope, during the existence of the present Administration.

Permit me in a few words to call the attention of my eastern brethren to the condition of the interior Western States. We, who live in the valley of the Ohio, do not supply ourselves with merchandise at the places where we sell our agricultural productions. Our horses, mules, hogs, tobacco, hemp, &c. &c. are taken to a market hundreds of miles to the south and southwest of us. Our dry goods are purchased in Baltimore, Philadelphia, and New York, hundreds of miles to the east and northeast of us. Now, sir, it is indispensable to our prosperity as a people, that we should be paid for our produce sold at the south and southwest, in that kind of currency which will enable us to pay for the goods we consume, without sustaining a loss upon it. We once had that currency in the notes of the Bank of the United States. But how is it now? One of our traders sells a drove of horses or mules in Mississippi or Louisiana; he must receive the State bank paper, or he cannot sell; and, when he gets it, has to undergo almost as much trouble to exchange it for something that will pass at home, and pay the farmers for their mules and horses, as he had in selling the property. And when our farmers receive State bank notes, especially notes on distant State banks, and come to settle with their merchants, the farmers must submit to a discount or loss, because these notes are not at par at the places where the goods were first purchased. Thus a system of *shaving* and brokerage is introduced, alike vexatious and injurious to the people. The regular operations of business and exchange are deranged, and distrust and confusion are the orders of the day. Formerly we could, for a half or one per cent. obtain checks and make remittances, to almost every part of the country. Now you can scarcely find any facilities of the kind, and when you do, you must pay three or four times as much to avail yourself of them. One line of trade extends from the Gulf of Mexico, through the heart of the country, to the Atlantic; and nothing can or ought to satisfy us but a sound currency, equally good at the centre and both extremities of our commercial operations. No administration of the General Government can be popular with us for any length of time, which does not furnish such a currency for the people. You may delude and deceive the nation for a while, through the instrumentality of a pensioned and a corrupt press: editors and office holders, under the influence of Executive patronage, judging of others by the rules applicable to themselves, may continue to pour out their vials of wrath and slander upon the purest and best men of the country; they may impute unworthy motives, and charge bribery upon them for sustaining the former Bank of the United States; but, sir, unless I am greatly mistaken, the good sense of the nation will ultimately get over the prejudices and alarms excited by such base means, and then, and not before, will the voice of reason and patriotism be listened to in favor of establishing a national bank. When that time arrives, existing evils can and will be cured by a national bank, with proper guards in its charter to prevent mischief. I do not disguise my opinion that such a bank is the only practicable remedy; but it is useless for me to propose it now. It would be a waste of time to discuss the propriety of establishing such an institution; or to point out the alterations I should propose in the late charter of the United States Bank, when I know that the President has the power and disposition to defeat any measure in regard to a national bank which Congress might adopt.

In looking back upon the tricks and artifices of scurvy politicians, by which the people have been deceived, and induced to overturn some of the best and longest-tried measures of their Government, I have deeply lamented the infatuation which prevailed. But when I behold a manifest disposition in

the public mind to review past transactions with calmness; to scrutinize the present, and to guard the future, I assure myself that there is a redeeming quality in our people, and the character of our institutions, which will carry us triumphantly to the bright destiny which awaits us. The genuine spirit of reform is abroad in the land. Not the spirit of reform which put down the Administration of the venerable gentleman from Massachusetts to my right, (Mr. Adams.) No, sir, that was a spirit which induced its possessors, to promise much, and do nothing. I recollect now some of the enormous extravagancies which it was said the gentleman over the way tolerated, and which tended to national destruction! He paid for blacking the boots and shoes of Indians visiting the Capital! He allowed his Secretary of State to write despatches with gold pens! And he himself walked upon a "brass carpet," and permitted members of Congress to be tempted by the offer of penknives! One member went so far, sir, I am informed, as actually to carry home a certificate, showing that he rejected the bribe! No, sir, it is not that microscopic spirit, only capable of looking at and magnifying the skeleton of a mite which is now sweeping over the land; but it is a spirit capacious enough to contemplate things of magnitude; intelligent enough to discriminate between promises and practices; and bold enough to do its duty in regard to men and measures.

In contemplating the evils of a depreciated currency, I was anxious for the adoption of some effectual and immediate remedy, and desirous that the President would propose some scheme of relief in which I could concur. But he has proposed nothing for the relief of the people. On the contrary, he has told us that "all communities are apt to look to Government for too much," and referred to the "uncommon fruitfulness" of the country, and the "proceeds of our great staples," to liquidate debts at home and abroad, and to revive commerce and credit. This waiting upon the seasons and the crops is rather cold comfort to those who must perish before these remedies can operate, unless they can procure other aids. It is like telling the poor wretch who is shivering at the door, "you will get over it when warm weather comes," instead of helping him with a blanket. However much the message has failed to propose or recommend any thing in aid of the people, it has submitted a scheme in aid of the office holders, and still further to enlarge Executive power, the deleterious consequences of which I shall briefly expose.

The plan is to establish sub-Treasuries, and to make this a "hard money Government." The jingling sounds of "hard money," when we are overwhelmed with *shin-plasters*, may, and probably will, tickle the ears of many people, and some, as in former days, will be deluded into the belief that the "hard money" age is just before them, and that nothing more is necessary to bring on this political millennium than to worship at the shrine of President Van Buren, with increased devotion. There is no more hope of a political zealot than there is of a religious bigot. Each is without the pale of reason. I do not expect to influence partisans; but those who are not blind past all cure may be preserved from falling into this new pit.

The plan of the President and the Secretary of the Treasury is to establish sub-Treasuries, at such places as may be deemed proper, and to appoint suitable officers, at which, and by whom, the public money shall be kept and disbursed; and to receive nothing in payment of public dues but specie. This plan is to bring about the *hard money* age!

We now have about eight hundred State banks. They have flooded the country with notes, depreciated and depreciating. Many of these bank charters are to continue from twenty to thirty years. The States have power to create banks. There is nothing to restrict the exercise of this power. As new States are admitted into the Union, new State banks will come with them; and the new and old States may go on and create eight thousand, instead of eight hundred, banks. Will the sub-Treasury scheme prevent the States from making more banks, or prevent the banks from issuing

more paper? It can do neither, unless, as is contended, the refusal of the Government to receive any thing but specie for its revenue should operate as a check. That check cannot operate, if at all, until the banks resume specie payments, and then its mode of operation would be, by withdrawing the specie from the banks, and depositing it in the vaults of the sub-Treasuries, and thus render the banks less able to sustain their issues.

The President tells us that "it is a mistaken impression that any large amount of specie is required for public payments. Of the seventy or eighty millions now estimated to be in the country, ten millions would be abundantly sufficient for that purpose, provided an accumulation of a large amount of revenue, beyond the necessary wants of the Government, be hereafter prevented." Now, suppose the President is correct, and that a sum not exceeding ten millions is abstracted from the banks and the general circulation, and placed in the custody of sub-Treasuries, what effect will the withdrawal of that amount in specie have upon the banks and the currency furnished by them? I perceive that the eighty-nine deposit banks, mentioned in the Secretary's report of the 5th instant, had in their vaults, according to the latest information, specie to the amount of \$10,873,722 67, and that the public deposits to the credit of the Treasurer of the United States and public officers amounted to \$17,519,130 04. If these banks were paying specie, the first effect of the President's scheme would be to deprive them of every dollar of their specie, and place it in the custody of sub-Treasuries. The next effect of this second removal of the deposits would be the inability of the banks to redeem their outstanding notes, and, of course a depreciation in the value of the notes would follow; and the third effect, if the directors of those banks should desire a speedy redemption of their notes, would be, heavy calls and rigid collections from their debtors, ruinous sacrifices of property, and much individual suffering. These would be the inevitable consequences of carrying the President's plans into execution, if the banks were now paying specie. But they are not; and what will follow, in the existing state of things, should Congress adopt the President's recommendations? The first consequence will be to diminish the quantity of specie in circulation, by collecting together in the vaults of sub-Treasuries whatever sums are paid for public lands and in discharge of revenue bonds. The next consequence will be, owing to its greater scarcity, that a higher premium must be paid by the people to get specie, or, what is the same thing, bank notes will be further depreciated. The effect of the whole scheme, if executed, will be to render the payment of debts for a time more difficult, to retard the resumption of specie payments by the banks, and to increase the sufferings of the debtor classes. The people have contracted large debts upon the basis of a paper circulating medium. The policy of the Administration is to compel the payment of these enormous debts in specie, and at the same time hoard up the specie in sub-Treasuries, and render it more difficult to procure. Ruin, inevitable ruin, to thousands of our citizens must result from such a policy. Sir, the whole scheme is nothing more than an ill-devised remedy of President Van Buren to save the officers and Government, while the people are left to suffer the evils brought upon the country by President Jackson. The policy and arbitrary proceedings of the latter tempted the States and the people to enter upon an extravagant system of State banking. We swallowed the fruit offered by President Jackson, which we ought not to have tasted. It was a stimulating poison, and ran the nation mad by excitement. Mr. Van Buren would cool this effervescence all at once, by prescribing a *gold and silver* currency! Thus we are to jump from one extreme to the other. If a laborer is overheated in the harvest field, would you cool him off instantly, by thrusting him into an ice-house, and covering his naked body with ice? If a traveller should lose himself, and follow new roads until he reaches the brink of a precipice, and there should discover the safe beaten track, which he ought to have kept, in the valley below, would you have him to plunge headlong down the steep to regain the track at the

highest point? If a nation has been groping in the dark, until the pupils of its eyes are dilated, so that twilight is more agreeable than day, will you risk producing perpetual blindness, by throwing a glare of dazzling light suddenly in its face? Sir, those sudden transitions are ruin and death. A few may have ability to bear them and survive them, but the mass are crippled or killed; and those who get through unhurt become the masters of the crippled herd, whose physical and moral energies are prostrated. Sir, your President's schemes will make the "rich richer, and the poor poorer." There are hundreds who will hail the arrival of the hard money age, who have had sense enough to foresee the bursting of the bubble, the explosion of the Jackson experiment, and who have been preparing for the fat harvest of speculation by hoarding up specie.

But, Mr. Chairman, let us suppose the President's sub-Treasuries in complete operation, and that good seasons and good crops have enabled the people to settle old debts, and that tranquillity and prosperity are again prevailing throughout the land: I ask you if it be possible to keep up any thing like a uniform national currency with the paper of State banks? The voice of experience and reason both proclaim that it cannot be done. How are the people of Kentucky, for instance, to know the names, the number, the creation, and character of the hundreds of banks chartered by the other States? How are they to know the officers, their signatures, the capital, and duration, or chartered life of a thousand banking corporations? How is it possible for them to have confidence in the solvency of institutions that they know nothing of, whose debtors and course of business they know not? And how can you make them give credit where there is no confidence? Why, sir, a life devoted to the study of banks and banking statistics can hardly keep up with the multitude of State banks now existing; and when our States extend to the Pacific, it will be utterly impossible. How, then, can the mechanics, manufacturers, and farmers of the country, know what paper is good, and what good for nothing? The people in one State have no voice or control in forming the banks in another State, nor can they, through their representatives, inspect the condition or control the operations of banks without their States. These causes will forever make the paper of State banks pass at a discount in distant States. Yet such is the risk and expense of transporting specie from place to place, and the impossibility of carrying it about our persons in large quantities, that the people find it more convenient even to use State bank paper, at a small discount, than to be packing specie. Hence it will be found, even in the best condition of the State bank system, that the specie will find its way to their vaults, and their paper take its place in circulation, although at a discount. Besides, the stockholders of the banks have an interest in collecting the specie in the vaults of their banks, so that they may enlarge their profits by issuing a greater quantity of paper. These causes combined tend to the concentration of specie in the vaults of the banks, and the production of a paper circulation of unequal value for the people. There is no remedy for the evils these causes produce but a national bank, to furnish a general paper currency for trade and intercourse among all the States, leaving the State banks to furnish a local paper currency for their States. I think I could show, beyond all question, that a national and State bank are mutually beneficial to each other, but I will not do it now. My only object at present is to prove that State banks cannot supply a general paper currency, passing at par throughout the Union, and I trust I have accomplished it. If they cannot, we are to be afflicted indefinitely with a depreciated paper circulation, and shavers and exchange brokers will grow rich out of the losses of the people.

Viewing the subject as I do, it is clear that the scheme of the Administration to make this a *hard-money* Government, and to give a gold and silver currency to the nation, is a new humbug, thrown out in the hope of amusing the people, and propelling a declining popularity. Sir, if the Administration be sincere in its projects to expel bank

paper from circulation, and to give us a specie currency, and no other, it must set to work in a different manner. The President must induce the people to amend the Constitution of the United States, and take from the States the power of creating banks, before his schemes of a metallic currency can be accomplished. As long as the States have the power to make banks, they will exercise it; and as long as they do, there will be a necessity for a national regulator in the form of a national bank. I will not go into the argument to prove the constitutionality of a national bank as a necessary fiscal agent of Government, and as an essential mean of regulating and conducting the commerce between the States; nor will I consume time, by exposing the pretences that the people have decided, conclusively, that Congress had no constitutional power to create such a bank; nor will I stop to notice the ridiculous declamation, imputing to the stockholders of a national bank (composed, as they are, of a large number of old men, old women, and orphan children,) designs unfriendly to public liberty. Such a discussion would be premature at this time.

One of my principal objections to the sub-Treasury scheme is, the increase of Executive power and patronage, which would necessarily result from it. The Secretary of the Treasury says, "the whole addition of principal officers need not exceed ten." He estimates the increased annual expense at fifty or sixty thousand dollars only. Ten principal officers! What salaries would you give to each? Not less, I suppose, than you give an Auditor, \$3,000 a year; especially as they would be located in the large cities. What a scramble among office-seekers this new batch of offices would produce! How many interviews and intrigues at the White House would grow out of it, I leave to those who are fond of such speculations. Thirty thousand dollars a year I set down as the least, for ten "principal officers," under this scheme! How many minor officers—clerks and agents—will be required, we are not informed; nor are we told what necessity there will be for additional buildings; nor are we told where they are to be located. I will venture to predict that, instead of \$60,000 a year, this sub-Treasury scheme will cost the nation double or treble as much, should it ever go into operation; and just in proportion as the people lose money, to sustain the establishment, so will the President gain power to reward his partisans.

But, sir, I look upon this new scheme as an entering wedge merely; the beginning of a new system, which will ultimately place all the money of the nation under Executive control. The Secretary already hints that he could furnish an excellent general paper currency, in small bills, based upon an equal amount of specie deposited in his sub-Treasuries. I admit it could be done, and that it might be convenient to the people. But the transition is so easy from a sub-Treasury bank of deposits to a sub-Treasury bank of discount, that I apprehend great danger, in the progress of events, that the President will deem it proper to call on Congress for power, through his Secretary, to lend money at least to the extent of the surplus revenue; and that Congress in obedience to Executive recommendations, will sanction the project. The Secretary now says, in substance, in the ninth page of his late report, that "it is impossible to conduct our fiscal operations any length of time with ease, vigor, and uniformity, without some such regulator as a power to issue and redeem Treasury notes, or to invest and sell the investment of surpluses." I am apprehensive that a power to lend the surplus would, in the Secretary's estimation, be found a better "regulator," and that the whole scheme of sub-Treasuries will eventuate in a Government bank, where the money of the nation will be loaned out at the will and pleasure of the President. Should such a state of things ever arrive, and if there is no curtailment of Executive power, as claimed and exercised by the late President, I am ready to declare that American liberty exists no longer. The people will become the mere slaves of power, and nothing short of revolution will burst their chains.

The Secretary now proposes that Congress would authorize him to vest "any unexpected excess"

"in safe State stocks, at their market rate, subject to be sold again whenever the proceeds shall be wanted to discharge existing appropriations." President Jackson was horror-struck at the idea that the National Government should become a partner in a State corporation! Well do I remember his veto relative to the appropriation for the Maysville and Lexington road. But now it seems that a power to become a partner or stockholder, through the instrumentality of the Secretary of the Treasury, in a State stock concern, is a most harmless and desirable matter! The Secretary modestly asks permission to do, at his discretion, that which the late President would not permit to be done by act of Congress.

I look upon this stock-jobbing project and the sub-Treasury scheme in the same light, and I believe they were both conceived in the spirit of that policy which grasps at power, and which has for its object the concentration of all power in Executive hands.

But, Mr. Chairman, I must hasten to a close. I must trespass upon the time of the committee, however, with a few additional remarks. Suppose the President's sub-Treasuries in full operation—suppose all the good should result from them which the President expects; then, I ask, will any of the blessings fall upon the heart of the nation? Will Kentucky feel its genial influences, in reviving its drooping commerce, and furnishing a sound currency? None of the public revenue, arising from taxation, is collected in the interior States at present, nor is there any prospect that such will be the case in any short time. Your sub-Treasuries will therefore be confined mostly, if not exclusively, to the seaboard, where your public money will be hoarded, and where it is usually expended. The valley of the Ohio will derive no benefit from the plan, and will be compelled to struggle through its present difficulties unaided by the Government, which has been the author of its calamities.

I can perceive no benefit to result from the scheme to any class, unless it be the office-holders and office seekers. Sub-treasuries may be instruments in the hands of the first to enable them to retain power; and by the multiplication of offices and salaries, the chances of the latter to obtain profitable situations will be increased. By receiving nothing but specie for revenue, the Government will be enabled to pay her officers in a better currency than that which the people use, and the officers of Government may, if they please, employ their salaries in shoving depreciated bank notes in the hands of the people. I am totally opposed, Mr. Chairman, to a good currency for the office holders, and a bad currency for the people. My ideas of republican equality require that all of us should fare alike. I cannot consent to any establishment which will place the officers of Government upon a better footing than the people at large: nor can I ever sanction such invidious distinctions as that recently made by the Secretary of the Treasury between the creditors of the Government, preferring the members of Congress to the war-worn pensioner and day-laborer; and paying gold and silver to us, and irredeemable bank paper to them. Sir, I was astonished to hear the other day, at the defence made for the Secretary by the member from North Carolina, (Mr. McKay.) He read the law to prove that all the creditors of the Government were entitled to specie, and then argued that as all could not get it, some must of necessity take paper, or wait until the means of the Treasury would enable the Secretary to pay in specie. Why, sir, the law provides that our army shall be fed with wholesome food; but suppose, under peculiar circumstances, it cannot be procured for all, what would you think of a commanding general who gave orders to feed the sergeants and corporals on the best cured Kentucky hams, and issue out rations of tainted meat to the common soldiers? Sir, such conduct would produce a mutiny against that general. The rule of justice in such a case would be to divide ratably, and to give each his portion of the good and the bad. If the Secretary could not execute the law fully because the means were not provided, no censure attaches to him for that. The ground of complaint is, that he acts partially; that he favors the strong, those who stand in least need

of favor, at the expense of the weak, who cannot protect themselves. If he had paid us in depreciated paper, it would have acted as a stimulus, growing out of our own losses, to shape our legislation in such manner as to improve the currency for the benefit of all classes.

I have expressed my opinions, and now, sir, it only remains for me to vote against the bill under consideration.

## SPEECH OF MR. GRAVES, OF KENTUCKY.

[As reported in the National Intelligencer.]

In the House of Representatives, Thursday, September 23, 1837.—On the bill to postpone the payment to the States of the fourth instalment of the Surplus Revenue.

Mr. GRAVES arose and said: The House is fatigued with this discussion. The subject itself is exhausted, and I am fully persuaded there is no desire to have the discussion protracted by me. Of all situations, none is less enviable, or more inauspicious, to a public speaker, than that in which he is compelled to address an unwilling audience. And were I to consult my own inclination or prudential considerations, I should not obtrude a single remark upon the House at this late period of the discussion. But such are the peculiar relations which this bill bears to my State, and particularly my district, that I do not feel authorized to allow my individual inclinations to predominate over a sense of imperative duty.

This bill, and that which the other day came to this House from the Senate, proposing to authorize the Secretary of the Treasury to call in from the deposit banks, all the public deposits in specie, in the short space of four, six, and nine months, should have been embraced in one. They are dependent upon each other; one is useless without the other, and hence they have been, and I shall continue to treat them in this debate, as one and the same.

The State of Kentucky, from the time it came into the Union up to the present year, has never had one dollar appropriated in her borders, whilst she has contributed her full share to the public Treasury. This, I am apprized, mainly grew out of her position; and she was content, whilst the national debt was in the course of liquidation, to wait until it was discharged, under the opinion that then there would annually be a large sum in the Treasury, to be appropriated to works of internal improvement, in which she expected to share. But when that long and much desired day rolled round, when the public debt was paid off, for causes which it is not my purpose here to notice, the Middle and Western States soon became satisfied that, for a while at least, they must not hope to share in the disbursements of the public revenue for purposes of internal improvement.

They submitted to their fate, for they saw an irrevocable mandate had gone forth from one who was all-powerful, and never revoked what in wrath he once said. Many of the national republicans, whose favorite objects were disappointed by the position taken by General Jackson in his veto of the bill making appropriations to the Lexington and Maysville turnpike, and other objects, have changed their opinions upon the subject of the policy of the General Government making appropriations for, and carrying on, works of internal improvement; because they think the experience of the last eight years has shown that the President, without the patronage and power incident to carrying on, in the States, internal improvements, wields quite as much political influence as is consistent with the perpetuity of our free and republican institutions. And I am free to avow that I myself very much question the policy of the system of internal improvements by the Federal Government, of which I was once so zealous an advocate. I desire now, as much as I ever did, to see the condition of our country ameliorated, and its resources developed by the formation of roads and canals; but, as much as I desire the accomplishment of this grand object, I prefer to forego it, and let the States erect their own works, to seeing the power and patronage of the President increased to an extent which large appropriations to this object would necessarily enlarge it.

But, whilst these States reluctantly were driven from their favorite object by these paramount considerations of patriotism, they claimed to have divided among the States the proceeds of the sales of the public lands, with which to enable them to prosecute their public works, under the auspices of their own Governments.

The land bill, memorable not more for its importance than for the new era which it furnished the subject of, in the history of the exercise of the veto power by the President, was brought forward by its distinguished author; its fate is recorded upon that page of this country's history upon which, of all others, the first despot who ascends a throne in this country will look with greatest pleasure.

There remained in the Treasury on the first day of January, 1837, upwards of \$41,000,000, notwithstanding the efforts of the friends of the administration to keep down the surplus in the Treasury by appropriating in the last two sessions upwards of \$70,000,000; by which they hoped to prevent the people from demanding a distribution or a land bill. They saw the people would never consent to have forty or fifty millions of dollars lying idle in the Federal Treasury, whilst they, through their State Governments, had borrowed millions and millions at interest to make roads and canals. They finally gave their consent to the deposit act, which, practically, every friend of the land bill thought to be the accomplishment of his own scheme under a different name. The deposit act at length passed; and, on the first day of January, all the money in the Treasury over and above \$5,000,000 was to be deposited with the States in four equal instalments; the last on the first day of next month.

The different States had, according to the proposition of Congress, agreed to accept of the money, and pay it over again when called on; but with a confident expectation that no emergency would ever present itself, when the payment would be necessary. So, in effect, all considered it a distribution act, although some said they considered it nothing but a *bona fide* deposit, which would, in all human probability, never be called for.

But gentlemen tell us this deposit act, passed as a measure of finance, purely and solely for the safe-keeping of our surplus revenue; that this Government has a right to call it back when, and as she pleases, without any sort of reference whatever to its provisions; that the States do not hold the deposits under any contract with this Government, but barely as a gratuity—as a boon to be withdrawn or withheld at the pleasure of the power bestowing it; that it would be mockery to pay over this fourth instalment, when we shall have forthwith to commence withdrawing it again, or to resort to a loan to raise money with which to conduct the Government. And we are further told that this money on deposit with the banks is actually necessary to keep the wheels of Government in motion; that they can not move on ten days without pecuniary derived from our action. And then we are emphatically asked, are we prepared, under these circumstances, to deposit our money with the States, and then borrow for our own use; or, in other words, whether we are prepared to borrow money to deposit with the States.

These positions, I hold, can not be maintained. The agreement between the States and the Federal Government is a perfect obligatory contract, supported by both a good and valuable consideration; and for a failure, upon the part of either, to comply strictly with the terms of the deposit act, if they were individuals, an action could be maintained and damages recovered.

But, to exemplify this proposition by presenting an apposite case, I will suppose Mr. Van Buren, as an individual, had on hand \$40,000,000, which he considered in very unsafe deposits, and having no present use for it, and no right to loan it out, at or without interest, he was to say to the Governments of the different States that he would deposit the whole sum with them, to be delivered over in four equal instalments, if they, upon their part, would bind themselves to be responsible for its safe keeping, and to refund it in certain proportions at given times; and he accordingly should proceed to make a deposit of the first three instalments, and they had gone on to appropriate it to the purposes of their public works, and to make arrangements, and perhaps contracts, to appropriate the fourth instalment to accomplish these works, and he should turn round and say that it is not convenient to pay over the fourth instalment; who would doubt the right of the States to bring suit against him, and recover at least as much damage as they had incurred?

Such, then, is the situation of most of the States. I instance Kentucky. That State, not having the most remote conception that the deposits would ever be called for by the Federal Government, and knowing that, in justice and law, they could only be drawn in the proportions and at the periods designated by the act, proceeded to appropriate the whole of her share to purposes of education and internal improvement. She is engaged in constructing her public works upon a most magnificent scale; she has commenced the improvement of the navigation of her rivers with locks and dams; but they are all in an unfinished condition. She looked to this fourth instalment, which this bill proposes to suspend, as the means to aid in their completion. If she be disappointed in this just expectation, she must resort to other means to raise funds, or abandon her works. The latter alternative she will not adopt; but if her situation would be such as to drive her to it, all the money thus far expended would be a total loss, and all on account of a disappointment in getting this fourth instalment. In this event might she not institute her action and recover damages equal to the amount of loss sustained by the failure to realize the fourth instalment, provided this Government could be sued by a State? Now, surely we are not prepared to violate our pledged faith, violate our plain contract with the States, because there is no law to compel us to observe the one or perform the other?

Suppose, again, that England had made the contract with this Government which the States have, and had received the first three instalments, and demanded the other when due, and we were to say to her that you are already indebted to us for the \$30,000,000 deposited, which you are compelled to pay back in certain instalments when called on, and if you get this fourth and last instalment, the \$9,000,000 remaining, you will have to also pay back; would she not very properly say to us, perform your part of the contract, observe your faith inviolate, and we will see that we fulfil our engagement; we will see that our faith is kept inviolate? Who could deny her right to demand of this Government a faithful, strict compliance with this understanding?

I, Mr. Speaker, would oppose the suspension of this fourth instalment, even if, by doing so, the funds which the Secretary of the Treasury informs us are necessary to carry on the Government could be forthwith raised by this step. But it is evident that the passage of this bill will not bring one dollar into the Treasury, at any rate for four months, if the Senate's bill, fixing that period, should pass; but I predict that it will be so amended as to place the first payment at more than twice as remote a period as that now proposed.

We have been told by the most ingenious advocates of this bill, who have run the deficit up to the largest amount, that there is against the Treasury the sum of \$5,876,565, as will appear by the following table, presented by the honorable gentleman from Ohio, (Mr. Hamet,) in his very ingenious speech: There was in the Treasury on the 1st of January,

1837	\$5,670,137
The money received during the first six months of the year is	13,187,182
The revenue for the last half of the year will be	7,000,000
Making in all	\$26,857,319
These are our means for defraying the expenditures of the year.	
The expenditures for the first half of the year 1837 are	\$16,733,844
For the last half of the year will be	16,000,000
Total expenditures for 1837	32,733,844
Deduct the amount of our funds	26,857,319
Balance against the Treasury	\$5,876,565

Now, without stopping to show the fallacy of this statement, for it is not necessary to my purpose, I will take that gentleman's table, for argument's sake, as correct, and suppose the "balance against the Treasury" to be \$5,876,565, and the proposed expenditures for the last half of this year to be as that gentleman has proposed, \$16,000,000. I ask, could not the Executive very easily suspend the expenditure of so much of that unexpended \$16,000,000 as would equal the balance against the Treasury? In this event, there would be left to be expended in

the latter half of this year \$10,123,435; surely quite a sufficient sum in times of great embarrassment and unusual pressure. This administration is, as I understand, but a continuation of the past retrenching and reforming administration, and it seems to me that in their prosperous work of retrenchment they ought to be content; in this unfortunate year, with expending \$26,857,273, which will be the sum, as is apparent from the table of the gentleman from Ohio, after his "balance against the Treasury" of \$5,876,565 shall be deducted. But again, if it be necessary that this administration shall conduct its retrenchment in its own way; that the opposition shall not dot an *t*, or cross a *t*, and that the precise sum of \$32,733,844, as shown in the above table, be expended; then I would suggest (for the opposition can only suggest) that we might readily realize not only the amount of the balance against the Treasury, but some \$2,500,000 over and above that sum, by selling the bonds due for the sale of the Government stock in the late Bank of the United States. These bonds are at an interest, I think, of six per cent. per annum, and could readily be sold at par, and would enable this Government to raise about \$3,000,000. Or, if this will not suit the administration, why do they not look to their Treasury note bill, out of which to raise funds to carry on the Government? They have the undoubted power to carry this bill through; it proposes to issue Treasury notes to the amount of \$10,000,000, and I have every confidence they will pass at a very slight discount.

Sir, I am unable to assign any legitimate object, any worthy or patriotic motive, to the administration, in pressing this bill, when at best they will not be able to realize a dollar by it for from four to eight months. I, perhaps, am too much disposed to suspect Executive encroachment; to suspect this administration with a design in all its acts to enlarge the Government patronage and power; but if I err at all, I would prefer it should be upon the side of over-vigilance, for I believe from Executive patronage is to be apprehended most of danger to this Government.

But I remarked in the outset, as an apology for asking the attention of the House, that my State, and particularly my district, had an especial interest in this bill. Kentucky has but four banks: the Savings Bank the Bank of Louisville, the Northern Bank of Kentucky, and the Bank of Kentucky.

The Savings institution is not authorized to issue paper. The Bank of Louisville, by a provision of its charter, is prohibited from doing any business after suspending specie payments. The Northern Bank of Kentucky finds its capacity to accommodate the country much diminished since the revulsion; and the Bank of Kentucky is the principal institution upon which the people of Kentucky rely for banking accommodations. It is situated in my district, in Louisville, the principal commercial city of the State. That city must first and most severely feel the paralyzing and withering effects of the overthrow of this institution; and I, as its representative, will not consent to stand by and witness in silence powers vested in the Executive which will enable him to crush it at his pleasure. By a report of this bank, made on the 31st of last month; it had in its vaults \$767,799 in specie, and had on deposit of the funds of the General Government \$676,710, and of funds of individual depositors \$626,269. Its other liabilities were not greater than other perfectly safe and solvent banks with similar means. If we pass this bill and the other which I have already named, by which the Secretary of the Treasury will be authorized to draw from the Bank of Kentucky \$676,710 in specie, the amount of Government deposits, there will remain in its vaults only \$91,089 in specie, which state of things would necessarily involve on the bank the imperative necessity of ceasing to do business, and closing, for a time, its concerns. Such a result would produce an amount of suffering that would be insupportably ruinous to every interest in the whole State.

It must be apparent to the most superficial observer, that in the depreciated condition of the paper of all the banks in the Union, and particularly some of the Western and Southwestern banks, from which, should this bill pass, about \$9,000,000 of specie must be drawn in so short a time, it will be utterly impossible for them to add one single cent to the amount of their specie now on hand, by collections from their debtors, as long as they have any paper in circulation which is of less value than specie. For surely nothing is more certain than that the debtors of the banks would prefer to purchase up with their specie the notes of the banks, at a discount, with which to pay their debts, to paying them off in specie.

Hence it results, if you impose on the banks the necessity of raising, through collections from their debtors, these nine millions of dollars in specie, you involve both the banks and the people in one common ruin. With these consequences so obvious, I am not prepared to believe any representative of the States whose prosperity depends upon the accommodation of these banks, especially from Kentucky, as I regret to have heard intimated, and one who can think for a moment of enforcing these oppressive measures, by voting for the two bills depending before this House.

But gentlemen say the President will not allow these banks to be broken up, and the people ruined, by enforcing the laws so as to withdraw the deposits in specie. Why then, I ask, are the friends of the President so anxious to give to him the power? Is it that he may use it as an engine with which to wield influence in certain States? or is it that his friends may say, he has the power to crush, but the will to save? I am for entrusting him with no such power over my constituents. I will not consent to entrust so mischievous an engine to the hands of any President, without the most imperative necessity; and I do not perceive that necessity.

Gentlemen say, the Government is without funds, and this bill is intended to afford means with which to enable the Administration to conduct its affairs. This is not so: for no portion of these means can be realized for four months from the passage of the Senate's other bill, if the credits in that bill proposed should not be extended, and, of course, no immediate relief can be derived for the Government. I defy the ingenuity of man to assign any sensible reason for the passage of this bill, except to give to the President power.

The State banks, from and after the passage of the deposit act of the 23d of June, 1836, had reason to believe that they would be expected, by the Federal Government, to settle with their respective States, the amount to which they eventually would be entitled under that act. Hence it is but justice that, in our action upon this subject, we should have reference to this natural and just expectation, confirmed by the fact that the first three instalments were paid through that medium. If nothing but the sums over and above the amounts to which the different States would be entitled were exacted, in reason-

able payments, I should think the banks would not, could not complain.

The Bank of Kentucky has, of Government deposits, less than \$200,000 more than the amount to which the State of Kentucky is entitled. And if it be true, as it is evident from my showing, that the Government is to derive no immediate aid from this source, why compel the banks to pay up to the Government the whole amount of the deposits in specie, and thereby break them, when, on the 1st day of January, 1839, the Government will deposit with them, perhaps, the same band, the amount to which their respective States would be entitled? Why not postpone, until the 1st of January, 1839, so much of the money upon deposit with the banks as will be sufficient to pay the instalments to the States, without deranging again the commerce of the country, by forcing transfers at that time from one to another portion of the Union? If it is thought desirable, make the banks in the mean time pay interest at some just and fair rate. Then, if the banks can not spare, from the amount of specie they have on hand, the sums demanded by the Government, they can go into the market and buy it at the market price, which is now here, I believe, at about 8 per cent. advance. To this I am not prepared to say I would object, because I suppose such a requisition upon most of the banks could be met without crushing them and the people. But I do protest most solemnly against placing in the hands of the President the terrible power with which these two bills will invest him. The world knows, and no one on this whole earth hotter than Mr. Van Buren, that when you place the prosperity of an individual or a community in the power of another, you give to him possession of it, influence to an unknown extent over the acts of his dependent. And, sir, I do fervently believe that these two bills, which ought to have been included in one, and can only be treated as one in their operation, are intended in part, if not mainly, to enable the Executive to bring to bear the power proposed to be conferred upon the elections in the Western and Southwestern States. I know, sir, that I have no infallible evidence upon which to predicate this opinion; yet I feel authorized to infer its existence, from the uniform policy of the present and past administrations, ever since Mr. Van Buren has controlled the councils of this nation. The President never acts without a motive; and when, through his friends in this House, he seeks to possess himself of power so mighty as that proposed to be conferred, without assigning a good and sufficient reason for it, I am left to infer, from the known character of the man, that he demands it to be exercised for the attainment of some important end. The western people, thank God, from their fortuitous position, have not been within the sphere of Executive patronage, to any great extent. They are, as yet, insensible of the practical operation of that deleterious power, except on a very limited scale. And I predict, Mr. Van Buren will find them more insubordinate, less tractable, than his experience elsewhere has given him reason to expect. He will find there a hardy, self-willed, though law-abiding race of men, who have been taught to look to their own stout arms, and to the most fertile and prolific soil on earth, for the means of living, and not to Executive patronage. They will not stand by, either indifferent or silent spectators to the proceedings of their Government, whilst it is exercising every nerve to reduce, within its own control, not only every branch of industry, but the political power incident thereto. All that they ask is the privilege of letting them pursue, in their own way, what they think best promotes their individual happiness and prosperity, and not to keep experimenting upon the currency, the mainpring of prosperity in every thriving community; so that the laboring man may have some data upon which to predicate a calculation to-day, what will be his condition to-morrow.

I believed, from the first complaints against the Bank of the United States in 1830, that they proceeded from a refusal upon the part of that bank to become a political instrument; and that all the clamor against that institution, and the efforts to put it down—the removal of the deposits, etc.—were intended to strengthen the arm of Executive power and patronage, by first overthrowing that institution, and then placing under the control of the President the local and the State banks of the whole country. But I acknowledge I had not anticipated at this early day, so gross and undisguised an effort to place unconditionally in the hands of the President the fate of the whole monetary affairs of the country.

It never once occurred to me that Congress would so soon be found capable, without any assignable cause, of placing the fate of whole communities in the hands of the Executive, by giving him the power to deal out destruction or preservation at his pleasure to the whole banking system, and consequently, for a time at least, to all who are dependent upon their accommodations. The different pursuits, in all well regulated Governments, are as dependent on each other as they are necessary to make up a happy and prosperous community; and when, from the depravity or ignorance of our rulers, a stroke is aimed at one great interest through the currency, it will be felt by every other. They exist as one indivisible whole, and must all suffer or prosper together.

The remarks of the honorable gentleman from Virginia (Mr. Garland) have been to me a subject of not a little surprise. That gentleman is considered as the great leader of the Conservatives on this floor; and I suppose his position upon this subject may be considered as identical with the other Conservatives, who seem to be acting with him generally. In the course of his remarks on this bill, he stated he had never seen any cause to regret the vote he gave in support of the deposit act; that he considered it a wise measure; and that if it had been properly executed by the Secretary of the Treasury, very much of the difficulties under which the country is now laboring, would have been avoided; that the report of the Secretary of the Treasury to Congress at the commencement of this session, from which it appears that the bill before the House was the confusion of tongues at the building of the tower of Babel; and yet, as the Secretary has taken upon himself to assume the responsibility of recommending the measure, he would vote for it, and let the responsibility rest with the honorable Secretary.

I would most respectfully invite the attention of the gentleman from Virginia, and his Conservative brethren, to examine carefully the position which they, I am in charity persuaded to conclude, have involuntarily been compelled to take, in obedience to the unrelenting iron rule of party, to which, until then, I had hoped they had determined no longer to yield obedience. If gentlemen are candid in the conviction that the deposit act is founded in good policy, and have succeeded in convincing their constituents of this fact, it appears to me, if their constituents are not widely different from mine, that they will find some difficulty in convincing them that the *ipse dixit* of that same

25th Cong...1st Sess.

Postponement of fourth instalment—Mr. Graves.

H. of Reps.

Secretary, whose hostility to the passage of the bill was so deadly, is sufficient to authorize their representatives to turn round and vote for a suspension of the fourth instalment under that act. In order, however, that the whole course of the Secretary of the Treasury upon the subject of the surplus revenue and its distribution among the States may be fully understood, I invite the attention of this House to his report made to the last Congress at the commencement of its first session, at a time when it was the policy of his party to make it appear that we should have no surplus at the end of the year 1836 to distribute among the States, under the operations of the then anticipated land bill, or some other mode of distribution.

On the 8th of December, 1835, the Secretary of the Treasury, in his regular annual report, made up and presented with all possible deliberation, informed Congress that the balance in the Treasury, on the last day of that month, would be \$18,047,558; whereas, as afterwards admitted by a subsequent report of his to Congress, it turned out to be \$26,749,895, showing an error in this item of his estimates of \$8,702,337.

In the same report of this remarkable Secretary, he estimated the available means of the Treasury, for the current year of 1836, at \$37,797,593; whereas it turned out to be, as shown in one of his subsequent reports, \$71,644,103; exhibiting an error of \$33,846,505. But, sir, in order to still better understand the real character of his official communication to Congress, and to enable us the better to appreciate the degree of authority we should assign to them in our action upon this floor, I ask the attention of the House first to an estimate in this same ever-memorable report as to the accruing revenue from one particular source—I mean from the public lands, in 1836. He says, from this source we need not expect to realize more than \$4,000,000. It so turned out that they yielded us exceeding \$24,000,000. Also to the remarkable statement it contains, that on the first day of January, 1837, the balance in the Treasury would not exceed \$14,500,000, whereas it exceeded \$44,000,000, making a difference of nearly \$30,000,000.

Again: In another report of Mr. Woodbury, made within ten days of the expiration of the last quarter of 1835, he estimates the accruing revenue for that quarter at \$4,950,000; when, in fact, it turned out to be \$11,950,000, presenting therein an error of \$7,000,000; and this certainly at a time when all must admit he did, or could have known, almost to a dollar, what would be the receipts of that quarter.

Mr. Speaker, I ask you, sir, and the other unwavering supporters of the past and present Administration, how do you account for all these egregious mistakes? I demand, in the name of the country, to know, of the oracles of those in power, what has produced those monstrous official errors? It will be answered, no doubt, that, from the remarkable character of the year 1836, a wild spirit of speculation of every sort brought into our Treasury, through the medium of duties, and the sale of public lands, an amount altogether greater than any could have anticipated; and that he has thus innocently and unavoidably been betrayed into the error. This, sir, must be the true answer, or the Secretary has prostituted his official station to utter an official falsehood, for the unworthy and shameful object of subserving low, mean, party, and selfish purposes. One or the other must be true; all candid men will admit. I think I can show that the former answer is not the correct one; and, in support of this opinion, I appeal to the well-known fact, that, in the fore part of the very session of Congress to which the Secretary of the Treasury made this memorable report, Mr. Ewing, Senator from Ohio, made and published, in pamphlet form, a speech containing his estimates, and embodying his opinions, on the points upon which the Secretary fell into such error.

In this speech, to which I invite the attention of every member of the House, what did Mr. Ewing say to the nation? Did he say the available means of the Treasury, in the year 1836, would be \$36,797,593, as did Mr. Woodbury, and therein miss the truth by \$36,846,505? No, no; but he foretold that the available means would be but little short of \$77,000,000. In this same speech, that Senator demonstrated to the Senate, that although the honorable Secretary of the Treasury had contended the receipts from the public lands in 1836 would not probably exceed \$4,000,000, that they would, in his opinion, exceed \$20,000,000, which was more than realized. And at the same time he showed the fallacy of the Secretary's calculation, in estimating the balance in the Treasury, on the 1st of January, 1837, at \$14,500,000, and predicted, as it turned out to be, that the balance would exceed \$44,000,000.

It then appears that these errors of the honorable Secretary did not originate from the want of sufficient data upon which to predicate a calculation which should approximate reality. For surely he, with all the facilities which his position afforded, had a much better opportunity of making a correct estimate than any one else, and very much more so than the honorable Senator from Ohio, whose incorruptible integrity, daring patriotism, and giant intellect rendered him an object both of fear and implacable hatred to the administration.

Now, Mr. Speaker, we boast of having the freest Government on earth: where our official functionaries are more amenable to, and more completely within the reach, and under the influence of the people's will, than in any other. Still I am inclined to think there exists a very great mistake on this subject. Though ours is a Republic, and the Governments of England and France are monarchies, still the people of both of those countries hold their officers responsible for a capacious and faithful discharge of their duties; and the King does not dare retain in any prominent station one in whose official character the nation's just confidence. If, as was the case here at the commencement of last Congress, it became a matter of importance to the Government of England or France to know the exact condition of her Treasury, and, as nearly as might be, the accruing means of the Treasury for the current year, and the Minister of Finance had sent to the King, to be laid before Parliament, an estimate of the available means of the current year, placing them at \$37,797,593, and an Opposition member had gotten up in his place and denounced the report as delusive and untrue, and had shown from his calculation that one particular source of public revenue would exceed, by one-fifth, the estimate of the minister, and that the available means would exceed his estimate by \$36,846,505, and thus show that the estimate of the minister was calculated and designed to defeat a great and important Opposition measure; and the estimates of that Opposition member should be literally realized: I ask, if the King of either of those countries would dare continue in place such a minister? No, sir, he would not dare do it; he would feel as he should feel, that he would have justly jeopardized his neck by such a course.

But, add to this, that this minister, by his bungling financiering, by his miserable tinkering with the currency of the country, had beggared tens of thousands of the best citizens of the nation, and produced a revulsion which diminished the value of the property in the country \$500,000,000: can any member contend, that in either of those monarchies, or any where else where civil liberty is appreciated, such enormities would be submitted to?

The honorable gentleman from Ohio, (Mr. Hamer,) who it justly considered the champion of the administration in all the contests upon this floor, commenced his speech, which I knew, when he rose, was to embody, at length, a defence of the general policy of this called session, by expressing his deep regret at feeling called on to participate in the discussion of this bill, and his great preference "to action rather than debate." The new members doubtlessly thought we should have from the gentleman a few pertinent remarks; and that then he would resume his seat. And the people who shall read his speech when it makes its appearance, will also be prepared to conclude that the honorable member arose without any intention of delivering a regular speech, and was involuntarily led on by the engrossing character of his subject, to protract his remarks to upwards of three hours in length. Such, however, as had served with that gentleman heretofore, knew well the relation he bore to his party, and the character of the speech he was to deliver, and the great length of time he would likely occupy, from the ample preparation he had been making for a week past, in taking notes upon such as have opposed this bill.

The gentleman complains that the opposition, instead of proceeding to support the administration in providing remedies for what he admits to be a very important crisis in the affairs of the nation, is disposed to stop and inquire, who produced all this distress which now pervades every class of the community? to which of the two parties in this country is it justly chargeable?

Now, sir, I think it would be any thing other than difficult to show that, after having been called together at this extra session by the President, to administer relief to the diseased condition of the body politic, it becomes us most thoroughly and deliberately to inform ourselves of the nature of this disorder, and of the cause that produced it, in order that the cause may, if possible, be removed, when, and not till then, will the disease cease to exist. The physician who would attempt to administer to a diseased patient, without using every expedient within his power to ascertain the nature and find out the cause of the disease, particularly when it is of so extraordinary a nature as to threaten sudden dissolution, would be justly denominated a quack, and consigned to ineffable disgrace for having wantonly sported with the health and life of his patient. If such would be the fate of the physician, for so gross a departure from the scientific course of his profession, I ask, what ought to be the fate of the leaders of the administration, who recklessly propose to administer to the present disordered, deranged condition of the currency, when every interest in it is struggling for existence, without either examining into the causes that produced the disorder, or knowing the nature and operation of their proposed nostrums, and then presume to reproach the opposition for carefully analyzing the nature and cause of the disease, and the probable consequences of the remedy? Let the constituents of these fastidious gentlemen answer; and, sir, that they may have an intimation of what that answer will be, I point them to the elections in Tennessee, Kentucky, Indiana, New Jersey, Rhode Island, and Maine.

I, Mr. Speaker, hesitate not to give it as my opinion, that the whole difficulty under which our country is now groaning originated from one great and most obvious cause, and that the disease will never be substantially removed without first removing the cause. I think this proposition is subject to the most satisfactory demonstration—I mean the failure to recharter the Bank of the United States, or form a new Bank of the United States.

Previously to 1792, before the adoption of the Federal Constitution, there existed no power in the States of the Confederacy to establish one currency for them all. Each State had its own banks, and then, as well as now, it was known that the price of property in the respective States bore a very close and intimate connection with the amount of its currency. Hence there was an obvious and overruling incentive greatly to enlarge the paper currency of the several States. The paper of one State, whilst at par at home, was under par in the limits of its nearest neighbor. Out of these causes grew great inconvenience, infinite complexity, and a world of trouble in conducting the commerce between the States. This was regarded by the States as a great and crying evil; one which taxed the ingenuity of many of the ablest statesmen and the best patriots of that day of statesmen and patriots, and was amongst the most powerful of the causes which gave birth to that venerated instrument, the Federal Constitution, which embodies evidence of the existence of more political wisdom, sagacious forethought, and clannish, disinterested patriotism in its framers, than has been found to exist in any previous or subsequent age.

In less than two years after the adoption of the Federal Constitution, whilst its framers were then upon the scene of public life, the United States Bank was chartered, and General Washington, then President, approved and signed the charter, after the most mature deliberation and consultation with his patriotic and enlightened cabinet. It was intended to furnish, and did furnish, during the twenty years of its existence, the best currency the world had ever known. Its notes, whether issued in New Orleans or Boston, were preferable to specie at any point in the Union, because it never had, and the country believed it never would fail to redeem its notes in specie; and in this expectation they were never disappointed.

During the existence of the charter of the first bank, from 1791 to 1811, none of the local banks ever were enabled to afford a currency equal to that furnished by the Bank of the United States. The cause of this was obvious to every intelligent person who looked into the subject. The existence of that factitious bank power that no other bank in the country had or could have. It had, through the instrumentality of its branches, facilities in affording exchange, which no other banks could have. And, as a consequence, its stock became more valuable than that of any other bank. Hence they grew up, very naturally, a great jealousy with those who had stock in, and were connected with, many of the local banks, and very many of the best patriots of the country believed that bank had too much power, and others of them believed that Congress had no constitutional power to grant a charter to any

such institution. So that, by the expiration of the first charter, in 1811, there was found a majority against the recharter of that institution. Some of the opponents of the recharter of that bank, in 1811, believed, or professed to believe, that, we then had too much paper money for the good of the country; and that, by refusing a charter to that bank, the country would, to the extent of its circulation, have the amount of paper circulation diminished. But those who had given that subject most attention, and best understood the natural operation of the causes that regulated such matters, were well satisfied that the exact converse of that state of things would necessarily grow out of a failure to recharter that bank. They saw and predicted at the time, that, as soon as the nation got to believe the United States Bank was not to be rechartered, or another substituted in its place, the same causes would be brought into action which had produced over-issues, and necessarily depreciation of the paper currency in the different States, previously to the adoption of the Federal Constitution. And they, during the debates on the proposition, in 1811, to recharter the bank, predicted that its failure would, instead of diminishing the paper circulation in the country, produce, necessarily, a great increase in its amount; and that there would be no limit to this inevitable tendency to increase, until it would produce such a plethora in the circulation, as to result in a certain and universal explosion. Experience soon verified all these predictions. As soon as a recharter was refused by Congress in 1811, the mania for local and State banks forthwith sprang up; and between that period and 1816, when the bank was rechartered, the number of banks had increased from 88, with an aggregate capital of \$42,610,000, to 246, whose aggregate capital was \$89,822,422. In the interval between 1811 and 1816, the increase in the number of banks was 158, and the increase of bank capital, in that short space of five years, was \$47,212,422; whereas, for the ten years immediately preceding 1811, the number of banks had increased from 32, with a capital of \$23,560,000, to the number before stated, of 88, with \$42,610,000 of capital—making an increase in these ten years in the banking capital of \$19,050,000. Upon the recharter of the United States Bank in 1816, however, an immediate check was given to this mania for banking, and, from that period up to the year 1830, the number of banks had only increased from 246, with a capital of \$89,822,422, to 329, with a capital of \$111,192,268, showing in this period of fourteen years an increase of 83 in the number of banks, and \$21,369,846 only in the amount of the banking capital of the country.

In 1830, however, this institution, which had, during its whole existence, exercised so wholesome an influence over that most ungovernable disposition to over-banking, and blessed the whole country with the best and most uniform currency that has ever been known, incurred the displeasure of him whose hatred for the last eight years has been certain death to every institution in the land, and fell powerless and lifeless at his feet. From that time up to the departure of this man from office, (I can not say from power, for he is known and felt by every informed citizen yet to be all-powerful,) embracing a period of seven years, the increase of banks was from 329 to 423, and of bank capital from \$111,192,268 to \$378,421,168. The increase in the last year of his administration, in the year 1836, in the number of banks, was 266, and in the amount of bank capital, \$164,541,873. From which it appears, in this short period of seven years, the number of banks have been increased nearly threefold, and the amount of bank capital more than threefold. The statistics which I have submitted are taken from an official report of Mr. Woodbury, the Secretary of the Treasury, which are thrown into a table exhibiting the increase in the number of banks and banking capital from 1792 to 1837.

Years.	Banks.	Capital.
1792	11	\$3,935,000
1801	32	23,560,000
1805	75	40,463,000
1811	88	42,610,000
1815	illegible	82,259,580
1816	246	89,822,422
1820	illegible	102,210,611
1830	329	111,192,268
1834	506	170,123,748
1835	678	193,584,361
1836	899	216,875,295
1837	823	373,421,168

These consequences flowed from no unknown or mysterious cause, but as the natural and unavoidable result of given causes. They arose from that which ever has been, and ever will be, the case with the State Governments—an irresistible propensity to over-bank, unless restrained by some sufficient counterbalancing cause. Over-banking always has, and ever will, produce a passion for speculation, over-trading, and all its endless train of evils, which invariably have resulted in a ruinous revulsion, as is seen at present in this country.

The currency, the circulation, is to the body politic what the blood, the circulation, is to the animal system; let an irreparable derangement take place in the one or the other, and the body must dwindle, decay, and soon perish. Once satisfy a community that its Government is incapable of regulating and controlling its currency, upon which so much of the value of property depends, and all regularity in every interest, and I guarantee you will find that community disposed to try another form of Government, which can secure to its people some stable, uniform, and stable medium, through which commodities can be exchanged, and the business of the country transacted. The principal return which a people expect in exchange for the restraints imposed upon them by civilized society, by regular Government, is a steady, permanent, uniform policy, and a sound currency, by which the necessary and proper incentives to industry and enterprise are encouraged; by which the industrious parent reaps the reward of his labor, with which to raise, educate, and advance his offspring. No civilized, enlightened, industrious, and enterprising people like ours, ever will consent to live under the form of Government that is so unstable, so fluctuating, and imbecile, as not to afford them the great and paramount objects of government. The sickly vacillating policy of this and the past administration, by which all regularity in the price of property, all certainty in the reward of labor, and all confidence in any regular and settled policy of the country, are destroyed, may be borne with for a while. Yes, it will be borne with as long as there is any reasonable hope of reform; but when all hope of this is lost, the time will have arrived, when the people, in the majesty of their strength, will demand

and procure for themselves such form of Government as will secure to them these great and indispensable objects.

We have lived for forty-eight years under the Federal Constitution, and for forty years of that time we have had a United States Bank, which furnished to the nation the best, soundest and most uniform currency that has ever existed. There has been no period of the forty years' continuance of that bank, when its paper has not been better, and furnished a more uniform currency, than gold or silver itself. For the paper of the mother bank, or any of its branches, was always equal to specie at any point in the Union, as remote as it might be from the bank that issued it; not that one branch was bound to redeem the paper of the others, but because it was always bankable paper at any point in the Union, without regard to the place of its issue. And, in the next place, it was more convenient for transportation, so that if a merchant in Lexington or Cincinnati had \$50,000 in specie, which he desired to pay over to his creditor in New York or Philadelphia, he would consider his specie one or a half per cent. less valuable at his home than in one of those Eastern cities; that is, he would have to give \$250 if he exchanged it at a half per cent. or \$500 if at one per cent. in order to get a draft upon one of these cities; but if he has the paper on the United States Bank, and he can get a draft at par, he only has to bundle his money up, place it in his pocket, and convey it himself to its destination, without his being known by a single soul. This thing has been done over and over again, with the most perfect convenience; hence, United States paper has ever been more valuable, and more uniformly of the same value at different places, than silver or gold.

Or instance another case: a horse drover in Kentucky, who carries a hundred horses to South Carolina, and sells them, say for \$15,000 in specie, could not get his metal back home without a wagon and team; hence he would prefer to buy a check on Kentucky at one per cent. and thereby lose \$150, to the trouble, expense, and risk of hauling home his specie; but if he should receive his pay in paper upon the Bank of the United States, he would just procure thirty notes of five hundred dollars each, and bring home, perhaps in his watch pocket, his \$15,000. Who can, with any knowledge of the business of the country, deny then that the United States Bank furnished a paper circulation better and more uniform than gold or silver itself. Then for forty years this growing, prosperous Republic has been blessed with the best currency upon earth, and in the use of it, has advanced with unparalleled rapidity to wealth, greatness, and happiness. What, however, has been the history of the other eight years, during which we had no United States Bank? It is one continued scene of confusion and distraction in the monetary operations of the country, and, consequently, frequent, sudden, and ruinous revolutions in the business of the whole country, involving in one common, indiscriminate mass of ruin whole communities of our best and most enterprising and industrious citizens. For, however prudent a man may be, he may have a neighbor less able to withstand the mania for money-making, in times of extravagant enterprise and speculation, whom he can not refuse when asked to endorse for him, and who gets disappointed in his just calculations, and is hurried with his innocent neighbor from affluence and happiness to poverty and wretchedness. In the four years that succeeded the refusal to recharter the United States Bank in 1811, the table which I read shows how rapidly the increase of paper money progressed. The history of the last two of the five years mentioned exhibited almost the whole country involved in bankruptcy and ruin. The banks in 1815 and 1816, with perhaps the single exception of those in Massachusetts, suspended specie payments, and their paper forthwith depreciated greatly below par.

In Baltimore and this place, the paper of the local banks was twenty-five per cent. below par. The paper of the local banks in all the other States was at different rates of depreciation. Still the customs and dues of the Government were collected in the paper currency of the different States, all differing with each other in value. So that the importer of goods here or in Baltimore paid one-fourth less of duties on their importations than the importers of the same articles in Boston. Thus did the amount of duties paid at the different ports depend on the depreciation of the paper money in that particular State.

This was an inequality growing out of the deranged state of the currency, which was so perfectly insupportable that, without a remedy, it would have produced a dissolution of the Union; for the operation of things was so, that the Constitution, both in letter and spirit, was outraged and violated in the most palpable manner. Those provisions which require that taxation shall be uniform, and that no port shall have privileges not common to all, were a dead letter, and all men, of all parties, admitted the evil was insupportable, and must be remedied. The commerce between the States was so crippled up as almost to be annihilated. No evils of this sort had existed from 1791 till after 1811, when a recharter was refused to the United States Bank; the absence of which, it was generally admitted, produced this swarm of local banks, which first flooded the whole land with spurious, depreciated paper money, and finally ended in the convulsion of 1815 and 1816. There existed then, as is the case now, but one remedy for the disorder of the currency, and that is a United States Bank. It was then, as it is now, known that a cause for the deranged and ruined condition of the currency existed; and it was then thought by all to be the duty of every statesman fully to examine into the matter, to ferret out the cause, place it before the country, and let the responsibility of it rest where it belonged. There was found no one then upon the floor of Congress who objected to finding out the cause of the embarrassments then existing, in order to remove them. No one could then be found who ventured to reproach others for professing to be unable to use means to remove the cause of great and heavy evils, before that cause was ascertained.

In 1816, it was believed that the absence of a United States Bank produced the embarrassments; to remove them, the cause was removed. A United States Bank was rechartered; and in less than one year from that date almost all the banks in the Union which did not finally fail from gross mismanagement or fraud, recommenced specie payments. Thus, with the removal of the cause, its effects also disappeared. I believe similar results would occur if we could get the whole truth before the country, and the people could see the cause of the present revulsion. The great body of the people are honest, and they need but to see what is right to do it. Hence arises the aversion of the gentleman from Ohio to have the true causes of our embarrassments placed in bold relief before the country.

Now, if the friends of the administration would admit, what I am sure they must believe, that our embarrassments have grown out of the downfall of the United States Bank, and join

those who have always been in favor of that institution in now chartering another upon similar principles, the opposition would desire to say no more on the subject of the crisis and its causes than would be necessary to place that matter fairly before the country, so that the people may fully understand who are the authors of our present embarrassments. But they refuse to admit themselves the authors of our troubles, and say it is the opposition that has brought them upon us; and then reproach the members of the opposition for disproving this most extraordinary charge.

The gentleman from Ohio says that the commercial embarrassments that now convulse this country have overrun England, France, Germany, Switzerland, Turkey, the East Indies, and the Empire of China; and then emphatically asks, if it is possible that any sensible man can believe that the removal of the Government deposits from the Bank of the United States to the State banks has convulsed three-quarters of the globe? I have not heard any man, here or elsewhere, pretend to say that the present disasters that overspread even this country are attributable to the removal of the deposits; and I must be permitted to say, that the assumption of the honorable gentleman is unauthorized; that he has drawn upon his fancy, in asserting that any such position has been taken by the opposition; and of such assumption is the greater part of his very long speech constituted.

But of all the unauthorized assumptions which the honorable member has seen proper to make, the most supremely ridiculous is that of attributing to the opposition the promulgation of the opinion, that all the embarrassments which he has chosen to assert do now exist in China, Turkey, etc., etc. are owing to the removal of the deposits from the United States Bank.

But, sir, I take issue with the gentleman upon the question of fact as to the existence of convulsions in England, or any of the countries which he has named, similar to, or comparable with, those which we find prevailing in this country. And I now invite him to rise in his place, and point me to the authority upon which he has predicated his assumptions.

It is perfectly astounding to hear with what unmixed effrontery it has been asserted since the revulsion, by the friends of this administration, from the President himself down to the most degraded tool of his party, that, in proportion to the entire amount of the paper circulation of England and the United States, its augmentation, in the last three years, has been as great there as here; and that it begat the same spirit for speculation and over-trading in that country as in this, and, as a consequence thereof, that both countries have been alike involved in similar difficulties.

Now, sir, as to the general charge that monetary affairs are as much deranged and as difficult in England as here, I appeal to the known fact, admitted by the gentleman from Ohio in his speech in support of this bill, that specie may be borrowed in any quantity at three per cent. in England, whilst all know that it can not be borrowed at four times that rate in this country. Indeed, sir, such a thing as negotiating a loan of specie is not thought of here; for if an individual has specie on hand here, he never thinks of loaning it, but proceeds to sell it at eight per cent. advance for paper money; and then, if he chooses, loans the paper money at six per cent. making an interest of fourteen per cent. on specie here, when it is worth but three, as has been shown, in England.

A distinguished Senator from Georgia, in a speech delivered in the other end of this building but a few days since, showed, from official documents from England, that the augmentation of paper circulation there, since the commencement of 1834, was only one and a half per cent. upon the entire paper currency of that kingdom; whilst the proportional increase in this country, within the same period, is exceeding sixty times as great. No Senator pretended to controvert the accuracy of his statements, nor has a contradiction emanated from any respectable source, so far as I have observed.

When a sudden reverse overtakes this country, under which its trade and commerce dwindle away, and its whole energies are literally paralyzed, as is the case now, it will, to a greater or less extent, be felt by all the countries with which we have extensive commerce and intimate connection. Then, whilst I admit that some slight embarrassments have existed in England, growing, in some degree, out of the intimate commercial connections between that country and this, I deny that they prevail, in any thing like so great a degree, there as here.

But the gentleman from Ohio says the causes of our embarrassments are widely different from those to which the opposition have attributed to them; and adds, that they are to be found in "the over-trading, speculations, and extravagance of the times;" and that they have prevailed alike all over the civilized world. To the latter part of his assumption, I have replied. Now, as to our difficulties having principally grown out of a spirit of speculation, over-trading, and extravagance, I very readily admit he is correct in the abstract; but that these causes took their origin, and grew out of a still deeper cause—the downfall of the United States Bank, I think is unquestionable; and, in that event, the whole responsibility of the present embarrassments rests with the administration. Did not every statesman who spoke in favor of a recharter of that bank, predict that its overthrow would necessarily produce a swarm of local State banks, that would flood the whole country with their paper, as they did from 1811 to 1816? that this increase of our circulating medium would, by increasing the facilities of getting accommodations from the banks, necessarily produce a mania for speculation, and, as a necessary consequence, great extravagance and profusion in all classes of the community? It was no supernatural power by which the advocates of a bank were enabled to foresee and predict these consequences; to do this, they need but understand the history of their own Government, the then condition of the country, and the natural operation of certain causes that are inherent in the constitution of man. They saw many of the States without any other bank than the branches of the United States Bank, as was the case with Kentucky. They knew that, upon the downfall of the Bank of the United States, each State would perceive the necessity of making banks of its own, that would furnish, for its own purposes, a currency preferable to the paper of the local banks of the adjoining States. According to the prediction, as soon as the fall of the United States Bank was understood to be settled, we saw this work of manufacturing new banks commence and proceed with the speed set forth in the table which I have read.

The gentleman says, we have no more constitutional power, and that it is not more our duty to regulate the currency, with a view of rendering it uniform, and to regulate and cheapen exchanges, than we have to transport the produce or stock of one

portion of the Union to the other. And then he emphatically asks, "What is money?" and answers the question by asking, "Is it any thing but property?" Thus, by this short process, he satisfies his own mind that money is property, and that it is as much the duty of Government to furnish the means of transporting property, as money, from point to point. Now, after the Herculean work of improving the currency and cheapening exchanges, so successfully accomplished by that chief, who, last spring, in his Farewell Address, could not refrain from congratulating the country upon the successful and glorious accomplishment of this wise and patriotic undertaking of his, little did I expect to hear one of the great pillars of that brilliant administration, at this early day, get up and denounce the whole scheme as unconstitutional and unworthy of Congress. I do not intend here to submit any argument upon the constitutionality, either of the Bank of the United States, or upon the subject of its being the duty of Congress to furnish a sound and uniform currency; time and circumstances forbid such a course now. For I consider, if weight of authority ever can settle any question, the constitutionality of that bank is well settled, and, as to its utility, it can not be denied by any one, who has any regard for his own veracity, or for the common decencies of life.

I will take occasion here to remark, however, that whilst I now am, and have ever been, an advocate of a United States Bank, I differ widely with some of my political friends, in believing we ought to charter a great mammoth institution, with capital enough to supply the whole currency of the country, and to supersede the necessity of State banks. I believe in banking, as in every other branch of business, there ought to be competition, and, for one, I should regret to see the whole banking facilities of the country within the control of any one corporation. Whilst, then, I advocate a United States Bank with a limited capital, guarded with proper restrictions, I am also in favor of a reasonable proportion of State banks. I believe them both useful and necessary to the sound, safe, and healthy operations of the business of this country.

The gentleman from Ohio, with much apparent surprise, took occasion to say that the opponents of the administration even contended that the measures presented by the administration at this session will extend no permanent and substantial relief to the country, and very emphatically asks whether any are prepared to deny that this bill, which proposes to extend a credit of four, six, and nine months to the deposit banks, is not a measure of permanent and substantial relief? Whether these banks would not, by this indulgence, be enabled to extend the necessary relief to the country?

It is very rarely, of late, that I am astonished at any thing I hear advanced in this House. But I must acknowledge I was perfectly astonished when I heard the honorable member, coming as he does from the West, and understanding, as he must, the condition of that country and the banks, utter this remarkable sentiment. They must have upon deposit some \$9,000,000 of this money. To draw this vast sum of specie from these Western and Southern banks in the short space of time proposed, would bankrupt that whole country. It would be utter ruin to both the banks and the people, and yet their representative here most unceremoniously calls it substantial relief to the country. It is mockery! It is an insult to the understanding of this House and the whole nation. I venture to hazard the opinion that not another Western member will endorse the monstrous sentiment. I venture to say they will unite, in a body, to denounce this four, six, and nine months' measure as ruinous, and demand a further postponement for their constituents, so as to enable the States by their fourth instalment on the 1st of January, 1839, to come to the relief of their banks.

The opposition, adds the gentleman, not only opposes the proposed measures of relief, but refuses to bring forward any measures of its own, upon which that gentleman distinguished for his great humanity, broke out in a strain of the bitterest invective. He said, if disposed to indulge in the use of epithets that are daily thrown out against the administration, he would pronounce such a party a "corps of political mercenaries," "miserable demagogues," "the most unprincipled, corrupt, and rotten-hearted faction that has ever appeared in this country." But he declines using such language, and adds, "It belongs to the opposition vocabulary." In reply to all this, I will content myself by saying that I think the gentleman deserves about as much credit for his ingenuity, in avoiding the use of epithets towards his political opponents, as for the profound statesmanship shown in contending that a party in a decided minority in both Houses of Congress, with the President opposed to them, is deserving of such language for not bringing forward measures of relief. The opposition, at the commencement of this session, declared to the country that they were powerless; that the administration had majorities in both Houses, and were responsible to the country for measures of relief. But the members of the opposition have not acquired their opinions either as to the cause of our distresses or as to the remedies for them; they have freely spoken of both, and for it have been reproached by the entire nation in terms like these. We have been told we should act, and not speak. "The opposition is prepared for both upon any measures the administration have or may bring forward."

But, sir, the gentleman from Ohio, who has been not only fixed on by his party to deliver the defence of the administration against the assaults which have been made upon its policy of this session, has chosen to denigrate, and I doubt not correctly, all the measures of this session as far as they consist of one grand system, and has as such treated of them in his elaborate speech. I will, as it seems no opposition member will follow me in the debate, proceed to respond to some of his arguments upon the other branches of this system.

He says: "The distress of which we hear so much is exaggerated. It exists only among particular classes of the community. It has not reached the great mass of the people." Whether the distress has been exaggerated or not, is a mere matter of opinion. I think it has not; and I think it has reached every class of the community. The sudden revulsion which has overtaken the country so astonished every person, that the whole people, with one accord, all over the Union, seemed to believe, and no doubt correctly, that the only way in which the credit of the country could be sustained was for every one to rally to the rescue, and offer upon the altar of his country's good a portion of his constitutional rights—the privilege of demanding specie for his dues; and thus has the shock been borne so far; but for this, no one could contemplate the extent of ruin which must have ensued.

Indeed, sir, as far as my acquaintance went, it was admitted

by every body that the debts of the country could not be collected in specie. There has been in the West, literally none in circulation since the suspension. The title that was there ceased to circulate, was bought up as a commodity, and transported to the Atlantic cities. It seemed to be agreed, as if by common consent, by every person, as far as my observation went, that where the payments of debts were demanded, specie was not to be exacted, and that if creditors claimed to exercise their constitutional right in demanding specie, the whole business of the country must cease, and society resolve into its original elements, and its members protect their property and possessions by physical force, until some relief could be afforded. I entertain not a doubt that, if the debts of the country were now generally sued for and demanded in specie, you would find the officers unable to enforce the law, and the best citizens resisting its execution.

The Constitution, which guarantees to every creditor the right to demand his debt in specie, has been, in the West, from the suspension till now, virtually and practically abrogated, because of the physical inability of the country to furnish the constitutional medium. This matter is spoken of and understood by every man in the land, and it is reaching and affecting every interest in society. This Government, we are told by the administration, can not get on for ten days without relief. The whole people are conducting their affairs, not in reference to the Constitution and laws, but independent of both; yet we are told that our difficulties have not reached "the great mass of the people."

The gentleman says the foreign debt, of which we hear so much, is not the debt of the nation, nor of the great mass of the people, but of the wealthy merchants, who have inundated this country with foreign goods, and who, as a class, have ever been venal and destitute of patriotism; who involved us in the late war, and then threw every impediment in the way of its successful prosecution, and therefore deserve no particular favor from Government.

Mr. Speaker, I stand here the representative of merchants; and if I was not a member of the American Congress I trust I should never be so insensible to that justice which is due to every class of the community, of whom it may suit the purposes or tastes of gentlemen here to speak disparagingly, to remain silent when such sweeping, unjust denunciations are aimed at so useful and worthy a class. Sir, I feel very little like retaining myself within those bounds which parliamentarianism requires in responding to this extraordinary denunciation. The rules of this House, respect for myself and the place I fill, will not allow me to employ language that would adequately convey what, under other circumstances, I should feel inclined to say. I must, however, be allowed to remark that, according to my taste, which I would by no means set up as a test for others, I should feel myself unworthy of the seat I hold here, if I was capable of perpetrating in my place such cruel injustice towards so valuable, so estimable a class, as every gentleman knows the merchants of this country constitute. It sometimes happens that the most erroneous estimates are formed of particular classes and communities by those who have never found their way into the better orders of those classes and communities.

The merchant is nothing more than an agent or factor of the producer, the instrument by which our products are carried abroad, and exchanged for such foreign commodities as we need; he is as necessary and as useful a constituent part of society as is the producer or laborer; and you cannot blast his prosperity without sweeping with it the prosperity of the community with which he is connected. It is true, the importing merchant owes directly our foreign debt; but the merchant to whom he has sold his imported goods owes him, and the consumer who has bought of the retail merchant owes him; so that the foreign debt is at last owing by the whole consuming population, the great mass of the people. They have to pay it, they are willing and able to pay it, if this Government will suffer them to have a currency, through the medium of which their surplus products can get to market without their losing from ten to twenty-five per cent.

The people of all the States owe their proportion of this debt, and they can only pay it off by selling their products for the money, with which to pay the merchants from whom they bought their goods. The farmers of the Western and Northwestern States depend upon the flour, the pork, the beef, the mules, and the horses, which they send to the great staple States of the South and Southwest, out of which to raise the money to liquidate their part of this debt. Our produce or stock, when sent to a Southern State, say Mississippi, is sold for the currency of that State, which is inconvertible; it is brought home, and sold for specie, or the local circulation, with which to pay the merchants, at a discount or loss of from 20 to 25 per cent. Thus a fourth of their gross sales are lost; out of the remaining three-fourths they have to supply their families, and appropriate what little balance remains toward paying their proportion of this foreign debt. Sir, if this Government had been in the hands of merchants, you would never have seen your currency in its present condition, and our people ground into the dust as they now are. The merchants need no eulogy from me. I stand here the eulogist of no class, but as the defender of those whose very name is the best passport which our Government can bear to every foreign land where this Government is known. I will not so far forget what is due to the merchants of this country as to institute a comparison between them and the trucking, unscrupulous demagogues of the day, whom fortune has thrown into station, of which they avail themselves to disgrace and slander those with whom they are not worthy to be compared.

But let us proceed, and examine further into what has been denominated by the member from Ohio as miserable, false, newspaper slang, upon the subject of two currencies, one for the Government, and the other for the people.

Is it not known to all that, in consequence of the deranged state of the currency the people receive their debts and transact their daily business in the paper money of the country, and that, otherwise, the regular business of the country could not continue a single day? And yet no gentleman who has any self-respect can deny that the officers of this Government, who draw high salaries, are paid out of your Treasury in specie; whilst your poor day-laborers, the soldiers who fight your battles, and the old pensioner, who has spent the days of his youth, and worn out his constitution, in fighting for that liberty which our fathers transmitted us, have to receive their pay in paper, right or ten cents in the dollar less valuable than specie. Insurances have occurred under my own observation, which should make this administration blush, if it was not insensible to shame.

But the other day I went, with a colleague and a friend of the

administration, to some of the public offices, to attend to some business for his constituents; he got a check to the "Bank of the Metropolis" for some pension money of a revolutionary soldier, which he had to receive in paper, whilst he and I, and you, sir, are paid in gold and silver. That gentleman was struck with the enormity of such a state of things, and could not forbear to remark upon its hardship and injustice.

In a few days afterwards, in passing by some day-laborers employed by the Government, either I or the gentleman with me, asked what sort of currency they were paid in; to which one who bore the appearance of a brave, hardy soldier, remarked: "In city paper," and that he was glad to get it; for it was much better than the paper in which he had been paid off for his services whilst in our army, marching in search of our southern Indians; that he had drawn from this Government \$200 in Southern bank paper, for his services in the army, which, upon his return to his home in this city, he had to shave off at a loss of twenty cents to the dollar, amounting in all to the sum of forty dollars—a considerable loss for a common soldier out of his daily wages. Upon the other hand, a member of Congress from Mississippi, Louisiana, or Arkansas, who draws about \$2,000 for his services, gets his pay in specie, can sell that specie upon his arrival here at eight and a half per cent. advance, making \$170 of profit; and then, if he choose, he could buy with the paper currency of this place Southern paper, as I have understood, at a discount of twenty per cent. by which he could realize about \$400 more, making in all the sum of \$570 by this shuffling operation, growing out of the better currency with which this administration has blessed the country. There are members, too, from the North who will realize enough by shaving off their mileage and pay to defray their expenses from the time they left their homes until their return. I do not mention this by way of disparaging those who have sold their specie; it constitutes no portion of our circulation; it is a commodity, and is bought and sold accordingly. The Secretary gave notice, through the public prints, that he had the specie on hand with which to pay the members of Congress. They felt, that if the specie was to be paid out to the President and his Secretaries, and their friends, there was no reason. When asked by the Secretary whether they preferred specie to paper, why they should not speak the truth. At first I could not understand why members of Congress were offered a choice between specie and paper; but when I recollect that the President, whose salary is \$25,000 per year, and the Secretary of the Treasury, whose pay is \$6,000 per year, were the persons who had the making of these offers, and that the one would draw about \$500, and the other about \$2,125 per year more, if paid in specie, than if they were paid in paper, my difficulty was removed. Perhaps the administration thought the responsibility of paying themselves in specie would be lightened by throwing it partly on Congress. But there it cannot rest.

Notwithstanding all this, when the opposition says there are two currencies, they are charged with repeating miserable slang. The Government, after bringing this state of things on the country, has convened Congress, and proposes no relief to the people; but only proposes means by which the Government can get on, leaving the people to buffet, as best they can, with the insurmountable difficulties that are now overwhelming the country.

But, Mr. Speaker, great as are the embarrassments with which our whole country is overwhelmed, I value them all as nothing, when compared with the evils that I perceive the administration has in store for us. We have, thank God! sir, the best population on earth, and a country incomparably beyond any other in its exhaustless resources of wealth and greatness. Our people understand more of the principles of their Government, more of the principles of civil liberty, than any population that has ever existed upon the face of this earth. And all, yes, all, sir, has grown out of that happy form of Government which the wisdom of our fathers transmitted to us. As long as we preserve our constitutional liberty, as long as we can maintain the supremacy of our Constitution over the will of our rulers all is safe. When the emergency requires, I am prepared to yield up all that relates to the right of property, all subordinate municipal regulations; but I will cling to this Constitution, to the great principles of civil liberty as secured to my country by that Constitution, as the only valuable fragment that is left of that mighty wreck which the folly of our rulers has brought upon the land. Executive patronage is the source from whence the Constitution has most to apprehend. Whilst wielded by the popular military chieftain, who has just left the Executive chair, it was believed, by many of the best and wisest in the land, to be too powerful for the Constitution. The administration, project of which I speak, and which I so much fear, is the proposed Sub-Treasury system, by which, we are told by the President, through his organs in this House, that the public funds are to be kept as safely, the fiscal operations of the Government facilitated, and the patronage of the President curtailed! Let us then, for a moment, examine first into the relative safety of the public moneys when in banks, and when in the hands of Sub-Treasurers, or Government agents. In the first place, then, what has been our experience—the best of teachers? For the period of more than thirty-six years, during which the Bank of the United States had charge of the government deposits, not one dollar was lost by it to the Government, nor did that institution, at any time during this period, fail to perform, as a fiscal agent of the Government, every thing that was required of it. Whilst upon the other hand, in the thirty years between 1789 and 1819, as appears from a report of Mr. Crawford, this Government lost upwards of \$3,000,000 by the defalcations of its collecting and disbursing officers, who had nothing to do with the money, except during the short periods it was passing from those who paid it to the Government till it reached the banks, and then from the banks to the public creditors. If this vast amount of our revenue was stuck to the fingers of the officers of the Government whilst it was passing thus rapidly through their hands, how much greater would have been the loss to the Government if they had been permanent keepers of it!

But again, if such heavy losses were sustained at a time when our revenues were comparatively so small, and when officers were selected, according to Mr. Jefferson's rule, for their capacity and integrity, what may we expect our losses to be, if our vast revenues are to be permanently kept by Sub-Treasurers, selected at this day, when officers are prescribed for their honesty, and their places filled by the most unscrupulous brawling partisans of power! The President, in that portion of his Message where he treats of this favorite project of his, says the objections to it are founded upon the mistaken supposition that "a vault in a bank is stronger than a vault in the Treasury." Not at all, sir; but upon very different grounds

do the opponents of his plan rest their objections to it in a pecuniary point of view, whilst, by the by, is the very least of their objections to it. It is, that the keys of those vaults are to be entrusted to his numberless Sub-Treasurers, selected, not as banks select their officers, for moral integrity and capacity, but for their dirty party services! These Sub-Treasurers, when a general election approaches, upon which, depends, perhaps, the fate of the "GREAT DEMOCRATIC PARTY," will likely feel themselves called on to use a few thousand dollars of the people's money for the success of the people's cause; and if they are finally defeated, they will feel that for their extra services in the cause of the people they are entitled to extra compensation; and, as they have the fixing of the amount, it is highly probable they will be well paid.

But the safety of the public funds, though a subject of great importance in itself, when compared with the objection to "the Sub-Treasury system" growing out of the enormous increase of Executive power, shrinks into utter insignificance. I hold that the loss of the largest amount of money of which these Sub-Treasurers could possibly rob the Treasury, is not worthy to be compared with a loss of any one of those great principles of civil liberty for which our fathers so valiantly fought.

The principle of spoils and plunder, upon which the late administration has been openly conducted, have justly excited the most solemn and awful apprehensions with all patriots who have taken the trouble to look into the mighty engine through which it was brought in conflict with the freedom of elections. According to the wise organization of our free Government, all political power is derived through the ballot-box; and whenever we place in the Executive the means of corrupting and controlling this fountain of power, we destroy all the checks which the forms of our Constitution have imposed upon him.

Bitter experience has taught us, during the late administration, that the hundred thousand office holders, who hold their stations by no other tenure than the President's good will, together with the vast appropriations which an administration Congress annually made, and the unparalleled popularity of the late Executive, gave to him a power to which constitutional restraints offered but a feeble and unavailing barrier. And the only hope of those who apprehended danger from this source was, that no other President would ever again have such a hold on public favor as then incumbent. No sooner, however, was the successor of this remarkable man seated in this chair of State, than he comes forward and proposes to us, and asks our concurrence in a system by which this very executive power will be almost doubly increased. How many officers this system will render it necessary to employ, it is impossible to tell; but, just as the number increased, so is Executive power increased. We are told by our late Minister to France, in his very able speech delivered a short time since, in the other end of the Capitol, that, while in France he instituted an inquiry upon the subject of the number of officers employed under the Sub-Treasury system of that country, and learned there was this enormous number of one hundred thousand. If that is the number thought to be actually necessary in France, where the throne is hereditary, and where the King has no motive, such as he would have if he were to be elected every four years, to increase that number in order thereby to increase his power and the better to secure his election; what would be the number to which the officers under the system would be run up in this country, where there would be every possible motive for increase? It is impossible to tell. No mortal twenty years since would have supposed the ingenuity of man could have devised ways and means by which to employ fifty thousand officers in this Government, whilst new we perceive we have twice that number. So it will be in this country, if this Sub-Treasury system, this new engine of power, is organized; the number will increase from year to year, until in all probability it will become as great as that now employed in France.

Already, sir, we have one-twentieth man in the Union an officer dependent upon the Executive. Organize your Sub-Treasury system, and you double that number, and make every tenth man an officer. For be it recollected that we have less than 2,000,000 votes in this Government. And what a spectacle shall we then have presented for our observation. A President of the United States, ex-officio commander-in-chief of our army, with 200,000 dependent stipendiaries, with the whole Treasury in their absolute, unqualified control, waiting anxiously waiting to do his bidding! I ask you, sir, I ask every man here who has a particle of patriotism left, is a mammoth power like this consistent with liberty? If it be once organized, will the form of our free government, as embodied in our Constitution, be worth contending for? The President will be absolute, and the people will be slaves! And not less slaves because our President may be a merciful man. The good man's slave may live through life insensible of his chains, but he is not therefore less a slave. And notwithstanding all this, what is the language employed by the President through his leading organs on this floor? Here it is, in the language of the honorable gentleman from Ohio. He remarks, "Here is the Executive of our Government voluntarily proposing to relinquish patronage, and those who are in a position striving to retain it in his possession, to force it upon him. It is perhaps the first instance in the history of free governments where such a proposition has been made, and I have met with opposition in such a quarter."

That the leading debater of the Administration, upon whose words, as they dropped, his party hung in rapturous delight, around whom, upon the conclusion of his speech, they flocked to take him by the hand and congratulate him on his effort, should upon the floor of Congress, in the face of the American people, assert that the President, in submitting this scheme, was "voluntarily proposing to relinquish patronage," presents the strangest and most melancholy scene that I have ever beheld in this hall!

There was a period in British history similar to the present in ours, when there was an excited contest carried on for years between the King, in favor of royal patronage and power, and the People against them. The People saw that the growing influence which the King brought to bear through his office-holders upon elections was increasing with alarming rapidity; they believed it was endangering English liberty; they resolved to check it, and by a single act of Parliament, which the King did not dare to veto, but was compelled to sign, forty thousand office-holders, one-seventh of all the voters in the kingdom, were disfranchised, and prohibited, by the heaviest penalties, from interfering in any manner with elections. What it, during this struggle, so analogous to that now going on between

the People of this Government and the President, a member of Parliament, a leading and acknowledged organ of the King, had arisen in his place and submitted a proposition to organize a fiscal agent of the Government, which would devolve upon the King the appointment of a hundred thousand new officers, to hold their stations at his will, and had denominated it a measure calculated to curtail the patronage of the King, how many members of Parliament, upon his concluding his speech, do you suppose would have gathered around him, taken him by the hand, congratulated him upon his effort, and endorsed the sentiment?

The President, Mr. Speaker, underrates the intelligence of the age. He is mistaken if he supposes he can gull the great mass of the American People into the support of this measure, as one calculated to curtail Executive patronage. If he is not, the experiment which we are now testing by our form of Government must inevitably fail!

### SPEECH OF MR. FILLMORE, OF NEW YORK,

*In the House of Representatives, September 25, 1837.—*

On the bill to postpone the fourth instalment of deposit with the States.

Mr. FILLMORE then said it was with extreme reluctance that he ventured to throw himself upon the indulgence of the committee, at that late hour of the day, and after such a pretracted debate. But (he continued) it is not my fault, sir, that I address you at this time. I have made every reasonable effort, that a modest man could make, for some days, to obtain the floor; and now, for the first time, I have been successful. I am now prepared, sir, notwithstanding the lateness of the hour, to offer what I have say on this subject; but if the committee prefer to rise, and continue the discussion to-morrow, it will suit me quite as well. For the purpose of testing the sense of the committee on that point, I will cheerfully yield the floor for a motion to rise. [Here a motion was made to rise, which was negatived, and Mr. F. proceeded.] I am content, sir, with the determination of the committee to hear me to-night.

What then, sir, is the history of this surplus revenue, upon which the bill upon your table is to operate, and which has elicited such a warm discussion? It is this, sir—our revenue had been graduated upon a scale sufficiently large, for many years, to collect from the people, chiefly by duties, a sum, which, together with the moneys received from the sale of public lands, not only defrayed all the expenses of Government, but left annually a large surplus to be applied in payment of the national debt. This debt, sir, which, at the adoption of the Federal Constitution, was upwards of \$75,000,000, had, by the operation of this system, been gradually reduced, so that, in 1812, before the commencement of the last war, it was only about \$45,000,000. The expenses of that war, sir, again increased this debt, so that, in 1816, it was upwards of \$127,000,000. A wise forecast had made ample provision for its payment, and year by year it was lessened, until 1834, when it was finally extinguished.

It was apparent, sir, to all, before this debt was finally liquidated, that when that event did occur, the same system of indirect taxation, which could not suddenly be changed without injury to our manufactures, must throw a large amount of surplus revenue into the Treasury. This money having been thus collected from the people, or being the avails of the public lands, it was thought no more than reasonable, as it was not wanted for Government purposes, to return it again to the people, from whom it had been taken, and whose it was. I shall not now stop, sir, to inquire into the justice or constitutionality of the measure. It was clearly just. The Government had this fund as the agent of the people. I hold, sir, that the Government, in all cases, is but the agent and instrument of the people, constituted to execute their collective will.

To restore this large amount of money to the use of those from whom it had been taken, with as little injury as possible to the country, Congress passed a law on the 26th day of June, 1836, by which it was declared that the Secretary of the Treasury should, on the 1st day of January, 1837, ascertain how much money there was in the Treasury, and deduct from the whole sum thus found \$5,000,000, and that the remainder should be deposited with the several States, or such of them as

should consent to receive the same, one-fourth on each of the 1st days of January, April, July, and October, in 1837, upon the conditions prescribed in the act; which were, that the States should keep it safely, and return it again to the United States, in sums not exceeding \$10,000 per month, from any one State, and so in the like proportion from other States, when wanted for the use of the Government, and demanded by the Secretary of the Treasury. But the Secretary was authorized to draw for \$20,000 on giving thirty days' notice. I do not pretend, sir, to give the words of the act verbatim, as I have it not before me, and I only speak from recollection. But this is the substance of the act of Congress.

This, sir, was the proposition on the part of the United States, of the terms upon which they were willing to deposit this money with the States. This, too, was a proposition emanating from the highest—pay, from all the separate departments of this Government. It was pledging the national faith in the most solemn manner that it could be pledged, by a law which received the assent of both houses of Congress and the approbation of the President.

The State of New York, sir, by an act of its Legislature, passed, I think, in January, 1837, agreed to accept this proposition made by the United States, and to receive the money, and safely keep and return the same when called for, according to the terms of said act of Congress; and pledged the faith of the State for the faithful performance of these acts. This, then, constituted the contract or compact between the parties.

The Secretary of the Treasury, as directed by the act of Congress, ascertained, on the 1st day of January last, the amount of money in the Treasury, and after deducting, as he supposed, \$5,000,000 from that sum, found there remained to be deposited with the States \$37,468,959 97. I say, as he "supposed," sir; for it now appears by his late report to this house, that there was \$1,670,137 52 in the Treasury, (that is, sir, in the pet banks,) on that day, of which he had received no account. So that, in reality, he reserved \$6,670,137 52, instead of the \$5,000,000, as directed by the act.

Well, sir, the portion of this which belonged to the State of New York by the terms of the compact was \$5,352,694 28, three-fourths of which has been received by that State, and the bill now on your table proposes to postpone the payment of the remaining \$1,338,173 57, to which that State will be entitled on the 1st day of October next, by the terms of the compact.

Now, sir, let it be borne in mind that this is one entire contract, in reference to one entire sum of money, and that it has been partially performed. I say, sir, the sum is entire. Although it was to be paid at different times, yet the appropriation was of the entire sum that should be found in the Treasury on a certain day. That sum, when ascertained in the manner prescribed by the act, was the money set apart for this specific purpose. It was in legal intentment as definite and fixed as though the money had then been counted out at the several banks where it was deposited on that day, and laid aside for this object. True, it was to be paid out at different times. But this was to accommodate the banks, and prevent a derangement of the currency, and consequent distress of the community, by calling for too large sums at once.

But, Mr. Chairman, I am opposed to the bill upon your table. I am opposed to it, first, sir, on the ground that it is hypocritical and false in its language. The title of the bill is an "act to postpone" the payment of this fourth instalment. This is a false label, sir, to the door through which we are to enter into the mysteries of this bill. But let us look to the bill itself. It declares that the payment of this instalment "shall be postponed until further provision by law." What is this then, sir, but a repeal of so much of the act of 1836 as authorizes the payment of this fourth instalment? It does not merely postpone the payment to a definite time, then to be made without any further legislative action; but it postpones it until further "provision by law," that is, until by a new law Congress shall direct this payment to be made. If this bill pass, nothing short of a new law can ever give this

money to the States. Then the effect of this bill is to repeal the law of 1836.

Why not say so, then? Why profess to postpone when you absolutely revoke? Why not call things by their right names? Is there some iniquity in the transaction that it is necessary to conceal? Is it intended to excite expectations among the people that are never to be realized? Sir, I disdain such a course. I will never give my vote for a law that on its face bears evidence of fraudulent concealment and hypocritical designs.

I am aware, sir, that an amendment has been offered by the gentleman from South Carolina, (Mr. Pickens,) that, if adopted, would obviate this objection. But as that amendment is undoubtedly intended to sugar over this nauseous pill, to make it a little more palatable to some who loathe it now, and as I should still be opposed to the bill if the amendment were adopted, for reasons which I shall hereafter give, I am inclined to let those who are prepared to swallow any thing take the dose as it is, and vote against the amendment as well as the bill. If this money be not now paid, I have no idea that the States will ever receive it. Let us have it now, according to the promise, or tell us at once that we have nothing to expect. Do not tantalize us by exciting further hopes that are never to be realized.

But, sir, I am also opposed to the bill for another reason, and that is, that this sudden change of the destiny of near ten millions of dollars is calculated still further to derange the currency and business operations of the country, and add to the accumulated distresses of the community under which they now labor. If there be one truth, above all others, well settled in political economy, it is this: that if you would make a nation prosperous and happy, give them a uniform and unchangeable currency. It is as essential as uniformity and stability in your weights and measures. This currency is the life-blood of the body politic. Its supply should be equal and uniform. Every throb of the heart is felt to the utmost extremities. If the regular flow and pulsation fail, languor and faintness follow; but "overaction," as the President calls it, often produces instantaneous paralysis and prostration. The political empirics have administered dose upon dose, and tried experiment after experiment, until the patient is prostrate and helpless, writhing in agony and imploring for relief. If ever there was a nation or an individual, to whom that epitaph was peculiarly appropriate, it is this nation and this Administration:

"I was well; I wished to be better;  
I took physic, and here I am."

I am also opposed to this bill, sir, for another reason. Its object and intent is to violate the plighted faith of this nation. I shall not enter into an examination to see whether the offer on the part of the United States, which was acceded to by the State of New York, in the manner that I have already stated, was or was not a pecuniary contract, according to the strict rules of the common law, which might be enforced in a court of justice. This point has been most fully and eloquently discussed by my colleague immediately in front of me, (Mr. Sibley.) I could add nothing to what he has said on that subject. It is said that the United States have received no consideration for the promise. But, sir, I am disposed to place this question on higher grounds. Does it become this nation or the American Congress to stand here paltering about the redemption of its plighted faith to one of the daughters of this Union, on the ground that it has received no consideration for the promise which it has made? Has this nation, indeed, sunk so low that it takes shelter from its engagements, when it finds it inconvenient to perform them, behind the statute of frauds? The reason why a consideration is required to enforce a contract between individuals does not apply to this case. That is a rule adopted by the courts to protect the inconsiderate and the unwary from the consequences of their own folly, in making hasty promises without consideration. But, sir, even as between individuals, if the manner in which the contract has been made evinces a due degree of deliberation, then the courts will enforce it. If, for instance, the contract be sealed, that is regarded as so solemn an act, and evidences such caution and

deliberation, that the courts, by the common law, preclude all inquiry into the consideration, and compel the obligor to perform his contract. This case shows the reason of the rule, and I submit that it has no applicability here. Will gentlemen say that Congress was surprised into this promise? that there was not due deliberation on the subject? or that the congregated wisdom of this nation requires such a miserable subterfuge as this, to justify to its own conscience the violation of its plighted faith? Sir, was not the contract sufficiently solemn? It is among the sacred archives of your nation. It is of the same high and solemn character with your treaties with foreign nations. Nay, if possible, sir, it is still higher, and more obligatory upon the nation. A treaty is only sanctioned by the President and Senate. This, sir, has been sealed with the national honor, and attested by the national faith of both branches of Congress and the Executive; and you may call it contract, compact, or treaty, it is clearly a promise by the nation, in the most solemn form that a promise can be made.

Sir, have gentlemen who are in favor of this bill duly reflected upon its nature and consequences? Have they duly considered the value of the national honor? Would any one dare to make a proposition to break our national faith, if it had been pledged to a foreign power, as it has been to the several States of this Union? I trust not. Then, sir, is the obligation less sacred to the various States of this Confederacy, especially when made for the benefit of the people themselves, in reference to their own money? I hope not. But, sir, if we violate our plighted faith here, may we not do it in other cases? Your pension laws, passed for the relief of the war-worn veteran and hardy mariner, promise to those individuals a mere gratuity. It is the bounty which a generous nation bestows upon its brave defenders. But it has no elements of a pecuniary contract. There is no such reciprocity in those cases, as in this, to constitute a contract. No promise or service is required from the pensioner, as a *quid pro quo* for the bounty which you bestow. But in this case you have required and received the plighted faith of the State of New York to receive the money, keep it safely, and repay it in certain proportions. Would any member of this house have the hardihood to propose a bill to withhold the payment of these pensions, and then assign as a reason that there is no valid contract for paying them? I presume not. Sir, there is something of more value to a nation than money. It is untarnished honor—unbroken faith. They should be as spotless as female chastity.

"One false step in vain we may deplore;  
We fall like stars that set to rise no more."

The reason why every promise should be performed is, that it has raised expectations which in justice ought not to be disappointed. The whole business of life is an endless chain of confidence growing out of these promises, express or implied. And frequently the breaking of one link sunders a thousand.

—"Whatever link you strike,  
Tenth, or ten-thousandth, breaks the chain alike."

Look at its effects, in this case, upon the single State of New York. That State, relying upon the plighted faith of this nation, has gone on and agreed to loan out all this money to citizens throughout the State, giving to each town and ward their ratable proportion. Bonds and mortgages have been taken for the whole amount; and the three-fourths which has been received by the State from this Government, has been paid over to the borrowers, and promises in the shape of certificates given to pay over the remaining fourth on the 1st of October. The State has relied upon the promises of this Government for the money to pay these certificates. Now, sir, unless the money can be raised in some other way by the State, if this be withheld, all those numerous borrowers must be disappointed. Those who have struggled from day to day, and from week to week, to bear up against the pressure of the times, until they could obtain this pittance of relief, are to sink down in utter despair.

But, sir, what is the difference between the promise on the part of the State to loan this money to individuals, and the promise on the part of this Government to deposit this money with the States?

A deposit is a loan; and the person with whom the deposit is made becomes the borrower, liable to repay the money according to the terms agreed. This Government, then, has agreed to loan the money to the State of New York; and has taken the bond and mortgage of that State, in the shape of a solemn act of its Legislature, to repay it on certain terms. The State has agreed to loan the same sum to individuals, and has taken their bonds and mortgages for the repayment of the same. Then, if this Government can be justified in breaking this agreement, much more will the State of New York be justified in the breach of the agreement to the individual borrowers. The State may not only plead the high example of this nation in the breach of its promise, but may urge, with perfect justice, that the breach of faith by the United States, on which the State had unfortunately relied, had prevented the State from fulfilling its engagements. Will any of my colleagues who now urge a breach of faith on the part of the United States, in withholding this instalment, say that they believe the State of New York will be guilty of a similar breach to the borrowers of this money? I know they will not stain her honor by such an insinuation. Then how can they justify themselves to their God or their country, in lending their votes or their voices to dishonor this nation in such a manner as would be regarded a reproach and disgrace to the State in which we live? I hope gentlemen will pause and reflect before they finally act.

But, sir, one of my colleagues (Mr. Parker) has attempted to justify this breach of faith on the part of this Government, by saying that the States of New York would sustain no damage, because there was a large amount of money belonging to the canal-fund of that State, now on deposit in the banks, drawing an interest to the State of only four or five per cent., and this money could be taken to make up the fourth instalment of the loans to individuals; which would thereby be invested on interest at seven per cent., and the State, instead of being a loser, would be a gainer of two or three per cent. per annum on this money. Sir, this is not a question of damages. It is a question of national honor. It is a question of national faith. Can you measure the value of these by the base standard of dollars and cents?

But, sir, if this statement be true, that this immense treasure, belonging to the canal-fund in our State has been for years loaned to the banks at four or five per cent. interest, when it could have been loaned to the people on bond and mortgage at seven per cent., then it does not reflect much credit upon the financial skill of those in our own State who have had charge of this fund. But, leaving them to the tender mercies of their friends upon this floor, let us see whether my colleague is correct in his inferences. If his reasoning be correct, the whole sum that has been deposited with the States has been an injury instead of a benefit. This must appear a strange paradox indeed. The State had it from the United States without interest, and loaned it out at seven per cent., thereby making annually upon the whole sum of \$5,352,694 the no less sum than \$374,688 58, being nearly four times as much as is annually distributed from the State treasury for the support of common schools in that great State, where about 500,000 children are annually educated. I think my honorable colleague, on reviewing his calculation, will see that he has made a slight mistake in arriving at this result, and that it is somewhat better to have money for nothing, than to pay even four or five per cent. for it.

But, sir, if my colleague (Mr. Foster) is right in the construction which he gives to the deposit act of 1836, then it is equally clear that in no event is this money, if once deposited with the States, to be repaid again to the General Government. I believe that no one ever expected it would be recalled. The money was deemed the property of the citizens of the several States. It had been collected from them in the shape of duties, or was the avails of the public lands. In either case, if not wanted for the uses of the Government, it was deemed just to return it to the people, to whom it belonged. To avoid constitutional objections, the law by which this return was made was christened "a deposit

act," instead of a "distribution act." But, sir, I care not what form or shape it assumes. Do justice—restore the money to whom it belongs; and let it be appropriated to the sacred object of education—an object dear to the heart of every patriot. If we use due economy here, our revenue is abundant. If it is to be squandered, the less there is, the better for the people.

Let my colleagues who believe in the infallibility of the Argus listen to an extract which I will read from that paper, and then vote against this bill. Remember that this extract is the honest, unbiased opinion of that oracle of wisdom, in view of an exhausted Treasury, before party prejudice began to operate. It is as follows:

"A remedy for any such contingency may be provided by Congress, by an issue of Treasury notes, or some other expedient measure, that would be less objectionable than any interference with the arrangements made with the States for the disposition of the surplus."

Sir, we are told that this bill should pass, because there is no money in the Treasury to make the payment. This, then, sir, is a distinct admission that your Treasury is bankrupt. Yes, sir, in less than one short year from the time this Government, through all its official organs and its hundred presses, was boasting of its wealth and prosperity, with an overflowing Treasury and no national debt, it now comes like an humble suppliant to the Representatives of the people, and says it is bankrupt and cannot pay. If the Treasury be empty, why pass this law? Will it withhold what you have not got? Will it postpone what does not exist? Our legislation seems to be a work of supererogation. It is making laws for a non-entity. But some say we should pass the law as a direction to the Secretary of the Treasury. Why pass it for him? He is not bound to furnish the money if it does not exist. His duty is discharged if he pays it over when we provide it. But, sir, we have passed one law, distinctly appropriating this identical money then in the Treasury to this object, and directing him to pay it over. Why has he not obeyed that law, and kept the money to be applied to this object? He had no authority to take this and apply it to any other purpose. The act was imperative, that the identical money in the Treasury on the first day of January last should be deposited with the States. I think, sir, instead of attempting to legalize this breach of trust on the part of the Secretary in using this money, not only without law, but against law, we had better institute an inquiry into his conduct for laying his hands upon this sacred treasure, and see if he has any justification.

But is the pretence true, that the money is not in the Treasury? This seems to be a difficult question to answer. I shall not venture into that labyrinth of mysteries—the Secretary's report. The bewildered senses and contradictory reports of those who have attempted to pass through its intricate windings and involutions, admonish me to beware how I venture. No two have been able to agree as to what they saw there. Some saw treasure; others saw nothing but "confusion worse confounded;" and in this state of doubt and uncertainty it becomes us to inquire if there be no collateral aid, by the light of which the mysteries of this report may be unravelled. In the absence of positive proof, let us look at probabilities. The last Administration professed to be one of "retrenchment and reform;" and the present Executive has declared that he intends "to follow in the footsteps of his illustrious predecessor." We have, therefore, a right to expect, and the people did expect, economy in both. Have they been deceived? Has this "promise been made to the ear and broken to the hope?" Have these professions, that elevated the present dynasty to power, been hollow and hypocritical? Let us look at the facts, and see how the matter stands, if the Treasury be now bankrupt, as is alleged by those in this house who support the Administration.

From a careful examination of the expenses of this Government for twelve years, that is, from 1819 to 1833, exclusive of the national debt, I find that they averaged about \$13,000,000 per year. I give them in tabular form as follows, from the best estimates I can make:

Year.	Expenses of Government	Whole am't for 4 years.	Average per year.	Whose administration.
1822	\$6,534,394 09			
1823	9,784,151 59			
1824	10,328,141 71			
1825	11,490,459 94	\$38,137,150 33	\$9,534,287 58	Mr. Monroe.
1826	13,032,316 27			
1827	12,053,095 65			
1828	13,295,041 00			
1829	12,053,490 62	51,670,943 54	12,917,735 88	Mr. Adams.
1830	13,229,533 39			
1831	13,861,087 90			
1832	15,516,398 77			
1833	22,713,355 11	65,323,745 11	16,580,936 28	Gen. Jackson.

Average expenditure for the whole twelve years, \$13,010,903 25.

Now, sir, let us see what money has been received into the Treasury since the 1st day of January, 1835, and then we may form some conjecture whether there is any there now; or, at all events, we and the People may know whether this and the last Administration have been economical in the use of the People's money, or whether they have squandered it with a profusion and extravagance never before equalled.

There was received into the Treasury, during the years 1835 and 1836, together with what there was in the Treasury on the 1st day of January, 1835, - - - - - \$88,461,942 04  
And during the first half of the present year - - - - - 13,687,182 00

And, if we estimate the receipts of the present quarter, ending on the 1st of October, at one-third of those for the first half of the present year, they are - - - - - 4,562,394 00

Making a total amount of - \$106,711,518 04  
Deduct from this the amount deposited with the States, being the first three instalments - - - - - 28,101,644 90

And it leaves no less than - \$78,609,863 05 applicable to the ordinary expenses of Government, which has been poured into your Treasury within two years and three-fourths, averaging nearly \$29,000,000 per year. Where is it, sir? The empty vaults of your Treasury echo, Where? I will tell you, sir, where it is. It has been wasted, squandered, and profusely lavished upon party favorites and parasites; and the people, from whose hard earnings you collected it, are now to be cheated out of it. Sir, the people will look into this matter. They will scrutinize this unparalleled profligacy of their public servants; and, in making up their minds, they will not forget that all these extravagancies have been the bitter fruits of an Administration having a large majority in both houses of Congress, and constantly uttering the hypocritical cry of "retrenchment and reform?"

Sir, there is one more proof that the money is in the Treasury, notwithstanding we are told it is not, by the chairman of the Committee of Ways and Means, (Mr. Cambreleng,) which I hope will be entirely satisfactory to him and the Administration members of this committee; and that is, the statement of the President himself in his message. I will read it.

"There are now in the Treasury \$9,367,214 directed by the act of 23d of June, 1836, to be deposited with the States in October next.

These, sir, are the words of the message itself. To those who credit the veracity of their author, I hope they will be satisfactory. They are too explicit to admit of doubt or to require comment.

But, sir, my chief objection to this and all the other measures recommended in the President's message, and proposed by the Committee of Ways and Means, is, that they hold out no prospect of permanent relief to the country. True, sir, the issuing of Treasury notes, on which you are to borrow money to replenish your exhausted Treasury, may afford a little temporary relief to those who owe the Government, and indirectly to the community; and the extension of time for the payment of the merchants' bonds to the Government will afford present relief to that class of citizens, or enable them "to put off the evil day" a little longer. But

these are mere expedients, temporary and partial in their operation, and do not reach the seat of the disease that now afflicts the body politic. That disease, sir, had its origin in the derangement of our currency; and that derangement, in my opinion, was produced by the unwise conduct of this Government. I will not charge this Administration with a design to bring all these evils upon us. But I do charge them with an unholy ambition, that grasped at power, regardless of the means by which it was attained; with a war upon the United States Bank, for political effect; and with enlisting and arraying against that institution all the feelings of rivalry and avarice on the part of the State banks, and of jealousy and distrust on the part of the people; and that a consequence of this war has been, all the evils of over-banking, over-trading, and ruinous and gambling speculation described in the message, and the final depreciation and derangement of our currency, and the bankruptcy of the Government and the people.

Let me not be misunderstood in what I am about to say. I have never been a particular friend of the United States Bank. I regard it as I do all other banks, as a necessary evil. I have never been its advocate, and am not now. It has gone down to "the tomb of the Capulets;" let it rest in peace. And I should have great doubts of the expediency of establishing a new United States Bank at this time, for the relief of the community. I fear that an attempt to put it in operation would rather aggravate than mitigate our sufferings. But on this point it is not necessary to express an opinion. I only allude to it, to prevent any improper inference, and that the committee may understand that all I have to say of the United States Bank is as matter of history, and not of opinion as to its expediency or usefulness at this time. Times have essentially changed; and what might have been proper or useful then, may be wholly improper or useless now. Then, such a bank, with the confidence of the Government and people, might be useful in regulating the currency. Since the war upon that institution, banks have multiplied beyond all former example. To add another at this time, and collect together the requisite specie to put it in operation, would, I fear, add greatly to our present embarrassment. People must learn from actual suffering that it is much more easy to tear down than to build up, to destroy than to create, and to derange than to restore. Ignorance and folly may accomplish the one; wisdom, prudence, and time can alone perform the other.

But, sir, I said I was opposed to these measures because they promised no permanent relief to the country. Why has the President, after witnessing the sufferings of this community—after calling us together, as every one supposed, to propose some measure of relief—turned thus coldly away, without recommending any thing to restore a uniform currency? Are the prayers, and tears, and groans, of a whole nation, suffering all the horrors of impending bankruptcy, not worthy of his consideration? Are members of the Administration prepared to return and look their constituents in the face, without making one effort for the relief of the country? We of the minority can do nothing. We are powerless. But you have all power. Then why not exert it to bring back the days of prosperity and sunshine that existed before this fatal war upon the currency, and commerce, and business of our country.

Sir, do the President, and those who support him, expect to find a justification for the apathy they manifest towards a suffering country, by charging all our distresses to the follies and extravagance of the community, and by carefully concealing every thing which shows that those very follies and that very extravagance, which are held up for universal reprobation in the President's message, had their origin in the wickedness or folly of this Government? So it would seem. The President, after adverting to the distresses and embarrassments of the country, in his message, says:

"The history of trade in the United States for the last three or four years affords the most convincing evidence that our present condition is chiefly to be attributed to over-action in all the departments of business; and over-action deriving, perhaps, its first impulse from antecedent causes, but stimulated to its destructive consequences by excessive issues of bank paper,

and by other facilities for the acquisition and enlargement of credit."

Sir, I agree with him, that excessive issues of bank paper have stimulated to destructive consequences. Of this fact there can be no doubt; and it is a precious confession from the head of that party, that, for years past, has wielded the legislative power of this nation, and also the legislative power of most of the States in this Union, and constantly charged their opponents with being the bank party. I say, sir, this is a precious confession from the head of that party, that banks have been multiplied by this no-bank party, until their "excessive issues have produced destructive consequences." But, sir, if it were decorous to the Chief Magistrate, I would ask if ever such shameful hypocrisy, when exposed, was met by such unblushing impudence.

But, sir, what are those "antecedent causes" that gave the "first impulse to this over-action?" Why are they concealed from the people? They are the true causes of all our sufferings; and, sir, let me tell you, that they had their origin in the war against the United States Bank. That was to be put down; and, to effect that object, and reward the pure patriotism of this no-bank party, new State banks were chartered. Let us look at facts. In 1830, all the banks in the United States were only 320. They have been increased in seven years to 677, and 146 branches, making in all 823 banks!

The capital of all the banks (January 1, 1830,) was - - - \$145,192,268  
It has been increased in seven years to - - - - - 378,719,168.

Add to this the \$40,000,000 of surplus revenue that has been bestowed on the pet banks since 1833, when the deposits were removed from the United States Bank, and you have the antecedent causes that stimulated to that over-action, and those destructive consequences, mentioned by the President. And all these, sir, are chiefly chargeable to the dominant party in these United States. They removed these deposits without law, and gave them to the pet banks. They invited these pet banks to extend their accommodations. They have created nearly three times as much banking capital in the United States, since General Jackson came into office, as all that existed before. Yes, sir, as strange as it may appear, this no-bank party, that has for seven years cried out against the bank monster, until the people trembled for their liberties, have, within the same time, created nearly three times as much bank capital as all that existed in the United States before. Was there ever such unparalleled hypocrisy?

But, sir, this war against the United States Bank, got up for political effect, regardless of the peace of society or the interests of the country, was made to unite the extremes of society. The more intelligent of the middle class never engaged in it; or were drawn into it, from political associations, with reluctance. It was really a war of the State banks against the United States Bank, got up by artful politicians to elevate Mr. Van Buren to the presidency. They tempted the cupidity of the thousand officers and stockholders interested in these banks, with the bribe of the public deposits, and the prospect of destroying a hated rival that kept them in check, and loaned money at six per cent. It was a Shylock feeling of avarice and revenge. On the other hand, all the affiliated presses connected with State banks cried out against the monster, until the more ignorant part of the community thought their liberties in danger, and joined the strong bank party against the weaker, to put down the United States Bank. Having effected this, and brought the country to the verge of ruin, and overwhelmed these State banks with infamy and disgrace, is it strange that the same unprincipled course should be pursued against them, that has been pursued against the United States Bank? It is what they had a right to expect. It is but "commencing the poisoned chalice to their own lips." We may pity their folly; we may condemn the heartless perfidy that first seduced them from their duty, and prostituted them to the vilest purposes of partisan warfare, until their infamy has rendered them useless, and now casts them aside; but we cannot

deny that the retributive hand of justice is seen in their sufferings.

Sir, in corroboration of what I have said about this being a war of the State banks against the United States Bank, got up by designing politicians, I will mention a few facts connected with a little secret history on this subject in my own State.

It is known, sir, that we have a peculiar system of banking in the State of New York, called the safety-fund system. It had its origin with Mr. Van Buren, when Governor of that State in 1829. Although he did not claim the merit of an original inventor, yet he adopted it as his own, and recommended it to the legislature. This system, sir, establishing a community of interest between the banks, and being under the immediate supervision of three bank commissioners, is admirably well calculated for use as a political engine. It was no sooner put in operation, than it was brought to bear upon the legislature of that State. In 1830 or 1831, while I was honored with a seat in the legislature of that State, resolutions were introduced into that body against a recharter of the United States Bank. These resolutions, sir, originated with the banks in that State. Not one solitary petition from the people on that subject had been presented to the legislature. The bank then had three branches in that State: one at New York, one at Utica, and one at Buffalo; and the people were contented with the currency which they furnished. No murmur, no complaint, was heard from the people. But, sir, day by day, as these resolutions were under discussion in that legislature, the birds of ill-omen, that deal in bank stock, hovered round that hall, and watched the progress of this unholy proceeding with an intense anxiety. But no farmers, no mechanics, were there. They had not been consulted; they took no interest in the proceedings. They had no share at that time in this conspiracy of the State banks against their interest. They were delving at their labor, and slumbering in security, while these banks were forging the chains with which they have since bound them. Yes, sir, I was informed, and I believe it, that nightly, during the discussion of those resolutions, their supporters in the legislature met in conclave, in one of the principal banks in that city, to devise ways and means to carry them through. They were carried. These banks, with the aid of the party screws, proved too powerful for the independence and honesty of that body; and the result was proclaimed as the sense of the people of that great State against the United States Bank. This State bank, sir, had its reward—it shared the spoils. But, sir, my colleague (Mr. Foster) has taken occasion to eulogize this safety-fund system. He says it works like a charm. I shall not deny, sir, that it has some good qualities; but I am far from thinking it so charming as my honorable colleague. I doubt not it appears so, sir, to many who share in its golden harvest, and enjoy its exclusive privileges; but to the great majority of the people, who, like myself, deal not in bank stock, but occasionally see or feel the tyranny of these little monsters, the working of this political engine is any thing but charming. Sir, I conceive it had its origin in the foul embraces of political ambition, and cunning, heartless avarice. "It was conceived in sin, and brought forth in iniquity." It has spread its baleful influence over that State, corrupting the fountains of power, and demoralizing the whole community, by the manner in which its privileges have been granted and its stock distributed. Banks have been granted, and the stocks distributed, to party favorites, as a reward for party services. They have been the mercenary bribe offered to the community to sap the foundations of moral honesty and political integrity. But I will not enter into the disgusting details. As to those who wish to see the workings of this charming system of my colleague, I will refer them to an examination of our State legislature last winter, and the proceedings of that body upon the report of their committee upon a single bank. I believe the very day on which the report was made, it showed such abominable corruption and abuses, that a bill was introduced to repeal its charter, and, within one or two days, passed through all the forms of legislation in the popular branch without a dissentive vote;

and also passed the Senate with but three or four votes against it. Does my honorable colleague think that a system which produces banks like this, works like a charm? But, sir, I perceive that this incestuous connexion between the politics and banks of that State has been festering and corrupting until it is about to fall asunder from its own rottenness. I, for one, have no tears to shed at the dissolution. I only regret that many of these banks, since they were chartered, have passed into the hands of honest and honorable men. I fear that the odium which rests upon this corrupt system, and which, in my opinion, is now necessarily connected with banking, will sink the whole, without discrimination. The vengeance of an insulted and oppressed community is terrible and overwhelming in its course. It stops not always to discriminate between the just and the unjust, between the proper use and improper abuse of a particular system; but, in the wild madness of popular fury, they hurl the whole to destruction. I warn them to stay their desolating hands. All sudden changes are dangerous. Let us not destroy, but purify this odious system. We cannot live without banks and banking. Credit in some shape is indispensable to our prosperity. Were we reduced to a specie circulation, as now proposed by the President, property would not be worth twenty-five per cent. what it now is, and would soon be wholly absorbed by the wealthy capitalists of our country. The debtor part of the community would be utterly ruined. Then let us purge this vile system of its corruptions and abuses, and strip it of its odious monopoly, and open the privilege of banking to all who comply with such prescribed rules of the legislature as secure the bill-holder and public generally from fraud and imposition. I hope, sir, to live to see the day when this shall be done, and the moral pestilence of political banks and banking shall be unknown.

Mr. F. here went into an examination to show that the pretence in the message, that there had been the same over-banking and over-trading in England as in this country, was not true. He exhibited tables that show the following results:

October 1, 1833, circulation of the Bank of England -	£19,800,000
December 27, 1836, do do	17,300,000

December 28, 1833, circulation of all the banks in England and Wales -	£27,621,104
June 25, 1836, circulation of all the banks in England and Wales -	29,386,196

Mr. F. then spoke of the hostility of the Administration to the deposit law, and its attempts, by means of the specie circular and transfer drafts, to oppress the banks, and, through them, the people, and render the law odious; and that the last effort was to declare the Treasury bankrupt and withhold the funds.

He then exhibited a statement showing that the banks in the State of New York, had on—

	In circulation.	Specie.	Discounts.
Jan. 1, 1837.	\$24,198,000	\$6,557,020	\$79,313,188
Sept. 1, 1837.	13,740,318	2,747,642	59,367,815

Red. in 8 mos.	\$10,457,682	\$3,809,378	\$19,945,373
----------------	--------------	-------------	--------------

Sept. 1, 1837, { United States deposits	\$728,571
{ Individual deposits	\$15,134,968

Now, sir, it appears from these facts, that the banks in the State of New York, in eight months, have reduced their discounts one-fourth; their circulation near one-half; and their specie almost two-thirds. The people of that State are literally gasping for breath, like an animal under the exhausted receiver of the experimentalist. And if you pass this bill, you authorize the United States to take all but \$2,000,000 of the specie now remaining in that great State, and lock it up in your vaults of this new sub-Treasury system. And you leave the bill-holders and individual depositors of that State with upwards of \$25,000,000 due them from the banks, and only \$2,000,000 of specie to pay them with.

Sir, however solvent these banks may be, it is impossible that they should ever resume specie payments under circumstances like these. This sub-

Treasury scheme, which I regard as the germ of a Treasury bank, will draw the specie from our banks faster than they can collect it. The Post Office now acts as an absorbent of all the small change in the country. Where the edict of the officer at the head of that department is faithfully executed, all the specie is gathered into the Post Office, paid out to the mail contractors, and by them sold to the brokers, by whom it is sold as a commodity, and shipped out of the country. In this way it daily grows more and more scarce, and has almost ceased to be used as a circulating medium among the people. This sub-Treasury system is calculated to carry out this infamous distinction between the Government and the people—to absorb all the specie for the use of the Government and its favorites, and leave the people to irredeemable bank paper; and this bill, with the bankrupt law recommended by the President, is calculated to take "peaceably if they can, but forcibly if they must," all the specie from the banks, and hoard it up for the use of the office-holders under this Government. Sir, there are evils between which a man is not bound to choose; he may reject both. And I regard this sub-Treasury system, and the union of the Government with the State banks, as evils of this character. I will not choose: I am opposed to both.

But have my colleagues, who profess to be the guardians of these State banks, who call themselves "conservatives," duly considered the awful precipice upon which we stand in the State of New York? Are you willing, instead of adding \$1,300,000 to our circulation in this time of distress, to pass this bill, and thereby not only withhold that, but take from us the \$700,000 now there in specie? Recollect that all our safety-fund banks are incorporated under a law that declares that they shall be deemed insolvent, and their charters dissolved by the Court of Chancery, if they neglect, for ninety days after demand, to redeem any evidence of debt issued by them in specie. The effect of that law has been suspended for one year, and for one year only, from the 11th day of May last. It will then expire by its own limitation, and can then only be renewed by the concurrence of each branch of the legislature. Is there not much reason to doubt whether this law will be extended? It was passed in a moment of alarm, when the cry of bankruptcy and ruin broke upon the astonished ear of the legislature like a peal of thunder from a cloudless sky. But they and the people have since had time to reflect. This is a state of things that cannot be endured, and most of the measures here recommended are calculated to aggravate it in a ten-fold degree. Men become desperate, and already the deep sea of popular commotion begins to heave its rising billows. I confess I watch its motions with solicitude and alarm. And I have been surprised to find, in the papers of the day, a letter from Gen. Jackson, the former patron and eulogist of these pet banks, speaking of them in the following language:

"The history of the world has never recorded such base treachery and perfidy as has been committed by the deposit banks against the Government, and purely with the view of gratifying BIDDLE and the BARINGS, and, by the suspension of specie payments, *degrade, embarrass, and ruin*, if they could, their own country, for the selfish views of making large profits by throwing out millions of depreciated paper upon the people, *selling their specie at large premiums, and buying up their own paper at discounts of from twenty-five to thirty per cent.*, and now looking forward to be indulged in these speculations for years to come, before they resume specie payments."

But, sir, although I have been surprised to see the foregoing charge, I must confess that I have been more surprised to see it published to the world, week after week, and meet with no response or denial from any man on this floor or elsewhere. Are gentlemen Conservatives aware of the effect of such a publication upon the popular mind? Let me tell them it bears upon its tainted breath, if false, a charge too foul for honest and honorable men to submit to in silence. It distils into the ignorant and credulous mind a poison more dangerous to the peace of society than foreign invasion or individual treason. And is there no honorable man connected with these institutions, or who stands upon this floor as their guardian, that will deny the foul charge of treachery and perfidy thus made against them? Why this unaccountable silence under a

charge so infamous and revolting? Is it the deep contrition of guilt and merited condemnation that has sealed your mouths? or are you transfixed with superstitious horror, and struck with silent awe at the Greatest and Best, who uttered the anathema? Then prostrate yourselves in the dust, and let this mighty Juggernaut roll over you without a groan or a tear. But if there be one independent and honorable man—as I trust in God there are many—let him stand forth and deny this base charge. Let this little band of Conservatives upon this floor, if they are fighting for principles, and not for spoils, raise the banner of independence, and meet their destiny like men; otherwise they must soon sink into utter oblivion and merited contempt. Already a black cloud hangs impending over your heads, and its sulphurous fires, lighted up by the midnight torch of *locofocism*, will soon burst upon you, more terrible than that storm of fire and brimstone that overwhelmed the devoted cities of Sodom and Gomorrah; and, without independence and firmness, you will go down to your political graves.

"Unwept, unhonored, and unsung."

### SPEECH OF MR. LOOMIS, OF OHIO,

[As reported by the National Intelligencer.]

In the House of Representatives, September 21, 1837.—The bill to postpone the fourth instalment of the payment to the States being under consideration—

Mr. LOOMIS of Ohio, addressed the committee to the following effect:

Mr. CHAIRMAN: Believing that the faith of the United States and the interests of the State which I have the honor to represent in part, are deeply concerned in the fate of the measure now under discussion, I have felt it my duty to ask the indulgence of the committee whilst I present the views and considerations which will influence my action upon that measure. It is no part of my present purpose, sir, to discuss either the policy or propriety of the enactment which proffered to the States the custody and safe-keeping of the anticipated accumulations of the Treasury. Suffice it to say, that that policy having, after full and ample discussion, after grave and mature deliberation, received the constitutional sanction of all the departments of the Government requisite to its legal obligation, I am not only disposed, but feel myself in the discharge of my legislative duty bound, so far as my vote and my voice can have an influence, to fulfil all the requirements, and to satisfy all the just expectations which that enactment has excited.

It is not, sir, in my judgment, material to determine whether the States have, or have not, in strict, legal, technical language, a vested right to the fourth instalment, contemplated by the deposit act. So far as relates to the three first instalments which have been deposited with them, I entertain no doubt that they have acquired vested rights and valuable interests, entitled to legal and constitutional protection. The States have a perfect right to the custody and benefit of those instalments, until recalled under the restrictions and in pursuance of the provisions of the statute. And I hold, sir, that the Government could not, in any emergency, or under the pressure or necessities of any combination, of circumstances, accelerate their recall beyond the limitations of the deposit act. And I think, sir, that a critical analysis of the stipulations of that statute, and a careful collation and examination of the acts of the States and the Executive departments, in pursuance and fulfilment of its provisions, will exhibit all the elements and requisites of a legal, valid, and binding contract. They would disclose full, adequate, and mutual considerations, and clear and distinct arguments between parties competent and willing to contract. I am aware, sir, that views and opinions variant from these have been entertained and expressed upon this floor. It has been denied that any certain sum has been appropriated by the deposit law: it has been affirmed that, although limitations upon the power of recall have been imposed upon the Secretary of the Treasury, none have been imposed upon Congress.

It has been claimed that Congress now possesses the power and right to recall, at pleasure, the funds deposited with the States; it has been denied that the States had a right to appropriate and use the funds which have been deposited with them. I hold, sir, and believe that I can maintain the converse of all these propositions. The thirteenth section of the "Act to regulate the deposits of the public money," provides "that the money which shall be in the Treasury of the United States on the first day of January, eighteen hundred and thirty-seven, reserving the sum of five millions of dollars shall be deposited with such of the several States, in proportion to their respective representations in the Senate and House of Representatives of the United States, as shall by law authorize their Treasurers or other competent authorities to receive the same, on the terms hereinafter specified; and the Secretary of the Treasury shall deliver the same to such Treasurers or other competent authorities, on receiving certificates of deposit therefor, signed by such competent authorities in such form as may be prescribed by the Secretary aforesaid, which certificates shall express the usual and legal obligations, and pledge the faith of the States receiving the same to pay the said moneys and every part thereof, from time to time, whenever the same shall be required by the Secretary of the Treasury for the purpose of defraying any wants of the public Treasury, beyond the amount of the five millions aforesaid: *Provided*, That if any State declines to receive its proportion of the surplus aforesaid on the terms before named, the same shall be deposited with the other States agreeing to accept the same on deposit, in the proportion aforesaid: *And provided further*, That when said money or any part thereof shall be wanted by the said Secretary to meet appropriations by law, the same shall be called for in ratable proportions, within one year, as nearly as conveniently may be, from the different States with which the

same is deposited, and shall not be called for in sums exceeding ten thousand dollars from any one State, in any one month, without previous notice of thirty days for every additional sum of twenty thousand dollars, which may at any time be required."

The fourteenth section provides "that the said deposits shall be made with the said States" on the first day of January, eighteen hundred and thirty-seven, or as soon thereafter as may be, and on the first days of April, July, and October, all of the same year. I find, sir, that this act received the Executive approbation on the twenty-third day of June, eighteen hundred and thirty-six. It is true that it did not provide for the deposit with the States of a sum certain then in the Treasury, but it did provide for the deposit of moneys which should be in the Treasury on a given future day, and the precise amount of which could be ascertained with mathematical certainty. It required that all the money which should be in the Treasury on the first day of January, eighteen hundred and thirty-seven, reserving the sum of five millions of dollars, should be deposited with the States. All moneys or funds, whether in the safe of the Treasurer of the United States, in the vaults of the Mint or Custom-Houses, in the hands of receivers for the sale of public lands, or in the possession of deposit banks, and passed to the credit of the Treasurer of the United States, on that day belonging to the Government of the United States, were, within the meaning and contemplation of that statute, in the Treasury and subject to deposit, first reserving the five millions of dollars. The Secretary of the Treasury so understood the law, and proceeded to execute its directions upon that construction of its terms and spirit. He did ascertain the aggregate amount in the Treasury (after the reservation required by the act) on that day, and promulgated to Congress and the States the aggregate amount, and also the precise sum which, under the provisions of the act, was subject to deposit with each of the States. The sum subject to deposit has been ascertained with exact certainty by our own officer charged with the execution of the duties and trusts created by our own legislative act, and promulgated with official sanction to the States and to the world. And surely it is not now competent for us, who represent here the United States, to evade or avoid a compliance with a contract which we have made with the respective individual States, by a denial that a certain sum has been appropriated. By whom was this deposit to be made? Congress could act only through the instrumentality of an agent; the Secretary of the Treasury, the chief fiscal officer of the Government, was very naturally and with great propriety designated as such agent, charged with the duty, and clothed with full power to execute the act. The Government is bound, or rather the United States are bound, by all the acts which he has performed in the execution of these trusts within the scope of his authority. He has communicated to the several States the propositions of the United States; the several States have respectively accepted these propositions, and he, as our agent, has proceeded to a partial execution of the contract on our part, by payment or deposit of three out of four of the instalments. The law required of him, before delivery of the money to the Treasurers or other competent authorities of the States, to receive from such Treasurers or other competent authorities certificates, signed by them, expressing the usual and legal obligations and pledge of the faith of the States for the safe keeping of the moneys, and for the repayment thereof, agreeably to the provisions of the statute. These certificates contain the evidence, and the only evidence, of the undertakings of the States. Their obligations and responsibilities cannot be extended beyond their terms and spirit, and they require the repayment of the deposits, agreeably with the restrictions and limitations imposed upon the calls of the Secretary of the Treasury, and not according to the will and pleasure of Congress. The limitations upon the authority of the Secretary of the Treasury, in calling upon the States for repayment, are clear and distinct. He can only call when the funds are required for the purpose of defraying the wants of the public Treasury, after the five millions reserved are exhausted. He cannot call at his own will and pleasure; he can only call when the funds are required to defray the wants of the Treasury, or, in other words, in discharge of legal appropriations. Again, sir: the last proviso of the thirteenth section, before quoted, contains superadded limitations upon the authority of the Secretary of the Treasury in recalling the funds deposited with the States. The money must be "wanted to meet appropriations by law;" it must be called for in ratable proportions, as nearly as may be, from the different States, in sums not exceeding ten thousand dollars from any State, in any one month, without previous notice of thirty days for every additional sum of twenty thousand dollars. These limitations enter into and circumscribe the legal effect and obligation of the certificates given by the States, and are restrictive of the power and authority of the United States in recalling the funds deposited with the States. Congress has reserved no right to interpose or accelerate the recall, nor have the States consented to the exercise of such right.

Suppose, sir, that Congress should enact a statute (I could not denominate such a statute a law) directing the Secretary of the Treasury to demand repayment of all the moneys deposited with the States; and, upon a refusal on the part of the State of Ohio to comply with his request, he should institute an action (conceding to some judicial tribunal jurisdiction) to recover the two millions deposited with her; suppose, sir, the certificate, which contain the evidence of her undertaking and indebtedness to the United States, to be given in evidence, and the provisions of the deposit act to be examined; would such judicial tribunal hesitate to pronounce the law of the case with the defendant?

It has been denied that the States had a right to use or appropriate the funds deposited with them. That sir, depends upon the character of the deposit, whether general or special.

[Mr. PICKENS of South Carolina explained. He had said that there was nothing specified in the act providing that the States should have the use of the money, or that made it a general deposit.]

I am aware, sir, that it is not declared to be a general deposit; but where there is no restriction, the deposit is general. The responsibility which a general deposit imposes upon the party receiving the deposit, and the rights which he acquires, are entirely different from the responsibility imposed, and the rights acquired, by a special deposit. A general deposit imposes upon the party receiving it the liability to re- and at all events the amount of money deposited, when demanded in pursuance of the terms of the deposit, and vests in him a right to dispose at pleasure of the moneys deposited. A special deposit vests no right to the use of the funds, nor does it impose a liability to return them, if proper care has been taken for their safe

keeping, and they are lost or destroyed. If, for instance, the Treasurer of the State of Ohio had received from the Secretary of the Treasury \$500,000 in bank paper, and given the certificate required by the provisions of the deposit act, and by a conflagration of the State Treasury the paper had been consumed, can there be a doubt that the State would have been bound to repay to the United States the full amount? Certainly not, as the property in the funds vested in the State as soon as they were deposited. The States have all received the deposits upon the distinct understanding that they had a right to the use of these funds, and have all made such disposition of them as was deemed proper.

The deposit act offered to the States the custody of one certain sum of money; that sum was ascertained by the Secretary of the Treasury, and proclaimed to the States. The proposition was made to the States to receive the whole sum, upon the terms specified in the statute; the States respectively accepted the proposition to receive the whole, not a part—the four instalments, not one only. The States had a right to regard it, and did regard and accept it, as one entire and indivisible contract; as a "unit," and to regard the national faith as pledged for the performance of the contract on the part of the United States. I am aware, sir, that there is no mode by which the several States can enforce this contract against the United States. There is no judicial tribunal possessing jurisdiction over these sovereign parties, or capable of affording an adequate or effectual remedy. The United States are above the reach of coercion; and there is nothing upon which the stipulations of the contract can be operative but the national faith, honor and justice. And shall it be said, sir, that a party which has wrested from another a specific written pledge of faith, shall violate its own? Shall it be proclaimed to the world that a sovereign power, enjoying the high character, and possessing the immense resources of this nation, has permitted its justice to be questioned, by refusing a compliance with its contracts, or disappointing the just expectations which it has excited? Never, sir, with the aid of my vote. The States, sir, have acted in good faith, and made their respective dispositions of these funds, which they have agreed to receive in deposit, with a confident expectation of receiving the full amount. The funds were declared to be in the Treasury by the Secretary; and the deposit act expressly provided that the funds so in the Treasury should be deposited with the States. No man anticipated a division of these funds to other purposes than those to which they had been specifically appropriated, and solemnly pledged. If, sir, they shall be withheld, just expectations will be disappointed, and great and serious inconveniences will be suffered by the States.

The State of Ohio stands in a peculiar and interesting relation to this measure, which, with the indulgence of this committee, I will proceed to explain.

The patriotic framers of the Constitution of that State were deeply imbued with the spirit of liberty, and an anxious desire to secure, upon stable foundations, its future prosperity. The provisions of that great charter of freedom, under whose benign influence and salutary protection the State has risen to wealth, power, and eminence, exhibit abundant evidences of that spirit and desire.

After a solemn declaration that all men have a natural and inalienable right to worship Almighty God according to the dictates of their own consciences; that no human authority can interfere with the rights of conscience; that no preference should ever be given by law to any religious society or mode of worship, and that no religious test should ever be required as a qualification to any office of trust or profit, I find this remarkable declaration and constitutional injunction: "Religion, morality, and knowledge, being essentially necessary to the government and happiness of mankind, schools and the means of instruction shall for ever be encouraged by legislative provision, not inconsistent with the right of conscience." This provision, impressed by the superadded sanction and obligation of an oath, imposed upon her legislators in all future time, the duty to encourage schools and the means of instruction by legislative enactments, so far as a just regard to the condition and resources of the State would permit. They were justly viewed by the enlightened founders of our Government as the main pillars and only sure support of our free institutions, as safeguards of liberty, and beacon lights to warn us of the approaches of danger.

But, sir, many circumstances connected with the history and condition of the State retarded and prevented compliance with this constitutional requisition. The hardy pioneers had reclaimed from the forest but a small portion of that fertile country at the adoption of the Constitution. Population was sparse, and resources few. Immense forests were to be subdued, roads opened, buildings erected, bridges constructed, the means of subsistence procured, families reared, and Government supported. During the first ten years of our existence as a State, these duties and pursuits occupied the time and employed the means of our enterprising population. Then succeeded the calamities of war, our Northern frontier exposed to daily descents from a superior naval force upon the lakes, and our Western borders overrun by hordes of ferocious savages. The scenes of that eventful contest are well known here, and will be long remembered in the West. It was with us, sir, a struggle for existence and self-preservation, and permitted not a diversion of our resources to the purposes of education and mental improvement. The revolutions and distresses which followed the restoration of peace are indelibly written upon the pages of our history. The wars of Europe ceased, and her immense armies were no longer the consumers of our productions. Commerce, agriculture, manufactures, and every other department of industry and enterprise, were paralyzed; credit was prostrate, and labor could neither find employment nor reward. It required, sir, the lapse of years to restore credit, repair losses, provide capital, reanimate enterprise, and reward industry. At length the approaching completion of the great Northern improvement promised a market for our productions. Ohio awoke from her slumbers, and aroused her energies. She resolved to develop her resources and improve her condition. With but thirty thousand dollars in her Treasury, and with no sources of revenue but the fertility of her soil and the industry of her citizens, she pledged her faith, and boldly went into the market for the millions requisite to complete a connection between the lakes and the Ohio. She appealed with success to the intelligence, sagacity, and interest of the capitalists of the great commercial emporium of New York. The commencement of her great work was speedily followed by an influx of capital and population, by a rapid development of her great natural resources, by vigorous activity and productive energy in all the branches of industry. Through the agency, sir, of credit, that much abused source of national and individual prosperity and

Improvement, her legislators soon found the State in a condition to fulfil the constitutional requisition which I have brought up for the notice of the committee. In a statute, enacted, I think, in eighteen hundred and twenty-seven, the preamble of which recited the constitutional command which I have read, the Legislature of that State laid the foundation of a system of instruction. The power of taxation, of direct taxation of the people, was boldly exercised to carry into execution the system. It encountered many prejudices and much opposition, but perseverance improved legislation, and experience overcame them.

The system was organized, and with much labor and great care improved. To the revenues derived from taxation were added the proceeds of the public lands appropriated by Congress to the great purposes of education. The system thus organized and improved promised great advantages, but it required enlarged resources and augmented revenues to carry into full, complete, and perfect effect the great and laudable purposes of its creation. At this auspicious juncture the national revenues accumulated beyond the wants of the Government. Their custody and safe-keeping were wisely proffered to the States. The proportion of Ohio amounted to nearly three millions of dollars. Her enlightened statesmen and patriotic citizens beheld in this proffered treasure the abundant means of perfecting and sustaining her great system of instruction. Upon the assembling of the Legislature, in December last, her patriotic Executive, Governor Lucas, called the attention of the Legislature to the propositions of Congress, advised their acceptance, and in a luminous and patriotic view of the whole subject, strongly recommended liberal and munificent appropriations to the purposes of education. His views and recommendations were seconded and strongly enforced by his patriotic successor, Governor Vance, in his inaugural address. The public voice sustained their appeal. Her Legislature accepted the proposition of Congress, and pledged her faith for the safe-keeping and repayment, if called for, of the proffered funds, and in discharge of their constitutional obligations, appropriated the proceeds of the fund to her great system of instruction. Sir, Ohio has a deep and vital interest in preserving this fund entire. If preserved, and wisely applied, it will afford to her sons and daughters, through successive generations, accumulating means of moral and intellectual cultivation.

But, sir, this bill, deceptive in its professed objects and ostensible designs, will, as I believe, for ever withhold from us nearly seven hundred thousand dollars. It is calculated, if not designed, to effect, covertly, purposes which could not be attained, if openly avowed. Who does not perceive, that postponing "till further provision by law" the fourth instalment is equivalent to a repeal of the deposit act? If this bill pass, further legislation must precede further payment. The united concurrence of the legislative departments must be obtained. Discordant views, conflicting interests, and rival appropriations will render such concurrence improbable, if not impracticable. But, sir, I warn gentlemen that there is a fatal danger beyond the legislative branches of the Government. There exists in the Executive a power that will be interposed between the declared will of the Representatives of the People and the accomplishment of that will. Sir, I may be told that no danger need now be apprehended from that source; that the political Sampson who once wielded that terrific power, to the dismay and destruction of so many interests, has been shorn of his locks; that that extraordinary man, who could at pleasure subvert and destroy without prejudice or injury to himself, is now beyond the lofty mountains of the West, in the quiet retreats of the Hermitage. Sir, though distant, he is not dead; though in retirement, he still mingles in political strife. Like the superannuated and dismissed war-horse, he still delights to rush, at the sound of the trumpet, unbidden into the conflict. Though his voice does not now resound in the commanding tones that once reverberated through the saloons and precincts of the palace, it is still heard amid the legions of power, and his influence is yet felt in the supreme Executive action of this Government. But, sir, I may be told that no danger is to be apprehended from the exercise of the veto by his successor; that he is mild, peaceful, and timid, partaking more of the qualities of the subtle and sagacious Reynold than of the bold and fearless monarch of the forest. Sir, I breathed my natal air in the State in which he was raised; I know something of his history, and have some knowledge of that extraordinary political party which has so long controlled the destinies of the Empire State, which brought him into power, and of which he was the moving spirit, the leader and idol. Though that party may have acquired much of its power and influence by sagacity and political intrigues, yet I challenge the history of the world to exhibit a party that, in emergencies, was more prompt, bold, fearless, and daring than the republican party of New York. The celebrated seventeen set at defiance and trampled upon public sentiment and the rights of the People, and yet, sir, strange and paradoxical as it may appear, were afterwards triumphantly sustained by public opinion, modified, wielded, and controlled by the sagacious influence of the party. Sir, I have a vivid recollection of a scene which occurred in another part of this Capitol during the panic session of 1834. Day after day official Senators pressed the supporters of the Administration to disclose their views, and the course of policy which they intended to adopt, whether they would create or oppose a National Bank, till, at length, one of the leaders of that party rose, cool, calm, and collected, disclaiming all authority to speak for the Administration, and, planting himself upon professed constitutional scruples, proclaimed undying hostility towards any national bank. Sir, from that moment the united energies of the Government and the party were arrayed against the revival of the old, or the establishment of a new national institution. The contest was yielded by the Opposition, and the bank surrendered to its fate.

Soon after trepidation and alarm reached the Empire State. Her credit system was in danger—confidence was impaired. Her connection of affiliated banks was in imminent peril. Appearance indicated the rapid approach of some great convulsion, some dread calamity. But, sir, the energy and boldness of the party saved them from the catastrophe. The bold design was conceived and communicated to the Legislature, with the sanction of Executive recommendation, of pledging the faith and resources of the State for six millions of dollars, principally to sustain the credit of the banks, then the pampered favorites, but now the prostrate victims of the party. Without consultation with the people, whose faith and resources were pledged, the proposition soon received the sanction of legislative approbation. The panic ceased, confidence was restored, prosperity succeeded, and the party reaped a rich harvest of popular favor. The leader of this party, sir, was never friendly to the policy of the deposit law. His predecessor

yielded to its reluctant and constrained approbation, and his prejudices against it are abundantly manifest in his letter to Sherrill Williams, and in various recent Executive emanations. His boldness has been put to the test. That most extraordinary exercise of Executive power called the Treasury circular awakened throughout the country a strong spirit of dissatisfaction. The voice of popular condemnation approached unanimity in one branch of the Legislature, and greatly preponderated in the other. But, sir, the Executive, instead of returning the bill repealing the Treasury circular to the constitutional action of Congress, under the extraordinary pretence that neither he nor the chief law officer of the Government could comprehend its import, deposited in the State Department as a memorial of the last triumph of Executive power over the popular will. It was believed that the present Executive would yield to the strong indications of popular sentiment, that he dare not refuse to revoke the obnoxious order. But, sir, what was the result? The dissatisfaction of the country increased; commercial embarrassment and distress, aggravated by the existence and operation of that obnoxious Executive measure, threatened the country with the most serious disasters. The commercial interests of New York, trembling upon the brink of ruin, petitioned, entreated, and implored the Executive to rescind the order, and to assemble the representatives of the people. But, sir, they petitioned, entreated, and implored in vain. The Executive, sir, gave a prompt, stern, and decided refusal. And let it not be said, or credited, that he will fear or hesitate to veto any bill that does not meet with his approbation. But, sir, there was one occasion, one memorable occasion, when he yielded to the influence of trepidation and alarm. Yes, sir, when that tremendous revulsion, which swept like a tornado through the land, overtook in its fearful course him and the Government, then, sir, he turned his anxious eyes to the representatives of the people, and bade them come up to his deliverance. Then, sir, with imploring looks he said to his faithful Commons, "help me, Cassius, or I sink." But, sir, he has recovered from his panic; he has surveyed his position, calculated his chances, and taken his course. We have had abundant evidence of his courage, and of his reckless determination. He has sent to us, assembled to receive a communication of the grave and mighty matters referred to in his proclamation, the most bold, novel, and extraordinary message ever communicated to Congress. Has he proposed, sir, any great and salutary measures for the permanent relief and prosperity of the country? None, sir, none. The Government is the great object of his solicitude. He has, sir, very plainly intimated that the people were created for the Government, and not the Government for the people. He has proposed, sir, to divorce the interest and destiny of the one from the interest and destiny of the other. He has kindly proposed to take for the Government the constitutional currency, and leave for the people their paper—their sufferings. He has, sir, disclaimed the power, and denied the duty of the Government to afford relief to persons in producing evil is powerless in doing good.

Sir, that extraordinary in sage has gone forth to the country, spreading in its course distrust and terror and alarm. But it has awakened a spirit among the people that will not slumber until their insulted rights shall have been vindicated. The popular response to the doctrines of that remarkable message have returned from the confines of the Republic to this hall, in tones which can not be misunderstood. And, sir, if the "recent demonstrations of public sentiment" have not already directed the eyes of the Executive to the handwriting on the walls of the palace, an adherence to his present policy will soon exhibit to his astonished vision his inevitable destiny. Sir, if this bill pass, the fourth instalment is for ever lost to the States. The Government desires the funds and the Executive veto will preserve them for its use. What necessity is shown for its passage? Is it even certain that there will be a deficit of funds in the event of its failure? There was a time, sir, when the true state of the Treasury was accessible to the comprehension of all. An early law of Congress made it the duty of the Secretary of the Treasury to communicate periodically to that body, and through them to the people, the state of the finances; to exhibit to the nation the receipts, disbursements, and existing condition of the Treasury. The reports of the enlightened men who filled that station during the early history of the Government subverted the purposes for which they were required. They presented to the people a plain, simple, and lucid exposition of the operations and condition of the Treasury, easily comprehended by the most ordinary capacity. But now, after fifty years' experience in the affairs of Government, in an age of unexampled light, intelligence, and improvement, we are told, upon this floor, that it has become a matter of "science," yes, sir, of deep and profound science, to comprehend the report of our Secretary of the Treasury! It requires the twenty years of incessant toil that qualified the English lawyer for the practice of his profession, to unveil the mysteries of a Treasury report. And, sir, this memorable declaration comes from a gentleman (Mr. Cambreleng, chairman of the Committee of Ways and Means) of commanding influence and distinguished talents, whose official station places him in intimate and confidential communication with the Treasury, and who, after sixteen long years of public service, with all his light, intelligence, and advantages, when placed upon the Executive tripod of this House, though inflated with the inspiration and trembling with the agitation of the Pythian priestess, can give but an *oracular* response to the interrogatories of those who seek intelligence at his shrine.

Instead, sir, of those clear, satisfactory, official expositions of the state of the finances, that silenced doubt and forbade discussion, we now behold, on every side, those sibilant views (alluding to the various calculations presented by members to explain the state of the Treasury) that have been for days scattered through this hall, claiming credit, and, as I believe, deriving negotiability from the endorsement of the Secretary of the Treasury! Must we be required to thread such labyrinths and fathom such depths? Sir, were we to leap into such an abyss of darkness, I fear that we should have just and early cause to exclaim, with the "mountain bard,"

*Facilis descensus Avernus, sed revocare gradum,  
Hic labor, hoc opus est.*

But, sir, suppose that the Government has not sufficient means now available to pay the fourth instalment to the States, can not those means be procured? Is it necessary for the United States to break their contract or violate their faith? Are not the millions due from the deposit banks, and the bonds of the Bank of the United States, which can be converted into available means at pleasure, abundantly sufficient to meet, in a manner acceptable to the States, the payment of that instalment?

And, were they insufficient, are not the credit and resources of the United States adequate to the exigency? Sir, their credit will command at pleasure, at home or abroad, all the funds requisite to meet any emergency; and their resources, the cotton fields of the South, the grazing and grain-growing regions of the West, the manufactures of the East and North, the products of the forest and the ocean, our navigation and commerce, our public domain, our national industry and enterprise, will afford abundant means of payment. Sir, the Empire State pledged her faith and the resources of her citizens for six millions, to preserve her credit system and sustain her banks. Shall the United States hesitate to pledge theirs to fulfil their contracts and preserve their honor.

Sir, in opposing this bill I disclaim all desire or intention of thereby throwing obstacles in the way of the administration. I am ready and willing to give my vote for procuring all the funds necessary to the beneficial administration of the Government, to give relief so far as we can to the Government and the country. I am prepared and disposed, sir, to sustain all the recommendations and measures of the Government that I can consistently with my conviction of public duty. I have no political aims or purposes to subvert; I stand not here to war with the men who compose this administration, but to sustain all measures, come from what source they may, which shall, in my judgment, conduce to the promotion of the public interests, and to oppose those of an opposite tendency firmly and fearlessly.

Sir, I should rejoice if our delegation could present an unbroken front against withholding this instalment from the cherished policy of Ohio; if they could raise an united voice in behalf of the great interests of that generous State which has warmed and cherished, honored and distinguished us, by sending us here, the representatives of her power and the advocates of her interests; of that State in which are concentrated all our interests, all our affections, and all our hopes; which contains our wives, our children, our dwellings, and our altars. Sir, I advocate on this occasion not merely the present interests of the citizens of Ohio, but the prospective interests of the unborn millions which shall, in coming generations, be spread over her fertile surface of the poor, the orphan, and the destitute. I seek to ameliorate and improve their condition; to elevate their hopes, their character, and destiny. I desire that the great edifice of education and intelligence should be reared upon enlarged and stable foundations; and, sir, with the liberal and abundant means which are justly due to us, it will arise broad in its dimensions, perfect in its proportions, and durable in its structure. And I fondly hope, sir, that biding defiance to the assaults of time and the shock of revolutions, it may endure to the last ages of this glorious Republic, a proud and abiding monument of the wisdom of its projectors and the faithful care of its builders.

## REMARKS OF MR. MENEFEE, OF KENTUCKY,

[As reported in the National Intelligencer.]

In the House of Representatives, September 27, 1837—On the bill to postpone the payment to the States of the fourth instalment of the surplus revenue.

MR. MENEFEE began by observing, that, after the protracted discussion which the bill had already undergone, he should refrain from taking the wide range in which gentlemen on both sides had indulged. He should content himself with a consideration of the proposition immediately before them—a proposition, in his opinion, quite sufficient for one debate. Nor, indeed, was he sure that he should have trespassed on the House at all, had the question been one of exclusively national bearing. But, sir, (said he,) it concerns, nearly and deeply, the Government and the people of Kentucky: to a degree rendering it inexcusable in her representative to witness the passage of this bill, without, at least, protesting against it on behalf of that State.

Among the numerous objections to this bill, it may, not without reason, be urged, as it has been, that the act of Congress of the 23d of June, 1836, directing certain money belonging to the United States to be transferred to the several States, on their complying with the prescribed terms, bears the character of a *legislative contract*, from the obligations of which this Government cannot lightly discharge itself by such an interference with its provisions as the bill under consideration proposes. The act carried with it certain propositions to the States, which, they accepted, respecting the public money. Its mere custody, if nothing more was intended, undoubtedly involved both expense and responsibility, independently of the express and formal stipulations to restore it when demanded according to the terms of the act. It is not pretended that the States have failed, in the smallest particular, to observe the requisitions of the act, as far as transfers have already been made; nor is their readiness or ability to comply, with respect to the instalment yet due, at all questioned.

It is perfectly competent to a Government to create, in the form of laws, contracts binding upon it. The practice often occurs. All our acts of incorporation are instances of this kind of legislation.

If, then, the act of 1836 be, as it is represented, and insisted upon as a *contract*—and it is difficult, if not impossible, to distinguish it from a contract—the objection to the bill, for that cause alone, is altogether sufficient. If a contract, it must be fulfilled. The Government cannot escape from the obligations it imposes, except by the consent of the other contracting party—the States. The violation by Congress of such a contract could not, I know, be redressed by a resort to the judicial tribunals. Yet the imputation of treachery and perfidy would justly await such a violation: a position which no one supposes an American Congress capable of occupying.

But, sir, I do not rest my opposition to this bill exclusively, or even mainly, on the ground of a supposed violation of contract involved in it. This I deem a narrow view of the matter. I place on higher and more commanding reasons: on the true nature and spirit of the act; not as evinced by its language or its form, but by the principles in which it was conceived, the ends it aimed at, and the whole context of circumstances which attended its enactment.

What, sir, I ask, are the nature and spirit of that act? It is attempted to be maintained that it was merely intended as a measure of finance; that the public money was to be transferred, for the advantage of the Treasury of the United States, to the State treasuries, there to be held on deposit strictly—not contemplating the use of it by the States for their own benefit, even temporarily. In other words, that the Stat

were, as such, substantially converted, by that act, into so many agents and instruments of the Federal Treasury. Under this pretension, the use of the money, by the States, even for the shortest periods, or to the least extent, was wholly forbidden. For if Congress could authorize the use of it by the States, without interest or equivalent, for an indefinite time, they might, upon the same principle, and with equal propriety, wholly relinquish it to the States; the constitutional power to do which the advocates of this construction deny.

The idea of the General Government collecting its vast revenue, from its innumerable sources, all over the Union, with its multitude of collecting officers lining our seaboard, and of receivers of public money scattered over the whole West, and all the expense and machinery belonging to so extended a system, to divide out amongst the twenty-six States, to be held without use by them, or interest to the Government, for the purpose of being returned when demanded, is utterly inadmissible as a measure of finance purely. But a small advance would be needed under a system like this, to require the revenue, after its collection, to be returned to the individuals from whom collected, to be by them held as agents of the Treasury, and repaid when wanted for the immediate use of Government. Its clumsiness, and utter imbecility, as a system of finance, would justly fix reproach on any nation that should adopt it.

But, sir, the error of this construction is still more manifest, when it is remembered that Congress, in the antecedent part of the same act, formally and minutely provides for the deposit of the public money in the State banks; another addition to the deformed and unnatural system attempted to be found in that act. As a system of finance, who, with a proper respect for his reputation, will consent to stand forth as its champion? Who will endure the paternity of such a financial monster? Who so reckless of the opinions of the world as publicly, in his place here, to hold fellowship with it? I dismiss this view of the question. Gravely to relate such a construction, would be an act of violence to the wisdom of Congress and the national character.

No, sir, (said he,) the act of the 23d of June was no financial expedient. It is more imposing. It is the offspring of considerations tenderly affecting the Federal Constitution and the purity of its administration.

By a course of federal legislation, whether constitutional or unconstitutional, wise or unwise, is of no moment here, a large revenue had accumulated beyond the wants of the Treasury. Large, however, as this surplus was, it cannot be pretended that its mere custody by the Government was impracticable, or even difficult. Its full competency to this end was never questioned. Yet, from the earliest period of this accumulation, it was universally regarded with an eye not only of distrust and apprehension, but of absolute abhorrence. It was viewed as the dread fountain from which were destined to flow extravagance in the Federal expenditures, augmentation of Executive power, and all else that was hostile to the Constitution and dangerous to public liberty. Nor, sir, was it viewed in any false light. No fear was entertained that was not just; no abhorrence felt that the frightful visage of the evil did not fully warrant. The worst predictions of its pernicious influences fast ripened into fulfillment. Government extravagance, impelled by this surplus, progressed without check, and with the utmost rapidity, to the point not only of profusion, but of profligacy, verging on actual corruption. Executive power, already expanded to its fullest constitutional dimensions, seated on this same surplus, and wielded by a popular hand, wrenched from its co-ordinate departments every check, and demolished every balance designed for its restraint. Under an abused, if not unconstitutional power of removal from office, the independence of public officers, so necessary to a pure administration, broken down to the basest servility, and the whole corps transformed from servants of the people and officers of the law into an army of mercenaries, obedient to Executive command, no matter what commanding. The Senate—prostrated, utterly. The Judiciary, contemned, defied; and principles advanced openly by the Executive, abolishing every vestige of restraint through that department. Congress—a seducing patronage perpetually playing upon it—the veto lightly and capriciously hurled at it—the practice of withholding bills, insulting and defrauding it—the purse violently wrested from it—the regulation of the currency usurped—its spirit broken—and at last subjugated and outstretched at the feet of the Executive. The people—deceived, despised, most grievously distressed. Their most highly favored measures—the bank bill, the land bill, the currency bill, successively perishing under the veto, or that other more terrible power. Their currency, in rags, torn asunder by the hand that had snatched it from Congress.

I do not insist, sir, that all these evils, or the most of them even, flowed from the surplus. But I do insist that the tendency of that surplus, whenever and however it operated—and in some form or other it incessantly operated—was pernicious in every aspect, and in the extreme.

Was it, then, in the least surprising, that the statesmen of the United States should have striven to relieve the Government of this surplus? The subject of its disposition accordingly became, as early as 1829, sufficiently important to find a place in the annual message of the President.

"As then," said he, "the period approaches when the application of the revenue to the payment of the public debt will cease, the disposition of the surplus will present a subject for the serious consideration of Congress."

That this recommendation may be duly estimated, it is of importance to remember that it was contained in his first Message, whilst flaming with ardor to signalize his Administration by a radical reformation of the Government, then supposed to teem with abuses. It was meant as a measure of purification. But it is remarkable that, notwithstanding the astonishing increase of the surplus subsequently, its disposition never afterwards attracted his attention; its employment for evil having unfortunately entered into the plan of his Administration.

The notice of Congress and the American People having been thus formally and officially drawn to a disposition of the surplus, it formed, up to the present year, a prominent subject of their consideration. In condemning the surplus as a lamentable evil, and in the propriety of some effectual disposition of it, there was but one opinion. The divisions found to prevail, related only to the mode of disposition. The Message of 1829 had distinctly announced the mode then most acceptable to the Executive.

"To avoid these evils," said he, "it appears to me that the most safe, just, and federal disposition which could be made of

the surplus revenue, would be its apportionment among the States."

And so fixed was his preference of that to all other modes, that, in his opinion, if that mode "should not be found warranted by the Constitution, it would be expedient to propose to the States an amendment authorizing it." This also occurred in the pure, or comparatively pure, days of his Administration; and, like the subject of disposition itself, from having been a favored measure, soon became an object of his hatred. Other counsels predominated. Plans were formed under the eye of the President, if not countenanced by him, for its employment in a vast system of military defences. Our whole national confines were to be walled in by fortifications; for the construction, arming, and preservation of which, countless millions would have been required, and for the manning of which an overgrown standing army kept up—alike useless and oppressive to the People, and dangerous to their liberties. Numerous other plans were conceived and pressed forward, as wrong in principle, though not so stupendous—all contemplating a disposition of the surplus by wasting it. To these schemes the Administration at length decidedly inclined, if forced to relinquish the surplus at all.

But, sir, the People of the United States were unwilling to abandon the subject, or even their favorite mode of disposing of the surplus, notwithstanding the abandonment of both by the Executive. They constantly and resolutely urged it. State after State pressed it—New York and Pennsylvania in the lead. Their sentiments were unequivocal for such a disposition of the surplus as would relieve the Federal Government of the dangers which its possession threatened, and, at the same time, render it beneficial to the States, by preserving instead of destroying it.

Its abstraction from the Federal Government was the principle common to all these plans, and kept steadily in view. It looked to a divestment of the surplus as a sanitary measure—a depletion indispensable to the health of the Constitution.

The principle of preserving the surplus for the States first acquired form and consistency in the land bill of Mr. Clay. That measure, from its first conception, was dear to the people and dear to their representatives. It received majorities in Congress seldom, if ever, commanded by so grave a measure; and it might have been reasonably supposed that such majorities, backed by the almost univocal voice of the nation, would have ensured its success. Yet, sir, it perished—under the frown of one man. Not by the veto, but that more detestable engine of withholding bills. Its fate was calamitous to the country, and the calamity was aggravated by the general conviction that it was induced by no constitutional objection really existing in the breast of the Executive, but by the relentless hatred he bore the author of that measure, and an insuperable repugnance to do or permit any thing tending to advance his fame.

The determination of the country to relieve the Government of this malady did not, however, perish with that bill. It survived and flourished. It presented itself next in the form of the deposit bill of the Senate, in the spring of 1836, proposing to transfer the surplus to the States, upon the execution to the General Government of certificates of deposit bearing an interest, and negotiable by the Secretary of the Treasury. That bill found its way to this House, and finally grew into the act of the 23d of June, 1836.

This, sir, is a concise view of the history of that act, and of the principles which lie at its foundation. That history and those principles, I think, prove—the debates upon it, the general understanding of the country, every thing that attended its passage, all that could characterize such a proceeding, its contemporaneous exposition drawn from every source, manifestly prove—that this transfer of money to the States was but colorably a deposit, having been meant, in fact, as distribution. Upon its constitutionality as an act of distribution, some, I know, expressed doubts; and, for that reason, opposed it. We have, therefore, their authority for asserting that it involved distribution. The various hues it assumed, between its first germination in the land bill and its maturity, arose from a desire on the part of its friends to mould it to the views and constitutional opinions of those who favored the principle of distribution, but hesitated upon the mode of effecting it. Sir, that great act experienced much tribulation in struggling into life. The organs of the Executive, in both Houses of Congress, denounced it—reviled it—warred against it in every shape, by all means, and without quarter. Their published speeches, now before me, breathe the utmost violence towards it. It is notorious that it experienced the frowns of the Executive; for even in the third generation, it labored, in his eye, under the curse which he had pronounced on its forerunner, the land bill. And when, at last, after passing by most striking majorities, it was presented to the Executive, a reluctant signature was wrung from him. He did not, in the language of the Constitution, approve the bill; he barely tolerated its passage—the first and last instance, during his administration, of his yielding, even in his caprices, to the will of Congress or the people! He repented signing the bill the moment after he had done it. His spirit of unbridled rule construed it into an act of Executive humiliation; to soothe which he followed the act of signing the bill with an extraordinary announcement, through the official paper, of his determination to publish to the world the secret necessity which had forced it upon him. His growing and ill-suppressed wrath pursued the measure ever after.

Those who regard this act with such utter abhorrence, as involving a flagrant violation of the Constitution do not, in my opinion, justly discriminate. They maintain that it is unconstitutional *for the mere purpose of distribution*. Granted. But that doctrine has no application to the act in question: it proposed no such thing. The constitutional sin, if any, had been committed long before. The surplus was found in existence, and the act sought to operate upon it. It contemplated no creation of a surplus. It looked to it, isolated from the means by which it had been raised. It formed no system, but terminated with the disposition of the existing surplus, no matter whether rightfully or wrongfully acquired. Congress has express power "to dispose of the property belonging to the United States." Does any just distinction exist, in a constitutional view, between property and money? The late President, in his far famed protest, thought not; and he had high authority, if not strong reason, for his opinion. Besides, sir, a deposit of this surplus with the States, without interest, and for an indefinite time, must obviously encounter the full force of the constitutional objections against a direct distribution. The right to distribute the use—the interest—of the surplus, cannot be assumed without yielding the right to distribute the surplus itself. Nor, in principle, can any difference be found between an investment of the surplus in stocks and a distribu-

tion of the dividends among the States, and a transfer of the principal surplus to the States without interest. In both cases, the States have its use without equivalent.

But, sir, I forbear to discuss the constitutional question, or even to allude to the right of the States to the surplus, founded on their interest in the public lands. It is not incumbent on those who oppose the bill under consideration, to maintain the constitutionality of the act of June, 1836. The true question is, was not an act of distribution, in fact, right or wrong? For the reasons assigned, I holdly claim that it was.

Nor, sir, in reaching this conclusion, by compelling the letter of the act to yield to its true nature and spirit, as manifested by the consideration to which I have referred, am I without authority or precedent in the legislation of Congress. This mode of interpretation, though from its nature seldom authorized, is well established. No Government can be wise or just without it. Our tariff laws, especially our protective tariffs, are all thus interpreted. Investments of capital are made in the branches of industry invited into existence, under promises of protection, to which the faith of the Government is committed. A sudden repeal or disturbance of such laws, though not forbidden by their letter, would undoubtedly expose the Government to the just imputation of perfidy and injustice. The great compromise act of 1833 presents a striking illustration. It differs, upon its face, in no respect, from an ordinary act of Congress. Yet, who views it as such, liable to be extended, modified or repealed, at the pleasure of Congress? Who, then, values his country's institutions or tranquillity, can regard it otherwise than as a great and extraordinary act, sacred beyond just treaty, no treaty, pledge, or even intimation. Whence, then, its inviolable character? It lies, sir, deeper than its language—in its history. It is not recited in that act that this Confederacy, being convulsed to its centre—a disruption of the Union impending—the national sword delivered over by Congress to a military Executive, who, if patriotic, was revengeful too, and flaming in his hand over a devoted State—the awful epoch opening in our constitutional history of subjugating by arms a sovereign State—the common blood of our ancestors, which had flowed in the revolution in the common cause of freedom, about to flow from the veins of their descendants, after little over half a century, in deadly civil strife—the sword or an ignominious gallows awaiting much of the genius and flower of the land—it is not recited. I repeat, that, in this portentous exigency, the compromise act came as an angel of peace, silently and invisibly, to compose and hush the troubled elements of the Republic! None of this appears in the act; yet it all existed. It was the offspring of all this. Nor is its nature the less sacred from this silence. Sir, its sublime spirit would have been degraded by the shackles of language. Too ethereal to be embodied, it nevertheless hovers around that act, and sanctifies it.

I maintain, sir, that the act of June, 1836, though certainly not so important, is of a kindred nature to the one referred to; that Congress has no more just right to disturb the one than the other; and that its obligation, in either case, to abstain from such an attempt, is derived from considerations more exalted, if possible, than contract, treaty, or pledge—the duty, I mean, which it owes to the cause of free institutions, which could not fail to incur the deepest reproach by its violation. It is of no moment whether these circumstances are allowed to enter into the construction of the act, or merely to afford reasons operating on the discretion of Congress. The mode in which they shall be permitted to influence our action, I am indifferent upon; their influence—decisive and irresistible—in some mode, is what I contend for.

What action, by the States, ensued the passage of this law? In their reception of their respective proportions of the surplus, none of them either viewed or treated it as a deposit merely; though, for the sake of the appearances which the act had been compelled to assume, they, too, observed the forms prescribed by it. The general policy adopted by them respecting the application of the surplus, was the same. In the West, in particular, as in all new countries, a great demand existed for capital, the want of which repressed their enterprise, and stifled the development of the boundless resources profusely scattered around them. This act was hailed as measurably supplying that capital. Their Legislatures, previously limited to the means afforded by direct taxation, felt freed from their former restraints, and at once launched into a bold and incautious policy. Popular instruction and internal improvement were the predominant objects of their regard. The whole energy of their legislation was bent towards laying deep and broad foundations of that policy; and the systems devised for the purpose became intimately connected with every ramification of business. They, in many instances, were connected with the local banks by an investment of the surplus in capital; through the banks, with the trading and mercantile interests; and ultimately with all classes.

In Kentucky, struggle after struggle had been made, through a series of years, for the establishment of an efficient system of public instruction. Scheme after scheme had been devised; but they all failed for want of money to sustain them. The occasion presented by this act was embraced with the utmost avidity; and upon it now rests a liberal and enlightened system, to which the poorer classes of her citizens have been taught to look as the only inheritance of their children.

Although a system of internal improvements was in operation in Kentucky prior to the act of 1836, yet, from deficiency of means, it was unavoidably partial and inefficient. Under the impulse of that act, it sprang at once into strength and activity, and promised its advantages, at no distant day, in the improvement of rivers, and the construction of roads and canals, throughout every section of that great State.

In these systems, sir, the people of Kentucky not only feel a deep interest, but have embarked in them their affections and the tenderest hopes of their posterity.

The influence of this act on the western country could never, I am sure, have been duly estimated by the friends of this bill. Tested by the ordinary progress of nations, the States, at one session of their Legislatures, advanced nearly half a century. They literally bounded forward, as if steam-impelled.

Its operation in other respects, to which too much importance can not, in my opinion, be attached, was peculiarly beneficial. The advantages of the ordinary legislation of Congress were, for the most part, general and remote. Many of the States, from their interior position, and a policy of this Government of doubtful justice, were excluded from a participation in the annual expenditure of the millions which they contributed their full share to raise. They were all, or nearly all, absorbed on the seaboard. Although the power of Congress to regulate commerce "with foreign nations," and "among the several States," is granted in the same clause of the Constitution, it has

been exercised almost exclusively in reference to commerce with foreign nations. Our whole Atlantic frontier attests it. It is not wonderful, therefore, that discontents should have arisen in the West, from this supposed inequality of legislation. But this act instantly dispelled them. It was hailed with general joy, and was deemed a measure of justice, though slow in its arrival. It came home to them, was embraced, domesticated, and cherished, as it deserved to be, as the future parent of a mass of most beneficent legislation. And, sir, it now stands indisputably incorporated with their domestic policy, which must perish under its withdrawal, and droop, if not perish, under its suspension.

Taking into view this application of the surplus by the States, and supposing it liable, as contended for, to be recalled at the pleasure of the Secretary of the Treasury, is it not plain that the act, instead of abridging Executive power, as was intended, must greatly augment it? It confers upon the Executive the most dangerous power over the States—no less a power than that of direct taxation; for to that a recall of the surplus must lead, the States having no other expedient to sustain the interests shown thus to rest upon it.

Even admitting then, that Congress may have the right to extort from the States the surplus already paid, and to withhold that now due, the exercise of the right would not be warranted, except on the most urgent and irresistible necessity.

What, sir, is that necessity, as alleged by the President and assumed by this bill? It is, that the Treasury of the United States is unable to sustain itself in its embarrassments without resorting to the fourth instalment intended for the States, amounting to \$9,367,214 98; the proportion of which transferable to Kentucky being nearly half a million. Have looked in the spirit of sincere inquiry into the evidences upon which this alleged financial necessity rests, and have looked in vain. The report of the Secretary of the Treasury, submitted to Congress at the opening of the session, though obviously meant to magnify, as far as possible, our financial difficulties, has, I think, utterly failed to establish it. Information derived officially from that Department since, under resolutions of this House, still further weakens the attempt.

Without entering minutely into the condition of the Treasury, it is, in my opinion, plainly demonstrable, that by converting into cash (which can readily be done) the bonds held by the Government on the Pennsylvania Bank of the United States, amounting to \$7,946,356 16, besides interest, means may be commanded fully adequate to the wants of the Treasury, without violating the act of 1836.

The proposition to withhold this surplus would be more tolerable if it were intended to prevent the creation of a new national debt; my aversion to which, if any thing could, might induce me to support it. But it intends no such thing. The President boldly announces to the people of the United States the startling purpose of fixing upon them a new public debt—not in a direct form, but under the insidious disguise of Treasury notes. The employment of these notes is, in the end, more pernicious than any other expedient of finance that could be adopted. Under its cover a public debt steals upon the nation by degrees, imperceptible to the people; and the first signal of approaching danger is, depreciated Government paper, and public credit prostrated, with impending burdens and taxation in the rear.

The plan of the Administration, then, being not only to withhold the fourth instalment, but to lay the foundations of a public debt also, if a deficit in the means of the Treasury should be found actually to exist, why may it not be supplied by an increased issue of Treasury notes? The principle having been assumed, a mere question of amount can be of but secondary consideration.

Sir, if the Treasury were reduced to the greatest conceivable wretchedness, the present times and condition of the country imperatively forbid the measure now proposed. The opening of a new Administration, or perhaps, more properly, the beginning of a continuation of the past Administration, finds this nation plunged into universal distress, reaching, indiscriminately, every class, condition, and pursuit of life.

The actual condition of the country has, until very recently, been a subject of much controversy. By one party it has been represented as I have described it. The Administration took the ground—as a party measure—that the country was, in fact, in the highest state of prosperity; that the country was taking the lead, by declaring that "there was no pressure which an honest man need fear." The thousand satellites revolving around it, reflecting the light, or darkness, thus imparted, united in the strain. Under these siren songs, multitudes of the friends of the Administration, shutting their eyes to what was transpiring around them, and closing their ears to the cries of surrounding misery, remained insensible of the real condition of the country, until themselves fell victims to the distress, the existence of which they were taught to deny. The suspension of specie payments by the banks, the overthrow of

Without aiming at exact accuracy, the following is believed to present, substantially, the condition of the Treasury:

<i>Is chargeable with—</i>		
Balances of appropriations, on the 31st of December, 1836		\$16,752,283 09
Appropriations for 1837		28,575,537 10
Other appropriations, specific and indefinite, October instalment due the States		2,242,560 40
		9,367,214 98
Making		\$57,519,585 57
<i>From which deduct—</i>		
Amount paid up to 11th September, 1837	\$24,077,031 22	
Postponed appropriations	15,000,000 00	
Estimated receipts for the balance of the year	4,500,000 00	
In banks, the mint, and hands of collecting officers	14,596,311 00	
Making		58,173,342 22
Leaving excess of means of		\$563,756 65
<i>To which, in case of obstacles in collecting from banks, or other causes of unavailability, etc. add the bonds (readily convertible into cash) held by the Government on the Bank of the United States, payable in four annual instalments, commencing on the 1st of October next, deducting the interest of the navy pension fund</i>		
		7,204,995 16
Exhibiting a total excess of means of		\$7,868,751 81

the financial system, founded on the deposit banks, and the Proclamation of the President, convening Congress, to consider of "grave and weighty matters," bred some suspicion among the faithful that all was not well; and the Message fully settled the question. The President's manner of unfolding, through the Message, the state of the country, is singular, though probably characteristic. He breaks to the nation the subjects of his griefs with a parental tenderness, and by degrees. The blunt and frightful truth, it was feared, might shock the sensibilities of a party long habituated to the deafening note of "unexampled prosperity." "Embarrassments in the pecuniary affairs of the country" are first gently hinted at; "the difficulties experienced," shortly after grow into "unexpected exigencies," and they, again, into "a revolution." "Destructive consequences," "wide-spread and calamitous embarrassments," "plunged into distress," and "disastrous derangement," are revealed in rapid and dread succession; and the dismal climax at last terminated in an "overwhelming catastrophe!" His country's misery is recurring to with a mournful frequency; and every touch deepens the picture, and, as the ghost of a nation's murdered prosperity rises up before him, he has hardly resolution to plead, like Macbeth,

Thou canst not say I did it; shake not  
Thy govy locks at me.

He confesses "the unpromising truth;" and his confession, like those of another class, less unenviably elevated, dwells with a melancholy satisfaction upon the most dreadful particulars; and, as in other cases, the fulness of the confession is relied on, in his application for mercy, where he reminds the People that they will "never desert a public functionary laboring for the public good." Of the pecuniary condition of the country, then, we have the highest official information.

Nor is its condition in other respects less deplorable. Pillar after pillar, and column after column, of the Federal Constitution, struck down by repeated assaults, and now in fragments at the feet of the Executive; an extravagant and profuse, if not corrupt, administration of the Government; an Indian war prosecuting at enormous expense, with extreme imbecility, and disgracefully to the American arms—all subjects of loud and just complaint by the people. The standard of national morals lowered, under the example of lawlessness set by the Federal Executive, and the influence of a policy which convulsed and upset the regular business of the country, by turning loose a spirit of wild and reckless speculation; riots, mobs, insubordination, and bloodshed, marking almost every day of our recent history. In short, sir, when the condition of the country is such, that the Secretary of the Treasury, enabled to discover no green spot in its affairs not blighted by "the evils occasioned by the waywardness of man," with every appearance of complacency consoles himself with the reflection that the country has not fallen a victim to some great "physical calamity!" When it has come to be a subject of official gratulation that our beloved country is spared us! that no tornado has overswept it! no pestilence depopulated, or earthquake swallowed it! To which, let it be added, that the people are now looking to Congress with an intense and almost morbid anxiety for relief—speedy and effectual.

Now, sir, suppose, in the midst of all these troubled and stormy elements, roused by the misdeeds of our own rulers, and these just expectations of relief, that the Government, instead of administering that relief, shall go forth, as this bill proposes, with sword and torch in hand, in quest of that same dreaded—detested—discarded surplus; threatening to tear up by the roots the most cherished systems of the States, by holding out an early abandonment of them for want of means, or the dim prospect of supporting them by grievous and interminable taxation; and when it is remembered, too, that, with the State Government, taxation is such in fact—direct—and seen and felt in every step of its progress; not like that of the Federal Government, unperceived and unknown by the people, except as announced from time to time in the reports on the finances—can any one doubt, under such circumstances, its disastrous tendency, and utter inexpediency as a financial measure? But it is of no purpose to enlarge on this view of the question.

In representing the effects of this bill, if passed, upon the States, I speak of it as looking to the entire revocation of the act of June, 1836. For, sir, now warn the States that if that act is suffered to be violated in one jot or tittle, it is lost to them—wholly—and forever! Once divest it of the sacred character which I have ascribed to it, construe it as a mere deposit act, and treat the States as other officers of the Treasury with funds in their possession, and it will be infatuation in hope to retain, for any considerable time, the money already received. Their only deliverance lies in the defeat of this bill; for even if the payment of the amount now with States should not be shortly exacted, the act will be so far shaken by this bill, that they cannot wisely or prudently rest any public measures upon it.

Yet, sir, intense as might be their suffering under such an operation, the people might endure it with some appearance of patience, if its object were different. But it is one of a system of measures devised by the Administration, and recommended in the Message, and now in the shape of bills before Congress, to sustain and relieve the Government, without the least reference to the fate of the people. To justify himself in this selfish and unnatural policy, and to silence the murmurings of a suffering and supplicating people, they are met with the chilling and repulsive information by the President that "they look to the Government for too much," and that the Constitution was framed on "a sounder principle" than to authorize Congress to extend them relief; in other words, that the Government, which they have lately seen prove itself so almighty for the purpose of mischief and distress, is, under this self denying doctrine, utterly imbecile for the purposes of good. Its own relief and preservation alone occupy the mind of the Government. The "grave and weighty matters" which Congress has been convened to consider, thus resolve themselves into measures to discharge in specie the demands of all the office-holders, contractors, and other dependants on the Treasury, from the Chief Magistrate down; being, substantially, an increase of their compensations, to the extent of the premium on specie, now between eight and ten per cent.

I trust, Mr. Speaker—I know—that I sympathize from my very heart with the people in their present adversity; and deeply deplore, "more in sorrow than in anger," the folly and madness which inflicted it. I stand ready, by my vote, to alleviate it by every means known to the Constitution. I condemn and sincerely lament the determination of the Government to separate, in the hour of tribulation, its fortunes from those of the people, and, from its secure position on a specie medium,

witness without emotion their calamities. But, sir, in the midst of this general gloom there is one ray of consolation. The Government, under the same policy which has brought distress upon the people, is itself fast approaching a point of financial weakness, which, under wise counsels in this House, may ensure a real, substantial, and permanent reformation of its abuses. The extravagance and profusion of expenditures which have marked the late years of its Administration, and, in greater or less degrees, forced the State Governments into an imitation of its pernicious example, may be effectually arrested. Its retrenching influence has already been manifested in a report of the Secretary of the Treasury, under a resolution of this House, that appropriations of former years, to the amount of fifteen millions of dollars, might be postponed without material injury to the public service. Governments, like individuals, are not sensible of what they can dispense with, until instructed by the hand of adversity. In this respect, the present exigency is peculiarly favorable. Maintain the inviolability of the act of June, 1836, and the fourth instalment may be held up in *terror* over the Government. The States will be enlisted on the side of retrenchment and economy, as the only means of securing the benefits of that instalment, and of escaping the load of direct taxation which awaits a recall of the instalments already received; and that recall must ensue at no distant day, if the Government persists in its profusion. I am solemnly convinced that the Federal Government, administered with an eye to direct taxation for its support, would be conducted, in all its constitutional efficiency, upon an annual expenditure of twelve millions and a half of dollars—scarcely half the sum now applied. Its tendency to abridge Executive power—the great bane of the Republic—is no less apparent.

For one, then, sir, I embrace the occasion; and, without respect to the course of others, shall cleave to it resolutely, obstinately, and to the very last. I had no hand in producing the wreck of our finances now exhibit. I view it as an existing "result of the disasters of the times;" and but seek to convert it into an instrument of good. Left to its own action—unmitten itself by the hand of misfortune—the Government would never have returned of choice, nor could have been brought back by force, to the simplicity and economy which lie at the root of our institutions; for no Government, when once fleshed into profusion, is ever satiated, but rushes on, ravening more voraciously every step it advances: of which the history of our own affords trumpet-tongued proofs. In this House all revenue bills must originate. It is the constitutional guardian of the people's money. I wish to make it such in fact. Of late years, the voting of millions at a time, without debate, inquiry, official estimates, or time for deliberation, has been a scene regularly recurring at the close of every session of Congress. This should not be; and I entertain a strong, and, I trust, patriotic anxiety to witness the day, at no distant period, when a demand by the Administration for money shall involve high and substantial responsibility: an event inconceivably important to the purity of the Government.

Considerations like these, if no others existed, would at once decide my opposition to this bill. But I am taxing too heavily the attention you have so flatteringly extended. I take leave, sir, of this wretched expedient.

## REMARKS OF MR. THOMPSON, OF SOUTH CAROLINA,

*In the House of Representatives.*—The bill to postpone the fourth instalment of the payment to the States being under consideration—

MR. THOMPSON, of South Carolina, addressed the House as follows:

MR. SPEAKER: I shall vote for the amendment of my colleague, as it makes the bill more acceptable; but I shall vote against the bill even if thus amended. Time and reflection have only served to confirm my first impressions of the wisdom and policy of the law depositing with the States the surplus in the Treasury. The chief recommendation of that law, to me, was not the money which it gave to the States: that was a small matter; but it was that a fund was provided to meet the future exigencies of the Government—a fund which was to be raised by each particular State in its own way, with a just regard to the different interests of each State which could best bear taxation, and not by the majority interest of the General Government, alike ignorant and reckless, as past experience has proven it to be, of the interest and circumstances of these respective States. If there were now a deficiency of resources, I should feel constrained, by the principles upon which I supported that bill, by plighted faith, and the peculiar interests of those I represent, not only to give back this fourth instalment, but all that we have received. No such case exists. I have examined the statement of the resources of the Government, presented by the gentleman from Tennessee, (Mr. Bell,) and have made the calculations in various forms; and, sir, I am satisfied that he has demonstrated (for it is a matter of figures) that there is no deficiency of funds. Charging the Government with all the demands upon it, including the fund of \$37,000,000 set apart to be distributed among the States, the unexpended appropriations of last year and the appropriations of this year, and you have an aggregate of \$55,000,000. Of this sum, the Secretary informs you that \$15,000,000 cannot be expended during the year, reducing the amount to \$70,000,000. The payments made, and the admitted resources of the Treasury, amount to \$64,000,000; to which add \$5,000,000 in the hands of disbursing officers, and you have \$69,000,000. In this estimate, the accruing revenue of the last half of the present year is taken, on the statement of the Secretary of the Treasury, at \$7,000,000; whereas it has been proven to my entire satisfaction that it will exceed \$9,000,000. So that, instead of a deficiency, there will be a surplus, even if you do not withhold from the States this fourth instalment. I am unable to perceive why money in the hands of disbursing officers of the Government is not as much the money of Government as if it were in the Treasury. It is only one step nearer being paid out—that is all. The Government can order these officers to pay it back into the Treasury, only to be paid again to the disbursing officers. If, then, sir, you withhold this fourth instalment, you leave in the hands of the Government \$9,000,000; to which add the \$12,000,000 of Treasury notes, and you have a surplus of \$21,000,000—not to meet the wants of the Government, but to be deposited in your Sub-Treasuries. I have another and an insuperable objection to this bill. The States will receive the funds in the bills of the State banks. The General Government will not, and cannot, receive it but in specie. The only

cers of the Government will be constrained by law to demand it in specie. They will be constrained by that which, with them, is stronger than laws or constitutions—by party obligations and an irresistible necessity to play out the desperate game they have commenced. I will not arm them with this terrible power over the deposit banks in their mad and ferocious experiment of a metallic currency. I would sooner see the whole amount of the fund sunk in the ocean than the wide-wasting ruin which a demand on these banks for \$12,000,000 in specie will produce. At the very moment that you are asked to adopt a measure which must lead to this pressure on the deposit banks and their debtors, it is recommended farther to indulge the merchants on their bonds. Why this discrimination? If you press the deposit banks, is not a corresponding pressure upon their debtors inevitable? Why, I ask, are they to be pressed, when the merchants are to be indulged on their bonds? I would at this time press neither. These considerations bring up at once the Sub-Treasury scheme and the metallic currency. They are all cognate branches of the same system of measures, and one of them cannot be properly considered disconnected with the others.

As to this new *expedient* of Sub-Treasuries, I am opposed to it in any and every form in which it can be presented. This new *expedient*, yes, sir, the old word *experiment* is somewhat odious; I have not heard it from the mouth of an Administration man for some months. No, sir, it is an ugly word. I fear that, if the present regime is to continue, one-half of the words of our language will become equally odious. I like this new word better: it is singularly appropriate: it is one evidence of a better state of things—that the Jack-Cade banner, which has been for eight long years floating over us, with the motto "hang all the schoolmasters," has been lowered. The meaning of this word "*expedient*," is "means employed in an exigency." If our whole language had been searched, a word more singularly significant could not have been found. But I cannot consent, by this dangerous expedient, to relieve our rulers from an exigency into which they have been led by confident folly and reckless ignorance. I have been too long denouncing this scheme of Sub-Treasuries as a tremendous engine of power and corruption to support it now, although it may be called by another name. By giving to a coiled anaconda a harmless name, I will not be induced to lay my head upon it. It is said that this is not a Sub-Treasury system. Indeed! will some gentleman inform me what has heretofore been understood by a Sub-Treasury system? Will he give some definition of such a system which does not describe that which is proposed to us? It is the very system which was first suggested by a very worthy gentleman, with a very savage name, (Mr. Gouge,) with the exception that it does not specially direct the sliding shelves and hydrostatic balances. In every important particular, in every point of political danger, in surrendering to the President the unlimited control of the public purse, it is the precise system which a few short months since was so generally and justly denounced. It is, sir, a Sub-Treasury system. I go farther—it is not only the embryo, it is the living form, the shape and substance of a Government bank, and that in its most dangerous form. Sir, it is one of the most melancholy signs of the times. The sword of the Government was absolutely surrendered to the late President. The present incumbent not being exactly the man to wield the sword of Achilles, as if in the very wantonness of a surrender of every guaranty of public liberty, it is now proposed to surrender to him as an instrument more compatible, but not less powerful—the purse of the country. Is any patriot willing, on the eve of a warmly-contested election, (in the city of New York, for example,) upon which the destiny of the Republic may depend, to trust five millions of the public money, with the power and the temptation to use it, in the hands of one man, and that one man the appointee of the President, whose very bread may depend upon the result of that election, as it may turn in favor or against the Administration? Suppose a wicked and ambitious man filling the Presidential chair, (and these are things to be looked to and guarded against, for confidence is not a republican virtue,) will he not place at the head of these treasuries his own corrupt minions and parasites? Are you willing to place in his hands twenty millions, to corrupt your people and perpetuate his power? I said, sir, that it was in fact a bank. I care not by what name you may designate it. It is admitted to have that character as a place of deposit. Will the system not also necessarily involve the business of discount or exchange? How are your funds to be transferred from places where they are redundant, to places where there are none? By hauling money from New York—say to Pittsburgh? No, sir, but by drafts or bills. These bills will be bought at a premium, when above par; at less, when below par. What power of speculation and fraud do you not thus place in the hands of your agents? How many losses shall we not suffer from bills thus purchased and not paid? Who is to lose in such cases; the Government or the agent? We shall have hundreds of applications to release our agents from such liabilities, of the same character as the famous Purviance claim. But it may be said that transfers will be made by drawing drafts on those places where the funds most accumulate. Does not every one see, by whatever name you may call it, that this will make of the agency in New York a great central power, around which the whole system must revolve, dependent upon it for light, heat and motion? Then as to issue. Is it not proposed that the drafts of these agencies, and the Treasury notes about to be issued, shall be the currency? It will then be a bank of issue, deposit and discount, and in its worst form, with greater insecurity, greater power and temptation to speculation and dishonesty, and greater facility of using the Government funds for corrupt electorship purposes, than with a bank at Washington, with branches distributed all over the country; as the security against all these is greater with an institution with twelve men to manage it than with one.

Why, sir, shall we be driven into this dangerous and untried expedient, when, to say nothing of other plans, that of special depositories with the banks is better in every possible point of view? In Spain, where a system of Sub-Treasuries exists, it is estimated that not more than one-fourth of the revenue received ever finds its way into the public Treasury. In France, not more than half. The banks will be more cheap depositories, all will admit; more secure, as the responsibility of the banks will be greater than that which can be secured from a private individual. The facilities of transfers of the public funds will be greater, and the risk and the patronage less. Let me state a case; and, stating it, I furnish the answer. Two millions are deposited with a Sub-Treasurer, who is the appointee of the President, of the same political party, and dependent for his support upon his salary—say \$3,000; and for that upon the

President. The same amount is deposited with a bank of a million capital, receiving the same compensation, to be divided amongst a thousand stockholders: over which is the President likely to wield the greatest power? Would special depositories with the banks increase their power? I cannot, for the life of me, see how. But the banks, it is said, are not to be trusted. Is this true, sir? Will any man rise in his place and say that he would fear to deposit his own money, jewels, or plate, in a bank, or that he would have the slightest doubt of having them restored to him on application? But, the banks have stopped payment; they are, therefore, broken. Is an inability to pay specie equivalent to insolvency? Between man and man is it so regarded? Does he who holds the note of his neighbor for one hundred dollars, who is worth one hundred thousand, regard his debtor as insolvent, or his debt insecure, because he has not the hundred dollars in specie? The promise of a bank to pay is no more than that of an individual. It is a promise which places it in the power of the creditor, in both cases, to exact specie, or to sacrifice the property of the debtor if he fails to pay it; with this decided advantage on the part of the bank—that the creditor is fully informed of the condition of the bank, and well knows that the bank has more notes out than it has specie, and more than in times of panic and apprehension can, by any possibility, be commanded. The credit is not given on the faith of the bank having specie, but that it has property, or, what is the same thing, lies upon the property of its debtors, to meet its engagements; that property, being a measure of the value of which constitutes the great value of specie, and to buy which, specie is alone wanted.

Take, as an example, the condition of the deposit banks in the State of New York. They had, at the date of our last annual Treasury report, \$4,637,731 in specie, to meet demands upon them of \$44,737,475; and yet, knowing this, the Secretary made his deposits, and gave to Congress the most confident assurances that the public money was safe. So it was, sir; not because the banks could pay all their obligations in specie, but because they could pay, and have paid, nearly the whole amount in that which alone was expected.

The banks not only acted wisely and honestly in stopping at the time they did, but they would not have acted thus if they had continued to pay until their last dollar was exhausted. It would have given a preference to some bill-holders and depositors over others—that very preference which is the object of a bankrupt system to prevent; and might, besides, have put it out of their power to pay their other debtors any thing. No, sir, the banks are not only entitled to the approbation, but to the gratitude of the country; and that they have received both, is conclusively shown by the fact that every where the people have abstained from the exercise of their power to coerce payments in specie. They have stood—nobly have they stood—between the people and general bankruptcy. They have done more: have enabled our merchants to save their own high character and that of the country from the infamy of paying their debts by wilful and fraudulent bankruptcy—a course recommended to them by those, and the organs of those, in high places.

But, Mr. Speaker, the insolent effrontery of these charges upon the banks must excite a just indignation, when it is seen that every single act imputed by the Government to the banks as a crime has been committed by that very Government, not only without excuse, but with aggravated enormity. The Government has stopped paying specie, when it is unquestionably in its power to do it. It may at any day raise funds in specie by loan; the banks can not. The Government has caused, by its action, the impossibility to pay specie; the banks have not. The Government, whilst it refuses to pay its debts in specie, demands specie of its debtors; the banks only demand the same currency that they pay. Take the conduct of the Government in the matter of the French indemnity; that indemnity, rather than delay which for three months, until the meeting of the French Chambers, we were well nigh being involved in war. After it was obtained, instead of allowing the claimants to draw for it, and have the premium of a foreign bill on their own money, it is delayed for a year, that it may be brought home in specie, at the loss of the premium, the delay, and the expense of transportation. When it arrives, is it paid in specie to the claimants by the Government, their mere agent? Oh! no, sir, but in paper; and the very next day the man who was refused his own specific money, if he owes to the Government, (yesterday his debtor, and refusing to pay specie) is forced to pay his own debt to the Government in specie. If the banks had been guilty of conduct so flagrant and flagitious, what shouts of indignation should we not have heard from one end of the Union to the other? But the banks have shipped specie to England—a charge, I believe, wholly without evidence; but, if true, has not the Government done the very same thing? Has it not very lately paid a debt to the Barings in specie—to those odious Barings, who have been guilty of the unpardonable offence of placing in this young and vigorous country, with its immense energies undeveloped, that capital which we needed, and giving the sole control of it to American citizens. But, at worst, it is but a discrimination between creditors; and a charge for it comes with an ill grace from a Government which pays us, who held the rod over them, in gold, whilst they pay to the time-worn veterans of the Revolution, and to the soldiers in your Florida campaigns, bank rags. Sir, impudence and effrontery can go no further.

I am, if possible, still more opposed to the other untried expedient, of demanding the dues of the Government in specie. I will not venture on the experiment in the present condition of the country, how gradual soever the process may be. I will not take any more drugs from quacks who have reduced me, in their recklessness and ignorance, from a state of health to one of almost desperate disease. I will not venture on another and a violent and dangerous remedy in any state of the system, and especially in the present condition of feebleness and inanition. I will not now, by the slightest movement, shake public confidence, at a time when I regard it the first duty of a statesman to restore it. Especially will I not venture upon a measure which I believe to be absolutely impracticable, and undesirable if practicable. If we were in a state of nature, and about, for the first time, to enter into social relations, and form a Government; or if we could, by a universal agrarian law, divide every thing equally—money and property—abolish debts, and to begin *de novo*, I should even then doubt about this metallic currency. But, taking the world as we find it, the thing is impracticable; or, if practicable, only to be attained by that universal change in the personal circumstances of men, that wide-wasting ruin which no people can or will bear. It is an old saying, that it is easy for bystanders to make observations. It may be, that those who owe no debts, or those who, having debts, are reckless of the moral obligation to pay, or beyond the reach of legal coer-

cion, can look with complacency upon the scenes of universal suffering and misery which will result from a return to a specie currency. I regard a depreciating or diminishing currency as one of the very greatest scourges of man. Pestilence, has its horrors, but they are temporary; war has its tolls and its sufferings, but it has its glories and its triumphs. But the misery produced by sweeping whole classes of society from ease and affluence, to a condition of poverty, helplessness, and despair, is deep, withering, and permanent. It does seem that philosophy has been teaching by example little purpose. In every similar crisis in other countries, the conduct of Government has not been like that proposed to us—the cold, selfish, and heartless policy of the greedy miser sternly exacting his own dues, and careless of the universal suffering of others. No, sir, it has been kind, paternal, wise, and efficient; taking their full share of the suffering and embarrassments of their people—rejoicing when they rejoice, sorrowing when they sorrow.

On the bursting of the Mississippi bubble in France, when the indebtedness of the people was more than the value of the whole property of the kingdom—a time of dismay and despair—the Government stepped forward and restored confidence and business, and gave repose and happiness to its people. The same was the course of England on the blowing up of the Mississippi scheme.

More striking instance perhaps, than either, was the memorable year in England, of 1793, a period of unprecedented embarrassment and difficulty. The Government came forward, not as a grinding creditor, but to relieve the general distress by the issue of five millions of exchequer bills. The fiat of Omnipotence could not have been more instantaneous than the effects of this order. Before one cent was issued, confidence was restored, and not more than half the sum ever was drawn. So it would be here. Our Government has it in its power, by the simplest means, to re-establish confidence, and restore business to its accustomed channels. But it can not do this by expressing its own distrust, by the demand of specie. Our whole disease has been more a disease of credit than of currency. It is the fashion to say that our currency is redundant. With gentlemen, before they talk of redundancy, tell me what is their measure of the proper amount of currency—what proportion to the value of property, to importations, or internal commerce? When they shall have fixed upon this standard, they will have done what the ablest writers on political economy have hitherto failed to do. I venture the proposition, that, according to all the established indicia of redundancy, our currency never has been redundant. Will you take as a standard the currency of France? By the last accounts I have seen, the specie alone of France was £120,000,000, or about \$600,000,000; if to this you add a million of paper, you have \$700,000,000, with a population just double ours. But it is a law of currency that it is required in an inverse ratio with the denseness of population. Our population is more diffused than that of France, and our internal commerce much greater. I am satisfied that we require as much currency as France, yet ours is \$140,000,000 less than one-fourth. I speak of paper; for specie, for years, has not been an article of currency, but of commerce.

But take the established criteria—the rate of exchange, or the market price of bullion, and neither has indicated any excess. But these are uncertain, and liable to variation from other causes. There is one rule which, in my judgment, can not fail. It is this: can articles be purchased in our currency and sold in a foreign market, where the currency is sound, at a profit, after paying expenses? If so, our currency can not be unsound, or else an unsound currency is as good as a sound one; for this thing of excess of currency only exists in relation to other countries. By this standard, our currency has never been sounder than it is now. Will you take the specie basis? Never has that, either in the banks or in the country, been greater than now. In 1833 it stood thus: \$17,000,000 specie to \$78,000,000 circulation; now it is, even after the banks have been depleted by the panic, \$30,000,000 specie to \$140,000,000 circulation. If you take the aggregate specie in the country, we have \$80,000,000 of specie to \$140,000,000 of circulation; a larger basis than has existed at any former period. No, sir; with our sparse population, vast internal commerce, and undeveloped energies and capacities, twice the amount of currency that we have ever had would be a blessing instead of a curse. We have only been enabled to get along at all, by the deficiency of currency being supplied by bills of exchange and other forms of credit.

It is a mistake to say that our paper has depreciated. Specie has appreciated; paper, to every other article, bears the same relation it has heretofore done. Specie is in greater demand. The great law of demand and supply, which is the foundation principle of the whole system of political economy, applies to specie as to every thing else. The return of Bonaparte from Elba raised the market price of specie, in one night, forty per cent. Were not bank notes as good as they were the day before? Yes; but specie, by the demand for foreign uses, was raised in value. So in the case of the suspension of specie payments by the Bank of England in 1797. What caused it? All the writers on the subject say the demand for foreign exportation, on account of the large importation of corn and the payment of foreign subsidies, added to the apprehension of invasion by the French. Precisely so here; the demand for specie to meet the demands of excessive importation, and that panic and apprehension which was caused by the war of the Government on the currency, as evidenced by the Treasury circular and other measures. Yes, Mr. Speaker, I have been so long arguing that the removal of the depositories and the Treasury circular would produce the present state of things, that I have at least persuaded myself that the cause of our present difficulties is to be found there; and now that the events predicted have happened, I am not willing to forego the exultation of prophecy fulfilled. The demand of his rents in specie by a single land-holder in England, Lord King, produced a sensation all over the kingdom. What effects will not be produced by such a discrimination by our Government, the great creditor and money-dealer? Sir, it is in vain to tell me of two currencies in the country: one for the people, and one for the Government; they cannot co-exist. The demand for specie will sink your paper from twenty to fifty per cent, and men will not receive their dues in the depreciated medium; they will demand specie; and then come the sacrifice of property for one-tenth of its value, relief laws, popular commotions, and God only knows where it will or where it should stop. And this, sir, is the avowed purpose of the original author of this system—he who, for being its author, has obtained the sobriquet of "the great humbugger." He avows his purpose to make gold and silver the sole currency of the country,

and to accomplish this by refusing any thing else for Government dues. But from whence is this specie to come to pay duties, and supply the deficit in our currency? From England? Do gentlemen, with a remaining feeling of our colonial condition, look to the father-land as to a place where every thing abounds? Is England that El Dorado which an illustrious Englishman once represented America to be? England has only about \$140,000,000 of specie. Every dollar withdrawn from that country injures us as much as it does England. It disturbs that equilibrium, as important to us as to England. Have we not recently had proof of this, as well as of the greater wisdom and sagacity of that enlightened Government, in coming to the rescue of American houses and American commerce, whilst we were waging a barbaric war upon hers? But, suppose you do get specie from England, you cannot pay for specie and manufactures both with the same cotton and rice. What then? Are we to live without them, with no revenue from imports, and buy American manufactures at prices greatly enhanced? But, suppose foreign goods are imported, is not the payment of the duties in a currency twenty per cent. more valuable than that for which they are sold, a clear addition of twenty per cent. to the tariff? I have been taught to believe that every impediment to foreign commerce is a duty upon that section that supplies the articles of that commerce. In other words, I believe in the truth of the famous forty-bale theory. Believing so, I cannot consent to impose so heavy a burden on that commerce in which my constituents are so much interested. Suppose we paid duties of twenty-five per cent. on the cotton we exported, would it not be a grievous addition to that duty to demand it in specie? If the doctrines of the school to which I have been attached be true, it is an equal burden imposed upon the imports received in return for our cotton; and this was the ground upon which cash duties were so strenuously resisted. What was the difference between cash and a short credit of a few months, compared with this appreciation of the currency in which the duties are paid? You had as well add twenty per cent. to the tariff, as to add twenty per cent. to the value of that in which the duties are paid.

Suppose, that it was proposed that foreign goods should not be allowed to be imported unless they had made a voyage around the Cape of Good Hope: every man would see that it would be a tariff in disguise. Sir, we have heretofore staked our lives and fortunes upon a resistance of that policy. Nay, more, sir, we put in peril the institutions of the country. I will not now contribute to re-instate in its full vigor that odious and unequal system.

But, sir, there is another view not less strong, in which this thing is presented to my mind. I have seen somewhat of the tendency of the disbursements of this Government. They are all eastward. With the Government fairly and justly administered, it must be so; as it is administered, it is one eternal tide that knows no reflux. The depletion of the South and West of their specie—of that which is literally the life-blood of the system—which would take place, is not to be estimated. Take for example the States of South Carolina and Kentucky—a Southern and a Western State. They pay, directly and indirectly, not less than a million and a half annually of duties on imports. Both States receive back from the Government less than \$200,000. Is such a drain of specie long to be endured? More than all this, sir: New York is our great commercial emporium; it is to America what London is to Europe—the place where payments are to be made, and where prices are to be regulated. It is there where specie will be mostly wanted, where its value will be highest; and that is the point to which it will tend, by a law as irresistible as that by which water finds its level. I appeal to every man from the plantation States, and from the West, so indissolubly connected in interest with us: is this a time—when the delicate and doubtful question of demand and supply of our great staple, cotton, is trembling on its balance—is this a time to be tampering with interests so vast?

It is wise in us to adopt a course of policy which shall force upon our great customer the alternative of buying of us and paying in specie, or of looking to other countries, to her own vast East Indies, for her supply, and encouraging its production. In the presence of such dangers, if, with the best intentions, I should do any thing to produce consequences so tremendous, I could not easily forgive myself. If, from any considerations of a party or selfish character, I should do so, I should expect the time to come when I would pray for the hills to fall upon me and protect me from the wrath of my injured constituents.

And, sir, if we could, without any of the evils apprehended, attain this political millennium, what are its wonderful advantages? The cant and the slang of the present day is against banks and corporations; in other words, sir, a war upon civilization, and an effort to abolish it. I regard them as both the signs and the instruments of the highest civilization. How many of your manufacturing establishments, your railroads and canals, would have existed, without banks and charters of corporations? To how many men of talent and enterprise has the banking system furnished the means of rising from poverty and obscurity to rank and power? It is, sir, the great instrument of the distribution of wealth. It is the only just agrarian principle; and in my heart I believe that it is especially beneficial to the poorer classes, to those whose ignorance and passions have been operated upon to array them against it. What has enabled England to sustain both herself and the cause of human liberty for the last hundred years? Her banking system, mainly. Contemplate her grand and glorious career in letters, arts, and arms, and say if you would think it well to exchange them for the blessings of a hard currency, as exhibited in Spain, or even in France? No, sir, abolish your banking system whenever you will; you may drag along through a period of peace, but let a period of war come, and you will have, as you always have had, to resort to it. Is this a time to talk of returning to a metallic currency, when the supply of the precious metals has diminished one-half, and the demand is daily increasing; when wise and able men are of opinion that there is not enough of them in the world even as a basis of currency?

But we are told by the President that he is of too strict a sect of the State rights creed to recognise any power the Government to relieve the sufferings of the people. Most modest and unassuming President! as free from all arrogance and assumption as a Chief Magistrate, as he unquestionably is in private life; and I do not know a more prepossessing gentleman. The Government has power to produce ruin in the country; none to relieve it. The Message itself attributes our present condition, in a great degree, to the action of the Government; to the distribution bill, and to the large loans made on the Government deposits. I was a little surprised at this

when I remembered, sir, that these loans were made under the direction and dictation of the greatest and best himself—of that "illustrious chief, under whom it was honor enough to have served, and in whose footsteps he was pledged to follow." It was regarded as one of the most degrading acts in the life of the great Bacon, that, in applying to King James for a high office, he said of Lord Coke, "He will seek gloria in obscurio." "I suppose the President did not know that he was not the first to tread the paths of subservience; but that he did not know that he was not the first to use the very same words of fawning. It was only a coincidence, resulting from congenial natures.

But, sir, to return to the disclaimer of all power to interfere with the internal concerns of the States. It is surely found in strange company with a proposition of a bankrupt law extending to the banks—and, what is most strange, at the very moment that it is proposed to cut the Government loose from all connection with these banks. If the Government is to have nothing to do with the banks, what business of this Government is it whether they are well managed or not? The President is a little equivocal as to what he means by a bankrupt law. He does not tell us whether he means the law of the twelve tables, *de debitoribus in partes secundo*, the law which directed the cutting up the body of the debtor and dividing it among his creditors, or the English law of bankruptcy. I suppose the latter. Now, sir, there are some curious things in this same law of bankruptcy. Let us apply them to State corporations. Some of the States—my own, for one—is a banking corporation itself. I will give you some of the acts which constitute bankruptcy, and their consequences. One is, departing the realm. Well, now, sir, my State will not do that as long as you will treat her tolerably well; but if she were, a commission of bankruptcy would be a notable remedy. Another is, voluntarily procuring himself to be arrested. I think we have some experience that the State will not be apt to do that. No, sir, her return is not in that way. A third is petitioning the King for relief: that is not in her line either. But when the commission issues, all the assets are to be surrendered. Now, the assets of our State bank are the whole property, real and personal, of the people of the State. It would be a "right merry sight to see" your commissioners—from Wall street, perhaps—going to take possession of the State of South Carolina, under a commission of bankruptcy. But, sir, there is some consolation, nevertheless. The commissioners are empowered to make a small allowance to the bankrupt; "by which allowance (says the law) and his own industry, the bankrupt may again become a useful member of society;" so that my poor State is not to be thrown on the common altogether. Sir, a proposition of this sort is not a fit subject even of ridicule. It is an audacious and impudent assumption, for which, in the worst periods of English history, the monarch would have put in jeopardy his crown, if not his head. I am opposed, sir, to this separation of our Government and its fortunes from the people and theirs. It is the very first principle of a representative Government, that the interests of the governors and the governed shall be the same. It is the only effectual security against oppression. I have as much attachment to the Government of my country as becomes a free man; no country ever was great without that feeling; but I am not willing to see prostrated before its juggernaut car the prosperity and happiness of the whole people.

## REMARKS OF MR. PRESTON, OF SOUTH CAROLINA,

[As reported in the National Intelligencer.]

In the Senate, Friday, September 23, 1837.—The bill to provide for the collection and safe keeping of the public revenue being before the Senate, and Mr. CALHOUN'S amendment thereon being under consideration, Mr. BUCHANAN concluded his remarks, and

Mr. PRESTON rose and addressed the Senate as follows: Mr. President: The administration has distinctly avowed that it is not their purpose to propose any measure for the relief of the country or the people. Their sole object is to devise means for the relief of the Government; and upon the declared policy of a separation between the Government and the people, they propose the receiving of the public dues in specie; and that they be collected, and kept, and disbursed by Executive agents throughout the country.

This is the project of the Administration. Another is proposed for our consideration by the gentleman from Virginia, (Mr. Rives,) who, being a distinguished member of the party in power, may, more reasonably than any member of the opposition could, calculate on a possible success. His proposition is to revive the joint resolution of 1816, which has regulated the currency for the last twenty years, and to re-enact the currency bill, which was passed with such unexampled unanimity at the last session, and was, so unfortunately for the country, suppressed by the late President. The main object and purpose of the measures proposed by the Senator from Virginia I understand to be, to restore, as far as the agency of this Government can effect it, a sound currency to the country, and to use that currency, thus re-established, in common with the States and the People.

Between these two measures we must decide. It is manifest that we must take one or the other, or go home without having done any thing; for, however gentlemen may object to either of these propositions, it is obvious that no third project can be brought forward with any possibility of success. The Opposition constitutes a small minority in the Senate, and could suggest no measure with the slightest prospect of success. It would be idle and absurd to make propositions doomed to inevitable rejection; but, by the division among the Administration Senators, we have some small privilege of selecting what we may consider the least objectionable policy. The Opposition, therefore, has distinctly assumed the ground that it will propose no measure; and especially have those gentlemen, whose known policy and long established predilections are in favor of a United States Bank, declared that it is not their purpose to bring forward a proposition for the creation of such an institution. The policy of such a measure would be very questionable; its suggestion would be manifestly vain and useless. It is most properly not before us. It is not one of the measures from which we are to select. All that has been said about it, therefore, on either side, is entirely gratuitous and irrelevant. I am wearied and disgusted with the eternal iteration of unmeaning clamor about the United States Bank. Whatever is

the subject of our deliberations, they run into the bank; whatever we are to be driven upon, the bank is the last that urges us. The bank is the raw-head-and-bloody-bones with which the Administration and its friends scare down the rising complaints of the people; and he who here might lack other means of entertaining the Senate can strut his little hour denouncing Biddle and the bank. Honor, and glory, and power were given to the late administration for having slain the monster, and yet honorable Senators roared him around this hall to split the ears of the groundlings. Whenever a measure is to be defeated, it is the bank in disguise; whenever a measure is to be carried, it is that of the bank. Three years since, he who did not praise the State banks was a bank man; now, he who does not denounce them is a bank man. The bank drove us into the pet banks; it now drives us out of them and into the Sub-Treasury. It is fact and argument, pathos and satire, logic and declamation, ready made to the hands of honorable gentlemen. It is the burden of every man's speech, the alternative of every man's proposition. It is the secret purpose of every opponent; it is the lurking cause of every difference of opinion. He who is cool on every other subject is warm upon this; and many a burst of eloquence would have been lost to the world but for the inspiring terrors of the bank. At present it is only in the heated fancy of gentlemen, or by the plastic power of their dialectical skill, that the bank is before us; and the Administration party alone is capable, by its misrule, and reckless plunging from one mischievous experiment on the currency to another, of bringing it up in a more substantial form. When you have teased and worried the country until its patience is exhausted; when you have destroyed all confidence; when you have broken down commerce; when you have made domestic exchanges impossible, and have irritated the whole body politic into fever and frenzy; then the people will demand the bank at your hands. When your shallow expedients and capricious experiments have reduced the country to that state of confusion and suffering which existed twenty years ago, the people will seek refuge from you in any institution that will give them quiet and security for their property and industry; and thus those who clamor with a ceaseless vociferation against the bank are at the same moment dragging the country towards it. And not the less so, Mr. President, that now, for the first time, their denunciations of the United States Bank are generalized into denunciations of all banks, and of the whole banking system. It is now said that the whole system is wrong and vicious, and that there is and always has been adverse feeling in the community against it. It is doubtless true, that in periods of commercial disaster, like that under which we now suffer, in the uneasiness of men's minds, complaints are apt to be made of the banking system, and of the whole system of credit, to such an extent, indeed, that some have said that all who trade on borrowed capital should break; but that the settled opinion of any respectable portion of this community is opposed to the banking system, or to commerce, from which it springs, and which it re-produces, I should very much regret to believe. My own opinion has always been, that the banking system was the child of commerce, and the handmaid of liberty. It is one of the mainstays of the great civilization of the last 150 years. It belongs to free States, and free States have grown freer under its influences. Its birth-place was free, and commercial Holland, and England and America have fostered it. Run you're, sir, over the map of the world, and you will find that in proportion as its nations are free, civilized, and commercial, this institution has been cherished and developed. All the peaceful triumphs of human intellect which day by day exalt us into wonder and admiration, all the glorious results of modern society, all the magnificent achievements of human industry, whose aggregate has made the last century more replete with human happiness and with the promise of it for hereafter, than the whole tract of history before—all this has been accompanied, promoted and vivified by that organized system of credit which is itself, for efficiency, complexity, and controllability, the most wonderful engine that the tasked, excited, and victorious ingenuity of modern times has produced. It has made England a miracle, and has, in a generation, built us up into a great nation. Is banking England less happy than hard money Spain, or less moral than hard money Mexico? Unquestionably the banking system, like all other beneficent institutions, may be and has been occasionally perverted and abused. Constitutional Government itself is subject to morbid action or vicious control. We are at this moment assembled here to deplore and remedy the effects of misrule and usurpation. Have our republican institutions failed because they are in this crisis? Has the Constitution run out because it has been abused? Shall we go back to hard money and despotism, abolish banks and the Constitution, because we are smarting under temporary evils, produced by the mal-administration of both? Denounce the breeze which wafts your commerce through the world because it may be lashed into a tempest. Deprecate the showers which fructify your fields, because they may descend in torrents. War against the blessed light of Heaven itself, because its scorching rays may wither a harvest. Shall we set about to supersede these kindly ministers of Nature's bounty, by arrogant devices of our own, or endeavor to bring them into disrepute by our ungrateful forgetfulness of their good, and exaggeration of their evil?

But, Mr. President, where is it proposed to terminate the war now declared against banks and banking? Is the whole system to be at once torn down and destroyed—scattering to the winds all the property, which, in such a vast variety of modes, is implicated in the banks? No one has proposed this instantaneous destruction of the country; and yet, sir, by my mind, it is questionable whether a short and final agony, though it be of death, is not better for the country than a protracted war of the Government upon its money, its currency, its property, and its credit. Your edict is that they shall all perish; and your boon is that they shall perish slowly, or still worse, that they may linger on for ever, under the ban of the Government; which, separating itself from the general destiny, will look coldly and safely upon the crippled and decrepit condition of the country. What, sir, is the arrogant and cruel language which this Government holds to the country at this moment? It has made an experiment upon the banks and the people, and has ruined both; and now we propose to leave the banks and the people to take care of themselves, and we will take care of ourselves! Boldly and calmly this revolting proposition is announced by the President, repeated here, and this moment avowed by the gentleman from Pennsylvania, (Mr. Buchanan,) whose whole declaration has been a tirade against those very institutions whom he and his friends seduced and debauched. The remedy he proposes is, to cast them back, polluted and dishonored, to the States and the people, for whom he considers them good enough, not being

good enough any longer for the chaste embraces of this most pure administration. Oh, no; not pure enough so as to deny, virtuous, humble and righteous administration, which, eschewing all adulterous connection with power or patronage, or spoils or banks, will be honestly married to hard money; and from its humble residence in a Sub-Treasury, prove its virtue to an admiring and incredulous people, by crying *hie, hie*, at the State banks.

Why, Mr. President, the honorable Senator (Mr. Buchanan) who has just taken his seat, was one of the loudest eulogists of the State banks; that day of the removal of the deposits up to this extra session. I recall the rest of them, lauded the experiment to the skies, deified the great experimenter, and, next in prophetic fire, predicted at the beginning the most glorious results—the best currency the world ever saw—the most graceful prosperity—a grateful people and triumphant Government; and then it was proclaimed with exultation this prophecy had become history; that all the flaming predictions of patriotic enthusiasm had been more than realized, and that democracy, Jacksonism, and the pet banks had established a political millennium. Such were the declarations of the Senator, and those who act with him, up to the fourth of March last. And now, sir, in the short space of six months, the very gentlemen turn short round, and with a gravity which would be ludicrous, if experience had not taught us to feel that their gravity is terrible, tell us that this Government has nothing to do with currency; that ours is the worst in the world; that the experiment has utterly failed; that the State banks are utterly unworthy to be trusted, and unfit to be used as financial agents; that the people must undergo another experiment, and for a moment imagine that, when it has failed like the last, the experimenters will turn coldly upon them, again smile at their folly, and advise a new ledgerman to arrive us for the time, and to enable them to keep their places. For some years past, I am aware that anti-States rights men, because we would not attribute all honor and glory to the State banks; and now, again, we are denounced as United States Bank advocates and anti-States rights men, because we will not attribute all sin and iniquity to the State banks; and when the wretched system now proposed shall have served its hour of delusion, and brought us to an avowed Government bank, then we shall be denounced in the same terms, from the same quarter, for not acquiescing in this ultimate, inevitable, and designed destiny of all these measures.

inadequate means and *designed* destiny for all these measures. From this general imputation against the Administration party of ineffectual tergiversation; justice and candor demand that I should make an exception of the Senator from Missouri, who, with unwavering pertinacity, has adhered to his hard money project, defending with paternal solicitude, against all assailants, his own political offspring, whatever may have been the momentary pet of the Administration, until he has achieved his present triumph. Well may the honorable gentleman congratulate himself upon his measure having survived for years the persecution of both sides of the House, until now, adopted as the bantling of the Government, it no longer requires his guidance or nurture.

The honorable Senator from Pennsylvania (Mr. Buchanan) not only treats the late experiment as an absurd measure, predestined to inevitable failure, but, with the provoking aid of recent conversion, denounces his late pets with bitter invective; delights to swell the key-note lately given from the *Hermitage*, by exaggerating all the evils produced by the banks, and attributing to them others, which I believe to be entirely imaginary. That great evils have resulted from the over-action of the banking system is entirely obvious; but that all the difficulties and distress which the country now labors under have sprung from this cause, is a gross and dangerous fallacy. The honorable Senator knows better than I can tell him, that no country is exempt from vicissitudes of prosperity and adversity, and that all commerce ebbs and flows. Even in those hard money countries which the gentleman is so well acquainted with, in Russia, Austria, and Prussia, and, still more, even in that beau ideal of a hard money country, Algiers, where there was lately found in the Government strong-box, unsummed silver, that was told by the bushel; even in those enviable and envied States there have been seasons of pressure, of commercial distress, of deranged currency. Indeed, Mr. President, it is of the nature of all human institutions to fluctuate; to advance, and to recede; to expand, or to contract, to be subject to over-action or to apathy; and in our country especially, where every department of human industry is urged by the unbridled will of the citizen, this alternate propulsion and recoil must be proportionally violent. While I concede, therefore, that there has been an over-action of the banks, still I am a friend to those institutions; and I assert with confidence that, in the midst of the evils which they have in part contributed to, their influence has been salutary and protective. With or without the banks, this commercial storm would have burst upon us; it might not have done so much harm without as with them—as the loss of a crop on barren land is not so great as that on fertile; but when the storm did come, these institutions have stood between us and its ravages. Under the protection of the incorporated credit of the community, the individuals of the community remain safe until time is allowed them to recover their means and meet their responsibilities. In obedience to the wishes of the people, and for their benefit, the banks suspended specie payments; and this for their credit, without loss of credit, to the public mind, without doubt of its solvency. The banks have a double fund for the discharge of their responsibilities—the specie in their vaults, which is sufficient to meet ordinary demands in the usual routine of business; and, secondly, the infinitely larger fund made up of all the property of all the drawers and endorsers of notes to whom they have loaned. A demand upon the banks beyond the capital in their vaults is, therefore, a demand upon the individuals of the community, and if it be so sudden and violent that they can not meet it, inevitable and general ruin is the consequence. Whatever cause we may have to deplore our recent sufferings, they bear no proportion, they give no indication of what they would have been, if the banks had gone on to pay specie, wringing it for that purpose, by forced sales of property, from the people, making a hundred bankruptcies where there has been one, and sacrificing the whole property of the country without paying its debts. The banks, the States, the General Government, and the people would have been involved in one common ruin. From this we have been protected by the stoppage of the banks. And, Mr. President, this suspension has operated on this occasion as it did in England and this country formerly—to the general relief, to the restoration of confidence, and to the instantaneous enhancement of the credit of the banks themselves. Sir, I thank them for their prompt and wise action, and would regard with indignation, if, were it not for the contempt I feel for it, the Execu-

tive recommendation of a bankrupt law; to be applied exclusively to them. \* The banks have not merited punishment, but thanks, for the suspension of specie payments. Their sin was to be wheedled and seduced into a contaminating contact with a corrupt Administration, which urged them to over-action by entreaty, exhortation, bribery, and bullying, and now rewards them (not unaturally or unjustly, perhaps) by proposing punishment for their unwise compliance.

Mr. President, the evil word of the day is divorce of Bank and State. The honorable Senator from Pennsylvania has it often on his lips; but as the gentleman argues that the union always was in violation of the Constitution, it is rather a casting off than a divorce. But what is the divorce the Administration proposes? A divorce of this Government from the State banks, from the State currency, from the whole monetary system of the States and of the people. You divorce this Government from its cumbrous and restraining connection with the country, that you may be free to wed it to the money. You divorce it from the banking system that you may, with a licentious polygamy, marry it to ten thousand Sub-Treasuries, making the whole land a Government harem.

But it is said that the experiment of the State banks has failed. Doubtless an experiment on the banks, made by faithless and incompetent experimenters, has failed. It was instituted in an open violation of law and the Constitution. It was conducted with the rashness and precipitancy of personal purposes. There was scarcely a passing regard bestowed upon the financial aspect of the arrangement, the whole attention of the President being directed to its political and party aspect. There was an omnipotent President wielding an acquiescing Congress, ever ready to record either his passions or his principles; and his passions were excited at the moment into a fury, which I hope, for the honor of the country, history will forget. He pronounced sentence of death against the United States Bank; by his own will he confiscated its property, he seized upon the public treasures; and when Congress assembled here, we beheld, with amazement and terror, the President standing upon torn charters and constitutions, and holding in his hands the money of the people, which he had snatched from the custody of the laws. The popular branch of Congress acquiesced; the people, I regret to say, acquiesced. This omnipotent President seized upon the State banks, promised to us a better currency than the world had ever seen, and ordered these institutions to relieve the wants of the people by discounting liberally upon the Government money, which the President had added to the banking capital. The national debt was paid off; the income of the Government was beyond all former precedent; there was an enormous surplus revenue, and an irritated and furious Executive lashed up the banks to effect larger and larger discounts.

The supervisory and restraining power of the United States Bank had just been removed. All the States created new banks to supply the place of the abstracted capital, and in their eagerness and recklessness quadrupled it. In the midst of this flush and plethora, the Government found itself in possession of forty millions of surplus revenue, and this was also converted into active bank capital. Much has been (and most properly) attributed to the agency of this surplus revenue in producing the present state of things. It is a political phenomenon without a prototype in all history, and could not but exercise a disturbing influence upon the politics, finances, and currency of the country. What were the remote causes of its accumulation it were perhaps useless to inquire. The immediate cause was the unreduced duties upon an increased commerce. By the compromise act of 1833, it was provided that the duties should be reduced by a fixed ratio, neither to be accelerated nor retarded; and this act was esteemed, and most justly esteemed, to be so sacred in its character and objects, of such binding as well as healing efficacy, that Congress was willing to brave the terrors of a surplus revenue, rather than disturb its provisions, or loosen the obligations of good faith and honor as well as interest, which were pledged to its maintenance. But for this, the obvious method of evading the crisis was to diminish the taxes, and thus prevent the surplus, which my colleague then foretold would be the fruitful cause of financial disorders and difficulties. I do not know, Mr. President, how the United States Bank, if it had been in existence, would have got on with this surplus of forty millions; but it is ludicrous to think on, with your proposed system, you would have been counting revenue by the chaldron—you would have had two millions and a half avoirdupois of silver—you might have laughed to scorn the Dey of Algiers, with his eighty bushels of coin.

It is a capital error of the late Administration to destroy the United States Bank without having provided in its stead some restraining power upon the banking system of the States. A very great, perhaps the main advantage of that bank was, that while it performed its own appropriate functions with unsurpassed wisdom and integrity, it also acted as a regulator of the State banks, keeping them, by a salutary check, within the legitimate bounds of banking. Each moved in its appropriate sphere, regularly and harmoniously, producing the happiest possible results. We had the best currency and the best condition of exchanges ever known in the world; and so firmly were they fixed, both by the organization of the banks and in the public confidence, that they could not be disturbed by the Executive or his party, until, by a nefarious act of open war, the President showed that the laws could not protect his victim from his fury. Then at once the whole organization was broken in upon and deranged; opposing forces and counteracting attractions, whose well adjusted combination had resulted in such harmonious action, and relations were disturbed and dislocated—confusion, violence, and eccentricity were of course the immediate result. But it was not only removing the restraint upon over-banking by the banks then in existence, but, what has been more productive of evil, was the unrestrained license given to the States to create a redundant banking capital. As soon as the United States Bank had received its death-blow, and while yet it lived, the States had created many times the bank capital which it had used, and both the old and the new banks rushed into the market with unbridled impetuosity. For this obvious and inevitable state of things nothing had been provided. The tendency of the States to an over-creation of bank capital, and of the banks to over-bank, unless checked and restricted, is the great danger of our condition. My colleague, whose monetary voice was unfortunately unheeded, predicted these results in 1834, and proposed, as a means of avoiding them, a recharter of the United States Bank, with such provisions as it was supposed would ascertain, by slow and cautious experiment, how far the country could or ought to be “unbanked”—where the restriction upon our over-tendency to

banking ought finally to be fixed. The Administration, however, not perceiving or disregarding the danger, tore down with brute force the barrier which had been erected against the overflow of bank paper, and the country was inundated. This is the great difficulty which the Senator from Virginia has to encounter. The Federal States and the State institutions will have received a salutary lesson in the present state of things. No doubt that the stern admonitions of disastrous experience will produce a decided effect: still, that very experience warns us that, without some restraining power upon the bank system, there is imminent danger; without some such, I have great distrust of the permanent success of the project of the Virginia Senator, (Mr. Rives.) I see the peril to which it is to be exposed. His project excites alarm—that of the Administration despair. His project may succeed—that of the Administration cannot.

A constitutional restriction upon the States in regard to the extent of bank capital to be created by them, ought to be obtained by a constitutional amendment. The pressure of the present difficulties would go far to induce the States to consent to the limitation of bank capital upon some fixed ratio amongst them; and if their wisdom and patriotism required to be stimulated to this prudent act of self-denial, that stimulus might be found in the fact, that the Administration project makes the alternative to the State banks restriction or destruction.

It is obvious that the evils of redundant banking, at present, are much more the result of indiscreet legislation in the creation of new capital than of indiscreet banking in the use of old. A document furnished from the Treasury Department shows that the bank capital now is more disproportioned to what it was four years since than the bank issues or discounts. There is, in regard to the latter, an ever-present, though sometimes sluggish principle of restriction to be found in the pecuniary interest of the institution itself. Over-issues endanger a bank, and therefore some degree of caution and hesitancy may be expected in venturing upon them. But the discretion of the Legislature is not aroused by any such necessity, and its prudence is apt to be overcome by the urgent solicitations of private interest, or the still more dangerous spirit of competition with neighboring States. Indeed, the extension of bank capital in one State imposes a sort of necessity for an equal extension amongst its neighbors. Its worse currency supercedes their own, and the necessity of their channels of circulation is thus increased. It is the extension of the bank capital, and not the issue of the currency, which is the cause of the evil. It has all the advantages of supplying them with capital, and at the same time it has all the evils of the extension of its length, when the revulsion takes place, all are involved in a common calamity—the States which created, and the States which used, the surplus capital sharing all an equal evil, having enjoyed an equal good. Thus are the States alternately put under a sort of necessity to push their banking to a hieutous extent, and this will unquestionably be done, unless prevented by some overruling power, such as a constitutional regulation.

The principle is broadly laid down in the Message, and practically embodied in the bills now under discussion, that the Government is not authorized to regulate the currency, but that the States have an exclusive right to do so, as far as least as the circulation is to consist of bank paper. This power, repudiated now for the first time by this Government, is assumed and exercised by all the States. We are in the midst of a banking system, good in itself when not abused, and of paper money, eminently fitted for all the business of money when not issued in excessive quantities. To avoid the possibility of abuse, all that is necessary is, that the States should mutually fetter each other by a constitutional amendment, forbidding the creation by any one State of banking capital beyond a certain limit; for example, beyond \$20,000 for each member of the House of Representatives, and forbidding, also, (if it be thought desirable), the issue of any note below a fixed amount. The Constitution already takes from the States the power to issue bills of credit, and the restriction suggested is of the same nature and policy. If the party in power, and which for the sine of the land have ruled it with such absolute and destructive sway; if that party which professes such violent antipathies to a degraded bank paper circulation, had suggested some such measure when they removed the control of the United States Bank, much of our present distress would have been avoided; or if that party, which as yet alone holds power, (tottering and decaying, I trust,) would now move such a measure, the States acting upon the recommendation of Congress might, and I believe would, before the termination of your next session, put the banking system in a condition that would silence the stoutest and most clamorous advocates for divorce. This Government has caused the mischief—let it propose the remedy. Pass the order along the lines of your party, sir; they obeyed you for the expunging, and will hardly be less prompt to adopt a measure of obvious propriety—a measure which will take away from you, by giving to the people a sound currency, all pretence of separating yourself from it; which will leave you without excuse or palliation of your selfish withdrawal from the destiny of the citizens—a destiny which your misrule has made wretched, and threatens to make intolerable by perpetuating it. Let it not be supposed that it is possible in the nature of things for two currencies to exist simultaneously in the same community, of different values. The worse, of necessity, expels the better. Thus the Government, by giving to gold and silver the exclusive power of paying public dues, makes it a better currency than any paper can be, and, by necessary consequence, makes them articles of merchandise and traffic, deprives them of the character of a circulating medium, and thus abstracts them entirely from general use. If the note of a specie paying bank cannot perform all the offices of the specie itself, it is degraded by and to the extent of the difference. When, therefore, the Government, the great money dealer of the country, rejects notes and demands specie, it at once, by force of the act itself, debases the currency, and makes the money of the people worse than the money of the Government. It is not possible that you can separate yourself from the common currency of the country, and maintain peaceful or neutral relations towards it. The separation itself inflicts a wound, and every run which the debtors of the Government make upon the banks to enable them to pay Government debts is an act of hostility.

Then, sir, the distrust and suspicion in regard to the banks, implied by the rejection of their paper, cannot fail to derange and injure that currency which is composed of it. Why, sir, will you not receive the notes of specie paying banks as you have always done, under the joint resolution of 1816? No answer has been given to this question but the vague and senseless cant word of divorce. Do you distrust the banks? Then propose measures of making them safe, so that you may no longer distrust them. Is your object to be paid in better money than the debts of the country are discharged in? Do you in-

tend to abolish the banking system, and substitute specie, or, as that is impossible, an irredeemable Government paper, a continental currency, by which this Government shall have the unlimited control of the whole property of the country? Are none of these your purposes? Why, then, demand specie, and reject the notes of specie paying banks? If you do not intend by your divorce to have a better medium of payment than that which the people use, what is the object of your measure? And if you establish for yourself this better medium, you make that of the people still worse; you not only abandon them, but aggravate their distresses. I have always held the true policy of this Government to be, that in the exercise of its granted powers, it should so shape its policy that the incidental effects of its measures should operate to the good of the community—that the collateral action of its money power, for example, should be so regulated as to sustain the currency, relieve the embarrassments of commerce, and facilitate the business of exchange. If there were in our community any bloated millionaire, any Rothschild or Baring, who from the extent of his operations could influence and control the moneyed affairs of the country, and who by that influence had induced distress, and difficulty, and embarrassment, and, in the midst of it, should demand the "Constitutional Currency," with what burning indignation would a suffering and insulted community denounce the wretch, and drive him from our borders!

I hold it to be a clear proposition, Mr. President, that this Government is bound not to make for itself a better currency than that of the people; and it results from this, that if the currency of the people is not good enough for the Government, it should suggest measures for making it so. The United States Bank effected this object; that you have destroyed, and by general consent it is not to be revived. The same object can be effected by a constitutional limitation upon the banking power. By this means you will have a sound currency for the people and for the Government. By this means you may continue the safe and long-tried policy of the resolution of 1816. By this means you at once restrain and strengthen the State institutions; you give them vigor by pruning, and you will enable them for ever to supersede all pretext for a United States Bank.

There are, Mr. President, some gentlemen who are opposed to any measure which has for its object the restoration of a sound paper circulating medium; whose eyes and ears can delight in nothing but the glitter and jingle of metal, and whose happy hallucinations continually picture to their fancy a sort of Saturnian reign, a golden age, a pastoral state of political impunity and beatitude, exempt from vicissitudes, amidst perpetual sunshine and perpetual peace. Of these romantic politicians there are but a few, and they would do well to study the most authentic chronicle of that ancient king, to whose earnest prayer the mischievous deities granted the power of converting all he touched to gold, and of whom the very winds proclaimed to mankind

"Auriculas asini Midas rex habet."

Certainly, sir, the idea of establishing a pure specie currency for this numerous, commercial, and rapidly growing people, is very chimerical. The purchase of the specie requisite for this purpose would cost an enormous sum. One very efficient cause of our present difficulties is the large importation of specie, forced by the blind and ignorant policy of the late Administration, with apparently no other object but that of boasting that they had eighty millions in the country, while the country is not only bankrupt with it, but in a great degree in consequence of it. The vast consumption of the precious metals, in various manufactures, and the diminished production of the mines, have enhanced their price to a degree that would make them a very expensive medium of circulation, while they are by no means so convenient as paper. Indeed, it may well be questioned whether the metals could answer the purpose of currency for our enterprising community, spread over so vast a surface, and engaged in such complicated commercial adventures. All this, however, I understand to be given up. The flood of specie which was to run up and down through the country in such strange courses is indefinitely postponed, or, rather, perhaps, has subsided into that little Pactolus which, dribbling from the exhausted Treasury, flows in tiny meanders round these walls, for members to dip their fingers in, while there is not a drop for the people.

But, Mr. President, although it be no longer contemplated to fill the country with specie, it is not the less insisted upon by the measures under discussion to demand it in the payment of revenue. The most obvious consequence is, that the action of the Government will increase the price and keep up the demand for the precious metals; by which means the resumption of specie payments by the banks will be rendered impossible. Let me, sir, point out the separate links of the chain by which you are to bind down the prosperity of the country.

1st. You confer upon specie a use which does not appertain to the note of a specie paying bank, convertible into specie: thus specie is made better than the best note, and a run is created upon the banks to the extent of the difference.

2d. The Government dues are almost a million and a half a month; the demand for this much specie must necessarily threaten the banks with a disastrous run upon them the moment their doors are opened.

3. The prospect of such a state of things will make it necessary for the banks to press their debtors, for the purpose of fortifying themselves; and thus the two great creditors of the country, the Government and the banks, will be pressing the people at the same time; the Government compelling the banks to this course for the purpose of trying an experiment. It is obvious that, under such circumstances, the banks will postpone the resumption of specie payments, and at length, perhaps, be driven to it through their own and the ruin of the community. These are necessary results from the attitude of place, the Government and the banks. In such a contest where the Government, from the beginning, has been in the wrong, and where its success can be achieved only by a wide-spread desolation of the property and prostration of the energies of the Government, I cannot wish success to it. I doubt whether this Government is worth to my constituents what it will cost them to make this experiment.

It is to be continually borne in mind, Mr. President, that the proposed divorce not only contemplates a rejection of the banks as Government agents for the receipt, custody, or disbursement of public moneys, but, what is of much more consequence, the re-

jection of all State bank paper in the receipt of Government dues. This last is the aspect in which I have been considering the proposition; and I have shown, uselessly, perhaps, how futile or pernicious would be the attempt to substitute specie. I say uselessly, perhaps, because, though specie appears in the bill, and although hard money—constitutional currency—gold and silver, are clamored through the country, I am not inclined to believe that there are a half dozen men in Congress who seriously entertain thoughts of actually adopting this absurd policy. It is a pretence; a matter of cant and electioneer upon; in short, sir, a humbug. No Senator has been able to get through a speech without a suggestion of paper money of some kind or other. To this complexion must we come at last. Even the Senator from Missouri, the great propositus of a hard money family, admits the necessity of discharging Government dues by bills of exchange, drawn from one Sub-Treasury on another; which, while they are in transitu between the place drawn from and the place drawn upon, must serve, to a certain extent, as circulating medium. The actual condition of our affairs will show the operation of this system. At this moment the largest disbursements of the Government are in the South-west and West—for the Florida war and for the protection of the Western frontier; the next largest disbursement is for fortifications and harbors in the North. Now, and at all times, New York is the great point for the collection of the revenue, there being about as much collected there as in the whole of the United States besides. These heavy disbursements, therefore, are to be made by bills of exchange upon New York. The workmen in the North and the soldiers South will be paid off by an exchequer bill upon New York, and this bill circulates until it is presented for payment. Until that time it is paper money, and in the mean time the Government has locked up the specie which it represents. The Government receives its debts in gold and silver, and pays its debts in bills of credit. The gold and silver are buried, and the bill is in circulation; and this is called the hard-money currency. I shall have occasion by and by to show that this is in truth and in fact a banking system; but my present purpose is merely to show that it is a paper currency convertible into specie in the city of New York. The supporters of this scheme rely upon what they consider a profound feeling in the community of hostility to bank paper. I think they are mistaken in regard to this feeling. The practice of this Government and of the States indicates no such prejudice. There has been a United States Bank during eight-tenths of the existence of the Government, and there have been State banks during the whole period; and although the system has occasionally, during times of pressure, been assailed by a few ardent minds, yet the great onward current of public opinion has set directly in favor of it. There is, however, a deep-seated and wise public opinion, inherited from our ancestors, against Government paper. We have hardly a more vivid recollection of the glories of the Revolution, than of the disasters of the continental money. The heaviest penalties of the laws, the utmost tension of public spirit, the devotion which subsisted to the encampment at Valley Forge, and the campaign of the Jerseys, all put together, could not keep up the Government paper. No Government has been found strong enough for this purpose. The Revolutionary Government of France, the Reign of Terror itself was not strong enough to create that vital spirit, that subtle and ethereal essence of all currency, confidence; and, for the want of it, the assignats sunk to nothing, although sustained all around by penal statutes. It is because we have not forgotten continental money, because we have not forgotten the assignats, that there is a settled hostility in the public mind against Government paper. But, if it were a new matter, in regard to which we were deprived of that intense light of experience which, fortunately, we possess, a single view of the proposition would at once condemn it for ever. It is proposed to make this Government the creator, centre, and controller, of the circulating medium of the country; to give to it the power of regulating the price of every man's property, and of deciding, according to its caprice or the exigency of party affairs, whether those who owe money shall pay it according to the contract, or doubled, or divided; all this. All this, the dexterity of debate might retort upon us, have the guarantee of their own interest that they will be careful how that power is exercised, their successful operation depending upon the prosperity of the people; whereas the interests of party, the desire for spoils and place, have been found to control the politics of the country. So deeply felt is the danger of combining the political and the moneyed power in the same hands, that all parties have in turn objected to the measures of their opponents, by stigmatizing them as having this tendency. The danger, it is said, of the United States Bank, is that the Government may get the control of the money power. The danger of the pet bank system is, that the Government may get control of the money power; and to avoid these dangers, it is proposed to give to the Government at once the whole power to create and control the whole money of the country; and this without the salutary check which all ages have found to reside exclusively in the convertibility of paper into specie. This is the great check in the banking system; a check which, to be sure, like all human restraints, may occasionally prove inoperative, when fraud is stimulated by temptation, or crime urged by necessity. But have we found angels in the laps of Government agents?

We all know, sir, by what indirect, crooked means the present Administration came into power, and what prodigious agency the usurped and illegitimate control over the currency had in effecting it. Confer upon it the power of issuing paper money, let Congress assume the power of making it; and do you believe, sir, that the country will ever be strong enough to stand up against the Executive? Will not its present waning power, will not its reeling and rickety majorities, be revived and increased, and its ignominious reign, now just about to be closed by the sentence of an indignant people, be perpetuated until our institutions perish with the vampires that feed upon them? Let those who look with favor upon the project of endowing this Government with new powers over the currency think a moment of the history of the last four years. While the currency was regulated by the natural and undisturbed action of the banking system, we had nothing left to desire; when the Government undertook the management of it, we soon had little left to lose; and yet the control which the Government had had for the last four years is nothing to the grant which is suggested of the money-creating power. I have before asked, sir, whether all history can furnish an example of a sound currency made by Government paper. I now ask, with as much confidence, whether in all history a Government can

be found assuming the power to make its own paper answer the ends of money, that it did not abuse the power thus assumed? History holds but one language, and that proclaims the perils into the midst of which we are hurrying. Let us not turn a deaf ear to the warnings of past times. I tremble, Mr. President, when I hear my colleague say, "There is another and a final reason which I shall assign against the reunion with the banks. We have reached a new era with regard to these institutions. He who would judge of the future by the past, in reference to them, will be wholly mistaken." I should be deeply grieved to think so. I should lament to believe that we are so adrift upon an unknown ocean, with an unknown heaven above us, that the light of the polar star can no longer reach us, and that our only hope for a safe navigation through the perils which beset us is, either in trusting blindly to the pilots who have brought us where we are, or in following the meteor coruscations of genius, which too often dazzle rather than guide. For myself, sir, I will continue to look out for, and endeavor to steer my course by, the steady light of experience—that light which beams from its fixed, unalterable position in the firmament of the past, through the misty prejudices and stormy passions of the present, showing us the way of safety and deliverance. If I could shut my eyes against this light; if I could forego the solemn warnings of experience yet ringing in my ears, in favor of the revelations of genius, I should go nowhere for them with so much confidence as to my colleague. But, sir, on the subject of an inconvertible Government paper the past is too pregnant with monitions to be disregarded. History has erected warning beacons on all sides of us. Our colonial, our revolutionary history, the old Congress, all the States, concur in exhorting us to avoid this fatal evil. The Constitution has embodied and perpetuated the terrors of our ancestors. "No State shall issue bills of credit." In this clause, sir, is declared the bitter experience of the Revolution. North Carolina, my colleague supposes, has furnished an exception to the history of her sister States and the world in the success of her Proc. money, as it was called. The history of that affair makes no exception to the general destiny of Government money. It fell below par, it embarrassed and confused the financial action of the State for very many years, and was finally burnt, with three or four times its amount in counterfeits, by the Treasurer of the State. My colleague's researches have not enabled him to cite any other instances than this of the Proclamation money of North Carolina; and whatever weight this may be entitled to I am persuaded is against his proposition; while the old Congress, and I believe, every one of the revolutionary States, afford woful examples of the disastrous utility of Government paper. It is impossible that it should be otherwise; for the primal law, the fundamental principle, the living soul of currency, is that it be property, or be readily convertible into it. Convertibility makes currency. Paper is money because it represents property; and losing the representative quality, it is but paper, and there is no magic in Government to make it otherwise. This necessary incapacity of Government to convert itself into a manufactory of money is one of those limitations upon despotism that the friends of freedom cannot too much rejoice in; and surely, Mr. President, if the question were whether we should, if we could, endow this federative agency with such a monstrous power, would we venture upon it? As guardians of the rights of the States, as jealous assertors of the limited character of this Government, as advocates and lovers of free institutions, would we give this tremendous power to this Government? No, sir. If we must have a Government paper; if this absorbing and destructive aggrandizement of Government power must be conferred, give it to the States, sir, and do not convert this Government into a money manufactory. Sir, I will not trust this Government with such a power, no matter who administers it; even if our own wise and pure Washington, (all will feel how extravagant the supposition is,) even if he were at the head of affairs. Could I then, sir, entrust it to a party whose wretched mismanagement and incompetence have brought us to this mournful condition? Shall I be called upon to confide greater powers over the currency to those who, with such powers as they have, have produced so much disorder; or, rather, sir, to state the proposition truly, shall I entrust them with much power because they have ruined us with a little? Those who govern us have given testimony of their financial abilities; if we are satisfied with the past, why, sir, pass these bills!

For one, Mr. President, I do not at all share the confidence in this Government which my colleague avows. I look upon it with an habitual distrust and jealousy, sharpened instead of blunted by recent events. My colleague says "I rejoice to think that the Executive Department of the Government is now so reduced in power and means, that it can no longer rely on its influence and patronage to secure a majority. Henceforward it can have no hope of supporting itself but on wisdom, moderation, patriotism, and devoted attachment to the Constitution, which, I trust, will make it, in its own defence, an ally in effecting the reform which I deem indispensable to the salvation of the country and its institutions."

I do not participate in these sanguine expectations; I see nothing in the proposed measures to quiet my long established terrors of Executive power. I see before me the same men whom I have been all along warning upon—those men who have subverted the Constitution, and usurped all powers—those men who issued the proclamation against South Carolina, who passed the bloody bill, who seized the deposits, who expunged the records of the Senate, who have perpetuated their control, by using the patronage of the Government and the plundered money of the country, in the hands of one President to make his successor. I see before me these men avowing, vindictive, and exulting in all that they have heretofore done, and proclaiming that they will persist in the same policy. All this I see, and I cannot give them my confidence. Let them resign, let them acknowledge their incompetence, and testify in sincere repentance, and they may be forgiven for the past. But still, Mr. President, I will not trust them for the future; I will still be jealous and circumspect, in regard to them and to this whole Government. It may be that the Administration is weakened and stunned for the moment, and is terrified that its misdeeds are about to be avenged by the indignation of the people. It may be that, like sailors in a storm, they will be pious for a moment; but, even if this were the case, I should have no great faith in their repentance. I do not, however, see any signs of repentance. I see their error distinctly enough, but there is nothing in their demeanor that would induce me to select them "as an ally in effecting reform."

With these feelings, therefore, and prejudices, if you choose, Mr. President, I do not come to the consideration of the Executive measures with a predisposition in their favor; but, on the

\*Members of Congress are paid in gold.

contrary, I am animated with a decided disinclination against any project which proposes to endow this Government with a new power, or to entrust my rights and liberties to the keeping of the newly-enforced "wisdom," "moderation," "patriotism," of this Administration.

My colleague states, as a main objection to any connection of the Government with the banks, the unsteadiness produced in the currency by the action of Government. He says:

"It follows as a necessary consequence that, to the extent of this influence, the issues of the banks expand and contract with the expansion and contraction of the fiscal action of the Government; with the increase of its duties, taxes, income and expenditure; with the deposits in its vaults, acting as additional capital, and the amount of bank notes withdrawn, in consequence, from circulation; all of which must directly affect the amount of their business and issues; and bank currency must, of course, partake of all those vibrations to which the fiscal action of the Government is necessarily exposed, and, when great and sudden, must expose the system to catastrophes such as we now witness. In fact, a more suitable instance cannot be selected to illustrate the truth of what I assert than the present, as I shall proceed to show."

Now, if this be true when the Government is operating upon banks which trade on a specie basis, and are cautious of their own interests, how much more true is it when the Government, divested of all such connection, and having full control of the currency, will expand or contract it, according to its necessities, whims, or party purposes? I understand the proposition to be, that the banks are to be discontinued because their paper partakes of the vibrations to which the fiscal action of the Government is exposed. But it is obvious that Government paper, that is, a currency created by the fiscal action of the Government, will be still more immediately and intimately affected by the vibrations of that fiscal action than bank paper. The banks are some check upon these fluctuations; which, without that check, will necessarily be greater. I can easily conceive that if this Government undertakes to decide on the quantity of money, or to regulate its issues by law, nothing can be more uncertain than its quantity, and therefore value, from year to year. If it be regulated on a ratio with the revenue of the Government, we may estimate the fluctuations by the receipts of 1836, compared to those of 1837. Or if it be submitted entirely to the discretion of this Government, let the various opinions at the present moment, in regard both to the quantity of money in circulation, and to the quantity which is necessary for circulation, and to a lesson of caution. The Administration party at this moment supposes that the country labors under a redundant circulation; and if it controlled the currency, would immediately curtail it; while, perhaps, the better opinion is, that the money in circulation is hardly equal to the wants of the country.

I cannot but think, Mr. President, that my colleague habitually overrates the influence of the fiscal action of the Government upon the currency, in regard to the expansion or contraction of it, and especially if he be correct in supposing that the income of this Government is now reduced to an economical standard, and that the Executive will sustain itself only by wise, patriotic, and moderate measures. He supposes that the Government has power to make an inconvertible paper money circulate, which I conceive to be beyond the power of any Government, and this idea seems in part to result from what I consider a misconception he has fallen into as to the credit which sustains bank notes. He supposes that this credit is conferred to a great extent by the Government making them receivable in public dues, which he illustrates by stating that if the Government would say that it would take in payment of its dues the notes of any beggar in the streets, such notes would be current. I do not think they would be current, unless the dues of the Government were unlimited, or the notes of the beggar limited. If, as I have endeavored to show, a Government cannot make its own notes circulate at par, it cannot make a beggar's. The case of the beggar would be analogous to that of the banks, if the Government said that it would take his notes as long as he continued to pay specie, which is the language of the resolution of 1816 to the banks. The endorsement of the Government on the bank notes was not "receivable in public dues," but "receivable in public dues as long as specie can be got for it." The efficacy of such an endorsement to confer credit is not very perceptible. The convertibility of the note makes it good without the endorsement, nor does the withdrawal of the endorsement injure its credit. The pet banks were not in better credit than the rest of the banks, nor did the withdrawal of the Government from all bank paper whatsoever strike down its credit. When the banks suspended, the Government withdrew its countenance, and yet the notes maintained and still maintain their credit, and this, too, when the Government has not only withdrawn its credit, but is waging a war of extermination against the banks. The community believes in the ultimate convertibility of the bank notes, and therefore trusts to them; and believing, moreover, that the prospect of that convertibility was improved by the act which made the Government withdraw its credit from them, the general credit was enhanced by it. Sir, let those who conceive that there is magic in the Government touch to confer or to take away credit, look to the recent history of the United States Bank, whose bills have been "every where at home," while the Government has been waging war against them, all over the world; amidst all the ruin which that war has occasioned, amidst the prostration of so much wealth, and the loss of so much credit, with a distressed people and a bankrupt Government, the credit of that bank is yet unimpaired, and its successor, under the wise and honest management of Mr. Bidle, is by general consent ready now to redeem you from your difficulties, and would be appealed to, but for that pride of opinion which prefers to suffer rather than acknowledge an error, especially when the suffering is that of the public, and the error that of the individual.

Mr. President, I deprecate this mad and ferocious warfare against any of the institutions of the country, against the United States Bank formerly, against the State banks now. It does not appear to me that this root and branch policy, this tearing up things established, to supply their places with new theories, however neatly constructed, or carefully elaborated, is the part of prudence and wisdom. My nature and habits of thought, confirmed by the terrible experience of the last four years, make me a Conservative. I hesitate at every proposition to destroy, that you may build again. If any of our institutions have suffered damage, let us repair them; if any portion of the vast edifice of our prosperity has been injured, let us with a cautious and reverend hand restore what has been lost, strengthen what remains, adjust the proportions, if you choose, proceeding in all with a sedate and steady purpose of not weaken-

ing the deep foundations. Let us not, sir, with a fantastic caprice tear down the solid, and let me say glorious fabric of our prosperity, that we may try, by as futile a device as the lamp of Aladdin, to build up another in one night, of fairy marble, and gold, and gems.

It is the part of statesmen to deal with the circumstances around them. In the closet of a philosopher, in the desk of a professor, speculation may discuss what is best, and genius indulge its aspirations for the "chief good;" but the practical politician is fenced around by inexorable necessities. He has to deal with things, not with ideas. He must control, not create. He must govern himself by the circumstances amidst which he finds himself, use the instruments which are presented to him, and be content with such results as he can attain, without attempting such as he can imagine. The genius and temper of Napoleon might aspire to a different destiny; but ours, thank God, is humbler and safer. We administer a limited Government for free and self-willed States, whose bidding and whose business we are to do. They have placed us their servants in the midst of a great banking system; a system of credit, surrounding, pervading, and penetrating the whole body politic. Mr. President, we must conform to our condition; we must work upon the platform prepared for us; we must use the materials furnished to our hands. It is in vain to try to extricate ourselves from the condition of our existence. We have not the strength (God forbid that we should have it) to disconnect ourselves from the circumstances in which the States place us. And if we attempt to tear ourselves loose from them, there may be much suffering, a struggle, an agony; but you will have at length to come back to your allegiance, and content yourself with reform instead of revolution. Let us, then, wisely and at once, begin to correct, control, regulate, modify, adjust, do any thing but destroy.

In 1834, Mr. President, I entertained the same sentiments. I found all the great interests of the country implicated so thoroughly with the bank system, that to tear them apart at once would destroy every thing, and therefore I acquiesced in the proposal of my distinguished colleague for the purpose of making a cautious experiment, to ascertain the extent to which the banking system could be contracted or modified, so as to reject as much evil and secure as much good as it was capable of. It was then proposed to use the United States Bank, rechartering it for this purpose; that instrument is no longer within our reach; but here are the State banks still, and why not use them for the purpose of an experimental reform? They are in the best condition imaginable for that purpose. If the fiscal connection of this Government with the banks gives it any portion of the control supposed, it may be used to induce the banks to limit their issues and extend the specie basis; in short, to induce them to do whatever was proposed to be effected by the recharter of the United States Bank in 1834. My colleague, however, discriminates our present condition from what it was in 1834, by stating that now we are disconnected from banking, and were not then. I cannot perceive the accuracy of this distinction, either in law or fact. It is perfectly obvious that the States and the people are more involved at this moment with the banks than they were in 1834. As to this Government, in 1834, its deposits were withdrawn from the United States Bank, and, as far as law was concerned, were nowhere—the language of the day was "that there was no Treasury, that the money was in the breaches pocket of the Government." There was no law as there now is, making the banks depositories and fiscal agents. At this time the banks have large Government deposits in their possession, which are daily drawn upon; and the resolution of 1816 being unrevoked, the banks can at any moment compel the Treasurer to receive their notes by resuming specie payment. Besides this, there are, by the Secretary's report, six banks yet used as Government agents and depositories. It appears, therefore, both in law and in fact, that the Government is less disconnected from the banks than in 1834!

And here, Mr. President, permit me to say one word on the subject of the partial disconnection which has been effected by the Secretary of the Treasury. But for the perverse and blundering policy which has characterized his agency in this matter, as in all of his official acts, we should not have been brought here at this time. I do not speak, sir, of the manner in which he habitually miscalculates and confounds the public revenue, or of the absurd and mischievous execution of the deposit law, or of the pernicious fluctuations and embarrassments produced by his intermeddling with the exchanges, or of his execrable Treasury order, in regard to the public lands; but I allude to his immediate agency in producing difficulties between this Government and the banks. When the banks suspended specie payments, the act immediately reassured public confidences, as was proved by the rise of stocks; individual transactions with the banks were continued, and private deposits increased, until at this moment there is more money on deposit in the banks than ever was at any former period—than which nothing could more strongly indicate public confidence. In this state of things, had the Secretary of the Treasury permitted the office holders of the Government to go on as every other individual in the community was content to do, they would have received their quarter salaries as usual, and the disbursements of the Government would have been made as usual; but he thought proper to issue a sort of circular to office holders, as he had formerly done to receivers, virtually enjoining them to receive nothing but specie, and putting them on a plan by which they might enhance their salaries by a traffic in dishonored Government paper. It was in this way that a pretext was obtained for this second removal of the deposits, and for a declaration of war against the State banks, as formerly against the United States Bank. But for this ingenious device, this stroke of financial diplomacy, we sir, in all probability, should not have been here; and by the regular meeting of Congress, a renewed prosperity, returning confidence, and the certainty of an early resumption of specie payments, might have spared us the anxious deliberations which now oppress us. The country, conscious of its own immense resources, and confiding in its own vast energies, would have even now been looking for the natural dawn of day, but that the Treasury interposed its huge and darkening bulk, not only giving no light itself, but intercepting that which otherwise would have been cheering us now. It was competent to the Administration to have sustained and kept alive the wounded confidence of the country, by the easiest method in the world, if its purpose had not been other than the country's good. If the President had recalled the Treasury order, in compliance with the wish of Congress, if he had said a word of kindness towards the banks, if he had disavowed his imputed hostility to credit and commerce, and chartered rights; if, above all, he had forbore to urge the wild and impracticable

theories of his Message, the natural springs of our prosperity would before now have begun to develop their recovered elasticity; and I believe, sir, that, even now, if we would adjourn to-day, and go home, having done nothing, we shall assemble at the constitutional time, under auspices so much better than the present, that very few will be disposed to resort to the desperate surgery recommended in the Message.

Let me, Mr. President, put a not improbable case. Suppose we assemble here, and find the banks paying specie, or upon the eve of doing so: will any one, then, propose to repeal the joint resolution of 1816, for the purpose of rejecting bills of specie-paying banks, and receiving gold and silver? I speak of nothing now, but of the divorce of the Government from convertible bills, which is the great divorce insisted upon—the question of the deposits being another and different affair. What I ask is, whether any one will propose, in the midst of solvent banks and convertible paper, to insist upon specie? To what end, if specie and paper be of equal value, as they are by the terms of the proposition? and so, too, in regard to any other kind of money it may be in contemplation to create. Is your continental money to be equal to the money of the people? Then it is useless. Is it better? Then it is a tax upon the people to buy it. Is it worse? Then it is a curse to the country, and a disgrace to the Government. But for the suspension of specie payments, which I contend was, in itself, a wise and proper measure, and full of salutary results, there would be no pretence for the indulgence of this rabid passion for experiment; the fiscal operations of the Government would have gone on; its reduced revenue would have been found to be to a great extent innocuous; experience would have pointed out and effected restraints upon the tendency to excess of the banking system; and the Administration, weak from the manner in which it came in, weak from the load of misdeeds which it inherited, and has added to, and weak from incompetency, would have been compelled to permit the passage of laws, to guard against a mischievous use of the revenue. But the present occasion is seized upon to drive us into new experiments, and made the pretext for a revolution in the monetary system of the country, by force of a single, sudden, and sweeping act of legislation. Nor, Mr. President, is the violence of the measure more objectionable than its delusiveness. It purports to be a hard money project, while in truth it is the merest paper project that has ever been dreamed of since the continental Congress—an inconvertible paper, which, if it circulates at all, must expel specie exactly to the extent of its circulation.

But there is one point of view in which as a Southern Senator this resolution of the whole money of the country into a Government paper system, strikes me with appalling terror. It is, that it establishes a centralization of the moneyed transactions of the Government and the country in New York, which will enhance the wealth, commerce, and political power of that already too powerful city to such an extent as to make the other States of the Union provincial dependencies upon it. Already, by the operation of permanent causes, and the action of this Government, there is a great ascendancy acquired by that city. It cannot be otherwise, perhaps; all systems must have a centre. In every community, or association of communities, there is a centripetal tendency of the moneyed and commercial transactions. This is of the nature of things, a law of society. New York, therefore, is, by necessity, the commercial emporium of the United States as long as we are the United States; but nothing can be more unwise or preposterous, nothing can be more unjust to the Southern States especially, than for this Federal Government to increase by its policy this absorbing centralization. Already the receipts and disbursements of the Government are in one section, and we of the South have felt the disastrous effects of it; but when New York is made the pivot upon which the circulation of the whole country turns, what will be our condition? It is said that the banking system has a tendency to centralization; but it has also a centrifugal tendency. South Carolina has her banks, with their centre at Charleston; abolish them, give us the Government money, (and it matters not whether it be specie or continental paper,) and South Carolina has nothing of her own; she is consolidated upon New York, which is necessarily the centre of the General Government money transactions. The result is inevitable, and will be utterly ruinous. In whatever aspect I regard this project, whether I consider the political consolidation which results from the power of manufacturing money by this Government, or the financial and commercial consolidation which results from the fact that New York must be the centre of the system, or the nature of the currency which is to be created, it is, in my judgment, liable to insuperable objections.

The rejection in the receipt of the revenue of the notes of specie-paying banks is the great revolution proposed by the present measure: this is intended as the vital stab to the banks; it is to be a standing discredit of those institutions, and the excuse for the Government to issue paper of its own to supersede theirs. The Sub-Treasury system is less decisive and far-reaching. The currency established by law since 1816 was that of the bills of specie-paying banks; but the State banks have been used as depositories a much shorter time. Until recently the United States Bank had custody of the public funds; after that, the State banks and the States, by the deposit act; and at present they are in the hands of Government agents. The policy proposed by the bill under discussion is, that when the revenue is received in specie, or in such paper as by law may be directed, (viz: Government paper,) it shall be retained in the custody of Government agents throughout the country.

It is this new mode of custody by individuals, instead of by banks, and, as a corollary from it, the disbursements by individuals, which constitute what is called the Sub-Treasury system. Hitherto it has been the policy of the Government to keep as distinct as possible the business of collecting, keeping, and disbursing the public money, for the obvious purpose of multiplying responsibilities and imposing checks. This sure and long-established policy of separating these functions is now proposed to be abandoned, and they are all to be blended in the hands of near ten thousand different individuals in various parts of the United States. And why is this fundamental change proposed? What is required in determining on the proper custody of the public money is, that it be kept cheaply and safely; and if the Government interest alone is to be considered, (upon which supposition the whole policy is founded,) when safety and cheapness are provided for, all is done that the Government need do. If the doctrine so strongly urged in favor of other branches of this proposed policy, that the Government must take care of itself, and let the People take care of them-

selves, be correct, then it is obvious, that when your money is safely and cheaply deposited, you must look no further; its effects upon the banks, upon the currency, upon the general welfare, are events put beyond the scope of your purposes or your powers, and are rejected by the fundamental principle on which your whole system rests, viz: that you have nothing to do with the currency. If it be your duty to reject a safe and cheap keeping of the public money because it will operate injuriously upon the banking system and the currency, then you are bound to avoid any other measure which is likely to produce that effect. Your first proposition proceeds upon the ground that the Government must take care of itself, and not look to the right or left in doing so. Your second proposition proceeds on the opposite ground, viz: that you must regulate your Treasury with a special view to the banks and the currency. Your plea for hard money, that you must regulate the Government—*safely* is your object, then keep your hard money when you get it where it will be safe; but this you will not do. You will carry one part of your policy on the ground of safety of the Government, and the other on the ground of love of the People.

I have assumed, Mr. President, that the custody of the public moneys is safer in the hands than in the hands of Executive officers. Does any man doubt it; or has any one, even in the fury of that tirade against banks, which constitutes the staple of every Administration speech, ventured to say that the custody of these funds by the banks is not as perfectly safe as moral and physical distress and insolvency which press upon the country, I am not aware that any thing has been lost by your confidence in the banks; but, sir, if your enormous revenue had been accumulated in the hands of ten thousand individuals during the recent rage for speculation and the consequent crash, where would your money have been? The experience of the Government is conclusive. It has trusted banks a thousand times more than individual agents, and has lost a hundred times as much by individuals as by banks. Why, sir, in that department of the Sub-Treasury which is to be conducted by the postmasters, there are now, by a report from the Postmaster General, some two or three thousand defaulters. Banks are created with complex checks and responsibilities, for the purpose of keeping and managing money; and all this is done in the first instance, and afterwards superintended in its operation, by those whose direct interest it is to have it well done. On what different principles are Government offices filled? They are yielded to the arts of solicitation, given to a needy kinsman or a subtle tool, or, to avoid at once the great principle of appointments, they are given for political purposes. This power of appointment is the great, the destructive branch of patronage which it is now proposed to increase to an enormous extent, and to strengthen by the whole money of the Government.

At the moment that the Government proposes to declare, by act of Congress, that banks are unsafe depositories of its money, all the money-holders of the country are contradicting the aspersion. The private depositories in the banks were never greater than at this moment, and vastly exceed your revenue. Merchants, artisans, agriculturists, keep their money in the banks; every individual here, who by word or act denies that the Government money is safe with the banks, contradicts himself by keeping his own money there. The most cautious and wary money-holder in the country will not trust his money to his own custody, but carries it to the banks; and yet you would fain delude us with the vain and presumptuous idea that you will get men more true to the Government than men are to themselves. Where every private individual entrusts his own money, let the Government confide its funds; and this will be the result even with your Sub-Treasury scheme; for, if your agents be honest and faithful, they will carry the money to the banks for safe-keeping, under the conviction that it is safer in the banks than in their own hands.

In such an event, what do you gain by these intermediate agencies between you and the banks? Why, sir, you gain this: a new electioneering office-holder, with means in his hands of influencing the banks. You give to the Executive the use of the money on hand, without any restraint of law to restrain him.

If your Sub-Treasury be robbed, shall your Sub-Treasurer and his serviles lose the money? If your Sub-Treasury be burnt, and your funds with it, shall the poor officer and his poor securities bear the loss? You well know, sir, how subject the Post Office and Treasury Departments are to conflagration; against all this the banks guaranty you.

Then, sir, as to the expense. Thus far the custody of the money by the banks has cost nothing; nay, has been a source of income to the Government, for they have paid for the privilege of keeping the money. General deposits in bank would cost you nothing, because the banks are willing to take care of the public money for certain incidental advantages resulting from it. And here lies, Mr. President, the paramount objection to the use of the banks as Government agents. It is said that these "incidental advantages" to the banks are injurious to the currency, and increase the power of the Government, by the control it gives it over the currency. The principle upon which this objection rests is that there should be no intermediate use of the public money between its collection and its disbursement. This principle is a new one for the last thirty years it has been thought politic that the large sum of money always in the hands of the Government should not be entirely dead to a country so much in want of capital as this; but that, either in the hands of the United States bank or the State banks, it might be brought upon as private depositories use. Thus the country did not suffer the loss of the Government revenue between its receipt and disbursement; but portions perpetually returned into the community to stimulate or resist enterprise. By this process the Government lost nothing, and the people gained. If the Government has a regular sum of twelve millions on hand, it is twelve millions permanently abstracted from the capital of the country. Now, it is said that the Government has no right to permit an intermediate use of its money; true, but it has no right to keep on hand twelve millions. The theory, to be sure, is, that money is collected to be paid out again, and not to be kept on hand or used until it be used for the legislative objects of disbursement; but, from the necessity of the case, it must accumulate, and, being accumulated, the policy has heretofore been to turn that accumulation to some account for the country.

But, it is said, this intermediate use, if entrusted to the banks, creates a political influence, and disturbs the currency of the country. If this be true, these deleterious effects would be hereafter diminished, by the reduced income and economical

expenditure of the Government, and regulated by the "virtue, moderation, and wisdom," which are expected from the Executive. The evil would undoubtedly be much less than heretofore; and, I think, infinitely less than that which will result from filling the country with salaried agents of the Government, wielding immense masses of money, for private or party purposes. General deposits in the banks, with the obvious dangers which I recognise as belonging to it, I do not think comparable to the embasement of Executive power and danger to the currency resulting from the Sub-Treasury scheme. But there is an obvious mode of securing all the advantages I have attributed to the custody of the revenue by the banks, and of avoiding all the evils which are said to be apprehended. This mode, sir, is to make special depositories in the State banks. By special depositories is understood to be that deposite which the bank receives to keep, and not to use for banking purposes; and to return the identical thing to the depositor when drawn for. For this species of custody, from which the bank derives no benefit, some small recompense might be demanded, and given, not amounting to an assignable fraction of the cost of the Sub-Treasury. By this means, the banks would do with the public money precisely what the law would impose upon the Sub-Treasurer; and which would be more likely to fulfil the law—the bank or the individual? Which would the community trust? Which would you, or I, or any body trust? The bank, by possibility, might violate its obligations and commit a fraud. Are you safe in the hands of an underling party intriguer, who receives office, it may be, under the General Government, as the reward for his treachery to his own State?

I shall, Mr. President, as soon as it is in order, move an amendment to the bill before us, providing for the special depositories of the money in the State banks.

Sir, it is said that this Government should not entrust its money to institutions over which it has no control. The proposition amounts to this: that the Government has not power enough over the banks to protect its own interest; and yet, in the same breath, it is contended that to allow this Government to use those banks will endow it with a power over them dangerous to the country. The propositions neutralize each other. But I am not discontented to see this Government using State agencies as far as they are fit for its purposes. I am not averse to some little control, on the part of the States, over the moneyed power of this Government. It is one of the recommendations to my system, that the Government has not so much control over the banks as over its Sub-Treasuries. The policy I propose, Mr. President, is simple, obvious, and dictated by our actual condition: it is to encourage the banks to resume specie payments; to receive, in discharge of Government dues, notes of specie banks, and to make special depositories in the State banks of your revenue, when collected.

Thus we conform ourselves to our condition. Thus we acquiesce in the business habits of the country. Thus we use the institutions provided to our hands. Thus we preserve all that experience has proved to be good, and reform what experience has shown to require it. Thus, sir, we avoid the jeopardy of revolution, we escape the terrors of experiment—a word which, in the mouth of this Administration, should appal the heart of every lover of his country. Let me examine for a moment, Mr. President, this Sub-Treasury experiment. My colleague has objected to the name of Sub-Treasury. Sir, it is a misnomer—*Government bank* is its true name. From the first moment of its existence it will be, as I solemnly believe it is intended to be, a Treasury bank, thoroughly equipped and calculated for Government and party purposes, and devised as the only means of preserving the ascendancy of the party which has so long abused our patience. The course of proceeding is obvious, and has been avowed. For disbursements in one part of the country, where the Government has no money, its Sub-Treasurer draws a bill on another where there is money. This bill is paid to the Government creditor, or sold for funds to pay him with, and is thus put into circulation. The Sub-Treasurer at Orleans is thus a cashier of the branch at Orleans, who issues a bill payable at the mother bank at New York. Thus the circulation of bills is established—bills issued upon the faith of specie or Government paper, in the hands of the Sub-Treasurers. Or if we are to consider the scheme as a whole, without reference to the parts, then the case is this: the Treasury draws a bill upon itself, and puts it into circulation, payable on demand. Now in what does this differ from a bank bill? It is obvious that this process makes the Sub-Treasury a bank of issue and circulation; but it is also a bank of discounts! This Government has funds in New York, and desires to have them transferred to Chicago; by what process is it to be done? Why, it discounts a bill of exchange on some merchant who has funds at Chicago, and pays him for it, either in New York or by a Treasury draft on Boston. In this consists the whole mystery of banking. The Government exchanges its credit for the credit of an individual, as in ordinary cases the bank does. And, sir, it is curious to remark how much more complete this system is than the first effort of the banking system. The origin of banking was this, specie was deposited, and certificates issued of the deposite, which were thrown into circulation, and upon presentation were paid. The keepers of the specie soon ascertained that these certificates returned in sums and at periods which might be calculated with great precision, and that only a small portion of them were presented for payment. Under these circumstances, the keepers abstracted two-thirds of the money confided to them, and were not detected for eighty years. This was the beginning of banking. The Sub-Treasury system is far more advanced, and the Sub-Treasurers no doubt will be equally skillful with the Dutch directors.

As our monetary system is now and has always been organized, there have been large moneyed and commercial institutions co-operating with private individuals, in conducting the exchanges of the country. The regulation and conducting of exchanges is a matter of infinite consequence in a commercial community, and of fearful influence if confided to direct political control. By the proposed system, you establish Executive agents through the country, who, having command of Government funds, go into the exchange market with irresistible power, and control this great branch of commerce, without risk or responsibility. To this huge banking apparatus, to this unchecked control over domestic exchanges, add to the Government the power of manufacturing paper money at its own pleasure; and will any man say that this is a confederated Government? No, sir, it is a consolidated, money Government, holding its tyrannical court in Wall street; for to Wall street are all its tendencies. It has been said that the United States Bank, established in Philadelphia, has a tendency to centralism; it is said that the banking system of the States, with

a bank in every village and hamlet, has a tendency to centralism; but what is all this to that irresistible centralism which will be given to New York, when, to her present political banking and commercial power, you add the all-absorbing influences of this new machinery, which, operating with the undisturbed force of singleness and identity, brings every thing within her already too powerful grasp?

I cannot but consider, Mr. President, the policy proposed by the Message as the very opposite of the true policy of the Government. We should reform our system, not crush it; we should deal with the circumstances around us, not attempt a new creation. We should not endeavor to effect an entire disruption of the ties which bind up our financial destiny with that of the States and the people, but try to regulate them, for mutual benefit—try to make the banks subserve the just ends of this Government, while they are permitted to perform what the States created them for. It is said that the experiment has failed, and ought not to be again attempted. Mr. President, the great experiment which has failed is that which the country has made with this Administration; that is the fatal experiment, and that the disastrous failure; that is the experiment which it is madness to expect success from. To check and control and contradict and beat down this Administration would effect more for the country in producing the true remedy for its disasters than any thing else that can be done. The remedy which the case requires is confidence. Restore confidence, and you reinstate prosperity; conquer the Administration, and you restore confidence. All its principles of finance have been wrong, violent, and preposterous. All men of property distrust it and its projects. If the great object of the vengeance and acrimony of the Administration, if the reviled and denounced Mr. Biddle were to-day called to the head of the Treasury, in the place of Mr. Woodbury, it would in ten days add more than a hundred millions to the value of the property of the country; it would loosen those immense depositories now locked up in the banks, and send them abroad into the community, it would dissipate like a cloud the gloom from men's minds. It would do all this, because the community has confidence in the wisdom, integrity, and honor of that persecuted gentleman. We need not expect the happiness of such a case as I have supposed, but we may, if we choose, revive confidence by other means—by our moderation; by our caution of entering on new experiments; by avoiding warfare upon the moneyed institutions of the country; by showing that we feel deep sympathy for the sufferings of the community, and are willing to contribute within our sphere to their alleviation, and to take our share of the burden. Above all, sir, let us deal tenderly and cautiously with this most delicate matter of currency; and when we have manifested such a temper and such purposes, confidence will be restored.

## SPEECH OF MR. CALHOUN, OF MASSACHUSETTS,

In the House of Representatives, October 12, 1837—  
On the bill imposing additional duties, as depositories in certain cases, on public officers.

MR. CALHOUN, of Mass., rose and said: An attempt had been made during the discussions of this session to give to the financial system of this country a new character, an impression of novelty, an air of mystification. Gentlemen who had taken a prominent part in the discussions in this hall and elsewhere had spoken of an extraordinary crisis in the monetary affairs of the age, a development of principles hitherto unknown or not acted upon, of a great financial theorem or issue of modern times.

This pretension seems to me (said Mr. C.) to be an arrogant one, if honestly believed; and if not, to be intended solely to cover over some most singular changes of opinion. Whatever may be the truth in this regard, certainly these assumptions have their origin in an undue fondness for theorizing and speculating. I have no antipathy to a spirit of this kind, if kept within proper bounds, and applied to suitable objects. In all that can contribute to human happiness, or that may tend to elevate the mass of mankind, I have the strongest sympathy with those who are philanthropically engaged in pointing out a new and better way, and for the abundant reason that they are giving their thoughts to what, unfortunately, does not attract the universal or even general interest of our race.

But in reference to subjects which are of every day concern, which enter into the constant business of existence, and which form an essential and prominent feature in all the aims and objects of the industry of our country, I cannot but look upon this undue attachment to theory as a sore evil. The subject of finance is peculiarly practical, and minds of a practical cast are almost the only ones that master its details, and meet with success in its pursuit. Whatever pertains to the finances of the country, to its business, and its currency, is better, far better, understood by men whose lives are devoted to that business, by men of large and long-earned experience, than by any mere politicians, however ingeniously or adroitly they may theorize. And certain it is that in this country, and in every country where civilization and intelligence have left their mark, the wisest, profoundest, and most sug-

cessful statesmen have been those who, in their financial systems, have drawn most extensively upon the resources and experience of men of practical business.

The mingling of matters of business and of financial institutions with partisan politics I look upon as the curse—the very evil genius of our country. It is this which lies at the bottom of all our troubles and distresses as a people, and which causes the administration of the Government to be so loudly and emphatically complained against. So long as the politicians continue to drag the business of the country within the vortex of politics, and to make it tributary to their own personal aggrandizement, to their own unpatriotic objects, so long will derangement and distraction reign in both.

We were yesterday asked quite imposingly by the gentleman from Virginia, (Mr. Hunter,) why not carry that system of analysis and induction into finance which has been brought to bear so successfully upon science generally? I have given, I think, the true answer: finance is essentially practical; in all its operations analysis and induction are necessarily and incessantly at work.

With such views, I find no difficulty in determining where to look for guidance and direction in all questions connected with currency and business. There is no safety but in the lessons of past experience. And what is the voice which the experience of our country utters upon this important subject? If we examine our past history, we shall find that our financial system has, for the most part, uniformly worked well, and that nearly all our derangements and embarrassments have arisen from the obtrusive interference of politics and politicians. Legislation has always been necessary in order to give the country a suitable currency. When this has been effected, and the currency has been suffered to take its own course, and to be regulated by the usages and laws of trade practically established and always understood by business men, nothing has ever interfered with or interrupted the steady progress of both currency and business, but some event, rarely occurring, extraordinary in its character, and overwhelming and controlling in its influence. In the conflicts of our neutrality with foreign aggression in the restrictions upon our commerce, and in the measure of war, which form a part of our past history, we find examples of such events. Aside from these, our prosperity has been uniform, except when checked by occasional and short-lived overaction. This latter is a state of things not of very frequent occurrence, which usually subsides rapidly under the unflinching operations of the laws of trade and the principles of a just political economy. With these exceptions, I repeat the important lesson derived from our past experience, that all our troubles and annoyances have originated in the unhallowed connexion of politics and business, for purposes of momentary triumph to the former, and with disaster to the latter.

We come to the great question which runs through the discussion of all the measures proposed to us at this extraordinary session. What is the cause of the embarrassments which have now so long afflicted the country?

We are told by the President, in his recent message, that the true cause is *overaction*. I object to this position, that, instead of being the assignment of a cause, it is simply a statement of the fact in another form. The country has suffered, and is still suffering, from *overaction*; that is, from overtrading and overspeculating. And the only question which can sensibly be asked or answered is, what has caused this overaction; to what is it attributable? Are we to seek its origin in the abandonment of those wholesome laws of trade, to which I have already referred, by the practical and sagacious business-men of the community, or is it to be found in the measures of the administration affecting the national currency? What induced the hordes of anxious speculators to precipitate themselves upon the great public domain of the west? What induced another class of adventurers to take advantage of the boon proposed by the Government in the extraordinary, and, in some cases, most indecorous and servile scramble for the public money? What induced the unusual increase of banks, on a sudden, and in defiance of that cautious policy which had

so long characterized the country in the asking and granting of bank charters? What induced the general rush into the business of trade and commerce, and the undue importation of foreign commodities? What induced the anomaly which we have all witnessed and wondered at—an extravagant demand for every thing, at extravagantly high prices, and money at the highest and most ruinous rates?

Unless the true cause can be ascertained for the evils which have so long disturbed the prosperity and deranged the business of the country, it is obvious that those evils cannot be remedied effectually and permanently. If simple overtrading be the cause, that has not unfrequently occurred, and has always readily yielded to the suggestions of prudence and ordinary sagacity. Indeed, overtrading never causes more than temporary embarrassment. If nothing affected our general system now but mere overtrading; if our financial system were not radically and deeply disordered, the discontents and distresses of the country would long ere this have passed away. No one has the assurance to assert a pretension of this kind.

Under the operation of a bad, disjointed, dislocated financial system, permanent prosperity cannot revisit the country. An apposite illustration of what I deem to be the truths now laid down may be seen in the present condition of England, to which reference is made in the President's message.

The President looks upon the state of things as substantially the same in both countries. "The causes of the revulsion in both countries have been substantially the same." Such is the language of the message. But, by a singular fatality, the President ventures to express a truth, within the compass of the same paragraph, which effectually overturns the fancied analogy in the causes of the revulsion in the two countries. "The most material difference," (I quote the words of the message,) "between the results in the two countries has *only* been, that with us there has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments, occasioned by the suspension of specie payment by the banks." Why did not the President carry his thoughts one step farther; why did he not see that the causes which led to this suspension of specie payment, thereby producing the acknowledged "derangement in the fiscal affairs" of this country, constitute absolutely the whole that is material to the subject, and the whole difference between the revulsion here and that in England? The monetary system in England has not, as a system, been affected at all. Here the monetary system has been changed entirely. Or rather, to speak more accurately, here we have been shifted from one system to another—upon the explosion of one experiment, betaking ourselves to another—until we have at last arrived at the proposition immediately before us, the sub-treasury or divorce bill, under which we are to dispense with all system. This is what is wanted before us as the great theorem or issue of modern times.

Let it be the revulsion in England and in our own country had been, as supposed by the President, substantially the same, how happens it that whilst he was busied in penning his message, the revulsion in England should have subsided, and business have resumed its place? That such is the fact, all accounts now agree. And no well-informed person can hesitate as to the cause of the embarrassments in England, growing, as they notoriously did, out of the connexion with American trade. The President indeed avers in the message "that the issues of paper credits put in circulation in England by banks and in other ways during the years 1834, 1835, and 1836, will show an augmentation of the paper currency there, as much disproportioned to the real wants of trade as in the United States." But the President gives no authority for this opinion. And it conflicts most glaringly with official, and therefore authentic, statements, furnished by the Bank of England, and by all the other banks, of every description, upon this subject. From these statements, it appears that the whole amount of circulation of the kind referred to in the year 1834 was £23,563,000; in 1835, £23,519,000; and in 1836, £28,875,000; showing an increase of circulation, in the three years designated by the President, of only a little over three hundred thousand pounds;

whilst, in this country, within the same period, the bills in circulation had increased *forty-five millions*; and the loans *one hundred and thirty-four millions*. The difference thus strongly marked between the two countries arises from the fact already stated; a fact which cannot be too often repeated—that in England the financial system has not been affected as a whole; whilst in this country the financial system has been absolutely overturned. And hence has arisen the difference in the results between the remedies applied in the two countries. If we apply to a disordered and revolutionized currency a remedy, as suggested by the President, applicable only to a state of overaction, it will turn out to be inefficacious. We already see that such a remedy is utterly inefficient. The disorder remains. The taint is upon us. How can successful business be resumed without a sound currency and a healthful system of exchanges? How can the country go on without the vigor of a permanent and accredited financial system?

The causes of the embarrassments of the country do then force themselves upon us in a way not to be resisted. They are written all around us in sunbeams. They are neither to be evaded nor escaped from. They are impressed upon the country in broad lines from end to end. Every man of business in the land bears the marks of them. At morning, noon, and night, when we lie down and when we rise up, they are ever and most disastrously present to us. They are distinctly traceable to the change, to the entire revolution, of which I have spoken, in our financial system. The bankruptcy of the Government the bankruptcy of the country, lie at the door of the politicians, who, for their own sinister and selfish purposes, have brought that system, the currency and the business of the country, into the arena of political warfare. Here, in my estimation, is the root of the evil.

Look back at the experience of our past history, to which I have heretofore adverted, constituting the true test, in a special manner, of all financial changes. What do we learn in the pages that immediately precede those which are to record this new theorem of modern times, this entire disruption and scattering of a currency which had carried the country along successfully and prosperously. I ask you, Mr. Chairman, to look back at the period of twelve years which preceded the late Administration, comprising the whole time of service of President Monroe, and that of my venerable colleague, (Mr. Adams.) In the year 1816, there were *two hundred and forty-six* banks, with a capital of nearly *ninety millions* of dollars, and a circulation of about *sixty-eight millions*. In 1820, there were 368 banks, with a capital, including the United States Bank, of *one hundred and thirty-seven millions*. In 1830, there were *three hundred and thirty* banks, with a capital of *one hundred and forty-five millions*, and a circulation of *sixty-one millions*. During the whole period, then, from 1816 to 1830, being *fourteen years*, there was an increase of *eighty-four* banks, with an increase of *fifty-five millions* of capital; of which *thirty-five millions* belonged to the United States Bank; but, at the same time, there was a *diminution of circulation* from *sixty-eight* down to *sixty-one* millions.

Such was the state of the banking system under Mr. Monroe and Mr. Adams. At the commencement of this period, there was great embarrassment all over the land, similar to that which now exists. In 1816, a national bank was chartered. In commencing the operations of that bank, there was much bad management, and the consequences were unfavorable to the business of the country: but these difficulties soon disappeared under the superior skill of new managers. And the whole period was marked by unusual commercial prosperity, although unfortunate cotton speculations, and the agitation of the tariff controversy, were distinctive features of it.

It is remarkable, too, that, during this period, no complaint whatever was uttered, from any quarter, against the currency or the banking system. The business of the country went on without interruption, except from occasional ill-judged speculations or over-trading, leaving no distinctive mark, except as matter of historical remembrance. In addition to this, and as confirmatory of it, another remark may be made, that the financial system was kept entirely detached from the politics of the country;

the politicians interfered not at all with it; and its course was therefore an undisturbed one, answering the great purposes of all financial systems, benefiting the people, promoting industry, awakening well-directed enterprise, and therefore reflecting credit upon the Government.

Immediately upon the close of the period embraced within the comments I have now submitted to the committee, a new order of things arose. The country was in a state of unequalled tranquility in all its prominent interests. The excitements of party had been, and continued to be, animated and bristling: but the business of the country was successfully pursued in all its accustomed channels. But, with a new administration, new men had found their way into the public councils. Adventurers were numerous: the appetite for distinction, for office, but more especially for money, became unappeasable. Politicians rose up in myriads of swarms. If the present moment would not suffice to provide them with the claimed rewards and spoils of victory, the future was drawn upon; and partisanship scented its prey in every avenue and by-path that led to game to be run down. Thus was the field of political aspiration immensely widened. Within the great vortex of party politics were absorbed, one after another, all the great interests of the country. Nothing escaped that could by any possibility minister to the hopes or the cupidity of politicians. And thus was it that the business interests, the financial systems, the moneyed institutions, gradually and successively fell before the destroyer. Each and all surrendered, or were trodden down beneath the tread of the political war-horse. In this way was prostrated the United States Bank. For the purposes which I have now indicated to the committee were the public moneys of the United States wrrenched from their legal depository, and thrown down at the feet of the politicians.

These events, the first in that train of measures which have led to the existing embarrassments of the country, occurred about four years ago. Against these measures, in their inception, my venerable colleague (Mr. Adams) raised his warning voice. Intimately connected as he had been with the preceding policy of the country, well might his judgment be taken as oracular. Unfortunately, it was disregarded and set at naught.

And what was the progress, what were the consequences, of these measures; especially of the transfer of the public moneys to the new league or coalition of State institutions? A general movement was made to obtain a share in the division and distribution. The appeals which were made to the Secretary of the Treasury, to be made "fiscal agents" of the Government, are many of them spread out upon our legislative records; and they evince, in too many instances, a cringing servility, at war with all just ideas of republican dignity and independence. The removal was effected under the dictation of that extraordinary man who has but recently descended from the Presidency. The public moneys were distributed throughout the country; and, under the repeated injunctions of the Treasury Department, founded upon the instructions of the President, which I shall not stop to collate or refer to more particularly, the chosen banks were directed to use those moneys for the public accommodation, in every variety of way. And so were they used; they were carried into every branch of business, regular and speculative. They were absorbed in the speculations in the public lands; they formed the nucleus for the erection of new banks; they were sought after with avidity by partisans; they found their way wherever money can go, and for all purposes to which money can be applied. In the general scramble for the means of speculation, bank rose into existence upon bank, and incredible was the rapidity with which these moneys, performed their circuit through the routine of banks, land offices, and the counters of the receivers.

And what is the exhibit which sober and undisputed facts present to us, of the state of our financial affairs within seven years from the close of the period of which I have already given an account? The report of the Secretary of the Treasury has been placed before us, furnishing an ample view of the banking institutions of the country up to

December, 1836. From that report we learn that at the latest period to which the report is brought down, there were 823 banks in the country, including 146 branches; and that the capital amounted to more than *three hundred and seventy-eight millions*, and the circulation to more than *one hundred and eighty-five millions*. Here is an increase, in a little less than seven years, of nearly *five hundred banks*, of more than *two hundred and thirty-three millions* of capital, and of more than *one hundred and twenty-four millions* of circulation. There are now considerably more than twice as many banks as there were in 1830, nearly three times as much capital, and more than three times as much circulation.

This increase of banking facilities, for which it would be difficult if not impossible to find a parallel, commenced immediately after the first attack upon the old and long-accredited financial system of the country. But the larger growth of this rank crop of banks was subsequent to that revolutionary measure, the removal of the deposits. The banking capital created within the last seven years is greater than all the banking capital created during the whole anterior period of our history. How could such a state of inflation and excess long exist, without being felt through every part and parcel of the business of the country? Shall we be amused with speculative notions about overtrading, when an exhibit like this is staring us in the face? If the President wishes for an example of the *over-action* of which he speaks in his message, here it is—the concomitant and consequence of that fatal measure, the transfer of the public funds, to which he gave his strenuous counsels and advice. If over-action, over-trading, over-speculation ever existed, they are to be found in this inflated, over-charged, and now exploded system of banking, which the counsels and instructions of the last and present Administration of the General Government substituted for the system which preceded it. I do not intend to say, or wish to be understood as implying, that this extraordinary course of measures was entered upon with a view to the result now manifested. It is unnecessary to take this ground, could it be maintained. I impeach not motives. I inquire for facts. With these facts, well authenticated, I go wherever truth will lead me. No one, it seems to me, can shut his eyes upon the fact, the pre-eminent fact, that here, in this inordinate stimulus to banking—this furnishing of means without stint, limitation, or caution—is to be found the *cause* of the excesses which have been indulged in; of the *over-action* which has gorged every channel of business; and of the disasters which have bowed down the country under a yoke too heavy to be borne.

A member from Ohio (Mr. Hamer) has said that the foreign debt, which he estimates at thirty millions, together with the distribution of the surplus revenue, are, in his view, the true causes of the troubles which have afflicted the country. And he asks, with an air of triumph, did General Jackson, did Mr. Van Buren, did the friends of the past or present Administration, either or all of them, induce that debt to be incurred? I answer, unhesitatingly, because I answer upon the solid foundation of facts, *they did*, each and all of them. Has that gentleman examined the course, the progress, of that debt? I apprehend, if he had done so, he would have discovered some facts sufficient to lead him to doubt the policy of some measures of the last few years, to which he has given, if I mistake not, his vigorous aid. During the year in which the celebrated tariff compromise bill was adopted, the imports of free goods into the United States amounted to about *sixteen millions* of dollars. According to the last annual report of the Secretary of the Treasury, giving statements of the commerce and navigation of the country for the last year, the amount of free goods imported had risen in their estimated value to more than *ninety-two millions* of dollars. During the same year, the whole imports, of every description, amounted to nearly *one hundred and ninety millions* of dollars. The import of goods "free of duty," therefore, was equal, very nearly, to one-half of the whole importation of the year: and the difference between the imports and exports was over sixty-one millions—the balance of the former over the latter.

Now, how will the gentleman from Ohio account

for this extraordinary increase of goods imported "free of duty," within the short period of about three years, upon any other ground than that of the incessant attacks which have been annually made upon the compromise bill? It has been the policy of the Administration to take off the duties from all goods, the importation of which, it was supposed, would not directly interfere with the products of American industry. But the *indirect* interference does not seem to have been cared for. This has induced the importer to glut the American market with cheap foreign fabrics and products: and the direct attacks which have been made upon the system, from year to year, have had a tendency, at the same time, to paralyze our own manufacturers. And then, striking in unfortunately with this policy, there has been the extraordinary facility for obtaining means and credit to carry on the foreign trade, since the removal of the deposits: for since that event it is that the principal part of the enormous increase of free goods imported has taken place. I repeat, then, that the foreign debt has been incurred under the inducements held forth by this incautious policy of the Administration. And thus it is that the overtrading of the merchants, about which so much has been said, and so vaguely said, too, lies at the door of the past and present Administrations, and is traceable, with great directness, to the breaking up of our old financial system.

I find myself fully sustained in the view which an adherence to facts compels me to take of the causes of the existing disasters, by a recurrence to a very absorbing and interesting topic—the sales of the public lands. For a considerable number of years anterior to the removal of the deposits, the income accruing from the sales of the national domain averaged, annually, not more than two millions of dollars. Immediately upon the great change effected by that extraordinary measure of General Jackson, we find a rapid and startling increase in those sales; so that in the three years following that event, the increase from this source amounted, on an average, to *fifteen millions* a year. In the year 1836, the amount was considerably over *twenty millions*. The proceeds of the sales during the period which intervened between the removal of the deposits and another great event, the distribution of the surplus revenue among the States, were more than equivalent to the whole amount set apart for deposit under the provision of the distribution act.

The committee will see, therefore, that but for the impulse which was given to the spirit of speculation by the transfer of the public funds from their legal depository to those points from which money accommodations were advisedly urged upon the public, no surplus revenue would have accrued for distribution. But as soon as the public funds were withdrawn from the influence of that financial system which, through all the reverses consequent upon over-trading and over-speculating, had kept the machinery of business steady and well-ordered, are volition followed, which disjoined every thing, diverting business from its fixed orbit, and giving a wild and erratic play to that headlong mania for speculation, which absorbed all and controlled all, until itself finally exploded. Nor is it to be concealed, nor can it be denied, because the records of this house bear the proof, that the politicians, the partisans, were most eager, most importunate in pursuit of those means of speculation.

Nor can it be irrelevant here to remind some members of the committee, especially the gentleman (Mr. Pickens, of S. C.) who opened the debate upon the bill immediately before us with so much earnestness and vehemence, that, from the statement I have now made, it follows, most conclusively, that the tariff system is not to be held accountable or chargeable as the cause of the extraordinary surplus so universally and so justly deplored. Such an opinion has been advanced, over and over again, and is relied upon as furnishing a stable reason for frittering away, in detail, the good effects contemplated by the celebrated compromise. I have already commented upon the facts, which show indisputably the impolicy of that attempt to interfere with the just operation of that compromise. That impolicy is still more convincingly manifested by the facts, now presented to the committee, which point to the true origin of the

surplus revenue. The public domain has been the great field of speculation; and the excessive banking, consequent upon the removal of the deposits, and principally warmed into existence by that measure, has poured forth the overshadowing means by which that speculation was conducted.

I am still farther fortified in the position I have taken, and the opinions I entertain concerning the causes of the embarrassments of the country, by a consideration of the effects of the immense importations of specie, which have been the theme of so much self-glorification. It is unnecessary here to inquire into the necessity for an ample specie basis for the circulating medium of the country. Such a basis is indispensable, and never can, without criminal neglect, be overlooked by any prudent and watchful administration of the Government. But the idea of forcing a circulation of specie in any one country, whilst the supply of the precious metals for all is extremely limited, cannot be sustained for a moment upon any sound notions of public economy. A circumscribed medium exclusively of specie may be imposed and carried out perhaps, but it must be at the risk of sacrificing or overturning the great business interests of the country, and of throwing the limited business that may remain into the hands of a monopolizing few.

The excessive importations of specie by the last Administration, at a time when the balance of trade was largely against us, and a very large foreign debt was outstanding, militated most strikingly against all the acknowledged laws of trade. And this, in connexion with the Treasury order, or specie circular, as it has usually been termed, hastened the approach of that financial crisis, which, without the powerful and electric aid of these causes, might have been longer postponed, but, in all probability, could not have been avoided. The drain of specie from the east deeply affected all the operations of business, which are there concentrated; and the fountains of our whole system were thus broken up. Vast as have been the importations of specie from abroad, did that specie enter into the circulation of the country? Were the promises concerning it at all fulfilled? Have not those promises long been the by-word and jest of the scorner? And are not the precious metals banished from among us, so far as the purposes of circulation are concerned?

This was most certainly true long before the crisis arrived. Instead of enlarging the circulating medium of the country in any essential degree, the imported specie was employed most extensively in forming the basis of new and increased banking operations. And thus, what was probably well intended, theoretically, by the Government, operated to defeat the very object which the Government professed to have in view. We are not to forget, however, that this very rage for banking, which in this manner so sadly crossed the path of the late Administration, grew up under the fostering and nurturing of its own measures. In this fact, we have an illustration, that ought not to be lost upon us, of the extreme hazard which is always incurred by a violent and uncalled for interference with a subject so sensitive and delicate as the currency of a country.

I have now gone through, succinctly, the consideration I intended of the causes which have conspired to bring the country to its present disastrous condition. I am unable to avoid the conclusion—to my mind it is as ready as it is irresistible—that these causes have led directly to that *over-action*, which is the genuine manifestation or development of the disease with which the country is afflicted. And what has been the result? What has been the winding up of that long train of measures, violently entered upon and energetically pursued, which must, in all time to come, hold up Andrew Jackson to the country as no ordinary man? The result is stamped upon the country in deep and broad traces. The winding up of this experiment of a new and better currency has engulfed Government and people in one common bankruptcy. The causes, of which I have spoken, opened throughout the land a boundless field of credit, accessible through myriads of avenues to the lowest and obscurest spots. Every description of business felt the effects of this overshadowing credit—to such a

degree, indeed, that, during the period to which I have referred, the amount of all kinds of transactions has been estimated to transcend *five hundred millions of dollars*. And when, at length, the experiment ran out, and the catastrophe came, the country was found, and still remains, with its commerce prostrated, industry at a stand, the banks unable to redeem their bills, and the Government rich only in unavailable means.

The Government and the people being thus alike embarrassed and paralyzed, it would seem to be the dictate of ordinary wisdom that they should make common cause, and breast themselves together against the storm. Especially would it very naturally be expected of the Government that they should not abandon the people, and seek to find refuge and safety for themselves alone. Their measures having prostrated both in a common calamity, the country had a right to look for peculiar favor in any contemplated schemes of relief. The measures which have brought about this deplorable state of things were never asked for by the people. They never petitioned for a change in the financial system of the country. They never even complained of the operation of that system. As far as their opinions and wishes can be gathered from the representations of their agents upon this floor, in this house of the people, they were contented with things as they were. It is historically true, that all the remarkable and extraordinary measures on which I have commented, met, when proposed, the signal rebuke of the representatives of the people. The two measures most decisive, effective, and revolutionary in their character and tendency—the removal of the deposits, and the Treasury order, or specie circular—have never obtained any favor within these walls. They have been sustained, and the latter is still sustained, against the will of the people. Emphatically is this true, and not to be denied.

With what face, then, can the Government seek relief, to the exclusion of the great mass of the country? Why shall those who have devised, counselled, advocated, and adopted the measures which have resulted in a depreciated currency, be relieved from the inequalities of that currency; whilst the people, who, to say the least, have been passive in regard to those measures, are left alone to reap and enjoy the harvest of their bitter fruits?

But it is said that two of the bills before us are specially intended for the relief of the country: the one authorizing a farther postponement of payment upon duty bonds, and the other to adjust the remaining claims upon the late deposite banks. If there be relief in these bills, it is obvious to remark that it is extremely limited in its scope. But whose is the sole interest to be secured, if it can be secured, by these bills? Is it not the Government's? By pressing its debtors, the merchants and the southwestern banks, the Government may lose all; by granting an extension of time, all may be saved.

The Committee of Ways and Means have reported three bills, in conformity with the recommendations of the Executive, and growing out of the relations of the Government to the disasters which have befallen the country. The first proposes to postpone the fourth instalment of deposit with the States; the second authorizes the issuing of ten millions of Treasury notes; the third is a bill to impose additional duties as depositories on public officers. The operation of all these bills has distinct reference to the Government. The same committee also reported a resolution, declaring it "inexpedient to charter a national bank." I was debarred from the expression of my opinions upon this proposition, after having risen to address the house, by the operation of the previous question—that convenient piece of machinery to check debate, but applied so only in this the freest Government in the world. That proposition is one of the three connected with the great question of the currency, to which our attention has been directed. I voted against it distinctly upon the ground of its being bald and abstract in its terms. I voted against it upon another ground—because it negated the only wishes or opinions which have come before us by petition from the people. We have the sub-Treasury schemes suggested to us by the President; we have a new modelling of the deposite

bank system presented by a member from Virginia, (Mr. Garland.) The proposition for a national bank finds its way to us only through numerous and respectful petitions. I am unwilling to thrust aside unceremoniously a proposition to which the people have invited our attention. I should be unwilling to dispose of any scheme, even that of the sub-Treasury, in so summary a manner. I would receive and entertain all of them; I would reject no one, until it was laid before us in proper form and features, that we might examine it in its practical details, and judge of it with precision. I know not that I should vote for a bill to charter a national bank. I have no constitutional difficulties in regard to it; but I should seek to have it well guarded and secured at all points, especially, as far as possible, against the machinations of partizan politicians—the root, the fruitful source, as I verily believe, of all the troubles that afflict the country.

But, Mr. Chairman, the Administration having determined to shape their policy, under the new and extraordinary circumstances of the country, with special reference to themselves and to their own distinct interests, let us look at the measures suggested for our consideration.

We have a bill to postpone the fourth instalment of the surplus revenue. I opposed that bill in the committee. I shall record my vote against it, in whatever shape it may come up. In the present condition of the country, the payment of that instalment, amounting to nearly ten millions of dollars, would operate to that extent advantageously to the people. I am unable to see the necessity for the postponement. I have carefully examined the report of the Secretary of the Treasury on the finances; I have examined all the subsidiary and "verified" statements that have been laid before us from various quarters. If the deficiency supposed by the Secretary were susceptible of clear proof, that proof ought to be on our tables. I have not seen it. If it exist, it can be shown by that which does not lie; it is a matter of figures. I shall not follow the steps of the gentlemen who have addressed the committee in this particular, by going into the details upon this subject. The task is irksome. I agree fully with most who have preceded me, that a clear case has not been made out by the Secretary. No one can doubt that the Treasury is in an embarrassed condition; the mismanagement of the finances and the disruption of our whole system could not but throw our exchequer into utter confusion. That is the evil under which we are laboring. Confusion reigns through every department of finance and business. Hence arises the unintelligible exhibit which has been made by the Secretary. In the deposite banks there remains a balance greater than the amount of the fourth instalment. Very many of the States could and would make an arrangement with those banks for their proportion of that instalment, which would be beneficial to the banks, satisfactory to the States, and tend to the relief of the Government. To these States, which, from their relative position, could not enter into such arrangements, drafts, in the language of the Secretary, "drawn, but not yet paid, though payable," and therefore, in the view of the Government, equivalent to specie, would fully answer the purpose. In whatever light I regard this subject, it seems to me to be demanded, by every consideration that can enter into a sound and just policy, to pay over the fourth instalment to the States, even at the hazard of some inconvenience and even sacrifice.

The bill to authorize the issue of Treasury notes to the amount of ten millions I oppose; because I deem the proposition, if not unconstitutional according to the recently-avowed opinion of General Jackson, certainly fraught with the greatest hazard, and of dangerous tendency as a money measure or experiment of the Government. It is a bad precedent to establish: it has once only been resorted to in the history of the past, and then in the extraordinary emergency of war. It is a scheme which furnishes too great facility for money-making to any Administration. It is a power too easy to be perverted; and the exercise of it is inconsistent with the simplicity of republican institutions. Surrender this power as a matter of ordinary legislation; con-

nect with it the proposed system of sub-Treasuries, designating the kind of currency which the Government is to demand, and you fix upon the country at once a Treasury bank in its worst form. I cannot shut my eyes upon the suggestion which has been made in another branch by a distinguished and now willing advocate of all these measures, that the Government ought to provide for an emission of paper money, declaring his opinion, at the same time, that convertible paper does not constitute a suitable currency. I believe the same opinion has been avowed during the debate in this house. Such a proposition would carry us back at once to the old continental money: so monstrous a proposition shows most convincingly the dangerous career we have before us, in consequence of departing from a financial system that had been reared upon the foundation of a long and successful experience.

I have voted, sir, in favor of an amendment to the Treasury note bill, to authorize the Government to raise, by loan, such sum of money as the actual wants of the Treasury demanded. That is the mode of raising money which the constitution has designated. "Congress shall have power to borrow money on the credit of the United States." I see no reason for departing from this plain requisition of the constitution. I see every reason, in the avowed and obvious disposition of the Government to resort to experiments, why we should adhere strictly and guardedly to such a requisition. I repeat, sir, that I am willing to vote for any sum of money that shall be needed to relieve the Government from its embarrassments; but I am not willing to do so in any way but that which shall be clear, safe, and in accordance with the letter and spirit of the constitution.

The sub-Treasury scheme, or bill imposing additional duties as depositories on public officers, is confessedly the leading and distinguishing measure of the session. It has been characterized, and, I think, justly, as a proposition to detach the interests of the Government from those of the people; to give to the Government a "better currency," and to the people such a one as they shall feel willing, or be compelled, to content themselves with. This representation, I know, has been denounced, as if it were intentionally used as the watchword of party. Were it really such, I would freely join in the denunciation. But I look upon it as accurately descriptive of the bill. Such are the whole tenor and scope of it; and the only way in which, under the operation of this measure, there can be a community of interest and of feeling between Government and people, will be by the universal adoption of the same scheme. When that event occurs, we shall have arrived at the much-talked-of age of an exclusive metallic currency. If this measure shall receive the sanction of Congress, and pass into the solemn form of a law, the conflict will be but commenced between the system to which the country has been accustomed from the earliest days of the republic, and that system which bears upon its front the baptismal name of "untried expedient." It is plain to suppose that this whole people will quietly and unrepiningly witness the exhibition of their own servants in the indisputed enjoyments of a high privilege, and themselves excluded from all participation in it. A stormy and wrathful contest will arise, upon which, even as a fancy sketch, no patriot can look with composure. Sir, I cannot join in the crusade, which the adoption of this measure, as the settled policy of the Government, cannot but beat up against the long standing order of things. I will not consent ruthlessly to pull down an ancient institution, until I can be convinced that the substitute for it shall better answer the purpose. I am contented, nay, anxious to reform, where reform is necessary; but I cannot yield to what I feel confident must be the effect of this bill, if carried through to its outside purposes. I cannot agree to destroy.

This, then, is the stable and firm ground upon which I plant myself in opposition to this sub-Treasury scheme. Carried out into all its consequences, the effect of it must be, to change the framework of society; to revolutionize property and business; to reduce the former indefinitely, and most essentially, and to withdraw the latter into the hands of the few; to circumscribe, and almost to obliterate the field for enterprise; to paralyze credit; to deaden

the vigorous arm of industry; and finally, and in one word, to give to wealth that ascendancy which nothing but free competition can break down, and to make poverty hug its chains more closely. Whilst the tendency of this scheme must be to give superior and unjustifiable privileges to wealth in large accumulations, and necessarily to make the poor poorer, the blight and mildew of it must fall in a special manner upon that immense mass of our community, which, I would to God, were the one and only mass—the men of moderate property, and of enterprise chastened and well regulated.

Mr. Chairman, I will not dwell upon the numerous objections which are urged against this bill, with great force, as a matter of business. Its insecurity forms of itself an abundant reason why it should be distrusted and repudiated. The placing of public funds in the hands of individuals for safe-keeping or disbursement, leads the depository into that temptation from which every prudent man should pray to be delivered. The importunities of friendship alone have, through this means, dragged down many an honest name to the dust. The field of such temptation should be hedged in as much as possible, not enlarged. Gentlemen have referred already to sad cases of defalcation from this source in several of the States. The Commonwealth from which I come is not without this stain upon its history. And what is the experience which the records of one department of this Government have recently furnished? Within the last eight or ten years, over eighteen hundred instances of defalcation are officially reported to have occurred in the Post Office Department. Who does not know that most or all of the motives in the way of temptation either do not operate at all, or to a very limited extent, in regard to funds entrusted to corporations? Sir, these are considerations which ought to address themselves with great seriousness to wise and discreet statesmen.

The necessary increase of Executive patronage is also a solid objection to this bill. Such patronage, operating upon the individual, is always dangerous. The state of public sentiment in this country points with singular significance to the sober truth, that such patronage "has increased, is increasing, and ought to be diminished."

Mr. Chairman, I pass to the leading objection to this bill, which I am compelled to dispose of briefly, in consequence of our being very nearly at the last stage of the deliberations of the session. This bill denies in the face of the country the obligation on the part of the Government to furnish a sound system of currency and of domestic exchanges. The doctrines of the message upon this point are entirely new. But they are new, only because the Government, or rather the Administration, instead of wisely retracing their steps, are determined to go on with their experiments; and surely it cannot be strange that these experiments should interfere with the provisions of the constitution as well as with the prosperity of the people. The Administration having resolved by this measure to detach their interests from those of the people, it necessarily follows that the interests of the people are not to be cared for or provided for. The constitution has declared that Congress shall have power to regulate commerce between the States. Congress has always heretofore made such provisions, or attempted it, by establishing what has been deemed a sound currency, and with it, and dependent upon it, a healthful system of domestic exchanges. The opinions of all our statesmen, of all parties, from the foundation of the Government down to the present dynasty, have coincided upon this subject. And yet, we are now told that the Government might as well be called upon to convey the merchandise of its citizens from one point to another, as to regulate their internal commerce. Such are the absurdities to which we are reduced by a spirit of theorizing and a fondness for experiments. In support of these novel and unheard of notions, the example of the States of Europe is referred to; and their usages are marshalled before us against an express provision of our constitution, and the unbroken practice of the Government and country. Sir, who and what are we, that we are thus called upon to abandon all our experience, every lesson of our history, and to lay ourselves down at the feet of the monopolists and autocrats of Europe? We differ from the whole of

them, individually and collectively; and I desire to thank God that we do so. We stand upon the solid platform of free institutions; we live only in the free hope that is given to labor, and industry, and competition. We are a confederacy of sovereign and independent States—many in number—and differing in our local institutions, arrangements, and usages. And are we to be referred to the single and consolidated arm of power in the States of Europe for business example and currency precedents? It is this peculiarity in our political fabric which led the statesmen of the revolution to make the provision in the constitution to which I have adverted; it is the same peculiarity, distinguishing us from all other States, which has led all our statesmen until now to conform to the wise forethought of those sages and patriots.

Sir, I will not trouble you by recurring to the opinions of the older statesmen. I will only refresh your recollection by adverting to some of more recent date—to opinions that have been uttered within the last four years. What does Mr. Taney say in one of his reports concerning the State or deposit banks? This is his language: "They are providing a general currency at least as sound as that of the United States Bank, and will afford facilities to commerce and in the business of domestic exchange quite equal to any which the community heretofore enjoyed." Again, he uses strong language—language free from all doubt—when he declares of the same banks that "they are competent to perform all the services which the Government ought to require, and to afford all the facilities to the internal commerce and exchanges of the country, which have been claimed from the Bank of the United States."

I offer but one opinion more—that of the late President Jackson in that celebrated paper which was "read to the cabinet." Who will doubt the meaning of this passage—"It should also be enjoined upon any banks which may be employed, that it will be expected of them to facilitate domestic exchanges for the benefit of internal commerce?"

These are excellent opinions; but they were most unfortunately applied, as our sad experience every day is showing us. They indicate the firm convictions of those who uttered them; and they correspond with all the opinions of past time upon the subject until now. Sir, the business of this great country cannot be carried on—it is monstrous to suppose it can be—without a sound general currency and a well-regulated system of domestic exchanges. These are indispensable. They are equally necessary to the man of large business and to the man of limited operations. Remittances are made by every class and almost by every individual in the community. How can they be made without a general and universally accredited currency? I declare to you, then, my unshaken conviction that the people will not countenance the system you propose in this bill. They will not consent to be cut off from these indispensable requisites of good business and healthful prosperity. They will not suffer their best interests to be sacrificed in order to gratify your unmanly attachment to impracticable experiments. They will demand of you, they are already demanding of you, that you retrace your steps.

Mr. Chairman, before concluding, I feel bound to notice some remarks which fell from the member from South Carolina, (Mr. Pickens,) who opened this debate. That gentleman thought proper to make an attack upon northern labor; and, by way of retaliation upon "Northern Abolitionism," proclaims his intention to "retort the preaching of insurrection;" and the text which he takes is "the universal emancipation of northern labor from northern fraud and duplicity." He represents the banks and corporations of the north as engaged in "enslaving and subjecting the laboring class." And he, a slaveholder, proposes to erect the standard of insurrection, and to draw thereto the laborers of the north.

Does that gentleman understand what is meant by the labor of the north? Does he deem it an instrument which he can wield to carry out his purposes of sedition and insurrection? Let me tell the gentleman that the laboring classes of the north comprise the whole population of the north. The great rule of existence there is labor, and only

labor. I would like very well to see that gentleman advancing upon the north with his insurrectionary intentions. It would gratify me much to see him at the head of his new-raised cohorts, with his banners floating upon the breeze, and, under the inspiration of martial music, marching forward "to preach the universal emancipation of northern labor from northern fraud and duplicity!" The holder of slaves at the South, preaching insurrection to the honest, intelligent, and independent laborers of the north! It would be an exhibition worthy to attract more than the gaze of curiosity.

Sir, the gentleman misunderstands the character of our institutions, the character of our people, the character of our labor. If he will come to the north, I will gladly introduce him to our farmers in their fields, to our mechanics at their benches, to our manufacturers at their looms. He will find them a body of men able and ready to explain to him what is meant by northern labor, and what is the character of northern institutions. He will find them full of general intelligence, possessed of a perfect knowledge of their own rights, and prepared to maintain them. Let me tell the gentleman he will not find them very patient listeners to his "preaching of insurrection." He will not find them flocking to the standard of a slaveholder, as he proclaims to them the way to "universal emancipation from northern fraud and duplicity."

Sir, the gentleman misunderstands the nature of our banking institutions and other corporations, as much as he does the character of our labor. They are not engaged "in enslaving and subjecting the laboring class." They are themselves the laboring class. The men of business of the north, the men who manage and control all these institutions, are the great middle class of society—the men who, by their own industry and intellect, have made themselves what they are. The banking institutions are owned not by the great capitalists, but by the active, thriving, and energetic men of business. The proprietorship of these institutions is, for the most part in the hands of the men of moderate property, of females, of orphans, of charitable societies. I do not stand here as the apologist or the advocate of banks. Much, very much, they may have done wrong. They are in the hands of the people at all times, for regulation and reform. Sir, I will not detain the committee, but I cannot avoid asking permission to read a passage from a letter of a distinguished personage upon this subject, which expresses, better than I can do it, what I deem to be the truth upon this subject. The letter was addressed to the Chairman of the Committee of Ways and Means, of the Congress before the last.

"If there were no State banks, the profitable business of banking and exchange would be monopolized by the great capitalists. Operations of this sort require capital and credit to large extent; and a private individual in moderate circumstances would be unable to conduct them with any advantage. It is proper that the business of banking and exchange should be open, as far as practicable, to the most free competition, and its advantages shared by all classes of society. Individuals of moderate means cannot participate in them, unless they combine together, and, by the union of many small sums, create a large capital, and establish an extensive credit. It is impossible to accomplish this object without the aid of acts of incorporation. The incorporated banks, moreover, under proper management, will offer a safe and convenient investment of small sums, to persons whose situations and pursuits disable them from employing their money profitably in any other mode.

"No commercial or manufacturing community could conduct its business to any advantage, without a liberal system of credit, and a facility of obtaining money on loan, when the exigencies of business may require it. This cannot be obtained without the aid of a paper circulation, founded on credit."

This is the language of the present Chief Justice of the United States, when Secretary of the Treasury; and here I leave the banks.

Let the gentleman from South Carolina proceed in his insurrectionary project against the labor and the institutions of the north. He looks for aid from the operation of this sub-Treasury scheme.

It might aid him, it is true; but with whom, that is sound hearted, will that consideration recommend the scheme? Let the gentleman proceed. He will return from the campaign mortified as well as instructed. His purpose is vain; his threats are impotent. As well might he attempt a crusade against the grave-yards of the north, and seek to spread ruin and destruction over the memorials of our dead, as expect to carry on a warfare, with any hope of success, against the industry, the enterprise, the sagacity, the honor of New England and the north.

## SPEECH OF MR. DAWSON, OF GEORGIA.

[As reported in the National Intelligencer.]

*In the House of Representatives, Wednesday, September 27, 1837.*—On the bill to postpone the payment to the States of the fourth instalment of the surplus revenue.

Mr. DAWSON said he would apologize to the House for participating in this discussion at this time. He would not have attempted it, but from the peculiar position in which he was placed in relation to the question under consideration. I purpose (said Mr. D.) making my observations brief. I do not intend, sir, in the investigation of this subject, to follow after the arguments of many honorable gentlemen who have discussed it. I understand the only question now presented to the consideration of this body is, whether we shall postpone the deposit of the fourth instalment of the surplus with the States. To that question, then, and to that question alone, sir, will I confine my observations, and endeavor not to go beyond the limits that should be prescribed to that subject. And, sir, in order to ascertain some important and leading facts in relation to it, it will be incumbent upon me, as a preliminary step, to propound some questions to honorable gentlemen, and more especially to the chairman of the Committee of Ways and Means; for, if I know myself, I can confidently aver that my vote will be the result of an honest conviction upon my mind, and a deep sense of the duty I owe my constituents and the country. Sir, if I could, on a question like this, be influenced by any party feeling whatever, I should hold myself utterly unworthy to represent those who sent me here.

For the purpose, then, Mr. Speaker, of discussing this subject most understandingly, and of presenting the facts as they exist, I will ask the honorable chairman of the Committee of Ways and Means this question: If this bill should pass, do you then propose to pass the bill on the Clerk's table, granting indulgence to those banks known as the deposit banks?

Mr. CAMBRELENG. I will answer the gentleman's question as well as I can. I can only answer for my own vote; but, in reference to that bill which proposes principally to grant indulgence to the banks in the southwestern country, I will give it as my opinion, that I have no doubt it will pass this House by a large majority. I shall certainly give it my zealous support.

Mr. DAWSON. Very well; I have a response to that. I also, Mr. Speaker, before I go into the argument, wish to ask gentlemen from the State of New York, and the chairman of the Committee of Ways and Means especially, whether the banks in the State of New York are considered as solvent or insolvent?

Mr. CAMBRELENG. The gentleman puts a more difficult question to answer, Mr. Speaker. Some of them are solvent, and some of them are possibly insolvent; there is one broken bank among them.

Mr. DAWSON. I mean the deposit banks?

Mr. CAMBRELENG. There is one of them broken.

Mr. DAWSON. I now, sir, put the same question to gentlemen from Ohio, to know whether the banks of that State are solvent or insolvent? The deposit banks, I mean.

Mr. DUNCAN said he would answer the gentleman as far as he knew, (although he knew nothing practically about it, but from report;) but he believed the banks of his State were generally solvent, and the public had confidence in them. Their paper, however, was from ten to fourteen per cent. below par.

Mr. DAWSON. Mr. Speaker, I discover that a large amount of the public money is on deposit in the banks of Louisiana, and I beg leave to propound the same interrogatory to my honorable friend from Louisiana before me, in relation to the deposit banks of that State.

Mr. JOHNSON replied, that they were as safe and as solvent as any in the Union.

Mr. DAWSON. I will propound the same question to my friend from Alabama, who sits near me. However, sir, I will not reiterate the question; but if any of the deposit banks, in any of the States, are insolvent or unsound, I should be glad to hear. I pause for a reply.

Mr. J. C. CLARK, of New York, referring to the reply of Mr. Cambreleng, said that that gentleman might just as well have said that all the deposit banks of New York were broken as that one was. As to the Dry Dock Bank, (to which he supposed the gentleman referred) he was informed the bills of that bank were at five per cent. discount. He did not believe the Government would lose a dollar by that bank. The banks of New York would compare with those of any part of the Union. The people were indebted to them more, by thirty millions, than the whole sum they owed.

Mr. WHITLESEY of Ohio said, that as he supposed these queries were put with a view to sustain an argument, it might be important that the gentleman from Georgia should receive correct information in reply. Mr. W.'s colleague had stated that the paper of the deposit banks of Ohio was at ten to fourteen per cent. discount.

Mr. DUNCAN explained that he had spoken of the banks of Ohio generally.

The inquiry, Mr. WHITLESEY said, had referred especially to the deposit banks. Now, (said Mr. W.) I aver that the paper of the banks in Ohio is not depreciated, unless it may be that of one solitary bank in the district where my colleague (Mr. Hamer) resides. There are not more solvent banks in any part of the United States. They are as sound at this moment as they

ever were. Let the New York banks resume specie payments when they will, the banks of Ohio will follow suit. One of the largest banks in the State is now paying specie. The bank at Dayton has never, in fact, ceased to do so more than a few days. Ohio is willing to take her share of the deposits in bills of her own banks; and if she shall receive more, she will give ample security that the deposits in her banks will be, at all times, forthcoming in notes as good as silver.

Mr. DUNCAN still insisted that it was a fact, if an individual wanted to convert Ohio bank paper into specie he must pay ten per cent. discount upon it.

Mr. HAMER remarked that the notes of the little bank referred to as being in his district were as good as any other, as far as they circulated.

Mr. WHITLESEY explained that he himself knew nothing about that bank, further than that, by the advertisement of the State Treasurer, he saw its notes were not receivable in payment of taxes. In relation to all the other banks of the State, their paper was received at par.

Mr. BOND confirmed this statement.

Mr. DAWSON. I have no doubt of the accuracy of the statement at all, for I have the authority of the Secretary of the Treasury that all the bills of those banks would be available at some period. The only doubt upon my mind was, whether these banks were solvent at this time; for upon that point the vote I shall give will be chiefly governed.

These facts now being ascertained, I propose, Mr. Speaker, to give the reasons that will induce me to vote against this bill. Sir, I am influenced by the idea of a contract between the General Government and the States. I consider the law of June, 1836, directing the deposits to be made with the States, in the nature of a pledge on the faith of the Government; and I hold the General Government bound to fulfill that pledge to the States, unless consequences injurious to the public interest and prosperity of the Union demand the postponement or repeal, or unless there exists an inability on the part of the Government to execute the law. With that view let the question be examined.

The Secretary of the Treasury, in his report to this Congress, whilst speaking of the temporary embarrassments which the recent convulsions in commerce and banking may have created, says "there is no just cause for despondency." The country "is neither overwhelmed with a national debt, nor destitute of large pecuniary resources on hand; but, entirely free from the former, it is so amply supplied with the latter, as to have in the Treasury over forty millions of dollars, and eight or ten millions more in bonds, which will soon become payable. But a large portion being in deposits with the States, and the residue chiefly in banks, and in the hands of merchants, under the difficulties before named, in procuring promptly, and in a legal currency, the amounts of money which are needed, some collateral aid for a short period, till a sufficiency can be collected, appears to be judicious, if not indispensable." The amount, then, in the Treasury, and due it, is over fifty millions of dollars; of this sum, there is yet in the deposit banks over thirteen millions; in the hands of merchants, over ten millions of dollars. But the Secretary of the Treasury says these funds are unavailable. What does he mean by the word unavailable? Nothing more than that the notes due by the banks, and the bonds of the merchants, cannot be converted, at this instant, into specie. Hence the call of this extra session of Congress, and the difficulties and confusion in the operations of the General Government and among the people. In this condition of affairs, Congress is in session; and our agent of finance recommends forbearance, indulgence, and kind treatment to the deposit banks, which owe the Government upwards of thirteen millions of dollars. Yes, sir, the recommendation of the Secretary is, that an arrangement be made with the banks, and the money be permitted to remain where it now is; and the same course be pursued towards the bonds given by the merchants for the public dues. He then says, "hence it seems expedient" that "some temporary resource should be provided until enough of the fourth instalment, or other means in the Treasury, can be rendered available to discharge all the public engagements." "It is not," says he, "to be a loan, or an increase of taxes of any kind; as the General Government, in respect to its finances, is far from having any just cause for despondency." Yet he asks Congress to supply him with ten millions of Treasury notes. And for what purpose? To supply the profligate and extravagant appropriations made by Congress for clearing out creeks, building useless fortifications, etc. and exploring expeditions in search of unknown regions of the world. Will this be a benefit or immediate advantage to the great body of the people? No, sir, no, sir. It is for the purpose of relieving this Government, and for that purpose alone. It is a mere arrangement to keep in motion the wheels of this central power. And this is one of the modes of relief which the gentleman from Ohio, who has just taken his seat, (Mr. Hamer) insists is to relieve the people! Sir, it becomes a farce! It is a mockery! when it is designated a bill for the relief of the people.

Mr. Speaker, what next do we hear? The chairman of the Committee of Ways and Means, this Chancellor of the exchequer, calling upon the Government, or rather upon the Congress of the United States—for what? He is to relieve some what more modest than the Secretary of the Treasury, and asks us for \$9,000,000—for the relief of this suffering and overwhelmed community? For what then? Why, it is in accordance with the views of the Secretary of the Treasury, and to add force to his requisition. And he, too, speaks of this bill as one, in all its tendencies, calculated to relieve the people, and improve the commercial operations of the country.

The gentleman from Ohio urges the passage of the bill postponing the fourth instalment, and warns the members of this House not to vote against this provision, and reads us a lecture of what our constituents will do if we oppose it. Sir, I do not consider the gentleman from Ohio a prophet, nor the son of a prophet, and consequently feel no apprehensions or uneasiness from his predictions; and shall await, with perfect confidence, the judgment of an enlightened and just constituency to confirm my views, and to sustain my course, on this question.

At this stage, at the earnest solicitation of many members, Mr. D. gave way to Mr. CRAIG, on whose motion the House adjourned.

On the next day, on proceeding to the orders, the subject was again resumed; and, at the request of that gentleman, Mr. D. yielded the floor to Mr. CAMBRELENG, who made the following explanation in reference to one of Mr. D.'s interrogatories:

Mr. CAMBRELENG said, with the permission of the gentleman from Georgia, he would explain more fully his answer to one of that gentleman's questions last evening, concerning the condition of the banks in the State of New York. He did not

mean to be understood that any of them, strictly speaking, were insolvent, or that they could not ultimately pay all their debts. He had referred to the Dry Dock Bank, which was placed by the Chancellor in the hands of receivers, and to the heavy losses sustained by many of the banks in the late revolution. By reference to the Treasury report, it would be seen that one of the city banks alone had twelve hundred thousand dollars of suspended debt; yet even that bank would in a few years restore its capital to its original amount by its collections and profits. He had merely intended to express the opinion that the actual capitals of many of the banks had been diminished during the revolution. He begged to be understood as entertaining no hostile feelings towards the gentlemen interested in these institutions, nor to banks, as the mere agents of trade; but to that legislation which is perpetually and improperly interfering with this as well as other branches of trade. His hostility was exclusively directed to this mischievous and corrupting interference with the business of men, which was not among the legitimate duties of Government."

Mr. DUNCAN and Mr. WHITLESS, of Ohio, also said a few words in mutual explanation, but in no way varying the statement of last evening as to the perfect solvency of the Ohio banks.

Mr. DAWSON resumed, by saying that it was not at his own solicitation the House adjourned last evening, for he would willingly have concluded his remarks then, much as he regretted the unpleasant necessity of sitting at such unreasonable hours.

Mr. D. continued: Mr. Speaker, I shall again resume the subject, and shall endeavor to confine my remarks closely to the matter we are investigating. With your permission, sir, I will just repeat the substance of what I stated last night. It was, that the Secretary of the Treasury had announced to the American people that the Treasury of the country was now full of funds, but that they were not available; that he asked Congress to be supplied with \$10,000,000 to carry on the Government; and that this application to the discretion of Congress the chairman of the Committee of Ways and Means had confirmed, and also asked a similar amount for the Government. Now, sir, I assume this position—for I desire this matter well understood, since I stand alone here from the State I have the honor in part to represent. I then ask, sir, what is to be done with the unavailable funds, if we make this appropriation of \$10,000,000 required of us? The response will be, the only response can be, that they must remain—where? In the deposit banks. If then, sir, they are to be unavailable to the Government—and I wish the question to be fairly understood—if the Government can go on without these unavailable funds, what earthly necessity, what earthly advantage, will it derive from the postponement of the fourth instalment? They tell you they do not desire any portion of it; they do not wish to use one single dollar of it, in the event of your granting the sum of \$10,000,000. Then, sir, this postponement of the fourth instalment will not even be required by the Government. Then, if it will be of no advantage to the General Government to grant this postponement, would it not be of immense advantage to the various States to have the use of this deposit money?

But gentlemen say that the States will not receive the bank paper of the other States in which the money is deposited. Have you tried them, sir? It is urged that you cannot divide the money among the States, because it is unavailable. Sir, there is, in my view, no difficulty upon this branch of the question at all; and why? Because the deposit law of 1836 requires the funds in the Treasury on the 1st of January, 1837, to be deposited with the States; and, whether the money be available or not, whether in bills or notes, or in specie itself, or in any kind of funds, available or unavailable, still the States have the right to become the depositories of the public money therein provided for, if they desire it, without regard to its kind or character. Sir, this is an argument merely for effect, and is not founded at all on the deposit act of June, 1836. The idea that the States will not receive it, is a mere gratuitous anticipation, a mere assertion without the shadow of a reason for its support.

Again, sir, the ten millions will grant instant relief to the Government; for the Secretary will not require the use of a single dollar, which shall be in the deposit banks, or due from the merchants, even if the whole of it becomes available within three weeks after the passage of this bill. Is not this proposition true, sir? It can not be denied. I ask gentlemen to respond to this interrogatory—will be have any use for that money? None, sir, none. This bill provides ten millions of dollars for the Government to pay its appropriations, its officers, and its agents; and this is all the Government requires. We are affording the means to do this, without reference to the money in the State banks.

Mr. Speaker, what is the next link in this chain of relief, having a connection with this postponement bill? It is the bill to grant indulgence upon the bonds due by the importers to the custom-houses. And what amount do the merchants owe this Government? About nine millions of dollars. Now, sir, I propose, in investigating this subject, to present all these facts fairly to the people whom, in part, I have the honor to represent. I ask this question, therefore: pass this bill proposing indulgence on merchants' bonds, and whom does it relieve? It relieves the importers, an isolated class in the cities of New York, Philadelphia, and Boston; and whether they be located there, or abroad, or whether they consist of the foreign manufacturers, it relieves them alone, and that indiscriminately. What aid, let me again ask, will that bill afford the retailing interest of the country? None, sir. What aid will it extend to the agricultural? None. What to the consuming interest? None, sir, none. The importer derives all the benefits of the indulgence. Sir, is this equal? Is it just legislation? Is it doing to others as you would be done by? These are questions the people will examine and investigate. By whom are the duties finally paid? By the consumer, and by him only. He pays the retail merchant, and the retail merchant pays the importer; yet you grant indulgence neither to the consumer nor to the retail merchant, but to the importer alone. This, sir, is what I call not only partial, but exclusive legislation, and in favor of a class which bears but an insignificant—hardly a discernible—proportion to the consuming, agricultural, or farming interest of the country; and if these large classes of the people were forced to rely on this bill for relief, they would be in a truly lamentable condition; and yet we are told this is a bill granting relief to the people. But mark me—I take no ground at this time for or against the merchants; I am only showing the fallacy of calling the measures before us a system for the relief of the people.

What, sir, is the next link in this chain of relief submitted by

the Chairman of the Committee of Ways and Means? He says, grant indulgence to the deposit banks. Upon what principle? For receiving specie, paid under the Specie circular or Specie order, in payment of the public lands, and then dishonoring the Government drafts? Sir, I might here take occasion to examine the Specie circular, and inquire into the means by which it was evaded, and why it failed, and how it failed, in depositing specie in the banks; but I will not at this time, because it would be foreign to the subject I propose to investigate. But, sir, I will ask, have gentlemen fully examined the profits and advantages that will be derived to the deposit banks from this indulgence if it should be granted? If so, then I will ask them, will they do injustice to the other banks of the country, and especially to the deposit banks, which have honestly and faithfully fulfilled all their engagements? Have gentlemen made this examination? Have you examined into the fact that you are holding out a premium, paying a reward, and doing an act of injustice to others, in order to provide for the relief of those who have violated their faith and broken their engagements? Have gentlemen taken into their calculations the enormous contrast between the conduct of the banks in some of the States and that of others? Do they know that the deposit banks of the State of Mississippi have in their vaults, or on deposit rather, upwards of seventeen hundred thousand dollars belonging to the Government? that the banks of Louisiana have nearly a million and half? the States of Alabama and Ohio each over a million? Have gentlemen asked themselves the question, is not this money pledged?—is not this money ordered to be deposited with the States? I will read to the House a very short statement, showing the contrast between the amount of public money deposited in some of the States with that in others?

The deposit banks owe the Government as follows:

1 Mississippi	\$1,714,373	14 Maine	\$257,554
2 Louisiana	1,440,023	15 Georgia	172,269
3 New York	1,400,670	16 North Carolina	146,030
4 Ohio	1,127,979	17 South Carolina	111,590
5 Alabama	1,020,556	18 New Hampshire	114,326
6 Michigan	986,050	19 Massachusetts	81,278
7 Kentucky	813,241	20 Illinois	39,693
8 Indiana	782,925	21 Connecticut	20,461
9 Missouri	589,327	22 Rhode Island	21,024
10 Tennessee	545,515	23 Pennsylvania	8,428
11 Virginia	403,136	24 Delaware	2,906
12 New Jersey	320,674	25 Vermont	588
13 Maryland	280,198		

Does this statement not show extreme inequality, great injustice, partiality, and grounds for dissatisfaction and complaint, if this body shall permit the public money, notwithstanding the deposit law, to be so unequally distributed?

Let us compare. The surplus, by the deposit law, is required to be distributed among the States, according to the number of Senators and Representatives. Mississippi, with two Representatives, has of the public moneys \$1,744,373; whilst Georgia, with nine Representatives, has only \$172,269—the State of Mississippi more than ten times as much as Georgia; and yet Georgia, under the deposit act, is entitled to four times as much. And, sir, you will remember that the deposit banks in Georgia (at least two) are, and have continued to be, specie-paying banks; and, by this time, it is thought, have fully paid over to the Government every dollar, or nearly so. Is this not too unequal?

Again: Massachusetts and Pennsylvania have in deposit only \$89,706 56, while Mississippi and Louisiana have \$3,184,396; and the proportions of the former being to the latter as 44 is to 9.

Again: Georgia, South Carolina, and North Carolina, adjoining States, have, in all, \$429,589 86; whilst Alabama, Mississippi, and Louisiana, also adjoining States, have \$4,205,233; the proportions of the former being to the latter as 37 is to 16.

Again: Ohio has \$1,127,979 50, and Georgia \$172,269 69; and, perhaps, by this time, not a dollar—of the five deposit banks which the Secretary of the Treasury reports as specie paying banks, two are in Georgia.

Sir, is it not evident, from these representations, from this statement of facts, that we are about to legislate unequally, unjustly, and unfairly, if we pass this bill? In argument it is admitted that the money in the banks will not be wanted for the necessities of the Government, when we grant the ten millions of Treasury notes.

But one word to the gentleman from Ohio. He says there is no pressure in the neighborhood of Cincinnati. No, sir! Then I want the world to know that, notwithstanding the President of the United States has called us here, and told us that the country was bleeding and suffering under embarrassment, still there is one green spot in this wide confederacy enjoying all the prosperity that can be desired. Why is it, sir? I will tell you. The single town of Cincinnati, in that gentleman's district, has one million of the public money in her banks, and, of course, loaned to her people—or perhaps to three times that amount of loans to the people upon the million in her banks. Sir, this is a strong inducement to operate upon the minds of the gentlemen in voting upon the measures under consideration, though I have no idea that the gentleman from Cincinnati would suffer a thing of this kind to influence him; money however, Mr. Speaker, will have its effect.

Well, now, sir, let us compare Ohio with Georgia in relation to this matter. Georgia, with her deposit banks, has paid nearly, if not quite, every dollar; and to make them able to fulfil their engagements with the Government, and to perform honestly what they had agreed to do, these deposit banks had to draw from the people, and of course press them; and for this honest course of conduct, what is to be meted out to her? She is still to be oppressed. Do not gentlemen who take ground in favor of this bill, discern the injustice of its passage?

Can I be mistaken in representing the interest of my constituents, and other sections of this country, by an opposition to this measure? No, sir, I know I cannot be mistaken upon a question where honesty and justice are involved. Like all men, I have my feelings; I am capable of knowing what is right and what is wrong—what to do here and what to do there. Sir, Georgia is to receive a fine reward at your hands for fulfilling her contract honestly! Sir, let me tell you, this is a fine specimen of congressional legislation! Let me ask you, sir, let me ask gentlemen on this floor, would it be patriotism for me to yield up the rights of the people I represent, in this way? Sir, you may cry out patriotism with your lips as much as you please; it requires me to make no such sacrifice. You may represent gentlemen, the prosperous condition of your particular sections of the country; but I tell you, it is a prosperity

gained by the public deposits—it is a prosperity procured by an unequal distribution of the public money.

Mr. Speaker, has this House come to the conclusion to take the fourth instalment away from the States? and for what? To leave it in the hands of those who have it; and three or four States have one-half of the whole deposits of the country! Is this to be only a postponement, Mr. Speaker? I apprehend not, sir. I apprehend it will be indefinite. Yet this is called a measure of relief! It is partial relief—relief of one class at the expense of another. Sir, there is not one single principle in the whole proposition founded upon a patriotic view of the subject, or consistent with equality among the States. It is doing more than justice to one, and withholding it altogether from others. It is narrow and contracted legislation, to benefit and relieve corporations at the expense of the honest people of this country. I am not opposed to the banking or mercantile interest; on the contrary, I am willing that relief should be extended to every interest; but the deposit banks and merchants, having been vilely abused, it is to make some little atonement to them, that these bills, for their exclusive benefit, (I allude now to the bills extending indulgences,) are to be passed, at the expense of every other interest.

Well, sir, presuming all these bills pass, I return to my constituents, and they ask me what I have done for them: what shall I answer? Shall I answer in the language of the gentleman from Ohio? Shall I say to them, Oh, yes! we have been most nobly and patriotically engaged. We have felt your oppression; we have sympathized in your distresses; we have seen the difficulties brought upon you by the Government; we have mourned over your situation, and we have almost wept tears for your afflictions! Well, what have you done? Why, we have passed a bill to relieve the Government, by authorizing the Secretary of the Treasury to issue ten millions of Treasury notes. Very well; what else? We have passed a bill to relieve the importing merchants. Well, what else? Why, we have passed a bill to relieve the pot banks from the payment of the public money deposited with them. Well, but what have you done for us? Nothing, sir, nothing; nothing at all! That will be the answer. Then, sir, will they reply, You have relieved the officers of the Government? Oh, yes, we did that. And you have indulged the banks? Yes. What! indulged those very banks which General Jackson denounced, in such strong terms, as having violated their faith, and being no longer worthy of the slightest confidence? Yes. Why did you do it? Now, sir, how can I reply to that? I tell you, sir, there will be a burst of feeling among the people on this subject; and this Administration have mistaken their ground, if they imagine their acts will meet with approbation. It is all a mistake, sir. And why is it a mistake? Because it is not right. Because it is not just. Because it is not doing equal justice to all, but is benefiting one class and section of the country at the expense and to the wrong of others. My constituents will ask me, Where is the fourth instalment we were to have had? What have you done with it? Why, I must reply, gentlemen, did you not see the President's Message, where it was recommended that you must postpone it? Did you not read the report of the Secretary of the Treasury, wherein he said it was wrong to pay it, and it must be left with him; that is, in the bank. And do you not know that he and the President both were against your having it from the beginning? Well, they reply, What have you done with it? You passed a bill to issue ten or twelve millions of Treasury notes. That was for the relief of the Government. What have you done with our money—our fourth instalment? Oh! we left that with the banks. Left it with the banks! Why, who told you to do that? Why, Mr. Van Buren, and his Secretary, and the chairman of the Committee of Ways and Means! [A general smile.]

Mr. Speaker, I have not drawn this picture to excite laughter, Mr. Sir. It is a melancholy truth. I insist upon it, sir, that this whole machine, this entire system, is a violation of the rights and equal justice of this country. And, say the people, you have left the whole of our surplus money in the banks; well, in what States are the banks? Why, they are over in Louisiana, and over in Mississippi, and over in Alabama, and in Indiana, and in Ohio, and in Michigan, chiefly. None in Georgia! No. Sir, these are all very hard questions, which will be presented by my constituents to me when I return, and the only answer I can give is, that I stated to the Speaker, I stated to Congress, my objections to this bill; I pointed out this inequality, and there was not a man in the House dared to deny it; and yet it was all of no use.

But, Mr. Speaker, I am not going to contend for the power of this Congress to relieve the distresses of the people; for I do not believe in the constitutional power of this House to raise money to give to the people. Only believe in a parental regard this House should have for the wants of the people, and, if any means can be devised, within our constitutional limits, that they should be. And we have the means of constitutional aid; and all we want is the inclination and the spirit to come up and do it, in spite of any mandastic the contrary, come from what quarter they may. That is all, sir. That is the only thing necessary for us to do. Uninfluenced by party, as the representatives of the people, and of them alone, let us do what we can.

Well, sir, what can you do? Why, you can pay the fourth instalment, what you pledged your faith to pay. But, it is said that the deposit will not be received in the only mode by which the Government can pay it. Sir, is there a gentleman upon this floor, and if there be, let him rise in his place, and say that his State will not receive its portion of the surplus in good solvent bank notes of the States. There is not a gentleman who will do it. I have no doubt every State would receive them. Why, sir, look at the fact, from Maine to Louisiana; for the question has been propounded by me to every State in the Union, and the answer given, that the deposit banks are all solvent, from one end of the country to the other. But they say they have not specie enough to pay all the States. Well, where are the States of this Union, whose circulating medium consists of specie? Where the States, whose commercial operations are carried on solely and exclusively through that medium? None. It is all a paradox. These bank notes are good. Alabama notes, how are they? They are owned by the State of Alabama, which is interested in all her banks. All the property in the State is pledged for their redemption. And who receives the profits? The State. Think you that the State of Alabama would fail to act with becoming magnanimity and honesty towards the other States? An imputation to the contrary would be injustice to her high character for punctuality as a State. So with Louisiana, Mississippi, and the other States having in their banks large amounts of Government deposits. They would surely act fairly to their co-States. The

deposit banks would not dare attempt such an outrage, as to refuse to make satisfactory arrangements with the States. Let Congress refuse to postpone the distribution of the fourth instalment, and the banks will soon make the settlement with the States.

Gentlemen charge the opponents of this measure with a disposition to embarrass the Administration of Mr. Van Buren. Why should I desire to impede his policy? If the Administration pursue that course which accords with my principles and views, so far I will sustain it; when it fails to do so, I will oppose it. If I were capable of any other feeling, I should be unfit to be a representative on this floor. No, sir; I will endeavor so to act as to be just; and to have fair, honest, even-handed justice extended to my constituents.

But, sir, let Congress refuse to make the deposits with the States, as required by law, and justice will not be done. Such are the necessities of the country at this time, that unless something be done, many of the States cannot, with any convenience carry on their usual commercial intercourse. The West and Southwest usually supply the Atlantic States to the South with stock during the fall of the year; and such is the condition of the currency at this time, that great perplexity will be the consequence. The specie is all locked up; no United States Bank notes; no western money; all belonging to the Government in deposit in the Western and Southwestern banks. Supply the States, distribute the fourth instalment, and they will take the paper of those States in whose banks there is, as I before showed you, a superabundance of the public funds. But, sir, this kind of talk, of the notes of your deposit banks being unavailable for the payment of the fourth instalment, will not do. You may make your "Globe" speak what it will; but it will not set aside the honest judgment of the people, especially when they know you have done an act of injustice. You cannot deceive them much longer; it is out of the question to do it; and it is ignorance of their intelligence to believe it.

These bank notes, being put into circulation, would be great relief to the people of the States; they will add to the circulating medium. Bank notes are the only means now in the hands of the citizens to transact their ordinary business. It is idle, sir, to attempt to justify this postponement by the allegation of the inconvertibility of the bank notes of the State institutions. Yes, sir, the people are told that the country has been overcome by distress, weighed down by over-trading and speculation, and that they ought to be aided and assisted; they are told that the Government has bank notes in great abundance—solvent, but they ought not to be circulated; that specie cannot be obtained for the States; and, therefore, they must have nothing.

I repeat—let any representative on this floor answer me—are not bills of the deposit banks of every State of this Union good? Yes, they are; and the people of these States know it.

Sir, there is another question coupled with this, that belongs to the States. The very moment you proclaim, through the papers of this country, that the banks are indulged from the payment of a debt, (which debt is a specie debt,) and tell the people these banks that have the money have loaned it to speculators to buy up the people's lands, as charged by the gentleman from Ohio, and have only notes for it endorsed by persons, many of whom are important functionaries, they will fire with indignation at this interposition of the Administration, if the fourth instalment be postponed.

[Mr. HAMER begged Mr. D. to give way for a moment. Mr. H. said he made no distinction between the banks West and East. He said that the banks had a large amount of public money in their possession, and that they had loaned it out to merchants and speculators. He meant to draw no invidious distinction between the banks East and the banks West.]

Mr. Dawson: Yes, sir, I was not mistaken, nor have I misrepresented the gentleman.

I repeat it again, sir; this very movement will seriously affect the State institutions. It will stab their popularity among the people. And have I not a right to raise the suggestion here? I call upon the friends of the States, the friends of the rights of the States, to mark it well. The State banks must be prostrated, say some gentlemen; and the first step to secure their prostration is to make them the peculiar favorites of the Government, by indulging them and making them unpopular among the people. This is the first step in the march. Then they "will have the banks upon the hip, and will keep them there," as the gentleman from New York said during the past summer.

If this be the object, I then inquire, Mr. Speaker, will not the postponement of the fourth instalment be an immense and incalculable injury to the States? No doubt of it. And, sir, it will not expedite the resumption of specie payments. Why not? Let me explain. The postponement carried, the banks will still resist payment. What care they? The debt still exists; how are they to pay it? They have not specie to do it with; and how can they do it if the Government continues to require specie, which is a professed object of the postponement and the indulgence?

To get the specie, they must curtail their issues; call in their notes, by reducing their credits; thereby pressing their debtors, decreasing the circulating medium, and consequently increasing the commercial embarrassments, and, of course, depreciating the value of the agricultural productions of the country.

But, sir, let the fourth instalment go to the States, and these difficulties will, in some measure, be avoided; the bank notes will go into circulation, and the people be aided, and to some extent relieved. The banks can then indulge their debtors without apprehension, and have no fear of the approaching day when specie shall be required *en masse* by the Government; and I feel confident that this course will better suit the present condition of affairs, and the existing state of things, than any other. It will be an act of sheer justice to the whole, and be, in my view, a partial discharge of the duty we owe the States.

Sir, if the money were absolutely required by the wants of the Government, I would vote for this bill.

Mr. Speaker, I will not at this time go into the subject of a divorce of this General Government from banks. I will only say that I have my doubts both of its expediency and practicability. But, when the occasion arises, I shall then be willing to express my views upon it; and, in the mean time, shall give the subject my calmest deliberation.

Then, sir, in conclusion, I aver that this postponement will be no relief to the Government, no relief to the people; but, on the contrary, inflicting an injury upon them; that the measure to grant indulgence to the importers is a measure which is local in its character, personal in its nature, partial in its operations,

and of no general relief to the country; that the indulgence to the banks, as proposed in another bill, is equally partial in its relief to the country; and I claim, in conclusion, the right of having the deposit act of 1836 executed according to the intention and meaning of the Congress which passed it, pursuant to the requisitions of justice and equity.

## SPEECH OF MR. JENIFER, OF MARYLAND.

In the House of Representatives, September 27, 1837.—On the bill to postpone the payment to the States of the fourth instalment of the surplus revenue.

The bill to withhold the payment of the fourth instalment from the States having been reported from the Committee of the Whole on the State of the Union, without amendment—

Mr. JENIFER, of Maryland, addressed the House. He commenced by saying that his remarks should be confined principally to the subjects embraced in the following inquiries, to wit:—

1. For what purpose was Congress called?
2. For whose benefit was the deposit law of June, 1836, passed?
3. Can the demands upon the Treasury be supplied without withholding the fourth instalment from the States? And,
4. What has given rise to the present embarrassments of the country?

Mr. J. said he should not attempt to discuss the question of contract, expressed or implied by the deposit law of 1836. That question had been ably debated on both sides in committee; and whatever might be the decision to which the House will come upon that point, he considered it of much more importance to ascertain whether the execution of that law, or its virtual repeal by the bill now on the table, would operate beneficially to the country.

Was Congress called together at this extraordinary session, to take into consideration the state of the community at large, and to adopt measures for its relief?

Or was it called solely to replenish the Treasury, at no matter what sacrifice to the interests of the States?

Was it called to relieve the Government, and further to oppress the people?

If the latter, then the object will be accomplished by the passage of the bill now under consideration, and others reported by the chairman of the Committee of Ways and Means.

Is there a gentleman here present, from no matter what part of the Union, when he read the Proclamation of the President of the United States, convoking Congress, who did not believe that the object for which it was called was to relieve the people as well as the Government? to adopt measures to restore the currency? to unite our exertions with those of the Executive, to stay the widespread ruin pervading the whole country? But now we are told that neither Congress nor the Executive have any right to regulate the currency; that there must be a separation of divorces of the Government and the pecuniary interests of the people. If this doctrine had been practised, and if the Government had not assumed all power over the currency, and had not attempted to regulate and give us a sounder and better currency, then all might still have been well.

But, Mr. J. asked, how long had it been since the Executive yielded the right of the power to interfere with the pecuniary concerns of the community, and to take under its fostering care the interests of the banks, of the merchants, and of individuals? It will be recollected that, in the fall of 1833, just before the meeting of Congress, the then President of the United States assumed and exercised the power to withdraw the public moneys from where they had been placed by law, and where they had remained since 1816, and distributed them where he pleased. This unprecedented act was viewed at that time, even by many of his warmest friends, as stretching the powers of the Executive beyond the constitutional right, and was deprecated by a large majority of both Houses of Congress. Yet, after the act was done, it was supported by those who had before denounced it; and this act was done to regulate and give to the country a better currency—"to afford increased facilities to commerce, and to extend accommodations to individuals."

In a letter to the President of the Girard Bank in Philadelphia, one of the selected deposit banks, the Secretary of the Treasury, in September, 1833, uses the following language, which was, none will doubt, the expression of the opinion and wishes of the Executive:

"The deposits of the public money will enable you to afford increased facilities to commerce, and to extend your accommodations to individuals. And, as the duties which are payable to the Government arise from the business and enterprise of the merchants engaged in foreign trade, it is but reasonable that they should be preferred in the additional accommodation which the public deposits will enable your institution to give, whenever it can be done, without injustice to the claims of other classes of the community."

"I am, very respectfully,

Your obedient servant,

R. B. TANNEY.

Secretary of the Treasury.

"To the President of the Girard Bank, Philadelphia." Mr. J. continued: It will be seen, by this letter, that the Executive at that time felt a deep interest in the "merchants," and particularly "those engaged in foreign trade," and directs the deposit banks to afford increased facilities to commerce, and to extend their accommodation to individuals." These instructions on the part of the Executive (at a time when, in consequence of this forcible removal of the deposits from the Bank of the United States, it was believed it would compel that institution, in self-defence, to contract her accommodations) were considered the most redeeming measures growing out of that atrocious act.

How does the liberal feeling expressed in that letter contrast with the miserable calumny vented by the late President, in a series of letters addressed to his dear friend, the Editor of the Globe, and which, though marked private, were published to the whole world.

The public money having been withdrawn from its lawful place of deposit and transferred to the selected State banks, some of which objected to receive it because they believed it to have been improperly removed, and which ultimately accepted the terms with specific instructions—what were their obligations? They were compelled to obey the instructions of the

Executive; which were "to adopt the most liberal course towards other institutions," "to afford increased facilities to commerce," "to extend accommodations to individuals," and "to give a preference to merchants engaged in foreign trade," because "the duties which are payable to the Government arise from their business and enterprise." And now, for having executed the orders of the Executive, for having performed the duties enjoined upon them, the banks and the merchants are denounced as being corrupt and under foreign influence; and this by the man who has brought them to the verge of ruin.

In his private letter to Mr. Blair, published in the Globe of the 9th of August last, Gen. Jackson says:

"Now is the time to separate the Government from all banks, receive and disburse the revenue in nothing but gold and silver coin, and the circulation of our coin through all public disbursement will regulate the currency for ever hereafter."

"The history of the world never has recorded such base treachery and perfidy as has been committed by the deposit banks against the Government, and purely with the view of gratifying Biddle and the Darings."

In another letter he adds:

"From the conduct of the banks and the merchants, they deserve no favors from the Government which they have attempted to disgrace, and to destroy its credit, both at home and abroad."

Is there a friend of the late Administration here present who does not feel ashamed and recoil within himself when he reads or hears read those foul calumnies promulgated through the official organ by the late President of the United States? Are they believed? Does the honorable chairman of the Committee of Ways and Means, (Mr. CAMBRELENG), or the chairman of the Committee on Finance, (Mr. WRIGHT), in the other House, believe those charges? Have not both of those gentlemen pronounced them to be false in the very bills reported by them from each of those committees? I refer to the bills on your table for the extension of the time of payment upon merchants' bonds. If those gentlemen believed the statements contained in General Jackson's letters to be true, they would not have recommended indulgence to those merchants who, by fraud and connivance with the banks, have attempted to "disgrace the Government, and to destroy its credit, both at home and abroad." Thus, Mr. Speaker, the State banks were used to put down the Bank of the United States, and then to enable the Executive to prostrate them also. This work has been commenced, and is to be pursued, regardless of the sufferings of the People, and all to give them a sound and better currency, which, like the long-promised "reform," means nothing more than strengthening the hands of the Executive to execute what purports to be his pleasure.

Mr. Speaker, in looking over the number of bills reported in either House, I see none, no, not one, calculated to relieve the People of this country from their present embarrassments, or to give any hope whatever of future prosperity. They cannot prosper without a sound, uniform, and stable currency. It is true, sir, that there is a bill for the postponement of the payments on merchants' bonds. This bill, so far as they are concerned, may have a beneficial effect. It is proper that such relief should be given, because your own acts had brought upon them the necessity of it. I approve the measure, and shall go for it with pleasure, and even to give still further time if required. It is also true that we have before us other bills for the relief of the Government.

Such is the object of the one to authorize the issuing of Treasury notes. But, sir, where is the measure emanating from either of those Committees on Finance to relieve the great body of the People?

The bill immediately under consideration is to withhold from the States upwards of \$4,000,000, which was directed to be paid to them on the 1st October approaching, and this, too, without any notice to the States. The deposit bill of June, 1836, distributing \$37,000,000 amongst the several States, provides that in the event that any portion of said deposits should be required for the Treasury, the Secretary is authorized to withdraw it "in sums not exceeding \$10,000, from any one State, in any one month; without previous notice of thirty days for every additional sum of \$20,000, which may at any time be required." Thus protecting the States against a too sudden or heavy draft, by which they might be inconvenienced. This bill proposes, without such notice, to withhold from them from \$300,000 to one and a half millions, according to the amount to which each might be entitled. From Maryland, for instance, upwards of \$200,000; from Pennsylvania, \$1,000,000; South Carolina, near \$400,000; New York, near one million and a half, and the other States in proportion. Is there no other means by which the Treasury may be replenished than resorting to the sum pledged to be paid to the States on the 1st October, and which has, in many instances, been anticipated in advance? This deposit with the States has been variously appropriated. By some of them loaned out at interest; by others applied to works of internal improvement; and by some to the purposes of education; the withholding of which, as proposed, must necessarily affect, more or less, those several interests.

Should the amendment of the gentleman from South Carolina (Mr. PICKENS) be adopted, it will render much less objectionable the bill, because that fixes the period when the nine millions shall be paid to the States, and takes from the Executive the power of withdrawing it at his will. The amendment to the amendment offered by the gentleman from Massachusetts (Mr. ADAMS) would make the bill still more acceptable, because in it the means are provided by which the payment is guaranteed to the States. But, sir, pass the bill, and you still have to raise, by loan, Treasury notes or other means to an additional amount. The estimate by the friends of the Administration makes a deficiency in the Treasury of from twelve to sixteen millions to be supplied. The nine millions withheld from the States will not answer your demands; and if you have to resort to the expedient of raising money as you propose by your Treasury note bill, why not issue notes to the full amount?

By this means you supply the demand upon the Treasury, without sacrifice to the States; and the principle is the same, whether you raise ten or twenty millions.

Mr. J. said he had seen a statement prepared by his friend from Massachusetts (Mr. Phillips), and which, it was to be regretted, had not been presented to the consideration of the House, which points out the means by which the demands upon the Treasury may be met without the withdrawal of the nine millions from the States, and without an additional tax

25th Cong....1st Sess.

Making public officers depositories—Mr. Pope.

H. of Reps.

upon the people. He hoped, before the question was taken, the House might have the benefit of his suggestions.

But, Mr. Speaker, why is the Government thus situated? Why is there a deficiency in the Treasury? Why is it that Congress is called to remedy the embarrassments under which the country is suffering?

I know that the response to these inquiries by the friends of the Administration is, that it is attributable to the Bank of the United States—to the State banks—to over-trading by merchants—to extravagant speculations. If such be the facts, who is responsible for all these causes?

In 1828 the country was prosperous, the currency sound, bank issues within proper limits, and confidence between man and man. From that period to the present time, the country has been under the dominion of Andrew Jackson. Congress has been under his control, and his will the law of the land. Which of his friends here present, in either House, have ever dared to raise their voice against his will? He undertook to re-organize the Government—to put down the Bank of the United States—to give to the country a sound and uniform currency—to establish a metallic circulating medium, and to make the people prosperous and happy. And now, after eight years of uninterrupted experiments, with all the departments of the Government under his control, with the exercise of a power which was never wielded in any country except a despotic one, his successor, in almost the first act of his administration, is compelled to convolve Congress to remedy the evils which he has inflicted upon the country.

But, sir, Congress cannot, by their acts alone, place the country where it was ten years since. They may, by persevering in the late experiments, divide the responsibility of those ruinous measures with the Executive, but they cannot remedy them without retracing their steps. Go back to 1834; replace the public money where the law directed it should be kept, restore the Constitution to its original purity by obeying its injunctions; repeal your Treasury circular, which was issued contrary to the almost unanimous consent of the Representatives of the people; listen to the voice which has spoken, in no doubtful language, from Indiana to Maine; attempt no more experiments upon the currency; do this, and confidence may be restored; but do not aggravate the sufferings of the people by contrasting their miserable currency with the golden bribe tendered to their representatives.

Sir, it is not extraordinary that while, on the 1st January, 1837, by a report of the Secretary of the Treasury, there was in the Treasury of the United States \$37,468,869.57 surplus over all the demands of the Government, and which was by law directed to be distributed amongst the different States, now we are told there will be a deficiency of from twelve to sixteen millions of dollars? And whilst the people are parcelled advised to deny themselves many of their accustomed comforts, and to economize their own expenditures, not one effort is made to curtail the expenses of the Government, which have risen up in eight years from thirteen to thirty-two millions of dollars.

The proposition has been made to separate the interests of the Government from that of the people—to establish for the one a sound, uniform metallic currency, and for the other such paper as is denounced to be perfectly valueless. This new experiment has already commenced, and a discrimination is to be made between different classes of Government creditors. I cannot more clearly show the rank injustice, and I might add, cruelty, practised by the Government in relation to this discrimination, than by stating a fact which has come to my knowledge since the adjournment of the House on Saturday. An old soldier of the Revolution, worn down by years and arduous duties in the service of his country, and who is entitled to a pension in consequence of those services from his Government, presented, as usual, his claim at the proper Department. A check or certificate was given for the amount, and, although he entrusted to have a few dollars for the payment of his post office account, he could not obtain a single dollar. To what objection was he brought by such a state of things as this? The Representatives in Congress, Heads of Departments, and various other officers of the Government, receive and send their papers, packages, and letters to and from all parts of the United States free of postage. Their frank saves them from oppression here. And yet, with few exceptions, gold and silver can be dispensed with except at the post office; and they being thus protected still are loaded with gold and silver, before it is asked for. And yet, a poor old soldier, who is as much a creditor of the Government for his pension as a member of Congress is for his mileage or per diem, cannot obtain as much of the precious metal as will enable him to buy from the post office his long-expected letter, perhaps from his children or grandchildren, whom he may never see again. Sir, the old soldier, with a check for sixty dollars in his pocket, paid for his services, cannot obtain from his Government money enough to pay for his letter, or credit at the post office to enable him to obtain it. And yet members of Congress and office-holders daily receive their golden reward for adhering to these experiments.

Amongst the bills reported from the Committee of Ways and Means, is one to revoke the charters of the several banks in the District of Columbia, unless they resume specie payments in thirty days. A similar bill was simultaneously reported by the Committee on Finance in the Senate; the chairman of those committees are both from the State of New York, and I would ask why has not this experiment been made there, where specie payments were first suspended? Sir, the reason is obvious. Neither of those gentlemen is responsible to the citizens of the District of Columbia for whatever acts he may perpetrate. And I will venture to say that the honorable chairman of the Ways and Means (Mr. CAMBRIENGE) would not have dared, at the present time, to have made such a proposition in relation to the banks of the city of New York, were he a member of the Legislature or the Corporation, notwithstanding he may suppose he has them as well as the merchants on the "hip," and so far down as not to be able to get up again. The citizens of the District of Columbia, and the adjacent counties of Virginia and Maryland, are alone interested in these banks. Their notes circulate freely, and are taken in payment for all business transactions, and, within the range of their circulation, are as current as the notes of any other banks; and, as regards their present derangement of the currency, are less responsible than most others. I speak from a knowledge of the fact, that two of the banks in this city continued to redeem their notes in specie some days after the suspension had taken place in New York, Philadelphia, Baltimore, and Boston. Nor did they cease to continue paying specie until advised by the Executive of the United States so to do. And one of those banks, being a depo-

sitory bank, was bound to obey the advice of the Secretary of the Treasury. With a knowledge of these acts, I cannot believe that this measure to revoke their charters can have originated from the Treasury Department, or can receive countenance there. It would argue a degree of injustice, if not perfidy, which I should be unwilling to attribute to any quarter. But the honorable chairman may have other reasons in commencing this attack upon the interests of the District of Columbia, and the surrounding counties of Virginia and Maryland. They are not his immediate constituents; they have no control over his acts; he may make his experiments here without responsibility; and these are his victims, because they cannot reach him.

We are told, and with much apparent triumph, that the notes of the State banks are perfectly valueless. Gentlemen who make these declarations cannot have much regard to the facts. Why are they received if there is no value attached to them? Why is it that they enter into all the business transactions, since you have compelled the seclusion of specie? The assertion is negatived by the fact that you receive them yourselves. And were it not that the Secretary of the Treasury, in his extreme kindness, has tendered you gold and silver, there is not one of you who would refuse to receive them. So that, with all the attempts to discredit the only currency your miserable policy has left us, the State banks at this moment are in a better condition than when you entrusted them with millions of the public money. A similar effort was attempted to depreciate the paper of the Bank of the United States, when it was determined to put down that institution; and although eight millions of the public money were vested in its stock, yet untiring were the exertions of the Government to discredit its notes and render them entirely worthless. What was the result? It was that the notes of the Bank of the United States were current every where, and taken in preference to all others, save by the Government, who are by law bound to receive them.

The Government having succeeded against the will of the country in putting down the Bank of the United States, now directs all its energies against the State banks, notwithstanding millions of the public money are in their vaults, and which might any moment have been made available by payment to any of the public creditors. Which of the Government creditors, whether contractors, office holders, or members of Congress, would have refused to receive in payment the notes of, or checks upon, any State bank within the range of their business, had not the Government waged this unnatural, ungrateful war upon them? Until this war commenced, no creditor asked for specie; they preferred the notes as more convenient; and when checks or drafts were drawn on the deposit banks the banks met them to the satisfaction of the holder. Had the banks been compelled to pay out specie for the drafts of the Government, I am sure I am safe in the assertion that no one could have been found which would have received that specie. Some gentlemen have erroneously imagined that specie was placed in the various deposit banks by the Government to meet those demands. I am not misinformed, the deposit bank in Baltimore, which has paid drafts and checks of the Government to upwards of a million of dollars, during the same period has not received from the Government perhaps twenty thousand dollars in specie. Most of the other banks here, no doubt, been in a similar situation; and yet they are discredited because they do not pay specie for all demands, whereas it cannot be denied that the Government, with all the deposits paid in specie, could not meet their own engagements, but had to resort to a loan or other means to effect it.

Mr. Speaker, there is no necessity for withholding the fourth instalment from the States; the deficiency in the Treasury cannot be supplied from this fund, it will not be sufficient for your purposes. If you require sixteen millions, nine millions will not suffice, and you will have to raise the remainder from some other source. Were the nine millions all that the Treasury required, there might be strong reasons for withholding it from the States. It might render unnecessary the resort to your Treasury notes or a loan. But if you have to borrow or issue your paper money, let it be for the full amount of your deficiency, and do not embarrass the States by withholding this payment from them.

## SPEECH OF MR POPE, OF KENTUCKY.

In the House of Representatives, Oct. 12, 1837.—The House having again resolved itself into a Committee of the Whole on the bill "imposing additional duties, as depositories in certain cases, on public officers,"

Mr. POPE, of Kentucky, addressed the Chair. He observed that he rose with reluctance, and much hesitation, to give his views to the committee on the principles involved in the bill, and the several subjects connected with it, after they had been discussed with so much ability in both Houses of Congress, and our session had approached its termination. He was aware that the committee were impatient to have the debate closed, and to take the question. He felt, however, that duty to the expectations of his immediate constituents and to himself forbade him to give a silent vote on a measure of so much magnitude, both in principle and consequences.

Many topics had been introduced into our debates during the present session, which did not seem to belong to any of the measures before us, and with reference to the parties in this House and the past political struggles of the country, to which he begged leave to give a passing notice. We ought (said Mr. Pope) to lay out of view every thing which does not belong to the crisis in which we are placed, and it seemed to him that gentlemen of all parties should elevate themselves for a moment above the mere party contests of the day, and act exclusively with reference to the good of the country. The vessel of State, in relation to our monetary system, appeared to be stranded, and all certainly should unite to put it fairly afloat again upon the great current of the public interest.

Mr. Chairman, the part I acted in the election of the late Chief Magistrate (said Mr. Pope) is well known; and on that account he had ever been unwilling to assail him, or the measures of his Administration. His veto of the bank bill, the removal of the deposits, and other acts tending to an alarming increase of Executive powers, at the expense of the other branches of the Government, were so much at war with his opinion of the principles and genius of our free institutions, that I have for several years declined to participate in the mere party struggles of the country. While I could not endorse the measures alluded

to, (said Mr. Pope,) I have not indulged in bitter censure or crimination of those with whom I have been politically associated. In my canvass for a seat here, (said Mr. Pope,) I appealed to no party on party grounds. My opinions about the United States Bank, currency, &c. were given to the people with openness and candor. Without disguise or evasion, or any mental reservation whatever, (Mr. Pope said) he had publicly avowed to his constituents his firm conviction that a national bank was a necessary and proper fiscal agent for the Government, the best regulator of our paper system, and an important auxiliary to the foreign and domestic commerce of the United States; and for the correctness of that opinion, he had appealed to the force of reason and experience.

Mr. POPE declared that, notwithstanding all the denunciations of the Bank or a Bank of the United States, his firm and unshaken belief was, that it is the best possible remedy of a permanent character which can be applied to cure the disorders in the local currencies, check excessive issues of paper money, and ensure to the nation a stable and uniform medium, and restore a healthy action to our money system. Public opinion in the Western States was strong and decisive in favor of this measure, and would be more so, from causes which do not apply as strongly to the Atlantic States. In Virginia, Maryland, New York, and other States on the Atlantic, the people trade to the cities on the seaboard in their own States; and the local currency will answer their purposes to a considerable extent. The trade of the Western States is carried on to distant places, much of it through other States, and the local currencies will not answer, and our Western traders are subjected to much loss in changing the paper received in every State through which they pass, going and returning; and all this loss falls on the farmers of the West; whereas, while the branch banks of the United States bank existed in the South and West, the traders were not subjected to the losses and inconveniences to which they are now exposed.

As so much has been said about merchants and overtrading, &c. Mr. POPE would remark that he represented an agricultural district, and that the farmers of the West were, if possible, more urgent than any other class, for a national bank, in order to have a currency in which they could confide—one sound and uniform. They had experienced the beneficial effects of a United States Bank, and were desirous to see that sound condition of things restored. Mr. Chairman, (said Mr. Pope,) I had occasion to act on this question of a national bank twenty-five years ago, in the other branch of Congress; and I then examined it with an honest inquiry after truth, and became entirely satisfied of the constitutionality and great utility of such an institution. The opinion I then formed, (said Mr. Pope,) I have maintained ever since, through good and evil report. Whether popular or unpopular, (Mr. Pope said,) he had made it a rule through life, when duty required him to act on a principle of cardinal importance or vital interest to the people, to explore it well, to establish truth in his own mind, and to adhere to it, unless overruled by the deliberate will of his fellow-citizens. Fortunately for me at this moment, in the opinion I express I stand supported by the voice of those who sent me, and the State at large.

Mr. Chairman, (said Mr. Pope,) before I proceed to bestow a special consideration on this Sub Treasury scheme, contemplated by the bill under consideration, or a national bank, which seems to be associated with it in this debate, permit me to notice other topics so frequently adverted to at this session. We are daily entertained or disturbed about the annexation of Texas, the tariff, and abolition. On the subject of Texas, I have no opinion (said Mr. Pope) at present to give; indeed, I have not considered it sufficiently to decide on the power or expediency of the annexation of Texas, if desired by the people of that country. Mr. Pope said he was not prepared to say to what extent our plan of Government could expand without endangering its integrity. It was a question on which an American statesman should not indulge hasty speculations; it was one which demanded grave and profound consideration.

In the old world there seemed to be natural barriers between nations—the Alps and Pyrenees separated communities; but here we had disregarded those geographical divisions, and cut down and perforated the Alleghany which divided the Atlantic States from the great Western valley. By roads and canals, with the consequent facility and rapidity, we had contracted practically the extent of our territory. I would, however, (said Mr. Pope,) implore gentlemen from the North and East, and especially the distinguished gentleman from Massachusetts, (Mr. Adams,) never to urge as a ground of opposition to Texas that slavery is tolerated in that country. It does not appear to be a legitimate ground of opposition. Should the provinces of Canada be ever separated from the mother country, and their independence established on the plains of Abraham, and that people should desire to be made part of this Republic, I should not think of objecting that they have or have not slaves. The question ought to be viewed on more elevated ground. We should bear in mind that in the struggle for liberty and independence, Virginia and Massachusetts shook hands as brothers, and staked their lives, fortunes, and sacred honor, in the common cause. Each State was left free to act in relation to domestic slavery.

It affords me pleasure on this occasion, Mr. Chairman, (continued Mr. Pope,) to do justice to the consistency of the respectable gentleman from Massachusetts, (Mr. Adams,) in the opinion he has expressed that Congress has no power to annex Texas to the United States. I well recollect (continued Mr. Pope) that he expressed the same opinion in the Senate, during the session of 1820-8, in regard to the admission of new States formed out of the Territory of Louisiana; but at the same time avowed his willingness, and I believe, with entire sincerity, while he could not concede the power to admit them, to vote for an amendment of the Constitution to authorize their admission.

The subject of abolition, so often mentioned on this floor, has never disturbed the people of Kentucky, although a slave State. I know (said Mr. P.) that there have been in my own State a large number averse to slavery, desirous of getting rid of it by emancipation, or in some other way. Some, probably, were in favor of abolition; but experience and observation have convinced the warmest friends of emancipation that any mode of terminating slavery and retaining them among us would be mischievous and dangerous. The Ohio river divides Kentucky from the free States of Ohio, Indiana, and Illinois; and while we are aware that there is a religious feeling and some fanaticism in relation to slavery, we indulge (said Mr. P.) no suspicion that the great body of the people of these States are disposed to disturb our slave property; and as to the enthusiasts and fanatics, we tolerate error and folly, while reason and practical observation are left free to counteract

them. The question of domestic slavery is one over which each State must be left to exercise sovereign control, subject to the power of Congress in reference to the importation of slaves from abroad.

The tariff is often mentioned, too, here, certainly foreign to the subjects of our present deliberations. Permit me, Mr. Chairman, (said Mr. Pope,) to retrospect the history of this tariff policy for the last thirty years. Nearly thirty years ago he was a member of the other branch of Congress; and gentlemen from the South and West, with the exception of Mr. John Randolph, and perhaps a few others, favored the tariff policy; and, in accordance with the expressed or imputed opinions of Mr. Jefferson, advocated the policy of rendering this country, to a great extent, independent of the workshops of Europe. I well recollect (said Mr. Pope) that I united in this opinion, without having ever considered deeply the effects of this policy on the different sections of the Union. The people of the Eastern States were at the time more inclined to employ their capital in commerce than manufactures, and Mr. Hilthouse, a Senator from Connecticut, a man of practical wisdom, remarked to me with apparent candor and much earnestness, that it was wrong to force or stimulate manufactures prematurely; that they ought and would grow up gradually with the growth of the nation. Circumstances, however, turned a large portion of Eastern capital into manufacturing establishments, and the Eastern people, ever astute and sagacious in whatever concerns their interests, asked for protection—more and more protection, until the South, awakened to a sense of the effects of this protective policy on the planting States, changed their course, and resisted this protective policy, which at one time gave rise to a most angry and excited contest. Fortunately for our peace and harmony, the question was compromised by the agency of a Kentucky member of this House, and a distinguished Senator from the same State; they, at least, aided much in restoring quiet to the country, and I hope that compromise will not be disturbed, and that until the year 1842 this matter will be at rest. It is very probable that the tariff policy was carried too far. Kentucky is a consuming State, as much so as Virginia and many other Southern States; and while she admits the power and policy of giving reasonable protection to American industry, she will be among the last to support, knowingly, any policy tending to sacrifice the interest of the South to advance or aggrandize any other portion of the Union. He would, however, take leave to remark, that he believed at no distant day Virginia and Kentucky will rival the Eastern States in many branches of manufactures. These States abound in coal, water power, and minerals, with a temperate climate; and it has been said of Kentucky that she contains the richest mineral wealth in the United States. Regions there, hardly inhabited now and considered of little value, will ultimately be filled with towns, villages, and an industrious and thriving population.

In connection with these vexed and exciting questions of abolition, tariff, annexation of Texas, we too often hear of disunion, &c. and I must confess, Mr. Chairman, (said Mr. Pope) that I regret to hear language of this sort from the distinguished gentleman from Massachusetts, (Mr. Adams) when speaking of Texas. When contending for freedom and independence with Great Britain, our brethren of the North did not object to an association with the South on the ground of domestic slavery. Kentucky is a central State, and a farming or planting State; a great consumer of foreign and American manufactures. We, the people of Kentucky, although, from habit, education, personal and commercial intercourse, partial to our Southern brethren, are not blind to the value and importance of our political association with the Eastern States. We consider them the right arm of our national strength as a maritime power. For intelligence, hardy enterprise, and skill in commerce and navigation, they are not surpassed, if equaled, by any nation of ancient or modern times. By the union of free and slave States, by their joint counsels and arms, our liberties and independence were achieved; and let not the trashy effusions of fanatics, or the visionary speculations of misanthropists, disturb our tranquillity or weaken those ties by which these States have been so long united. If we continue (said Mr. P.) a united people, this nation will, at no distant period, by their justice and power, exercise more influence and control over the affairs of nations than ancient Rome when mistress of the world, or Great Britain when she asserted the empire of the seas. He begged pardon of the committee for digressing so far from the question under consideration, and had only to assure them that he was led off by a solicitude to divert their attention from subjects which had been, as he thought, rather strangely brought into discussion, and to bring the minds of all to a deep and solemn consideration of the existing crisis; for sufficient for the time is the evil thereof.

The bill under consideration provides not only for the collection of the revenue, but the establishment of a number of Sub-Treasuries, to be located in different places in the United States where the revenue and proceeds of the public lands are collected, and the Secretary of the Treasury is authorized to appoint agents to inspect the books and accounts of these Sub-Treasuries, and report to him. Those charged with the collection and preservation of the money drawn from the pockets of the people, with the agent to inspect, &c. are to be appointed by the Executive, removable at his pleasure, and in all respects subject to his control. It is in substance a bill to unite the purse and sword of this Government in the hands of the President, in derogation of a fundamental principle of our free Constitution, and the title of it should be, (said Mr. Pope,) a bill to consummate the overthrow of that equilibrium and division of power which the wise founders of this Republic intended to establish to secure American liberty.

The maxim that a division of power among different departments or bodies of magistracy, was necessary to secure liberty, seems to have been better understood and practically applied by the statesmen of modern times than in remote ages. This maxim has been incorporated into all the American Constitutions, and pervades every ramification of this confederated Republic. Such a division of power as will prevent undue accumulation of power in the hands of one department or body of magistracy, was deemed by our ancestors essential to the security of the public liberty. This great principle forms a vital feature in the political law of modern Europe, wherein it is held that every power ought to be restrained within such limits as will ensure the independence of neighboring States; and hence the numerous laws to maintain the balance of power.

Our Constitutions divide the powers of Government into several departments or bodies of magistracy, and these powers are again divided between State and federal bodies of magistracy. To the legislative department it belongs to impose taxes upon the people; and I put the question (said Mr. Pope) to the

grave and candid consideration of this committee, whether it properly belongs to the Legislature or the Executive authority to create or select the agent to keep and guard the money of the people, until drawn out in conformity to appropriations made by law? Is the Executive or Legislature the keeper and guardian of the public treasure? In practice, the first Bank of the United States was the chief agent in taking care of the public money, and the last bank was made the agent by legislative authority; and that both were safe and responsible agents, is ascertained by the fact that no loss was ever sustained while they had the care of it; whereas we know that numerous defalcations and frauds and speculations have been committed by collectors, receivers, and others charged with the care of the public revenue. Large sums confided to individuals furnish temptations too strong for poor weak human nature. Treasurers in Virginia and Kentucky, of the fairest character for purity and honor, afford strong proofs of the danger of confiding large sums of money to the care of individuals; and both States have directed the public money to be placed in sound and responsible banks. When it is deposited in a bank, to the credit of the Government, the whole corporation is responsible. The capital of thirty five millions of dollars of the late Bank of the United States was bound for the money placed in its vaults.

I will not, said Mr. Pope, detain the committee by any calculation of the additional expense, or Executive patronage of this new scheme of Sub-Treasuries, because it is liable to other objections of much more magnitude. To what responsibility, Mr. Chairman, (said Mr. Pope,) do you rely on the security of the public revenue? Do you rely on the bonds and securities provided for in this bill? Remember, (said he,) that there will be collected in the city of New York alone from twelve to fifteen millions; and that in the cities of Boston, Philadelphia, Baltimore, Charleston, and New Orleans, from three to five millions on an average will be received by the collectors at each port; and a large amount of this money must remain for a considerable time in their hands before it can be paid out. In the whole of these Sub-Treasuries, there will generally be on hand from five to ten millions of dollars. Now, sir, what individual and securities can be good and responsible for millions? Sir, you have no security for the safety of the public funds, but in the honor and integrity of the officers charged with the care of them.

I have, Mr. Chairman, other fears and objections in relation to this measure. The officers to have charge of your money will be the creatures of the Executive, holding their offices at his pleasure, and responsible directly to him. We all know (said Mr. Pope) that money has become a powerful agent in our political contests, and especially in the large cities. Let me suppose a violent party contest for the Presidential office, and the man under whom these treasurers hold their office a candidate; can you believe that they will resist the appeals of the friends of power, to use the public money to ensure the election of their favorite candidate? I cannot (said Mr. Pope) think of a scheme more likely to be fatal to the purity of our institutions, and the public liberty, than the one on your table. I deem it, said he, a most sacred duty of the representatives of the people to place the money drawn by their authority from their constituents in safe hands, and not where it will be in danger of being wasted and plundered. The guardianship and care of the public treasure belongs to Congress, and not to the Executive. Acting upon this principle, and in accordance with the genius of our free institutions, the people of Kentucky, in convention, provided that the Treasurer of the State, who was to be charged with the care of the public money, should be elected by the Legislature, while the appointment of all other officers was confided to the Governor and Senate.

This measure seems designed to substitute an exclusive metallic currency for the specie and paper currency, that is, paper convertible into specie, to which the people have been accustomed for half a century. During forty years out of forty-eight of our political existence under the present Constitution, we have had a currency consisting chiefly of silver money and bank money, that is, bank notes convertible into specie; for such paper has been considered and called money from the commencement of the banking system in Europe. That notes at all times convertible into specie, such as issued by the banks of the United States, have been deemed by the people money, and paid and received as such by all classes in this nation, is a fact of universal notoriety. And why we should, after this long practice and experience, revolutionize our whole monetary system, and run counter to the fixed habits and prejudices of the people, I am (said Mr. P.) utterly at a loss to imagine. Are gentlemen prepared to injure the best interests of the people and endanger our domestic tranquillity merely to preserve their consistency in error? Would it not be more wise, manly, and patriotic, regardless of all party considerations and past opinions, to sacrifice party opinions and a selfish policy on this altar of their country's good? Let us, said he, now look at our condition. According to the late estimates which we have been furnished, there is now in the United States from sixty to eighty millions of gold and silver, twice as much as we ever had before, with double the number of banks we had five years ago and our whole land abounding with the finest crops ever before witnessed; and yet, strange to tell, owing to the instability in the public councils, and a disordered currency, confidence and credit are destroyed, and distrust and painful anxiety pervade this great community. The commercial action of the nation is, to a great extent, suspended; a large number of our vessels and steamboats are laid up and idle; and a large portion of the laboring classes thrown out of employment.

The wisest statesmen and purest patriots of this nation have abandoned long-established opinions and prejudices in obedience to the voice of experience and the exigencies of their country, and why cannot we do likewise to redeem this people from the embarrassments, dangers, and difficulties which surround them? In this age and Government of experiment, we ought not, said he, to be surprised at change of opinion in the wisest men. The most enlightened statesmen ever selected to preside over the affairs of nations have been often mistaken: they have only seen through a glass darkly the consequences of their measures. God has given to the mental vision of mortals but an imperfect and limited view of the future. I must here be permitted (said Mr. Pope) to repeat the remarks of Mr. Giles, of Virginia, a most distinguished parliamentary debater on the floor of the Senate, when charged with inconsistency. In his defence, he observed that he should have lived to little purpose, if he had not learnt by experience to correct his errors; but, said he, I have another very sufficient answer to give to the charge—I am consistent in this, said Mr. Giles, that I consider it my duty, at all times, to my country, to do what is best for that country under the circumstances in which I am placed. In a

review (said Mr. Pope) of our political history for the last forty years, it will be found that there have been frequent and great changes of opinion on the most important subject. At one time the great body of the people of the South and West were opposed to a navy; but experience has corrected their error. Many of the most distinguished men have changed their opinions on the question of a national bank—Mr. Madison and Mr. Monroe among others. Thirty years ago the people of the Eastern States were rather opposed to the manufacturing policy, the South and West for it; and now the East for it, and the South and West, or a great portion of them, against it.

Let experience, said Mr. Pope, the best of all teachers, learn us to act wisely, in relation to the existing crisis in our public affairs. Let us reason together with frankness, and in a spirit of patriotism, and with bosoms animated with no other feeling than the public good, apply such remedies to the disorders in the currency which experience has proved to be efficacious, and restore once more a healthy action to the body politic. Let us, said Mr. Pope, have no more new, untried nostrums. The brokers and shavers are now reaping a rich harvest from this ruinous condition of the currency, and the loss must ultimately fall on the laboring and industrious classes of the community. The vacillating and unstable policy of the Government has shaken the confidence of moneyed men, who are now hoarding their treasures, because they are unable to calculate the results and consequences of the present state of things, afraid to lend or invest their money.

Mr. Chairman, (continued Mr. Pope,) the farmers of the West, when they sell their stock or other products of their industry, want that sound, good currency to which they have been accustomed; and when they sent agents here to correct existing evils, they did not expect them to provide good money for themselves only, but for their masters—the great body of the people. This bill provides that no money shall be received for land, or at the custom-houses, but gold and silver. Twenty or thirty millions of gold and silver are to be drawn from the interior every year into the land offices, and to the large cities on the seaboard, where it is to remain until paid out to the public officers—to the navy, army, and for the public works; and I fear it will beslow in its march back to the interior States, where there will be little or no public expenditures. How the State banks can resume specie payments, or maintain specie payments under this operation, I must leave, said Mr. Pope, to better judges to decide. From five to ten millions must be generally locked up in the Government vaults, and withdrawn from circulation. To reconcile us to this experiment, we are told that we are to have a hard money constitutional currency. I will not, said Mr. Pope, by exploding paper money convertible into specie, and establishing an exclusive metallic medium, carry this nation back to a rude and half-civilized age, before commerce, enterprise, and navigation had enlightened and civilized the nations; but will content myself with the facts and examples furnished by the most enlightened and powerful people of modern times, as the basis of my opinion and reasoning on this question. On a territory of no greater extent than Delaware or Rhode Island, or the city of New York or Philadelphia, a hard money medium would be practicable, and a paper medium could be dispensed with. It can only suit a small territory, where the population is dense, where it can be removed from place to place without much expense or hazard; but in this extensive country it must be evident, on a moment's reflection, that convenience and necessity require a paper representative of specie. Every traveller through this vast territory, with a moderate amount of the precious metals, would be exposed to hazard; the weight of his trunk or saddlebags would give notice, at every inn at which he stopped, of the amount of his treasure; and when large sums are to be transported to distant places, the peril and expense would be increased.

I will not, said Mr. Pope, by my vote, authorize the President of this free people to imitate the example of kings and emperors a few centuries past, who hoarded up at the capital all the gold and silver they could extort or filch from their subjects, to carry on wars of ambition and conquest. Neither my pursuits nor reflections have led me to explore, with the eye of a profound financier, the monetary systems of the commercial world in all their ramifications and effects; but I believe I may venture to say that neither this nor any other people can long have more than their fair proportion of the gold and silver of the commercial nations. If we should be able to obtain an excess, so as to produce a pressure in other countries, that excess would soon leave us and return to places where it would be wanted; nor can bolts, or bars, or vaults, embargoes, prohibitions, pains, or penalties, arrest the current established by the laws of trade, which no power, the most despotic, had ever been able to control. The currency of Great Britain and France consisted of gold chiefly, and paper with this difference, that in Great Britain the proportion of paper, in the form of bank notes to gold, was greater than in France. With these countries we have more commerce than with any others. Our currency has generally consisted of silver chiefly, and paper in the form of bank notes, with a greater proportion of paper than in either Great Britain or France; and the specie must flow from those countries to this, and from this back, according to the laws of trade, regardless of any laws or regulations of either.

Mr. Chairman, said Mr. Pope, in exploring the causes of our present difficulties, I shall not go back to the removal of the depositories, but content myself with the recital of a few extracts in relation to this subject. There is no doubt that the extensive and extravagant speculations in the public lands, diverting twenty or thirty or forty millions of dollars from the ordinary channels of trade and business, may have had some influence. The unusual importations of gold from England and France may have produced a pressure for specie there, which, reacting on this country, produced a rapid return of it, and forced the banks, for self-preservation, to suspend specie payments. In this conflict and pressure in both countries, cotton fell, merchants failed, and a shock was given to confidence, credit, and business; and owing to the fall of cotton, with other causes, a large balance was created against us in favor of Europe. In this state of things, said Mr. Pope, the Government, instead of denouncing the State banks, and threatening to crush them, by destroying their credit and issuing commissions of inquiry, should, on account of the people, if not the banks, have exerted all their power and influence to sustain their credit and confidence in them and their paper, the only currency among the people.

The effort money policy, and cast off the State banks, is calculated to have the most disastrous consequences on the community, by encouraging creditors to refuse to take the local currencies for their debts; to reduce the value of property, and unjustly

change the relation of creditors and debtors. The Legislatures of the States may be driven to stop execution, unless the creditors will take paper, as has been done by Virginia at her last session. Mr. Chairman, we do not realize the dangerous consequences to result from the disordered condition of the money system. Derangement of the currency, loss of confidence and credit, is the hinge upon which many revolutions have turned in civilized countries. It is well known that the derangement of the finances, and destruction of public and private credit, was the immediate cause of that revolution in France which deluged that country with blood. At an early day an insurrection occurred in the State of Massachusetts; and in my own State, not more than ten or twelve years ago after we had created numerous banks, the creditors and debtors had a most angry conflict; and after relief laws, judge-breaking, and a temporary war upon our judiciary, the people of that State were brought to the verge of civil war. On no condition of the State ought we to look with more deep concern than a disordered state of the monetary system. There are no duties of more paramount obligation on the Congress of the United States, than to exercise all the powers granted them by the Constitution, to restore a sound and healthy action to that currency which regulates the transactions of the people. To preserve union, establish justice, and ensure domestic tranquility, are among the leading objects of the Federal compact.

Mr. Chairman, said Mr. Pope, another unmeaning and complex notion is to be presented to the nation to reconcile them to this new and dangerous project. They are to be amused with the cant phrase, that Government ought to be divorced from the banks, and the people, who have based all their transactions on the local banks and the currency furnished by them, are to be abandoned to shift for themselves, under the denunciation and slanders of the Government—that same Government that brought many of these banks into existence, and assured the people they were to be confided in, and that they would furnish a better currency, and do the business of exchange on better terms, or as good, and more extensively, than the Bank of the United States ever had. And this language was held by the Administration up to the 4th of March last, when the late President, in his farewell address, only about eight weeks before the banks all suspended specie payments, from causes to which I have briefly adverted, announced to the nation that all was well in regard to our banks and currency. If those placed by the people of this country at the head of public affairs, for their supposed wisdom and patriotism, could not foresee the fatal catastrophe which was to occur in so short a time, how can they criminate with such wanton and unfeeling cruelty the conduct of the banks which had followed their counsels? For, sir, I have now before me the letter of Secretary Taney to the deposite banks, after the removal of the depositories, in which he exhorts the State banks to expand their issues, and to be liberal in their accommodations to the community. No sooner, however, (said Mr. Pope,) had the check been felt by the banks, and their doors closed, than the friends of the Administration became alarmed lest censure and reproach should fall on the Administration, and "let slip the dogs of war" on the banks, in order to make them the scape-goats to bear off the sins and blunders of the Administration.

Sir, (said Mr. Pope,) how many of the deposite banks are insolvent, and how much is the Government likely to lose by them? I should like to have a candid answer to this question. I am sure (said he) that I have not been informed. If any are likely to prove insolvent, they ought to be designated. On the contrary, we are informed by the Secretary that the public money placed in them will be ultimately safe. Their whole crime, then, consists in having expanded their issues in conformity to the advice of the Secretary of the Treasury, and the approbation of the Government, and, under an unexpected revulsion in trade, and a pressure for specie which the wisest men among us did not foresee, suspended specie payments. In this hour of difficulty and alarm, Mr. P. said he would ask of every candid man whether the Government, after having nationalized these banks and their paper, were not bound in gratitude to their bank friends and the people to put forth all their strength and constitutional power to aid and sustain their credit and the confidence of the community in the paper.

Mr. Pope said he had not much sympathy for those banks which accepted the depositories at the time of their removal from the United States Bank, because they had been hired and seduced to embark their influence in a crusade against the national bank, which they will find, and ought to have known long since, as the best regulator of our paper system, and the great conservator of the sound State banks of the nation. From the commencement of the Government, the national bank and State banks had lived in harmony, and worked together for the great and proper prosperity of this rising nation. By their joint efforts spurious and fictitious banks had been kept under, and during the existence of a national and good State banks, the people had been secure against a vicious national or local currency.

Mr. Chairman, if I was as jealous of men in power as a political man ought to be in this free Government, I should incline to believe that the plan has been long and deeply laid to destroy the present banking system of the nation, national and local, for the purpose of rearing up on its ruins a great Government bank, to be wielded by those in power; yes, sir, to concentrate in the hands of the Executive not only the sword, but the great money power of this nation. The first bank to be destroyed was that of the United States; and that accomplished, the next to be sacrificed were State banks; and it might have been supposed, from what occurred in 1814 and 1815, that they would fall an easy prey from similar causes; and then a Government bank would seem to be a necessary result of the destruction of all others; for, sir, it has never been imagined by the enlightened men of this country that the fiscal and commercial business of the United States could be carried on over our extended territory by an exclusive metallic medium. Until lately, I was utterly at a loss to conjecture the motive which induced the friends of the Administration to oppose, with such zeal and violence of denunciation, the char of the late Bank of the United States by the State of Pennsylvania; and what is most extraordinary is, that a distinguished citizen of Pennsylvania, now on a foreign mission, should have so lately advocated, in the public prints, the revolutionary course of annulling, in a convention, the solemn charters granted by that State. The bank had ceased to exist as a national institution; and why there should have been such hostility to its incorporation by the State of Pennsylvania I could not divine, until this Sub-Treasury scheme was announced in the late Message of the

President. It is possible that it was apprehended that a State bank of such magnitude, under State authority, might present some obstacle to the great destroyer of banks and embarrass the scheme under consideration, designed, if I am not greatly deceived, to lay the foundation of a great Treasury bank.

In looking at the past and present course of things, I am led back (said Mr. Pope) to the discussions in the Virginia convention of this Constitution, between Patrick Henry, the first orator of ancient or modern times, and one that looked through the deeds of men, and the late Mr. Madison, among the most virtuous and enlightened statesmen in America. Mr. Madison could not believe that any President would remove a good officer without reasonable cause, and supposed that the powers of Government were so arranged and divided that there could be no undue or dangerous accumulation in any department. Mr. Henry, with prophetic vision, at the same time that he bestowed a merited eulogium on the virtues and intelligence of Mr. Madison, said in emphatic terms that, unfortunately for himself, and unfortunately for his country, he had been bred up in the dark closets of study, and knew nothing of mankind. Sir, said Mr. Henry, whatever others may think, however they may admire this Constitution, to me it has an awful squinting towards monarchy. Mr. Henry had studied human nature thoroughly, and explored, with an eye of a wary statesman, all the secret springs of human actions, and foresaw, or thought he foresaw, a strong tendency in this Government to concentrate too much strength in the Executive head, and predicted that at no distant day he would be more absolute in fact, if not in form, than any monarch on the British throne since the revolution of 1688. Mr. Chairman, (said Mr. Pope,) from what I have observed within a few years past, I fear Mr. Henry's predictions will be fulfilled, unless every man who thinks this free system is worth preserving will stand forth and contribute his mite to check this tendency to prostrate all other departments at the feet of the Executive.

I know, said Mr. Pope, that many gentlemen calculate that this cant-phrase of divorce Government from banks is to carry them triumphantly through the pending struggle; but if they mount this petty, poor hobby, they will soon find themselves cast into insignificance. They rely too much on the credulity of the people, and underrate their intelligence. In prosperous times, when they feel, said Mr. Pope, no distress or suffering from the measures of the Administration, they cannot be easily roused to resist error; but in times like the present, gentlemen may be assured that the whole intellect and energy of the people will be brought into action to vindicate their rights and interests.

The respect I have, said Mr. Pope, for many gentlemen who talk about a divorce of the Government from all banks induces me to examine more gravely than might seem to be necessary or proper, the nature and character of this divorce. The parties to be divorced are the Government on the one part and the banks, and I would add, said Mr. Pope, the people, on the other part. Now sir, what is the Government, the party on the first part? It is, Mr. Chairman, if I understand the matter, the States and people acting here in all the departments by agents; this is a Government of the people and States, who are at present acting by selected agents, in one branch, the States acting by agents selected by them in their corporate capacity. Now, sir, what are the banks of the States but money corporations, created by the States, furnishing bank money or currency for the people of the States, and solemnly made by this Government, money agents of the United States, and furnishing with the sanction of this Government, bank money for the Government and people of the United States? The stock of some banks is owned exclusively by the States; in some the stock is owned in part by the States, and in part by the people; in others the whole is owned entirely by citizens. This divorce, then, if I can, said Mr. Pope, comprehend the true character of it, is a separation of the States, banks, and people, from the States, banks, and people. There is something so obscure and preposterous in the proposition advanced, that the Government of the nation ought to sever itself from the States and people, and leave the people to struggle with a ruinous currency without an effort to correct the evil, that I am at a loss for an argument to combat such an incomprehensible, idle phantom. Am I to understand gentlemen, said Mr. Pope, that the existing currencies in the nation, practically the money of the people, long the standard and measure of value among them, the basis of all their contracts and transactions, is to be left in chaotic disorder and confusion, without an effort on our part to apply a corrective, and that we, the agents of the people, are merely to provide good money for ourselves and public officers—that we, a select few only, are to be taken care of?

Mr. Chairman, let us reflect, said Mr. P. like faithful representatives and guardians of the public prosperity and happiness, and act effectively in obedience to the dictates of duty and patriotism. Let us exert all the powers granted by the Constitution to redeem our country from the evils and dangers which surround it. It is proper to examine, said Mr. P. the powers of this Government in relation to commerce, and money or currency. By the Constitution, power is expressly granted to Congress to coin money and regulate the value thereof, and to fix a uniform standard of weights and measures. To Congress power is expressly granted to regulate commerce with foreign nations, and between the several States, and with the Indian tribes. That money and currency is intimately associated with commerce, and has been so in all times and in all well regulated commercial nations, I need not, said Mr. P. adduce facts or arguments to prove. Money and currency have ever been considered the life and soul of commerce; in the language of Mr. Hume, it is the oil which renders the wheels of trade smooth and easy, and he considers the thorough concoction and circulation of money through a State of much importance.

The people of the United States, in Convention assembled, were deeply impressed with the necessity of granting to Congress full power over the subjects of commerce, external, and internal, and currency; and to make their intention more manifest, they denied to the States the power of coining money or emitting bills of credit. The evil which had been experienced from the power of the States to coin money or emit bills of credit, and the danger and inconvenience of permitting the States to regulate commerce with foreign nations, or with each other, induced the Convention to vest Congress with plenary and exclusive sovereignty over these subjects; and I put it to gentlemen, said Mr. P. to answer whether the powers and duties of this Government in relation to currency and commerce are not as ample and imperative under the limitations of the Constitution, as can be imposed on any other Government. The States and people of the States have not reserved any control or

sovereignty over these subjects, but have surrendered them to Congress.

The people of these States, by their relation to this Government, are bound, by their money and their arms, to stand by and support it in all good and evil times, and have a right to demand the exercise of all the power and means within the sphere of their authority, to give them a good currency, a fair measure of value to insure a just relation between creditor and debtor, and preserve a healthy action in the external and internal commerce of the country. Nor can the Government refuse or neglect to perform these duties to the extent of their power and means, without a criminal violation of their highest duties and obligations. If those placed in authority are too elevated to feel for the remedies of the people, or not wise enough to perceive the remedies necessary and proper to cure existing disorders; are so tight laced with commitment and consistencies as to be unable to act the part demanded by the exigencies of the times and the voice of a disturbed nation; let them retire from the post assigned them, and give place to wiser and better men, who have not sought the post of honor at the expense of principle and the public good; will not be committed against measures essential to maintain credit and confidence, and protect the great springs of the public prosperity. How different is the language held by the Administration of public affairs in this country, said Mr. P. from that held by the Administration of Great Britain and the Whigs of that country. In the year 1793, when the people of that country were overwhelmed with difficulties and embarrassments, and the commercial credit was in danger, the Government stepped forward with a kind and aiding hand, and arrested the ruin and desolation which seemed to be impending.

In 1797, when the Bank of England suspended specie payment, and a panic seized the nation, the prime minister of England, instead of denouncing the bank, and ordering a commission of bankruptcy against her, had a committee raised to examine her affairs, who reported, after a full examination of the affairs of the bank, that the means were ample to meet her engagements, and that she was sound and solvent; that the suspension was forced on the bank by the circumstances which surrounded the country, and the dangers which menaced it.

If, Mr. Chairman, said Mr. P. this Government had taken the same course, had an investigation made into the condition of our banks, and a report of the same character, so far as merited, made to the nation, with assurance that the Government would aid them with its credit and countenance to resume specie payments, they would have maintained with the people confidence in our institutions, so important in this hour of alarm and distrust; and if the President, in his Message, instead of denouncing a national bank, had declared, like President Madison, that the State bank experiment would not answer without a national bank, and recommended the measure to the consideration of Congress; if he had hurled from him the hobby by which he rode into power, and dismounted his followers, and admitted his error with that magnanimity which becomes the Chief Magistrate of a nation, he would have gained a crown of public approbation worth all the Treasury note bills and Sub-Treasury schemes which his ingenuity can invent in the four years for which he was elected. In confirmation of the opinion I have advanced, said Mr. Pope, of the duty of this Government to give the people a good currency, and guard against a ruinous and unstable one, let me call your attention to the sentiments expressed by the Whigs of England, such as Charles Fox, Sheridan and others, whose lives were devoted to sustain the rights of the people against the usurpations of the crown.

In a protest entered on the journals of the House of Lords in the year 1797, during the war between England and France, they held and maintain the following language and opinions. The whigs insist, in that protest, that "the advisers of the Crown are responsible for the condition of the State; responsible for its internal peace and general good Government; for the protection of its commerce, its credit, and the various sources of its prosperity and wealth." And Mr. Chairman, (said Mr. P.) I concur with Fox, Sheridan, and other whigs of England, whose lives were devoted to the maintenance of the powers and privileges of Parliament against the encroachments and usurpations of the Crown, that those charged with the administration of this or any other Government, are responsible for the condition of the State, and for the protection of its commerce and credit, and that no Administration can evade that responsibility with honor or regard to public duty. According to the express provisions of our Constitution, and the fundamental law inherent in every political association, these placed in authority are under the most imperious and sacred obligations to perform the duties to which he had adverted. It is true, (said Mr. P.) that, technically and strictly speaking, nothing but gold and silver can be forced on a creditor; but we know also that, in practice, whatever medium may by law or general consent be generally received in exchange for property or commodities, and in payment of debts, is, and must be, the circulating medium and currency of such country, and will regulate the performance of contracts, if another medium be not specially provided for; and hence the necessity imposed on the sovereign power to guard against the depreciation and fluctuations of currency, whatever it may be, to secure society against violent struggles between debtor and creditor, the necessary consequence of a spurious, uncertain standard of value. For forty years out of forty-eight of our national existence, our Government, by the use of national banks, has secured the country against these evils. It seems to be fashionable now, said Mr. P. to denounce the banking and credit system, and extol the hard money plan. The policy and expediency of banks he did not consider, at this day, a debatable question. They are liable, like all other good institutions, to abuses; but the system here, while we had a national bank, said Mr. P. attained as much perfection as in any other country where they had been used. Banks have been introduced in the most enlightened countries of Europe, the offspring of commerce and wealth in commercial nations. The experience of ages has established their utility, and it would be strange for us, at this day, to run counter to the long usage and testimony of the whole commercial world. We have had them in this country, said Mr. P. for more than half a century. Few men are willing to keep in their private coffers a large amount of money; the fact is difficult to conceal from those about them. A man cannot be always at home to guard his treasure, and is exposed to robbery and murder; hence men are generally disposed to deposit their funds on hand in some place of safety, and banks of good and solid character, and having general confidence, are selected by prudent men to take care of them; and these depositories, said Mr. P. are of great advantage to the public, because the money of the country, instead of being hoarded, is

secured by the owners from fire and robbery, and placed in good banks, and put in circulation by the banks, to aid the enterprise, industry, and business of the people. But to secure these advantages, and augment in this way the active capital of the community, it is necessary that the banks should be sound, and have the firm confidence of the people.

Banks, in their origin in Europe, were places of deposit and of inspection for money, to prevent clipping or debasing the coin. The checks of the depositors passed from hand to hand as money, and being convertible at all times into specie, this species of transfer was called bank money; so the notes of the Bank of England and of the Bank of the United States, while convertible into specie, may be properly denominated bank money. To give to paper, in the form of bank notes, the character of money, it is necessary so to organize and regulate our banking system as to secure to the holder of a note the power of converting it into gold and silver at all times; and this we have never been able to do uniformly, but by the agency of a national institution. The banking and paper credit of Great Britain has been carried to a greater extent than that of any nation in Europe; and under its operation and influence she has become the first commercial and naval power in the world. When Bonaparte, (said Mr. Pope,) was preparing to invade England with a million of soldiers, the timid part of the nation became alarmed, and made a run upon the bank, in order to prepare for flight from the kingdom in the event of Bonaparte's success; and this, with other causes, forced a suspension of specie payments; and yet England, with this suspension, maintained a war against nearly all Europe for more than twenty years—triumphed over the combined fleets of France and Spain in two decisive victories, at Trafalgar and the Nile, and carried her power and domination to regions where the Roman eagles never flew when mistress of the world; and there would seem to be no limit to her domination, but for the rising greatness of this Republic.

It was, said Mr. Pope, the Anglo-Saxon spirit of this people that gave us independence; and this nation, if united, will, at no distant period, rival Great Britain in commerce, and check her supreme dominion on the ocean.

What, Mr. Chairman, said Mr. Pope, has been the effect of the banking system and paper credit in this country? It commenced more than fifty years ago, has expanded with the growth of the nation, and, in less than half a century, under our present Constitution, we have risen from a small beginning to be the second commercial nation in the civilized world. Our navigation has increased; our country has improved, with astonishing rapidity, in wealth and internal improvements of every kind; our population has expanded to the far West, where the wilderness has been made to blossom like the rose, under the operation and influence of this banking system so much denounced of late.

Banks are useful, not only in aiding the general operations of commerce, but they place the poor and wealthy on more equal ground. Young men of enterprise, industry, and good habits, can generally, with the aid of friends, obtain loans, on moderate interest, to embark in trade and business; and thousands, said Mr. Pope, of enterprising young men without capital, with a little credit, have risen from poverty to opulence. I know, too, said he, that the branches of the United States Bank established in Kentucky, after all other banks were wound up there, diffused their loans and accommodations to the people of my State as fairly and usefully, and, indeed, more so than other banks ever did, and without interfering in our party contests. I believe, said Mr. Pope, no institutions were ever less liable to such an imputation.

Mr. Chairman, I have now to say to my friends from Virginia, who oppose this bill, and insist that the State banks shall be continued as depositories of the public money, that while I do not believe that this Government ought to depend on the agency of banks under State authority, I will vote with them to make general and special deposits in those banks in preference to the bill under debate; and I hope, said Mr. Pope, if the amendment proposed in favor of State banks should be rejected, that my friends from Virginia will unite with me for a Bank of the United States. They will answer me, probably, said Mr. Pope, that they cannot do this, because it is forbidden by the constitutional doctrines of Virginia, which, he must confess, he had never been able to understand, although born in Virginia, often an actor on the political theatre, and a supporter of three Virginia Presidents—Jefferson, Madison, and Monroe. If, said Mr. Pope, these distinguished men are to be considered the elders of the Virginia political church, with the addition of the late Mr. Crawford, born in Virginia, and supported for the Presidency by that State, we shall be still more at a loss to understand what is meant by the Virginia doctrines; and we shall probably find them like the doctrines of most other States—one rule of faith in theory, and another in practice.

It has been generally supposed that the Virginia statesmen of the Jefferson or Republican school were opposed to the exercise of implied or constructive powers; or at least that they are more strict constructionists than others; that they are opposed to the exercise of powers not expressly granted; and so am I, Mr. Chairman. If there is any plain line of demarcation between the opinions of Virginia politicians and others, in regard to the powers of this Government, I have never been able to discover it.

It is true that parties have differed about the power to pass particular measures; but there is no general rule of construction on which the statesmen of this country have differed, at least in practice. Those in opposition have, under every Administration, assailed the constitutionality of measures adopted by those in power; and those in power have uniformly exercised all the powers in their opinion necessary and proper to sustain their policy and accomplish their objects. If politicians of the Virginia school have, in practice, observed a more strict construction of the Constitution than others, I have in vain, said Mr. Pope, looked for evidence of the fact. Mr. Jefferson, Mr. Madison, and Mr. Monroe, united in the purchase of Louisiana, and its incorporation into the United States, the constitutionality of which was controverted by the statesmen of the Eastern States; and the correctness of their constitutional objections was admitted by Mr. Jefferson himself; but he justified the act on the ground of necessity. He considered the acquisition necessary, to secure to the West a free outlet to the ocean, and to preserve the Union. After this, a law passed Congress to establish a branch of the United States Bank at New Orleans, which the bank had no right to do under her charter; and, therefore, that act must be considered in the nature of an original proposition, and it received the sanction of Mr. Jefferson, then President of the United States; and other

laws were, I believe, passed during his Administration to protect this unconstitutional monster.

Mr. Pope said that among the first acts for which he ever voted in Congress, was the embargo recommended by President Jefferson, in the winter of 1807, for which there is no express grant of power in the Constitution, unless embraced by the clause authorizing Congress to pass all laws necessary and proper to carry into effect the powers granted, etc. or the power may be implied as incidental to the powers to declare war and regulate commerce. The public men from the Eastern States, or many of them, contended that, under a power to regulate commerce, Congress had no power to destroy commerce. The law, without limitation as to time, declared that no ship or vessel should depart from any port or place in the United States, for any foreign country; certainly one of the strongest measures ever hazarded by any Government.

Mr. Chairman, said Mr. Pope, I do not intend to be understood as questioning the constitutionality of the embargo law. At an early period of this Government, I think, said Mr. Pope, the Virginia statesmen supported the constitutionality and expediency of protecting and encouraging American navigation, by imposing discriminating duties on foreign vessels; and, until lately they admitted the power of Congress to pass a protecting tariff. In the year 1781, the continental Congress, composed of the most godlike men for wisdom and elevated patriotism ever assembled under the sun, passed the first national bank, called the Bank of North America, ten States voting for it, of which Virginia was one, and three against it. After the next bank, first under this Constitution, had passed both Houses of Congress, and been presented to President Washington for his signature, in consequence of some opposition to it in Congress on constitutional grounds, General Washington, with that caution and prudent circumspection which characterized his course through life, called on his cabinet for their written opinions on the constitutional question; and after receiving and considering them without reference to men or parties, (for he was above all party,) with that practical wisdom and forecast for which he was distinguished, approved the law. Yes, sir, this father of his country, this Virginia President, decided that a national bank was constitutional.

In 1816, Mr. Madison and Mr. Monroe, regardless of previous commitments, bowed to the voice of necessity and experience, and sacrificed their consistency on the altar of their country's good. Virginia, said Mr. Pope, supported Mr. Crawford, a decided supporter of a national bank, for the Presidency; and in that vote, according to the notions of the day, has declared in favor of a national bank. While on this subject, I will add to the authority of Virginia statesmen the opinions of Mr. Gallatin, Mr. Dallas, Mr. McLean, and others might be mentioned, the most enlightened financiers in the country, who have, from a thorough and practical knowledge of the necessity and utility of such an institution, concurred in opinion with the distinguished men to whose authority I have appealed. May I be permitted, continued Mr. Pope, to refer to the decisions of the Congress of 1791, 1816, and 1832, as high authorities in favor of a national bank?

In the face of this high authority, the experience of forty years of our national existence, and admonished by the present disturbed condition of the country, it is given out in speeches, and strongly intimated by the President in his Message, that he will put his veto on any bill for the creation of a national bank; and he speaks further, said Mr. Pope, in his Message, of the persevering opposition of the people of the United States to a national bank, and seems to suppose his election a high evidence of public opinion on this question. The conclusion he draws from the event of his election, furnishes very slender evidence on this point; for it never has happened that any Presidential election has turned on any one political question. The choice of the people, continued Mr. Pope, of a President is influenced by various considerations, and rarely with reference to any particular question or principle; and, besides, it ought to be recollected that the bank question had been disposed of long before his election, and could not have been the only ground of selection. But, continued Mr. Pope, if they decided against a national bank, they must have declared in favor of State banks. In pulling down the Bank of the United States, it was distinctly announced to the nation, not that bank agency would be dispensed with, but that State banks would answer the purpose better. The people, therefore, if they decided any thing, have approved the substitute presented to them by those high in authority, who now acknowledge that the substitute of State banks has failed; and hence it is but fair to contend that the people have only declared against a bank on the condition that the State banks would fulfil their expectations; and, therefore, it would seem to be still an open question, or the decision is in favor of a national bank. If any thing has been decided, continued Mr. Pope, it was the question between the Administration and the late bank, on the ground of imputed misconduct on their part, and not the general question of a national bank. He was not sufficiently acquainted with the facts to decide on the merits or demerits of the late bank; he had thought it indiscreet in them to issue publications concerning the controversy with the Government, because it did them no service, and subjected them to the imputation of interfering in the elections and politics of the country. For this course there may have been some excuse on the score of self-defence. I certainly never heard of any charge of the kind against the bank before their contest with the Administration; and the branches in Kentucky, he believed, had acted fairly and usefully, and to the satisfaction of all parties. I neither, Mr. Chairman, understand the facts involved in the controversy, nor am I disposed to concern in the discussion of them. I am for a good bank under proper regulations, with a competent capital; reserving to the States one-fourth or one-third of the stock, to be divided among them according to an equitable ratio to be paid out of the proceeds of the public lands; foreigners to be excluded from any direction of the bank; the interest to be moderate, and a majority of the stock to be subscribed by citizens of the United States, with a reservation of full power to Congress to guard against abuses, and to insure to the people a sound, stable and uniform currency, and a fair and undisturbed administration of its affairs. Mr. Chairman, I have no expectation of a national bank until Congress should act in advance of public opinion. I am ready to act, at any time, when a majority shall feel satisfied that their constituents are for it. I shall not be deterred from pressing this subject on the consideration of this House or the Executive by any intimation or menace he may give of a veto; and I deny his right in this way to dictate to or influence the deliberations of the legislative body. In doing so he departs from the sphere of action as-

signed to him by the Constitution of his country. From what part or clause of that instrument does he derive the right to tell the Legislature that he will not co-operate in measures deemed by them necessary for the good of the people?

The Constitution makes it the duty of the President, from time to time, to give to the Congress information of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; but on what part or clause he claims the right to tell the Congress of those things they ought not, or shall not do, I am yet, said Mr. Pope, to learn. The veto power was vested in the President, said he, to protect him against encroachments of the Legislature. It is, to the President, a conservative power, and may, in extraordinary occasions, be interposed to stay, for a time, rash and intemperate measures proceeding from high party or popular excitement, and pregnant with very disastrous consequences to the nation; and in such a possible case, not likely often to occur, the President may interpose to throw back the subject on the consideration of the people; but when it goes through the crucible of investigation, and is presented as their settled and deliberate will in relation to matters of concern to the whole nation, I cannot imagine a case where the President could rightfully use his veto to defeat the popular will; and the case is not materially different in regard to constitutional questions. After the nation has long considered and deliberately decided a constitutional question, the President must co-operate with the legislative department, not as he understands it, but as understood by the intelligence of the great community, for whose benefit it was made. The popular will, clearly and deliberately expressed, must control the course of this free Government, and especially on subjects of doubtful policy, and doubtful constitutional power.

To illustrate and support my views of this veto power, Mr. Pope said he would call the attention of the committee to the last paragraph of Mr. Jefferson's letter to General Washington, on the bank question, in the year 1791. Mr. Jefferson, after expressing his opinions against the bank, well concludes by telling President Washington that, unless his mind, on a view of every thing, was tolerably clear that it was unconstitutional, if the *pro* and *con* hung so equal as to balance his judgment, a just respect for the wisdom of the Legislature would decide the balance in favor of their opinion; it is chiefly for cases where they are clearly misled by error, ambition, or interest, that the Constitution has placed a check in the negative of the President. This opinion was given to the President at the first session the bank question was agitated in Congress, and before it had been discussed or decided on by the People. How much stronger is the case now, after we have made two successful experiments of twenty years each; after the constitutional power has been three times asserted by large majorities of both Houses of Congress, confirmed by all the other departments of Government, and supported by the opinions of a host of the most enlightened statesmen and patriots of this country? Let it be remembered, said Mr. Pope, that the charter of a national bank does not invade the Executive or Judiciary, and can only interfere, if unconstitutional, upon the rights reserved to the States and the People, and is a measure which concerns the interest of the People at large.

If, continued Mr. Pope, the People and the States, from a conviction of the necessity and utility of such an institution, should call on Congress to establish a bank, on what ground could the President rightfully interfere? Should this measure pass both Houses of Congress in conformity to the public will, I cannot believe it possible, said Mr. Pope, that he would venture a veto; but should he, in defiance of the public will, do an act so subversive of the great principle of self-government, for which our ancestors bled, I trust that another Patrick Henry will rise on this floor, and remind those clothed in a little brief authority here, that Caesar had his Brutus, Charles his Cromwell, and that they had better profit by their fate. Sir, this menace of a veto has no precedent in our history, except an opinion expressed in a message of Mr. Monroe about the appropriation of money for roads, for which he was censured by a friend on this floor. The British monarch would not dare to threaten a Parliament with a veto on a measure demanded by the voice and interest of the nation. The veto power, placed, continued Mr. Pope, as a shield to protect the Executive and other departments against the invasions of the Legislature, and to stay, for a moment, rash and intemperate action, was never designed by our Constitution to defeat the deliberate will of the nation in relation to measures of general interest.

I will not, Mr. Chairman, said Mr. Pope, say any more, on this occasion, of the veto power or its exercise, but will proceed to notice, very briefly, the amendment offered by a gentleman from Virginia (Mr. Garland) to the bill under consideration, for which, I repeat, I will vote, as the least of evils, and continue this State bank agency, whether the deposits are general or special, until the wisdom and experience of the nation shall provide a better. And here he would take leave to remark, that he felt proud that the old Dominion was the land of his birth, when he saw her representatives stand forth, with manly firmness, regardless of party and the frowns of power, and resist measures of such dangerous tendency; and he begged leave to assure them that he was not hostile to State banks—on the contrary, he believed it was wise for every State to have banks of solid capital, and under prudent management. He was not disposed, continued Mr. Pope, to impair the strength of the State Governments, because he held them to be essential pillars of the temple of American liberty. While he was not prepared to go the whole length of nullification, his observation of the course and tendency of this Government for a long period had convinced him that the strength of the State Governments must be maintained, and that they were the great bulwarks around which the people must occasionally rally to arrest the anti-republican tendencies to which the central power is liable in the hands of wickedness or folly. At the same time that I express this view, with unfeigned sincerity, I must, continued Mr. Pope, be permitted to say, that the National Government must be allowed the full and fair exercise of all the powers assigned to it, according to a fair interpretation of the Constitution, to enable it to accomplish the objects for which it was intended. The powers were granted to Congress to regulate commerce, external and internal, and to coin money and regulate the value thereof, in exclusion of State power; and it would be a violation of the spirit and intent of the Constitution to withhold from Congress any of the means fairly necessary and proper, and clearly adapted to carry into effect the objects of those grants of power to which I have referred. An unreasonable distrust or jealousy ought not to be indulged in this Government more than of other Governments created by the people, from whom both State and National Governments had emanated. Our na-

tional compact, continued Mr. Pope, whether of the people in the aggregate, or by the States, in their sovereign corporate capacities, ought to receive, especially in regard to powers and subjects to which the States are not competent, a fair and rational interpretation, to accomplish the object of the parties to it, instead of an over-strict, technical, or metaphysical one.

The Conservative friends, he said, must pardon him, while he admitted their manly independence, to say, with great deference to their intelligence, that, according to his reflections on the subject of commerce and money, they are only half right. We agree, (said Mr. Pope,) if I understand them, that an exclusive metallic medium will not answer over this extensive country; and that our social and commercial intercourse and business requires a paper representative of gold and silver, otherwise called bank money; for bank notes of undoubted credit, and convertible every where into specie, are money, for all the purposes of human society. If a paper medium is necessary—if one is to be coined or manufactured for this people, I put the question, said he, to the candor and intelligence of those gentlemen and all other gentlemen on this floor, whether, according to the divisions of power established between the State and National Government, that medium ought not to emanate from the Federal, instead of State authority? And if gentlemen could only free themselves from their commitments, and disregard of what is termed consistency here, they must respond in the affirmative.

Commerce and currency are certainly placed by the Constitution within the sphere of national legislation, and the paper medium or bank money representative ought to be issued by a national bank of universal credit and confidence, and on a foundation as firm as the Government itself.

It is essential, said Mr. Pope, that any paper substitute for specie to make a currency over the whole nation, and convertible into specie every where, must have a national character; and I now put it to gentlemen, continued Mr. Pope, to answer whether it is possible to make the notes of the banks of twenty-six States current every where, and constitute a uniform and stable currency for this people? Is it in the power of this Government to nationalize the notes of all these banks, however solvent they may be, so as to give them a par value every where? And if they cannot, the harvest of the brokers must continue, and the losses to the holders of notes must fall chiefly on the laboring, farming, and planting classes of the community.

It is impossible, said Mr. Pope, for the great body of the people to know the condition or credit of all the local banks scattered over this vast country; hence the necessity of a medium with the national stamp on it. The people may be acquainted with the condition, and have confidence in the banks of the State or neighborhood in which they live, but few can know much of distant institutions.

In the most prosperous season of trade and business, when there existed little distrust of banks, it was difficult to travel in different States with local notes, and it was generally under par at a distance from the banks of issue, and had to be sold to the brokers. Mr. Pope said he could not believe that this Government ought to be dependent on the agency of banks not responsible to them, but under the control of the States; and he had other strong objections to this connection, but he preferred them to the plan under consideration. In addition to the objections he had urged against this bill, he would observe that these Sub-Treasuries were to be dispersed over the country, and to be inspected by the agents of the Secretary of the Treasury, and their reports, through him, would be all the information which it would be practicable for Congress to obtain. A large portion of the public money might be perished from these Sub-Treasuries, which it would be impossible for Congress to detect, without sending committees to all these distant places to examine things and count the money, and then, without an inspection of the whole, the most vigilant scrutiny could be eluded. It cannot be expected, said he, that the members of this House can absent themselves from their duties here so long, and encounter the labors such an examination would require.

Mr. Chairman, continued Mr. Pope, we have now twenty-six States, with unlimited power to create banks, beyond the direct control of Congress, and it is the extreme of folly to think of exterminating it; and if one State banks another will, and this system must remain a permanent part of our domestic policy. These banks furnish, and will continue to furnish, local currencies for the people; and the inquiry is, whether this Government ought to guard them against the evils of the system, and what are the best and most practicable means of doing so. Every Administration, commencing with that of Washington, down to the present, has considered it the sacred duty of this Government to use the best means in their power to cure disorders in the currency, and insure to the people a stable and uniform measure of value for commerce and contracts of every kind. Can it be expected, said Mr. Pope, however we may get along in good times, that, in a commercial or pecuniary convulsion, or war, these numerous local banks can have general confidence in each other, or can be united and act with that concert which is necessary to sustain credit and confidence and a good uniform currency during the shocks incident to periods of difficulty and danger? Alarm and distrust overspread the country; moneyed men and holders of notes run on the banks, and force them to close their doors; business of every kind is suspended; thousands are thrown out of employment, and the public tranquility endangered. A wise Government ought not to content themselves with the means of managing the vessel of state in pleasant seasons, and when temperate breezes only are to be met with, but should be prepared to keep her steady and moving in the great current of the public interest in the most tempestuous seasons. Throughout our past political history, the strong ground taken against a national bank has been, that State banks would answer; for at all times it has been admitted that bank agency was a necessary and important auxiliary to the fiscal and commercial operations of the country. Twice has that agency failed; twice, for a period of twenty years each, has the agency of a national bank succeeded to the full extent of public expectation; and yet will those charged with the control of public affairs obstinately adhere to the ground they have assumed. If gentlemen believe their constituents are opposed to a bank, continued Mr. Pope, I will not ask them to oppose their will; I will, however, I must exhort them as fellow-citizens, and patriots, when they return among the people, to tell them, with frankness, that there is no other effectual and permanent cure for the disorders of the State but a national bank.

Gentlemen must be sensible, continued Mr. Pope, that

in the exigencies of war and the revulsions of trade, a national bank, with a competent capital, with well established credit and confidence at home and abroad, would be able, with the aid of the Government, to do more to sustain public and private credit and confidence, keep the monetary system sound and regular, and avert the evils incident to the perils of war and shocks in trade, than a thousand local insulated institutions, with no common head, jealous and afraid of each other, which, in a moment of panic, would each revolve on its own axis, and take care of itself. What occurred twenty years ago, said Mr. Pope, will occur again; when another bank shall be established, the small fictitious banks will be wound up, others of sound capital will dissolve and subscribe their funds to a new bank, and those of good and large capitals, freed from the competition of swindling institutions, will be able to do a fair business in harmony with a national institution. A new bank, if established, will be required to locate branches, one at least in every State, which will be particularly advantageous to the Western and Southwestern States. The capital and wealth of the South and West consists chiefly of land, live stock, and slaves; and the people there are more disposed to vest the fruits of their industry in such property than in bank stock, yielding a moderate profit of five, six, or seven per cent.

The interest of money in the West is high; in some of the States the legal interest is ten per cent., and the people of those States have little motive to put their capital in banks, who must lend at five or six per cent. The property of the commercial States consists, to a great extent, of money derived from the profits of trade, and they are willing to vest their capital in good stock, yielding a moderate profit; and they would prefer stock in a national bank, because more valuable, and under the protection of the Constitution and Government of the United States. Their capital, through the bank, would be diffused over the nation, according to the demands of trade and business, and would aid and encourage the trade, enterprise, and industry of the West, and especially of the new States of the far West. It would facilitate their exchanges and commerce, and every branch of their industry. The traders from the interior States of the West to the South and West would be able to do their business in a currency which would pass every where, and remit their funds from place to place without hazard or loss.

Sir, continued Mr. Pope, this bank, with its branches diffused over our extended country, part of the stock belonging to the States, would be a bond of union; every man, using a note of a national bank, would, in feeling at least, be in some degree identified with the National Government. The power and influence of such an institution is an objection urged by some, to which, Mr. Pope said, he would answer that he believed that the State institutions exercised forty times as much influence and power over the political affairs of the country as had ever been used by both banks of the United States. Nor, continued he, any bank exercise one-fiftieth part of the power and influence which belongs to the Post Office Department alone. The same objection of power was urged against a navy at an early period of this Government; it was said that the navy would be an instrument of power in the hands of the Government, but time and experience had overruled all objections to this strong arm of our national defence. The navy is not only a weapon of defence and protection to our rights on the ocean, but a powerful bond of union. Our ships of war, continued Mr. Pope, do not belong to any State; they are the common property of the nation; and every victory or defeat vibrates through every fibre of the body politic.

The strong ground of objection, and the one chiefly relied on at all times, said Mr. Pope, has been, that the Constitution does not authorize the creation of a bank, while its utility and convenience have been generally admitted. I shall not, continued he, enter at large into a discussion of this objection, nor have I the vanity to suppose that I could shed any new light on a question on which the intellectual powers of a Hamilton, a Gallatin, a Marshall, a Pinckney, a Crawford, a McDuffie, and a host of others, the most distinguished statesmen of our Republic, have been exhausted, supported by the cool and deliberate opinion of the Father of his Country, sanctioned three several times by large majorities of both Houses of Congress, and at a late period, after a long trial of its utility and necessity, confirmed by the opinions of a Madison and Monroe, two of the elders of the Republican church. One fact, often mentioned in the public prints, and much relied on here, I must, continued Mr. Pope, be permitted to notice; and that is, that the convention rejected a proposition to grant charters of incorporation. I have not, said he, examined the proceedings of that body; but if the fact be as stated, it proves nothing, because that proposition was for a general power to grant charters of incorporation. That was, I think, very properly refused—not is such a power contended for by the friends of the bank. It will be a sufficient set-off to that fact, to state another, and that is, that in the same convention a proposition was made to grant Congress a power to emit bills of credit, and that it was rejected. Now, sir, continued Mr. Pope, it is well known that during the late war Congress did issue bills of credit; and the bill passed at the present session, to issue Treasury notes, approaches very nearly, if not entirely, to bills of credit.

It, said Mr. Pope, is fairly necessary and proper to grant a charter to carry into effect any of the great powers granted, if such a measure is a necessary auxiliary to effectuate other powers, and it has a fair relation to it, then the bank is constitutional; and if money is not to be had to meet the demands of Government by taxes or loans, if it is necessary to resort to an issue of notes, then it may be constitutional. I voted, continued Mr. Pope, with much hesitation for this Treasury note bill, because it authorized a larger sum than appeared necessary, and it seemed to me more congenial with the spirit of the Constitution to borrow money directly than to do it indirectly; but as the amendment to borrow directly failed, and the interest on the notes gave it the appearance of a loan, I voted for it, to relieve the Treasury, and give some relief to the country. I entered this House, continued Mr. Pope, with no disposition to find fault or embarrass the Administration. I voted for indulging the merchants, and will give time to the banks to enable them to induce the people; and would have voted for the postponement of the fourth instalment, provided the House had adopted the amendment offered, making it the duty of the Secretary of the Treasury to pay the money at the period to which payment is postponed; but, sir, I felt constrained, by a regard for principle and the public good, to exert my feeble powers against the passage of this Sub-Treasury Bill.

Mr. Chairman, said Mr. Pope, I had more to say to this committee, on the several subjects embraced in this debate, but I feel too much exhausted to proceed, and will therefore conclude

with urging on the consideration of the representatives of the people the propriety of postponing a final decision on a measure of so much importance, and involving principles of such great magnitude, until public opinion can be pronounced upon it. If the measure be doubtful in principle or policy, we ought to avoid the appearance of precipitancy; respect for our constituents, who have had no opportunity of making known their sentiments, and who are to be bound by this measure, requires that the final action on this bill should be suspended until the next session. Let us, continued he, think a little more of ourselves, and afford our constituents an opportunity of thinking and speaking also.

## SPEECH OF MR. CROCKETT, OF TENNESSEE,

In the House of Representatives, October 5, 1837.—On the bill authorizing an issue of Treasury notes.

MR. SPEAKER: I hope, sir, the House will not think me impertinent or obtrusive when I ask their indulgence, but for a few moments, to submit some few remarks in justification of the vote which I feel it to be my duty to give upon the bill now under consideration. After so much has been said upon this subject, either directly or indirectly, perhaps I may not hope, sir, to cast any new light upon it, or to place it in any point of view in which it has not already been considered. But when I consider the pledges I am under to my constituents, and the very extraordinary course of measures which has been recommended by the Administration, I cannot permit this occasion to pass without at least making a general exposure of my views, in order that my constituents and the country may see upon which side of the "fence" I stand in relation to these great and important questions.

Sir, I was one of those who used all honorable means to prevent the election of the present Chief Magistrate of this nation to the distinguished and exalted station which he now occupies. But, sir, I do not entertain any bitterness of feeling towards the President; nor did I come here as a representative of the people determined to oppose his Administration, right or wrong, or to throw obstacles in the way of its success. On the contrary, it was my firm purpose to divest myself of the shackles of prejudice, and sustain the Administration in every measure which I might believe calculated to advance my country's prosperity, and fearlessly to condemn and resist whatever would, in my judgment, tend to produce a contrary result; and this is still my determination.

Sir, the Congress of the United States has been convened under extraordinary circumstances. We are assembled in obedience to the proclamation of the President, to take into consideration "great and weighty matters" which claim our attention; and we find ourselves surrounded by a state of things, in my humble opinion, unprecedented in the annals of this country. I must beg leave to differ most materially from the honorable gentleman from Massachusetts, (Mr. Parmenter,) who has just resumed his seat. He tells us there is no general distress in the country; that it is confined to a few individuals, and the merchants in the large commercial cities. But, sir, it would seem to me that we have before our eyes the most incontestable evidence of the deepest pecuniary distress and embarrassment in every quarter of this Union. So far as I have heard, no section is exempt, save the district of the honorable gentleman from Ohio, (Mr. Duncan,) who declared on this floor, not many days since, that none had been felt or experienced there; and sir, I apprehend this exception stands "solitary and alone." We find our currency most awfully deranged—every branch of industry and enterprise prostrate—public confidence withdrawn—commerce and trade suspended, and universal bankruptcy and ruin staring us full in the face. These things, sir, are acknowledged to exist, and are brought to our view, and their causes assigned, in the Message of the President. Whether he has given the true causes, I will not here stop to inquire; but, be that as it may, the evil is upon us, and all eyes are turned upon Congress with the most intense interest and anxiety, to see what measures of relief will be adopted; and, sir, what relief are we about to extend? In the very first paragraph of the Message, the most denuded and embarrassed state of the finances of the Government is brought to our notice; and, in the second, we are told that, owing to the increased embarrassments in the pecuniary affairs of the country, the public revenue would be so far diminished, that the accruing receipts into the Treasury would not, with the reserved five millions, be sufficient to defray the expenses of the Government until the usual period for the meeting of Congress; and, sir, although this increased state of embarrassment in the pecuniary affairs of the country is acknowledged to exist, yet a system of measures has been recommended, and has been brought forward by the Committee of Ways and Means, all having in view but one single object—the relief of the Government.

With this view, sir, it is proposed by the bill now under consideration to clothe the President of the United States with authority to cause to be issued ten millions of dollars in Treasury notes, to meet the exigencies of the Treasury; and for the redemption of which the faith and credit of the United States are to be solemnly pledged. This, then, sir, is the "great and weighty matter" which we have been assembled to consider! It is a "great and weighty matter" that the Treasury should be replenished, so that the office holders may get their pay. But the distress and embarrassment of the community seems to be a matter of minor importance, and of but little concern!

Sir, it has been urged by honorable gentlemen that this is a measure of relief to the country; that it will supply the country with a circulation and a medium of exchange; and I grant that it might offer some temporary relief; but, sir, I believe it would tend, ultimately, to aggravate the disease. So far from being a measure of permanent relief to the people, I believe it is the entering wedge to an institution almost as odious as the Spanish Inquisition. I mean, sir, a Treasury bank. In fact, if the amendment of the honorable gentleman from South Carolina (Mr. Rhet) be adopted, a Treasury bank of issue and deposit is at once established.

Sir, instead of showing any disposition to grant relief to the people, we are called upon to increase their burdens. We are about to heap upon them another national debt, (for, disguise it as you will, it is nothing less, and has been so admitted on all sides,) to the amount of ten millions of dollars, to relieve the Government; while the people are told, substantially, that they need not expect any relief; that it is the business of the Government to take care of itself; and that it has no power to intermeddle with the concerns of individuals! The Government, after having tampered with the currency until it is ruined and anni-

hiliated—after having prostrated every branch of industry and enterprise, the commerce and credit of the nation, by practising wild and visionary experiments—cuts loose from the people, and tells them it has no power to grant them relief, or interfere with their concerns! They are to be dismissed with a lecture on economy. Yes, sir; they are contemptuously told that they are to look to their own industry and frugality for relief, without the aid of the Government! Sir, this reminds me of the language of Job's comforters. We read in Holy Writ, that on a certain occasion Satan was permitted by the Almighty to try an "experiment" upon the firmness and integrity of "Job, a perfect and an upright man, one that feared God and eschewed evil;" that when, by the power of this arch-enemy of the peace and happiness of man, Job's fortunes, and his children, and every thing that was calculated to render him happy, had been driven to the four winds, and he was reduced to beggary and ruin; when, in addition to this, "he was smitten with sore boils from the crown of his head to the sole of his foot," and was groaning under the bitterest agonies of human affliction; when, in short, by one calamity upon the heels of another, he had been reduced from the highest state of prosperity and happiness, to the lowest depths of degradation and misery, and was wont to roll himself in the ashes upon his hearth, there was but one resource left upon earth he could look for consolation and solace—and that was, his wife. And when he cried out to her, in the bitterness of his soul, what was her reply? She told him he had better "curse God and die!" And, sir, pretty much in keeping with this is the President's consolation to the people in their afflictions.

Sir, do you imagine the people expected to hear such language as this from those to whose interests they have shown so much devotion? Did they expect their rulers to mock at their calamities, which they themselves have been instrumental in bringing upon them? No, sir; they looked to those whom they had placed in power to devise some means to relieve them from their calamities. The proclamation of the President was hailed with joy by thousands as a favorable omen. They hugged to their bosoms the delusive hope that their rulers had seen the folly of their course, and were about to retrace their steps. Sir, although the President was pledged to "read generally in the footstools of his illustrious predecessor," yet, I imagine, no one believed he designed to tread specially in his footsteps. And it was hoped that if he did tread in his footsteps at all, he would take his "back track" (if I may be allowed to use a hunter's phrase), at least in relation to the currency and the revenue. But, in all this, how sadly are we disappointed! So far from this, we find him disposed to plunge still deeper into new and untried experiments! Sir, what do we behold? The whole country involved in one widespread ruin, and the Government itself bankrupt; and we are yet to have another "experiment!" Yes, sir, the State bank experiment has failed, and the golden bubble has exploded, and left a wreck of ruin in their train; and now, sir, in obedience to the mandate from the Hermitage, we are to have the Government divorced from all existing banks, and wedded to a new and untried system of Sub-Treasuries, or, in plain language, a Treasury bank. Sir, we find that the ex-President is not content with having dictated to the people whom they should choose to be his successor, but seems now determined to dictate to that successor. I had hoped, Mr. Speaker, that, as the President had attained the summit of his wishes, he would kick from under him the ladder which he had ascended, and take the dictates of his own judgment as the man of his counsel; but, sir, mortifying as it may be, we find the Message the exact *fac-simile* of certain letters not long since addressed to the editor of the Globe, and published in that print.

Mr. Speaker, I shall not now undertake to discuss the Sub-Treasury system; but, sir, I will say, that, unfortunately as has been the result of former experiments upon the currency, I am bound to believe that this new project must prove much more fatal, if adopted. It is not only calculated to heighten the pecuniary distress with which the country is now surrounded, by bringing discredit and ruin upon all local banks, and all who are interested in them, or indebted to them, but will add tremendously to the patronage of the Executive, which I think is already much too great. My friend from South Carolina (Mr. Pickens) told us a few days since, in his answer to this argument, that he treated all such charges with "the most sovereign contempt." Sir, let me tell that honorable gentleman that it is easier to dispose of some matters by treating them with contempt than in any other way. In what, sir, does Executive patronage consist? I answer, in the power of appointment and removal from office, and the disbursement of public moneys. The President would have the right to appoint and every officer who would have have any thing to do with either the collection or disbursement of the public moneys, and consequently it would place directly under his control every dollar of the public revenue, and thereby unite the sword and the purse of this great nation in the hands of a single individual. Sir, we have had a little experience upon this point, in the removal of the public deposits from the Bank of the United States; and with this accumulation of power the President might trample under foot the right of suffrage—the most sacred ever guaranteed to freemen—and designate his successor with impunity, if he chose to follow the precedent already established. Sir, the liberties of this country were too dearly bought to be committed to the keeping of any one man, no matter how pure and unsuspected he may be. "Gold is corrupting," and power is tempting. It can never be done, sir, with my consent. And, besides, as I humbly conceive, the public moneys would be much less secure. The public revenue is to be taken from the custody of all banks, and committed to the keeping of some ten or eleven thousand individuals, scattered throughout the U. S. And, sir, although we have recently heard much said about the unavailable funds of the Government, I venture to predict, that if this new experiment be adopted, we have not heard the last of it. We have had an item of this description, in the annual report of our Secretary of the Treasury, for many years; and I fear, sir, that under this new organization of that Department, it will not require a great while to add a much larger item to the account, from the failures and defalcations of Sub-Treasurers.

Mr. Speaker, in order to remedy the evils which now afflict this country, I am for commencing the work where they originate. Let us, sir, in all due charity, instead of charging the whole of these misfortunes to the account of the people, at least charge one-half of them to the mal-administration of the Government; and, although it is not recommended by the President, let us commence economizing a little on the part of the Government, and set a praiseworthy example before the people. We have heard it remarked that example was much more

forcible than precept. Let us, sir, instead of creating a national debt, in order to keep up an extravagant and prodigal system of expenditures which has crept into the Government, commence the business of retrenchment and reform which was promised us a few years since, and adopt some measures of general and permanent relief to the community as well as to the Government; and then, sir, and not until then, may we hope to see better times, and cease to hear the complaints that are now continually saluting our ears from the tens of thousands of honest, industrious citizens who have been thrown out of employment and reduced to beggary and ruin during this age of experiments.

Sir, I deem it unnecessary to detain the House with any calculations to show the State of the Treasury, in order to prove that the passage of this bill is not required to supply a deficit in the Treasury, as contended for by the friends of the measure. It has already been shown to this House conclusively, to my mind at least, that, by withholding the fourth instalment of the surplus revenue from the States, and suspending certain appropriations for useless—pay, worse than useless, public works, exploring expeditions, &c. and thereby reducing the expenditures for the present year some fifteen millions of dollars, there would be ample means in the Treasury to meet all demands against it, without resorting to the expedient of issuing Treasury notes on the credit of the nation. And, sir, if this be true, would it not be an unpardonable outrage to heap upon the people another national debt, right upon the heels of the one just discharged? Sir, we have had theoretical reform long enough; I think it is time we should begin to carry it into practice. But, on the other hand, it is urged that, after withholding the fourth instalment of deposits from the States, and suspending the fifteen millions of appropriations, there will still be, in any event, a deficit in the Treasury, which renders it indispensable that this bill should pass. And, sir, we are told that the Treasury is in actual want of those funds at this moment, and cannot perform its engagements for ten days without them. I cannot perceive, sir, how this can be; but if it be true, I, for one, say, so let it be. If the Government has actually brought itself to insolvency, and it is really necessary to borrow money to pay its expenses, let the truth come out, and let things be called by their right names. Sir, this bill is designed to practise a fraud upon the people, by borrowing money in such a form that they will not understand it, and thereby shield the Government from the odium of bringing itself from a surplus of forty-five millions to bankruptcy in less than one year. If I were satisfied that there would really be a deficit in the Treasury, which would make it necessary to borrow money to enable the Government to perform its functions, I should certainly grant it; but, sir, I would prefer that it should be asked for in plain English in that form. I am opposed to laying burdens upon the people in disguise. If they are to be taxed, let them understand it, and have an opportunity to provide for it.

But I am told, sir, that we do not borrow money or create a debt by the passage of this bill; that we only anticipate funds that are now unavailable. And, sir, is it not possible that a large amount of these unavailable funds may for ever remain so? Is not the Government attempting to divorce itself from the deposit banks, and thereby to discredit and destroy them? And, should it so turn out, most unquestionably it will prove a debt to the nation. But, sir, in my opinion, this is all a fiction. I concur most heartily with the honorable gentleman from Massachusetts (Mr. Fletcher) in the opinion that there is not a dollar in the deposit banks, belonging to the General Government, that cannot be made available to the Treasury by another process, just as conveniently as by the measure now under consideration.

Has not the Treasury, for months past, been making these funds available, by drawing drafts upon them, even when it was certain that they would be protested by the banks? And I would like to know the difference between a protested Treasury draft and a Treasury note bearing interest. The draft is good against the Treasury, with interest, and charges of protest, and answers the holder every purpose that a note would. It enters immediately into circulation, and commands a premium on account of the exchange it affords. And, sir, while the Government has these unavailable funds in the banks, the Treasury may make them an inexhaustible source from which to create funds by means of drafts. The Treasury may draw upon the very same fund five hundred times, and the drafts may go the rounds, and come back upon the Treasury, and be paid out of the accruing receipts into the Treasury, and the fund still remain. Then, sir, where is the necessity of Treasury bills or notes? I can see none, and am therefore induced to believe this measure is proposed with no other object than to establish the precedent, and thereby make it the prelude to the great unfinished measure of the late Administration—a Treasury bank; an institution, in my humble opinion, more dangerous to the liberties of the people than a combination of all the powers of Europe. But, sir, I will not at this time enter into a discussion of this great question. I will only pray God that I may never give my sanction to any measure calculated, in the remotest degree, to establish such an institution.

Mr. Speaker, I fully concur with the honorable gentleman from South Carolina (Mr. Rhet) in the opinion that the people expect, and have a right to demand at our hands, the adoption of some measure which will supply the country with a national currency, which will answer as a medium of exchange between the different sections of the Union; but I am unwilling that these exchequer bills shall constitute this national currency. I believe, sir, that it is as much the duty of the Government to foster and encourage commerce as agriculture, or any other branch of industry; the prosperity of the one depends upon that of the other; and, sir, when we view society in all its ramifications, we find the interests of all classes so intimately connected, that who ever affects one must inevitably affect all. The farmer, the planter, the manufacturer, and the mechanic, are as much dependent upon the merchant as the merchant is upon them. And, although the merchants have been denounced with the bitterest epithets, and charged with being the authors of all the evils that now afflict the country—a most base and disgraceful attempt to array one class of the community against another—there is not one sentence of truth in it. Sir, if you destroy the merchants, what will become of all the surplus produce of the country? Every cent's worth over and above what every man can consume in his own family would prove a dead loss to him, and consequently every spring to industry and enterprise would be cut off and destroyed. And, sir, under such a state of things, we must inevitably relapse back, in a short time, to the most perfect savage barbarity. Indeed, sir, I look upon commerce as the main source and fountain from which all our prosperity and greatness flow. Where, sir, is an instance of a nation attaining to

any distinction or greatness, where commerce has not been encouraged? If there is one, it has escaped my observation. Why, then, should we not afford the facilities necessary to sustain this enterprising class of our citizens? It is a fact, universally conceded by all who know any thing of commercial operations, that the merchants do not bear the loss sustained for want of these facilities, and that it ultimately falls upon the laboring classes. It cannot be expected by any reasonable man that the merchants can buy and sell goods for nothing. They are compelled to make a moderate profit, and, consequently, all expenses incurred by them for want of proper commercial facilities, they must of necessity charge upon the goods, and ultimately the consumer pays it. So we discover that it is the laboring classes, "the democracy of numbers," so much talked off in this House, whose interest demands a sound and uniform currency throughout the United States.

The power of Congress to supply the country with some sort of national currency that is uniform throughout the Union, in order to assist the domestic exchanges of the country, I believe has been admitted, and even insisted upon, by every Administration, from the foundation of the Government down to the last. The first charge which General Jackson ever preferred against the United States Bank was, that it had failed to fulfil the expectations of the people and the object of its creation, viz. to furnish the country with a sound and uniform currency; but in this I think he was mistaken. The present Chief Magistrate, however, "with the lights now before him," has determined that Congress has no such power. But, sir, I think he must have read through magic spectacles, and will have to read again. He surely will not be sustained by the representatives of the people in a position so unprecedented and absurd. Admitting then, as it surely must be, that Congress not only has the power, but that it is our indispensable duty, to supply the country with a national currency and medium of exchange, the question naturally arises, how is this to be accomplished? Did any man ever seriously believe that the commerce and trade of this great nation could be carried on by an exclusive metallic currency? I answer, no; this question is too clear to admit of controversy. In the next place, sir, are the State banks able to furnish such a currency? Of this I shall leave every man to be his own judge; but, should say it is most clear and manifest they cannot. Then, sir, the great and important question comes up: What will accomplish this end? By one set of politicians, sir, a national bank is said to be the only institution capable of supplying this currency, and past experience is quoted as incontrovertible evidence in support of this position; while, on the other hand, it is most vehemently denounced as both unconstitutional and dangerous to liberty. These, sir, are grave and weighty objections, if well founded; and if any other means can be devised to accomplish this end, which will be free from constitutional objections, and less dangerous to liberty, I will most gladly embrace it. And, sir, I concur with the honorable gentleman from South Carolina (Mr. Rhet), that, unless the country be supplied with such a currency by other means, it will not take the people long to remove all constitutional scruples out of the way of a national bank. As for myself, sir, I do not believe that either of the objections to a national bank is well founded. I have never doubted the power of Congress to charter such an institution. But if I had, I should consider myself a most egregious bigot were I to set up my judgment against all the precedents on this point. Indeed, sir, I believe this is a question that cannot now be raised with any propriety. It has been twice determined, after the most deliberate investigation by every department of this Government, Legislative, Executive, and Judicial. And I am one of those, sir, who believe that the Constitution is as susceptible of being reduced to fixed and settled principles as any other law of the land. If it is for ever to remain an unsettled text, and is to be one thing to-day, and another to-morrow, and another again the next day, to suit the whim and caprice of the powers that be, I think we had better surrender the instrument. We had better have no Constitution, than to have it the mere creature of those in power, to administer as they may choose to understand it.

And as to the other objection, I think it is equally futile. Suppose we admit that the late Bank of the United States had been guilty of the greatest crime with which it was charged—that of intermeddling in elections, and using its means to acquire political power. Sir, does that furnish any argument why another should not be chartered, with such guards and restrictions thrown around it as to prevent a recurrence of those evils? Most certainly not. We might with as much propriety say that, because the late President of the United States interfered in the election of his successor, and brought the power and patronage of his office into conflict with the freedom of elections, we ought therefore to abolish the Executive Department of this Government. Such an argument is absurd and preposterous.

And, sir, I avail myself of this occasion to express my firm belief that a national bank, based upon correct principles, is the only institution capable of giving the country such a currency as is essential to its prosperity. And I am sustained in this opinion by this remarkable fact, that, during the space of about forty years, while such an institution was in operation in this country, there was never, at any time, a material derangement in the currency, or pecuniary distress; and that, during the two short periods, comprising only about eight years, in which the Government attempted to do without one, we had an entire suspension of specie payments by all the local banks, and the deepest distress and embarrassment in the pecuniary affairs of the country. And, sir, although we have recently had it from high authority, and from different sources too, that a large majority of the people of the United States are opposed to such an institution, with due deference, sir, I must take the liberty to dissent from that opinion. Upon the score of expediency, I am bound to believe there is an overwhelming majority in its favor. And, sooner or later, humiliating as it may be, the Government must return to it; and I hope the day is not far distant.

The community, sir, and especially the commercial community, who have been struggling against winds and tides, and Government experiments, to sustain their credit and reputation, have borne their misfortunes with much long suffering and forbearance. But, sir, the time may come when forbearance will cease to be a virtue.

I am fully aware, however, that a national bank cannot now be established. We have had inconceivable evidence of this fact this morning. And, sir, even if there were a probability

\*Resolution adopted declaring it inexpedient to charter a national bank.

of its success, situated as I am, I would not presume to make the proposition. It is due to those who have more experience to take the lead in a measure of so much importance. But, sir, I am ready to act my part, whenever the subject may be presented. In conclusion, Mr. Speaker, I will only say that, for myself, I am perfectly satisfied with new and untried experiments, and I hope and believe the country is so.

## SPEECH OF MR. NAYLOR, OF PENNSYLVANIA,

*In the House of Representatives, Friday, October 13, 1837—In Committee of the Whole on the bill "imposing additional duties, as depositories in certain cases, on public officers."*

Mr. NAYLOR, of Pennsylvania, said it was with great reluctance that he rose, for the first time, in this hall. He felt himself obliged to rise. Yes, said Mr. N. I am impelled to speak. I cannot remain silent. I voted for the introduction of this bill to our deliberations some days since, on purpose to afford the honorable gentleman from South Carolina (Mr. Pickens) an opportunity to express his views in relation to it. I perceived his anxiety to speak, and felt a friendly disposition to gratify him. If I were surprised when I heard him draw into the vortex of discussion the exciting topics of abolition, Texas, slavery, and Loco Focoism, topics which have nothing to do with this subject, what must have been my feelings when I heard him denounce the institutions of the North as mercenary and slavish, and exalt those of the South as ancient, patriarchal, and almost perfect; boldly avow that the laborers of the North were the subjects of the Northern capitalists; put the Northern workmen on a footing with the Southern slaves, and threaten to preach insurrection to the laborers of the North? Yes, preach insurrection to the Northern laborers!

I am a Northern laborer. Ay, sir, it has been my lot to have inherited, as my only patronage, at the early age of nine years, nothing but naked orphanage and utter destitution; homeless and homeless, fatherless and penniless, I was obliged, from that day forward, to earn my daily bread by my daily labor. And now, sir—now, sir, when I take my seat in this hall as a free representative of a free people, am I to be sneered at as a Northern laborer, and degraded into a comparison with the poor, oppressed, and suffering negro slave? Is such the genius and spirit of our institutions? If it be, then did our fathers fight, and bleed, and struggle, and die in vain!

But, sir, the gentleman has misconceived the spirit and tendency of Northern institutions. He is ignorant of Northern character. He has forgotten the history of his country. Preach insurrection to the Northern laborers! Preach insurrection to me! Who are the Northern laborers? The history of your country is their history. The renown of your country is their renown. The brightness of their doings is emblazoned on its every page. Blot from your annals the deeds and the doings of Northern laborers, and the history of your country presents but a universal blank.

Sir, who was he that disarmed the thundrer, wrested from his grasp the bolts of Jove, calmed the troubled ocean, became the central sun of the philosophical system of his age, shedding his brightness and effulgence on the whole civilized world—whom the great and mighty of the earth delighted to honor; who participated in the achievement of your independence, prominently assisted in moulding your free institutions, and the beneficial effects of whose wisdom will be felt to the last moment of "recorded time"? Who, sir, I ask, was he? A Northern laborer; a Yankee tallow chandler's son; a printer's runaway boy!

And who, let me ask the honorable gentleman, who was he that, in the days of our Revolution, led forth a Northern army, yes, an army of Northern laborers, and aided the chivalry of South Carolina in their defence against British aggression, drove the spoilers from their firesides, and redeemed her fair fields from foreign invaders—who was he? A Northern laborer, a Rhode Island blacksmith—the gallant General Greene; who left his hammer and his forge, and went forth conquering and to conquer, in the battles for our independence! And will you preach insurrection to men like these?

Sir, our country is full of the glorious achievements of Northern laborers. Where are Concord, and Lexington, and Princeton, and Trenton, and Saratoga, and Bunker Hill, but in the North? And what, sir, has shed an imperishable renown on the never-dying names of those hallowed spots, but the blood and the struggles, the high daring and patriotism and sublime courage of Northern laborers? The whole North is an everlasting monument of the freedom, virtue, intelligence, and indomitable independence of Northern laborers! Go, sir, go preach insurrection to men like these!

The fortitude of the men of the North, under intense suffering for liberty's sake, has been almost godlike! History has so recorded it. Who comprised that gallant army, that, without food, without pay, shelterless, shoeless, penniless, and almost naked, in that dreadful winter, the midnight of our Revolution; whose wanderings could be traced by their blood-tracks on the snow!—whom no arts could seduce, no appeal lead astray, no suffering deflect; but who, true to their country and its holy cause, continued to fight the good fight of liberty until it finally triumphed: who, sir, were these men? Why, Northern laborers; yes, sir, Northern laborers!

Who, sir, were Roger Sherman, and—but it is idle to enumerate. To name the Northern laborers who have distinguished themselves and illustrated the history of their country, would require days of the time of this House. Nor is it necessary. Posterity will do them justice. Their deeds have been recorded in characters of fire!

And such are the working-men of the North at this time. They have not degenerated; they are in all respects worthy of their intelligent and sturdy sires. Whose blood was so profusely shed, during the last war, on the Canada lines, but that of the Northern laborers. Who achieved the glorious victories of Perry and McDonough on the lakes, but the Northern laborers! Yes, they "met the enemy, and made them theirs." Who, sir, have made our ships the models for all Europe, and sent forth in the late war those gallant vessels that gave our little navy the first place in the marine arm; of the world, and covered our arms on the ocean in a blaze of glory, but the skill and intellect and patriotism of the Northern laborers! And who, sir, manned these vessels and went forth, and, for the first time, humbled the British Lion on the ocean—but the Northern laborers? And who, sir, was he, that noble tar, who, wounded and bleeding and mangled, and to all appearance lifeless, on the

deck of one of our ships, on hearing that the flag of the enemy had struck, and that victory had perched on the proud banner of his country, raised up his feeble, mangled form, opened his languid eyes once more to the light of heaven, waved his palsied hand round his head in token of his joy, and fell back and died? Who, sir, was he? Why, a Northern laborer—a Northern laborer! And yet these men are the slaves of the North, to whom the honorable gentleman is about to preach insurrection!

(Mr. PICKENS explained, and said, in substance, that he had spoken only of the tendency of Northern institutions to make the working men of the North tributary to the capitalist, and to prevent them from rising from their laborious situation. That he had not degraded them into a comparison with the slaves, but had said that if the people of the North would continue to interfere with the slaves of the South, then he (Mr. PICKENS) would preach insurrection to the Northern laborers.)

Mr. NAYLOR resumed, and said, I have not misunderstood the honorable gentleman. That the honorable gentleman does treat the Northern workmen as Southern slaves is evident from what he had just said. If he had not intended to place them in the same degraded situation of slaves, how could he threaten to preach insurrection among them? Sir, the honorable gentleman has mistaken the tendency of Northern institutions, as much as he has misconceived the worth and spirit of Northern character. Our institutions have no such tendency; no, sir, but exactly the reverse. They raise up the laborer. They place every man upon an equality. They give to all equal rights and equal chances, and hold out to all equal inducements to action. Northern institutions tend to keep down the Northern laborers! The whole history of the North, from the landing of the first pilgrim on the rock of Plymouth to this hour, contradicts this position.

I appeal to the representatives from Pennsylvania. I ask you, sirs, who is Joseph Ritner, that distinguished man, who at this very moment fills the executive chair of your great State, a man who, in all that constitutes high moral and intellectual worth, has few superiors in this country—one who has all the qualities of head and heart necessary to accomplish the great statesman, and who possesses, in the most enlarged degree, all the elements of human greatness—who, sirs, is he? A Northern laborer—a Pennsylvania wagoner—who for years drove his team from Pittsburgh to Philadelphia, "over the mountains and over the moor," not "whistling as he went"—no, sir, but preparing himself then, by deep cogitation and earnest application, for the high destiny which the future had in store for him. And who, let me ask the same gentlemen, who is James Todd, the present Attorney General of Pennsylvania, distinguished for the extent of his legal acquirements, for the comprehensive energy of his mind, for his strength of argument and vigorous eloquence; who, sirs, is he? He, too, is a Northern laborer, a Pennsylvania wood-chopper—in early childhood a destitute, desolate orphan, bound out by the overcares of the poor as an apprentice to a laborer! These, sirs, are some of the fruits of Northern institutions; some of the slaves to whom the honorable gentleman will have to preach insurrection!

But if the Northern institutions be hostile to equality, and have the effect that the honorable gentleman contends for, to keep down the workmen, and make them tributary to the capitalists, how comes it, how comes it, that I am now, at an early age, a Representative in this Hall? Sir, the gentleman is utterly, utterly deceived as to the effect of our institutions, and the character of public sentiment in the North.

Fellow-freemen of my own, my native district; bankers, capitalists, and merchants, (so much denounced,) manufacturers, mechanics, and laborers, I appeal to you all: Did it ever occur to any one of you when I was a candidate for the high office to which your free suffrages have elevated me—did it, I say, ever occur to any one of you to object to me because poverty, orphanage, and destitution had once made me a laborer for my daily bread? No, sirs, no; I will do you the justice to answer for you, no. Your inquiry was not "is he rich or poor, a laborer, a capitalist, a banker, or a merchant?"—but "is he a man?"—has he ability enough moderately to sustain our interest in the great councils of the nation, and nerve and moral courage enough fearlessly to defy the assaults of power, and to vindicate the outraged principles of our Constitution? And here, sir, I now am; and what is there to prevent me from taking my stand by the side of the proudest man in this Hall?

Mr. Chairman, it is not the first time that I have heard a parallel run between the slaves of the South and the working-men of the North. For a while, sir, that parallel was made as to the relative condition of the free negroes of the North and the slaves of the South. Recently, however, some of those who advocate the surpassing excellence of the slave institutions of the South have taken a bolder and more daring stand. Racking their brains for arguments and illustrations to justify slavery as it prevails among them, they have hazarded the bold proposition that slavery exists in every country; and that in the North, the operatives, though nominally free, are, in fact, the slaves of the capitalists. Such a proposition is monstrous. I tell you, sir, gentlemen deceive themselves. They slander the free institutions of their country. They wrong the most intelligent and enterprising class of men on earth. I know them well; I have been long associated with them. I have seen them form themselves into libraries and other associations for intellectual improvement. I have seen them avail themselves of every leisure moment for mental culture. I have seen them learned in the languages, skilled in the sciences, and informed in all that is necessary to give elevation to the character of man, and to fit him for the high destinies to which he was designed. Let the honorable gentleman go among them, and he will find them in all respects equal to those who make it their boast that they own all the laborers in the South. Yes, sir, as well qualified to become honorable rulers of a free people, having heads fitted for the highest councils, and fearless hearts and sinewy arms for the enemies of this great nation.

Mr. Chairman, I call upon gentlemen of the North to bear witness to the truth of what I have said: I call upon them to look back upon the days of their childhood, and say whom they have seen attain honor, distinction, wealth and affluence? Are they not the working, the industrious parts of society? And do not the institutions of the North necessarily lead to such results? Sir, when I pause for a moment, and behold what are now the little destitute playmates of my childhood, I am overwhelmed with astonishment. Some of them have gone forth from their homes, become draughts and signers of declarations of independence, founders of new empires, breakers of the chains of despotism; and the earth, even in their youth, has drunk up their blood, shed willingly in the cause of the rights of man.

Some have ministered to the altar of their Divine Master. Some have led the bar, adorned the Senate, illustrated the judiciary; and others have wandered in the flowery fields of literature, trod in the cool tranquillizing paths of philosophy, delved in the depths of science, and compassed the world with their enterprise. In a word, civilization has no pursuit that they have not already honored and adorned. And yet these men are some of the fruits of those odious institutions against which the eloquent gentleman has attempted his crusade.

Sir, it is the glory of the Northern institutions that they give to every man, poor and rich, high and low, the same fair play. They place the honors, emoluments, and distinctions of the country before him, and say, "go run your race for the prize; the reward shall encircle the brow of the most worthy." Thus it is that every one feels and knows that he has a clear field before him, and that with industry, prudence, and perseverance, he can command success in any honorable undertaking. He knows that his industry is his *own*; his efforts are his *own*; and that every blow he strikes, whilst it redounds to his *own* immediate advantage, contributes also to the good of the community, and the glory and renown of his country. All honorable employments are open to him. The halls of legislation are open to him; the bar is open to him; the fields of science are before him; there is no barrier between him and the object of his ambition, but such as industry and perseverance may overcome.

Look at the workings of their institutions upon the appearance of the North. Look at her mighty cities, her forests of masts, her smiling villages, her fertile fields, her productive mines, her numerous charities, her ten thousand improvements. Behold my own, my native State. Pennsylvania is intellectually under their auspices. Her soils and hills, and valleys, and rocks, and everlasting mountains, live and breathe under the animating influence of her intelligent and hard-working population; every stream feeds its canal, every section of country has its railroad, distance is annihilated, the flinty ribs of her rocky mountains are riven asunder, the bowels of the earth yield forth their treasures, and the face of the earth blooms and blossoms, and fructifies like a paradise. And all this, all this is the result of the intelligence, industry, and enterprise of Northern laborers, fostered by the genial influence of their institutions.

Nor are their efforts confined to this own country alone. Their industry and enterprise compass the whole earth. There is not a wave under Heaven that their keels have not parted; not a breeze ever stirred to which they have not unfurled the starry banner of the country. Go to the frozen ocean of the North, and you will find them there; to the ocean in the extreme South, and you will find them there. Nature has no difficulty that they have not overcome—the world no limit that they have not attained.

In every department of mind do the institutions of the North exert a wholesome, a developing influence. Sir, it was but a few days since you saw the members of this House gathered around the electro-magnetic machine of Mr. Davenport. There they stood mute and motionless; beholding, for the first time, the secret, sublime, and mysterious principles of Nature applied to mechanics; and there was the machine, visible to all eyes, moving with the rapidity of lightning, without any apparent cause. But the genius that made the application of this sublime and mysterious influence, who is he but a laboring, hard-working blacksmith of the North?

Sir, where do learning, literature and science flourish, but in the North? Where does the press teem with the products of mind, but in the North? Where are the scientific institutions, the immense libraries, rivaling almost at this early day Europe's vast accumulations, but in the North? And who, sir, gives form and grace, and life and proportion, to the shapeless marble, but the sculptor of the North? Yes, sir, and there, too, does the genius of the pencil contribute her glowing creations to the stock of Northern renown. To Northern handwork are you indebted for the magnificence of this mighty Capitol. And these noble historical pieces now filling the panels of the Rotondo, which display the beginning, progress, and consummation of your Revolution, and give to all posterity the living forms and breathing countenances of the fathers of your Republic—they, too, are the work of a Northern artist!

But before I conclude this branch of my subject, let me make one observation that I had almost forgotten. The gentleman seems to think that our workmen must of necessity be the passive instruments of our capitalists. His idea of the power and influence of wealth, controlling the very destinies of the man who labors, must be derived from the institutions of his own generous South; where he frankly avows that the capitalist does absolutely own the laborers. His views are, however, utterly inapplicable to the North. Who are the Northern capitalists of to-day, but the penniless apprentices of yesterday? Sir, in the North there is scarcely a class of men existing exclusively as capitalists. The character of capitalist and laborer is there united in the same person. In ninety-nine cases out of a hundred, he who is a capitalist has become so by his own industry and perseverance. He begins as an humble "laborer"—his industry, virtue, and integrity his only capital. He gradually accumulates. Every day of toil increases his means. His means are then united to his labor, and he receives the just and honest profits of them both. Thus he goes on joining his accumulations with his labor, receiving the profits of his capital and his toil, scattering the fruits of his efforts abroad for the benefit of society, living in manly independence, and laying up a stock of comfort and enjoyment for his declining years. Such was the rich Girard, the "merchant and mariner," as he styles himself in his last will. He began his career a destitute cabin boy. And such are the capitalists all over the North. They were all laborers some few years since; and the humble operative of to-day must and will be the wealthy capitalist in some few years to come; and so far are the institutions of the North from retarding his advance, that they encourage him, aid him, cheer, cherish and sustain him in his onward career.

But, sir, there is no limit to this subject. I will pursue it no farther. I might easily exhaust myself, but the subject is inexhaustible. What I have said has been said to vindicate the character of my constituents from unjust attacks, and to relieve the institutions of the North from the burden of denunciation which has been so profusely heaped upon them. I have uttered nothing in a spirit of disparagement to the South. No, Heaven forbid! I am incapable of it. The whole country is my country. To me there is neither North nor South, nor East nor West. I am an humble representative of it all. Our fathers fought and bled and died for it all. And how can we, their sons, if we respect their principles and cherish and venerate their memories, how can we quarrel about local difficulties, and foster sectional jealousies? I stand here the representative of the

How many receivers and holders of the public money, or in other words, how many "Sub-Treasurers" there will be scattered throughout the whole extent of this wide-spread country, no man can at present determine. In France, where a similar system prevails, there are one hundred thousand! Here, I have no doubt, in short time, the number would even exceed that. These men are to hold and absolutely possess the whole treasures of the nation. Some of them, particularly in our large cities, will have millions of dollars in their hands at a time. One uninterrupted gold current will be continually pouring in upon them. What a temptation (even aside from party political influences) is thus offered to use a portion of this money occasionally or continually, as need or circumstances may require. Sir, the temptation will be irresistible. Surrounded by needy or pressing friends in distress, whose family and fortunes they may think will be comforted or repaired by a timely loan; in the very midst of the exciting whirl of speculation, with fortune's dazzling visions urging them on to use the treasures confided to their keeping, and embark in schemes promising result in the enjoyment of immense possessions, and with the full certainty that a temporary use of even large amounts cannot be discovered; taking into consideration, with

these circumstances, the fact that there will be one hundred thousand of these men—I say they will in some cases, inevitably misappropriate the money. Large amounts of it must be lost. The treasures of the country will be plundered. Under such a system, there is no safety for the public funds.

But, sir, this is not the only evil that I see in this measure. The loss of the public moneys will be nothing, compared to the moral and political evils that must flow from it. "Lead us not into temptation," was the sublime prayer of our God. Our rulers, disregarding this divine lesson, seem determined to surround their public officers with a consuming fire of temptation, from which there is to be no hope of escape. Their consciences are to be seared, and they are to go abroad corrupted and corrupting, until the whole body politic becomes one of offensive mass of putridity, smelling to Heaven, and tainting the very atmosphere of freedom. This may be strong language. But I see the evil strongly—I feel it strongly.

I have heard of the danger of uniting the purse and the sword. All the unions of this kind heretofore depreciated as existing in this country are as ropes of sand or bonds of gossamer, compared to what will be the case if you pass this bill! You will not only unite one purse and one sword, no, sir, you will unite one hundred thousand purses and one hundred thousand swords, all ready to yield up their treasures and leap from their scabbards at the nod or stamping of the foot of one man!

"A Sub-Treasury bill," it is gently termed in this House. Before the country, for the purpose of deluding the people, and exciting popular feelings in its favor, you name it a "bill to divorce the Government from the banks." But what is it? Trampling the mere name under our feet, and looking at it as it is, stripped and naked in all its odious deformity, I ask what is it? Why, sir, it is a bill for arresting the flow of our prosperity; for subverting the fundamental principles of our Republic—a bill for laying the corner-stone of despotism. How do those in power recommend it to us? What arguments do they urge in favor of its adoption? "Oh," they say, "it is no new scheme. It exists in France; it flourishes in Prussia and Austria; it has grown into full and vigorous perfection in Russia. It prevails in Turkey, and in every despotism of the new and old world."

My heart shudders, my blood curdles, at their recommendations. In every country under Heaven where such a system prevails, the people are trampled on and plundered of their rights—ground down to the very dust by the awful despotism of their rulers; bought and sold like cattle with the earth; persecuted by power, plundered by these very Sub-Treasurers; "chained to the brutes, and fettered to the soil." And yet, sir, this Administration and its advocates urge the example of these odious tyrannies as almost the only argument in favor of the adoption of their hateful scheme. They tell us that their plan works very well in those countries. But they do not tell us that it is there the grand engine of despotism, without which the people could not be kept in slavery! Yes, the plan does work well in despotisms. It does the work effectually. It works admirably well. It answers the very purpose for which it was designed—that of plundering and enslaving the people, whilst it deprives them of the power of resistance.

Where am I? Is it possible that here, in this mighty capital of the only free Republic on earth, with the deeds of our gallant fathers still green in our memories, with here and there one of their lingering associates now gazing upon our deliberations, and the thunders of Yorktown yet ringing in our ears—is it possible, I say, under these circumstances, that we can calmly listen to a proposition to abandon the settled policy of our Government from its beginning to this day, despise and denounce the wisdom of its immortal founders, reject a course which has secured an unexampled prosperity to our country, and the utmost stretch of liberty to ourselves, and turn back and affectionately embrace—hug to our bosoms, as jewels above all price, the barbarous institutions of the dark and benighted despotisms of the old world? Are we to turn a deaf ear to the counsels of our revolutionary sages, and receive for our guide the arbitrary decrees of autocrats and tyrants? Sir, is the republican seed, scattered far and wide by our immortal sires, to be eradicated with our own hands; and are we to transplant into our fertile soil the sickly shoots of despotism, and nurse, and water, and cherish them into health, and vigor, and fructification? Heaven forbid. Let every man who wishes well to our republican institutions put the seal of his reprobation on this scheme.

I have said that this very "Sub-Treasury system" is one of the great means used by the autocrats of Europe for perpetuating their tyrannies. In the hands of a monarch, it is an engine of tremendous power. He appoints every officer. They are absolutely dependent upon him, and are appointed to do his bidding. They are responsible to him alone. They are scattered all over the empire. Every petty district has its officer to receive and hold the revenues of the Government. They have immediate communication with the People. Of course, as the interest of the officer binds him to serve his sovereign, and as there is no one to interfere between them, the money he receives can be used in influencing the People (or subjects, as they are there called) in any way desirable. Thus thousands and tens of thousands of these little treasurers are using the money in their respective districts so as to produce the desired influence on the People. And yet, in a moment, the whole revenue can be collected in one concentrated mass, at the nod of the monarch. This is all done silently and secretly. The evil is felt, and no one can tell whence it comes. Despotism is upon them, and they have no means to break it.

This system of monarchy, this engine of despotism, is the very one which the bill under consideration proposes to introduce into this country. It will make the power of the President as supreme as that of any autocrat of Europe. You will have a hundred thousand office-holders appointed by the President, holding their office at his pleasure, dependent upon his will for the very bread they eat, and commissioned to do his bidding. Every neighborhood will have within its narrow confines one of these "Sub-Treasurers" to harass the people and eat out their substance. The land will be filled with spies and informers. All the public money, millions on millions, will be in their hands! It will be scattered about among their partisans, become the source of countless demoralizing speculations upon the industry and property of the people, and must inevitably end in concentrating all power in the breast of the Executive. Adopt this scheme, carry out its provisions in all their ramifications, and there will be no salvation for this Republic; republican forms may exist, but despotism will be its very life-blood—is pervading spirit.

This scheme will not only increase the number of your officers

four-fold, and thus quadruple the taxes of the people, but it will furnish Government with an irresistible means of controlling the popular will. These officers must use the money to promote the views of their masters. They are appointed for that purpose. He who would dare refuse to do their bidding would not only be instantly dismissed, but hunted beyond the pale of national consideration; yes, denationalized and proscribed by the hiring hacks of party power.

Will any gentleman dare say that these evils are all imaginary? What takes place in one country will, under the same circumstances, take place in another. This system is the one by which despotism perpetuates itself all over the world. Why can it not, why will it not, be used for the same purpose here? Is it for a want of a disposition in our rulers? What takes place among us now? Do not those in power attempt to force the minds of the people to think with them? Do they follow the popular will, or do they make the popular will bend to their decrees? Sir, my honorable colleague (Mr. Sergeant) told a grave truth the other day, when he said that Government carried every thing by a war. It singles out its object, selects its plan, adopts its measures, and then opens its campaign; and with its countless office-holders, vast treasures, and immense power and patronage, enters the field, marshals all the "faithful" to its standard, shoots as deserters all who fly, and marches onward, crushing those who dare oppose.

There was a time, in the days of Jefferson, in the good old days of real Democracy, when an officer of the Government, interfering with the freedom of elections, or attempting to influence the popular will, was instantly dismissed from office. It was the cardinal maxim of the Administration of this illustrious man, "that an officer who would attempt to use his power and influence to control public opinion should at once lose his office." This was the fundamental law of Jeffersonian Democracy. Now, sir, those who claim to be the exclusive Democrats of the land have reversed this law. The maxim at present is, "that the officer of the General Government who does not use all his power and influence to control the people shall be forthwith dismissed." Hence, sir, we find that it is the office-holders all over the Union who fight the political battles for the Administration. They must do it; they are bound to do it; and they do it.

In the election, which resulted in sending me as a representative of the people into this hall, the office-holders of the General Government in my own and the neighboring districts were the persons who bore all the heat and labor of the campaign, and did all the speech-making against me. Not only that, sir, but at least one person residing here, in the city of Washington, in this grand seat of Executive power, holding a lucrative situation under the Government, having his sons employed here in Government Departments, left his family, travelled one hundred and fifty miles to get into my district, and there mounted the stump, became an open-mouthed bawling advocate of party power, called upon the people to reject me, and come to the support of his master in Washington. Sir, if such scenes are familiar to us now, what will take place when you make four times the number of officers, and place millions and tens of millions of public money in their hands? My heart shudders at the contemplation!

Mr. Chairman, I have shown that this system is the engine of tyranny wherever it exists; and that the examples of other nations, urged upon us by its advocates, are all derived from despotism.

They urge another argument in favor of this measure, which consorts in all things with the one just mentioned. They say that the effects of this scheme will be to destroy the whole system of credit. It is true that, wherever this "Sub-Treasury scheme" exists, there is no credit, except upon the most narrow and limited scale. Now is this singular. Recollect that this system prevails only in tyrannies. The absence of credit is one of the grand characteristics of despotism all over the world. Every body must know, or can know if they will, that a well-regulated credit system and despotism never have, do not, and cannot exist together. It matters not what the forms of a Government may be, if a system of general credit prevails throughout its whole extent, the heart and spirit of despotism must be crushed and broken.

There is no credit system in Russia, Prussia, Austria, Denmark, Sweden, Spain, Turkey, nor in any other country under heaven where the people are in chains, and wretchedness, misery, and degradation. Nor is this all. The converse of the proposition is true. There is no country in which a well-regulated credit system prevails where the people are in bondage. It is a fact, which no man having any respect for truth can deny, that just in proportion as a sound credit prevails in any country, in the same proportion are the people in the enjoyment of happiness and civil and political liberty.

The reason for all this is very obvious. What is credit? It is trust, confidence, belief, and faith in the honor and integrity of man. It was the first kind of money, upon which all other money is founded. It existed before paper or letters were dreamed of, and long before the metals, either precious or base were extracted from the gloomy bowels of the earth.

In the early stages of society, men obtained from each other the product of their labors by barter or exchange. The artisan would exchange his wares for the grain of the husbandman. If he wanted bread, and had nothing at the time to give in exchange, the farmer, giving credit to his integrity, would furnish him with bread stuff, on his promise to give him his wares in return, when convenient. This credit was, therefore, the only money then. It was nothing but confidence of one man in another. It was not until this confidence or credit, it was necessary that a man should be honest. Thus it improved the morals of mankind. The more it was used, the closer did it unite men in society; because it made men, in a degree, dependent upon one another, and made each individual interested in the welfare of the whole. Thus it encouraged the kindly sympathies, and humanized the human family. When it passed from hand to hand, or in other words, when the farmer passed the promise of the artisan to his neighbor for something that he wanted of him, it became circulating credit, or confidence; and as that became widely extended from man to man, it associated together into one family and in one interest the most distant inhabitants of a whole empire.

Thus, sir, it becomes the bond of society. It introduces man to his fellow, and gives mutual confidence. It promotes travel, improves the country, facilitates civilization, develops industry, quickens the mental faculties, expands moral and charitable feelings, unites men together by the gentlest, but strongest of all ties, and teaches them their power. This is the reason why credit and despotism are never found together. It makes men too strong for tyrants! Were it possible to diffuse, at once

throughout all Russia, the credit that prevails in this country the iron bonds of Russian despotism would be burst asunder as by magic, and the Russian serf, springing at once into the full dignity of freedom, would stand erect and unshackled!

It is the policy of tyrants to keep their subjects apart. They are for weakening the ties that bind them together. They are for disconnecting every man from his neighbor, forcing him to stand isolated and alone; sowing the seeds of jealousy, distrust, and individual disunion; destroying all combinations, and making every one depend alone upon the sovereign power.

This state of things cannot exist with a credit system. Credit gives men one interest, makes them depend upon one another, and combines them into one irresistible whole. Therefore it is that despotism is at war with credit. They must keep men apart in savage, barbarous, desolate isolation. The moment a common interest, given by a common understanding and mutual confidence, combines them together, they become irresistible in power, and despotism flies before them. This, sir, is the reason why liberty and credit are found side by side together wherever either of them has an existence. They are never found apart.

Look at all the non-credit countries of Europe. They are all despotisms, every one of them! And what are they doing for man, for civilization, for the spread of free principles? Why, nothing—absolutely nothing! There they are in chains and wretchedness, without liberty, without domestic comfort, enveloped in ignorance and barbarism, without even the hope of rational freedom to cheer and brighten up the future!

Now, turn your eyes to Old England—the credit country of the world, our "father land"—the land from which most of us derived our blood and our name! Look at her manufactures, her arts, her literature, learning, science, and her civilization, that carries a portion of comfort and liberty into every cottage throughout her island domain; with her fleets on every ocean, her commerce embracing the whole world, diffusing her language, institutions, and free principles to the remotest corners of the earth; overrunning India, filling up New Holland, peopling all the South Sea islands, and every where planting the standard of civilization, Christianity, and civil and political liberty! Whilst other European nations are stationary, England, by her moral power, derived in a great degree from her credit system, is producing a moral and political revolution throughout the globe.

Sir, let us recross the Atlantic, and turn our attention to America, and see what the people are doing there. Look to Mexico and the South American Governments. That part of the country was first discovered and first peopled. The inhabitants are in possession of inexhaustible mines of the precious metals; hard money is no scarcity there. But they have no credit system, and, therefore, no confidence in one another. They have no liberty, not even proper notions of liberty. They have no commerce, no agriculture deserving of the name, no navy, no manufactures, no arts, no internal improvements, no literature, no science—but, with an abundance of gold, they are benighted, ignorant, miserable, wretched, enslaved, and oppressed, but one degree removed from the brutes around them! Their whole history is but one unmitigated narrative of savage discord, murder, rapine, and bloodshed; mad, infuriate, revolution and sanguinary insurrection! These are the people, and these are the institutions, that are held up to us for our example!

After this view of the degradation, wretchedness, and slavery of the southern part of America, with what feelings of pride and patriotic exultation can we return to our own proud and happy United States. I will not pretend to speak of her glory, prosperity, and advancement; nor portray the virtue, intelligence, genius, skill, and hardy and adventurous enterprise of her people. Under the influence of her present institutions, she has done, and is now doing more for her own people, more for the cause of human rights, more for civilization, more for the elevation of morals and of mind, and more for the whole human family, than any other nation that has, or ever had existence.

Now, sir, I appeal to every patriot in this House—I care not by what party name he may be called—I solemnly appeal to every man in the country; I ask you all, are you prepared to abandon the means which have placed yourselves and your country on such high grounds, and adopt in their stead the miserable, unnatural, and wretched policy of the soul, rank, brutal despotisms of the earth? Will you follow in the paths which your fathers have made holy, and which have led to glory, peace, liberty, prosperity, and unbounded comfort; or will you obliterate every trace that they left behind them, shut your eyes against the brightness of the past, destroy every germ of hope as to the future, and follow that rugged and that crooked way which has always terminated in tyranny, degradation, wretchedness, and woe? As for myself, my mind is made up; I am for abiding by what has been tried. I must vote against this bill.

One word more as to credit, and I am done. I know, sir, the evils of credit. I know how it may be, how it is abused. I have ever been a bold and open opponent of its abuses. I have, for years, taken an active stand against the inordinate increase of banks. I have spoken against it. I have written against it. I have petitioned and remonstrated against it. I have done all that a reasonable man could do to limit their number and check their abuses. Yes, and I have seen the very men who now so bitterly oppose all credit, within six years, double the number of those banks, and more than double the banking capital of the country!

Credit has been abused. But it is no reason why it should be destroyed. The abuse of any thing is no argument against it. The best of institutions are always those that are abused most. In the name of our holy religion, the earth has been deluged with blood, and countless millions have been consumed in the flames of martyrdom. But this is no argument against either the truth, necessity, or value of our religion. Let us, therefore, labor to purge our credit system of its abuses. To destroy it, would be to break down all confidence between man and man, and restore once more the savage, desolating reign of barbarism.

Mr. Chairman, let me beg gentlemen to pause—pause before they pass this bill. It is now nearly six weeks since the commencement of this session, during which I time we have been in this hall night and day. We come at early morning, the day passes away, and the darkness of midnight still finds us here. We have had no time for reading, for thought, reflection, research, or calm and dispassionate examination. Worn and jaded, and worn out with fatigue, the President and his partisans have been hurrying and lashing us into their measures.

[Mr. LOOMIS, of Ohio, asked leave to explain. He said the gentleman from Maine misunderstood him in supposing that he (Mr. LOOMIS) made the loss of the fourth installment to Ohio, proposed by the bill, his only reason or ground of opposition to the bill: that was only one ground of opposition to it.)

Mr. SMITH proceeded. I understand the position of the honorable gentleman from Ohio, and mean not to misrepresent him. I have not indicated that this argument of the honorable

gentleman has his only ground of opposition. But, sir, it is one of his positions, urged by him upon the consideration of the committee, and consequently one which he must have regarded as worthy of the approbation of his constituents. I maintain, in reply, that it is a consideration wholly unworthy the approbation of the People of his great State, and one that is unworthy of influencing the legislation of this House upon this subject.

But, sir, if I could believe the honorable gentleman's constituents were capable of being moved by sordid considerations in this matter—if I believed that their support or opposition to this bill is, through their representatives upon this floor, to turn upon the amount of dollars and cents that their State is to win or lose the keeping and use of, I then, sir, might claim their support of this measure upon information that is communicated in the report of the Secretary of the Treasury now before us. And I call the attention of the honorable gentleman to the fact. In the table appended to the Secretary's report, showing the condition of the public money, I find that there is still on deposit in the banks of Ohio the sum of eight hundred and eighty thousand eight hundred and eighty-six dollars. The fourth instalment of deposits to the State of Ohio amounts to only \$663,036—thus leaving an excess of deposits at this time in that State of \$211,800—besides \$277,000 more not yet paid on drafts already drawn upon the different banks of Ohio, and unpaid. Now, sir, if Ohio is to be influenced by the consideration of pecuniary benefit in this matter, is it not obvious that her People have already more money from the public Treasury on deposit under the existing state of things than her share, and, by postponing the payment of the fourth instalment, she will be likely to keep it, for some time to come at least?

[Mr. Loomis here remarked that the People of Ohio were not reaping the benefits of these deposits, but they were only in the keeping of the banks of that State, which were the property of only a small portion of the People of Ohio.]

True it is, said Mr. Smith, the deposits to which I have alluded are nominally with the banks of Ohio. But, sir, the honorable gentleman well knows, as does every other person, that those banks are not prepared to repay that money to the Government, because they have loaned the money to the people. And although in terms it is correct to say that the whole people have not the money as now on deposit, nevertheless it is true that the whole people are deriving a benefit from its being within the State. Funds held by your banks are funds used by the people. And hence, I say, the facts of this case show that if Ohio is sordid, (an imputation which finds no place in my argument), and is seeking only a pecuniary benefit, she has much at stake in availing herself of the credit which the Treasury must inevitably accord to the deposit banks within the State of Ohio, and under a postponement of the fourth instalment. They are holding more than twenty-five per cent. beyond the remaining quota of that State.

The gentleman from Massachusetts (Mr. Briggs) has contended, that if the instalments are not paid to many of the States, the omission will create great embarrassment among the people of many States, as they have entered engagements upon the faith of these instalments. Well, sir, if this argument of local embarrassment is to prevail over the votes of some States it ought to influence in an opposite direction the votes of other States, where the embarrassment of the people will be aggravated by a payment of the instalments. I find by the table in the report of the Treasury Department already alluded to by me, that not only the State of Ohio, but several other South-western and Western States, have much larger sums of the public deposits than their quota of instalments. Alabama has an excess of nearly \$600,000, and three times her quota. Louisiana has an excess of more than one million of dollars beyond her quota. Mississippi and Indiana have also each very large excesses. And is not the embarrassment that must inevitably be created in those States by an immediate exaction of this surplus from the banks of those States by the Secretary of the Treasury, to be taken into the account in offset to the alleged embarrassments that will ensue in other States from the omission of the Government to pay the instalments? Sir, the matter is quite as long as it is broad. Embarrassment grows out of it at all events. And since this embarrassment to the people cannot now be remedied on all sides, our first purpose is to disembarass the public Treasury in the best possible manner. As for the State I have the honor in part to represent here, if mere pecuniary or sordid considerations were to influence its vote here, it would be adverse to the postponement of this fourth instalment. Because, sir, while her quota would be upwards of three hundred and eighteen thousand dollars, she has less than forty-three thousand dollars of it on deposit in the State. The difference, therefore, must be brought from other quarters of the Union to the State, to add to the available capital of the State. But, sir, we are uninfluenced by this consideration, as much as we need money there. We look to the necessities condition of the National Treasury, and in good faith are willing to join in its relief?

The honorable gentleman from Pennsylvania, (Mr. Biddle,) in his ingenious, and to all sides, very interesting argument, exhibited in contrast the promises of the late Administration and of its friends relative to the efficiency of the local banks to act as depositories and fiscal agents of the Government, with their present crippled and embarrassed condition; and he connected the embarrassments of these institutions with the present proposed measure, by way of attaching odium to it as an Administration measure. He also improved the opportunity of eulogizing in contrast with the local banks, the Bank of the United States. Now, sir, it is admitted, on all hands, I believe, it is, so far as I know, that the deposit banks have somewhat disappointed the expectations of the Administration. No Administration could calculate on the present state of things, or the present condition of those banks. But I say this not to censure those banks, for I am not of opinion that they have, in general, dealt in any bad faith with the Government. But, sir, I advert to the remarks of the honorable gentleman to say that, if he could have demonstrated that, while the expectations of the Administration and the assurances of its friends relative to the efficiency and soundness of the local depositories have failed, or been disappointed, the Bank of the United States has not, in like manner, failed the promises and expectations of its friends and advocates also; there would have been something in the contrast which the honorable gentleman has exhibited entitled to weight. But, sir, has the much-sung Bank of the United States stood in its strength, and fulfilled its obligations, unlike and distinguished from the mass of local and deposit banks throughout the country? No, sir; it has failed, as the latter have, and sunk beneath the accumulated embarrassments of the mercantile and trading world; and while its

friends ask that it be not regarded with censure for it, they assuredly ought to accord the same charitable judgment towards the friends of the local institutions; and while its friends assert that the promises of the National Administration relative to local banks have failed, they should be willing to admit, also, that the promises of themselves relative to their favorite institution have failed in like manner. Thus the account stands square again between the parties.

The gentleman from Pennsylvania (Mr. Biddle) further says, there is no occasion for legislation on this matter; if the Secretary of the Treasury should not have the money to pay to the States on the first of October, he can say so to the States; if he shall have it, let the deposit act be fulfilled. Sir, this recommendation of the honorable gentleman does not accord with that frankness for which he has contended, and to which I have given my assent, in relation to the provisions of this act. He has said we ought to express clearly in our act what we mean. I say so also. If I meant to repeal this fourth instalment, I would say so. If I meant only to postpone its payment, I would say so. And if I meant to have the Secretary either pay over or not pay over this instalment to the States, I would say so. I would not leave the Secretary without any positive directions on the subject. He has told us that the present condition of the Treasury will not admit his paying it. Now, if we mean he shall pay it, nevertheless, let us say so, and give him the means instead of ordering ten millions of Treasury drafts, let us order for his use twenty millions, and enable him to pay the instalment of deposits to the States. If we don't mean this, let us tell him so, and either repeal or postpone the payment. It would be unjust to the Secretary, on the information he has given us, to refuse legislation on this subject one way or the other. We would be unjust to the States to do so. If the payment be not postponed or repealed, the States will expect the subject to uncertainty, and it would be the height of injustice to all concerned for this House to do so.

Mr. Chairman, I have but a few remarks to add, and these relate to a topic which has not seemed to me to have any special connection with the subject now under debate. But the gentleman from Pennsylvania, (Mr. Biddle,) and also the gentleman from Ohio, (Mr. Loomis,) have introduced it, and brought it to bear upon this measure, as an Administration measure, and, as such, to prejudice the measure in the public mind. These honorable gentlemen have alluded to the recent elections in Maine as an expression of the public voice of that State upon the measures and policy of the present National Administration. The voice of the people, from both the West and the East, say they, is coming up to us in condemnation of the people of the West is relative to this Administration. The gentleman from Ohio, I dare say, may in sincerity think he knows it; and to his superior means of information on this point, I bow with all respect. But the honorable gentleman must allow me to understand quite as well as himself, to say the least, what the voice of the people of the East is relative to the Administration, and particularly the voice of Maine. I can assure that honorable gentleman, and every other person desirous of knowing the truth of this matter, that the result of the recent elections in Maine is not an expression of the sense of the people of that State relative to either the present or late Administration: it is a result that has been shaped by local and personal considerations alone. It is the result of divisions existing in the ranks of the Administration party there. And whether the intelligence we now have relative to the result of the elections in that State be authentic or otherwise, if it does not embody the sentiment of that people in relation to the National Administration. I think I have not a colleague upon this floor who will gainsay this statement. On the contrary, sir, I can assure every gentleman—and I do not this for effect, and only because the subject has been introduced here under a most erroneous, though probably most sincere, impression—that at no period have the people of Maine been more decidedly with the National Administration for the past six or eight years than they were at the period of the recent election. And I do most adventurously admonish gentlemen who are opposed to the principles that the people of Maine have for several years sustained, not to include, in counting up their jewels, the people of that State, if they would not be deceived themselves, nor deceive others.

## REMARKS OF MR. BRIGGS, OF MASSACHUSETTS,

In the House of Representatives, September 21, 1837.—The bill to postpone the fourth instalment of the payment to the States being under consideration.

MR. BRIGGS, of Mass. would detain the committee but a few minutes. He should not attempt to enter the dark and gloomy labyrinth of the Secretary of the Treasury's report. He was willing to acknowledge his own obtuseness, so far as candidly to admit that the exercise of all the powers of his mind, in an attempt to understand that report, had been entirely fruitless, and that he had given up the attempt in despair. He could not get out of it any definite idea of the actual state of the Department which was under the management of that officer. And he believed that he but shared a very common and general inability, on the part of the members of that House, while suffering under this want of perspicacity in relation to that document. Yet some gentlemen had called it a clear and perspicuous report. If it be so plain that "they who run may read," he would ask why it was that the gentleman from New York, the chairman of the Committee of Ways and Means, had deserted its pages, and substituted for them his own statements, by way of enlightening the House on the present state of our Treasury? That gentleman would not hazard the bill before this committee upon calculations which he had made from the Secretary's report, but had gone to the Department in person, and from the manuscript papers found there made up his estimates, as exhibited in the printed tables now before us. If that clear-headed gentleman, with all his talents and reputation as an accountant, could not satisfy himself of the financial state of the Treasury by investigating the report of the Secretary, but was compelled to seek information among the mass of unprinted papers on the files of the Department, it is not strange that those who make no pretensions to learning in this "Treasury science" should be in doubt and difficulty.

Nor had that gentleman (Mr. CAMERLENO) been alone in his laborious researches. The gentlemen from Virginia, Mary-

land, Ohio, and New York, together with the gentleman from Tennessee, on the other side, have all given their statements, and yet he would venture a Yankee's "guess," that there were neither two of the whole number which would be found, on comparison, to agree. All this may go to prove that the Secretary of the Treasury's report is a remarkably clear document, I admit; but if that be so, it also goes to prove that the members who have favored us with their statements do not possess equal clearness with the Secretary. It may be all very clear; yet was he, (Mr. Briggs,) in relation to the matter, very much in the predicament of a certain old lady, who was asked how she liked a very metaphysical sort of sermon she had been listening to. "Why," said the good woman, "it was the best sermon I ever heard in the whole course of my life; and I would have given any thing on earth if I could only have understood it!"

Thus perplexed, he (Mr. B.) had been compelled to use his own lights, dim as they were, in order to ascertain the object he had in vain been seeking for, and he had come to the conclusion that there was no pecuniary necessity in the case which should impel Congress to postpone the provisions of the act of June, 1836, in relation to the deposits of the surplus revenue; nor did he believe that the Secretary of the Treasury, if he should appear before us, would say that he believed there would be a deficiency of means in the Treasury to meet the demands of the current year, though he might say that a part of those means would not be immediately available. In relation to the law of June, 1836, it struck him (Mr. B.) as passing strange that, in a House consisting to so great an extent of well-read and experienced lawyers, there could be such wide differences of opinion as to the legal import and character of that act. For himself, though a lawyer by profession, he did not pretend to the possession of any very high legal abilities, yet, to his mind, the meaning and intention of that law appeared clear and plain. It provides that "the money which shall be in the Treasury on the first day of January, 1837, reserving the sum of five millions, shall be deposited with the several States in proportion to their respective representations in the Senate and House of Representatives, as shall by law authorize their Treasurers or other competent authorities to receive the same on the terms hereinafter specified."

The terms and conditions upon which the money was to be deposited with the States are set forth in the act. In pursuance of the directions of the act, the Secretary of the Treasury communicated to the several States the law authorizing him to deliver to them the public money, and called on them to say whether they would comply with its provisions. Every State in this Union, in the solemn form of legislative enactment, consented and agreed to receive the money, and to comply with the conditions and requirements of the law of Congress. In compliance and fulfillment of this proposition, made by the Government of the United States, and accepted by the Legislatures of the States, three-fourths of the whole sum which was in the Treasury on the first day of January, 1837, (the whole amount of which was named by the Secretary in his proposition to them,) has been paid over to the States.

Can this Government now withhold the fourth instalment without the consent of the States, and not violate the plain provisions of their own law?

The money was to be passed over to the States in four equal instalments, at fixed periods. It was to be repaid by them when wanted by the Secretary of the Treasury, to meet appropriations made by law, in ratable proportions, and in sums not exceeding a certain amount by any one State.

No provision in law authorizes the Secretary to withhold, in any state of the case, any portion of the money. Nor does Congress reserve to itself the right or power to do any such thing.

The gentleman from Virginia (Mr. Jones) asks if Congress meant that this money should be deposited with the States, if the Government should want it for its own purposes? I answer, that Congress intended that all the money which should be in the Treasury on the first day of January, 1837, after deducting five millions of dollars, should be deposited with the States. To prove this intention, I refer to the explicit, unambiguous, and unqualified language of their own law, made to accomplish this identical purpose.

The gentleman from Virginia says, the fact that this thirty-seven millions were to be paid to the States by instalments does not change the character of the transaction between the General Government and the States. I concur with him fully. The instalments were arranged for the accommodation of the banks who held that money on deposit. As between the Government and the States, the case is the same as though the whole amount had been paid out at once. If it had been so paid, neither the Secretary, under the law, nor Congress, by new legislation, would have the right to recall the money in any different manner than is provided by the terms of the law as proposed to, and accepted by, the States. This fourth instalment constitutes a much larger amount than could be demanded from the States, and cannot, therefore, in good faith to them, be withheld without their consent. What Congress would have done if they had anticipated a different state of the Treasury is one thing; what they actually did, and what are the rights of the States resulting from their action, is entirely another thing.

But (said Mr. B.) we are told that this is not a contract, and not binding as such, because no amount is put down in the wording of the act. What do you want, sir, (asked he,) of an amount? All that shall remain in the Treasury, after deducting \$5,000,000, on the appointed day, that is "the amount;" and if there were any doubt about it, the Secretary of the Treasury himself has kindly helped us out of the dilemma, by telling us, in dollars and cents, what that "amount" was. Well, this being ascertained, the States have a claim for their several proportions of it, as soon as they comply with the conditions of the act. They did so comply, and received three-quarters of the "amount," according to the tenor of the contract, and meanwhile, the other quarter was their own as much as that already received, and was so understood by them, as well as by the Secretary of the Treasury. Several of the States have made appropriations of the whole sum as their own, enacted laws for its employment, and predicated all their action upon it as their own. And yet the distinguished gentleman from Virginia (Mr. Jones), as well as other professional men here, argue that this is no contract. What do gentlemen understand would constitute a contract? If a proposition, consisting of various conditions and limitations, made by one party to another, accepted by that other, and three-fourths of its stipulations actually carried into effect, does not come within the legal and common understanding of a contract, I am unable to imagine what would.

I will not say (said Mr. B.) that a case might not be put in

which this Government, acting under the imperious law of necessity, might be justified in refusing to comply with the clear stipulations of their own law, in refusing to pay over this fourth instalment to the States. But, in my opinion, no such case is presented in the question before us. I do not understand from the Secretary's report that he means to say there is any deficiency in the funds of the Treasury to meet the demands upon it, if those funds were immediately available. But as a portion of its means, consisting of money on deposit in the banks, and a considerable amount in merchants' bonds, "cannot be immediately realized in funds suitable to meet existing appropriations," it seems expedient, either in aid or exclusion of a requisition on the States, (as may be deemed most suitable by Congress,) to provide some temporary resource, until enough of the fourth instalment, or other means in the Treasury, can be rendered available to discharge all the public engagements."

The passage of this law to withhold the nine millions of dollars now due to the States under the law of June, 1836, will not, in the slightest degree, relieve the Treasury from its present wants. The money is now in the deposit banks, and the Secretary expressly says that it "cannot be immediately realized in funds suitable to meet existing appropriations." Not one dollar of available funds would be brought into the Treasury by the violation of the faith of the Federal Government to the people of the States, as solemnly pledged in the law now upon your statute book. The Secretary proposes that Treasury notes should be issued, to meet the present demands on the Government. Whether this bill withholding the money from the States passes or not, the necessity for the issue of Treasury notes is the same.

If the deposit law is left to go into operation, the banks can better make arrangements to settle the claims upon them with the States than with the Treasury of the United States. The Secretary of the Treasury says, "many of the banks which hold the money might be able more satisfactorily to pay it to the States than to the Treasury." The amount paid over by them would be distributed among the people of the States, go into the circulation of the country, and contribute, so far at least, to relieve the embarrassment of the community. I do not stand up as the apologist or advocate of the pet banks. They were brought into their existing relations with the Government without my agency or consent. But the Treasury poured its millions into their vaults, and it should not, by an effort to coerce them, further embarrass the people. Any pressure upon them by the adoption of measures already originated in Congress, designed to force them into a sudden payment to the Government of its demands, would, directly or indirectly, add to that burden under which the people of this whole country are at this moment reeling.

The specie drawn from the banks must be taken from the people, who are their debtors. That derangement of the circulating medium, and that embarrassment of the whole business of the country, embracing all classes and conditions of men, from those who earn their bread by daily labor to the most opulent merchants of the great commercial cities, would be rendered more severe and oppressive to the end that a few millions of specie should be gathered together and locked up in the iron safes of Government offices until it should be wanted to pay the salaries of the people's servants.

Why should we, who are assembled to adopt measures to alleviate the sufferings that are pressing our constituents to the earth, lend our aid to measures which will tend at least to aggravate those sufferings?

If this instalment is withheld, the expectations of the States will be disappointed: expectations created and raised by the voluntary action of the very Government which is now about to blast and destroy them. It will operate a most serious inconvenience and injury to many of the States. They have anticipated its reception, and, in one way or another, it has entered into their arrangements—led them to embark in expensive public improvements, and to incur obligations and liabilities, to meet which, without it, will subject them and their citizens to great trouble and embarrassment.

Mr. B. would again call the attention of gentlemen to the fact, and he begged them to notice it, that whilst the immediate pressing necessity of the Treasury was urged as the reason for the passage of the bill before us, not one dollar of the money which its passage would withhold from the States could be made available to meet the present demands upon the Treasury. It seemed to him, therefore, that the momentary pressure upon the Government for funds, which the Secretary tells us "is far from being any just cause for despondency," is seized upon as a pretext to repeal the unexecuted portion of the deposit law, when no practical good, but much evil, will result from it. These (Mr. B. said) were some of the considerations which had operated upon his mind, and produced the conviction that this bill ought not to pass—a conviction which had not been removed by any of the arguments which he had heard put forth in its favor. He wished to see the fourth instalment, amounting to more than nine millions, distributed among the States, fulfilling the just expectations of the people, created by the deposit law, and tenning, as he believed it would, to relieve them from that cruel pressure under which they were groaning.

The gentleman from Ohio (Mr. Hamer) in the early part of this debate, had admitted that the *onus*, as the lawyers say, of showing the necessity for the passage of this bill, was upon those who sustained it. He called upon the gentlemen to come forward and dispel the mists and clouds which hung around the report of the Secretary, and to show the fiscal necessity of withholding this instalment from the States; to show, not merely that there would be a want of available funds on the first of October, which all could see; but to prove that the Treasury would not have resources for the year sufficient to meet all the claims upon it, though a portion of those resources could not be commanded within the year—a difficulty which the Secretary proposes to obviate by the issue of Treasury notes. The gentleman from New Hampshire (Mr. Atherton) admits, with the gentleman from Ohio, that the burden of satisfying the committee that the bill ought to pass is upon its friends. But he says, if it is made doubtful whether the Treasury will want this fourth instalment or not, we should withhold it from the States. This is, indeed, a new way of making out a case. It to raise doubts is to make proof, it would be easy to make out almost any case. I am not satisfied with that gentleman's manner of sustaining his *onus*.

Before the gentleman from Ohio can expect that I should go with him in support of the bill, I want him to satisfy me that there will be a deficiency in the resources of the year to meet the demands upon the Treasury; and that this nine millions of dollars, to which the States are entitled by the law of 1836,

could be made available to meet existing appropriations. Let him show, as he has maintained he can show, that the proposition made to the States by the Secretary of the Treasury for them to accept thirty-seven millions of dollars upon the terms and conditions named in the law, and their agreement, in their high legislative sovereign capacity, to receive the money upon the terms prescribed, and the payment of three-fourths of the amount by the General Government in part fulfillment of their proposition, altogether do not constitute a clear, intelligible, well-defined contract; such a contract as either of the parties, if they were amenable to the judicial tribunals of this country, would be compelled to execute, by all the courts in this land, from the lowest petty justice to that which holds its sessions in the basement of this Capitol.

When he shall show this, I will go with him and support his bill.

## REMARKS OF MR. EVERETT, OF VERMONT,

In the House of Representatives, September, 1837.—On the bill to postpone the payment of the fourth instalment of deposit with the States.

Mr. EVERETT, of Vermont, said he had attempted to obtain the floor when the bill was under discussion in committee, and also in the House. He had then intended to submit his views on the measures presented by the Committee of Ways and Means for the relief of the Government. At this late hour, he should confine himself to the bill before the House. He would submit to the House the effects its passage would produce on the business transactions of the State he in part represented. The Legislature of Vermont, on accepting the terms of the deposit act, made provision for the immediate disposition of the instalments, as they should be received. They were to be paid to the several towns, in proportion to their population, to be by them loaned for the use of schools, under the direction of town committees. These committees were composed mostly of farmers, and the loans were made, in limited sums, principally to farmers and mechanics. The time of payment and the amount of the instalments being certain and fixed, the business of the country was, in advance, predicated on the certainty of receiving the money. The fourth instalment has, in effect, been anticipated. Though not actually received, the business of the country has been based upon it. On the faith of it, debts have been contracted, engagements made, and business undertaken. The effect of disappointing these well-founded expectations, to say nothing of higher obligations, would be similar to that which would have been produced by a sudden call for the same amount, had no such expectation been excited. To the same extent, it would derange the business of the country. The same effect, he presumed, would be produced in most, if not all, the States from which the public deposits have been withdrawn.

It is not to be disguised that the States in which there is an amount of deposit greatly exceeding, or even equaling, the amount of their proportion of the fourth instalment, have interests different from those who have none, and those interests have, to some extent, been seen in the votes of this House. In the deposit States, the deposits continue to be the basis of their bank circulation. These States already enjoy the full benefit of the instalment and of a large surplus. He would now present the subject as a question of justice between the States.

The unavailable deposits in banks are principally, if not wholly, in ten States, Alabama, Louisiana, Mississippi, Tennessee, Kentucky, Missouri, Illinois, Indiana, Ohio and Michigan. The amount on the 30th of August was over nine millions, at this time probably exceeding seven millions, while their proportion of the instalment is short of two millions and three-fourths. It is well understood that the deposit banks cannot make payment, even within the times limited by the bill from the Senate, (two, five and eight months,) or in treble that time. Is it just that these States should retain, for almost an indefinite time, the possession and use of the seven millions, while the sixteen States, having none but available deposits, and even but little of these, should have no equivalent; that the only measure of relief—that which they seemed to have—should be withheld? He did not desire to press the deposit States; but, in his opinion, some measure was demanded which should meet out something like justice to the creditor and debtor States, without oppressing either; and he would appeal to the representatives of the deposit States, with what justice, with what hope, could they ask the other sixteen States to give them further time of payment, if they insisted on the postponement of the fourth instalment indefinitely, as proposed by the bill, or until December, 1839, as proposed by the amendment?

He would now state in what manner something like justice might be done to the now deposit States; and which being done, further time might be given to the deposit banks. It is this: authorize the Secretary of the Treasury to issue Treasury notes. As much as he abhorred this species of currency, he would consent to it for this purpose, and for this purpose alone: authorize the Secretary of the Treasury to issue Treasury notes to the amount of the fourth instalment, if necessary, without interest, receivable in payment of Government dues; give the States the option to receive either these notes or drafts on the deposit banks in their respective States, in payment of their share of the instalment, and give a reasonable time to the deposit banks to pay the surplus that would remain due. The States in which there are sufficient deposits, would accept the drafts, if, for no other reason, to relieve their banks; and thus the instalment to ten States would be satisfied by a measure beneficial to them; and the expectations of the other States, to say nothing of the faith of the Government, would be satisfied. The reason of proposing that Treasury notes should be issued, and without interest, is to make an equivalent in value to the drafts on the deposit banks; and the equivalent might be further adjusted by the time at which they should be receivable for Government dues, and by the rate of interest that should be required of the deposit banks.

Thus far he had considered the subject as a question of justice between the States. He would now consider whether the measure proposed could be adopted under the present embarrassed situation of the Government. It was a question not of original choice, but of the greater evil. On the one side was presented the embarrassment from the disappointment of the well-founded expectations of the business of the country; on the other, the embarrassment of the finances of the country, and the resort to a paper money currency even for a temporary purpose. He would consider the measure in its relation to the finances of the country.

Gentlemen were not agreed on the state of the finances: Much had been said about the intelligibility and non-intelligibility of the Treasury report. Though a more succinct report would have been acceptable, yet, for one, he could say his difficulties did not arise so much from what was in the report as from what was not in it. He could ascertain, with sufficient accuracy, the amount of the deficiency of the present means; but was it not equally material to ascertain in what way the deficiency could be best supplied? It has suited the purpose of the Secretary to ask Congress to furnish supplies to carry on the Government to the 1st of January only, on a mere statement of present cash means, with reference to the actual means of the Government, which might be rendered available, and without relation to the fiscal operations of the ensuing year; and in this limited view of our financial situation, we are requested to postpone the fourth instalment indefinitely, and to issue ten or twelve millions in Treasury notes. It might reasonably have been expected that the Secretary would have laid before Congress statements similar to those usually made by a bankrupt on calling a meeting of his creditors. We had a right to expect not only a statement of our debts and cash on hand, but of all our assets. The want of a statement of our assets has afforded a convenient argument to the friends of the bill. Almost every gentleman who has supported it has insisted that, if we pay the instalment, we must create a debt. And the question is continually asked, will the people consent to borrow money, to be repaid by dry taxes, for the purpose of paying it to the States? Even were it necessary to borrow money for that purpose, why should the Administration shrink from the responsibility now? The responsibility that has created the occasion—the necessity was boldly assumed. No, they will not borrow money, but they will take it from the States, to avoid the responsibility of creating a debt—of borrowing money. But to enable the Government to pay this instalment, it is not necessary to create a debt, to be repaid by taxes. It is only necessary that Congress should convert its unavailable means into available means. All that is asked is, that we should anticipate the debts now due (though not payable) to the Government. This operation would require no tax; it would impose no new burden on the people.

He did not overrate the assets of the Government in estimating them at seventeen millions, exclusive of the duties on woolsens on bond, (which, in New York alone, are estimated at two millions.) And all that is required, beyond the available means, for the operations of the Government and the payment of the fourth instalment, is to render fourteen millions of this seventeen millions available for present use. He would ask if the seventeen millions were now in cash in the Treasury; if the New York fire bonds, (1,000,000) the United States Bank debt, (5,000,000) and money undrawn for in the deposit banks (7,500,000) were now paid, and the duty bonds (2,500,000) were not to be postponed, would any one propose to postpone the instalment even for a single day? Why then should we not draw on these resources, and fulfil the expectations of the country? He would not now stop to hold the balance between the bill and the amendment; he went against all postponement.

He submitted these considerations to the House. Those who held the power might adopt them or not, as they should prefer. The bill was in the hands of its friends. He was willing to meet the measures of the Administration in the shape and form they chose to present them. He did not desire to throw any embarrassments in their way by presenting amendments, either to consume time in discussing them, or to avert a direct vote on the propositions offered.

He regretted that no measures of general and permanent relief had been proposed for the embarrassments of the country—that the Government should have confined its measures to its own immediate relief. The whole country looked to Congress for relief. They are—they will be disappointed. And on whom does the responsibility rest? On those who hold the majority. But we are tauntingly told, if you are not satisfied with the measures proposed by the Administration, propose other and better measures. To this he answered that it was but fair to the Administration to permit its friends to take the lead. By their acts, we had been reduced to our present extremity. It was their right, their privilege, their duty, to extricate us from it. He desired the sense of the House might be taken directly on their measures. If adopted, be it so. If rejected, it will be in due time then to propose other measures for the consideration of the House and of the country. And even then the prospect of succeeding in this House, in the other measures, would have its weight in determining the expediency of bringing them forward. But with what reason was the demand made? Our complaint is that no measures of permanent relief to the country are brought forward—no measures tending to restore to it a sound currency. More than this, the Administration disclaims the power to afford such relief in any way or manner. It assumes that it has no constitutional power to give the relief. It plants a veto in advance. Why then, in the face of the Message, in the face of the opinion of more than one-third of this House, should we be called on to propose measures in which we can have no hope, at this time, of succeeding? Are we not met even in advance by a negative resolution from the Committee of Ways and Means, on one of the measures for general and permanent relief? He repeated, what better hope could be entertained for any other mode of relief when the constitutional power to grant any relief was denied by the Executive? It is said there is a time for all things; but the time is not now. He expressed only his own opinion. He was not authorized to speak for others.

But, we are asked, will you not support your Government; will you not supply the means to meet its expenditures; will you not relieve it from its present embarrassments? For one, he answered he would; but he reserved the right to judge of the measures proposed; to adopt or reject them as his judgment should dictate. But might he not stop to ask by what providence or improvidence the Government was brought to its present condition? Might he not ask, will your measures afford permanent relief to the Government itself? Might he not inquire whether the new experiments would not, in the end, involve the Government and the country in additional embarrassments? The Government now proposes to separate itself from the States and the people. It asks relief for itself alone. How stands the case? The Administration have been trying a grand experiment. Disregarding the experience of the past, and the admonitions and warning of the best engineers, they have run their cars with flange wheels on one side only. The *I take the responsibility*, with its train, went fair and smooth on the level and straight road; it was then the glorious experiment. But at the first turn, locomotive, tender, and passengers, were all in the ditch together. The chief engineer finds his assistants and firemen can give him no aid. He calls on

the passengers; he asks them to assist in getting his locomotive and tender on to the rails again; and the passenger cares, too, they ask. No, gentlemen; I intend to leave you where you are. I have constitutional scruples. What would probably be the answer of the passengers? He would not apply their answer as his answer. Before he gave a final answer, he would ask the chief engineer, Pray, sir, if we do put you on the rails, how do you propose to proceed? He has already answered: Try another experiment, merely by changing my flange wheels to the other side. The unanimous opinion of the passengers would be, that at the next turn he would be off and in the ditch on the other side; and entertaining that opinion, he would not, as one of the passengers, vote for any measure of relief to the Government that was unsafe for the people.

## SPEECH OF MR. WISE, OF VIRGINIA,

In the House of Representatives, October 13, 1837.—On the bill from the Senate to create a Sub-Treasury system.

Mr. WISE said: After the rich treat which we have just enjoyed, I can hardly hope to be listened to. I have much to say, far too much to be said at once. Did I not know that it was the wish on all sides for the committee to rise this night and report the bill, I would not proceed now; and had I not at the last session reviewed the last Message of the "Greatest and Best," and did I not feel it to be a more imperative duty to review the first Message of his protégé and successor, I would not proceed at all. But, sir, a duty rests upon my shoulders which most gentlemen seem to shun, and I shall discharge it, though the debate has exhausted this subject, and exhausted still more our time and our patience. I mean the duty of complaining: I rise to murmur and to complain.

The gentleman from South Carolina (Mr. Legare) exhorted us not to disturb our tempers by tracing the causes of the ills we endure to their authors—it could lead to nothing but crimination and recrimination; he begged us rather to study out the remedy and to apply it to our maladies. I shall not follow the gentleman's recommendation. It may well suit the powers that be, who have always heretofore been claiming for their Administration the highest praise of prosperity and infallibility, now that they have reduced the country to distress, and the Government to bankruptcy, to cry for a spirit of conciliation and charity; but, as for me, I compromise not, I conciliate not with public plunderers, and I spare not those who have willfully and deliberately misgoverned my country, and who have basely and corruptly rioted in her distresses and her wrongs. Whom have they spared? Let them answer me. Have they spared any thing worth preserving? Sir, I believe that the only true remedy is to trace the evils of the present times to their real authors, and hold these authors responsible to a just, though it be a severe judgment. No virtue should be so averse, so austere as patriotism; it should be as respectful of persons, excuse no man or set of men, for bringing ruin on a country rich in every element of wealth; and it should visit, with the most condign punishment, that man or set of men who have usurped and perverted power for the basest and worst purposes of reducing that country, once the freest in the world, to slavery as well as beggary. There is no remedy so wholesome as that of convicting these spoilers, and taking from them the power to do further mischief.

Sir, whether the gentleman from South Carolina (Mr. Legare) was abroad in Europe, studying the condition and the policy of foreign countries, it was my lot to remain at home, and for the last four years to mark the policy, to study the motives, and watch the march of our own Federal Government. Let me tell that gentleman that our Federal Executive has almost within that period of time, changed the form of our Government from a representative, Federal Republic, to that of an elective monarchy—an elective monarchy, with the power of absolute control over legislation, and of perpetuating a succession! I congratulate this House and the nation that the gentleman has returned to his country in time to strike for her a blow with his strong arm against this nefarious measure, calculated for no other design than that of strengthening the coils of Executive power, and of riveting for ever the chains which have been forged for us for the last four years; and I only regret that he was not here before to war side by side with me and others who have been laboring in vain to ward off the catastrophe which has befallen, and the crisis which now threatens the country and its institutions. If he had been here to watch the conduct and motives of our rulers, as I have been, he would be as ready as I am to arraign the conduct and impugn the motives of the real authors of this monstrous change in the form of our Government, and in the condition of our affairs. Sir, I repeat that I rise for no other object than to criminate the conduct and the motives of the preceding and the present Administrations. They have deliberately and wickedly, with malice aforethought wrought this mischief, and a bill of indictment should be laid against them before the grand jury of the nation—the People! I appeal to them, and, sir, I propose to show the guilt of the culprits out of their own mouths.

Sir, contrast "the last annual Message" with the first semi-annual Message to this extraordinary distress session!

"Alas, from what high hope, to what relapse  
"Unlook'd for are we fallen!"

In the very first paragraph of this extraordinary message, we have the precious confession that the experiment has failed! failed! Ay, failed! Is it possible? Can this thing be so? Ay, failed! The great chief, the greatest and best—the under whom it was glory enough to have served—was altogether such as we are, a man! He was not, as it was thought, a god! He was but a poor weak mortal; his wisdom was fallible! This our Caesar did feed on meat as other men! Sir, this one truth is every thing, that Jackson was a fallible man; that he was not endowed with all virtue, all wisdom, and not entitled to all confidence and trust; this dissolves the charm; and from this one truth admitted alone, I augur better times to come. I breathe, I hope! Now, sir, will the people heed a warning, reason for themselves, act for themselves? Sir, I do not mean to exclaim: I came here this night to reason with the people. I mean, God willing, to bring in review before them the collected wisdom of General Jackson's administration upon this same experiment; the messages, the reports, the essays, the speeches, documents, arguments, proofs, which were written, adduced, made, read, and reiterated, to establish the length and the breadth, the height and the depth of this same grand, safe, and sure experiment,

which now lies like love bleeding! Could any system, any wise plan of finance and currency be more strongly, more earnestly, more confidently recommended and urged than was this same experiment? Let us see: to the proofs! [Here Mr. Wise raised many large volumes of Executive documents and reports of committees, etc.] Here! here they are, pile upon pile—mountain high, if you choose: if these are not enough, I can touch that dome with Pelion upon Ossa, and Ossa upon Olympus, of multiplied proofs against you, (turning to Mr. Cambreleng.) Shall I read them? [Here Mr. CAMBRELENG begged for God's sake that he would not.] I know they are gall and wormwood to you now, but you must take a portion of the bitter draught, though I do not intend to minister to you the dregs. You must endure a portion. Sir, I omit the President's celebrated cabinet paper, read in 1835, upon the removal of the depositories. I omit the reports and papers of honest Iago, Amos the agent, to the President in 1833, upon the expediency and policy, the wisdom and virtue of removing the depositories from the monster, and placing them in certain local banks. I cite only the Congressional documents. (See Executive documents, 1833, '34, p. 12.)

In the President's Message of December, 1833, he (Jackson) told us: "I entirely concur in the view he" (the Secretary of the Treasury) "has taken of the subject," (the removal of the depositories.) What was the view he took? The report of the Secretary of the Treasury (Mr. Taney) in 1833, says:

"The State banks can, I have no doubt, furnish a general circulating medium, quite as uniform in value as that which has been afforded by the Bank of the United States. Probably more so." "But a currency founded on the notes of State banks, could not be suddenly substituted for that heretofore furnished by the Bank of the United States, and take the place of it, at the same moment, in every part of the Union. It is essential that the change should be gradual, and sufficient time should be allowed to suffer it to make its way by the ordinary operations of commerce, without requiring a hasty and violent effort."

This view was supported by the Committee of Ways and Means in the House of Representatives, the chairman then (Mr. Polk) the present Speaker. The report of that committee in 1833-'34 upon the removal of the depositories, says:

"The question then arises whether the State banks should be continued as the fiscal agents of the Government. The committee are satisfied that the State banks are fully competent to perform all the services which the General Government ought to require, in the collection and disbursement of the revenue, and to afford all the facilities to the internal commerce and exchanges of the country which have been derived from the Bank of the United States."

"The opinion has already been expressed that the State banks are competent to perform all the duties which the Government or the public convenience may require; and there are many circumstances which strongly recommend them to a preference over a Bank of the United States. No one of them can exercise a general control over all the others, and expand or contract the whole currency of the country at its pleasure, to favor the private speculations of individuals, or to increase its own profits. And they can never combine together for political objects, nor hope to gain possession of the Government and control its operations."

"The State banks are now firmly interwoven with the institutions of our country, and it would be unjust, and contrary to the spirit of our institutions for Congress to sustain a great moneyed power to over-awe and oppress them, and bring ruin upon multitudes of our citizens, whenever cupidity or ambition shall tempt them to exercise their power."

"If it should be urged, as an objection to the State banks, that they cannot afford a general currency, the answer is obvious. If it were deemed necessary to create a paper currency possessing equal credit with that of the present Bank of the United States, the object can as well be accomplished with the State Banks as with the Bank of the United States."

"With these views, the committee are of opinion that the State banks ought to be continued as the depositories of the money of the United States," &c.

The same committee, on the 23d of April, 1834, reported a letter, dated April 15, 1834, from Mr. Taney, upon the mode of selecting the deposite banks, in which he says:

"It will be seen, from this statement, that it is no part of the proposed plan to dispend with the State banks. It is obviously not in the power of Congress (if it desired to do so) to take measures for that purpose without an amendment to the Constitution. And the States would not, and ought not, to surrender the power of chartering banking companies. The State banks are now so numerous, and are so intimately connected with our habits and pursuits, that it is impossible to suppose that the system can ever be entirely abandoned. Nor is it desirable that it should be. They are often abused, like all other human institutions; yet their advantages are many, and under proper regulations, and with the metallic basis now proposed for their paper issues, they will be found of much public advantage."

President Jackson, in his Message to Congress, December, 1834, speaking of the United States Bank, says:

"It happily is already illustrated that the agency of such an institution is not necessary to the fiscal operations of the Government. The State banks are found fully adequate to the performance of all services which were required of the Bank of the United States, quite as promptly, and with the same cheapness. They have maintained in themselves and discharged all these duties, while the Bank of the United States was still powerful, and in the field as an open enemy; and it is not possible to conceive that they will find greater difficulties in their operations when their enemy shall cease to exist."

President Jackson, in his Message to Congress, December, 1835, says:

"We are now to see whether, in the present favorable condition of the country, we cannot take an effectual stand against this spirit of monopoly, and practically prove, in respect to the currency as well as other important interests, that there is no necessity for so extensive a resort to it as that which has been heretofore practised. The experience of another year has confirmed the utter fallacy of the idea that the Bank of the United States was necessary as a fiscal agent for the Government. Without its aid as such, indeed, in despite of all the embarrassment it was in his power to create, the revenue has been paid with punctuality by our citizens; the business of exchange, both foreign and domestic, has been conducted with convenience; and the circulating medium has been greatly improved. By the use of the State banks, it is ascertained that the money of the United States can be collected and disbursed without loss or inconvenience, and that all the wants of the community,

in relation to exchange and currency, are supplied as well as they ever have been before. If, under circumstances the most unfavorable to the steadiness of the money market, it has been found that the considerations on which the Bank of the United States rested its claims to the public favor were imaginary and groundless, it cannot be doubted that the experience of the future will be more decisive against them. It has been seen that, without the agency of a great moneyed monopoly, the revenue can be collected, and conveniently and safely applied to all the purposes of the public expenditure. It is also ascertained that, instead of being necessarily made to promote the evils of an unchecked paper system, the management of the revenue can be made auxiliary to the reform which the Legislatures of several of the States have already commenced in regard to the suppression of small bills; and which has only to be fostered by proper regulations, on the part of Congress, to secure a practical return, to the extent required for the security of the currency, to the constitutional medium. Severed from the Government as political engines, and not susceptible of dangerous extension and combination, the State banks will not be tempted, nor will they have the power which we have seen exercised, to divert the public funds from the legitimate purposes of the Government. The collection and custody of the revenue being, on the contrary, a source of credit to them, will increase the security which the States provide for a faithful execution of their trusts, by multiplying the scrutinies to which their operations and accounts will be subjected. Thus disposed, as well from interest as the obligations of their charters, it cannot be doubted that such conditions as Congress may see fit to adopt respecting the depositories in these institutions, with a view to the gradual disuse of the small bills, will be cheerfully complied with; and we soon shall gain, in place of the Bank of the United States, a practical reform in the whole paper system of the country. If, by this policy, we can ultimately witness the suppression of all bank bills below twenty dollars, it is apparent that gold and silver will take their place, and become the principal circulating medium in the common business of the farmers and mechanics of the country. The attainment of such a result will form an era in the history of our country, which will be dwelt upon with delight by every true friend of its liberty and independence. It will lighten the great tax which our paper system has so long collected from the earnings of labor, and do more to revive and perpetuate those habits of economy and simplicity which are so congenial to the character of Republicans, than all the legislation which has yet been attempted."

Mr. Secretary Woodbury's report, of the same date, tells us:

"This Department takes pleasure in stating that the public money continues to be collected and deposited, under the present system of selected banks, with great ease and economy in all cases, and with greater in some than at any former period. The transfers of it to every quarter of the country where it is needed for disbursement, have never been effected with more promptitude, and have been entirely free of expense to the Treasury. The payments to creditors, officers, and pensioners, have been punctual and convenient; and the whole fiscal operations through the State banks have, as yet, proved highly satisfactory. Incidental to this, the facilities that have been furnished to the commercial community in domestic exchanges, were probably never greater, or at so moderate rates."

Again, he says:

"It will be seen that the situation of the selected banks, as a whole, bears an enviable comparison with the rest. In all cases deemed proper, they have given collateral security, and are all believed to be entirely safe, to the extent they have been confided in. Their discounts have been in general somewhat increased, but, though tempted by the enterprising spirit of the times, not usually increased in a degree disproportionate to their available means. They have also, in some cases, been able to aid, and have liberally aided, other banking institutions in their neighborhood, by as large and long balances and other inducements as would generally appear to have been sanctioned by correct principles."

Now, sir, "the enterprising spirit of the times" is called by the hard name of "improvident speculation"—"over-action."

In "the last annual message," December, 1836, the Greatest and Best still continued to say:

"Experience continues to realize the expectations entertained as to the capacity of the State banks to perform the duties of fiscal agents for the Government, at the time of the removal of the depositories. It was alleged by the advocates of the Bank of the United States that the State banks, wherever might be the regulations of the Treasury Department, could not make the transfers required by the Government, or negotiate the domestic exchanges of the country. It is now well ascertained that the real domestic exchanges, performed through discounts, by the United States Bank and its twenty-five branches, were at least one-third less than those of the deposite banks for an equal period of time; and if a comparison be instituted between the amounts of service rendered by these institutions, on the broader basis which has been used by the advocates of the United States Bank, in estimating what they consider the domestic exchanges transacted by it, the result will be still more favorable to the deposite banks."

After instituting this comparison, the Message proceeded:

"In the same manner have nearly all the predictions turned out in respect to the effect of the removal of the depositories—a step unquestionably necessary to prevent the evils which it was foreseen the bank itself would endeavor to create in a final struggle to procure a renewal of its charter. It may be thus too, in some degree, with the further steps which may be taken to prevent the excessive issue of other bank paper," &c.

Sir, it is unnecessary to quote further. I will not quote from Mr. Woodbury's testimony before the investigating committee of which my colleague (Mr. Garland) was chairman. I will not cite passages from the valedictory—the miserable imitation of Washington's farewell address. I will not stop to show a continuous recommendation, incessant, labored, from the removal of the public depositories, in 1833, up to the 4th of March, 1837, the very day when this system of deposite in the local banks sunk never more to rise; but I only ask of you and all men to contrast what I have quoted, to compare all this with the letter of the immortal, infallible ex-President, during this summer, denouncing the pet bank system as the most base and perfidious, and with the successor's present Message, confessing that the experiment has failed! And then to me whether these men of Gotham are again to be trusted in their recommendation of another experiment! Did not the failure touch their very noses before they discovered it? If so, they were—I will not mince terms—fools! Did they foresee the failure?

Where is the warning they gave? Where is the measure they took for safety? If they did foresee it, and, foreseeing it, gave no alarm, took no measures of safety, they are—knaves! They are, undoubtedly, both knaves and fools!

But the Experiment has failed. Why? Is the next question. Sir, why should this experiment have failed? It was wholly and solely in the control of the Executive. If it has failed, the Executive wholly and solely is to blame. They can offer no excuse; they have no pretext that their favorite bantering has expired under the unkind nursing of its enemies. The Administration assumed the entire responsibility, took upon itself the sole care, and wielded the whole power of originating, maturing, regulating, and carrying out its own experiment. No minority can be blamed. We were in a minority, and too weak even to throw a stumbling block in the way of its success; all that we could do was to predict its failure, and wofully has the prediction been fulfilled! The President alone removed the deposits; he placed them wherever he pleased, on his own terms, and under his own rules. For more than three years did the public money remain in the custody and control of the Executive hand without authority of or regulation by law. Congress was so yielding and obedient that it left its legitimate powers derelict to Executive assumption. The President, without restraint or limit, ordered the receipts, safe-keeping, and disbursements of the public funds at will; he took upon himself to organize a confederation of local banks, obliged his pets to raise the minimum denomination of their notes, endeavored to force them to constitute among themselves a system of internal exchange, backed them with Government credit to accommodate trade, regulated their receipts of local bank paper; he issued the Treasury circular to remove the specie basis of circulation; in short, was master of his own system. Why did it fail?

Sir, there is one remarkable fact in the history of this failure, which should not escape our attention, and which should be especially noted for our warning and our instruction. The deposit act was passed by Congress in June, 1836, and the very first report of the Secretary of the Treasury thereafter for the first time gave notice of difficulties in our finances. From the removal in 1833 up to that time, the time when Congress had again asserted its power to regulate and control the deposits and safe-keeping of the public money, the note of the night watch was all in well; the system works well, efficiently and safely, even more so than did the Bank of the United States. But the moment that Congress again assumed its powers, the note was changed, though darkly and dubiously. No one would have apprehended, or did apprehend, certain passages of the Secretary's report, in December, 1836, as they must be understood now. The report of Mr. Woodbury, December, 1836, says:

"The money in the Treasury has been safely kept during the year 1836. Until July last, as during the two previous years, it was placed in the State banks, selected according to the discretion of this Department, on account of their high standing and favorable position for fiscal purposes, and regulated in a manner considered most secure to the Treasury and convenient to the community, as well as useful to all concerned. It is a source of high gratification to be able to add, that, while so selected and employed, not a single dollar was lost." &c. "Nor is it believed that the domestic exchanges of the country were ever lower or more regular than during that period." &c. "But since the passage of the act of Congress, of June 23d, 1836, to regulate the deposits of the public money," most of the discretionary power before exercised by this Department on this subject, under previous laws and long usages, has been considered as no longer possessed; and various solicitations to use it, though some of them were in cases of extreme hardship, could not, therefore, be complied with. Relieved from great responsibility, and in many cases from much delicacy, in the exercise of it, by the passage of that act, a new system, in conformity with its provisions, and in place of the former one, was at once commenced by this Department, and has since been pursued with all the strictness and regularity which the nature of business, so extensive and complicated, would permit." &c.

How did the law create any embarrassment to the Secretary? there was a majority in both Houses of Congress; the Senate had been prostrated by the expunging blow to make it pliant to the wishes of the Executive in the framing of this law as well as others; and the law of June, 1836, did no more than sanction the then existing state of finance, except to deposit the surplus with the States. Sir, the complaint, in plain English, was, that Congress was an incubus upon the Executive will. Moreover, an excuse was wanting for foreseen disasters; here is proof, plain and positive, that the Secretary knew that the deposits were not to be safely kept for the year 1837! The law should not be the scape-goat. The Secretary was put under the law, but the law put every thing under him. The Administration carried out its experiment in its own way, had all the precautionary means of safety, and every opportunity of foreseeing embarrassments in its own power, and yet the pet banks were the first to suspend specie payments! The first bank selected after the passage of the act of June, 1836, was the first to fail with more than a million of Government deposits on hand—the Agricultural bank of Mississippi protested a Government draft of \$130,000. The second was the Planters' Bank of Mississippi; the third was a Government bank in New York; the fourth also, in Philadelphia, the pets were the first to fail, and they were the first also in Virginia. The States favorable to the Administration were the first and only States to legalize the suspension of specie payments, and to sanction by law an irredeemable paper currency. Alabama was the first State, and New York, Connecticut, Virginia, Michigan, Illinois, and Mississippi, followed suit. Such, sir, was the end of "the better currency," the swarm of yellow jackets, the flow of humbug metallic currency, in suspension of specie payments, and in the inability of the Government to pay its just debts, in less than four years from the day the Experiment began!

[Here Mr. CRAWFORD, of Mississippi, interposed with these remarks:

Mr. C. said, with the permission of the gentleman from Virginia, he would set him right as to an error into which he had no doubt been led by the current reports and newspapers of the day. No story laws had been passed by the Legislature of Mississippi, nor had that body, by any act, sanctioned the suspension of specie payments by the banks. The legislature was in special session when the suspension took place, but, so far as Mr. C. was informed, it expressed no opinion on the subject. Great distress and embarrassment prevailed in Mississippi; at that period, particularly, when the first shock was felt; property suddenly depreciated to less than half the value at which it had been quoted; but this distress and depreciation had been greatly exaggerated abroad, and every press at the North seem-

ed to take it for granted that relief laws would be passed. No such proposition was made in the Legislature; the public mind revolted from the idea; men whose property was under execution, whose horses were leaved on in the plough, and whose negroes were absolutely starving, were the first to insist on the supremacy of the law, and the inviolability of contracts. This was emphatically the case in the section of country from which he came. The prospects in Mississippi were now brightening. Some of our banks were adopting the most liberal and judicious measures to relieve the people and sustain themselves. The growing crops were very heavy, and will almost extinguish our foreign debt. An abundance of provisions for domestic consumption had been raised; and our creditors every where may be assured that their dues will be paid to the last dollar. We beg not for indulgence, but it is to their interest to grant it to us.]

Sir, as to Mississippi, I derived my information from the newspapers of the day. It may be wrong; I hope it is so; but, if wrong, it affects not the general conclusion from all the facts in the case, independent of the course of Mississippi. The question still remains to be answered by the Administration, why has the Experiment failed in its hands?

This question, sir, brings us to the causes assigned by the President. The Message says: "The operations of credit are so diversified, and the influences which affect them so numerous, and often so subtle, that even impartial and well-informed persons are seldom found to agree in respect to them." And yet, sir, though this subject of credit and the causes which affect it are so delicate and subtle, though a measure touching trade and finance and currency, and the main support of all, credit, tends nobody knows where, or to what; and though every safe and sagacious statesman will ever be ruled and guided in this subject by the light of experience, and the history of what has been tried in the past, the late and the present Executive have laid upon credit, finance, and currency the rudest hands of barbarism itself; have knocked down every fly-wheel and regulator of either; have destroyed all the balances of trade, and have set the machine in motion at an unprecedented rate of velocity towards self-destruction—just in the experiments! If this subject be so delicate, why has it been so harshly tampered with by experimenters? The Message continues:

"It was hardly to be expected that those who disapproved of the policy of the Government in relation to the currency would fail to attribute to that policy any extensive embarrassment in the monetary affairs of the country. The matter thus became connected with the passions and conflicts of party, etc. It is, however, a cheering reflection that circumstances of this nature cannot prevent a community so intelligent as ours from ultimately arriving at correct conclusions."

No, sir, party itself, with all its blindness of partiality, prejudice, and passion, cannot so dupe any as to make them differ about the causes of the failure of this Experiment. I venture to say that there is no difference of opinion among all men of this country on this subject. The President may, with much policy, assume this difference to exist, but it is unnatural to suppose for a moment that the "impartial and well-informed" can doubt or differ, or that the ignorant and the bribed themselves do not distrust the real causes. No flattery of its intelligence can now cajole the community into the theory or belief of other cause than one, and that one cause, in one word, is—misgovernment or mal-administration! The primary cause of all this mischief, the Message tells us, is—over-action! What is that? The Message says, 1st. Increase of bank capital, circulation, loans, and discounts. 2d. Foreign loans and debts. 3d. Domestic debts. 4th. Speculations in public lands, etc. 5th. Expenditures in improvident improvements. 6th. The diversion of labor from agriculture. 7th. Luxurious habits of the people. The Message says:

"However unwilling any of our citizens may hereinafter have been to assign to these causes the chief instrumentality in producing the present state of things the developments subsequently made, and the actual condition of other commercial countries, must dispel it remaining doubts upon the subject."

Now, sir, I affirm that there are no "impartial and well-informed persons" who are unwilling "to assign to these very causes the chief instrumentality in producing the evils of the present times. These are the causes, say I, say all. These, united with other, and impelled by other causes, have produced the mischief. The President admits that this over-action derived its first impulses from antecedent causes. What were these antecedent causes? Here he leaves us in the dark. Sir, I will tell you. "These antecedent causes were the acts of the Government." "Solitary and alone." "The Government," amidst the warnings of the wise and the cheers of the wicked, who batten on the spoils, "put all these balls in motion!" How did the Government impel these causes? Sir, a virtue ascribed to the Bank of the United States by its worst enemies was its salutary influence in checking the increase of bank capital, and the constant tendency of local banks to over-issue. In the year 1833, the war was openly commenced and declared against that institution. It was as certain to be destroyed by the President as Carthage by Rome. It was counted already as dead, as soon as the removal of the deposits was justified by Congress. As long as it existed, there was no necessity for more banking capital; it supplied the wants of trade amply, and did the business of the Government and of the People efficiently. What was the consequence of its defeat? Sir, listen to what the President himself says on that subject:

"At the commencement of the year 1834, the banking capital of the United States, including that of the national bank then existing, amounted to about 200 millions; the bank notes then in circulation to about 95 millions; and the loans and discounts of the bank to 324 millions. Between that time and the 1st of January, 1836, our banking capital was increased to more than 251 millions; our paper circulation to more than 140 millions, and the loans and discounts to more than 457 millions."

Thus was the banking capital, in two years, increased more than 51 millions, paper circulation more than 45 millions, loans and discounts more than 133 millions!—according to the President's statement of the effect of destroying the only safety-valve we had to secure us from this fearful over-action. This summary of the President does not vary essentially from others which I have seen. In the National Gazette of April 8, 1837, you will find the 2d No. of the essays, under the signature of An Examiner: numbers which I fail not to quote, because they are truly able and philosophical commentaries upon the political economy of the times. There it is stated that Gen. Jackson's war against the Bank of the United States, and his removal of the deposits, had, in the seven years which elapsed between the 1st of January, 1830, and the 1st of January, 1837, produced the following results:

1st. An augmentation in the number of banks from 320 to 677—an increase of 357, besides 146 branches.

2d. An augmentation in banking capital of the United States from \$145,192,268 to \$334,240,292—an increase of 179 millions of dollars.

3d. An expansion in the circulation of bank notes from \$61,323,898 to \$189,762,506—an increase of paper money of upwards of 124 millions of dollars.

4th. An augmentation of amount of deposits, public and private, from \$55,559,938 to \$134,541,894—an increase of near 91 millions of dollars.

5th. An extension of the amount of bank loans and discounts from \$60,461,214 to \$590,892,661—an increase of upwards of 390 millions of dollars; a sum only 12 millions less than the aggregate of the increased capitals, circulation and deposits.

To test the question, whether the Bank of the United States tended to prevent an increase of banking capital, you have only to compare the increase of banking capital in the periods when the bank did not exist with the periods during which it did exist.

"The aggregate capital of the banks in the United States was—

In; 1811	1815	1816	1820	1830	1835	1836, (to the month of August.)
						\$52,000,000
						82,200,000
						89,800,000
						102,100,000
						110,200,000
						196,250,000
						291,250,000

"Thus, in ten years, from 1820 to 1830, the increase of bank capital in the United States was only eight millions of dollars; whereas, in the six following years—no; not six, but only five and a half—the increase amounted to the prodigious sum of one hundred and eighty-one millions!"

Sir, this very increase of banking capital, issues, loans, and discounts, of which the President now complains so much, was caused by "the Government"—the Executive itself, in warring upon and destroying the United States Bank; and was encouraged by the Executive in stimulating the local banks with the public deposits. It was a part of the Experiment itself to increase the local bank capital in order to supply the vacuum produced by the fall of the United States Bank. As soon as that institution expired, competition in banking at once commenced. The question among the States was, who shall now furnish the circulating medium? And the question among the banks was, who shall acquire the Government patronage? It had been urged vehemently, by the friends of the United States Bank, that if the Government destroyed that institution it would destroy the circulating medium, currency, and exchange. Every effort was made by the Government to meet and answer that objection, by stimulating its pet banks with Government credit to perform all the functions and offices, commercial and financial, of the United States Bank. In proof of this, sir, I adduce the numerous and various circulars issued by the Treasury Department from 1833 up to the moment when the bubble burst in the spring of 1837. [Here Mr. Wise read the two circulars—of July 7th, 1834, and of February 22d, 1836.]

The deposits banks were expressly told that while they had the "use, without interest, of unusually large sums of the public money, they should make some further temporary sacrifices to obtain and circulate gold, and in other respects to enlarge the specie basis of our circulating medium;" and all this was with the view of the Department to improve the currency! The banks were appealed to to establish a credit, mutual, if they chose, to redeem and reissue a certain amount of each other's bills, as they might be needed for circulation in travelling and the transmission of funds at a distance. They were regularly notified, through their agent, Whitney, how long Government deposits might remain in their vaults for them to trade, issue, loan, and discount upon. Sir, I adduce, as further and conclusive evidence, this message itself. See page 11.

"The use by the banks, for their own benefit, of the money deposited with them, has received the sanction of the Government from the commencement of this connection." The money received from the people, instead of being kept till it is needed for their use, is, in consequence of this authority, a fund on which discounts are made for the profit of those who happen to be owners of stock in the banks selected as depositories. The supposed, and often exaggerated, advantages of such a boon will always cause it to be sought for with avidity. I will not stop to consider on whom the advantage incident to it is to be conferred; whether the selection and control be trusted to Congress or to the Executive, either will be subjected to appeals made in every form which the sagacity of interest can suggest. The banks, under such a system, are stimulated to make the most of their fortunate acquisition; the deposits are treated as an increase of capital; loans and circulation are rashly augmented; and, when the public exigencies require a return, it is attended with embarrassments not provided for nor foreseen. Thus, banks that thought themselves most fortunate when the public funds were received, find themselves most embarrassed when the season of payment suddenly arrives.

"Unfortunately, too, the evils of the system are not limited to the banks. It stimulates a general rashness of enterprise, and aggravates the fluctuations of commerce and the currency. This result was strikingly exhibited during the operations of the late deposit system, and especially in the purchases of public lands. The order which ultimately directed the payment of gold and silver in such purchases, greatly checked, but could not altogether prevent, the evil. Specie was, indeed, more difficult to be procured than the notes which the banks could themselves create at pleasure; but still, being obtained from them as a loan, and returned as a deposit, which they were again at liberty to use, it only passed round the circle with diminished speed. This operation could not have been performed, had the funds of the Government gone into the Treasury to be regularly disbursed, and not loaned out for their own profit, while they were permitted to substitute for it a credit in account."

In page 12 he further goes on to say:

"Since, therefore, experience has shown that to lend the public money to the local banks is hazardous to the operations of the Government, at least of doubtful benefit to the institutions themselves, and productive of disastrous derangement in the business and currency of the country, is it the part of wisdom to renew the connection?"

Sir, who gave the use of the public money to the local banks, for their own benefit? Who made the money received from the people a fund on which discounts were made for the profits of those who happened to be owners of stock in the banks selected as depositories? Who caused this boon to be sought for with avidity? Who stimulated the banks to make

the most of their fortunate acquisition? Who encouraged them to treat the deposits as an increase of capital? Who caused loans and circulation to be rashly augmented? Sir, the Message itself answers—"the Government, from the commencement of this connection!" He needed not to stop to consider on whom the patronage was conferred; the Government sanction was given to all this monstrous abuse of public trust, for reasons best known to him who now sits in the Presidential chair,—reasons which he will never mention, if nobody else does! How profligate though, and insolent, must that man be, who first stimulates another to the height of intoxication and madness, for purposes of base profit, and then turns upon his victim and tool, and derides and denounces him to the world! Such is the conduct of "the Government"—the Ex and the In-President of the United States, towards the deposit banks! The increase of circulation, loans, and discounts was rather an effect than a cause. Money was made plenty by the action of the Government. Money plenty—there was a domestic demand for credit, which caused domestic debt; and the same cause produced our foreign debt, and large importations—our speculations in public lands, and in every species of property. The Government officers especially were interested and engaged, deeply and fraudulently, in these very land speculations; and the improvident extravagance of the Government, in appropriating immense sums to public works, drew off more labor from agriculture than all the private speculations of the nation could have done. The whole system tended and operated to hallucinate the public mind, and to corrupt the public morals. Cruel, indeed, is it, no less to the people than to the pet banks, to blame them with effects proceeding directly from the mal-administration of the Government. In no other point of view are they to be blamed for their participation in the wrong than for having trusted their great interest and their liberties to such abandoned and insolent rulers! The system of the Government was not limited to the banks; it did stimulate "a general rashness of enterprise, and aggravated the fluctuations of commerce and currency."

But the President takes comfort in his misfortunes from companionship in grief—from alleged distresses in other countries. He says:

"It has since appeared that evils, similar to those suffered by ourselves, have been experienced in Great Britain, on the continent, and, indeed, throughout the commercial world; and that in other countries, as well as in our own, they have been uniformly preceded by an undue enlargement of the boundaries of trade, prompted, as with us, by unprecedented expansions of the systems of credit."

Now, sir, we happen to have an authority upon this point, which does most conclusively show the fallacy of this position assumed by the Administration; an authority too which beautifully illustrates the value and importance of a national bank in times of commercial and financial embarrassment and distress. Sir, I call the attention of the committee to a statement rendered in the name of the Council General of the Bank of France, by the Count D'Argout, Governor," to a "general meeting of the stockholders, on the 26th of January, 1837." (See "The Financial Register of the United States," September 13th, 1837, No. 6, vol. 1.)

In this important document we find a full and satisfactory answer to this part of the Message, contradicting it expressly, and showing where the commercial crisis and pressure commenced. The statement says:

"The consolidation of public order has favored the extension of commerce, and has augmented the revenues of the State. Commerce has demanded of the bank the most ample means of credit; the increasing wealth of the Treasury has rendered the assistance of the bank less necessary and less useful to it. Far from regretting the diminution of our relations with it, we ought to congratulate ourselves; we therein find a certain proof of the prosperity of the country. We are happily wry far from those critical periods, during which the bank had at the same time to assist commerce and to aid the Treasury. If at the latest of these epochs the bank was enabled to furnish, in a single year, 617 millions to commerce, and 253 to the Treasury, she feels honored by the recollection of it; but she congratulates herself at not being at this day called upon to employ her resources otherwise than in seconding the progress of commerce, or in protecting it against a return of those distressing vicissitudes which occasionally happen."

It is to this last result that she just devoted all her efforts. During the second half of the year 1836, the security of commerce appeared shaken, confidence was for a moment weakened. From the month of July some symptoms of a partial distress had begun to manifest themselves. The march of our manufactures had been so rapid, that there could not have failed to arrive a period of reaction. Some exportations of coin, the importance of which was exaggerated, and which are now insensibly reduced, excited a certain degree of anxiety, when a crisis rather severe overtook the United States. The scarcity of specie raised the interest of money there to an exorbitant rate. It was at London that the reaction of this crisis was first felt. The Bank of England, notwithstanding the power of her means of action and her well-known skill, found herself obliged to raise the rate of discount from 4 to 4½ per cent, and subsequently to 5. The Bank of Amsterdam imitated this example. France could not withdraw herself entirely from the influence of these events, for the commerce of the whole world is more or less responsible for all its parts.

"Although this commercial reaction only reached its second-hand, and consequently confined, it could not fail to develop the seeds of embarrassment which I have just now alluded to. Thus, in many towns of the Kingdom, the interest of money rose to 5 and 5½, and even for a moment to 6 per cent. Money became scarce; demands for specie were addressed to Paris from different points of France, and from neighboring countries. The coffers of the bank could alone furnish it. She had then to administer simultaneously to the wants of the capital and to those of the departments, as well as to those of the adjoining States. If the bank had shown the least hesitation, fears would probably have become general. The public funds, which had already declined, would perhaps have experienced a much heavier depression; this momentary pressure might have been converted into a real crisis."

"The bank, in this situation, restricted neither the length of time which paper had to run, nor diminished the amount of her discounts. She delivered up to the circulation one hundred and eight millions of specie, and discounted four hundred and fifty millions in six months. She maintained at four per cent. the rate of her interest, when this limit had been exceeded by a great part of Europe. It is thus that she was able to arrest or

to check a movement which seemed to be assuming a serious aspect."

"But, in order to accomplish this, she was obliged to have recourse to extraordinary precautions. The specie on hand decreased rapidly; it was necessary to replace this reduction. The bank purchased eight millions of gold at Paris; she drew from abroad 10,800,000 francs in silver bullion. The premium expended in procuring the gold will sooner or later be made up. The operation on the bullion occasioned a loss of 105,000 francs. This loss has been in some measure recompensed by more abundant discounts; but even had it been impossible to obtain any compensation, this consideration would not have prevented the Council from taking that course; it would equally have adopted it without hesitation, inasmuch as it was imperiously called for by the interests of commerce; a fact which it now frankly declares to you through my instrumentality."

"The interests of commerce, gentlemen, are therefore intimately allied to yours. The aggregate of the dividends of 1836 have given you a proof of it. You received, in 1834, but 80 francs, and, in 1835, 96; the year 1836 gives you 112 francs. This is the highest annual dividend that has been declared since the creation of the bank."

So much for the pressure in Britain and on the continent of Europe. Indeed, sir, I believe the fact was, though I am not confident in stating it to be so, that cotton actually fell in New Orleans before advices were received of a fall in Liverpool! This is an unexampled fact, if it were so, that produce should fall at the place of exportation before it was known that prices had diminished at the market of sale! The fact might well be so, owing to the failures of our own merchants, and the total want of exchanges at home. I have endeavored to obtain accurate information as to this fact. I have only the information, however, contained in Mr. Raguet's communication in the National Gazette of the 14th of September last, under the signature of "An Examiner;" and a letter from an intelligent gentleman of Philadelphia to a friend assures me that "the heavy failures in New Orleans (Hermann, Briggs and Co. etc.) took place about the end of February, or the 1st or 2d of March. This was shortly before the bad news was received from Liverpool."

But, sir, there were other causes of this catastrophe, proceeding from the action of the Government, besides the increase of banking capital, circulation, loans and discounts, besides foreign and domestic debts, and the other causes enumerated in the Message. Besides the importation of some ten millions of silver dollars from abroad, which commenced with the removal of the deposits in October, 1833, and continued until July, 1834, and "which would not have been imported in the ordinary course of trade," and which, in part, increased the issues, loans, and discounts of banks, and the debts consequently of individuals, I proceed to enumerate the "gold bill" as one of the most prominent acts of "the Government" which caused pressure abroad as well as at home. I voted for that bill, and therefore owe an apology for my vote. The least apology I can make is the only one which the friends of the Administration can make for it—I ask forgiveness, for I knew not what I did! The party and the President were bent on the glory of doing: to increase its amount in the country was "a part of the system." I could not, at the time, see how the exchange in part of silver for a gold basis would injure us, though I confess I did not understand how it was to benefit the country, and I was anxious that the Administration should have no excuse left for the failure of the experiment if it should fail, as it has. It is singular enough that more than one means which were selected to make the experiment more successful and permanently efficient have contributed most signally to its failure. So did the gold bill. The manner in which it has done so is clearly demonstrated in the 2d No. of "An Examiner." (See National Gazette of April 8, 1837.)

"Suffice it to say, that a more unfortunate measure for the country could scarcely have been devised, as I will now endeavor to make apparent."

"By the mint regulations of 1791 the relative value between pure gold and pure silver was assumed to be 1 to 15, that is, one ounce of pure gold was assumed to be the equivalent to fifteen ounces of pure silver, and according to this proportion were the gold eagles and silver dollars and their fractions regulated. For some years our currency was composed partly of gold and partly of silver; but it so happened that, prior to the year 1819, the relative value of these two metals had undergone a change in the general market of Europe, so that one ounce of gold could readily be exchanged for more than fifteen ounces of silver. The consequence of this was, that whenever coin was required to be exported to Europe, gold was sent in preference to silver; and this exportation continuing until the year 1822, scarcely a gold coin was, at that period, left in circulation. Even the gold which was subsequently produced in the Southern States went abroad in search of its equivalent."

"By this disappearance of gold, the currency of the United States became virtually a currency of silver. Silver dollars and their fractional parts were the coins universally employed. As the basis of a banking system, they had all the value of gold; and, if their portability was not as great, they were far more convenient than gold to the great mass of the people in the ordinary transactions of life. But this was not all. The currency of the United States was placed in a state of independence as regards the currency of Great Britain, which was of gold; so that each country, in the management of its banking system, had only to look to itself. An expansion or contraction of the paper currency of either country had but a trifling influence upon the currency of the other, and the commercial prosperity of neither was placed at the mercy of the other."

"One remarkable proof of the truth of this position is to be found in the well-known fact that the great panic and pressure for money which, in the year 1825, brought the Bank of England to the verge of stopping specie payments, and absolutely

"In support of this position, the writer is able to state that, having examined the prices of cotton quoted in commercial letters from Liverpool houses of the greatest respectability, he has found the highest quotations to have been as follows, at the dates respectively mentioned, for uplands of the best quality:

1833.	d.	1834.	d.
October 30	-	9 March 22	-
November 23	-	87 April 23	-
December 7	-	83 May 16	-
December 31	-	94 June 7	-
1834.		95 July 8	-
January 4	-	96 August 23	-
February 24	-	9 September 30	-

compelled eighty private banks to suspend, was not felt in the United States as a general pressure for money, although many commercial disasters resulted from a fall in the price of cotton, in which article heavy speculations had been entered into." Another proof is to be found in the condition of Great Britain during the period of General Jackson's panic above referred to. Whilst we drew from her near four millions of silver dollars in the course of a year, it produced no pressure for money in the London market. The writer remembers noticing that fact at the time of its occurrence, and he is fortunate in being able to sustain it by evidence which will not be disputed. In the report of the Secretary of the Treasury, which has been heretofore assumed as authority for most of his calculations, there is a table giving "the aggregate amount of notes circulated in England and Wales, by the Bank of England, by private banks, and by joint-stock banks and their branches," at the following dates:

December 28, 1833, when the amount was	£27,621,104
March 29, 1834, do do	28,735,827
June 28, 1834, do do	29,207,652

"The importations of dollars from England to the United States commenced in November, 1833, one month after the removal of the deposits, and continued until July, 1834, when the news of the passage of the gold bill reached that country; and yet we find that, between the 28th of December, 1833, and the 28th of June, 1834, the currency of England, so far from having been contracted in consequence of that importation, was positively increased more than seven millions and a half of dollars, estimating the pound sterling at \$4 80. This arose from the circumstance that silver dollars were, in England, mere articles of merchandise; and the abstraction of a few millions of them could produce no more effect upon the currency of Great Britain than the exportation of an equal value in iron or lead, dry goods or hardware."

"But this was not all. The steadiness of the English currency prevented a fall from taking place in the prices of cotton and other American produce, which would have occasioned great loss to the American shippers, whilst, at the same time, it enabled British capitalists to extend relief to our merchants by the acceptance of bills of exchange, or by shipments of specie."

"By the gold bill, enacted on the 28th of June, 1834, the relative value of gold and silver was changed, so as to render an ounce of gold the equivalent of about sixteen ounces of silver. Another law was passed on the same day, declaring certain foreign coins a legal tender, one of the effects of which was to make the British sovereign, or gold pound sterling, equal in value to about \$4 87½ of American currency; and the joint effect of the two was to render gold the preferred metal on all occasions where importations of specie from Europe were called for the operations of commerce. From the date of the passage of these laws, the shipments from Europe were ordered to be made in gold instead of silver, and the consequence was, that this demand reaching the coffers of the Bank of England, the great repository of gold in Europe, produced an immediate effect upon the currency of Great Britain, by compelling the banks to contract their issues. Hence we find, by the Secretary's table, above referred to, that a contraction took place in the circulation of bank notes in England and Wales, so that, on the 27th of September, 1834, the amount was reduced to £28,591,112, and on the 28th of December to £27,729,828, being a diminution of upwards of seven millions of dollars."

"From these facts, supported by the documentary evidence of the Treasury Department, as well as by sound reason, it is manifest that the passage of the gold bills identified the British and American currencies, and rendered each for ever thereafter liable to be influenced by the other. Expansions and contractions can now hardly fail to be simultaneous, and henceforth, more than at the period when the sentence was first pronounced by Mr. Gorham, in Congress, must it be true, that 'the barometer of the American money market hangs up at the Stock Exchange in London.' Over-issues by the English banks cannot fail to excite over-issues by the American banks; for, as Great Britain is the country in which almost all our exchange transactions with the world are concentrated, if the British standard of currency be depreciated below the metallic standard of the Continent, we shall feel its effects in our currency, without being able to detect it. 'Shall feel,' did I say? We do already feel it; and there cannot be a question that our present pecuniary embarrassments have been greatly augmented by the operation of this cause, resulting from one of General Jackson's 'humble efforts' to restore the constitutional currency."

"With these evidences before him of the practical operation of a law which was capable of producing the most disastrous results, General Jackson, had he understood the subject, would have abstained from any active participation in rendering it more mischievous and fatal than the ordinary operations of commerce would have rendered it. But not so. Carried away, in the pursuit of his *ignis fatuus*—his "constitutional currency"—he arrogated to himself the right, by the arbitrary exercise of his executive authority, of imposing a tax upon the owners of the French indemnity. Those citizens were entitled by treaty to the full amount of the sum stipulated to be paid by France, without any deduction whatever, either for the purpose of glorifying General Jackson, or for the purpose of enabling him to pursue his favorite Jack o' Lantern. They were also entitled to their money without a moment's unnecessary delay, and the manifest plain course which justice demanded to be pursued was, to have given each claimant a bill upon France for the amount of his claim, to be negotiated or collected in the mode which best might suit him. This course was urged upon the Secretary of the Treasury by some of the claimants, who proved it to be the cheapest and most prompt mode by which they could be placed in possession of their property; and it is evident that, had any of the claimants wished gold for his share, he could have imported it upon quite as favorable

"The aggregate amount of gold coin and bullion imported during the year ending on the 30th September, 1834, was \$3,766,172, of which \$1,922,960 came from England, and \$824,673 from France."

"The aggregate amount of gold imported during the year ending on 30th September, 1835, was \$2,325,116, of which \$1,066,106 came from England, and \$445,955 came from France."

"It is probable that nearly the whole of this gold was imported within the last six months of the year 1834, under orders given after the passage of the gold bill, and before the country had recovered from the shock which led to the importation of coin. There was exported during this same year, in gold, \$625,679, probably during the last six months of the financial year."

terms as the Government? But no. The demands of justice weighed nothing in the scale, when opposed to the glory of "the constitutional currency." Orders were sent to France to transmit the amount of the four instalments of the indemnity paid in February, 1836, amounting to near four millions of dollars, in gold. To procure this quantity of gold, a draft was made upon the London market, which, if it did not create, at least assisted to augment, that pressure upon the British currency which commenced in April, and which every one knows has been continued, with occasional fluctuations, up to the 11th March, 1837, the date of the last advice, and which has been latterly augmented by the additional demand for nearly another million of dollars, the amount of the fifth instalment of the indemnity paid by France in February last. It is not pretended that the whole pressure on the English money market within the last year has been occasioned by the last mentioned "humble efforts" to restore "the constitutional currency." Other demands for gold have existed, amongst them one by the Bank of America, the principal deposite bank in New York, and one by the Bank of the United States, rendered expedient by the rapid return of her notes for payment in the early part of 1836, owing to the substitution in their place, throughout the Western and Southwestern country, of the notes of some of General Jackson's three hundred and fifty-seven new banks.

"Of the practical operation of these two 'humble efforts' upon the immediate interests of the citizens of the United States it behoves us now to speak.

"The contraction of the British currency, as every intelligent observer knows, has been to create a pressure for money in England, which has produced the following result:

"1. The market rate of interest has been advanced from 2½ to 5 per cent. per annum on first-rate commercial paper, which has had a tendency to keep money in England, which would otherwise have sought investment in the United States.

"2. British merchants are prevented from accepting with their accustomed freedom the bills of exchange drawn upon shipments of American produce.

"3. British capitalists are less able than before to make advances, or loans on the security of American stocks, which cuts off a large source from which capital has been heretofore supplied for our various internal improvements.

"4. British manufacturers are less able than heretofore to give credit to such of our importing merchants as require it.

"5. The price of cotton has fallen, since the first of January last, four or five cents a pound, in England, by which American shippers will lose 20 or 25 per cent. upon the stocks gone forward, and by which our cotton planters will be deprived of a corresponding or a greater amount, as the fall of prices at the South has already made evident.

"And now it only remains for us to inquire, how have these 'humble efforts' tended to restore 'the constitutional currency?' Has the importation of thirty millions of gold and silver pushed any paper out of circulation? So far from it, the amount of paper has augmented, as we have shown, to an incredible amount. The banks all seem to have acted upon the principle that their power to emit and keep their notes in profitable circulation was just in proportion to the specie they had on hand, and accordingly we have seen that, just in the measure that General Jackson supplied them with one million of dollars in coin, they supplied the public with three millions of dollars in paper. So much for the soundness of this 'constitutional currency;' and now for its uniformity.

"On the 2d of January, 1830, when General Jackson, in his Message to Congress, in reference to the Bank of the United States, said that 'it must be admitted by all that it has failed in the great end of establishing a uniform and sound currency,' the rates of domestic exchange were as follows, as appears from the New York Shipping and Commercial List:

Richmond,	1 per cent. discount.
North Carolina,	2 to 2½ do
Charleston,	1½ to 2 do
Savannah,	1½ to 2 do
New Orleans,	1 to 1½ do

"The rates on the 4th of March, 1837, the day after General

"Exchange on Paris at New York, for a bill at 60 days' sight, between the 2d of March, and the 15th of June, 1836, fluctuated from what is called 5.25 to 5.40, making an average of 5.324. The par exchange on Paris is about 5.354; that is, one dollar of American currency is equivalent to 5 francs and 35 centimes, or one-hundredth parts of a franc. The exchange then was, at the period mentioned, half per cent. above par; which, added to one per cent. which a bill at sight, such as the Government had a right to draw, and perhaps half per cent. for the superior security of a Government bill over a private bill, would make about two per cent. that the claimants would have received beyond the amount of their claims. It is true that the exchange upon France might have fallen something, in consequence of the increased supply of bills; but this could not have equalled the loss which the claimants sustained by the delay to receive their money, which was not paid until July, and which was then subject to a deduction for the expenses of freight, insurance and commissions, incident to the importation of the gold.

"The best commentary, however, upon the folly of these importations, is to be found in the following article, which is copied from the Washington Globe of the 1st of April:

"NEAPOLITAN INDEMNITY.—The last New York American contained the following:

"The Bank of America will also draw their bills on the Rothschilds, of Paris, for upwards of a million of francs."

"The above sum, which the Bank of America proposes to draw for, is, we presume, an account of the next instalment falling due under the Neapolitan treaty."

"The bank having, as we learn, an open credit to a large amount upon the Rothschilds, but being unwilling to avail of it, under existing circumstances, suggested that the next instalment, to be paid in May or June, might be anticipated under that credit."

"The Secretary of the Treasury, we are informed, finding that the interest of the claimants, in the present state of things, would be promoted by availing of the present high rate of exchange, over any other mode of bringing home the funds, and that, to the extent of the same, they might be used to relieve the community, unhesitatingly assented to the suggestion, and directed the Messrs. Welles, the agents for receiving the indemnity, to pay it over to the Messrs. Rothschilds as soon as received, to reimburse them for the bills drawn in anticipation of its receipt."

"It is for this sum, and upon this arrangement, we presume, the Bank of America proposed to pass the bills on Paris."

Jackson wrote his Farewell Address, as quoted by the same authority, are as follows:

Richmond,	1 to 1½ per cent. discount.
North Carolina,	2½ to 3 do
Charleston,	2½ to 3 do
Savannah,	2½ to 3 do
New Orleans,	3 to 4 do

"Let these two tables speak for themselves.

"And now, reader, with all these proofs before you, of the total failure of all General Jackson's schemes of finance, can you read the following passage in his Farewell Address, without asking yourself whether he was really in earnest?

"My humble efforts have not been spared during my Administration of the Government to restore the constitutional currency of gold and silver and something, I trust, has been done towards the accomplishment of this most desirable object."

"AN EXAMINER."

In addition to these causes, set in operation by the Government, came the celebrated Treasury order or circular of July 11, 1836. This circular enacted by Executive order that after the 15th day of August, 1836, the receivers of public money and the deposite banks should receive in payment of the public lands nothing but gold and silver, and in the proper places Virginia land scrip. Frauds, speculations and monopolies in the purchase of the public lands, and excessive bank credits, were made the pretext of this extraordinary measure, when these frauds, speculations, monopolies, and excesses of every description, had been known for a long time to the Administration, and participated in particularly by "the party," from the removal of the depositories to the moment when General Jackson was aroused vindictively to prevent the depositories with the States, directed by the deposite act of June, 1836. Whatever other difference of opinion there may be as to the effects of this order, all will agree that it removed the specie of the country from the large importing cities and the most important places of trade, and placed it in the "Far West," where it was locked up in the land offices or Western deposite banks, and rendered unavailable to commerce and to the wants of trade in an anomalous period of unexampled plenty and pressure! The gentleman from South Carolina, (Mr. Legare,) as I understand, admits this effect of the circular, and that it accelerated a revulsion, the severity of which the President says none had correctly anticipated. Had the specie of the country been permitted by the Government to remain where trade required it to be, none can say that the same extent of ruin would have been felt, or that it would have been felt so soon.

Such, sir, are some of the "antecedent causes" whence "over-action" derived "its first," and I may add, its last "impulses!" Forsooth, I had nearly omitted one cause, enumerated by Mr. Secretary Woodbury, which the President, in his wisdom, had entirely overlooked—the over-production of cotton! The over-production of cotton!—there is an example of a financier for you! Oh! rare Levi! Much more wisely had he spoken if he had, in ascribing the causes of our disasters, enumerated the potent reason that we had at the head of the Treasury Department a financier who regards the products of labor and industry as causes of national poverty and bankruptcy! A head that has not been wood-gathering, but picking cotton!

In the comparison of our condition with that of other countries, the President admits that "the most material difference between the results in the two countries [United States and Great Britain] has only been that with us there has also occurred an extensive derangement in the fiscal affairs of the Federal and State Governments." Ay, sir, there is the rub! Why has there not been in England and in France the same extensive derangement in fiscal affairs as in the United States, whilst there has been, according to the Message, "the same redundancy of paper money and other facilities of credit; the same spirit of speculation; the same partial successes; the same difficulties and reverses; and, at length, nearly the same over-whelming catastrophe?" Is it because our finances have not been managed so well, that we have had Levi at the helm, or that we had not, as France and England had, the great conservator, the life-preserver, a National Bank? Sir, this "material difference" is owing to both reasons. We deprived ourselves of the means of preserving credit, disabled the ship before the storm came on, shipped an incompetent crew and a worse pilot; and when the hurricane came—as hurricanes intrude will come as certainly as storms on the ocean—it swept over us at mercy—struck the ship of State down on her beam ends—dismasted, and leaking—and there she will lie, with hope only to aid her until the despairing mariners, now standing on her sides with spy-glass in hand, shall discover far out upon the "dim distant sea" a speck of sail sent by Providence alone to right ship, and save all hands from a watery grave! Strong canvass, new rigging, ballast and compass, and skilful crew and pilot, will not prevent the storm, but they alone can save the ship from the tempest when it blows. So with a National Bank and other means of regulating finance and currency—they cannot prevent the vicissitudes of trade and commerce, or wholly arrest their ravages and disasters, but they can save us from despair and death! The report of the Bank of France proves this at this moment. That nation was not only guarded from death and despair, but restored to health, and sustained in actual prosperity by sustaining a National Bank, whilst we have been nearly destroyed by destroying one.

But, why trace the causes of this revulsion in our affairs? Sir, the Administration knew from the first that the State banks were unsound. In proof of this I refer you to the letter of Mr. Taney, of the 15th of April, 1834, pages 4 and 5. He says:

"If the estimate I have made of the proportion between the paper circulation and the specie in possession of the banks be correctly, or nearly so, the condition of the currency is obviously such that the nation should not be content with it, nor desire to continue it in its present state. It is an immense superstructure of paper, resting on a metallic foundation too narrow to support it. It has never been sustained by its own inherent strength, but by public confidence. When every one firmly believes that the notes of the banks will, on demand, be paid in coin, they will readily circulate, and answer all the purposes of money. But the moment that the circulating medium, and are returned upon the banks for redemption in specie, and the disproportion between the paper circulation and the coin prepared to redeem it is so great, that it is constantly liable to have its chief support, public confidence, withdrawn from it."

I refer, also, to a statement of the condition of the local banks, furnished about the same time by the honorable R. H. Wilde of Georgia, and printed by order of the House of Representatives in the session of 1833-'34. Thus, sir, the Admini-

stration knew from the beginning that these agents, the local banks, could not stand the shocks of trade. The President himself says, "that the prospect of revulsion was present to the minds of considerate men before it actually came." Why was no warning given, no preparation made? Were our rulers not "considerate men?" Is it not true, as I have shown, that up to the fourth day of March last they were still crying in the night-watch, "all is well?" Sir, they knew of these causes, and they intended their effects! No matter what are the causes, the ruin is here! and the Administration designed to bring it upon the country for the diabolical purpose of establishing upon this ruin a Treasury bank!

Yes, sir, the very result of all these causes of mischief, whatever they may be, is now proposed as the second system—another experiment! This result is what has been aimed at all the time—the final triumph of Executive power—the total ruin of the liberties of the country—the complete union of the "purse and sword!" In the very midst of our calamities and misfortune, we are told to take up the very condition of distress into which we have been thrown by mismanagement and corruption, and to organize it into a permanent system of finance—ay, sir, from one quarter, not the most inconsiderable and influential source of these mischiefs, we have heard boasting and exultation at the calamities of the country. A letter written from St. Louis, August 11th, 1837, signed by Big Bully Bottom, Tom Benton, "congratulates" the party in Ohio "on the success of General Jackson's endeavors to improve the condition of the currency!" Sir, that man is misunderstood—that letter does not embody impudence and effrontery so much as it sets forth the real feelings, and shadows the designs of those in power—he knows their secrets—to force upon us now the extreme end of policy which they have always aimed at—to make the Government a bank and the President of the United States and "the party" its "President, Directors, and Co.!" This is not the desperate courage or bravado of a ruffian who is forced to brave every danger in the last extremity, but it is the chuckling of a fiend who has really reached the diabolical end he aimed at over the disasters and sufferings and ruin of a whole people! He knows that the danger now is not the re-establishment of a national bank, but that a revolution in the Government is already effected by forcing a "scurged country" and an "humbled democracy" into a system of Sub-Treasuries which will subvert all our ancient institutions, and laugh this republic to scorn! Above all the passages in the message—except one which I shall presently notice—the most pharisaical and insincere is that in which the President says he is "sensible that adequate provisions for these unexpected exigencies could only be made by Congress; convinced that some of them would be indispensably necessary to the public service, before the regular period of your meeting; and desirous, also, to enable you to exercise, at the earliest moment, your full constitutional powers for the relief of the country, I could not, with propriety, avoid subjecting you to the inconvenience of assembling at as early a day as the state of the popular representation would permit. I am sure that I have done but justice to your feelings in believing that this inconvenience will be cheerfully encountered, in the hope of rendering your meeting conducive to the good of the country."

Sir, why was Congress called at all? Does it matter whether we act at all? Has the President not put the system in operation, and is it not in full blast? Yes, sir—by the fiat of the Executive, by a single "circular" from the Secretary's pen, is the Sub-Treasury system called into being, full formed and perfect. See, sir, with what despatch, with what unity and simplicity of action, one will controls already the destiny of this nation. See this circular, and know the will of your master.

#### CIRCULAR TO RECEIVERS OF PUBLIC MONIES.

(TREASURY DEPARTMENT, May 12, 1837.)

"If the bank where you deposite should suspend specie payments, you will keep in your own hands safely the public money you have in possession, or may hereafter receive, till further directions are given to you by this Department how to deposite, transfer, or pay it, or any portion of it."

"You will report to this Department weekly the amount on hand."

"Secretary of the Treasury."

By this simple instrument—a circular—have magic changes been wrought in the form and policy of our Government; it has, by such means, been truly made a "simple machine!" After having done the deed, and put the system into full operation, then Congress is called, not to deliberate, not for consultation, but to register Executive edicts, or to adjourn! He proceeds—

"For the deposite, transfer, and disbursement of the revenue, National and State banks have always, with temporary and limited exceptions, been heretofore employed; but, although advocates of each system are still to be found, it is apparent that the events of the last few months have greatly augmented the desire, long existing among the people of the United States, to separate the fiscal operations of the Government from those of individuals or corporations."

How long, I would inquire, sir, has this desire "to separate the fiscal operations of the Government from those of individuals or corporations" existed? Not longer, surely, than since the 4th day of March last. Sir, what said Mr. Taney, on the 15th of April, 1834? (See his letter to the Committee of Ways and Means, pp. 9, 10.) After saying "the State banks are now so numerous, and are so intimately connected with our habits and pursuits, that it is impossible to suppose that the system can ever be entirely abandoned—nor is it desirable that it should be"—he proceeds:

"If there were no State banks, the profitable business of banking and exchange would be monopolized by the great capitalists. Operations of this sort require capital and credit to a large extent, and a private individual, in moderate circumstances, would be unable to conduct them with any advantage. Yet there is, perhaps, no business which yields a profit so certain and liberal as the business of banking and exchanges; and it is proper that it should be open as far as practicable to all the most free competition, and its advantages shared by all classes of society. Individuals of moderate means cannot participate in them, unless they combine together, and by the union of many small sums create a large capital, and establish an extensive credit. It is impossible to accomplish this object without the aid of acts of incorporation, so as to give to the company the security of unity of action, and save it from the disadvantages of frequent changes in the partnership, by the death or retirement of some one of the numerous partners. The incorporated banks, moreover, under proper regulations, will

25th Cong.....1st Sess.

Making public officers depositories—Mr. Fiske.

offer a safe and convenient investment of small sums to persons whose situations and pursuits disable them from employing the money profitably in any other mode. It is not more liable to be lost when vested in the stock of a bank, than when it is loaned to individuals. The interest on it is paid with more punctuality, and it can be sold and converted into cash, whenever the owner desires to employ it in some other way. And if a larger portion of the metals is infused into the circulation, the business of banking will become more sound and wholesome, and less liable to the disasters from which it has suffered, under our extravagant and ill organized system of paper issues. It will render investments in banking companies entirely safe and secure to the holders, and afford them the almost absolute certainty of a reasonable profit, without endangering the capital invested in it.

"For these reasons, it is neither practicable nor desirable to discountenance the continuance of the State banks. They are convenient and useful also for the purposes of commerce. No commercial or manufacturing community could conduct its business to any advantage, without a liberal system of credits, and a facility of obtaining money on loan when the exigencies of their business may require it. This cannot be obtained without the aid of a paper circulation, founded on credit. It is, therefore, not the interest of this country to put down the paper currency altogether. The great object should be to give it a foundation on which it will safely stand. A circulating medium composed of paper, and gold, and silver, in just proportions, would not be liable to be constantly disordered by the accidental embarrassments or imprudences of trade, nor by a combination of the moneyed interest for political purposes. The value of the metals in circulation would remain the same whether there was a panic or not, and the proportion of paper being less, the credit of the banks could not be so readily impaired or endangered."

What said Mr. Woodbury in December of the year? (See the Report of the Secretary of the Treasury "On the present system of keeping and disbursing the public money." December 12, 1834.)

"With the causes of these last and most important failures happening from time to time, as the table shows, to the very last year, this branch of our inquiry has no particular concern except to discriminate them from others, and from any special connection with the system that prevailed from 1811 to 1816. Whether they arose from an unsound policy pursued by the United States Bank, or from circumstances which, under the paper system, neither legislation nor caution can always avert, or from less justifiable reasons, and in spite of all the salutary influence the National Bank could exercise, it is a singular fact. In praise of this description of public debtors, the selected banks, that there is not now due on deposits, from the whole of them which have ever stopped payment, from the establishment of the Constitution to the present moment, a sum much beyond what is now due to the United States from one mercantile firm that stopped payment in 1835 or 1836, and of whom ample security was required and supposed to be taken under the responsibility of an oath.

"If we include the whole present dues to the Government from discredited banks, at all times and of all kinds, whether as depositories or not, and embrace even counterfeit bills, and every other species of unavailable funds in the Treasury, they will not exceed what is due from two such firms. Of almost one hundred banks, not depositories, which, during all our wars and commercial embarrassments, have heretofore failed in any part of the Union, in debt to the Government on their bills or otherwise, it will be seen, by the above table, that the whole of them, except seventeen, have adjusted every thing which they owed, and that the balance due from those, without interest, is less than \$82,000. Justice to the State banking institutions, as a body, whose conduct in particular cases has certainly been objectionable, but whose injuries to the Government have been almost ludicrously exaggerated, and whose great benefits to it, both during the existence of our two national banks, and while neither of them existed, have been almost entirely overlooked, has led me to make this scrutiny, and submit its results, under a hope that it will, in some degree, not only vindicate them from much unmerited censure, but justify this Department for the confidence it formerly, and, in the great improvement of their condition and of the financial affairs of the Government, has recently, reposed in them. Under these circumstances, so very favorable, with the new security and examinations provided for, if our former small losses by them, in keeping and paying over the public revenue, under circumstances so very adverse, are compared with our large losses, either in collecting or disbursing that revenue, their present safety seems to be as great as is consistent with the usual operations of the paper system, or with the credit which must always be entrusted by Government, in some way or other, to agents of some kind in keeping the public money. In considering their safety, it should be constantly recollected that the owners and managers of banks, when properly regulated by legislative provisions in their charters, are, like other individuals interested to transact business securely; are desirous of making, and not losing, money; and that these circumstances, with the preference in case of failure belonging to depositors and holders of their bills over the stockholders, united with the security, if not priority, given to the Government, render them, in point of safety, generally much superior to individual agents of the United States. It is to be further remembered that many of the former losses occurred indirectly and remotely from war and embarrassments, affecting deeply the whole community as well as banking institutions, and from the injurious influence of which calamities, banks, whether of State or United States origin, can never claim a full exemption; that the correct principles of banking were, at that time, less generally understood and practised than at the present time; that the selected banks, by the course of our expenditures and collections, were then exposed to more onerous duties and hazards; and that less full information of their true condition was then possessed by this Department."

Such were the views of both Secretaries, and the only heads of the Treasury Department since the removal of the public depositories in 1833. In 1835, General Gordon, of Virginia, made his celebrated proposition in the House of Representatives, to receive nothing but gold and silver in payment of the public dues, and to make the receivers of public money its depositories. Sir, it becomes me to give the history of that proposition. At the time it was made, the bill to regulate the deposit and safe-keeping of the public money was before the House, and then, too, the din of jangling promises to give us a hard money Government, a metallic currency, and a circulation of gold, was

almost deafening. I knew the promises were false, and the professions were hollow then. I knew that the Administration could not, if it would, do what it professed, and I was anxious only that its inability and weakness and "humbbugery" might be made manifest before measures brought upon the country this present crisis which I then foresaw. With my colleague, General Gordon, the proposition was sincerely made. He was opposed to the constitutionality of the Bank of the United States, and distrusted the system of employing the local banks as depositories. He came to me with his scheme, and asked if I would vote for it. I told him, at first, that I would not; that it was as objectionable to me, even more so, than the other measure; that I had no scruples about the constitutionality of a national bank; and I thought then, as I think now, that it alone could insure the safety of the public money, and restore our finances and currency to a healthy and sound condition. But there was no prospect of a recharter of a United States Bank, and I was forced to vote for or against the only other two measures to be adopted. He asked me, as an act of courtesy to him, to vote to let his proposition in. I consented to vote for its introduction into the House, warning him that I should finally vote against its passage if it was likely to succeed. I voted afterwards for it, on the main proposition, as many of the Opposition members did, simply to show that the Administration did not desire what they then professed, as now, to separate the fiscal operations of the Government from those of individuals or corporations! I knew that "the party" and that the then powers would not sustain the proposition or I should have voted against it. It then required but few Administration votes to carry the measure; but behold! as I calculated, they voted against it to a man! The vote on the proposition of General Gordon then proves, if it proves any thing, that there was no such desire, as the President says has existed for a long time on the part of the Government, in the spring of 1835. It would be as easy to show, sir, that there was no such desire expressed as late as the 4th of March, 1837. The gentleman from South Carolina (Mr. Pickens,) however, is right; the proposition to separate the Government from the banks, and to destroy all banking institutions, is not new; it originated with Fanny Wright, but the desire which the President describes has continued for a long time only with that part of "the Government" yelled Thomas Hart Benton. The great expunger and humbugger was the first to introduce the Locofoco doctrine into Congress, and to give them character before the nation; and, let me tell my friend from South Carolina (Mr. Pickens,) that he will be deceived who thinks to deprive Benton of his hobby—that if these destructive doctrines are to come into vogue and in favor with a majority of the people, Benton is as much identified with them as Thomas Jefferson was with the doctrines of '93, and he (Benton) and no other man under the sun will ride into power on their popularity!

But, sir, however old this proposition to divorce the Government from all banking corporations may be, there is a doctrine new under the sun contained in this notable Message. The President expressly refrains from suggesting to Congress "any specific plan for regulating the exchanges of the country, relieving mercantile embarrassments, or interfering with the ordinary operations of foreign or domestic commerce, from a conviction that such measures are not within the constitutional province of the General Government, and that their adoption would not promote the real and permanent welfare of these they might be designed to aid." He says the accommodation to domestic exchanges "is now, indeed, after the lapse of not many years, demanded from it, the Government, as an organ of its first duties," etc. When was this accommodation not demanded of the Government as among its first duties? Certainly, to afford this very accommodation was among the most oft-repeated, though often violated promises of General Jackson's administration, from the removal of the public depositories, in 1833, up to the 4th day of March last. Every message of President Jackson, from the one period to the other, and every report of his respective Secretaries, as well as the numerous circulars of the Treasury Department, the reports of the Committees of Ways and Means in this House, and other documents, will show that the currency of the country at large, its domestic exchanges, its commerce, and all its monetary interests, were taken especially under the guardian care and protection of this same most beneficent Government, which then promised as a better currency, and now tells us we must not look to the Government for "too much!" Surely, sir, the present incumbent is not about to falsify his promise to "follow generally in the footsteps of his illustrious predecessor;" or does he mean to follow them as my young friend from Tennessee (Mr. Crockett) felicitously expresses it, "by taking the back tracks?" Sir, it is profitable now to recur to the wholesome doctrines of the preceding Administration respecting the duties and powers of this Government in relation to a sound and uniform currency. (See Executive documents, 1833-34, No. 2, pages 5, 6, 10, 11.) In this report of Mr. Taney, after insisting "that the interests of the country would not be promoted by permitting the depositories of the public money to continue in the bank until its charter expired," he says:

"Besides, the principal circulating medium now in the hands of the people, and the one most commonly used in the exchange between distant places, consists of the notes of the United States Bank and its numerous branches. The sudden withdrawal of its present amount of circulation, or its sudden depreciation before any other sound and convenient currency was substituted for it, would certainly produce extensive evils, and be sensibly felt among all classes of society. It is well understood that the superior credit heretofore enjoyed by the notes of the Bank of the United States was not founded on any particular confidence in its management or solidity. It was occasioned altogether by the agreement on behalf of the public, in the act of incorporation, to receive them in all payments to the United States; and it was this pledge on the part of the Government which gave general currency to the notes payable at remote branches. The same engagement in favor of any other moneyed institution would give its notes equal credit, and make them equally convenient for the purposes of commerce. But this obligation on the part of the United States will cease on the 3d of March, 1836, when the charter expires; and, as soon as this happens, all the outstanding notes of the bank will lose the peculiar value they now possess; and the notes payable at distant places become as much depreciated as the notes of local banks. And if, in the mean time, no other currency is substituted in its place by common consent, it is easy to foresee the extent of the embarrassment which would be caused by the sudden derangement of the circulating medium."

He then promises that "the State banks can furnish a circulating medium quite as uniform in value," as that of the United

States Bank—"probably more so;" and afterwards states "the condition of the mercantile classes at the time of the removal, to explain why it was impossible to postpone it even for a short period." Those views of the Secretary were confirmed and supported, of course, by the report of the Committee of Ways and Means, made to the House of Representatives, March 4th, 1834, precisely as the opposite views entertained by the present Executive are in like manner echoed by the same committee now. By-the-by, the question was asked in 1834, why the then Committee of Ways and Means was like a tadpole? It was little at both ends (two certain gentlemen being at the two ends, the one at the head, the other at the tail) and big in the middle, (Binney and Wilde being there.) The report of that date says:

"There appears also to be much force in the considerations urged by the Secretary, connected with the currency of the country and the domestic exchanges. The notes of the Bank of the United States must necessarily, in a short time, be withdrawn from circulation. The principal currency of the country, for many years to come, will be bank notes, there is no reason to doubt; and it is certainly good policy to foster the State banks which furnish them, in measures tending to give them as general credit as has heretofore been attached to the notes of the United States Bank and branches. That the natural and ascertained course of trade, circulation, and exchange, connected with the interests of banking institutions, will ultimately produce this result in relation to the notes of the principal State banks, there is every reason to anticipate; but their employment in the business of the Government, by awakening them to their capacities and interests, is calculated to hasten the consummation of so desirable an event. It was a matter of no small moment to encourage and hasten the State Banks in maturing their system of circulation and exchange, so that at the termination of the charter of the Bank of the United States, the trade of the country might not encounter at the same time the loss of a general currency, and the entire breaking up of the domestic exchanges, a partial interruption of which by that bank is now producing such serious inconvenience. By the latest returns of the banks employed by the Government, it appears that they are already rapidly taking the place of the Bank of the United States in the exchange operations."

See, also, Mr. Taney's letter of the 15th of April, 1834, already in part quoted, *passim*.

"Mr. Secretary Woodbury, in his report to Congress, December, 1834, says: 'The wealthy and commercial, for whose benefit chiefly banks were instituted, will then chiefly use their bills, and suffer by them if forged or depreciated; while the laboring classes and men of small means will, by the justice and paternal care of the Government, generally be provided with a currency of hard money, not exposed to any risk of failure, and to be used for all dealings of such an amount as their daily or weekly wants may in most cases require.'

See, also, the Message of President Jackson to Congress, December, 1835, and the report of Mr. Secretary Woodbury, of the same date, (already quoted.) See, also, the Message of the President and the report of the Secretary of the Treasury, December, 1835, (already quoted.) In addition to these documents, I refer, sir, for conclusive proof that General Jackson took the currency, domestic exchanges, and the circulating medium, wholly under the "paternal care of the Government," to the report of the investigating committee, of which my colleague (Mr. Garland) was chairman, made to the House of Representatives, March 4, 1837. See the letter of the six depositories of Philadelphia, New York, and Boston, to Mr. Taney, dated in October, 1833, Whitney's letter accompanying the same, and Mr. Woodbury's answer, November 4, 1834. Therein are to be found similar expressions to this:

"In proportion as this system shall be well digested and executed, will be the soundness and equality of value throughout the Union of the circulating medium; and upon it will depend the degree of convenience or inconvenience which will be felt by the public in consequence of the recent change."

I refer, sir, also to an anonymous letter in the correspondence of Whitney with the deposite banks, dated November 8, 1834. I refer to the circulars of Whitney to the deposite banks, forwarded by Levi Woodbury, dated May 30, 1836, September 7, 1836, and December 7, 1836. And, sir, I appeal to my colleague (Mr. Garland) if it does not appear throughout the whole investigation that one of the principal purposes of Whitney's agency was to confederate and knit the banks together in one grand system of exchange. As a specimen, sir, of the whole business of the agency of Whitney and of the deposite banks, I will read a letter from him to John Hass, President of the Union Bank, Tennessee, Nashville, dated Washington, March 16, 1835:

"Sir: I am in receipt of your favor of the 23d ultimo. In reply to your request, I have to say, that the letter written by a person here high in the confidence of the Government, a copy of which I sent you with the other papers, gave you, in part what it was expected the agent appointed by the deposite banks would write. I want, however, state, as fully as I can, the duties the agent feels as devolving upon him. He expects to perform precisely the same duty that he would if appointed by the Treasury to superintend the deposite banks generally. He will carefully watch the operations of each; endeavor to produce concert of action; make suggestions in relation to operations of any which are calculated to lead to an improvement of the currency, or any which are necessary to preserve it from being affected by the operations or issues of any of the selected banks; aid and advise in establishing a system of domestic exchanges throughout the country, through the agency of the deposite banks, whereby the country shall reap all the advantages through such agencies that it ever did through the operations of the branches of the Bank of the United States."

"The agent will also feel bound to inform each deposite bank which employs him, at different periods, as nearly as he can from the estimates of the various Departments, of the probable amounts each will be called upon to disburse within a given period; the amounts and times when they will be called upon to pay it over; and where transfers will be required to be made from one bank to another, for the purpose of meeting such calls, the banks from which, and the times when, such transfers will be made."

"Such a table is now being prepared, to embrace the next six months ending the 30th of September next. This will embrace the estimated expenditures of the War and Navy Departments, as well as the civil list; the States in which the same is to be disbursed; the probable time wanted, and the banks which will have warrants passed upon them."

"In fine, the agent will communicate to each selected bank that wishes it, any information which he may at any time think will be serviceable individually; as well as give that general superintendence to the operations of the whole, which is so necessary."

25th CONG.....1st Sess.

Making public officers depositories—Mr. Wise.

H. of Reps.

sary for the security of each, as well as for the promotion of the interest of the public generally.

"I am, with great respect, your most obedient servant,  
"R. M. WHITNEY.

"JOHN M. BASS, esq.  
"President: Union Bank of Tennessee, Nashville."

In addition to the documents on file here, I cite the *circulars* of the Treasury Department, published from time to time during the last four years, and directed to the receivers of public money and the deposit banks. As specimens, I quote, first, a circular dated the 7th of July, 1834:

TREASURY DEPARTMENT, July 7, 1837.

Sir: As the public confidence in the banks selected by this Department for public deposit has, on trial, increased, and the notes of most of them might become a very convenient medium for circulation in travelling, and the transmission of funds at a distance, if mutual arrangements were made between some of them for the redemption of each other's bills, I take the liberty to submit the following suggestions for your consideration:

1st. Would it not be profitable to your corporation, as well as useful to the public, to make arrangements and issue bills to a limited amount, payable on their face either at your own bank or the bank with which you make the arrangement? This has already been done by some institutions, and, it is believed, with beneficial effects.

2d. But, if this is not considered expedient, would it not be prudent to establish with certain banks a credit, mutual if you choose, to redeem and reissue a certain amount of each other's bills as they may be needed for the purposes before mentioned? This might be so arranged as to expose you to little expense or risk; and the fact being known, would extend your circulation at a distance, and often furnish, it is trusted, a currency for travelling and transmission of funds, very safe, convenient, and advantageous.

Any aid that this Department could lend to you in perfecting such arrangement, by transfer drafts or otherwise, consistently with its powers and the public interests, will at any time be cheerfully granted.

I remain, very respectfully, your obedient servant,  
Secretary of the Treasury.

THE PRESIDENT of the ———

On the 27th of January, 1835, the following circular was issued:

TREASURY DEPARTMENT,  
Washington, Jan. 27, 1835.

Sir: Finding that my circular of the 13th of December last has not, in all instances, been fully understood, I beg leave to state, that it is the wish of the Department to be enabled to present a correct statement of all the domestic exchange operations of the selected banks. For this purpose, I have to request that your statements, semi-monthly, hereafter, give the whole of your operations, whether in drafts on other places purchased, notes payable in other places discounted, or either, collected. The latter to be brought into the statement after they are carried in the credit of the individuals for whom collected, together with the rates in all cases, &c. Some of the banks have supposed that the request of 13th ultimo was not intended to embrace paper collected, payable out of the city. Where that has been the case, I have to request that all omissions of this description, since the 1st instant, may be added to the next return made to this Department.

As before requested, I wish a statement of all drafts or checks drawn by the bank, payable any where out of the place in which the bank drawing is located, together with the rate, &c.

As early as convenient, after receipt of this, I will thank you to forward to this Department a statement of the places upon which your bank collects or purchases domestic exchanges, together with a tariff of the rates charged, exclusive of interest. I will also thank you to state the extent, geographically, to which it receives, on deposit, the notes of State banks, and particularly those of the selected banks; also, such as have made arrangements with you to redeem their notes, where any such arrangement has been made, as well as where arrangements may have been made with other banks for the redemption of your notes.

I am, very respectfully,  
Your most obedient servant,  
LEVI WOODBURY,  
Secretary of the Treasury.

THE CASHIER of the ——— Bank.

On the 6th of April, 1835, the following was issued:

TREASURY DEPARTMENT, April 6, 1835.

It is understood, that the instructions from this Department to receive for the public dues only such State bank notes as the deposit banks are willing to credit at par, have been construed to authorize the receipt of such notes of any denomination. The undersigned considers it *highly beneficial to the currency of the country and the safety of the banking agents employed in keeping the public revenue*, that the more general use of specie for the small and ordinary transactions of society should be encouraged; and as the disuse of bank notes of a low denomination is believed to be the surest method to effect that object, and as the acts of Congress do not expressly require the receipt of any such notes, if less in amount than five dollars, you are hereby directed, after the 30th day of September next, not to receive in payment of any public dues bank notes of any denomination less than five dollars.

You are also apprized that it is in contemplation by this Department, after the 3d of March, 1836, [should Congress in the meantime make no provision on the subject,] to exercise the discretionary powers, which it is supposed will then belong to it, over the receipt of paper money of any denomination for the public revenue, and to extend the restriction on the receipt of bank notes, for it, to all of a less denomination than ten dollars. For the greater security of the banking institutions employed by the Treasury, and for the improvement of the currency by the fuller restoration of that specie circulation for common purposes, which seems to have been contemplated by the Constitution, it is intended then to make arrangements, if practicable, to discontinue the use of any bank as a fiscal agent, which shall thereafter continue to issue notes of a less denomination than five dollars, and which shall, after some subsequent period, to be then designated, continue to issue notes of a less denomination than ten dollars.

The course proposed to be pursued hereafter on this subject by the Treasury, is now indicated with a view to ensure suitable notice of the changes contemplated.

On the 22d of February, 1836, the following was issued:

To Receivers of Public Moneys, Collectors, Disbursing Officers, and the Deposit Banks of the United States.

TREASURY DEPARTMENT, Feb. 22, 1836.

The established policy of the Treasury Department, so far as may be practicable, under its present powers over the collection, keeping, and disbursement of the public money, is to diminish the circulation of small bank notes, and to substitute specie, and especially gold, for such notes, with the view of rendering the currency of the country, through which its fiscal operations are performed, more safe, sound, and uniform. In pursuance of that policy, a circular was issued last April, which prohibited, after the 30th September, 1835, the receipt, on account of the Government, of any bank notes of a less denomination than five dollars; and which intimated that other steps to promote the desirable objects before named, would, in due time, be taken.

Consequently, in further pursuance of the same policy, you are hereby required, after the 1st of May next, not to pay the demands of any public officer or creditor in any bank notes of a less denomination than five dollars, and, except when it may be otherwise prescribed by law, after the 4th of July next, not to receive or pay on account of the Government any bank notes of a less denomination than ten dollars.

All the deposit banks are requested to supply themselves with such a quantity of American gold coin as to be able to pay, and, when a public officer or creditor prefers it, and his demand does not exceed five hundred dollars, to pay at least one-fifth of such demand in that coin. It is also requested that the deposit banks will not, after the 4th of July next, issue any notes of a less denomination than five dollars; and that, after the 3d of March, 1837, they will not, unless the subject be otherwise regulated by Congress, issue any notes of a less denomination than ten dollars. It is believed that the amount of gold which by that time shall be coined at the mint, will be sufficient to admit of the convenient substitution of it for small notes, in much greater extent than at present; and it is deemed reasonable, that while the deposit banks have the use, without interest, of unusually large sums of the public money, they should make some further temporary sacrifices to obtain and circulate gold, and in other respects to enlarge the specie basis of our circulating medium. From these considerations, and from the liberal spirit evinced by most of the public depositaries in a late correspondence with them on this subject, it is confidently expected that, in this state of things, they will cheerfully comply with the above requests, and with all others which have been made by the Department, with a view of improving the currency: nor will it, I trust, be considered unjust, or impolitic, while the deposit banks shall continue to enjoy great privileges from the Treasury, to regard a neglect or refusal by any of them to comply with those requests as sufficient cause for discontinuing the employment of such banks as fiscal agents.

At a proper time it will be decided under what circumstances, and at what periods, these restrictions on the agents and officers of the Treasury shall be extended to notes of any denomination under twenty dollars.

This communication is made with the sanction of the President of the United States; and it is hoped that, till otherwise prescribed by Congress, or by this Department, these requirements and requests will be faithfully complied with by all the fiscal agents of this Department, and all the collecting and disbursing officers of the Government.

LEVI WOODBURY,

Secretary of the Treasury.

And, sir, on the 11th of July, 1836, the celebrated specie circular went forth like a bull from the Vatican.

To Receivers of Public Money, and to the Deposit Banks.

TREASURY DEPARTMENT, July 11, 1836.

In consequence of complaints which have been made of frauds, speculations and monopolies, in the purchase of the public lands, and the aid which is said to be given to effect these objects by excessive bank credits, and dangerous, if not partial, facilities through bank drafts and bank deposits, and the general evil influence likely to result to the public interests, and especially the safety of the great amount of money in the Treasury, and the sound condition of the currency of the country from the further exchange of the national domain in this manner, and chiefly for bank credits and paper money, the President of the United States has given directions, and you are hereby instructed, after the 15th day of August next, to receive in payment of the public lands nothing except what is directed by the existing laws, viz: gold and silver, and in the proper cases, Virginia land scrip.

The principal objects of the President in adopting this measure being to repress alleged frauds, and to withhold any countenance or facilities in the power of the Government from the monopoly of the public lands, in the hands of speculators and capitalists, to the injury of the actual settlers in the new States, and of emigrants in search of new homes, as well as to discourage the ruinous extension of bank issues and bank credits, by which those results are generally supposed to be promoted, your utmost vigilance is required, and relied on, to carry this order into complete execution.

Such are some of the footsteps of General Jackson in taking care of the currency! Here we see a series of Treasury circulars, which were issued during a period of the last three years, coming up to the present fiscal year almost all issued by the present Secretary of the Treasury, with the objects avowed on their faces, to make the notes of deposit banks "a convenient medium for circulation in travelling—to extend circulation at a distance—to constitute a safe and convenient and advantageous mode of transmitting funds—to take accounts of exchange operations—to ascertain the geography even of notes received on deposit—to promote measures "highly beneficial to the currency of the country"—to raise the denomination of small notes to be issued, in order to circulate specie—to render the currency safe, sound, and uniform, as contemplated by the Constitution—to require the banks to make sacrifices to this policy—to discourage the over-issues of banks—taking trade, commerce, circulation, currency, bank notes, specie, the country, and all that is in it, under the full and complete jurisdiction of the Executive alone. And now, sir, are we coolly told that these measures are not within the constitutional province of the entire Federal Government! This is new! this is false! this is flagrant insult added to outrage! this is a total departure, I affirm, from the principles and policy of General Jackson; and that, I suppose, is capping the climax of enormities with his blind followers! The Federal Government cannot regulate currency and exchange, but it may prevent the over-production of cotton! It cannot regulate currency and

exchange, but it may take into its keeping the consciences and morals of the People! It cannot regulate currency and exchange, but it may pass bankrupt laws to put in durance vile every State corporation of the Union! Such are President Van Buren's first steps in the policy of the Administration.

Sir, this doctrine is so new that the President, throughout this very Message, except in those parts where he is expressly asserting this strange doctrine that the Federal Government has nothing to do with the currency of the country, forgets himself, and contradicts the position from the mere habit of his own mind to conceive the contrary. He speaks of "the embarrassments in the pecuniary affairs of the country diminishing the public revenue so much that the accruing receipts, with the reserved five millions, would not be sufficient to defray the unavoidable expenses of Government, until the usual session of Congress." And is it so, that the embarrassments of the country do thus embarrass the Government, stop its wheels, and yet the Government has not power to do the only thing on earth which can relieve itself from these embarrassments, and permanently prevent their recurrence—regulate the currency? Did "the difficulties experienced by the mercantile interests force them to apply for indulgence on duty bonds before the suspension of specie payments?" And yet has the Government, the collection of whose revenue is thus suspended or stopped, no power to afford facilities for the payment of its dues, or no power to secure their payment at all by some system, to strengthen commercial confidence, and enlarge the capacities of trade? Sir, the President himself, I repeat, speaks constantly in this Message, of the policy of Government in relation to the currency of the country, as if there was, and should be, some policy of the kind. No one can read his Message, and not see that he contradicts himself, and does not in reality entertain any such novel and absurd opinion as that a Government possessing the powers and duties which it does, cannot take care that there shall always be a safe and sound circulating medium, and a sound condition of commerce and abundant means of trade, foreign and domestic, without which Government debtors cannot be sound or able, and without which the resources of revenue must always be meagre, unstable, or exhausted. What, sir, are the duties of this Government and its powers? Congress shall lay and collect taxes, duties, imposts, and excises; it shall regulate and collect all duties, imposts, and excises uniform; it shall regulate commerce with foreign nations, and among the several States, and with the Indian tribes; it shall establish uniform laws on the subject of bankruptcies; coin money and regulate the value thereof; provide for the punishment of counterfeiting the securities and current coin of the United States; declare war and support armies; provide and maintain a navy; make all laws which shall be necessary and proper for carrying into execution the foregoing powers. And yet, sir, the President says it shall not, it cannot, provide the only means of executing any or all of these powers—the sinews of war, the security of peace—a sound currency for the country! Ay, but he says it may demand the "constitutional currency" for the Government! How can the Government demand specie, whilst the people have not specie to pay? Specie is no more a constitutional currency than good convertible paper. The provision in the Constitution which makes nothing else but gold and silver a legal tender in payment of debts, does not require the Government to exact specie. It is only another provision of that wise instrument which guards the mode by which Congress shall regulate currency, make it sound by basing it on specie, and make it safe and efficient by being easily convertible. Sir, the fact is, that the Executive has tinkered and cobbled the currency, until it is past mending. The Ex and the President have practised upon its health until the patient has died upon their hands, of their wretched quackery. Now they wish to give up its cure, or its resuscitation, as a bad job. Now their only refuge from political or professional disgrace is in saying it was ever immedicable by Government. After exerting all their power and their skill to make the currency better, now that it has become worse than was ever predicted by the regular practitioners, they insist that they never exerted, and never can exert, any power or skill in the case; for they never had either! Sir, as to power, they had too much to destroy; as to skill, they never had any to reanimate or to restore! God help a patient in such hands! Their want of skill and want of honesty in this case would constitute murder, if the patient were a human being whom they had destroyed, instead of the country and its private and the public interests. Sir, it is impossible for Government not to interfere with the currency of the country. When it ceases to perform the functions of Government—when it ceases to raise, receive, keep, transfer, disburse revenue—when it ceases to use custom-house and land offices, tax gatherers and collectors—when it disbands its one hundred thousand stove-fed office holders—when it dismantles its navy, and disbands its standing army—when Congress ceases to sit, and the President no longer draws his salary—then, and not till then, may he say to the people, pay what you owe the Government in specie, take what you can get from the Government, and get the specie as best you may. Government has nothing to do with the pockets of the people. Sir, you are not willing to bargain with the people to hold hands off, to agree that you will go to them for nothing if they will come to you for nothing. No, sir, if you will not collect yearly from the people some twenty or thirty millions of dollars, and expend more than you collect, they will not ask you to regulate the currency. They ask nothing more; when, where have they claimed of Government to "aid individuals in the transfer of their funds," or in the transportation of their merchandise? When or where have they asked Government "to make men rich, or to repair, by direct grants of money, or legislation in favor of particular pursuits, losses not incurred in the public service?" Sir, though the Executive has reduced our people to beggary, by interfering with "individual concerns, most oppressively and cruelly and unconstitutionally, yet have they not come as "beggars" to their own Government—their own servants! All they demand is, in the language of this message, "a system of general laws commensurate with, but not exceeding the objects of the establishment of good government; leaving every citizen and every interest to reap, under its benign protection, the rewards of virtue, industry, and prudence." But, what virtue can now withstand the corruption of "the Government?" What industry can now live under the present system of Government pillage? What prudence can now foresee or calculate the ruinous results of wild experiments? Virtue is cast to the dogs! Industry is rified and picked! Prudence is baffled, and stands dismayed!

In the next place, sir, the President again attacks the Bank of the United States. Again is the dead monster picked, and

without doubt in time. This is now the fifth Executive misdeed, in four years, hurled against it! The United States Bank will be like a man hung by the neck until he is dead—dead—dead! But, sir, I am beginning to hope that, like Lazarus, though it stinketh, it will yet "come forth," with the grave clothes on. I see signs of its coming, and therefore I wish to prepare the minds of the people to see no spectre—no hobgoblin—no monster. In respect to that institution, sir, I join issue with the President and all its enemies in advance. And I do this, though unnecessary now, because on this subject I have no fears and no concealments. I am willing to trust the intelligence and the virtue of the people who send me here. I maintain then: 1st, That a national bank is constitutional. 2d, It is expedient. 3d, It is the best friend, financial and commercial, especially of the South. 4th, and lastly, It is the best bulwark which can now, by law, be established in defence of the civil liberty of the country. All these propositions I am now ready to maintain to the uttermost.

A national bank is constitutional. Congress has the power to charter a bank corporation. Sir, let me here observe that it is remarkable the President does not say in his message it is unconstitutional. His principal reason for not co-operating in the re-establishment of a national bank is, because "it would be to disregard the popular will"—because he believes "a majority of the people to be irreconcilably opposed to that measure." Now, sir, this is ominous of what I have more than once predicted—if a majority of the people shall clearly and unequivocally express their will in favor of the establishment of such an institution, he will give it his sanction. Will he, who has lived and moved and had his political being in the breath of another man's popularity, and who is now vulgarly reiterating that man's disgusting demagoguism, ever dare to disregard the popular will when it shall come up, as it will, like the rushing of the mighty waters—"terrible as an army with banners?" No, sir, he will quail into his own utter helplessness! He is no hero to ride upon the whirlwind and direct the storm; and, sir, if Jackson himself were here again, the people would tell him—"Sir, your experiment has failed; we have been gulled and ruined!"

Sir, Congress has certain powers conferred upon it to be exercised, and certain duties imposed upon it to be discharged and performed.

Its powers, in connection with this subject, are:

"To lay and collect taxes, duties, imposts, and excises; to pay the debts and provide for the common defence and general welfare of the United States."

"To borrow money on the credit of the United States."

"To regulate commerce with foreign nations and among the several States, &c."

"To coin money, regulate the value thereof, and of foreign coin, &c."

"To dispose of, and make all needful rules and regulations respecting the territory, or other property, belonging to the United States."

Such are the powers *quo ad hoc*. Among the duties most important to be enumerated is that of making "all duties, imposts, and excises uniform throughout the United States."

Now, sir, how are these powers and duties, imperatively required of Congress to be exercised and performed, to be executed? Are not the means granted? Expressly. The Constitution says: "The Congress shall have power—"

"To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

Here is a striking feature in this great instrument. Every power is specific, every duty is specific, but the means are not specified, and the Government is left unlimited and unrestricted as to means, save by the terms "necessary" and "proper"; that is, it is confined only to such means as are "necessary" to the ends of some one, or all, of the granted, specified powers or duties; and to such as are "proper"; that is, consistent with, or fit, or congenial to the form of our Government and the nature of its powers and duties. And, sir, this distinction between the powers and duties of the Federal Government and the means of executing these powers and duties is a full and complete answer to the oft-repeated objection drawn from the imperfectly understood fact that the Convention of '87 rejected a proposition to grant the power of incorporation. To have granted a general power of creating corporations would have granted too much; it would have included certain corporations, ecclesiastical or others it might have been, uncongenial and inconsistent with our institutions. And to grant the power of creating specific corporations would have been to enumerate one means of executing granted powers, to the exclusion of all others, upon the principle of "expressio unius est exclusio alterius." The framers of the Constitution preferred rather in their wisdom to confine the Government only in the selection of means to such as were necessary and proper. If a particular corporation should be found to be necessary and proper to execute some one or all of the granted and enumerated powers, or duties, they left it to the law to create such a corporation under the general and comprehensive grant "to pass all laws necessary and proper for carrying into execution such powers or duties." And they left it to the sound discretion of Congress to select, of course, the best of means thereby; inasmuch as the particular corporations they might have chosen to grant might in time have proved to be the worst means of executing the granted powers. It would have been unwise and impossible for them or for us, were we now making the Constitution anew, to attempt to enumerate the granted means. They should have been omniscient to provide such as would, throughout all time and under all circumstances, have been the best. Not knowing what would always be the best to be used, they left, wisely left, in Congress an option of means, according to the wants and condition of the country, requiring the exercise of powers and the discharge of duties.

Again, sir, the only Congress unrestricted and unlimited in the employment of means to execute its granted powers, except, as I have said, by the terms necessary and proper; but Congress is independent also as to these means. To Congress are these means given. The existence of State banks is urged, or has been—not now, I suppose—as a reason against the necessity of creating a national bank. It was not necessary, because the means of other Governments—the State Governments—might be employed. As to its granted powers, and the means of executing them, this Federal Government is as independent of the State Governments as it is of France or Italy, and as the States are of it in respect to their reserved rights. To no foreign power under the sun is this Government bound to look, or obliged to depend on none, for means to execute its constitutional powers.

The question then, sir, is reduced simply to this: Is a national bank necessary and proper to collect the taxes, to pay the debts, to negotiate the loans, to regulate the foreign commerce and the internal trade, to dispose of the public lands of the United States, and to regulate the value of money in the country, and to enable Congress to fulfil the duty of making all duties, imposts, and excises uniform throughout the United States? Sir, I will leave it to forty years' experience to answer the question on all these points; the wayfaring man, though a fool, cannot err in recounting to you what the Bank of the United States did in collecting, and keeping, and transferring the public revenue, without cost or charges, and without loss; what it was bound to do in case the Government needed to borrow money; what it did in equalizing and facilitating exchanges of foreign and domestic commerce; what it did in paying pensioners, and in accommodating Government in selling, and the people in purchasing, public lands; what were its salutary and steady influences in regulating the money market and the value of money, and its uses in rendering duties, imposts, and excises, uniform! Its notes were better than fine gold every where—at land offices, custom-houses, to the Indian and the traveller, to the Government and the people, at home, in the North and South, East and West; and abroad, in the East Indies, they commanded a premium!

Twice has a national bank been chartered, and again and again has its constitutional validity been sanctioned by every department of the Government, Executive, Legislative, and Judicial, and by all parties, Democratic and Federal, and admitted by every President of the United States, from Washington to Van Buren, Jackson not excepted, and acquiesced in by the people. The first bank charter was proposed within two years from the period of framing the Constitution. It was formed in 1787, and a Bank of the United States created in 1789! In the Congress of 1789, many members of the Convention which framed the Constitution sat, and more than two thirds of them voted to charter a national bank. Mr. Madison, who then was one of those members of the Convention who opposed the bank charter, afterwards, when President of the United States, gave it his sanction upon the principle of "stare decisis." The question of the constitutional power of Congress was submitted in 1789 to General Washington, who was president of the Convention, and he referred it for solemn advice to the heads of the Departments—two of whom were also members of the Federal Convention. Hamilton, the then Secretary of the Treasury, the author, in part, of the Federalists, who understood the history of the Constitution as well as, if not better than any man, maintained that the power was constitutional, and Randolph, Attorney General, dissented. The latter and Mr. Jefferson, who was not a member of the Federal Convention, and who alone, by the by, made the point that the proposition to grant incorporations was rejected, gave in their written opinions on one side, and Hamilton submitted his on the other. General Washington, who knew all the facts of the history of the Constitution, necessarily, from his presiding in the Convention, sided with Hamilton, and, after months of anxious and careful deliberation and inquiry, sanctioned the bill to incorporate a national bank! History, authority of decisions in every form, and the practice of the Government from its foundation, all concur in establishing the validity of a national bank charter. Shall these be overruled by one man in the nation? Shall nothing be decided under our system?

The word "necessary" was given in an absolute sense by Mr. Jefferson. It is plain the term is not so meant in the Constitution, because, if so, it would exclude the use of all means whatever, and totally destroy all option or selection of means. One could not be employed, because another might. One is not absolutely necessary, because the other exists. The employment of State banks is not absolutely necessary, because Sub-Treasuries may be used, and Sub-Treasuries are not absolutely necessary, because State banks may be employed. Their unconstitutionality may be demonstrated precisely in the same manner as that of a national bank. There are no means absolutely necessary in all life; there is no one tool or agent in mechanics, or power in natural philosophy, absolutely necessary; bread itself is not absolutely necessary to sustain human life, because some other article as a substitute may be used as food. The very existence of more means than one destroys the absolute necessity of the necessity of any; and to say that one shall not be used because the other exists, is to destroy the power of choosing the best means altogether. The Constitution could never have intended that Congress might employ the worst, and should not have the power of selecting the best, means to execute its delegated powers and duties! Such a conclusion is the absurd one to which those who oppose the constitutionality of a bank charter are reduced.

The next question, then, is—Is a United States Bank expedient—is it the best means? Sir, it is vain to argue this. I will not appeal to the chaos and confusion out of which the last national bank brought order and credit and confidence. I will not appeal to a comparison of the rates of exchange. I will not appeal to the premiums on silver and gold. I will not appeal to the traveller, to the laborer. I will not appeal to the restraint upon an increase of local bank capital, issues, loans, and discounts. I will not appeal to Siam for the uniformity of the circulation of its notes and their value. I will not appeal to the manner in which it conducted all its business relations with the Government—to the uniformity of taxes, or to the exact equality, under its influence, of Government officers and the people, and of Government creditors and debtors; but, sir, I remind my friend from South Carolina, (Mr. Pickens,) of the report, able, clear, and unanswerable, of George McDuffie, his illustrious predecessor, in 1823, to the House of Representatives; and I appeal to the fact that it was the height of the last Administration's wishes but to attain to the perfection of a national bank in organizing its system of local deposite banks! Sir, it is too late in the day now for any man to presume to say, against all experience, delightful and useful, of all times, in peace and in war, with and without a Bank of the United States, that such an institution is not expedient. Sir, I have said that Mr. Van Buren reiterates the miserable demagoguism of his predecessor—he exceeds it in the passage which says:

"The Bank of the United States, with the vast powers conferred on it by Congress, did not, or could not, prevent former and similar embarrassments; nor has the still greater strength it has been said to possess under its present charter enabled it, in the existing emergency, to check other institutions, or even to save itself!"

Here we see a President of the United States, the highest officer on earth, resorting to falsehood itself to catch vulgarly and ignorance! In the first place, it is not true that the Bank of the United States did not or could not prevent former and

similar embarrassments: there never was embarrassment similar to the present—embarrassment so extensive, deeply pervading, and universally following, a long-continued prosperity in trade, and a rich harvest of profound peace. It is true that in 1819 the last national bank did, though like a strong man under an immense burden, stagger under the weight of embarrassments which followed war and the many years' want of a great regulator of currency, but as a strong man—omnipotent to save—it did clear away the wreck—it wrestled with derangements and embarrassments unprecedented, and subdued the task of restoring us to a state of commercial health and prosperity unexampled in the annals of finance and trade. It took a giant to rescue the country from its oppressive difficulties, and a giant that bank proved itself for much good and no mischief! But, sir, the falsehood which I mean here to expose is the base subterfuge of the President in treating a local bank of Pennsylvania as a national—a United States Bank. Had he no other resort than this ever weak and immoral subterfuge of the vanquished wicket—to take up a mere name for a defence, or a shield and buckler? Did Congress charter the State Bank of Pennsylvania, called only by the name of a United States Bank? Had that institution the credit of this Federal Government at its back—has it not all the opposition and hatred of the Federal Executive? Would not any other local or State bank—any one of them which that same Executive has been putting and stimulating to ruin the country—with the same name, "smell as sweet?" Have they done any more to check other institutions or to save themselves? Does the virtue of a national bank consist in a mere "cognomen?" Fie! fie! sir, upon such ad captandum demagoguism in a President of the United States!

Sir, the gentlemen from South Carolina (Mr. Pickens) in like manner says that the Bank of the United States never restored the currency; and, sir, permit me to tell the gentleman that, like the President of the United States, he contradicts himself. In one breath they tell us that the Government credit did every thing and does every thing to insure the soundness and efficiency of banking institutions, and in the next breath they boast that the Pennsylvania bank, without the Government credit, and with the Government opposition, did not, and could not save itself! In one breath they tell us that the Government may "take a beggar from off the streets" (Mr. Calhoun in the Senate), and attribute him with commercial and financial power and credit, may make him a safe and sound banker; and in the next breath they call out to us for help, for postponement of the fourth instalment, for Treasury notes, for indulgence on duty bonds, for the means of assisting a bankrupt Treasury, for the reason that some 80 or 90 local State banks, which Government has been backing with its credit for four years, have suspended specie payment! In one breath they tell us that the Bank of the United States never restored the currency; and in the next they admit that if we continue to take local bank paper, we must have a national bank, to check the local institutions and purify the currency! Sir, it is true that the Government credit does much, it does every thing, when it fortifies and guarantees a national bank. Its credit, organized in that form, is all that is now wanting; but it does nothing but mischief when afforded to individuals or to local corporations. It stimulates to excesses, and is of itself weak to restore an equilibrium—in fact, is the first to suffer from a state of intoxication and delirancy. It requires more help, or its protection, from a national bank, than it can possibly confer upon any other form of fiscal and commercial agency. If a bank of the United States does not tend to restore the currency, why did Mr. Calhoun propose, in 1834, to subvert the banks with such an institution? The Government was then fully divorced from all banks; all that had to be done was to withhold the deposits from them. Now, sir, the Government is married to the banks—has been in Co. with them for years; and now, when a severance cannot be had without violence and disaster, now is the connection to be dissolved! We are told that a United States Bank has never yet encountered a period of war. Certain it is that in no period of war have we ever had such a help in time of need, unless the old Bank of North America, which was a powerful friend during the Revolution, could be so considered. It is said a national bank could not have survived the scenes of 1813-14. True, those scenes were awful enough without such an institution, *non constat* that they would not have been better with one, knowing that such scenes have never occurred whilst a Bank of the United States was in operation. Well may the gentleman safely appeal to all the intervals when there was no such bank, to find scenes which, perhaps, no bank could have encountered; but it is sufficient for us to say, in reply, that it ever encountered all the difficulties it met during its existence; that its existence occupied more than ten times the space of time which its absence filled; and hence the fair inference might be drawn that no such scenes could occur during its existence as those which have occurred in the intervals when it was not in existence, to control causes and effects.

In the third place, sir, I join issue with the gentleman from South Carolina, (Mr. Pickens,) and maintain the proposition that the bank was ever and would be now the best friend of the South.

Sir, no interests in the country are more dependent upon a sound, safe and uniform currency than the interests of agriculture, and, consequently, the interests of the South. The great regulator, fly-wheel, and safety-valve of currency is, as I have shown, a Bank of the United States. It afforded, and is the only means which has ever yet been devised, which has furnished that great amount of circulating medium called "bills of exchange." Many suppose that the most of the circulating medium consists of bank notes, intermixed with a small amount of specie. Not so, sir. What proportion consisted of inland bills of exchange I have not been able accurately to ascertain; but certain it is that all the *le vier* operations of trade are and must be carried on by them. At certain seasons of the year large amounts are wanted by the South, to be transferred to the northeastern cities, with which to purchase importations for consumption; and at other seasons similar amounts are needed by the North, in the South, to purchase the raw materials for manufacture or exportation. The transfer of these heavy amounts must be made by *bills of exchange*. It cannot be conducted by transmitting specie or local bank notes; the cost and insurance and delay of transporting the one, and the discount and risk upon the other, forbid their use for the purposes of transferring funds. The great and leading arteries of trade, then, between the North and the South, were supplied by bills of exchange as the circulating medium, whilst the Bank of the United States was in operation. It had funds in Boston, New York, Philadelphia, and Baltimore, upon which to draw

from New Orleans, Mobile, Charleston, Nashville, Cincinnati; and funds in the latter places upon which to draw from the former. Funds were drawn without transmitting a dollar; the operation was effected simply by changing the pen from one side to the other of the books of the mother bank and its branches. No money was withdrawn from trade in New York; none from trade in New Orleans. The oblong bits of paper called bills of exchange caused convertible bank notes or specie to be paid at either place at sight, and at the rate of one-half of one per cent. This was the simple and beautiful operation; and these bills were the pabulum of trade when the United States Bank was stricken down at a blow by the mace of despotism. What was the consequence? The life-blood was dried up; the arteries were drained; a large proportion of the circulating medium was destroyed. The consequence to the South was ruinous upon a principle, a favorite principle of Mr. Calhoun. He calculates that the circulating medium is, to real estate or property generally in the country, about as *one to thirty*. If so, whenever the circulating medium is reduced one million, the property of the community falls thirty millions in value. It would be frightful and enormous, if the amount of diminution in the value of real estate and other property in the South could be ascertained, in consequence of destroying bills of exchange by refusing to re-charter a national bank. There is, sir, a striking and manifest difference between the property of the North and the South. The property of the North consists of money-capital. The property of the South consists of land and its products, and slaves. It is clear, therefore, that when a large portion of circulating medium is destroyed, they suffer much less than we in the South do. The diminution of circulating medium depresses the price of land, of agricultural products, and of slaves, thirty fold; whereas the money of the North is actually raised in value precisely in the same ratio. Our property will sell for less money—these money will buy more of our property. True, in times like these, when there is a total want of bills of exchange to transfer debts due to the North from the South, they may be embarrassed in the collection of their debts; but, nevertheless, when they are forced to sue us at home for goods purchased in the North, it will always take a double portion of our land and negroes, or of their products, to pay the debts. Besides, they are chiefly the purchasers of our agricultural products, and the carriers of them, and whenever they are oppressed for the want of a circulating medium we are eventually the greatest losers in the prices of those products. This truth is clearly illustrated in these very times, by the fact that the chief losses of the nation have fallen, to the amount of forty millions at least, upon cotton!—notwithstanding that paragraph in the Message which says:

"The difficulties and distresses of the times, though unquestionably great, are limited in their extent, and cannot be regarded as affecting the permanent prosperity of the nation. Arising, in a great degree, from the transactions of foreign and domestic commerce, it is upon them that they have chiefly fallen. The great agricultural interest has, in many parts of the country, suffered comparatively little; and, as if Providence intended to display the munificence of its goodness at the moment of our greatest need, and in direct contrast to the evils occasioned by the waywardness of man, we have been blessed, throughout our extended territory, with a season of general health and of uncommon fruitfulness. The proceeds of our great staples will soon furnish the means of liquidating debts at home and abroad, and contribute equally to the revival of commercial activity and the restoration of commercial credit."

This passage, sir, reminds me of this curious extract, which I found the other day in some newspaper:

"An almanac, published in the year 1730, has the following very remarkable predictions, which have been fulfilled to the very letter:

"By the power to see through the ways of Heaven,  
In one thousand eight hundred and thirty-seven,  
Will the year pass away without any spring,  
And on England's throne shall not sit a king."

It is true, sir, that Providence has displayed its goodness and munificence at the moments always of this country's greatest need; and His infinite goodness will ever, I hope, sustain us, notwithstanding "the evils occasioned by the waywardness of man," and the wickedness of unwise and corrupt rulers. God alone, and the dew He sends upon the ripe and unripe corn and upon the mown hay, can keep us from beggary and want, can supply us with food and raiment; but a sound policy, and wise and virtuous Administration, would turn these blessings of Providence to some account, would establish and fix a sound price upon the abundance of the harvest field! Truly, the year 1837 has been like the times of our trouble; there is a promise of abundant harvest, though there has been no spring-time.

This mighty country, powerful and rich as it is, is hard to kill in its resources, which are almost infinite; but be assured, sir, it is in the kingdom of policy as it is in the kingdom of grace—you must not always strive against God! We must not throw away and abuse the fruits of Providence! Though Heaven has done much for us, the land, the land of the South, groans with the folly and waywardness of man!

The gentleman from South Carolina asks where the capital is located when a Bank of the United States is created? I answer, every where, throughout the whole country, according to the demands and necessities of trade. If we were to charter a bank to-morrow, and locate the mother at Charleston, the branches at New York and Philadelphia would become the principal wings of the institution—that at New York would in fact become the mother. Why? Because the importations are there, the trade there, the revenue is collected there. And, I ask, will not this be the case under any system?—was it not so under the deposit bank system, and will it not be so under a Sub-Treasury system? As certainly as that two-thirds of the revenue of this Government is collected there, and more certainly as that revenue, under the gentleman's favorite system, would accumulate there in specie—there in specie, when specie would be so scarce, by being sponged up by Government, that it would command a premium, and be in fact a greater amount of capital concentrated there, (in New York) than the Government would otherwise have. He asks, if the States of this Union were separate, as in the time of the colonies, would not the exporting States import for themselves? No, sir, they never did import for themselves when they were colonies. A raw-material region, an agricultural country, cannot be also a mercantile and manufacturing country. The facturing, a ship-building and money-capital country. The trade of Virginia was carried on before the Revolution, by English merchants and shipping, and since then by New-England merchants and shipping. True, the English merchants sent their ships directly to our rivers on the Chesapeake, but then there was no coasting trade, which now does the same thing for us to the full extent of our wants and demands.

The gentleman from South Carolina also complains that the Bank of the United States, in 1832, gave the President a sword to bury in the vitals of nullification! Sir, this is a new charge, strange and extraordinary in its character, and coming from an unexpected quarter.

It is a "true bill" against the bank, that it furnished the means of defending the Union in its peril, it will be a new and unheard-of recommendation of it to some, though not to me. I repudiated the doctrines of nullification. I struggled against its principles and practices, and deprecated its effects and tendencies; but, sir, if the war upon South Carolina had come "to the knife," it would have found many a Union man of Virginia fighting in her defence, though they had argued she had her full share of wrong in the quarrel. I should have been one among those who reasoned on one side, and would have fought on the other. No corps of a standing army should ever have crossed Virginia borders, with my consent, to invade a southern sister State. I therefore say, sir, that this charge against the United States Bank is, if true, no recommendation of it to me. Nothing recommends itself to me which cannot be tenable. Be it remembered, but, sir, this charge cannot be tenable. Be it remembered, that the bank itself was then (in 1832) struggling against that same President for its own safety and existence, and that then he was warring against it furiously, upon the ground that it had enticed the political lions against his re-election. I cannot conceive, therefore, upon what grounds it is now accused of furnishing weapons to the hands of its own enemy, and that, too, to destroy some of its own best friends. Among those strongest friends were then counted the Hon. George McDuffie and the Hon. John C. Calhoun! And most strange and unaccountable is it, if this charge be true, either as to the motives of the bank or its necessary effects, that Mr. Calhoun should, so soon after the fall of 1832 as the spring of 1834, propose in the Senate of the United States to recharter this same bloody monster for twelve years!!! The gentleman, sir, must be wrong now, or his honorable and distinguished Senator must have been most unparadoxically and egregiously guilty of a suicidal act of southern policy in 1834.

The gentleman boasts that the people of the South are an old-fashioned people, and he complains that the bank, like Czar Peter, cut the coats of southern village dandies in the fashion! This is a still more grievous charge against the tyranny of that monster, which it seems to be guilty of monstrosities from the most enormous—the plucking of a President's beard, to the most petty—that of clipping the coat-tails of southern dandies! It did, no doubt, affect the social habits, as well as the political, financial, and commercial power of the country. But, sir, this objection, though apparently frivolous, has more in it than strikes us at first. It illustrates the nature and degree of that prejudice which really prevails in many communities, which are not immediately connected with the associations of trade, against that institution.

In many respects, sir, but in none so much as in relation to the improvements of commerce and of the mechanic arts, are the Southern people a half century behind the times in which they live. Noble, generous, liberal-minded, brave, independent, intelligent and sagacious, yet are many of them too metaphysical, and likely—as Mr. Letcher used to say of old Virginia—to die of an abstraction! They admire and cherish old things and ways, and despise, without much reason, improvements in the credit system, just as they do a new lapel or button! They do not enlarge, as I said on a former occasion, their capacities to receive the benefits of any institutions of trade; they do not calculate their losses in the destruction of them when created and existing, but look alone with dissatisfaction to the greater benefits which others receive from improved capacities and enlarged advantages. They claim justly that nature has done the most for them; are content with what nature has done for them, and are only discontented when they behold the art of others, and outstripping their friend nature. They are only wrong, sir, in not improving and assisting their own natural advantages, and in wishing to prevent others from exerting their enterprises, and in making up for natural deficiencies, whilst they are unwilling to exert their own wits and enterprise, and Norfolk tap the Big Bend of the Ohio river, and we shall shortly hear no more complaints about the immense advantages of capital which a Bank of the United States gives to the North. If we sit all the day idle, why shall we complain of miles to take to ourselves, and Baltimore come thousands of miles to take to themselves, by internal improvement, the produce of back countries, which need not be transported as many hundreds of miles to our seaboard? We must have trade before we have capital, and State internal improvements before we can have trade. Trade, sir, trade, will make the South as prosperous and strong as the North; and trade will make the South as fast a friend of a national bank as a national bank is now of the South without trade!

I regret, sir, exceedingly, the remarks of the gentleman from South Carolina in relation to Texas. He says the friends of a Bank of the United States are the enemies of Texas. I beg leave to say, sir, that time will show whether he is any truer, though he may be a much abler, friend to the annexation of that State to this Union than I am. On that subject, as on nullification, I presume, he will find the friends of a national bank divided; but, sir, he will find no one opposed to the annexation of Texas, because favorable to a national bank. But what does this allusion to Texas mean? Is it a political appeal? Is it expected by any quarter that Texas will unite the South upon some leader; and that the South, added to the Loco Foco destructives of the North, and the Executive retinue of New York and Pennsylvania, will bring that leader into power? Sir, let me warn those who entertain it that the hope is vain, and worse than delusive! The South is most opposed in reason and interest to Loco Focoism; and it will be unjust and destructive to the cause of Texas, to make it a hobby of party politics. The restoration of a sound currency here would aid Texas as much as ourselves. Whence has that glorious Republic derived her loans to achieve the battles of her liberty and independence? The South and Southwest have furnished her with arms and men; the North, I presume, has furnished her with money and credit. If her wars still continue, still she will want the benefit of that system here which carried us through the travails of independence; a system of credit; yes, ours was depreciated paper credit!

A Bank of the United States would not only indirectly aid the cause of civil liberty in Texas, by the confidence and credit, safe and sound, it would diffuse universally, but, as I have said, it would prove, at this time especially, the best bulwark of civil liberty in the United States! Sir, I mean all I say. The bank is expedient and necessary; the only question which remains is, is it "proper," that is, congenial with our free insti-

tutions? What has been the practice and tendency of the Executive of this Government for the last eight years? To wield the entire legislation and control of this nation and its destinies, by means of the public money! There is needed, much needed, an interposing stumbling block, or check, between the President and the public purse, now more than ever! When President Jackson removed the deposits, he took them from out of the hands of the law—the of the legislative department. When he put them in the pet banks, he put them in the hands of the Executive; there they have been ever since, in defiance of the law and the Constitution; and now we are asked to yield the constitutional custody and control of Congress over the public money, and to place it in the Briarian hands of a hundred thousand office holders—"the eyes and arms of the Executive!" To what department of this Government does the custody and control of the public money belong? Sir, there is an obscure clause of this Constitution which has ever been overlooked by all of the wisest of its expounders. I mean that sacred clause which reads: "Congress shall have power—

"To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

Now, sir, the first clause of this section is the only part of it which is habitually referred to, and is a clause, by the bye, which is not favored generally by strict constructionists, because it is erroneously thought by some to confer indefinite powers. No such thing. The reverse is the case. By marking the latter clause attentively, you will find that there is not a section in the Constitution more jealously restrictive, and especially of Executive power and discretion. It is that clause which General Jackson never read, "that he was to execute the laws and the powers of the Executive as he thought proper." Sir, the Executive has no discretion as to the means of executing its own power even, much less the powers of Congress. The means necessary to execute the "foregoing powers"; that is, the powers of Congress, "and all other powers vested by this Constitution in the Government." Mark the gradation of descent from generals to particulars, "or in any department or officer thereof." Does this not mean Executive powers? All the means necessary to execute all the powers of every department, or officer, are given to Congress! Does the President require means to execute an Executive power even? May he adopt means, however necessary or proper, himself? No! He must apply to the legislative department. Such is the Constitution; yet how perverted, and abused, and trampled on! Sir, I am thus minute in commenting on this clause, so restrictive of Executive power and discretion, because, I repeat, there is no clause of the Constitution which is so much overlooked, and never regarded.

To illustrate its application. The question arose last winter, in the case of Texas—to what department does the power belong to recognize the independence of a people struggling for liberty and for an equal station among the nations of the earth? To my utter surprise, on examining Judge Story's Commentary on the Constitution, I found that he lays it down as a power belonging to the Executive, because he says it is incidental to the power of appointing and receiving ambassadors. He entirely overlooked that clause in the Constitution which clearly vests every incidental and resulting power of the Government in Congress. Thence, sir, is derived the power to collect, to keep, and to pay away, the money of the United States. Congress may appoint a hand, an agent of the law, to do and perform all these duties independent of the Executive; for "Congress may by law vest the appointment of inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments." But the custody and control of the public money have been usurped by the Executive, in which almost all incidental and resulting powers have merged, and have been tamely and supinely yielded by Congress! Sir, I know of no way so wise and so appropriate to reclaim this derelict and important power as that of creating a national corporation, which shall be made the agent and hand of the law, which the Executive shall not touch or control, and which shall be subject only to the legislative will.

The gentleman from South Carolina (Mr. P.) is utterly wrong, then, when he says that to create a bank will be to part with an attribute of sovereignty—to regulate the currency. Sir, it will regain and restore the just and constitutional powers of Congress, and it will be the most complete and efficient check which can be put by law upon Executive absolutism! In this point of view it would become the axis of constitutional liberty! Experience teaches us its weakness as a political engine. It was in favor of with one Administration, the Administration died; it was opposed to the succeeding Administration, and the bank died. Admit it, however, to be as dangerous as it was ever charged with being, is it more so than the substitutes which have been tried and proposed? It may, forsooth, concentrate and unite the money power and the political power of the country and Government. The pet bank system certainly did thus unite them and elect a President, and the Sub-Treasury system is an open and palpable proposition of direct and certain union between the purse and the sword! Such is the consistency of these pretended patriots who war upon a bank as a political monster, and yet go "all for the" money in the hands of the Executive! The bank is more "proper" in this sense than any substitute which its enemies have ever yet proposed.

The gentleman, sir, in good feeling and friendship, advised me not to rely on the letter-writers for a character, but to look rather to enlightened public opinion. I shall take the advice, sir; for, from the billingsgate which has lately been sent forth from the desks in this Hall—[Here Mr. Wise looked significantly at the seat of JOHN H. PRENTISS, a member from New York, the editor of the Freeman's Journal, in that State, and the letter-writer for his own paper]—I am well aware that a character for virtue, honor, and truth, has nothing to expect from the pen of falsehood dipped in the gall of bitterness; and I know not why I should have been warned not to rely on the praise of letter-writers, when I have been made the subject of their constant vituperation. Some of the letter-writers I know to be gentlemen, and the friends of truth more than they are my friends; but I rely not on them, but on enlightened public opinion. My own convictions as to a national bank are not new, and have not been taken up for a party purpose or for a season; they are as old as my public life; my constituents have known them of old, and they are not to be relinquished for the sake of a triumph to myself, or of triumph over an enemy, or for fear of defeat; though, sir, I am confident that they are convictions which will eventually seize upon the minds of all as they have fastened upon mine. I have been for a bank through evil report; and now that I see the great reformer—Expe-

rience—abroad, with scourge in hand to wake up the people to reflection and inquiry; to make them hold up their heads from individual pursuits to attend to the operations of a Government which has put its rude hands deeply into their pockets now, I say, when I see the hope of better times, I shall wait patiently, for the troubling of the waters, for the healing of the people, for their voices to come up as a strong man, for radical relief of the country, its Constitution, its currency, its liberty!

But, to return to the message: I have been drawn off singularly enough to reply to a gentleman, who I thought once would have been one of the last to be found fighting for this Administration. The President next attacks the local banks. They have failed, notwithstanding the Government credit at their back; I admit it, sir, and always thought they would, and so did the Administration. I am excited to feel some sympathy for the pet bank system only by the rank profligacy with which "the party" now denounce their own victims. In his war upon these institutions the President exceeds even Fanny Wright herself. I have one of her books, sir, and I find, I confess, some moderation, something conservative even in her book; but in this message nothing but "destructiveness" is developed. She says—I quote her in contrast with the President—

"And now I will concede, and it is a position I have ever myself assumed, that all things have to be taken successively and in order. But, one thing is to propose measures, and another thing to take a general view of the state of affairs. One thing is to distinguish where we are; another, whether we are to go; and another, how we are to get there. It is by no means necessary to knock down all the chartered monopolies the first fine morning; nor, on any morning, that we should unsettle such as may be judged of real public utility, or of importance to the public defence and safety, at a time, too, when, of all others, the financial affairs of the nation require careful and skilful guardianship. Yet I do think it is not only allowable to look at them, and every morning that we choose; to investigate the nature of their whole structure, examine their foundations, pry into all their hidden passages, back entrances, secret cupboards, traps, and cellars; but, moreover, that it is right and proper, and of urgent necessity, that we should do so. I will not quote the old proverb which says a cat may look at a king—a proverb that is practically true in most countries where there are kings to look at; nor ask why, in this country, the king, which is, *de jure* at least, the people, may not look at the cat—and a cat too that gives him many hard scratches."

Yes, sir, I am for looking at the cat too. The King, *de facto*, however, is the President—and the President too is the cat which has stolen the cheese from the People, the King *de jure*.

But you see, sir, that even Fanny is not for knocking down all the chartered monopolies the first fine morning; nor, on any morning, that we should unsettle such as may be judged of real public utility. But the President and Levi Woodbury both now say the pet banks were corrupt. Sir, I refer to the 9th page of the President's Message, which I have already quoted, and I beg you to hear what Saint Levi says; he is speaking of the little sub-treasuries now in operation, when he says:

"The existing establishments and officers, whenever convenient, would be employed without a double machinery or the organization of a new system of agents. Executive control would be diminished rather than increased by them, because any additional officers will be selected, not by the President alone, or the Treasury Department, as the banks' now are, but virtually by designation by Congress, and the principal incumbents appointed by the Senate. They would also remove all ground for the objection sometimes urged against the former system, that the Executive alone exercises an extensive patronage and great moneyed influence through a host of bank presidents, directors, and stockholders, scattered through every section of the country, and selected without the check or check of either House of Congress in any particular case, and making loans of the public money from considerations merely political or official. A very wide discretion will be thus restricted, and a prolific source of suspicion and imputation of favoritism and partiality be entirely stopped."

"The officers, under the plans proposed, will likewise be amenable exclusively to the General Government, and not be embarrassed, like the officers of the banks, by conflicting duties and interests in respect to the States, nor involved in those collisions, jealousies, and recriminations often attendant on that position."

Angels and ministers of grace defend us! Who would have imagined such as this from Levi? Last spring that Pharisee was brought to the book and sworn upon the Holy Evangelists of Almighty God to tell the truth, the whole truth, and nothing but the truth, about the corruptions and dangerous influences of the deposit banks, and he tried to know nothing. The whole system and concern was "as fair a thing as ever was," and now we see him coming out in the face of his oath, and reporting officially against "a prolific source of suspicion and imputation of favoritism and partiality!" Oh! how he has been gulped at this much even! how much more when he got out—"the Executive alone exercises an extensive patronage and great moneyed influence through a host of bank presidents, directors, and stockholders, scattered through every section of the country," &c. All this, this very charge—this, the gist of it, was made by Peyton and Wise last winter. Levi kept his own conscience; the Globe denied; the minion and pimp, Rouben, bullied and placarded; the President pronounced us liars all the way from Washington to the Hermitage, and said here we ought to be houstonized! And now, oh! all earth and heaven! look here! verily, every charge is confessed by both President and Secretary! What thinks my colleague, (Mr. Garland), the chairman of the committee of investigation, a majority of which reported that there was no agent, no corruption, no political influence; that all was fair, and right republican! Does this not put that majority to the blush?

Never had I, never had my friend Peyton, never shall we again obtain for truth—"which is mighty and will prevail"—such a glorious triumph as this! Sir, I must quote Fanny Wright again. I approve her sentiments cordially when she says:

"But, joking apart, I would ask if, on the part of any set of men, there be either policy or decency in a world whose rule is right, and whose guide is reason, (or which otherwise is without either rule or guide at all.) I would ask, I say, whether, at the point of inquiry at which the public mind has now arrived, there be policy or decency in the attempt to prevent, or even to retard, the investigation of any question whatsoever?"

It is a law of the human mind instinctively to resist injustice and to spurn arbitrary dictation. In America, moreover, such is the law of the State. To cry "silence!" to the voice of public curiosity is here outrage; to induce silence by bribery or enforce it by violence is overt treason. What policy is there or can there be in endeavoring to hide what every body sees, or in making endless turns and tricks, when the public eye is open to them all? There is a mode by which, in this country, all prudence may be secured and all patience commanded. It is simply to tell the truth on all occasions. Never to mystify and never to falsify. To say, such and such is our position. By so much it false; but, in setting it right, let us beware of the leash and the false current. And, so that we hear of dangers really in existence, and not of imaginary ones invented to draw the ship into some new course of error, or to keep her from taking the shortest course, consistent with safety, into the right one, we may be sure that all on board will possess their souls in peace, and wait for salvation, or strain every nerve to aid it, without a murmur or even a hard thought. All above-board and nothing in the dark. Whenever a measure is right, or even when not absolutely right in itself, but only indispensable under existing circumstances, there is always reason to give for it; and let it be given, and given without fear of opposition or evasion of discussion, and the mass of this nation will support it."

Sir, I am no advocate of the pet bank system. I think now what I have always thought of it; though a letter-writer reports me as making terms now with Rouben, between whom and myself my colleague (Mr. Garland) is said to be the internecine. I cannot vote for the Conservative measure; but I cannot agree that our State institutions shall all be knocked down, as Fanny says, at a blow, by the President, after he has used them for all his ambitious and corrupt designs, and after he is forced to cast them off on account of the odium they have incurred by the abuses to which he has perverted them. It is now politic in "the party" to be the first to denounce them—to cry catch thief! catch thief! the loudest, in order to turn pursuit from themselves, who have been the chief of the sinners, the guiltiest of larceny and robbery, and accessory before and after the fact to the guilt of the pet banks!

The Message throughout, sir, is a general and sweeping attack upon the whole credit system; and the gentleman from South Carolina agrees with the President in the Loco Foco tenet that that system is inimical to human liberty. The gentleman (Mr. Pickens) "preaches back insurrection to the Northern laborer," whom he puts upon the footing of a Southern slave! I should hardly think, sir, that he would be heeded by any laboring men of intelligence, and scarcely by a mob, if *to-hold*, if they had any pride of condition, or the least self-respect. He tells us that John Milton was a Loco Foco. I wonder if he was for the Sub-Treasury! Sir, in this, too, the President is clearly departing from "the footsteps of his illustrious predecessor." In Mr. Taney's letter to the Committee of Ways and Means, dated April 15, 1834, he says: (See passages already quoted.)

"Sir, I was much astonished to see the great leader of Loco Focoism in New York, (Mr. E. Moore), shake hands with the gentleman from South Carolina, (Mr. Pickens), after he took his seat, upon the proposed union between Northern laboring men and Southern slaves! I can account for such a union and such congratulations only on the principle that extremes are sure to meet. Not that the laboring men of the North are sure to affiliate with our slaves; but that Loco Focoism is certain to amalgamate with aristocracy as it now does with power—despotic Executive power, irresponsible, and seeking to be unchecked!"

Such were the principles which guided the Administration of General Jackson in selecting the deposit banks, and in regulating them; and, sir, let me do Mr. Taney the justice to say that, however he may have been in error in carrying his principles into practice, he advanced many which were undoubtedly sound and wise, and he seemed to me ever to have been governed by fixed and well-considered principles. He did not appear to adopt a creed merely because it might captivate the popular prejudices; and I do not think that he would have pursued one to extremity if he saw that it would lead to ruin, though it might be "clapped by the crowd." Certain it is that he was General Jackson's favorite Secretary, and he was very far from advancing these alarming appeals to "the poor," to war upon a system which is the best protection of men without capital. To see a poor man assisting to destroy the credit system is at once to remind one of Hogarth's picture of a mob, in which a misguided and frantic wretch is sawing himself down from the top of a high sign-post! Sir, there are two kinds of democracy as to equality among men. The one tends to degrade all men to an equality upon the lowest scale; the other tends to exalt them to an equality upon the highest scale of human excellence. The former strives to pull down all excellencies in systems or in men, and forbids all perfection in either. This is the "Agrarian," which would reduce us to the level of brutes, and which, under the pretence of holding back those who strive to improve their own condition and the moral condition of mankind, to prevent improvement from making differences among men, would, in fact, make industry work for indolence, the vigilant keep guard for the sluggard, give the fruits of enterprise to those who toil not and do not spin, and divide the rewards of wisdom and virtue with ignorance and vice! This kind of democracy is the rankest despotism. It is as unjust and oppressive as it is impracticable and impossible.

Sir, no Government can repress the energies of mind and of moral power. This low, leveling democracy may declare a division of property among men to-morrow; will it be an equal division the next day? No, sir, some will excel others in character, in moral power, in sagacity, in energy, in wisdom and virtue and success; start them even as often as you may, with the profligate, the slothful, the ignorant, the inactive, the careless, the vicious, or the unfortunate, and still "onward," "onward" in advance, will be their course, and all justice yields them the precedence and superiority! Government might as well undertake to "fetter flame with flaxen band, or stop the ocean with the sand," as to put limits by law to the degrees in which one man may, in social life, excel another. The political justice which entitles every man to all the advantages which he can fairly acquire by his merits and the exertion of his moral, physical, and intellectual faculties, is sustained by that other and genuine democracy only which tends to advance and promote human improvement, and to encourage that free emulation and competition which exalt men to an equality on the highest scale of moral, physical, and intellectual excellence! True democracy ever exalts man. It diminishes the power of Government, but it enlarges the moral and social power, and

increases the political privileges of men. It makes man free to pursue his happiness, and allows neither king "one," or king "many," to hinder or molest him; it prevents Government from checking the exertion of his powers to acquire all the good he may, without injury to his neighbor; it prompts each one to aspire and to strive for every excellence, and for the prize of success; it cheers each one in the pursuit, and crowns each one in the attainment of the ends of a virtuous ambition; it tells all men not to stop, to reach forward farther and farther, higher and higher, towards the standard of perfection; and it strikes down the hand which would arrest the march of freedom! It declares in this land that all may strive equally for power and place, for honor and office, for distinction or wealth; and thence is derived the hallowed truth that the sovereignty is in the people!—each is a sovereign in himself—a king to compete with his fellow for equality in acquiring the greatest good, and to make man the fellow of man on the highest elevation! The credit system, sir, supports and is supported by this latter creed of genuine democracy. The credit system is the most potent auxiliary of true republicanism. From it have sprung the inventions of the age, the improvements in mechanic arts and powers which have reformed the world. Whence came the steam engine? From the genius of Fulton. Who was Fulton? A penniless inventor without capital. What would his genius have done without credit? It would have sickened and died in neglect and despair ere it had wrung from the avaricious gripe of a private capitalist the cash—the specie, in time to strike out that Giant Champion of science, and arts, and civilization, and "peace on earth and good-will to man!" How many of the virtuous and enterprising poor could individual capitalists patronize if they would; and how many do they patronize of those they could? A bank has no soul, it is true, but it dispenses infinitely more real charity than that sordid, hoarding, grasping, selfish tyrant you call a capitalist—a Jew! Let the "poor man" choose between them—a credit system, organized by laws which he may partake in making, and which make the credit free for every "poor man" of character; or, that system which leaves the Jews, the Shylocks, called "private capitalists," alone to make the law of trade—a system which patronizes only "the per cent." and knows no law but that of the "auri sacra fames!" The free system of credit is in danger of being destroyed by despotic power—loco-focoism, as mobism ever does, is aiding despotism; and it is left to the virtue and intelligence of "the poor man" to decide which side of the contest he will take—whether with those without capital, and who want credit, against the power of money capital, or with the rich against the poor? The rich now say that the poor are not entitled to credit to enable them to compete with cash for power, and wealth, and honor, and office!!

The banking and credit system destroyed, what is proposed as a substitute? A Government Shylock—a political Jew! No, sir, I will not denounce it before I have examined it. What is it? As yet, sir, we know not what it is; we are left to imagine the worst. If it could be well defined, I would inquire whether it is not liable to the very same objections which have been urged against the Bank of the United States. Of this one fact, sir, I am morally certain—that the present propositions and the views of their advocates in both Houses of Congress, as well as those of the Executive, all tend to the final establishment of a Treasury bank. We are asked to permit the collectors and receivers of the public money to keep it in their custody, to make them its depositories, to collect nothing but specie in payment of the public dues; and we are told openly from one quarter (Mr. Calhoun in the Senate) that there must be a permanent issue of Government paper for currency.

Now, sir, I ask, when you have organized and systematized this plan by law, if it is not a creature—call it by what name you please—which is no more known to the Constitution than a bank corporation? Will this, in fact, not be a corporation by law? I do not pretend to say that, when formed and examined, it will be found to be unconstitutional, but I warn gentlemen who say that a Bank of the United States is unconstitutional, to look well to what they create as a substitute for it, to see whether their substitute is not liable to the same constitutional objections, by their own mode of construction. Are we to be told that the General Government clearly has the power to organize a Treasury Department? Where, whence is such a power derived? Precisely from the same source and by the same deductions that the power to create a national bank is derived—the necessity to execute granted powers, and the propriety of the means to the end. But the constitutional question aside, the question of expediency still remains; would this plan "accomplish the beneficial purpose promised by its advocates?" And "would it not impair the rightful supremacy of the popular will, injure the character and diminish the influence of our political system, and bring into existence a concentrated money power, hostile to the spirit, and threatening the permanency, of our republican institutions?"

Could this system furnish a currency? No one will contend that it could furnish a circulating medium of specie. There is not enough of the precious metals in the world to admit of a circulating medium of specie alone, and it would be an impracticable medium if there was. It never did, and never can, answer any other purpose than that of a basis for currency and of change in small transactions of trade. It can never be the substitute of bills of exchange. It cannot be had for the currency, if it is to be demanded for the public dues. Hence the necessity of a permanent Government issue of paper. Will that become the currency of the country? It depends upon whether it is to be convertible. If convertible into specie, it will never circulate, for the reason that the public debtors will always return it upon the Government to call for the specie to pay the Government. If inconvertible, or Government issues, as the banks do, more paper than it can redeem, the paper will depreciate, or the Government will, at times, be compelled to suspend specie payments precisely as the banks—the Government will become a greater nuisance to the People, and more base and perfidious to them, than the local banks have ever become to the Government. Besides, if the Government issues permanently this paper, it must receive it in payment of the public dues. If it receives it in payment of the public dues, where is the Government's specie to come from to redeem the excess of its paper which may be issued over and above the amount which may be required to meet the demand for paper where-with to pay the public dues? Whether such paper will depreciate, will depend upon the amount Government issues: if it exceeds the demand for paying public dues, the paper must depreciate, as did our old continental money. It does not exceed that demand, what is to become of the great interests of trade—whence the supply of a currency, exchange, and a safe, sound, and uniform circulating medium? If Government

is not to concern itself about supplying a currency, why not pay specie alone, if it is to receive specie alone? But, sir, it is not in the mind of its advocates to make this plan supply a currency. It is to insure the Government interests alone, and to leave the people to take care of themselves. No, not to leave the country to shift for itself—it must destroy the country by destroying its currency. The Government will operate as a great sponge to absorb the specie from the banks, and from its proper places of deposit as a basis of circulating medium. This Sub-Treasury system must inevitably depreciate the local bank notes, and the people's securities of trade; it must leave them to deal in shin-plasters for ever, whilst it deals in hard money. It makes the servant greater than the master, it separates the Government from the people, whilst it is as much their concern as are private affairs; and it makes the interests of the Government conflict with those of the people. It demands of the people specie for Government, while the Government dries up every source whence specie can be drawn. It establishes one currency, the metallic, for the servants, and another, the basest depreciated paper, for the masters. But the money view of this scheme is nothing compared with its political bearings. Has the gentleman from South Carolina (Mr. Pickens) examined the effect of this amendment to collect the Government dues in specie, upon "the great landed interests of the South?" He is sure, he says, that it will make us our own importers. I insist, sir, on the contrary, that it will raise the premium on specie exorbitantly, and that premium will and must raise the tariff. The importer must purchase the specie to pay the duties to Government, and the amount of the premium must be added to the price of the goods, and the consumers, his constituents and mine, must at last pay the piper's, no matter who imports.

But, sir, is this plan "proper?" Is it congenial with the spirit of our institutions? The President says, "It is believed that a considerate and candid investigation of these questions will result in the conviction that the proposed plan is far less liable to objection, on the score of Executive patronage and control, than any bank agency that has been, or can be, devised." This is the very essence of consistency. To charter a national bank will be "to concentrate a moneyed power, hostile to the spirit and threatening the permanency of our republican institutions; but to put the whole of the public money in specie in the hands of a hundred thousand officers of the Government, the Briarian arms of the Executive—the creatures whom the President makes and unmakes at his good will and pleasure—will be a sure way of vindicating the supremacy of the popular will, of preserving the character and influence of our political system, and of diffusing the moneyed power. When, too, it would concentrate about sixteen millions in specie in the hands of a single collector in the city of New York! The Bank of the United States might, forsooth, become a dangerous political monster when united with an Executive. This plan is perfectly harmless and innocent, less liable to objection, on the score of "Executive patronage and control," though it would certainly place in the hands of the President the whole concentrated moneyed power of the Government! This, sir, is too unblushing a demand for more patronage and control; this is almost putting on the imperial purple and the crown in the face of all the people! Oh, no, the President modestly says:

"If a Chief Magistrate may be allowed to speak for himself on such a point, I can truly say, that to me nothing would be more acceptable than the withdrawal from the Executive, to the greatest practicable extent, of all concern in the custody and disbursement of the public revenue: not that I would shrink from any responsibility cast upon me by the duties of my office, but because it is my firm belief that its capacity for usefulness is in no degree promoted by the possession of any patronage not actually necessary to the performance of those duties. But, under our present form of Government, the intervention of the Executive officers in the custody and disbursement of the public money seems to be unavoidable: and before it can be admitted that the influence and power of the Executive would be increased by dispensing with the agency of banks, the nature of that intervention in such an agency must be carefully regarded, and a comparison must be instituted between its extent in the two cases."

Yes, sir, "if he may be allowed to speak for himself on such a point," he speaks boldly enough, when vouching a wish to be deprived of "all concern in the custody and disbursement of the public revenue?"—"not that he would shrink?"—oh, no; he boldly argues to show that all concern ought to be given up to him and his minions! What did Mark Anthony say of Caesar? "Thrice did he refuse the kingly crown." Sir, if nothing would be more acceptable to the President than the withdrawal from the Executive of the immense and irresistible and corrupting influence and patronage which the public money, united with his political power, gives him and the creatures of his will, I, for one, am disposed, gladly eager to gratify his patriotic wishes, I devoutly pray that you will indulge him in a desire, regain the constitutional powers of Congress to keep and control the public revenue, and that you will rekindle the spirit and protect the permanency of our republican institutions by diminishing Executive patronage by every law full means in your power. Now is an auspicious period to do much for our liberties, in imminent danger from this threatening cause of alarm to every watchful and faithful patriot. But no. The President, so far from co-operating in this great work of curbing Executive patronage, asks to be trusted by law with the entire collection, keeping, and disbursement of our revenue; he denounces all banking, petitions for a divorce of the Government from banks, and yet, like Madame Darusmont, is for a union with a *Government bank!* Heretofore, sir, well it might have been said of him, as Loco Foco John Milton says, in *Paradise Regained*, of Satan:

"What have been thy answers, what but dark,  
Ambiguous, and with double sense deluding,  
Which they who asked have seldom understood,  
And not well understood as good not known?  
Whoever, by consulting at thy shrine,  
Returned the vicer, or the more instruct  
To fly or follow what concerned him most,  
And run not woe to his fatal snare?"

But now, sir, the veil is raised—the horrid form is seen—the wicked intent of wedding the money of Government with the political power of the Executive is plainly manifested; and, if the people start not back affrighted and appalled, it will be because

"God hath justly given the nation up  
To thy delusions, justly, since they fell  
Idolatrous!"

## SPEECH OF MR. MASON, OF VIRGINIA.

In the House of Representatives, October 11, 1837.—On the bill "imposing additional duties, as depositories in certain cases, on public officers."

The bill being under consideration—

Mr. MASON said: Agreeing, as I most cordially do, in the several measures which have so far been presented by the Committee of Ways and Means for the consideration of this House, it is with the utmost reluctance that I am now brought to differ with those with whom I have heretofore acted.

This difference, however, I am pleased to consider, is at last but one of mere expediency, and in itself contains nothing which should sever those who are united otherwise in the preservation and support of those great and leading principles which actuate political parties.

Differences of opinion necessarily pertain to deliberation; it is against the constitution of our nature that it should be otherwise: intelligence, reason, and sound judgment are alike hostile to entire unanimity; nor would our representative Government be any thing more than a mere formal acquiescence in the will of some ordained superior, if the doctrine were allowed to hold, that party discipline exacts an unconsidered sanction to every measure which brings a recommendation from the Executive chair.

Such is certainly not the spirit of our institutions; nor should it be the spirit of any party that would act safely and wisely, or even successfully, in the administration of the Government committed to their charge.

Having thus premised, I will proceed at once to state my objections to the bill under consideration.

Those who have brought it in, address its claims to our favor as a measure simply intended to provide for the safe-keeping of the public money. It is said that the former depositories, the State banks, having proved either inadequate to the duties required, or unfaithful to the trust reposed in them in this branch of the public service, it is necessary that Government now should take care of its own interests; and that this will be most effectually done by a return to what is called the legal currency of the country, and by constituting certain fiscal officers of the Government the keepers as well as the disbursers of the public money.

The machinery is certainly very simple; and if the only end to be attained were, in truth, the safe-keeping of the public money, however I might dissent from the expectations of those who have planned its operation, I could not see in it those insuperable objections which impel me now to renounce it against it.

The evils, sir, which we are expected to remedy by some adequate law, lie far deeper in the public mind than any alleged insecurity of the public money—evils for which no remedy is provided by this bill, but which will, in my judgment, be fastened upon the community by its passage. I mean the present degenerate condition of the currency.

What is now the currency of the country? Is it not what it ought to be, but what actually now is the *sale* currency?—the only medium having exchangeable value, by which the business of the country is carried on? It consists entirely, from one end of the Confederacy to the other, of irredeemable bank paper; every payment that is made, every debt that is collected, every transaction of every kind, whether large or small, into which *money* enters, is carried on and effected by paper that has been issued by the State banks, and which they no longer redeem with gold or silver. These metals have passed entirely out of circulation; they form no longer any portion of the *money* of the community; treating money as that only which, for the time being, serves as the symbol of exchange of things having marketable value.

This condition of the currency is the true and great evil of the times; it affects the people in their business precisely in the same manner as it affects the Government in the conduct of its affairs; and there can be no remedy, at all adequate to relieve the Government from its embarrassments, which shall not, at the same time, and to the same extent, relieve the people from theirs.

In considering this subject, as I propose to do, it is unnecessary to go at large into an examination of the causes which have operated to bring about this state of things. I do not know that I am, nor do I at all profess to be, equal to this duty. And yet, were I to attempt it, I should certainly differ very widely from those who trace these causes no farther than to a redundant issue of bank paper. That such issue has been, to a great extent, auxiliary to the present embarrassments, there can be no doubt. But it has been auxiliary only; and I freely admit, that, in my very humble judgment, a well-founded objection to our banking system lies in this very thing—that banks of discount, organized as our American banks are, yield the facilities of credit too readily and amply to the demands of trade, without a power of discrimination between such as arise from the extension or accidental vigor of healthful commerce, and such as have their origin in a wild and gambling spirit of speculation. Commerce requires credit. From the day that man passed in their dealings beyond the first simple stages of barter, credit, in some form, entered into the affairs of trade. Its agency soon came to be understood; and the winds are not more active in circulating the common air, than credit now is, all over the world, in circulating through every land the productions of every soil.

Trade and commerce, then, becoming drunk with prosperity, have drawn too lavishly upon the credit offered them through the banks; or, if you will have it otherwise expressed, the expansible character of bank credit has offered too great temptations to commerce of over-action, and we are now suffering under the consequences of over-action as well on the part of those who use this credit as of those who gave it.

In this reasoning I am borne out by the Message of the President. He says that "our present condition is chiefly to be attributed to over-action in all the departments of business; an over-action deriving, perhaps, its first impulses from antecedent causes, but stimulated to its destructive consequences by excessive issues of bank paper, and by other facilities for the acquisition and enlargement of credit."

I have entered into the subject thus far only that I may invite you to a more enlarged view of the difficulties to be met than are presented when our inquiry is confined simply to a consideration of the safest custody that we can provide for that portion of the people's money which is to pass into the public coffers.

My great objections to the measures proposed in this bill are, that they are not at all commensurate with the exigencies of

the times. They do not meet the real difficulty. The bill simply ordains that the Government, after a limited time, will receive nothing but gold and silver in payment of public dues; and will entrust its keeping to its own officers alone. Now, if there were a creative power in our law; if by this simple enactment the bank paper could be driven out of circulation back whence it came, and the precious metals substituted in sufficient quantities to meet the wants of society, as well as the demands of the revenue, the chief ground of my opposition would be at once removed. I can well see, from the experience we have had of the evil tendencies of the banks to excessive issues, (and such, at present, are my decided impressions,) that whenever the currency is placed in a condition to bear the tribute, the true policy of Government may be found to be to exact its dues altogether in coin; and to withhold its revenue, while resting between its collection and its disbursement, from the use of the banks, as a fund to increase their discounts. My reasons for this I will give hereafter, when treating of the proper position which the Government may ultimately assume toward the State banks.

The bill is to operate upon the currency as it now is, for we have not only no guarantee that it will be found in an improved condition at the end of twelve months, (the limited time,) but is susceptible almost of demonstration that one necessary consequence from the proposed law will be to continue the currency in its present debased condition.

The precious metals, all will agree, are now banished from circulation: They are in the country, I grant you, and in sufficient quantities, perhaps, to answer their accustomed duty of circulating in those channels, below the reach of bank paper; but they no longer pass from hand to hand as a medium of exchange. Their former exchangeable value has been converted, by the course of trade to which I have alluded, to a value exclusively marketable; and thus they have fallen back, and are entirely merged in the common and general mass of merchandise. Specie, whether in coin or in bullion, is now merchandise, and not money; and those who require it for any purpose must go into the market and buy it at market rates, as they would do any kind of merchandise whatever. How long, then, is this state of things to continue? How long will this marketable value attach, which detains the coin from its most appropriate function as current money? And by what process can it be restored to circulation?

The answer to the two first inquiries is very simple. Specie will continue to be merchandise so long as there exists any demand for it greater than that which would invite or retain it in circulation. It was driven out of circulation by the demand for exportation, after the business of the country had realized the fact that our exports were insufficient to pay for our imports. The balance must be met, and the precious metals were called out of circulation to answer this new demand. It is a necessary and fundamental law of currency, that where you have two media, of which either answers all the purposes of exchange, and one of them, besides those purposes, will answer another purpose as a subject of trade, the latter will fly at once to meet the new demand, and leave the duties of currency exclusively to its fellow.

So it was between the paper and the specie, when by the exigencies of trade, the latter was suddenly called off to meet the new demand created by the necessity in commerce of extinguishing the balance against our imports. There is no mystery in all this. Imports are to be paid for from two sources alone: by the produce and labor of the importing nation, or by gold and silver; and, whenever the former is found inadequate, the precious metals must make up the deficiency.

Thus stood the country when the banks suspended the payment of specie. They had an agency, and a large agency, I grant you, in bringing that necessity about; pampering, as they did, the pride of commerce. They met all its demands, honored all its drafts, as well in the rage for importation as in those extravagant speculations to which the apparent prosperity of the age gave immediate birth.

But the banks are not alone to blame in this. It is due to the occasion, and will aid us in searching out the true remedy against a recurrence, to admit candidly and fairly that the Government itself saw as little of the mischief that would follow from the extension of the credit as the banks did themselves. It is a part of the history of the times, and should be recorded on the same page, that when the deposits were given to the State banks they were expressly instructed to make them the basis of new incentives to commercial enterprise.

I do not speak this at all, sir, in the spirit of rebuke—far, very far from it. I adduce it only to show that the Government itself, against whom, as some have said, the banks have committed the unpardonable sin, was itself actively instigating them to that very extension, now so zealously condemned. How far the banks might have gone in extending their discounts, upon immense deposits thus cast upon them; without this authoritative hint, none can easily tell. But it is fair and reasonable to infer that this license in advance did not pass unperceived.

Having stated thus the actual condition of the currency, and briefly traced the causes which have led to it; let us inquire next, what will be the probable operation of a law that takes no account of its feeble state, but peremptorily demands, after a given day, that the entire revenue, amounting to some twenty millions of dollars per annum, shall be paid up in gold and silver? One necessary consequence, in my apprehension, would be effectually to place it out of the power of the banks to resume the payment of specie within any reasonable time. How can it be otherwise? They suspended payment because of the new demand for coin, created by the exigencies of trade. They have not yet resumed, because although that demand has certainly diminished, as shown by the rate of foreign exchange, yet there is still demand enough to warn them of the consequences of an attempted resumption before the trade of the country is in a fit condition to bear it. Sir, the country is recovering fast from the violent and sudden convulsion into which it has been lately thrown. It cannot otherwise be, when we consider the immense resources of this vast continent, wielded as they are by a people whose industry and enterprise acknowledge no other limit than the very bounds of the earth. But the Government must keep its hands off—time must be allowed for the system to re-act before any new or additional pressure can be borne.

If the necessities of circulation are not strong enough now to bring specie into general use as part of the currency, because of the existing collateral demand in trade, does it not necessarily follow that any new demand will have an additional effect in retarding that operation?

On create this new demand by the bill under consideration; pass it, and you at once increase the premium that specie already bears over the ordinary currency; you give it increased

value in the market to the extent of such new demand—and to that same extent you postpone the day when it can return into use as a part of the circulating medium. Until that day comes, it is impossible for the banks to pay out specie upon their notes. They never can do so until the demand upon them is reduced to a naked demand for circulation. If I am correct in this reasoning, the best that could be hoped, under the proposed law, would be that it should remain a dead letter upon the statute book.

I think I have shown that we could have no return to a circulation of specie under its auspices; and if this be so, do you believe, does any man believe, that the law could be carried into effect?

What, sir, that the Government alone should be paid in silver and gold, when those who have the payments to make receive nothing but irredeemable paper! How vain and idle it is to expect any such thing. If, by any chance or lucky accident, over-ruling those stern necessities to which all human affairs are subject, the exigency of the times should have passed by before your policy begins, then it might, thus chance-favored, be that the scheme could be carried out. But it becomes us not to legislate upon such improbable contingencies. I want no better evidence of where the Government would be twelve months hence, under the operation of this law, than what is now daily passing before our eyes. There are, it is said, (and I presume at least with an approximation to truth,) now in this country eighty millions of dollars in coined metal. By the existing law, (as there is no bank paper convertible into specie,) Government can now receive nothing but coin in payment of any part of its revenue. I ask confidently, is any part of that revenue so paid? With all this abundance of the precious metals, fully three times as much as we have had at any former period, do we not all know that none whatever is paid into the Treasury from any source of revenue? I mean none, when compared even with the lowest necessity of the public service. The mint, it is true, does furnish a small supply, merely sufficient, if at all, to meet those demands which coin will alone satisfy. But this does not come in any shape of revenue—far from it. It is purchased by Government at market rates, and a premium paid upon every dollar that is brought in. Such is the present state of things, under the operation of a hard money law, while the only money in the country is in irredeemable paper; and such must ever continue to be your condition, under the operation of any laws that you may pass, so long as the money which you require is banished, by whatever cause, from the channels of circulation.

I lay down then this position, and defy any refutation: That the Government must, as a permanent necessity, deal in that currency in which the People deal; it is the law of its creation, and inseparable from its condition. It must receive what the People receive, and pay what they pay—a necessity from which Government cannot escape if it would, and ought not if it could.

I speak of this as a permanent necessity, distinguished from the necessities of immediate want, it is struggling now against this very want, and precisely as any large capitalist might equally do, by using the resources of his credit, to supply the temporary absence of revenue. Have we not just passed a law, authorizing an issue of ten millions of Treasury paper, for this very purpose? I mean for the single purpose of rescuing the Government from the necessity of coming down at once to the irredeemable paper of the banks? And this only to answer the present emergency; for it will certainly follow, unless that medium can be restored, in which alone the Government is allowed to deal, that we must issue at least ten millions more before we return home from the ensuing session. Sir, I went cordially with you in this use of Government credit, and I will do so again should the emergency continue. But I tell you fairly and candidly, and I tell the people too, that this Treasury issue is all that saves the Government now from coming down at once to bank paper. I say this, sir, because your revenue laws, exacting gold and silver, are not and cannot be enforced. If you collect any revenue, it can only be in that very paper, because there is nothing else to pay with.

Suppose, then, your law passed, and the currency remain, as under such policy it inevitably must, in the condition that it now is, what are you to do? If you could enforce the law then, I ask, why do you not do so now?

Why do you not new compel your debtors to go into market and buy specie, in order to replenish the Treasury? So far from this, we have a bill now before us, which it is admitted on all hands must pass, to save the Secretary from the necessity of so idle an attempt. With more than four millions of dollars now due in New York alone, so far from exacting payment, we are about to give further time on all bonds due, and to become due, between this time and the next session of Congress.

I say, then, confidently, pass what law you may, you cannot have your revenues paid in specie, so long as it remains at a premium; and that the very first effect of this law, by creating a new demand, would be to increase the premium, and thus render permanent the very exigencies to which your legislation is now actually yielding.

But take another view of the subject. Suppose the law carried out, what then would follow? The importer, besides all other charges for freight, insurance, duties, &c. is required to pay five or ten per centum for specie to pay the duties. Certainly this latter would be added to the price of the commodity; and thus the whole effect of your policy would be to tax the people to this extent, in order that Government might deal in gold, while they were left to struggle on, unaided, against all the ills of worthless paper money.

My view of the subject, then, is, that by passing this law now, you postpone, to an indefinite period, the resumption of payment by the State banks; that, until they do resume, the law must be inoperative, and the Treasury supplied by loans; or, if enforced, besides creating a new and heavier tax upon all foreign merchandise, the sole effect will be, to enrich the office holders, and all who feed upon the public crib, at the expense of the rest of the community. I know, sir, that this last objection has been scouted as mere slang, as part of a mere "rabble," and unworthy of notice. But I tell you that it has never been met, and that it cannot be overthrown. I do not believe (and that disbelief is founded on the experience of the present day) that such a law could be carried out. But if it were, the host of Government dependents would grow rich under it. They would have money worth five or ten dollars more in the hundred than the money used by the people; and the people would be taxed to the extent of this five or ten dollars in the hundred, to furnish the former with the better currency.

Now, sir, in all this, my sympathies are with the tax payers, and not with the tax gatherers. I go for the interest of those

who are to pay, and not for those who are to receive. I cannot agree to any policy which might, and I believe would, lead to these results. It is unwise, unjust, and unnecessary; and it could not, and ought not, to stand one day after those results are ascertained.

I may express myself strongly, but I do not mean to do so harshly. I see mischief and disaster without end, in any attempt to legislate now, as you would have us do by this bill; and it is to save ourselves from utter defeat and shame, that I beg you to pause with me, and consider the consequences of such attempt.

Let me, before leaving this part of the subject, present another view, which, to my mind, increases the difficulties to be encountered by the proposed law. I have, so far, considered only the demand arising under the accruing revenue, as that which is to retard the resumption of specie payment. But the revenue in arrears, that of which we are to postpone the payment, will come heavily in aid, to increase this demand at the very outset of the new law, to what extent we do not as yet very certainly know; but, reasoning from what we do know, the promise is sufficiently appalling. The duty bonds to be postponed amount, in New York alone, to more than 7,000,000 dollars, computed to January next; and, including the other cities, to more than \$10,000,000; constituting, to such extent, whatever it may be, an obstacle at the outset over and above what is to be encountered in its ordinary course.

I have heard it said, however, that this very demand to be created under the law will have the effect of bringing in specie to meet it; and thus it is alleged that the demand will occasion the supply. I do not deny this in the least degree. There is nothing more certain in every branch of political economy, than that there will be a supply for the demand. But regard for one instant only what this demand is, and the fallacy of the reasoning will appear at once. It is a market demand, which is to produce this supply. It is an increase only of the same demand, which has already banished coin from circulation; now it is purchased for exportation, then it will be purchased for Government, and the effect will be precisely the same in both cases—to give a marketable value to specie as merchandise, in lieu of the exchangeable value, which it would otherwise have as money. None will pretend that, because Government will pay it out again, it will thereby circulate, unless they can find the term circulation fully satisfied in a constant round from the custom-house to the broker, and from the broker to the custom-house.

If it be true then that Government cannot command the precious metals through its revenue until they return back to circulation, the inquiry remains to be answered, how that end is to be attained? I would answer, first, it will be attained even before a very long time, if matters are allowed to remain, as far as Government is concerned, precisely where they now are.

Let us keep our hands off, and the banks will resume as speedily as reviving trade will allow; within what period I will not profess to answer; but their course of dealing since the suspension evinces the strongest purpose to do so, at the earliest practicable day. The Secretary of the Treasury tells us in his report that since the suspension of payment "the policy pursued by most of them has been favorable to an early discharge of their engagements to the Treasury, and to a resumption of specie payments." And again, in proof of that position, he says, speaking of the deposit banks, that "since the 1st of May, their discounts as a whole have been reduced about \$20,388,776; their circulation \$4,991,791; and their public deposits \$15,607,316, while their specie has diminished less than \$3,000,000." Such is the encouraging account which the Secretary himself gives us of these institutions. We have already seen the great reduction in exchange since our session began, evidencing the rapid extinguishment of the foreign debt; and the same manifested by the approaching market for the southern staples. Even the presentation of the bill for an issue of Treasury paper had an effect in bringing down exchange. Putting all these things together, we may safely argue that the evil day is passing by, and all that I urge upon you is to keep hands off, and let very well alone.

The resolution of 1816, now in full force, had the effect, at that day, of bringing about a general resumption of payment by the banks. It will do so again, if its operation be unaffected. I have shown you already the promise under it. But the bill proposes to repeal that resolution, as the first step in the policy of the new law. Then, the attitude of Government towards these institutions was one of encouragement and confidence. It offered inducements to them to resume, and invited back the confidence of the community. The wisdom of that policy was manifested by the result. Now, the very reverse is to be attempted; in lieu of confidence, we present discredit; for encouragement menace destruction. I need not add that the same end cannot be obtained by such opposite means.

But, again, sir, there is in this bill an entire departure from the great and leading principles of the late Administration on the subject of the currency. It looks no further than to a supply of specie for the Government and its dependents. There is no account taken of the more important object, of infusing specie into circulation, for the common use of the people. Then, the great effort was to enlarge the specie basis, by the suppression of small notes. The Government, as the greatest creditor of the banks, sought to effect this by the control incident to its large deposits. The banks were encouraged in every way to co-operate; and the States were appealed to for their aid, in the common duty of a reform in the currency.

Many of them, where there was a bank issue under five dollars, met the appeal at once, by a direct prohibition to that extent.

But, the State of Virginia went farther. She had long since realized the benefits of a specie circulation below five dollars, by a prohibition of all paper under that amount; and on the very first occasion when the charters of her banks would be reached, so recently as during the last winter the prohibition was extended to ten dollars, and to take effect at an early day.

These were the measures then contemplated for the improvement of the currency, and begun to be carried out by the powerful aid of State legislation. Why are they to be abandoned now? It was admitted then, and it is beyond all question true, that specie, either in gold or silver, will not circulate by the side of paper. If experience of this were wanting, it is abundant in Virginia in reference to small notes; as soon as they were expelled by her law, silver took their place. And there is no doubt that, if her policy could be carried out, by the expulsion of all paper under twenty dollars, gold would flow at once into the vacant channels. All this can yet be done by a

simple adherence to the original plan. But your policy is in utter disregard of all such intent.

The great forcing process now in contemplation will work the very reverse of what was then so strenuously urged. It will put all our golden dreams to flight, of the halcyon days of hard money; and the States will be compelled, from sheer necessity, to license once more the very lowest issue of bank paper. Seeing these things as I clearly do in prospect, under the operation of the proposed law, I can have no choice but to raise my voice against it.

As to so much of the bill as constitutes the collectors of the revenue, with the Mint and its branches, depositories of the public money, I have but little to say. It is certainly subject to very strong objections, not the least of which is the very great increase of patronage to which it must give rise; and a patronage of the most dangerous influence, as being so immediately connected with the public money. Neither is this objection at all answered when it is said that the patronage will be less than that exercised in the intercourse between the Government and the deposit banks, because, by the simple substitute of a special for a general deposit, all patronage will be at once taken away, and on the score of safety the difference is incalculable.

Whether I regard, then, the pernicious influence which this bill must exercise upon the currency, if now enacted into law, or the inadequacy of its provisions for the safe keeping of the money, I am equally constrained to withhold my assent. In the first aspect it has never been submitted to the country, and has had very little consideration here. The innovation is too great, the transition too violent from all previous usage, to be thus suddenly met.

The people are too deeply interested in the consequences which may follow, to have this usage changed without the most mature consideration. For myself, sir, I want to go home from this whole subject, *re infecta*. It is a new proposition, presented for the first time in an imposing form by the late Message, and, before adopted, should be well and thoroughly canvassed before the country. The President himself, in proposing it, invites, and the subject is well worthy of, the fullest deliberation.

Let it be discussed, then, as it will be, and as all great public measures ought to be, by the people themselves, in their primary assemblies, and through the press, before it is enacted into law.

No inconvenience can possibly arise from this postponement; first, because the time must necessarily be short, as Congress will be again in session within six weeks from the adjournment; and, secondly, because the whole system proposed is now, under the late orders of the Treasury, in as full and complete operation as if specially ordained by the law under consideration. The Secretary has already adopted it, in the exigency of the occasion, under the discretion given to him by the law organizing the Treasury Department. There is no occasion, then, for this great haste, and there is every reason why we should forbear.

We are told, however, by an honorable member from South Carolina, (Mr. Pickens,) that by our opposition to the present bill we are strengthening the interest of that party which seeks the re-establishment of a national bank. This suggestion, sir, has come from a very remarkable quarter. I do not allude now to the member from South Carolina, but to a distinguished statesman from the same State is the other wing of the Capitol. The Sub-Treasurer, it is said, must be ordained at once, as the only safeguard against the restoration of a great national banking institution; and this vindication seems to be thrown out as a sort of bugbear, to frighten us into instant submission.

Sir, in my humble sphere at home, or in the halls of our State Legislature, my opinions on the subject of a Federal bank need no new confession. I have ever been an uncompromising foe to any such institution. I believe the existence of such a bank is inconsistent with the purity, and dangerous to the safety of popular government. I have ever opposed it in every form on grounds of expediency; and, what is above all, to fix and confirm that opposition, I entertain no doubt whatever that it has no sanction either in the spirit or in the letter of the Constitution. Strongly committed, then, to such opinions, and having uniformly acted up to them in every time of trial—in the removal of the deposits, through the panic era, and the Executive veto—I am not to be frightened from what I have taken as the path of duty by the new-born fears even of so distinguished a proselyte.

I distrust the quarter, sir, whence the denunciation comes. I have no confidence in that counsel which springs from the zeal of recent conversion. Opinions that are hastily taken up are as speedily laid aside, and are worthy of no reliance whatever.

No, sir, in my humble judgment, the danger of recurrence to a national bank is to be looked for in the very opposite quarter—in the immature conception and hurried execution of this Sub-Treasury scheme. I do not mean to predict it, because I would not be understood as disparaging the judgment of those who confide more readily than I do. But suppose they should fail—suppose it should be found impracticable to carry out the new scheme—that the currency should grow worse—that bank paper should continue irredeemable—and the People become wearied out with their rigid exaction of coin from them, while nothing but paper is paid them—I ask you, and I put it to the serious consideration of the country, what remedy would then be found? You could not fall back upon the State banks. They had been just divorced, and common decency would forbid the new espousal. Where then would you find refuge? Why, sir, as was done once before, in the arms of a national bank, and nowhere else.

I am not at all answered in the objections thus advanced, when I am told that my apprehensions of this failure are without foundation. You relied as confidently when the public money was transferred to the State banks, that they would not fail. Every official report, and every State paper, was replete with their commendation. We were told that they were equal to every emergency in the fiscal operations of the Government, and furnished its best and safest reliance. And yet, within two short years, the whole system is denounced as an entire failure. What better assurance can you give us now than you offered then?

Why may not your new scheme fail? I believe that it must, inevitably must, if attempted now. And when it does fail, I can imagine no possible resource left but that which our new convert so earnestly deprecates. I pray you to excuse me, then, if I do not see with his eyes.

Sir, in attempting these Sub-Treasuries now, the Government, if I may so express it, is retreating to the citadel at once, in the great battle with a National Bank. I see nothing but

danger in the attempt. Opinions differ amongst your best and ablest advisers, whether you can now make the position good; and if you do not, there is no escape, no choice, but in unconditional surrender.

One word more, sir, to the honorable member from South Carolina, and to those to whom this portion of his address is directed. I understand him as making an appeal to the Democrats of the North, to rally around this Sub-Treasury scheme, as their surest and safest protection against the opposition of Northern capitalists. He tells them that they are looked upon as the natural allies of the South, because their labor holds the same position to capital in their country, that our slaves hold to their owners at the South.

How these Northern Democrats may relish the doctrines of their newly ally, I need venture no prediction. I doubt whether they can be brought to rally around the standard of a leader who denies them any place, even in the common scale of humanity.

Is it upon principles such as these that the Northern Democracy is invoked to lend their aid to the measures contemplated by this bill? These are they, I presume, who are appealed to in the occasional addresses of certain newspapers, as the "democracy of numbers," contradicting, we find now, from any democracy of men—who hold no place in the thinking, acting part of the community, but are classed as mere dead weight, to be thrown at will into either scale of the political balance.

If there be any such party in our favored land, I thank Heaven it is unknown in the quarter of the country from whence I come. We have there, sir, I am proud to say, as honest and sturdy a race of Democrats as ever the sun shone upon. Of intelligent, thinking, independent, and free men; each doing and acting for himself, in all questions of public interest; having perfect equality of right, and participating to the fullest extent of a free citizen, in the direction and control of all public affairs.

This, sir, is the character of the Democracy with which I am familiar; nor, I apprehend, are our true Northern Democrats of a texture any whit inferior. But I desire my constituents at least to know to what sort of Democracy the merits of this bill are addressed by its friends. Not to intelligent and thinking men, but to a class who are counted only by their numbers, and are estimated to have no influence in public affairs, save as a mass holding a certain position towards capital.

[Mr. PICKENS here asked the floor, and was understood to say, that he did not lay down the proposition as broadly as was stated by Mr. Mason. He meant only to say that the tendency of the institutions at the North was to organize capital, and to make labor tributary to it; and, unless such tendency were checked, would finally reduce labor there to a state of vassalage.]

Having thus given my objections to the passage of any law at this time, which has not for one of its principal objects a reformation of the currency, or, I should more properly say, which will not, by its operation, lead back the banks to a resumption of specie payment, I proceed briefly to suggest what my opinions are of the ultimate attitude which the Government should assume towards these institutions. I have no expectation or belief, notwithstanding the cry which has been raised against the banks, through the press and otherwise; that by any action of this Government these institutions can be destroyed. It is not in your power to do so, sir, if you would; and if attempted by any means, direct or indirect, every effort that you could make would eventuate in defeat. They are created by the States, are incorporated, and have life given to them by their separate law. For their being, they lean upon the States, and are as entirely independent of you as you can ever become of them. Most of the States have a large moneyed interest in their stock, and participate largely in their management by the immediate appointment of directors.

Virginia has an immense fund invested in her banks, the income from which is appropriated to education, to internal improvement, and to other favorite objects of her State policy. Besides all which, the banks of each State furnish to each the entire paper circulation within its borders—a source of profit in which the States themselves largely participate. For good or for ill, then, these banks are so closely interwoven now, in all their relations with State interests, that they cannot be eradicated even by the power upon which they depend for existence.

They enter largely into, and influence, to a great extent, all the elements which affect the trade of the country; and thus, whether you are connected with, or divorced from them, whenever trade or the course of exchange (in which they largely deal,) is deranged or injured, your finances will be immediately affected. You may be divorced from them a *mensa* and *vinculis*; and should a period ever occur again when there is a general suspension of specie payment, your Treasury will be a general suspension of specie payment, precisely as it has stop payment in unison with the banks, precisely as it has done now; and the only difference between you will be, that they will stop payment as a measure of precaution, and you from necessity.

I say then, emphatically, that the present embarrassed condition of the Treasury is not owing to its connection with the banks. You have not now money enough to the credit of the Government, in all the banks north of the Potomac put together, (the quarter where the principal revenue is collected,) to carry on the Government for two weeks. The Treasury is without money, not because the banks have stopped payment, but because its supplies are cut off. Its revenue is stagnant in the hands of its debtors, and not in the vaults of the banks. There is money enough due to you, but you cannot get it in; and so it is precisely with the banks. You and they are both obliged, being operated upon by the same causes, to give time to your debts, and to wait for the reaction of trade, the revival of commerce, before you can again get afloat.

Neither is this reasoning at all weakened by the fact that you have some five or six millions yet on deposit in the Southern and Western States, which is styled "unavailable"—meaning that you cannot command it for use. You cannot command it, simply because you have no use for it in the place where it is. In the Northern and Eastern States, where you had use for money, you have withdrawn it rapidly since the suspension; and so you would have done from those South and West, could you have used the money at the place where it was. Suppose, then, that this money, instead of being on deposit in the banks, was locked up in Sub-Treasuries in gold and silver. Five or six millions of bullion is too large a sum to be suddenly transferred from one quarter of the country to the other, without producing very serious effects upon the trade and business of

those places whence it is taken; and yet you would have no other resource whatever in order to make it "available," but to bring it away in bulk, transporting it at heavy cost across the country, from the place where it was collected to the place where it was wanted.

You could not command a dollar by means of exchange, for the very causes that now make your deposits "unavailable" there, have run up exchange to rather more than the expenses of transportation; and thus that whole fund, even if now in gold and silver, and in Sub-Treasuries to boot, would be just as unavailable to Government, in the present condition of the country, as their deposits are in the banks mentioned. Government would not attempt to bring away the metal. The country would not allow itself to be thus drained; or, if it were done, the very operation would open the people's eyes to the working of the machinery, and all would cry out against it. No, sir; if this "whole unavailable fund" in the South and West were now locked up there in gold and silver, sooner than encounter the cost and risk of transportation, and the clamor that would be raised against it in those States, we should go quietly to work, as we are now doing, and issue Treasury notes to answer in its place, until the restoration of trade to its accustomed channels would allow its being made available, by the use of bills of exchange.

Treating the banks, then, as they certainly are, institutions dependent for their being upon the States alone, and yet exercising so important an influence upon the trade and business of the country, it becomes us next to inquire what is the best and safest relation in which the Government can place itself towards them, to avoid, as far as may be, a recurrence of the evils under which we now labor?

In the first place, I see no *prior necessity*, either as regards the welfare of the Government or the banks, for any connection between them whatsoever. A sudden and violent separation, such as is contemplated by this bill, I have already said would, in my judgment, be impracticable, in the present condition of the country. I believe the transition (from the state of things which such a "divorce" would create) would be to a national bank, as inevitably as from anarchy and confusion a people always seek relief in despotism.

The process of separation must be gradual, after it is commenced; and its commencement must await the entire recovery of trade, accompanied, as such recovery will be, by a sound and healthful currency; that is to say, a currency, so far as it is of paper, convertible into specie at will.

The Government may, I think, under such circumstances, and at such time, confine its receipts to gold and silver, and withhold its revenue, while resting between collection and disbursement, from all use, whether of banks or others.

I am aware that strong objections hold to keeping so much money idle as would remain permanently on hand under any system that may be adopted. But my decided impression is, nevertheless, that the patronage and political influence with which its use by these corporations must be attended, together with the great incentive which it offers to over-dealing, are objections far stronger. And from such inaction of the public money, I should look for another great practical good. It would invite, in the most urgent manner, as a fixed policy, a scale of revenue reduced to the lowest standard of the most economical Administration.

And again, by confining its receipts to gold and silver, the collection of the revenue would exercise a salutary control over the issue of the State banks. It would do so by presenting at their doors, to the extent of that demand, always an inexorable creditor—a curb sadly wanted by the banks in their late career. The receipt by Government of gold and silver only, after the paper medium becomes freely and immediately convertible into coin, presents nothing inconsistent with the position that Government must deal in the same currency in which the people deal, because coin and paper immediately convertible are substantially the same.

But I can see no advantage, and, on the contrary, a fruitful source of mischief, in making Government officers the keepers of the cash. Place about them what guards you may, in the shape of commissioners, inspectors, or whatever else, peculiar to the system, and the mischief will be endless. There is no security in it, and it will involve heavy and unnecessary expense. The chief and overruling objection, however, is the endless source of patronage to which it would give rise. Make the machinery as simple as you may, and open to view, wherever money is, temptation will creep in, and corruption in every form following at its heels. But the money can be safely kept, under the most ample security, and freed from every source of special deposits in political influence, by a simple system of exchange of patronage between the State banks—remaining always in specie, the separate property of the Government, and paid out in kind upon drafts from the Treasury.

I have thus, sir, stated my objections candidly and fairly to this bill. They go more to its peculiar machinery, and to the time at which it is brought forward, than to its general scope, as a measure of State policy in the subject which it is intended to effect. There is no sufficient reason, as I have already declared, satisfactory to my mind at least, why it should be passed now, at the close of a short and hurried session. And I take leave of it, therefore, in the confident hope that this great subject of the relations between bank and State will, at a future day, be presented in such form as will unite those counsels which are now so unhappily divided.

## REMARKS OF MR. RENCHER, OF NORTH CAROLINA.

In the House of Representatives, September 26, 1837.—On the bill to postpone the payment to the States of the fourth instalment of the surplus revenue.

MR. RENCHER said he did not feel as the gentleman from Virginia, (Mr. RICE,) who had just taken his seat, animated with the hope of being able to throw additional light upon the subject now under consideration, but he could not forbear expressing briefly the reasons which induced him to vote against the bill. In doing so, (said Mr. R.) I will not follow the example so repeatedly set me, of wandering into the discussion of other matters, but shall confine myself strictly to the bill now before the committee. I am called upon to surrender up a large amount of money set apart by a former act of Congress for the use of the people I represent. Before I can do so, I must be thoroughly satisfied that it is necessary for the wants of this Government; and, satisfied of that, I should not hesitate to do it, notwithstanding the deposit law. That law was passed for the benefit of the States, and I do not concur with many of my

friends that it created such a contract between the States and this Government as to make it legally binding on us to pay over this money, or incur the charge of violated public faith. But we all concur in this: that the deposit law of 1836, authorizing the distribution of a large amount of public money, created a reasonable expectation on the part of the States that it would be done, unless we were prevented by the necessary wants of the Government. That necessity does not exist; and this bill is not to relieve this Government, but to re-attach to it a large amount of surplus revenue, and to swell again that patronage and power of which it was deprived by the deposit law. It is not the Government, but the party now in power that cannot get along without the political influence of this public money; and I have been struck with the remarkable fact that those gentlemen who have shown most zeal in favor of recalling the fourth instalment were originally opposed to the deposit law. They were then unwilling that the Federal Government should be deprived of this large amount of public patronage, and are now most anxious, under various pretences, to recall it. The deposit law, which has been so much abused, was a most salutary measure: like the quality of mercy, it has blessed both the giver and receiver. While it has cut off from this Government much of its corrupt and dangerous patronage, it has and will enable the States to scatter blessings among their people. Where, let me ask, but for this deposit law, would now be the who's amount of the surplus revenue distributed under that law? Locked up in your broken pot banks, and put down in the Treasury report as unavailable funds.

Permit me now, Mr. Chairman, to call your attention to a brief statement of the financial condition of the Treasury. I will not trouble the committee with a detailed statement in figures. I am willing to take the report of the Secretary of the Treasury himself, the statement made by the gentleman from New York at the head of the Committee of Ways and Means, (Mr. Cambreleng,) or the more elaborate calculations made by the gentleman from Virginia, (Mr. Jones.) These results differ a little, but none of them make the deficiency in the Treasury at the end of the present year to exceed seven millions of dollars.

The report of the Secretary states that, on the 1st of January, 1837, there was set apart, of surplus money in the Treasury, to be distributed under the deposit law, \$37,468,859, including the \$9,367,214, which it is now proposed to recall, and leaving still in the Treasury, on the 1st of January, 1837, \$6,670,137. This balance, with the revenue already received and estimated for the present year, makes an aggregate of \$27,457,319. The appropriations for the same period amount to \$34,733,584. Now, suppose the Administration could expend the whole of the appropriations, which I believe perfectly impossible—prodigal and extravagant as I know them to be, I do not believe it can be done—still, however, there would be a deficiency in the revenue, at the end of the year, of only \$5,276,565. To this add two millions more for the Florida war and the extra session of Congress, and it would make the deficit \$7,276,567. This is the extent of the deficiency; and how, let me ask, are we called on to supply it? What means are we required to place at the disposal of the Administration to meet it? In the first place, we are to give up this fourth instalment, set apart for the benefit of the States, and, in the next place, to authorize the Secretary of the Treasury to issue Treasury notes for twelve millions of dollars, amounting, in all, to \$21,367,214! This immense sum is to be placed at the disposal of the Administration, to meet a deficiency of little more than seven millions! Will the people sustain us in such prodigality? Ought they to do it? We have been called together at a period of unusual disaster; our constituents are ground to the dust by the pressure and embarrassment of the times; and yet we are about to appropriate of their money, and create a debt for them to pay, three times as much as is called for by the real wants of the Government! This sum is double as much as is asked for by the Secretary of the Treasury. Liberal as he is in his demands upon the Treasury, he has not ventured to ask us for more than ten millions. We have been but recently rebuked from high places for granting larger supplies than asked for by the Administration, and shall we, in the very teeth of that rebuke, repeat the offence?

I have spoken, Mr. Chairman, of the bill upon your table, authorizing the Secretary of the Treasury to issue twelve millions of Treasury notes, thereby creating a national debt to that amount. That bill will become a law. Whether you postpone the fourth instalment or not, we must create a national debt to that amount; and gentlemen who have advocated the bill before you on the ground that, unless it pass, you must issue Treasury notes, well know that we shall be forced into the adoption of that measure at all events. And, much as I deprecate a national debt, and opposed as I am to the mal-administration of those in power, I shall feel it due to my country to provide ways and means to enable the Government to discharge its just obligations to the people.

You are urged to recall upwards of nine millions of dollars from the States to meet a deficiency in the revenue of something more than seven; and, as soon as you do so, you will be immediately told that this money due the States is locked up in broken banks, and cannot be made available to the Government, and you must therefore pass the Treasury note bill to meet the wants of the Government. Such has been the action in the other branch of the Legislature, and such will be the action here.

And now, sir, let us inquire what amount of public money is asked for during the first year of President Van Buren's administration. The receipts into the Treasury have been stated at \$27,457,319. The bill before you proposes to recall from the States upwards of nine millions of dollars, and the other bill upon your table, authorizing the Secretary to create a public debt, by the issue of Treasury notes, for twelve millions more, making an aggregate of \$48,824,833! These are stupendous facts, which cannot be denied. In the very first year of this Administration, professing exclusive attachment for the people, we are asked for upwards of forty-eight millions of dollars for its support. The gentleman from Massachusetts, (Mr. Adams,) was on port. The gentleman from Massachusetts, charged with prodigality at the head of the Government, was charged with public money and extravagance in the expenditure of public money; and upon that charge was driven from office that Administration, during its but, be it remembered that it expended but little more than the whole term of four years, the first year of this Administration. The sum asked for during the first year of this Administration. Is this the retrenchment and reform promised to the people?

I know it will be said, in reply to this statement, and said with truth, that much of the money due the States under the fourth instalment is deposited in State banks having suspended specie payment, and cannot, therefore, be made available to

this Government. But this, to my mind, constitutes a strong argument against this bill. The whole amount may be made available to the States. No State in the Union could refuse to take the notes of its own banks in payment of its distributive share of the fourth instalment. For myself, I would scorn to ask any other paymaster than the banks of my own State. When the banks of a State held more upon deposit than the distributive share of that State, those banks could pay that excess to other States, whose banks did not hold upon deposit an amount equal to the distributive shares of those States. In this way, the operation might be made favorable to the banks, the States, and the people. It may be said that the banks having an excess would not be able to pass this excess to a sister State. How, then, let me ask, would they be able to pay the whole amount to this Government, demanded, as it would be, in specie, if you pass this bill? If unable to pay a part, they would be less able to pay the whole; and if the whole were demanded of the banks, what would be its effect upon the people? A sudden contraction by the banks would be the inevitable consequence. They would be compelled to call in their debts; and, instead of relieving the people, for which we have been invoked, we should but augment their sufferings, and aid in their bankruptcy and ruin.

Mr. R. argued at length in favor of allowing the fourth instalment to be paid to the States by the deposit banks, and of authorizing the temporary issue of Treasury notes for the immediate relief of the Government. Why (said Mr. R.) are we called on to adopt any measure of relief at this time? It is because you are compelled to postpone the collection of custom-house bonds till another year, and because the channels of revenue from the public domain have been blocked up by your specie circular. If no more mail experiment be performed upon our currency, we may expect better times; worse they cannot be. Commerce will again revive, and the specie circular repealed. The revenue from the public lands will again swell your Treasury. To this may be added a large amount of custom-house bonds postponed for collection till the next year. The revenue, therefore, for the next year, must be large, and will enable the Administration, in a year or two, at furthest, to pay off these Treasury notes without recalling any part of the money distributed among the States. All that is wanting is the practice of more economy in our expenditures, and I trust we are prepared to do it. Let us not preach economy to the people, while we practice prodigality towards the Government.

And now, Mr. Chairman, I have a word or two to address to my Southern friends on this subject. You and I come from a quarter of the Union who have always received a stipend's portion of the favors of this Government. In the scramble, therefore, carried on for the public money, the South has always stood aloof, because she believed many of the expenditures unauthorized by the Constitution. Under the deposit law, however, we are entitled to our proportionable share of the surplus revenue, and, for once, I am determined to hold on to it. The bill, it is true, purports to be a postponement of the fourth instalment; but the gentleman from Maine (Mr. Smith), with his accustomed frankness, tells you in his friends' intent it to be a repeal. Pass that bill, and the fourth instalment is gone from you, and you will never recover it. The public Treasury may again become full to overflowing, but no part of it will ever be applied to return to the States this equitable apportionment. It will be squandered as it has heretofore been squandered, in unequal, extravagant, and unauthorized expenditures, upon splendid edifices, new fortifications unequalled by the public service, light-houses, creeks, harbors, and exploring expeditions. What, sir, has been the history of this Government for the last four or five years, but one of the most wanton profligacy? The friends of the Administration are responsible to the country for these extravagant and unauthorized uses of the public money. They have a decided majority in both branches of Congress, and were, therefore, able at all times to check this extravagance. Look at the expedition which they are now fitting out at great expense for the purposes of exploration and scientific research. At a time when the Government is said to be bankrupt, and we are called upon to create a national debt to meet its wants, and while every breeze which has blown for the last four months from the North and the South has brought complaints of unexampled distress among the people, this Administration has been expending millions for the purposes of research and discovery! The gentleman from Massachusetts, (Mr. Adams), when at the head of the Government, in his great zeal for science and internal improvement, in his annual message to Congress, says:

"In inviting the attention of Congress to the subject of internal improvement upon a view thus enlarged, it is not my design to recommend the equipment of an expedition for circumnavigating the globe for purposes of scientific research and inquiry. We have objects of more useful inquiry nearer home, and to which our cares may be more beneficially applied."

What the gentleman from Massachusetts considered too extravagant for his purposes, this Administration is carrying out to the very letter. Let us reform these abuses, reduce our expenditures, and bring back the Government to its ancient republican simplicity. This is the relief which the people have a right to expect at our hands.

I have but one word more, and I am done. Frequent allusion has been made in the course of this debate to the financial system recommended for our adoption in the Message of the President. He admits that the experiment performed by his illustrious predecessor, of making the State banks the fiscal agents of the Government, has signally failed. The failure has brought disaster upon the country, and we are now invited to another experiment upon the liberties of the people, by establishing a Government bank; for this Sub-Treasury system is nothing more nor less than a Government bank, for the exclusive benefit of the Government and its officers. It may furnish them with a sound metallic currency, but it will inevitably leave for the people nothing but the paper currency, commonly called "rag money." It will add to the Executive Department still more dangerous and alarming powers, and place at the will and disposal of the President a thousand more Executive officers armed with the whole revenue of the country! Sir, I trust we are to have no such experiments. The people of this country are sick even unto death, both of experiments and experimenters. Lacerated and bleeding at every pore, they tremble at the thought of being again placed under an exhausted receiver, to be operated upon by political quacks. Afflicted as they are, and afflicted as they have been by those in power, they yet prefer to

"Bear those ills they have Than fly to others that they know not of."

## SPEECH OF MR. SIBLEY, OF NEW YORK,

In the House of Representatives, September 22, 1837.—

The bill to postpone the fourth instalment of the payment to the States being under consideration.

MR. SIBLEY of New York, said: Mr. Chairman: If, on presenting myself to the committee upon the present occasion, I should say that they who sent me here were directly and deeply interested in the question now under consideration, I should but put forth a common yet a sufficient apology for detaining the committee by such remarks as I should offer. If to this I add the expression of my deep conviction, that the decision of this question involves the faith and honor of the Federal Government, for good or for evil, I shall perhaps have said enough to justify the most humble member of this body in contributing to the prolongation of a debate which has already occupied the committee so many days.

In what he had to say upon this question, he would confine himself, Mr. Sibley remarked, as strictly as possible, to the subject immediately before the committee. It was his intention to avoid all agitation of the exciting political topics which characterize the party divisions of the day, and which, suitable as they may be for discussion elsewhere, do not come properly within the range of the question now before the committee.

And he remarked that he had yet another conciliatory assurance to make in the commencement of his remarks. It was not his intention to invite the committee to thread again that worse than Cretan labyrinth, as it seemed to be viewed by some minds, the Treasury report. After so many honorable gentlemen had tried every possible process of dissimulation by which they might have hoped to extract the true spirit of that document, Mr. Sumner said he certainly could not pretend to an acquaintance with any financial alchemy, by which its supposed meaning could be precipitated. So far from this was the fact, he found himself constrained to make a confession, which might, perhaps, seem a humiliating one, that he was among that large and unfortunate class, composed alike of the political friends and opponents of the Secretary, who had been free to avow their inability to understand that report. True was it that he had tasked the best powers of his mind, and applied much patient and anxious study to the document, and yet, like most other gentlemen on that floor, he remained in painful and perplexing doubt whether he accurately comprehended the meaning of its author, or understood the actual condition of the public Treasury. For himself, he would not say—it did not become him to say—that this was the fault of the Secretary. This he could hardly do, after the high and unqualified eulogium pronounced upon that functionary by the honorable member from New Hampshire (Mr. Atherton.) That gentleman, in his speech of yesterday, had exhibited the honorable Secretary of the Treasury, before he left his native State, as the very focus of all learning, forensic, judicial, and political. Having thus concentrated all oriental light, and then removed it from its candlestick in the east to this Capitol, Mr. S. was surprised to hear that nothing remained behind save those *ignis fatui*, which the honorable gentleman assured us had recently beguiled the good people of that benighted region from the "true democratic course."

In view of all this, Mr. Sibley said he had not left him the poor consolation of being able to attribute the obscurities in which his own mind had been involved by the report, to any want of illumination at its source. He would not say that no light shone through the pages of that document, but he must be permitted to remark that, if such light there was, "the darkness comprehendeth it not."

Mr. S. went on to say, that much industrious ability had been displayed by gentlemen who had preceded him in attempts to illustrate a document which ought to be so plain that "the who runs may read." The gratitude of the committee was certainly due—his own was cheerfully tendered—to those distinguished members, for their efforts to disentangle the committee from the perplexities thrown around them; and yet, sir, (he remarked,) notwithstanding the toil and talent which have been lavished in all those calculations, and in the formation of those statistical tables, by way of elucidation of the report, that document seems absolutely to mock investigation; and we, sir, remain much in the condition of those metaphysicians whom Milton has so graphically described as ever reasoning on, "Finding no end—in wandering mazes lost."

It had occurred to Mr. S. in the course of the debate, as quite possible that the curiosity which impels highly gifted and inquisitive minds to pursue with eagerness deep and mysterious subjects, may have led some gentlemen to overlook the more obvious and important questions for our decision, in their search after the obscure and less essential.

This question had been treated as if the Federal Government were alone interested in a just decision; and the inquiry had been chiefly confined to its means and convenience. Gentlemen seemed to have overlooked the important fact that there were other parties not represented here, who have a deep stake in this matter—the sovereign States of this Union.

Sir, (continued Mr. S.) what questions naturally arise in the mind of every honorable and ingenious man, who is called to act upon the rights and interests of others? The first great question always, or always should be, what are the relative obligations and duties of the respective parties, and how will the proposed measure comport with good faith and fair dealing? Duties and responsibilities being ascertained, means and convenience are made to conform to them. But, instead of adopting this rule of conduct, are we not setting ourselves to the task of proving that it is not convenient to do what is required of us, and thus naturally and imperceptibly gliding into the conviction that we are not bound to do it? States and nations are theoretically supposed to be exemplars of the highest systems of moral justice. And does it become them, in their intercourse with each other, to adopt a lower standard of action than that maintained by individuals in carrying on the general business of life?

Mr. S. insisted that the first and great question for the House to decide, as a co-ordinate branch of the Federal Government, was this: What are the obligations resting upon Congress, in the relation which it holds to the several States, for the payment of the fourth instalment, under the deposit act of 1836? Has our past action raised just and reasonable expectations on the part of the States that this money would be paid; and have those expectations led to important arrangements by the States, deeply and seriously affecting the interests of the people? If so, then have obligations and duties been imposed upon us

which could not be disregarded without violating the faith of the Federal Government, and fixing a stain upon the national honor. That our position in this matter might be clearly seen, it would only be necessary to recur to the law of Congress for regulating the deposits of the public money, passed on the 23d of June, 1836, and to the action of that statute, consequent upon that law. By the 13th section of that statute, Congress declared that all the money which should be in the Treasury of the United States on the 1st of January, 1837, (reserving the sum of \$5,000,000,) should be deposited with such of the States (in proportion to their representation) as would agree to receive the same, and pledge its faith for the safe keeping and repayment of the money, in instalments not exceeding thirty thousand dollars per month, upon thirty days' previous notice. The sum being in the Treasury on that day was directed and required by the law to be so deposited, in four equal instalments, on the first days of January, April, July, and October, 1837.

Under this law it became the duty of the Secretary to ascertain the amount of money in the Treasury on the 1st day of July, 1837, and to communicate that amount, together with the law which appropriated and fixed the destination of the money, to the several States, as an entire proposition for their acceptance or rejection. This duty was performed by that officer, as appears by a communication made by him to Congress in January, 1837, in which he says: "I seize the earliest occasion to inform Congress of the measures adopted by this Department since the 1st instant, in compliance with the 13th section of the act regulating the deposits of the public money."

"The balance in the Treasury on that day, which was subject to be apportioned among the several States, has, on the principles of the act, as construed by the Attorney General, and explained in my last annual report, been ascertained to be \$37,468,889 97."

"The division of this money in detail among the several States may be seen in the document annexed, (marked A.)"

That document, continued Mr. S. shows the distributive portion accruing to my own State (New York) to be \$5,352,694 28.

It had been said, by the friends of this bill, that the law of June, 1836, did not propose to deposit a sum certain. The maxim that that is certain which may be rendered certain, is a sufficient answer to such an objection. Besides, the sum designated by the law was actually rendered certain in the manner contemplated by the act, as appears by the statement of the officer charged with that duty.

The proposition, then, made by the Federal Government on the one part to the Government of the State of New York (equally independent, and as competent to contract) of the other part, was, in substance, this: We agree to deposit with you, for your use, the sum of \$5,352,694 28, in quarter-yearly instalments, if you will agree to receive that sum and safely to keep and repay it, when duly demanded, by instalments not exceeding thirty thousand dollars each, upon thirty days' previous notice for each instalment.

What was the response of New York to this proposition? Did she say that she would receive, safely keep, and return any fractional part of the stipulated sum—as one-half, or three-fourths? No, sir! (said Mr. S.) She accepted your proposition, and your whole proposition, in all its parts and proportions. You tendered her an entire contract, the essence of which were, the amount to be deposited, the times of deposit, and the terms and conditions of re-payment. She closed with you upon that contract, in all its length and breadth, and has never assented to change or modification. In January, '37, the Senate and Assembly of that State, representing its sovereignty, "struck hands" with this Federal Government, and pledged, in solemn form, its faith, and the honor of its people, for the performance of those terms, which, being accepted, drew after them reciprocal obligations of faith and duty on your part. Did New York place reliance upon that faith? Judge of her confidence by her conduct. Mindful of your interests, and her own obligations, she made prompt provision by law for the safe investment of every dollar of the money you had so proffered for her acceptance.

In full reliance on your fidelity to engagements, she apportioned the entire sum among her people, and sent out her loan officers into the several counties to pay over the amount actually received, and to issue authorized and official certificates for the payment of the balance. These officers have performed their duty. They have lent the whole five millions, and for the security of its re-payment have taken bonds and mortgages. And while we are here debating whether this last instalment (amounting to nearly a million and a half of dollars, appropriated to the State of New York by the act of 1836, and actually in the Treasury of the United States last January,) be now any where in existence, the mortgages of the landholders of that great State are duly executed and recorded, for securing the "safe-keeping and employment" of that identical money, according to the terms and conditions of your contract!

There exists, then, (continued Mr. S.) a contract, compact, or agreement—call it what you will—deliberately formed between independent sovereigns, under all the sanctions and solemnities used and approved by the high contracting parties, each of which has entered upon the execution of the contract, and assumed all the liabilities contemplated by it. It is now proposed by one party to this agreement, without the consent of the other, to set at naught some of its essential provisions. This, it is urged, may be lawfully done, because our engagements are not upheld by a valid consideration; and the genius of the old common law is invoked and thrust between this Government and its just accountabilities. Sir, it will be time enough for the Federal Government to seek refuge behind the narrow and technical rules of the common law when she acknowledges its jurisdiction over her, and consents to become a party litigant before our judicial tribunals, and yields obedience to their mandates. But while she stands aloof from all these, a law unto herself and a fountain of law unto others, it does not become her to entrench herself behind the defences of a system to which she does not acknowledge subjection.

But the duty enforced upon the opponents of the bill now before the committee, the duty, namely, of arguing the question involved in this debate, as if in a court of common law, must, Mr. S. presumed, be performed, whether humiliating or not. This difficulty of a want of consideration had been thrown as a stumbling-block in the path of the committee, and it should be his purpose to remove it, if possible. That there may not be any misapprehension about the import of terms, it might be proper in the first place to inquire what is meant by "want of consideration?" What is that essential element of a contract, the presence of which is necessary to give it vitality? It is presumed that the word is not used by gentlemen supporting the bill in its

broader and more general signification, as the inducement or motive of human action, but in its strict technical sense, as the pecuniary advantage requisite to the legal validity of a contract, as contradistinguished from a nude pact. To illustrate the meaning of the term, in this application of it, Mr. S. would not quote himself, but would resort to the unequivocal and authoritative language of the highest judicial tribunal.

[Here Mr. S. read authorities, showing that, if the performance of an agreement between two parties might involve hazard, service, or expenditure, to one party, and pecuniary advantage to the other, such agreement contained a valid legal consideration; the slightest degree of pecuniary advantage being sufficient to create such consideration.]

Mr. S. then proceeded. Applying these plain principles to the arrangement which was entered into between the General Government and the States, can any one fail to perceive that it contained all the attributes of a strictly legal and technical contract? What were the facts? The Federal Government found itself the owner of an immense surplus, scattered among innumerable local banks, of limited capitals, and some perhaps of doubtful responsibility. These corporations, prompted by the semi-authoritative encouragement of the late Secretary of the Treasury, and stimulated by the desire of gain, were flooding the country with issues, and bloating it with a seeming prosperity. In this state of things it was deemed wise and prudent (and so it undoubtedly was) to withdraw our immense revenues from these questionable depositories, and place them where they would be safely and securely kept and returned, when wanted, upon the prescribed terms. Sir, did not this condition of things present the strongest possible inducements for the new arrangement? Is not the safe-keeping and prompt return of your immense treasures a direct pecuniary advantage to this Government? Let the groans which have issued from the "white house" and from the head of your financial department—let the bills which burden your table, and the scenes in which we are now now engaged answer the question. Sir, had your revenues been deposited as they were collected with the States, instead of being poured into the laps of your "pets," to be by them distributed in largesses to their pets, we should have been spared this black list of millions upon millions of "unavailable funds," a list, it may be remarked, which would have been vastly augmented but for that very law which we now hear stigmatized as a nude pact.

Such were some of the pecuniary advantages which, according to Mr. S. the Government had derived from her participation in this contract. But, continued he, turn to the States: Take New York, for example. Did she not encounter pecuniary "hazards" when she assumed the responsibility of the "safe keeping and repayment" of upwards of five millions of your money? Are you quite sure that she will sustain no loss when the time comes for gathering in and paying back this immense sum? Did not New York perform a valuable "service" to this Government when she took upon herself the duty of safely investing so large a share of your surplus revenue? And has she not already made large "expenditures" in performing this service—in legislation, the payment of officers, investigating titles, recording securities, and in various other forms which cannot be estimated? I would not be surprised, sir, were the aggregate expense to the Government and people of my State, consequent upon the execution of their part of this contract, to amount to \$200,000. And it should be observed that no additional charges of this nature would be required upon the payment of the money now proposed to be withheld, the investment of it having always been made, so that, so far as New York is concerned, beneficial uses could alone flow from the payment of the instalment now due.

Mr. S. had dwelt at such length upon this dry subject, with the hope (a presumptuous one, he feared) of disembarassing the subsequent debates upon the bill of a needless difficulty which had hitherto greatly encumbered and retarded their progress.

He (Mr. S.) would task the patience of the committee while he attempted to convert some other positions assumed by the friends of the bill, which seemed to him equally untenable with that already considered.

It is insisted by gentlemen (said Mr. S.) who do not seem quite prepared to regard the engagement of this Government as an absolute nullity, that the bill only proposes to effect in one way what, by the express terms of the contract, might be done in another. "If," say these gentlemen, "we can withdraw the money actually deposited with the States, why may we not withhold that which remains in our hands? It cannot make any difference with the States, and they can have no objection." If he (Mr. S.) had succeeded in proving the binding force of the contract, then even strict constructionists must see that they had no more power to alter or modify, than to revoke or rescind, an entire contract, without the consent of all the parties in interest. Was the sovereignty of the State of New York represented on this floor, and consenting to this course, no objection would then exist to the proposed new arrangement. But no right appertains to the representatives of portions of that State, in this House, to negotiate for a new bargain. They did not come here clothed with that power. It belongs to the Legislature of the State of New York, in Senate and Assembly convened, to whom alone it is delegated.

But the proposed change is not by any means immaterial to the People of that State. True, Congress may recall the money deposited, but how? Look at your statute! Thirty thousand dollars is the utmost that can be withdrawn in thirty days. If the bill on the table becomes a law, upwards of \$1,300,000 are withheld. Now, pay over that sum, then withdraw all the law permits, and, by the interest on the balance, a calculation might be made of the immateriality of this measure to his constituents. Besides, what security have they that as soon as you have determined to withhold what is due to them, the pressing necessities of this Government may not impose upon it the painful duty of recalling a portion of the deposits? Mr. S. had no confidence—he could not have any confidence—that an Administration, whose appetite for money had not been gorged upon forty millions a year, would stay its hand until it had clutched every dollar within its reach.

He called the attention of the committee to the condition of the country—to the fact that contracts had been made between the States and their people; between citizen and citizen; that public works had been undertaken, laborers employed, systems of improvement and education undertaken or expanded, and the manifold affairs of men arranged upon the basis of the deposit law. Was it wise or just? Was it not cruel and perfidious to throw derangement, disappointment, and confusion, into all those relations of society? The country was stag-

gering under revolutions. Ought it to be stricken again, without allowing it time to rally and stand erect?

It had been said that none of these disappointments, or derangements, could reach the people of New York, because their expectations were to be met from their own treasury.

It was true that the financial head of that Government had resolved, during the recess of the Legislature—as if the passage of this bill had been predetermined—to put forth its resources in such an emergency. But, what funds does that officer propose to substitute for the money which the Federal Government had engaged to deposit in his hands? The revenues of the Erie and Champlain canals, of course. These are the ready resort in all cases when money is wanted for any purpose. Those funds ought to be dedicated, he could almost say consecrated, to the perfection of that system of internal improvement, devised for New York by her immortal statesman, and prosecuted by the energies of her people, until it had placed that State upon the proud eminence she holds among her sisters of the Republic. In a certain contingency, not unlikely to happen, these funds might be required to complete the enlargement of the Erie canal; a work already begun, and in the rapid completion of which western New York, particularly, had a deep interest. The sooner that work was done the sooner would the prices of transportation upon it be reduced; and as the cost of transportation was chiefly borne by the producer, every farmer throughout the extended region which sends its productions to the seaboard, upon that great channel of trade, had a direct interest in the question here pending.

The friends of the New York canals would never have consented, upon the direct proposition, to the distribution of nearly a million and a half of her canal funds, amongst all the towns in that State; and they cannot, consistently, vote for a bill which must, if it becomes a law, produce the same result.

That money, if it shall be required for the purposes of the canals, can only be recalled by a vote of the Representatives from all parts of the State. When that question arises, antagonist interests may come along with it, and the restoration of the money, so scattered throughout the State, might encounter serious, if not successful, resistance. In the latter event, the deficiency could only be supplied by continuing, or increasing, the high tolls of the Erie canal.

Mr. S. represented a district almost exclusively agricultural, bordering upon the Erie canal; and it was his forecast of the possible consequences of this measure upon interests confided, in some degree, to his care, that had overcome an almost invincible reluctance to throw himself upon the indulgence of the committee.

He would not grope in the thick darkness of the report of the Secretary of the Treasury find out by it whether he had the funds to pay the fourth instalment. These funds were in the Treasury on the first day of January last, for we had his official statement of the fact. Being in the Treasury, they were solemnly set apart and appropriated to the States by Congress, and it could not be admitted that they had been applied to other uses without implying maladministration in that Department.

But, if your engagements cannot be otherwise fulfilled, suppose you retrench some of your enormous and useless expenditures, and cut down the extravagant salaries of some of your officers? Such a course, whilst it preserved your honor untarnished, would be one step, at least, towards that system of "retrenchment and reform" so loudly vaunted by the late Administration, and would harmonize with those lessons of economy so gravely read to the people by the Executive head of this. Duty and consistency unite in demanding that this Government should begin to give the sanction of its example to its precepts. It had dealt out quite enough paper currency of that sort; and it was high time that the promises were redeemed in the precious metals.

Mr. S. concluded by repeating his conviction that the bill could not pass without a violation of plighted faith, and that the Federal Government was bound to fulfil its engagements to the States, not only by the stern rules of the common law, but by the higher precepts of moral equity and the immutable principles of justice.

## SPEECH OF MR. JOHNSON, OF MARYLAND,

In the House of Representatives, October 12, 1837.—The bill imposing additional duties, as depositories in certain cases, on public officers, being under consideration.

After Mr. POPE, of Kentucky, who had addressed the Chair, had taken his seat, and had yielded, being exhausted, to Mr. WM. COST JOHNSON, of Maryland,

MR. JOHNSON rose and addressed the committee as follows: Mr. Chairman, I return to the honorable member from Kentucky (Mr. Pope) my thanks for yielding the floor to me before he has completed his remarks. After having spoken for four hours, his physical energies have yielded before the rich abundance of his mind is exhausted on this interesting question. I feel (said Mr. J.) how perilous my situation is in attempting to follow the learned and distinguished member who has just taken his seat. At this late hour, too, when the committee have been so long in session, I am strongly apprehensive that I may not compensate them for any portion of their attention. I must, therefore, throw myself upon their magnanimity. But before I enter upon the subject under discussion, I feel it a duty which I owe to myself and to others, to give a passing notice to an observation which fell from the honorable member who last addressed the committee.

The honorable member remarked, in the course of his observations, in substance, that the friends of the Administration, or some of them, had said that the Opposition had, a few years ago, made charges against the Post Office Department, and, among others, his friend, the late Postmaster General; and that the Administration sacrificed some of the members of that Department (at least the chief clerk) to the avenging deity of the relentless Opposition. I do not for one moment suppose (said Mr. J.) that the honorable gentleman purposed any personal application of his remarks to any particular member of the Opposition, but spoke of the Opposition as a party. But having been a member of the twenty-third Congress, when the administration of the Post Office Department was made a subject of special examination, and the report upon that examination was submitted to this House, I felt it my duty to take an humble part in a debate in this hall in relation to the abuses committed in that Department. And my name having been

thrown before the public in connection with that discussion, and with a collision with the late Postmaster General and his son, I feel warranted in now alluding to it, from what has been said, and in giving an explanation which circumstances at the time rendered it impossible for me to do.

When a bill was under discussion in this House giving, as I thought, increased patronage to that Department, I took occasion to oppose its passage, and to animadvert upon the corrupt practices which were proved to exist in it. A spirit of intimidation then still lingered in this hall, and clearly manifested itself, I thought, on the night of that discussion; for, during that session, a member had been waylaid on the street and attacked for words spoken in debate; and but shortly before, other members had been beset and assaulted. I saw, or thought I saw, that there were members willing to place themselves between the officers of Government and the members of this House, who wished to scrutinize their official conduct. I was soon left alone on one side in that exciting discussion, and, fancying I saw its result in advance, took the distinct ground, when dangers were spoken but none used, that I was willing and ready to hold myself responsible to any member of this House, or to any officer of Government, who might imagine himself aggrieved by my strictures. That was the position I assumed—perhaps rashly—but still it was the position. The next morning, in this Capitol, and before I entered this hall, I received a laconic note from the Postmaster General, by a gentleman whom I had never seen before, but whose bearing convinced me that he was a gentleman. There was no threat written in it, but, from its peculiar brevity, I regarded it as a threat; so did two honorable gentlemen of this House to whom I submitted it. I felt it to be my duty to give it a very short answer. Soon after, I received a challenge from the son of the Postmaster General—a gentleman whom I have never seen in my life. I accepted it. By the advice, I apprehend, of others, it was withdrawn. Rumor reached my ear that I was to receive some two or three more, and was to be caned by I know not how many. Under such circumstances, I would neither explain, nor authorize any friend to explain in my name, as an honorable friend in this hall will well remember. The system of interrogatories I dislike at best; but, according to my sense of propriety, I can never bring myself to answer them when they are blended with even the shadow of a threat.

But now that the late Postmaster General is no more, and the restraining circumstances of the affair passed away, I embrace the opportunity which the remarks of the honorable member have afforded me, to say, in my place, that I never designed to charge the Postmaster General with peculation, though I was unwilling to except him from the charge (of which I had proof enough to convince my judgment) that it did exist at that time in the Department. I deem it due to myself, due to those whom he has left behind him, his relations and friends—and the honorable member as one of those friends—to say, that I had no proof that he was corrupt, nor do I believe that he was a corrupt man, in the moral or legal sense of the term. The most that I meant to say was, that when corruption was proved to exist in a department, the censure should fall with the heaviest force upon the head of that department, if he did not suspend the guilty subordinate.

But I dismiss this subject, now and finally, and will attempt to approach that immediately under debate.

Mr. Chairman, (said Mr. J.) when Sir Walter Scott was asked why it was that he had not written the Life of the Emperor Napoleon in one instead of three volumes, he answered, because he had not time! And if I should trespass upon the kind indulgence of the committee a little longer than it may think judicious, I beg the committee to receive in advance, as my apology, that I have not had time to investigate, in all its bearings, the important subject before us, and to arrange my reflections in perspicuous brevity, which is the best proof I know of a familiar knowledge of a subject.

Day and night have we been occupied in this hall, for weeks past, without hardly taking respite for sleep, in investigating the important bills which have been crowded upon our attention; with not even time to eat with comfort, and with scarcely a spare hour to read the budgets daily placed on our desks, or to spend in examining books of knowledge, or be occupied in quiet reflection.

The experienced debaters, and the learned members of this House, may easily surmount such obstacles; but the humble member who claims your indulgence feels them with the strongest and almost overpowering force. Notwithstanding such embarrassing considerations, I am unwilling to give a silent vote on the bill before the committee, but will assent, as briefly as I can, the reasons why I shall give a negative voice.

We have been assembled, Mr. Chairman, in extraordinary session, and have already acted on some extraordinary bills. But the most extraordinary ever presented to the consideration of this House, with an earnest and specious hope of being received with favor, is the bill now under debate. A bill of no less a nature, in my judgment, than one calculated, if passed, to obliterate some of the brightest features in our Constitution; to annul in its operation almost all the statutes which so carefully guard the mode of receiving and disbursing the public revenue. In one word, a bill to take from the representatives of the people all supervision and control of the public moneys, and to place in the Executive hand, which now has control over the Army and the Navy, the appointment of an almost illimitable number of public officers, and the command of the militia when in the actual service of the United States—to place in the same hand, to receive and to pay out, without scarcely a check or restraint, all the public money of the nation.

The request from the Executive to be possessed of such delicate and enormous power greatly surprised me; to find the representatives of sovereign States tamely acquiescing, completely astonished me; to find it advocated on this floor by some of the representatives of the people, who, under the Constitution, are the purse-creating and the purse holding power, has awakened into alarm every hidden apprehension of my mind.

What proofs of superior knowledge and superior usefulness has the Executive given, to warrant a surrender of power to its discretion? Has it shown, from the prudent exercise of powers delegated to it by the Constitution and the laws, that, to promote the interest of the nation, its powers should be amplified and new authorities delegated? That, to promote the interest of the people, you must abandon your trust and your duty, and give almost unlimited discretion to the Executive will? That the Executive will better administer your duties than the conjoint wisdom of the Representatives of the people? Or does the President even place his request upon the pretext that, by your surrendering into his hands all control over the money of the people, it will give them relief in their present distress, and

25th CONG...1st Sess.

Making public officers depositories—Mr. Johnson.

H. of Reps.

equalize the exchanges and currency of the country? Even this plausible argument is not offered, but is distinctly repudiated in the Executive Message. No argument of this sort is offered; and yet you are asked to make the surrender simply to gratify the Executive pleasure. But, Mr. Chairman, I would not care how strong the reasons might be that could be assigned; if they were ten times as strong as any I could imagine, I never can be guilty of violating, by voting for such a measure, the whole genius and spirit of the Constitution—the essence of every republican Constitution in every representative Government. So far from the Executive exhibiting superior sagacity and prudence in regulating the financial operations of the Government, it has shown itself most conspicuously inefficient to discharge the duties required by the existing laws, and those which it has assumed, in violation of both law and usage. I have not even a shadow of doubt in my mind, that all the embarrassments in our country, in the currency, and in business of every kind, are in a chief degree chargeable to the Executive of the last four years.

To justify this allegation, I am constrained to allude briefly to the past, but shall take only a rapid glance at circumstances that have transpired, as that ground has been most ably occupied by members who have preceded me in this debate. When, Mr. Chairman, did any country present as great a degree of prosperity as this nation did at the time that General Jackson commenced his unrelenting hostility to the late Bank of the United States? What country on earth possessed a better currency than this did at that time? What country afforded such a reduced rate of exchanges? Where was labor better rewarded? Where was industry better recompensed? Search the inhabitable globe for a parallel, and you will search in vain. Where was an institution better organized and conducted, and its paper more readily received in every part of the United States, if not in every part of the world, by people of every pursuit, from the centre to the remotest borders of the Union, than the paper of the Bank of the United States? It had realized more than had been predicted by its most ardent advocates in 1816. It had been chiefly instrumental in effecting and maintaining, for nearly twenty years, what I regard to be the great desideratum, in a country where agriculture, planting, manufactures, and commerce lean upon and support each other—a convertible paper currency—bank paper converted at the will of the holder into gold and silver. Such was the state of the currency four years ago. Bank paper was not only convertible into silver at the counter of the bank that issued it, but was convertible every where in the interior at the counters of retail merchants, who were always glad to exchange their silver for bank notes, which better suited their purposes for transmission. Peace and plenty gladdened the whole land; content and cheerfulness were found in the most humble cottage as well as in the more costly edifice; a prospect of universal prosperity was then presented, on which the mind loved to dwell. I will not expatiate upon it, but content myself with a simple narration.

General Jackson, in the plenitude of his power and unparalleled popularity, had forced, by his system of proscription, most of the officers of the Government to become political partisans. To be an active partisan, to gain government, was a *sine qua non* with him. The political armor was put on, and each saw written on it, "This is the road to Byzantium." The president of a northern branch of the United States Bank had displeased some active partisan, and the mother bank refused to dismiss the honest and independent head of the branch; that partisan infused the venom of his feelings into the bosom of General Jackson. Threat after threat was made, in the President's messages, against the United States Bank. A better currency was promised the people, if they would unite with the Executive in destroying that institution. That promise had a charm in it, as all persons are anxious to better their condition; and all believe, however preposterous, that their condition can be improved. But still an honest and upright Congress refused to lend itself to the malignant purposes of the Executive, or to gratify his sycophantic will. Congress was in favor of renewing the charter of the bank. The Executive veto nullified the will of the representatives of the States and the people. Congress refused to gratify the will of the Executive in ordering the Government depositories to be removed from the Bank of the United States, where the law had placed them; but he, with ruthless hand, seized upon the public treasure, as Caesar had done before him, and parcelled out the money of the people among a host of State institutions, which he now testifies are the most unprincipled and profligate in the annals of history.

Those institutions were urged by the Secretary of the Treasury to discount most liberally upon the deposits of the Government; and, as slaves always most readily obey the first orders of a new master, they not only discounted paper offered to them, but in many cases invited customers. Congress altered the standard of gold, and reduced its value. (I rejoice that I had the honor to vote against that bill.) Europeans sent their gold here to be coined, and then ordered it home again. The Neapolitan and French indemnities were adjusted, and imported in gold. This was hailed as the millennium of the golden age, and General Jackson was told by his flatterers, and believed it, that he had at last discovered the Philosopher's Stone. Jaundiced-eyed and near-sighted politicians, whose minds cannot realize causes and effects, or discriminate between true and abiding causes, thought that they had really worked a specie miracle; and the General himself read his valedictory, "still harping" on the monster bank, and congratulating himself and the country on the experiment which he had tried in his humble efforts to improve, as he said he had, the currency of our country. But I am fast in my chronology: there is one other remarkable event which I wish to allude to. Before General Jackson retired from office, a distinguished Senator, who had aided much in building up the golden image which he wished all to fall down and worship, made a political prediction, that if the people of the West would co-operate with him in destroying the Bank of the United States, they would see, in violation of all the laws which govern fluids or solids, gold flow up the Mississippi. They believed, and looked with anxious hope, but looked in vain. He conceived the expedient whilst Congress was in session, but revealed it, perhaps to few, lingered until Congress had adjourned, and then, "solitary and alone," he thought he would set the golden stream in motion. Congress ordered the Secretary of the Treasury to receive the notes of specie-paying banks, and to pay out gold or silver in payment of public dues. The alchemical operation was to be effected by a disregard of the law; and the Secretary of the Treasury was ordered to issue his famous proclamation, demanding nothing but gold or silver for public lands. The prediction was realized: gold

and silver flowed up the valley and over the mountains, but flowed in steamboats and stages; flowed to the land offices and to the banks of deposit, but never into the pockets of the working people of the West.

This last act broke the glittering dream, and the veil of Mokhanna fell to the ground. Convertible paper and gold were no longer synonymous. Government, which should have been the last, was the first to make the distinction. Gold and silver were of once more valuable—for the article most in demand in this country is land; and the Government is the largest (because it is the greatest proprietor) and cheapest seller, and can control the market value. Thousands daily purchase public land, and of course thousands were forced to procure specie. It soon became an article of merchandise, to be bought in the market, rather than a medium of exchange. The banks found their paper returned upon them, and their specie almost exhausted, and wisely suspended specie payments; and the deposit banks were the very first to set the example. Confidence became impaired; the banks had been pressed by those who held their notes, and they, in turn, called on their debtors, and the debtors of the banks called on all who owed them; thus the pressure pressed the whole round of the circle of trade and business. Panic, dismay, confusion, and bankruptcy, followed in quick and fatal succession. The Government could not escape the consequences of its measures, and suspended specie payments.

The last Congress, foreseeing the evil consequences of the specie circular of the Treasury Department, passed a bill rescinding that order. General Jackson treated it with contempt, placed it in his pocket, and retired to the Hermitage, denouncing the insolence of Congress in sending a bill to him which questioned the wisdom of any measure which he had ordered. Mr. Van Buren, who succeeded to the Presidency, was urged most earnestly to rescind that circular, but he refused. When he saw, as he ought to have seen, its evil tendency, he should have yielded to the counsel of honest and practical men. I will here say that, whilst I believe that the evils of that measure might have been in some degree softened if Mr. Van Buren had rescinded the order after the 4th of March, I do not think that it would have prevented a suspension of specie payments. Much of the silver would have been drawn from the West to the Atlantic and to the Southern cities, and would have, in some degree, relieved them; but that would have forced a suspension of specie payments by the Western and Southwestern banks, which would have been quickly followed by the banks of the commercial and large cities. When silver is at a premium, it is impossible, in the nature of things, for the paper of any bank to remain long in circulation, or for any bank to throw out its paper to any useful extent to the people, an I redeem it with the precious metals.

From this train of measures and circumstances I trace the causes of the suspension of specie payments by all the banks, the great confusion and embarrassment in business of every kind, the distresses and bankruptcies which occurred, and the confusion which has overwhelmed both the people and the Government. From such measures you can trace consequences with the same unerring accuracy as the human eye can mark the path of the desolating whirlwind.

Amid this disastrous crisis, the President issued his proclamation convening Congress, which he had positively refused to do a few weeks before. We assembled, some of us with hope, some with apprehension, though all equally anxious to know what measures would be recommended, and what position the Executive would assume. Some thought that the President would recommend the Sub-Treasury system; others, a retrieval of the State banks; whilst others hoped (at least I did) that he would throw himself upon the advice of Congress. This was really my belief, as well as my hope. His appointment of Mr. Polk at the head of the War Department had inspired me with some hope of better things. No man, save one, who had been born either south or west of Pennsylvania, held a place in the Cabinet. And the appointment of a second, and one so highly worthy and eminently qualified, was, I thought, the harbinger of some salutary changes. So first-rate men are in office, I care not from what quarter they are taken, or where may be their birth-place. But I do maintain that every prominent place should be filled by high-minded and efficient gentlemen, who understand their duties, and are prompt to discharge them. I came here with no pledged hostility to his administration, and personally, I had a very high regard for the President. My situation here is peculiar. I have been elected by the aid of both parties. If I were to consult the feelings of a majority of the persons who voted for me, rather than the opinions of a majority of the voters of the district, I would pass in my course. But when intrusted with a public duty, I do not feel at liberty to be governed by feelings of personal predilection or antipathy. I feel bound to take a more expansive view of the whole district and the nation.

When we assembled here, speculation was at once hushed by the receipt of the President's Message; and I must confess I was greatly disappointed. I had read his famous letter to Mr. Sherrod Williams, in which he considered the State banks as Government depositories, and said how admirably the system worked—where he denounced the United States Bank, and promised to tread in the footsteps of his illustrious predecessor. I thought all this was the mere electioneering language of the day, and that, when once in office, he would make himself the President of the people, and not of a party. All my expectations were disappointed; for almost the first thing he informed the representatives of the people whom he had called together—who assembled here fresh and warm from the midst of the people—was, that if they should dare to pass a bill to establish a United States Bank, he would be a lion in their path; that he was armed with a veto power, and would assuredly use it. Such language is unprecedented in the history of this or any other country. The President, in his inaugural address, informed the people that if a particular measure should be passed by Congress, he would use the veto. I thought that unnecessary and uncalled for, but supposed it was designed for southern effect. A veto in that case would be unnecessary; nor did Mr. Van Buren, or any one else, suppose that he would ever be called on to redeem his pledge; for Mr. Chairman, whenever the Congress of the United States shall so far forget their compact with Maryland as to violate private property in the District of Columbia, your jurisdiction will end, and that of Maryland will begin, over all that part of the ten miles square north of the southern bank of the Potomac river. I may go farther: that moment that this House shall contain a majority of members who will be so reckless as to vote for the abolition of slavery in the District of

Columbia, the annunciation of that majority by the Chair will be the sounding of the death-knell of the Union.

Before Mr. Van Buren is six months in office, before a single bill or resolution has been sent to him for his signature, he has voluntarily, gratuitously, stepped out of the line of his duty, to inform Congress that upon at least two measures he will use his veto. I have a hostility to the veto power, and can never be reconciled to its use. The framers of our Constitution placed it in the hands of the Executive under the fallacious belief that it was the weakest of the co-ordinate branches of Government. Sir, the framers of the Constitution and the authors of the Federalist were mistaken. The Executive is more powerful than all the other branches put together. All power is fast consolidating in the Executive hands; and the Executive history for the last four years is sufficient to justify the remark, without any further proof. They thought it harmless, because they found it obsolete in England, though existing in the English Constitution.

The Government of the United States is the last in the world which should tolerate the veto power. There may be some plausibility for it in the State Constitutions, which secure to the people the right to elect both branches of the Legislature; for there both branches may be moved, in a greater or less degree, by the same commotion or popular impulse. But even in the Constitution of my own State, where the Senate is not elected by the people, the Executive is denied the veto power; the Constitution says that the Governor shall sign the laws. And it has been judicially decided by our highest courts, that laws which have passed the General Assembly, or both Houses of the Legislature, are valid without the signature of the Governor; and that is almost the only feature in the Maryland Constitution, which, I think, could not be changed for the better; and in the Federal Government, also, every useful caution exists in framing laws, without the existence of the oppressive veto power in the Executive. In our Government, part representative, part confederative, no law can be enacted without its first receiving the sanction of the representatives of the people; or, in other words, a majority of the people in their aggregate capacity, without distinction of States, control in this House. In the confederate branch, where the sovereign States are equal, a majority of those States must give sanction to every bill. What greater safeguard can there be to liberty than to require first the concurrence of a majority of the people, and then a majority of the States, to every measure of public utility? Every restraint beyond this is actual, real oppression. I regard the abuse of delegated power to be as obnoxious to censure as the usurpation of power; and an Executive places itself within the range of that censure, when it arrogantly uses, or presumptuously threatens, the veto. It is to awe free and fearless deliberation, by suspending the sword of Damocles over the heads of nervous politicians, in this hall or the other.

Historians inform us that with all his vices, "Nero never attempted any thing against the jurisdiction of the Senate."

Marcus Aurelius, though armed with the imperial tribunician (co-senate) prerogative, said, in alluding to the Senate, "It is more proper that I should submit to the opinion of so many and such friends, than that so many and such friends should follow my will."

An able writer says, "It was by adding the tribunician power (*intercedere velare*) to the military, in their own persons, that the Roman Emperors consummated the ruin of the Republic." "It was by this mode," says Tacitus, "that Augustus found means, without the name of King or Dictator, to make himself superior to the legislative and executive powers of the Commonwealth."

If the Romans lost their liberty by the union of the military and the veto power in the same hands, how can it be preserved in this nation, when you unite in the same hands which have now the military and veto, the power of the purse, which you propose to do by the bill now on your table—a power which Augustus never possessed.

But in these modern days, a President is called a Roman patriot, who freely uses this detested instrument of tyranny; though Pliny boasts, in panegyricizing Trajan, "that the Emperor never allowed himself to annul or prevent the execution of the Senate's decrees."

I will not dwell longer on this subject than to say that, as it was by the use of the veto that Louis XVI lost his head—so may the next American who shall use it lose his personal popularity.

But the President has thought fit to read to Congress a lecture upon constitutional law, and gravely tells us that a Bank of the United States would be unconstitutional. Yes, sir, he would fain convince us that the Constitution was in his keeping, and that he will not let the rude hands of the representatives of the people profane it. Mr. Chairman, how much crime has been committed, how much blood has been shed, by fanaticism, under the pretext of serving the cause of religion! How much usurpation and tyranny have been practised, upon the pretence of saving the Constitution and serving the people? Let history answer—for every volume can answer, from the creation of the world to the present moment. Who is this mighty expounder of the Constitution? Is he the venerable and glorious man who presided over the deliberations of the Convention that formed that sacred instrument? Or is he the wise and distinguished individual whose pen gave it form and proportion, and who has been emphatically called the Father of the Constitution? No, sir, he is not. But he is Martin Van Buren, of Kinderhook. The same individual who informed the nation, in his inaugural address, on the east front of the Capitol, that he was the first President elected who had not participated in the patriotic struggles of the Revolution; who thought it proper to say, for the information, perhaps of the times present, that he was born since those ancient days. He is the first and chief of the modern expounders of the Constitution. Yes, sir, even Amos Kendall, an officer not of the Constitution, but of the law, says that he is a limb—yes, sir, the right arm, I suppose—of the Executive body, and has dared to read a homily to the courts upon their duties and the Constitution. It is time, for the dignity of this House and the nation, that such insolence and effrontery should be frowned down, if not punished. But I will leave these distinguished personages for a moment, and allude to others. There is another class of politicians in this House, who have been thrown into ecstasies because Mr. Van Buren says that, as he construes the Constitution, Congress cannot create a United States Bank. They call themselves the true State rights Old Dominion Republican Democrats of the Jeffersonian school, and quote the name of that patriot for every purpose, numberless times, in every speech with which they favor this House. My mind is in doubt whether such displays should be treated gravely or lightly.

Gentlemen seem to speak as if no one had read and understood Mr. Jefferson's writings but themselves, and quote slips from, and fragments of, his letters written some fifty years ago, before the existence of a United States Bank. I have been amused to see the dreadful wariare of words carried on among the Southern State rights politicians, who dispute upon subtleties too refined to be perceived by my mental vision. One descends upon constitutional law, and all eagerly listen, in hope to hear some idea which may impinge against something which Mr. Jefferson may have loosely written or said, believing it will be his political destruction at home. Quick as thought, a messenger is sent to the library, to produce a letter or conversation of Mr. Jefferson. The orator ends, and another begins with anticipated victory joyously illuminating his features, and his Southern friend is handled without gloves or mercy. But with that propensity for long speaking, which is so remarkable in the South, where all are imaginative children of the Sun, and where all possess the *copia verborum* in an eminent degree, he soon runs foul of some other opinion of Mr. Jefferson, or some other and foreign subject. Yes; and another more Mercury-footed page is posted, to tell the first to be swift. Then another State Rights Jeffersonian Old Dominion true Republican Democrat rises, and with the merciless vengeance of a Samson, he routs and vanquishes the political Philistines before him, behind him, and around him, horse, foot, and dragons. These gentlemen regard it high treason, verily, to differ in the minutest particular from Mr. Jefferson. What a bombastic Englishman once said of Homer, they think true of Jefferson—

Read Homer once, and you can read no more,  
For all books else appear so mean, so poor,  
Verse will seem prose; but still persist and read,  
And Homer will be all the books you need.

They regard it heresy, beyond the benefit of clergy, if any man dare speak, think, or breathe, without producing the authority of Mr. Jefferson; and he is read out of the State rights party. They call to my mind an anecdote which occurred in my own State on the death of Alexander Hamilton, in the best days of Maryland hospitality, before she was governed, as she now is, by uncles and aunts, who are all united by either affinity or propinquity, who fill all places, and hold the reins of Government in their feeble and effeminate grasp—for Maryland is pretty much like the rest of the Southern States. They have all been, for the last ten years, like so many barrels of frozen cider—the spirit has not escaped, but it has become concentrated; some of them now show signs of reanimation, and enlivening feelings are beginning to pervade them; and we may hope that even "Rip Van Winkle" (North Carolina) will in time open his wondering eyes. But to my anecdote. The news reached a coterie of thoroughgoing Federalists, who were dining on the Eastern Shore of Maryland, where wine and wit were flowing in equal streams; all expressed, in general exclamation, their bitter sorrow; all, save one, became earnest and eloquent in speaking of the powers of that great man's mind—the great services he had rendered to the country, and the heavy loss which the nation had sustained, and how much they lamented it. At length, Thomas Bailey, the brother of the Attorney General of Maryland, who was remarkable for a high order of intellect, it when he would venture to exercise it, setting down his empty wine glass, said to his bevy of friends, that he had listened to the expressions of grief which the sad news had called from them, but he felt that his grief was greater than theirs, because his loss was greater in the death of Hamilton; for, as long as Hamilton lived, (said he) he had never been put to the labor and trouble of investigating questions for himself, and that, as Hamilton was dead, he now, alas, would be forced to the dire necessity of thinking for himself.

I could but think, since this discussion has commenced, if Mr. Jefferson had not left behind him some two volumes of State Papers, one volume of Correspondence, and his Notes on Virginia, how awfully annoyed some of the Virginia politicians would be, if driven, like Tom Bailey, to think for themselves. What would these gentlemen do if the *point d'appui* of their political lever were destroyed?

An able member from Virginia informed us, last night, that he considered Mr. Jefferson the polar star that directed his course. Suppose we draw imagination from around the figure, and examine it by the test of real life. Will a traveller always keep his eye on the polar star? If he should direct his gaze continually that way in his journey, he will soon find that stars would add to his comfort; he would next find that the white bear and the wandering Indian would be the only living things about him; and the next step he would find himself plunging into Symmes's arctic hole. Will the prudent and skillful mariner look alone at the north star, in directing his vessel's way over the trackless ocean? At times, he is forced to look at other fixed, or less beautiful, luminaries, and finds them equally true and useful. Yes, sir, astronomy and navigation teach him to point his glass, at times, to all the bright stars in the zodiac, and the power of human reason makes them subservient to its control.

So I should fain think the practical American statesman should view every star in the firmament; or, to quit the figure, should read all that has been written by the wise and the good, and then dare to think for himself.

When Jefferson embarked in the glorious cause of the Revolution, did he take Solon or Lycurgus, Sidney or Hampden, for his model of greatness? Did he take Locke or Milton as the text-books of his creed? No, sir, he did not. He read all that patriots had written; he read deeply the volumes of human nature; and then, sir, he dipped his pen into his own mind, and wrote the immortal Declaration of Independence. He had no model; daring to think and to act for himself, he made himself great as he was.

We are in Committee of the Whole on the state of the Union; and I am unwilling, as an American citizen, to sit silently and hear Mr. Jefferson's name quoted, to effect every narrow and selfish purpose. His name is the property of the whole nation, and is not placed in the hands of a few southern politicians. Mr. Jefferson had faults, as all men have; but Mr. Jefferson was a man of enlarged and expansive mind. And if any supernatural power could resuscitate his body with the magic wand of one of old, as we read in solemn history, and present him living before us, he would rebuke his friends for using his name, as it has been, on many occasions.

Mr. Jefferson doubted, before the first Bank of the United States was established, whether it was constitutional to establish such an institution. But did he advise General Washington to put his veto upon it? No, sir. He cautions him against using the veto—he urges him to respect the representatives of the people. This he did in the last sentence of his letter to General

Washington, in 1791. He says: "It must be added, however, that, unless the President's mind, on a view of every thing which is urged for and against this bill, is totally clear that it is unauthorized by the Constitution; if the *pro* and *con* hang so even as to balance his judgment, a just respect for the wisdom of the Legislature would naturally decide the balance in favor of their opinion."

Such is the manly language of a great mind; and I wish, for the interest of the country, that his modern friends knew how to appreciate it. He recommends no veto, but cautions the President against it. He advises the President to respect the Legislature. This is the language of a true Democrat. A Democrat is he who will think for himself, vote for himself, speak for himself, and obey the laws and decisions of the tribunals of the country. A man who puts on the blind-bridle of party, and allows himself to be caparisoned with party trammels, is not a Democrat—he is half a vassal. A Democrat must be a free thinker and a free talker—a free and fearless political actor.

Whilst Mr. Jefferson spoke and wrote freely his sentiments, he knew how to respect the opinions of others. He respected the Constitution and obeyed the laws. When the Bank of the United States was established, he acquiesced in deference and with cheerfulness. And in 1804, after he was elected to the Presidency, he signed a bill authorizing the bank to establish branches in the Territories. If he had not surrendered his first opinion, he placed himself in the attitude of being guilty of base perjury in sanctioning the measure; and I would not venture to give utterance to the opinion I would entertain of the man who would bring such a charge against him.

It was but last night, whilst listening to an able member from the Old Dominion, who was quoting Jefferson against the Bank of the United States, that I turned to a learned friend from Virginia, by whom I was sitting, and said that I really believed that if Mr. Jefferson was on this floor, and saw the distresses of the country, he would be first and warmest to advocate a United States Bank. My friend remarked that I appreciated justly Mr. Jefferson's character; for he had heard a few days ago, a distinguished gentleman, who was a neighbor of Mr. Jefferson, assert that Mr. Jefferson had said that, if the State bank system was to be tolerated, the only way to control it, and to give a good currency, was to have a Bank of the United States. But this fact has been alluded to by the able gentlemen who preceded me (Mr. Pope). That he said so, I have not the smallest doubt. Your Supreme Court, last winter, decided that the State banks were constitutional. Then, if Mr. Jefferson's opinions are to be quoted, they would be in favor of a United States Bank.

But these very gentlemen, who wish to chain down Mr. Jefferson's opinions to the narrow views on all subjects, will find themselves in an awkward predicament at the next session. I predict, Mr. Chairman, that they will then quote Mr. Jefferson as the greatest latitudinarian who ever filled the Presidential Chair.

When the question of the annexation of Texas to the Union shall come up, as I expect it will next winter, these gentlemen will quote Mr. Jefferson as a precedent; because he recommended the purchase of Louisiana.

Mr. Jefferson has admitted that that purchase was made without any authority being given in the Constitution. But still he recommended it, and signed the bill. Sir, he acted wisely; he acted as a philosophic statesman should have acted. There are occasionally and rarely great national emergencies, which no framers of a Constitution can foresee. Those emergencies must be met, and acted upon promptly. This was one of them. In such a case, all public functionaries are justified in adopting their course to the circumstances. Whilst they venerate the Constitution, they are required by duty to obey what must be the sense, not of party, but of the whole nation in the emergency, and adopt such measures as will meet the wishes of the present generation, and which they are convinced will meet with the approbation of all posterity. Such occurrences are but seldom presented, but still they do sometimes occur. And Mr. Madison said truly, in his able report upon the Virginia resolutions of 1793, that "as the Constitution is above the law, so are the people above the Constitution." That maxim should be received with caution, to be sanctioned only when the people desire a change in the organic law, or when great national exigencies arise, such as I have alluded to.

Some of these Southern constitutional lawyers seem to revel in denunciations against the Bank of the United States—not only some of the Virginia politicians, but the able member from South Carolina, (Mr. Pickens), who sprang into the front rank in this debate. Some new light has illumined his path. I thought, if any State in the Bank of the United States, it was South Carolina. If the people have erred in sustaining the bank, South Carolina has incited that error, for all of her great men have advocated it. In 1816, seven out of eight of her representatives voted for the charter of the United States Bank. Yes, sir, Messrs. Calhoun, Chappell, Edwards, Huger, King, Lowndes, Middleton, Pickens, Taylor, and Woodward; and Mr. Mayratt stood "solitary and alone" against it. But the onward path of modern genius can demonstrate that all these men were ignorant of the Constitution and their duties.

"We think our fathers fools, so wise we grow.  
Our wisest sons, no doubt, will think us so."

Yes, sir, Mr. Calhoun, who was a southern fixed star, has, by some inscrutable phenomena of nature, by some undiscoverable law of attraction, wandered from his station, and is now in the northern polar hemisphere; or, rather, is now a planet revolving around, by attraction and repulsion, the Executive centre. Sir, I grieve at the sudden transition, because I like Mr. Calhoun personally. But he has made himself a living warning to the opinions I have expressed, how dangerous it is for any free-thinking and generous man, whether in public or private life, to pin his faith to the skirts of any man. Mr. Calhoun's political life has been most strangely erratic. If I should wish to find an argument in favor of the Bank of the United States, I would read his speech made in 1816; if I wished to find a confirmation of those opinions, I would read his speech made in the twenty-third Congress; if I wished to find an argument against the bank, I would read his recent speech made in the twenty-fifth Congress; if I wished to find an argument in favor of the tariff, I would read his speech made in 1816; if I would wish to find an argument against the tariff, I would read at least a dozen speeches which he has made within the last four years; if I wished to find an argument in favor of forts and fortifications, I would read his report made when he was Secretary of War; if I wished to find an argument against forts and fortifications, I would read his speech delivered in

the twenty-third Congress; if I wished to gain proof that he was friendly to the tariff and internal improvements, I would ask for it from the gentleman of Pennsylvania, who, some ten or twelve years ago, urged his name for the Presidency, and I would be answered that they urged his claims because they thought him ultra on those subjects; if I wished to find arguments against that system, they would be found in every speech which he has delivered on any subject whatever for the last six years. Let the generous and chivalric young men of the South follow such a polar fixed star, and they will find, when too late to retrieve their standing and usefulness, that they had been following an *ignis fatuus*, which had been leading them from swamp to bog, from bog to glen, from glen to morass, and finally left them in a cypress swamp of the most impenetrable darkness. He may be quoted for any political opinion, as a distinguished judge once said Coke's reports could be quoted for any legal opinion. I had rather at once cut my political jugular, than follow such a star; for if I did not, the people would soon do it for me, and I regard suicide preferable to public execution. I was aroused at the gallant bearing of my chivalrous friend from South Carolina (Mr. Pickens) when he took the lead, conscious of his right and ability to lead in this debate; it proved to my mind that his Southern feeling still animated his bosom. I thought it seemed cruel, though it was just, when he required the clerk, with his strong voice, to read out the names of those who had voted for and against General Gordon's proposition a few years ago. I thought that that was, to his new allies, "the most unkindest cut of all." I was then seated in the chair on the Clerk's platform, which is now occupied by the honorable Senator from Massachusetts, Mr. Webster, (Mr. J. pointed in the direction of the Clerk's seat,) philosophizing and surveying the effect it would have on many countenances, and perceived, as some names were pronounced, their faces would crimson; others would blanch; some twisted on their chairs, whilst others left the hall, as old Proteus once quitted an unpleasant theatrical hall; whilst in some old and hardened sinners, who had long and often offended, not an eye would wink, or a muscle move, or a single feature change. They seemed to look as if they were conscious that they were past all forgiveness, and had made up their minds to look with more composure upon their past acts, than upon the enormity of those which they fully expected to perpetrate; whilst I heard, or thought I heard, several voices involuntarily exclaim, "expunge the journal." That gentleman, (Mr. Pickens,) whilst he is advocating in his able speeches, State rights, is, at the same time, supporting a measure which is the very definition of consolidation. The whole reasoning amounts to this: because Congress has not the power to establish a bank, therefore Congress must surrender into the hands of the Executive all power over the public money.

Whilst I regard a Virginian or South Carolinian, who will act upon the principles of his ancestors, and dare think for himself, as one of the noblest beings in creation, I regard that different Lithpian race, who are seven months children, always talking about the Constitution and never reading it, who ride about with saddlebags and the revised code, and shout "Constitution and Jefferson" at every court-house and cross road, as the unsafe guides in the world; and if they should happen to be such lawyers as "rare Ben Johnson" describes, I would warn the people to beware of them who

"Give forked counsel: take provoking gold  
On either hand, and shut it up;  
No rise, so grave, of so perple's a tongue,  
And loud without, that would not wag, nor scarce  
Lie still without a foe."

There may be no other class of Southern politicians who are worse constitutional advisers. They are those of more standing at the bar, who are called great special pleaders—the true greer-bag zany, who know all the arts of filing a declaration, or framing a demurrer—who can at once analyze in their minds all the dry maxims of the black letter, and the liguum vite terms of the law—who know how to make thin distinctions, and can quibble on the point of a cambric needle. Such men I would counsel with upon a contingent remainder or executory devise; but they are not such men as I would select as my guides to expound the Constitution on this floor, or to make them my archetypes as philosophical statesmen. Hair-splitting distinctions prove, they think, superior wisdom; and they will beautify them with rich diction and elegant manner, and leave you in a perfect paradise of ecstasy, figures and flowers. Mr. Chairman, these are safer and better guides. Let those who wish to understand the Constitution, read the debates of the Convention which framed that instrument—read the debates in the State Conventions which adopted it—read the Federalists and Chief Justice Marshall's decisions upon it: let him do this, and then he will dare to think for himself, and will know something about it. And in this reading he may learn that Mr. Jefferson was not in this country at the time of the formation of the Constitution, but was Minister in France. As a politician, Mr. Jefferson was superior to Mr. Madison; as an expounder of the Constitution, I regard him as inferior.

Can any one doubt that, had Mr. Van Buren recommended the establishment of a United States Bank, chartered with cautious and well-guarded restraints, it would have been passed by this Congress, and that in less than six months every solvent bank would resume specie payments, and the overwhelming misery and distresses of the people would have changed into a brighter and more prosperous aspect? I do not doubt it. Had Mr. Van Buren said that he had been disappointed in the new experiment, as all of his friends had been; that it was the part of wisdom now to adopt the old and well tried policy of his predecessors, a policy which had acted well; if then some of his friends here had opposed it, he could have held up the example of Madison, and been sustained by the nation. Madison's name would have outweighed a host of modern politicians. When Mr. Madison stood alone in his vote in the last Virginia Convention, against all the rest, an able American writer said that he would sooner have taken Mr. Madison, to be right than all the rest put together. As much as I admired his wisdom, I could not say that much. But Mr. Van Buren's course has been called a firm one; and a distinguished Senator, now in my eye, (Mr. Webster,) said, in a speech which I heard with great pleasure, in another quarter of this Capitol, that, after reading Mr. Van Buren's Message, and finding that he was really tracking the footsteps of the late President, he would not charge him with a want of firmness. I differ with that distinguished gentleman, and many others who have used the same language in this and the other end of the Capitol. I will not call it, at the same time, timidity, but I will call it rashness. The brave Roman, who sent his gallant son at the head of an army, cautioned him as much against rashness as he did against

cowardice. "The mean of true courage," said he, "lies between the extremes of cowardice and rashness." It is a proof of an absence of moral courage for any man to persist in wrong because his friends urge him to do so. Mr. Van Buren had an opportunity of showing moral fortitude in an eminent degree; for it does require no small degree of moral courage for a man to gently chide, softly to rebuke, a ruinous career of his friend. Had Mr. Van Buren said to his friends that he had believed in the experiment as they had done, but he and they had been disappointed; it had overwhelmed the whole land in misery and distress; his supporters as well as his opponents were beggared by it; that he felt it his duty to abandon the scheme which had so signally failed, and he had determined, for the good of the nation, to go back to the well-beaten path in which Washington and Madison, and all the other Presidents, trod—he might have lost here and there a friend, but he would have gained a hundred for one; he would have proved himself worthy of the office which he holds, proved himself of true and generous courage, and would have been placed by the side of the amiable and patriotic Madison. But what does he do? When the popular frenzy was highest against a bank, Mr. Van Buren, in an evil hour, committed himself against the bank, supporting the pet bank system, which would succeed; because General Jackson had sworn in his wrath that it should succeed. But it failed—exploded—blowing up the Treasury as well as the banks; and the People were ruined. Mr. Van Buren was in a dilemma, and could not go for a United States Bank, and preserve his consistency; and had not magnanimity of feeling to confess error, repent, and ask forgiveness of the thousands and tens of thousands whom he had helped to ruin. What was he to do in this emergency, as Congress had been called in the panic of the moment? He was pledged to go in the footsteps of the late President, and there were no footsteps. Mr. Van Buren was at fault, sadly at fault. A fast runner was posted to the Hermitage, two letters are quickly written by General Jackson, published in the Globe, and thus footsteps are made where none were before. Never did Tiberius reign with as much awful terror as when he retired from Rome and went to his gloomy and secluded hermitage, and sent his authoritative and bloody edicts to a slavish and affrighted Senate.

One or two gentlemen have thrown out, during the discussion on this bill, or the one which was acted on a few days ago, a delicate intimation that the expediency of the bank might be more clear to their minds if the Constitution were altered so as to express distinctly that Congress should have power to establish a bank. Of such allusions I think as Lowndes said in 1816, when he was requested by a member to move an amendment to the Constitution to authorize Congress to establish a bank. Lowndes said that he had two objections to doing so: one was, that he thought such an amendment would not be adopted; and the second was, that he thought the power already existed in the Constitution.

Mr. Chairman, I do not profess to be a constitutional lawyer. I have read some law, if it is true, but have never practised in the courts. I have been admitted to practise in the court at the base of this Capitol, as a great many other unworthy lawyers have been admitted. I studied law in Virginia, under the most distinguished jurist of that State—a personal and political friend of Mr. Jefferson. I was taught to believe that it was the duty of a lawyer to respect the Constitution and the laws; that the Constitution had authorized courts armed with power to decide litigated questions; that from the inferior courts there was a right to appeal to the higher, and that the decision of the Supreme Court of the United States was final, and its powers were broadly and clearly written in the Constitution; that if the Supreme Court were to decide a question or principle, which did not suit the popular taste, the decision still was final; but the People had a remedy in two ways, pointed out by the Constitution, by which Congress and the States should not alter the decision, but could alter the Constitution, as they have on some occasions altered that instrument. This was the doctrine which I was taught; this is the doctrine which all my reading and reflection have since confirmed.

The Supreme Court has said that it will not decide political questions; but that same court has twice said that the constitutionality of the bank was a legal question, and has twice decided it to be constitutional. The decisions of that court have, in every case, been acquiesced in by the people of the whole nation. General Washington, who presided over the Convention which framed the Constitution; Mr. Madison, who was most prominent in framing it; Alexander Hamilton, who, in intellect, was second to no man in the nation; have given their sanction to a bank. The Congress of 1791, which chartered the first United States Bank, voted two to one in favor of it—ayes 39, noes 20. The greater portion of the members of that Congress, who were in the Convention which framed the Constitution voted for it. Every President has given it his sanction: Washington, J. Adams, Jefferson, Madison, Monroe, J. Q. Adams, Jackson—for the latter, in one of his messages, said he would condescend to write a charter, if Congress would meanly ask him to do so; every President, save Martin Van Buren; and even he signed a memorial to have a bank established at Albany. The man who would raise his voice against this overwhelming authority, I will respect more for his pertinacity and obduracy of opinion than for his dispassionate judgment.

We are told by metaphysicians that nothing is so difficult to prove as self-evident propositions. And I regard the right of Congress to establish a national bank as being so decidedly clear as to require no necessity for any argument on that subject.

The President says that against a United States Bank the sentiments of the people are "deliberately fixed." How does he know that? What spirit of divination does he possess, to know whether the people always think with him? He has charged against the pet bank system; he was for it three months ago; his message contains his palinodia. May not the people, who changed against the bank in hopes of bettering their condition, change for it now, to bring themselves where they were, rather than be beggared and miserably? If they should be convinced that it will improve their present distressed situation, they will very quickly change. Self-interest is a powerful lever; and the President and his friends, by their acts, have induced the people to look to it. The people will not ruin themselves because Mr. Van Buren has held out false hopes, false lights, by which they have been wrecked; they will come back, and denounce and quit all crude experiments.

But, when the committee of New York merchants told Mr. Van Buren of the dreadful distress in that city, he did not believe it; he thought it all panic. The recent elections ought to be a gentle warning. But no man is so blind as he who will not see; and I am half disposed to believe that some politicians do not yet know that the gold experiment has failed.

The expediency of a bank presents a very different proposition.

We can often, Mr. Chairman, look into the future by the lights of the past. And the past furnishes to my mind the most conclusive evidence that a United States Bank is highly, almost indispensably, necessary, to promote the rapid and uniform prosperity of the nation. Without money, no business can prosper; and without a convertible currency, and a near uniformity of exchanges, the prosperity of all business is in a great degree paralyzed. Whilst the inequality of exchanges in a depreciated currency will secure wealth to the brokers and money exchangers, in the same degree will it diminish the profits of the farmer and the mechanic, of the merchant and the man of useful enterprise.

Whenever we have had a United States Bank, we have had every where a convertible, redeemable currency, by which the value of property could be clearly estimated; whenever we have not had a Bank of the United States, we have had a stoppage of specie payments, distress, and individual ruin. If we are to judge of effects by causes, what can be more convincing and conclusive? When the Bank of the United States was in existence, exchanges from New Orleans to New York were never more than one per cent. often at par, and sometimes, from one city to the other, above par. There was then but a reasonable and useful number of State banks.

How are the exchanges now? We can sometimes judge of great things by small. A friend sent me a hundred dollar note, a few days ago, on a bank in Florida, which he had been trying to pass off, but could not. I went to a broker, and he offered me seventy-five dollars in District paper for the hundred dollars on the Florida bank. I offered him the note for eighty-five dollars, and he refused it. I called on the Delegate from Florida to know whether the bank was good. He informed me that it was perfectly solvent, and as good as any bank in the world; that its paper passed freely in Florida. Then a man who owes a debt of seventy-five dollars in this city, who may reside in Florida, will have to pay one hundred dollars in paper, which he takes at par at home, to liquidate his liability in this city. Such is the discount at but one-half the extent of our nation. If my mind had ever doubted on the subject of the expediency of a United States Bank, this single circumstance would have removed every doubt. The Government has disconnected itself from the currency, and all things are in confusion, and I fear will remain so until we have what was appropriately called, yesterday, by my eloquent friend from New York (Mr. Hoffman,) the balance-wheel of a United States Bank. I have travelled almost in every part of the Union with United States Bank paper, and never met with an individual in my life who did not prefer receiving it to specie. But the condition of our exchanges has been enlarged upon by several gentlemen, and with great force by the able member who preceded me; and I will not consume the time of the committee on that branch of the subject.

I had intended to offer some considerations upon, first, the right of the Government to create and establish a good and sound currency for the people, and a safe and salutary mode of exchange; and, secondly, the duty of the Federal Government to exercise that power; but I have been anticipated by the able member from Winchester (Mr. Mason,) who made an argument upon this subject, clear and lucid; one which has been unanswerable, because it is unanswerable. He showed the evils which would be inflicted on the people by establishing one currency for the Government and another for the people. He proved the close affinity of both, and their relative duties and responsibilities. I will only ask in addition, Mr. Chairman, that if the Government will not exercise any control over, and feel no obligation to regulate, the currency and the medium of exchanges, for what purpose was this federal alliance formed? Why was it that the States gave up to the General Government the whole control over commerce, if that Government will not adopt means for carrying on that commerce with a currency uniform, or as nearly so as human wisdom can devise? Why have they made the sacrifice of solage and surrender of so great a portion of their sovereignty, as to be denied the right to regulate commerce between the neighboring States and foreign nations, if the General Government will take no step to promote this interchange? What other consideration could they receive for this immense surrender of State sovereignty, but that the Government would extend its paternal care to effect a good currency and safe and easy exchanges? But the President, with a profound ignorance of both the spirit and the intention of the Constitution, has told us that the people might as well expect the Government to aid in the transportation of their merchandise, as to cause or establish a good system of exchanges. It is the first time that an American President has uttered such a sentiment of disregard to an injured people; and I trust that their indignation will make it the last. If this is to be the established doctrine and policy of the Government, each State will, or might as well, stand in the relation of separate and distinct nations; for each will bear the same relation to the other, so far as currency is concerned, as Canada does to the United States, or the different nations of Europe do to each other. And the quicker they resume the power over commerce, the better will it be for their interest and happiness.

The miserable bunglers of the Executive, who have attempted to regulate and improve the currency, have not yet discovered that they are totally ignorant of the subject, and have failed in their experiments; and even now feel disposed, like a bewildered pilot, to let the ship of state float at the mercy of the winds and the waves, in hopes of reaching a safe point which their pretended skill could not attain, or leap into the long-boat and desert the crew.

The President, after writing us a long message containing many maxims of sound policy, many long sentences of sophisms, much plausibility, and more bad reasoning, finally hands us over, by way of recommendation, to his Secretary of the Treasury, for the details of his new schemes and untried experiment. I will use this occasion to express my utter abhorrence of the long essays which are annually given by our Executive to the representatives of the people and the States. The Executive seems to think it his duty to send us a long lecture upon our public duties, and assumes as much importance as if he were a professor lecturing a class of sophomores upon the principles of philosophy, and schooling us in the line of our duty.

The King (or now the Queen) of England and the King of France send their messages or speeches to the Parliament or the Chamber of Deputies, of about a span's length, simply saying that the nation is at peace with the world, the King is thankful for the supplies granted; and that he will take pleasure in carrying out such measures as the Parliament or Chambers may

think proper to promote the interests of the nation. If either the King of England or the King of France were to threaten a veto, neither would hold his crown a month, if he would escape with his head. I think it ought to be an impeachable offence for any Executive officer of Government to send a message or communication to Congress longer than a column of an ordinary newspaper, unless, after that space, statistics and tabular exhibits should require more.

The Secretary of the Treasury has sent us a volume of eighty-eight large pages, laying off his subject, like the monster in grave history, into "seven heads and ten horns." I have read it by candlelight, and by daylight; and in groping through it for a clear idea, I could not find one! Now and then you will find a beggarly thought enshrouded in a whole mist and cloud of words. But his thoughts and ideas are like the arts of the cuttle-fish, which, naturalists inform us, when pursued, throws out, as quick as magic, a dark liquid, which embarrasses and bewilders its pursuers, whilst it escapes from pursuit, amid its own self-created darkness. You pursue his thoughts, but in the pursuit you are lost in darkness. If the Secretary of the Treasury is a man of delicate and refined feelings, I would not have suffered the perturbation of mind which he must have endured, whilst he was thinking of and writing that report, for all the public money which he has handled for the last four years. I could never fully realize to my mind the description which Milton has given one of his heroes, who was confused and disappointed, until I read the Secretary of the Treasury's report. Milton describes a personage who attempted a great reform, not perhaps, in currency, but in civil government;—(and in quoting Milton, I do not wish to interfere with the criticisms of my eloquent friend from New York, (Mr. Hoffman,) and my no less able friend from South Carolina, (Mr. Pickens,) who have rendered him, by their able review, of such questionable authority.) This reformer was disappointed, as the Secretary has been, and was humbled from his high estate; and "nine times the space which measures day and night to mortal man," he lay "confounded, though immortal." And if that immortal personage could not recover his faculties for nine days, amidst the ruin around him, why should we be surprised that it should take Mr. Woodbury, who is only mortal, nine times nine days to regain his, amid the distress and ruin which he has created? In good sooth; I have no doubt that he was confounded whilst writing. Indeed, I am satisfied that he had not regained any of his faculties, save his "modest assurance," when he asked Congress to give him these powers, and to make him, according to his will and judgment, the sole receiver and disbursing officer of the public moneys.

And here, Mr. Chairman, I will claim the kind attention of the committee whilst I say a few words in relation to the Treasury Department, and the bill under consideration granting it additional (I might say unlimited) powers. I feel conscious, Mr. Chairman, that whatever I may say will have little weight in this House or with the nation; but I should be happy if I could flatter myself that any thought which I may express would awaken reflection in the mind of any member of this House, or any citizen not a member. The day was, Mr. Chairman, when a public officer thought himself an officer of the country and responsible to the laws. Things have changed. Now, every officer, however important or insignificant, considers himself an Executive officer, and responsible to the Executive. This modern doctrine has obtained, and therefore I must consider the bill in relation to modern usage and construction. Still, I will offer my protest against the construction. It might be more curious than profitable to account for this transition of custom and construction. Perhaps it may be found in the fact, that, as General Jackson had overwhelming popularity, and rewarded most liberally his partisan friends, each who felt anxious to be promoted thought that, by placing himself under the Executive wing and will, he would be sooner rewarded for his servility; and Congress, under the zeal of party feeling, thought that their friend and chief could not err—that the President "could do no wrong"—and therefore acquiesced. Whilst I know this to be the prevailing construction in this House and out of it, still I will venture, perhaps with temerity, to express my disagreement.

The Secretary of the Treasury is an officer not known in the Constitution. Then, under the Constitution, he can claim no powers. He has been created by law, and to that law he should look for not only his existence as an officer of the Government, but for the powers and duties which have been assigned to him. And he should look to all the laws (and not to the Executive) which assign him duties, for the quantity and discretion of duty which may be imposed upon him to discharge. He is not to look to the nominating power for his authority of action, but to the creating power. The law brings him into being, and the law alone rightfully prescribes his power of action. The Executive might have exercised the constitutional negative at the time of his creation; but it gave its sanction to the law, and in that sanction it yielded its acquiescence to all the powers of the Secretary of the Treasury which run with and are contained in the law of his creation, and to the subsequent laws which enlarge or restrain his sphere of duty. A question of great interest might here naturally arise, whether the powers granted by the Constitution and those granted by the laws should be decided by a common rule of interpretation. I have not the time now, if I possessed the ability, to make an argument upon the true rules of construction of both the Constitution and the laws. I will content myself for the present by quoting a rule laid down by Mr. Madison, in a letter to Mr. Ingersoll, in 1831. "A constitution," says Mr. Madison, "being derived from a superior authority (or to the laws) is to be expounded and obeyed, not controlled or overruled by the subordinate authority of a Legislature. A law, on the other hand, resting on no higher authority than that possessed by every successive Legislature, its expediency as well as its meaning is within the scope of the latter." If this rule is correct, the Secretary of the Treasury should direct his eye to Congress in the discharge of his official duties, and not make himself, as he has made himself, or allowed himself to be made, the simple instrument in the Executive hands.

Those who urge that the President has entire control over the Secretary of the Treasury, because he has the power under the Constitution to nominate to office, run into error; and, in order to make their construction more plausible, assume (what is not the fact) that the Secretary is a mere subordinate auxiliary officer of the Executive department; that the President is not only responsible for his own acts, but is responsible for the acts of all officers of Government whom he may nominate; and being responsible, they maintain, for the acts of the Secretary of the Treasury, he has a right to control the actions of the Secretary, and to assume, in the Secretary's stead, the entire re-

responsibility of the Secretary's acts. The President, I humbly conceive, has the mere right to nominate (or he may suspend) a person to discharge the duties of the office of Secretary of the Treasury; the Senate, a co-ordinate branch of the Executive, guards the appointing power, have a right to confirm or to reject the nominee. This gives no power to either to control the actions of the Secretary. But it is the law that throws dignity and duties around the Secretary, and the law assigns his powers and his obligations. For the fidelity of discharging his duties, he becomes responsible neither to the nominating nor the appointing power, but he becomes only responsible himself to the law; and for an infraction of the law, or malfeasance in office, he is amenable to the law, and answerable before tribunals adequate to pronounce decision of acquittal or condemnation for all his official acts. The President may nominate—Congress can abolish. If the modern doctrine is correct, as has been assumed, that the right of the President to nominate to office carries with it a right to control the acts of the Secretary, then the President, who has Legislative power as well as Executive duties to perform, (for no law can be passed without the signature of the President,) can, by a parity of reasoning, not only interpret and control, and arrest the operation of the law which he has signed, (as has been done,) but he can set the Constitution at defiance, and find his justification, not in the sanctions of that instrument, or in the written law of the land, but by assuming the responsibility of outraging both—seek his justification in making an appeal, not to the tribunals of the country, but to the American people, to countenance his attack upon the institutions of the country, upon the co-ordinate departments of Government—for assuming sole Executive and Legislative power—and for arrogating uncontrolled power over the Secretary of the Treasury and the currency and money of the Government. When the representatives of the people of the several States framed the Constitution, they assigned the President his duties, and required him in the discharge of those official duties, to make his conduct quadrate with that instrument; nowhere recognising his right to control a public officer in the discharge of his legal duties; nowhere recognising his right, in justification of an infraction of the Constitution and the laws, to appeal to the people, in order to gain their sympathy or contempt, their forgiveness or their censure. Every usurper appeals to the people; Caesar appealed to the people; so did Cromwell and Bonaparte; all deceived the confidence of the people, and each trampled upon their liberties. A candidate for office may appeal to the people—a public officer should appeal to the law; and if the law will not suit the people, they can order their representatives to alter it. Whether these views are correct or not, they are still the sentiments I entertain; and, holding them, I am free to give them utterance, for I believe this to be a time when every representative of the people should think audibly.

The law of September 11, 1793, entitled "An act to establish the Treasury Department," declares, in the first section, "That there shall be a Department of the Treasury, a Secretary of the Treasury, a Comptroller, an Auditor, a Treasurer, a Register," &c.

"Sec. 3. It shall be the duty of the Comptroller to superintend the adjustment and preservation of the public accounts; to examine all accounts settled by the Auditor, and certify the balances arising thereon to the Register; to countersign all warrants drawn by the Secretary of the Treasury, which shall be warranted by law; to report to the Secretary the official forms of all papers to be issued in the different offices for collecting the public revenue, and the manner and form of keeping and stating the accounts of the several persons employed therein. He shall, moreover, provide for the regular and punctual payment of all moneys which may be collected," &c.

"Sec. 4. That it shall be the duty of the Treasurer to receive and keep the moneys of the United States, and to disburse the same upon warrants drawn by the Secretary of the Treasury, countersigned by the Comptroller, recorded by the Register, and not otherwise. He shall take receipts for all moneys paid by him, and all receipts for moneys received by him shall be endorsed upon warrants signed by the Secretary of the Treasury; without which warrant, no signed, no acknowledgment of money received into the public Treasury shall be valid. And the said Treasurer shall render his account to the Comptroller quarterly, (or oftener, if required,) and shall transmit a copy thereof, when settled, to the Secretary of the Treasury. He shall, moreover, on the third day of every session of Congress, lay before the Senate and House of Representatives fair and accurate copies of all accounts by him, from time to time, rendered to and settled with the Comptroller, as aforesaid; as also a true and perfect account of the state of the Treasury. He shall at all times submit to the Secretary of the Treasury and the Comptroller, or either of them, the inspection of the moneys in his hands; and shall, prior to the entering upon the duties of his office, give bond, with sufficient security, to be approved by the Secretary of the Treasury and Comptroller, in the sum of one hundred and fifty thousand dollars, payable to the United States, with condition for the faithful performance of the duties of his office, and for the fidelity of the persons to be by him employed; which bond shall be lodged in the office of the Comptroller of the Treasury of the United States."

Section 5 assigns the duties of the Auditor.

Section 6 of the Register.

Sec. 8. That no person appointed to any office instituted by this act, shall, directly or indirectly, be concerned or interested in carrying on the business of trade or commerce; or be owner, in whole or in part, of any sea vessel; or purchase, by himself, or another in trust for him, any public lands or other public property; or be concerned in the purchase or disposal of any public securities of any State or of the United States; or take, or apply to his own use, any emolument or gain for negotiating or transacting any business with said Department, other than shall be allowed by law. And if any person shall offend against any of the prohibitions of this act, he shall be deemed guilty of a high crime and misdemeanor, and forfeit to the United States the penalty of three thousand dollars, and shall, upon conviction, be removed from office, and for ever thereafter be incapable of holding any office under the United States," &c.

In 1817, March 3, four Auditors were created, and one Comptroller, additional; and the restraints upon each officer are as great as in the law of 1793.

I cannot, Mr. Chairman, but pause here for a moment to admire the great wisdom and foresight of the wise framers of these statutes in guarding the public moneys of the people, by the variety of officers which they have created to be guards and checks upon each other. They knew the frailty of human nature, and its impotency to resist the seductive influence of

temptation. By these statutes, we find that even the Secretary of the Treasury could not touch one dollar of the public money; that he had as little control over it as any other officer of the Government.

By the extracts from the statutes which I have read, it will be perceived that the same law which created the Secretary of the Treasury, created co-ordinate, and, I maintain, co-equal officers of that Department, who are as independent of the Secretary of the Treasury as they are independent of the Secretary of War; who are as independent of the President as they are independent of each other. They are not to look to any power but the law, and that they are to obey. The Treasurer is required to give a large bond. To whom? to the Secretary of the Treasury? No, sir, to the nation. Then he is responsible to the nation, and not to the Secretary. The co-ordinate officers, the Comptrollers, the Auditors, the Treasurer, and the Register, hold no responsibility to the Secretary; Congress have appointed them guards upon the public money and upon the Secretary of the Treasury; and I fondly hope that they will so regard themselves. Rumor has reached my ear, upon the wings of the wind, that some officers have been considered too honestly faithful to the law, and would not bend to advice from a particular direction. It will be understood where I wish it to be, when I say to them, be firm and faithful to the law and your duty. I will say to those officers in Washington and out of it, whether I know them or not, whether they are Conservatives, Whigs, or Van Buren men, as long as they are faithful to the laws, and firmly resolved to do their duty, I beg them to consider me as their friend. Let them do their duty to the people and the laws, and, if persecution should assail them, I care not how dark the cloud, how fearful the storm, so long as I have a place on this floor, I will raise my humble voice in their defence.

But, to examine for a moment the bill on your table. What does the Committee of Ways and Means propose by that bill? In a bill of ten little sections, to blot out from your statute book all the many laws which created, regulated, restricted, and restrained the Secretary of the Treasury; and to destroy the enactments of our forefathers, which so cautiously guarded the public moneys of the people. To destroy the power, or to surrender it, of the Congress of the United States over the revenues of the nation, and to place it all in the hands and under the control of the Secretary of the Treasury.

This is not all; the bill proposes more: it proposes to give to the Secretary, singly and alone, not only power over the money of the nation, but it also invests him with legislative powers. It proposes in the very first section, after saying that "the collectors of the customs," "postmasters," &c. shall be "receivers" and "fiscal agents," that they shall be governed "by any regulation of the Treasury Department" "which in its wisdom it may think necessary," &c. In the fourth section, after saying that the receiving officers of the revenues "may be allowed any necessary additional expenses for clerks, fire-proof chests or vaults, (as if the keeper of the key of a vault could not have the same ready access to it as he would have to his own private bureau,) or other necessary expense of safe-keeping, transferring, and disbursing said moneys—all such expenses, of every character, to be first expressly authorized by the Secretary of the Treasury, whose direction upon all the above subjects, by way of regulation and otherwise, are to be strictly followed by all the said officers."

In the fifth section, he has the power to "appoint special agents as occasion may require, with such reasonable compensation as he may allow;" and no report are to be made, in all cases, as the Secretary, in his discretion, shall direct."

I ask your candid mind if it is in the power of language to give more absolute and unqualified power over the money of the nation, and over every officer who is to receive or pay it, than is given by this bill to the Secretary of the Treasury? Can such a measure ever receive the sanction of a majority of the representatives of freedom? That such a bill should be received in this House, without exciting the strongest feelings of indignation, surprises me. That this House should patiently allow any committee to ask them, without prompt resentment, to surrender their rights, and the rights of those whom they represent, to the spirit of its independence. Even the slavish members of a Turkish divan would rebel against such a measure. If the Representatives of the People abandon their interests on this floor, I have greatly mistaken the genius and character of my countrymen, if they will not quickly abandon them. I use this language in no spirit of censure or threat, but in prophecy.

We have wandered beyond our reckoning; we have been floating in an unknown sea; and our pilots are ignorant of the sea, the winds, and the stars. This they have proved; but still they call on us to trust to them, although they have run us aground; they promise to run on another tack, and say they can escape the reefs and the breakers. They are in a fog, but are still determined to rush recklessly on, instead of using the anchor, and run the ship of state they know not where.

It is a good, a safe maxim with the merchants—I hope and trust it will become the maxim with the farmers and the mechanics—never to trust those twice, who have deceived them once. I was in the panic session of the twenty-third Congress, one of the youngest (I know the humblest) members on this floor. When the rash, now all know the ruinous, experiment was proposed, almost the entire Executive party predicted that it was the commencement of a golden era—that every mechanic would have all his pockets filled with gold. I might read extracts from fifty speeches to prove this assertion, if it were necessary. I could read extracts from fifty speeches, made by the opponents of that measure, to prove that they predicted all the dire effects which the whole nation are now groaning under, if that visionary scheme should be adopted.

What were then promises on the one side have proved as deceptive as what were then predictions on the other is now and reality. If the half-starved children, and the haggard looks of their miserable mothers and agonized fathers, which we all have left behind us in our districts, be not sufficient proof of the fact, it is to be found in the evidence of the fact that the President has convoked us at this unseasonable and unusual period. When I saw then around me the grave and experienced, the learned and practical men, discussing the whole policy of our currency and our Government, I felt too distrustful of my ability, though confident in my judgment, to participate in that debate. But when I have seen that experiment fail, and the same men who urged it press upon us another—an experiment which I believe will make the rich poor, and the poor miserable—I am unwilling to be a silent voter; and, however limited my range of thought and ability, I am still resolved to speak the

inmost feelings of my mind, if this speech were to be my last; for diffidence in this crisis I do not regard a virtue.

What is the character of our currency now? What is the character of our exchanges? What, let me ask you, is the condition of our people? Miserable beyond description or parallel. What were the people promised, if they would go against the United States Bank, and so for the humbug experiment? They were promised all that imagination could throw out to eager hope. The farmer was told that the Bank of the United States checked his energies, and caused a failure in his wheat crops; the mechanic was told that he would never be a rich man as long as there was a United States Bank; the merchant was told that exchanges would be improved if he would but aid in destroying the monster; the professional man was led to believe that he would never have a patient, or a client, or a marital rite to perform, if he did not join in the cry against Nick Biddle and the bank. All were promised, and too many believed, that, if they would war against the monster bank, the whole land would flow in gold and silver; that the imagination of the travelling Spaniard through South America would be changed from conceit to vivid and tangible reality; that the houses would be covered with gold and silver; that the trees would bear ambrosial fruits of vegetable gold; that the whole nation would be an El Dorado and a specie paradise; that all might voluptuously live without working, and be rich without industry. This picture was delightful to the imagination, and it required the sternest philosophy to resist its captivating influence. For who, Mr. Chairman, would labor for wealth, if he can gain it by idleness?

The People were promised the same national and individual blessings which a notorious reformer in England once promised his followers and believers. He said:

"There shall be, in England, seven half-penny loaves sold for a penny; the three-hooped pot shall have ten hoops; and I will make it felony to drink small beer: all the realm shall be in common."

"Away, burn all the records of the realm."

The last part of this promise is the first which has been kept. The Constitution enjoins upon each House of Congress to keep a journal of records. The Senate have expunged their record. I would to Heaven, for the honor and fame of the nation, that, after expunging, they had burnt the record, so that the infamy of the act might have been consumed with the record!

Sir, you have falsified all your predictions and your promises to the People, and still you have the temerity to ask them to go with you in another crude and untried experiment, which shows upon its face a delusive hope and a ruinous consequence. Sir, you claim to be the poor man's only friend, and you have brought the poor man to poverty and to ruin.

You are consulting your own ambitious aggrandizement at the expense of the misery and suffering of the People. With consciousness of error, you still persist in wrong. You first induced the People to wage with you a war upon the United States Bank, and promised them better times and more prosperities; you have not realized the hopes you awakened. You now tell the People to wage a war against all banks—and the very pots upon which you relied as your instruments to effect a better currency. Yes, sir, you have done all this; and now, by your Executive's recommendation, you wish to create a universal bankrupt law. The honorable chairman of the Committee of the Judiciary has creditably to himself, and—I return him my acknowledgments—to the committee, informed you that he is not prepared at this time and at this session to obey the Executive will in that request. Yet the Senate's committee have reported a bill to annihilate the banks of this District—a step, I suppose, preparatory to a general bankrupt law.

(Here Mr. Johnson was informed, by a voice from behind him, that the chairman of the committee of the Senate (Mr. Grundy) had asked leave that morning in the Senate to be relieved from the consideration of the Executive request, to establish a general bankrupt law against the banks.)

Mr. J. said: I return my thanks to the voice which I hear, and to the honorable member from whom it proceeded, for the information which he has given me; I was not apprized of it before. I regard it as an omen of better things; I congratulate this House, I congratulate the country, upon the fact, that, as pliant as the Senate have been, they have not been so reckless of the public interest as to go with the Executive in all his mad and violent projects. I have now, for almost the first time, some hope that there is a redeeming spirit in this House to check and oppose some of the crude and ruinous measures of the Executive; and I feel animated with fresh and enlivening sentiments. But, sir, to resume the entangled thread of my discourse.

You found it popular with the public taste to go against the United States Bank. But, remember, when you got the People to go with you, you promised a better currency, and a better system of exchanges; you promised them gold for bank notes, and prosperity in their business for what you called bank oppression. The scheme took well on the start, but failed in those results; and now, because you deceived the People once, you would fan believe that you can make them think that it is now the State bank—your pots—that have caused all this misery and suffering. You are really, now, attempting a bold experiment on human credulity. Sir, you seem to revel instead of sympathizing in the distresses of human beings; you first deceive, and hope to make atonement by misleading. You think, because you got popular feeling against the United States Bank, you can now direct it against State banks, against all banks. If that fails, then to direct it against all rich men, and adopt the levelling, the agrarian system.

Sir, when I read, in my early youth, Rochefoucault's maxims (although he seemed to understand the human heart as though he had made it,) I marked with my pencil at the time, as wrong and impossible, the maxim where he says, "that there is something in the desires of our friends which does not please us." Although I read Dean Swift's parable of it, who was well read in the secret impulses of human action, still I doubted. He describes it better in verse—

"From Rochefoucault his maxims drew  
From Nature, I believe them true;  
This maxim, more than all the rest,  
Too base 'tis thought for human breast—  
That, in the distresses of our friends,  
We first consult our private ends;  
And Nature, kindly bent to ease us,  
Points out some circumstance to please us."

Sir, I begin to doubt, and am almost inclined to believe, that in the unsophisticated thoughts of less experienced life I was

wrong—when I have seen and witnessed the great excitement which was brought to bear in the public mind against the late Bank of the United States, how completely politicians succeeded in elevating themselves by destroying that institution; although, in its destruction, their friends, as well as their opponents, were whelmed in the same common distress and ruin. Whether some of these same politicians have not looked on the general ruin and misery with complacency, and at least consoled themselves that, as the first experiment acted politically (if not financially) well, they could now turn the indignation of the people from themselves against the State banks; and if that should result as the first experiment has terminated, and the people should still suffer distress, that they would say to them, to complete the glorious reform in our currency and money affairs, the people must go one step further, and it will be but one step, and direct their indignation against every rich man; and that there is no freedom where there is not an equal distribution of property; that, to be free, we must have the agrarian loco foco feeling to triumph; that—

"All the realm shall be in common."

Sir, every feeling of my nature startles at such a monstrous doctrine. The doctrine is avowed by few, but many are acting in the way to cause such a result. It will fail, I predict. I know it will fail. There is too much honor and integrity in the composition of the American character ever to allow such a doctrine to prevail. There is too much honesty and worth with the unspurring portion of our farmers and mechanics to suffer such sentiments to obtain a place in any honest bosom. I believe that one-half of those politicians who talk so much about the poor are their worst enemies; I judge so, because their measures are not calculated to aid, but to oppress, the indigent. Professions of patriotism have become trite and stale. I judge, and would urge the whole nation to judge, of public men, not by their professions, but by their acts; it is the safest test. The public distresses of the people will force them to adopt it. You have touched the most sensitive nerve in the American system. You have touched the pocket nerve, and it communicates directly to the thinking faculties of the mind. "Of all rebellions," said Lord Bacon, "those of the belly are the worst."

The attempt to draw a distinction between the rich and the poor, which is so often hinted at in the message, is delusive, because it is false. The President alludes to the people and to the poor to gain their favor, but recommends nothing to relieve their embarrassments. If he turns his eye at all to the sufferings of the people, it is a mere sidelong look that falls upon them

"As cold as the moonbeam on the barren heath."

He will not carry their produce to market, or think about their exchanges. The Emperor of China ploughs a furrow every year, in respect to agriculture. The President might have written one line in his message in favor of that interest. And get politicians talk about the poor—the laboring men—the very men who have suffered the most by their pretended friendship.

We hear the terms of "the poor" and "the aristocrats" used in every public place and in every public document. These epithets are unjust when applied to the people. We have no such distinctive classes; and those politicians who denounce the honest man who has made a competent fortune by honest industry and frugality as an aristocrat, are themselves the worst sort of aristocrats.

As General Foy, in the French Chamber of Deputies, was enlarging with much earnestness in a discussion in the Chamber, and had just used the word aristocracy, a voice from one of the ministers asked him to define it. "Aristocracy," he replied at once, and quickly—"Aristocracy, in the nineteenth century, is the league, the coalition, of those who wish to consume without producing, live without working, occupy all public places without being competent to fill them, seize upon all honors without meriting them; that is Aristocracy."

This I regard as a true and practical definition of the word. It is as just as it was happy. There is no such class in this country as the poor, if you will exclude the tenants of the almshouses. Every man in this country, who works at daily labor, gains wealth enough to secure him all the comforts of life, and many of its luxuries; is well fed and well clothed; and has, at the end of the year, spare money, and feels properly as proud and as independent as any man in the nation. He knows that, whilst he is one of the people, he is part of the Government; that his voice is felt and obeyed as much as if he had millions. He knows that, whilst he has to labor hard, the laws will protect him in his rights, and in the possession of the rewards of his industry.

The laws of our country, of every State in the Union, prevent a large accumulation of wealth in the hands of the few. The accumulation of one generation is divided with the descendants in the next. All that is wanted to acquire wealth is stability in wise laws to regulate the currency. Repeated fluctuations and changes, such as our rulers have produced, cause want of confidence, and finally distress. Confidence causes credit; and a system of credit, when controlled within cautious limits, adds to individual enterprise, which augments the wealth of the nation. Credit is the poor man's capital; and by it, in a moral point of view, the nation is benefited; for every individual is more anxious to preserve the rectitude of his integrity and honesty, when he knows that, by doing so, it may advance his wealth and prosperity. The rich man of last year is the poor man this year, and the poor man this year is the rich man next year; so the changes go round the circle, from year to year, from generation to generation. From some knowledge of the people of the United States, I do not hesitate to give it as my opinion, that, of the many who possess great wealth, a larger number of them have started from humble means, and have been the architects of their own fortunes, than those who have derived it from paternal inheritance.

By the laws of descent of the States, it is impossible that any family or class of individuals ever can accumulate so much wealth as to be enabled to oppress any portion of the people. Public functionaries that are wise should be cautious in availing themselves against any class in the community, when the interests of all are so naturally dependent upon each other, and are knit together like the web of the spider's web, so that whatever touches or deranges a part must be felt at the most remote and attenuated extremities. They should hold out, by establishing a safe and convertible currency and wise regulations of law, inducements and facilities to the needy industrious to accumulate property; and in this way to give a stimulus to industry; for it is not in the amount of specie which may be in a nation that you alone are to judge of its prosperity and its wealth; a

better criterion is its productive industry. A man who acquires property accumulates wealth; and who he has done this, he can soon convert it into money. The man who has but a hundred dollars, will find that at six per cent. it would support him with the necessities of life for a month; but if he were to expend it in Government lands, at a dollar and a quarter an acre, and apply his labor upon those lands, the production would not only support him and his family, but the surplus of his production would enable him annually to increase his wealth. But he must have either the capital in money, or the capital gained by his credit; for, if there is neither capital nor credit in the country, to allow him to establish himself, he must be for ever poor and miserable. Then I maintain that, to promote the prosperity of the poor, you must supply them with the facilities of acquiring either capital or credit, or rather of both. And this brings me to an important part of our inquiries and our duties: Whether a nation can prosper without a sound and abundant convertible circulating medium? whether gold and silver alone will be sufficient to promote that prosperity? and whether the poor would be benefited by the destruction of all banking institutions? Not having had time to arrange a regular and systematized argument, I will offer a few considerations in relation to these several propositions, without speaking of each separately, and care but little in what order I may take them up, and I may speak of each in conjunction. No member on this floor has said that there is more than eighty millions of dollars in this country in gold and silver. The easiest way of arguing this question is by the Yankee mode of asking a question. That question is, how will the people be enabled to pay off all their debts, which amount to many thousand millions, with only eighty millions of specie, if you force by your policy bank paper from circulation? For the Constitution authorizes every creditor to exact specie, (if he is unfeeling enough to do so,) as your law authorizes the Secretary of the Treasury to exact specie, when the banks cease to redeem their paper.

We can form some idea of the amount of debts which are owed by the people from the President's Message. He says: "At the commencement of the year 1834, the banking capital of the United States, including that of the national bank then existing, amounted to about two hundred millions of dollars; the bank notes then in circulation (about ninety-five millions; and the loans and discounts of the banks to three hundred and twenty-four millions. Between that time and the 1st of January, 1836, being the latest period to which accurate accounts have been received, our banking capital was increased to more than two hundred and forty-one millions; their paper circulation to more than one hundred and forty millions; and the loans and discounts to more than four hundred and forty-seven millions. To this vast increase are to be added the many millions of credit," &c. Then, according to the President's own showing, the people owe the banks nearly eight hundred millions of dollars, to say nothing of the immense amount which is owing between merchant and dealer, between farmer and mechanic, and I should not be exorbitant if I were to say it amounts to at least ten times that sum. Then, suppose you would carry out your hard money experiment, what would it lead to? The Government exacts its dues in gold and silver, and requires the deposit banks and the people to pay it in gold and silver; the banks which have made loans, as all have, call on the importing merchants to pay them in gold and silver; the importing merchant calls on the retailing merchant to pay him in gold and silver; the interior merchant calls on the farmer, and the farmer calls on the mechanic. Cannot all see the impossibility of paying more than ten hundred millions of debts with eighty millions of gold and silver? There is not gold enough in the world to pay the debts of the people of this nation. But suppose, purlindly, you press on with your schemes: Look any member of this floor, if any of his constituents were to owe a debt, say one thousand dollars, and he possessed of property to the amount of ten thousand dollars, if it would not require the whole property he possessed, if it were to become a general policy to pay in gold and silver, to sell for one thousand dollars? So far from this policy having the tendency to benefit the poor, it will, in its results, if it be not arrested, make the rich poor; and the poor man, who is forced to pay all his debts in gold and silver, will find himself beggared, if not incarcerated in the jail of his country. That is the paradise of suffering and misery which such a measure will lead him to; and if he follows such counsellors as we have had for the last three years, he should prepare his mind and body to endure poverty and suffering. "It is in these countries," says an able writer, "only, where labor is well rewarded, and where the mass of the people are placed in a situation to accumulate wealth, that they acquire a stake in the hedge, and are, in consequence, made to feel a direct personal interest in the support of all those great fundamental principles essential to the existence of society, which they otherwise regard either with indifference or aversion, and which the slightest provocation is sufficient to induce them to attack."

But these statesmen who ride in their English carriages, with white servants in livery, who all feed upon the public crib, say that the people are too voluptuous; they have too many luxuries; that they are too extravagant, and that their rulers are determined to bring them down to princely simplicity; that they must be brought down to the economy of the pastoral ages, and Republican simplicity, which we read of in books of olden times; to the hard-money days of Lycurgus, when a man was regarded a patriot, if he not only would covet, but if he would steal, his neighbor's property, without being detected in the theft; when their bread was made of acorns, and the skins of wild beasts furnished them with raiment. Or are we to be brought down to later days, the days when cocoa-seeds were received in part of South America for a currency? That had more plausibility about it, for the holder of that currency could convert it into an article of food, which was no small improvement upon Lycurgus's system.

Example has more effect than precept; and he who wishes to reform a society, must first reform himself; and if the President and his Secretary would start the fisher, they might advise with better hope of success. Let the President dress him self in sackcloth, and his Secretary in the skins of wild beasts, and borrow a dress from Keokuk or Black Hawk, who are now in the city, and start out as missionaries to proselyte the people, and they will soon find how many converts they will make. The first district which they would enter, would be the district which I have the honor to represent on this floor. Let them approach some settlement of industrious Friends or German farmers—the former they would first reach in about ten miles from this place. The President would enlarge upon the advantages of his system, and finally hand the listening crowd over to his faithful squire, who would show, by statistics, what would be

saved to the nation if no luxuries were imported from abroad, and how much less their merchants' and tailors' bills would be if they adopted his attire—to banish broadcloths and merino shawls. We can well conjecture, Mr. Chairman, that the women, if they said nothing, would look inexpressible things; and I can imagine some such man as Roger Brook, a resident of Montgomery, who is a man of reading and a wit, replying to the President, and saying that his costume and the Secretary's were unique and peculiar; that he belonged to a society that but seldom changed good habits; that he liked to read of such attire in the Bible, but could not say that he was at that moment prepared to adopt it. Although they are remarkable for treating both invited and stranger guests with great hospitality, he would play off Van Burenism upon Van himself, and say to him, as a delinquent debtor once said to a dunning creditor, Friend, call next week, and — then I will tell you when you can call again.

But we have had some of these currencies in our own country, or something very much like them. In the democratic simplicity of the trappers of the Rocky Mountains at this time, they use pel instead of bank notes, and pay their debts in the skins of beavers, otter, or racoons. Before the purchase of Louisiana, and until 1804, deer skins were a legal tender, by the laws of all Upper Louisiana, at forty cents a pound. Our forefathers, in their Republican simplicity, made fish oil, cotton and tobacco, a legal tender; and you cannot now open an old statute book, of either Virginia or Maryland, that has not tobacco so often written in it, that it really smells of the indigenous weed. In Maryland, by the law of 1783, tobacco was made a legal tender at a penny a pound, and Indian corn at twenty pence a bushel. Whilst in Virginia, in 1618, tobacco was made a legal tender at 3s. per pound; and in 1620, the "young" and beautiful "women who were shipped by the Virginia Company in England to that colony to be married to the residents, the price on each was a hundred pounds of tobacco; though, when the article was scarce, as much as a hundred and fifty pounds was paid."

This kind of currency is very elegantly described in the sixteenth number of Salmagundi, where it represents that "the lady of a Southern planter will lay out the whole annual produce of a rice plantation in silver and in gold muslins, lace veils, and new liveries; carry a hoghead of tobacco on her head, and trail a bale of sea island cotton at her heels; while a lady of Boston or Salem will wrap herself up in the nett proceeds of a cargo of whale oil, and tie on her hat with a quinté of codfish!" I do not believe that any of my constituents wish to go back to the tobacco experiment of their ancestors; many of them raise most excellent tobacco, and some like to utilize their senses with it; but none, I believe, are anxious to have their dues paid in it: they would prefer the miserable currency which you have now afflicted them with. I know by how frail a tenure I hold the attention of the committee; but as it has favored me with its attention, I am emboldened to proceed a little further, and will attempt to illustrate the positions honestly thrown out in my remarks—the necessity of the Government to establish, by wise regulations, a currency for the people; and the absolute impossibility of the advance of the people in its usual and rapid strides to wealth, to greatness, and to power, without an abundant and good currency. I will not go into a discussion of metaphysics and abstractions, as one-half of the political economists do, who write long and labored books to find out whether gold and silver is properly money or not; whether it is a merchantable commodity, and ought to be sold as any other production of labor; whether bank paper is a good and safe representative of value, or whether it may be worn out and more quickly consumed than the precious metals. I will leave these discussions to those who have a taste for them. I am in the Congress of the United States, and feel that it is my duty to act upon circumstances around me; to look at the past, and try to do the best I can for the future. Close refinements may suit the purpose of the learned lawyer, and abstract metaphysics may suit the man of recondite lore; but practical utility, I think, will best suit an American legislator.

I will take the liberty of reading an extract or two from the little volume I hold in my hand. It is about half the size of the report of the Secretary of the Treasury, and contains, in my poor judgment, more sound maxims of usefulness to the laboring class than all the messages and reports, and speeches, too, which have been written by the Presidents and Secretaries, and their friends, for the last four years. I am sorry to discover that it is not to be found in any of the libraries in this Capitol; and whilst I am making a miscellaneous speech, I will use this occasion to say, that I am sorry for the American taste that they buy up every large volume of romance that is published, whilst pamphlets of solid information are neglected. In England it is different; nothing is quicker bought and read there than political essays and statistical tracts. We have not a taste for statistics, and nothing is more important for a public man. The volume which I will read from is one that was sent to me by a travelled friend from Edinburgh. It was written by J. R. McCulloch, and is entitled "An Essay on the Circumstances which determine the Rate of Wages, and the Condition of the Laboring Classes." The first section is headed, "Rate of wages in any given country at any particular period, determined on the magnitude of the fund or capital appropriated to the payment of wages, compared with the number of laborers." He says: "The capital of a country consists of all that portion of produce of industry existing in it which can be made directly available, either to the support of human existence, or to the facilitating of production. But the portion of capital to which it is now necessary to advert consists of the food, clothes, and other articles required for the use and consumption of the laborer. This portion forms the fund out of which their wages must be wholly paid. We shall err if we suppose that the capital of a country depends on advantageousness of situation, richness of soil, or extent of territory. These, undoubtedly, are circumstances of very great importance, and must have a powerful influence in determining the rate at which a people advance in the career of wealth and civilization. But it is obviously not on these circumstances, but on the actual amount of the accumulated produce of previous labor, or of capital devoted to the payment of wages, in the possession of a country, at any given period, that its power of supporting and employing laborers must entirely depend. A fertile soil affords the means of rapidly increasing capital; but that is not all. Before that soil can be cultivated, capital must be provided for the support of the laborers employed upon it, just as it must be by providing for the support of those engaged in manufactures, or in any other department of industry."

It is a necessary consequence to this principle, that the amount of subsistence falling to each laborer, or the rate of

wages, must depend on the proportion which the whole capital bears to the whole amount of the laboring population. If the amount of capital is increased, without a corresponding increase taking place in the population, a larger share of such capital will fall to each individual, or the rate of wages will be increased. And if, on the other hand, population is increased faster than capital, a less share will be appropriated to each individual, or the rate of wages will be reduced."

"So long as capital and population continue to march abreast or to increase or diminish in the same proportion, so long will the rate of wages, and consequently the condition of the laborers, continue unaffected; and it is only when the proportion of capital to population varies, when it is either increased or diminished, that the rate of wages sustains a corresponding advance or diminution. The well-being and comfort of the laboring classes are therefore essentially dependent on the relation which their increase bears to the increase of the capital that is to feed and employ them. If they increase faster than capital, their wages will be reduced; and if they increase slower, they will be augmented. In fact, there are no means whatever by which the command of the laboring class over the necessities and conveniences of life can be enlarged, other than by accelerating the increase of capital as compared with population, or by retarding the increase of population as compared with capital; and every scheme of improving the condition of the laborer, which is not bottomed on this principle, or which has not an increase of the ratio of capital to population for its object, must be completely nugatory and ineffectual."

Such are the views, not of a man who wishes to be returned to Congress upon some popular prejudice, who aspires to a secretaryship, or a foreign mission, or to the Presidency, but one who writes for the benefit of mankind, and is willing to meet his reward in the approbation of a benefited and grateful posterity. If I may venture to illustrate his views, in this country we have now some eight or ten hundred millions of circulating medium, which is received, and gladly received, by all who have debts to collect, as money. If you adopt the advice offered, and destroy our banking institutions, you reduce the circulating medium to the amount of the specie in the nation, which has been computed at eighty millions; but I do not believe that it is much more than half that amount. Then you will have a currency or circulating medium which, if you were to divide it among the people, would give each individual some three or four dollars. The effects would be, that those who work for a dollar a day now, would have their wages reduced to some ten or twelve cents per day; for, instead of increasing the capital with the increase of the population, you reduce the capital to about five per cent of what it is now, whilst the population of the country increases about five per cent. every year. Or you would have to raise the value of money more than a thousand per cent. and say that a dime shall in future pass for a dollar, an eagle for a hundred dollars. I will read another extract from his second chapter, exhibiting the "Comparative increase of capital and population." "It is not possible to obtain," he says, "any precisely accurate estimate of the absolute quantity of capital in a country at different periods; but the capacity of that capital to feed and employ laborers, and the rate of its increase, may, notwithstanding, be learned with sufficient accuracy for our purpose, by referring to the progress of population. It is clear, from the statements already made, that the inhabitants of a country, supposing them to have the same, or about the same, command of the necessities and conveniences of life, cannot increase without a corresponding increase of capital. Whenever, therefore, we find the people of a country increasing without any, or with but very little, variation taking place in their condition, we may conclude that the capital of the country is increasing in the same or very near the same proportion. Now, it has been established beyond all question, that the population of several of the States of North America has, after making due allowance for immigrants, continued to double, for a century past, in so short a period as twenty, or at most twenty-five years; and as the quantity of necessities and conveniences falling to the share of an inhabitant of the United States has not been materially increased or diminished during the last century, this increase of population is a proof that the capital of the country has advanced in a corresponding ratio. But, in all old settled countries, the increase of capital, and consequently, of population, is much lower. The population of Scotland, for example, is supposed to have amounted to 1,030,000 in 1700; and as it amounted to 2,135,000 in 1820, it would follow, on the principle already stated, that the capital of the country had redoubled about one hundred and twenty years to double. In like manner, the population of England and Wales amounted to 6,064,000 in 1740, and to 12,256,000 in 1821, showing that the population, and therefore, the capital of that country, applicable to the support of man, or the supply of food, clothes, and other articles necessary for the support of human life, had doubled in about eighty years."

"The effects which the different rates at which capital and population advance in different countries have on the condition of their inhabitants, may be exemplified in a very striking manner, by comparing the rate of increase and the actual state of the people of Great Britain, with the rate of increase and the actual state of the people of Ireland. It is certainly true, and there has been a considerable increase in the capital of Ireland during the last hundred years; though no one in the least acquainted with the progress of the different parts of the empire, has ever supposed that this increase has borne the proportion either of a third, or even a fourth, to the increase of capital in England and Scotland during the same period. But the increase of population in Ireland, as compared with its increase in Britain, has been widely different from the increase in the capital of the two countries, or in their means of employing people, supporting them in a state of comfort and respectability. According to the tables given in the Parliamentary reports, the population of Great Britain amounted, in 1720, to 8,955,000, and in 1821 it amounted to 14,391,000, having a little more than doubled in the course of the century; while, from the same reports, it appears that the population of Ireland, whose capital had increased in so inferior a proportion to that of Britain, amounted to very little more than two millions in 1731, and to very near seven millions in 1821; having nearly quadrupled in less time than the population of Britain took to double."

He further says:

"All the witnesses examined by the committee of the House of Commons, on 'the employment of the poor of Ireland,' in 1823, concur in representing their numbers as excessive, and their condition as wretched in the extreme. Their cabins, which are of the most miserable description, are utterly unprovided with any thing that can be called furniture. In many

families there are no such things as bed clothes. The children, in extensive districts of Munster, and the other provinces, have not a single rag to cover their nakedness; and, whenever the potato crop becomes even in a slight degree deficient, the scourge of famine and disease is felt in every corner of the country. The Right Honorable Maurice Fitzgerald, M. P. mentions that 'he had known the peasantry of Kerry quit their houses in search of employment, offering to work for the meagre subsistence that could be obtained, for two pence per day; in short, for any thing that would purchase food enough to keep them alive for the ensuing twenty-four hours.'"

I will read but one line more and then lay down this useful volume. He says, "that while the average market price of a day's labor in England may be taken at from 20d. to 2s. it cannot be taken at more than 5d. in Ireland."

These undoubted historical facts are so conclusive to my mind, that I will not attempt to enlarge upon what seems so convincing to the reflecting understanding, further than to say that they first convince us that you are not to judge of the prosperity of a nation by its rapid increase of population; but if capital does not advance side by side with population, misery and poverty will be the inevitable consequence, and that the poor will be the first and most numerous sufferers; that capital advanced in England with its population, and wealth and comfort followed in its train; population rapidly increased in Ireland, whilst capital lagged behind, and misery and wretchedness now scourge that people. Then carry out the President's views, and those of the Secretary: after first destroying the United States Bank, then destroying the State banks, by your bankrupt scheme; destroy capital; destroy credit, which the President says has been carried too far, and should be checked. Do all this, and the poor man sees his fate read in the history of Ireland. Their distresses are great beyond description; their means of support the most scanty; and the Irishman said truly, as he said wittily, that the first mouthful of bread he ever ate was a potato; yes, sir, the potato is his meat and his bread, and often he is without it. Carry out your system, and the cheapest food, which is the potato, will be that which the poor of this country will be forced to live upon. They will not be able to buy a barrel of flour or a barrel of pork.

Bank credit, individual confidence, and the credit system, have been the chief currency of our nation for fifty years. Never has any nation prospered as this nation has in so short a period. But now the President tells us and the People that the Government must cut loose from the community; that they have traded on borrowed capital; and have carried the credit system too far. Such language would be ungenerous from that source, if in all respects true. Who did most to adopt measures which brought about these results? You destroyed the United States Bank, and at least tacitly invited the States to fill the vacuum of that institution by making banks of their own. You told these State banks to discount liberally. The People, believing that all was true which you told them, increased their business; the farmer bought more land, the mechanic employed more journeymen. Each went in debt, believing, if your promises of a better currency would be realized, that he could not only meet his liabilities but enlarge his means. Your promises were not realized; and now he meets with Executive denunciation for trusting that very Executive. Is not this ungenerous? Is it not cruel? It is a very refinement in cruelty which a fallen angel might envy.

The President, in his Message, has written, as I have spoken, about a great many things; among others, he tells us that England has over-traded, and all Europe felt embarrassments as we feel them.

It is often true, (and the President's Message proves it,) as Lord Brougham has well said, that philosophers have been led into an error, not uncommon in many departments of science, and in none more frequent than in politics—the mistake of the occasion for the cause, and of a collateral effect for a principle of causation. Sir, it is true that there have been, and are, embarrassments in the moneyed arrangements of Europe; but did it originate there? No, sir. I have an interesting pamphlet before me, written very recently, and translated from the French, which I cannot trespass upon the time of the committee to read extracts from. But it shows, by the most conclusive demonstration, that the first cause of our distresses was the warfare upon the bank and the currency by General Jackson in this country; and that so clearly allied is the whole commercial world with this nation that embarrassments in this country are felt, and will be in a greater or less degree, by every Power of Europe with whom we trade. Civilization and commerce have made the human family, so far as trade is concerned, as one people, and you cannot affect the interest of one without affecting the business of all.

This connection and this dependence have been the result of the credit system, which has been so much denounced, and which has been enlarged upon in the Executive Message. I have listened to speeches on this floor, in which whole pages of the Gongo plan have been adopted; yes, sir, the whole anti-bank plan. The little States of the Germanic provinces have been alluded to, to show that by individual banks the interest of the People and the Nation could be promoted. Sir, statesmen and political economists run into error in receiving the theories of abstract writers. Practical judgment knows how to receive or to eschew maxims of writers which apply to a particular nation in a particular condition. The provinces of Germany are small; the line of business is defined. Our nation is as yet new, and immensely expansive. What may be wise in a little State in the centre of Europe may not be wise in a large State in an immense hemisphere.

But I deny that any of the Germanic provinces have gained their wealth or their prosperity by the simple gold money system, by excluding the whole foundations of the credit system. And, in support of this opinion, I will read one sentence from the first volume of Lord Brougham's admirable work on the Colonial Policy of European Nations: "Credit has contributed to the astonishing increase of the Dutch settlements, so much wanted in all other colonies." To sustain this opinion, I will read an extract from Thornton, on Paper Credit, showing that paper credit has been a great cause of the prosperity of Holland. He says, "the extent of the circulating medium of Holland is deserving of notice. Besides the great circulation of bank notes and receipts, Government paper and bills of exchange, (which latter are without doubt a part of the circulating paper of every trading country, although they circulate more slowly than the other parts,) the system of colonial credit must have always thrown into the market a very large portion of circulating paper." Then, sir, when it is thus shown that the Germanic States and Holland owe their prosperity to the paper system and to credit, they will no longer be quoted against both.

If there is one man on earth who knows when to use the credit system, it is a German, whether he is in Europe or America, because he is a close calculator of number one. If he finds, after making his estimates, that he can easily repay, he will then borrow money at six per cent. when he has convinced his mind that he will make eight, or ten, or twelve, upon its judicious use. They do not want the Executive, or any one else, to tell them how to make their estimates; they are the safest calculators in the world.

Some gentlemen here, from the South, have advocated this measure and the views of the Executive—to destroy the banking system of our country, to disconnect Government from the banks, and to restrain the credit policy of the nation. I have, it is true, travelled much through the South, the West, and the North. I have read much of all, and reflected anxiously on their separate and blended interests; still I do not feel sufficient confidence in myself to dissent too rashly from some of the opinions which I have heard of members, who take, with an air of confidence, the interest of their respective regions of the country under their own protection. I cannot, however, restrain the expression of my doubts that the interest of the South will be promoted by these measures; I honestly believe that there is no part of the Union where capital is in such demand, and credit so much required, as in the South—the cotton-growing regions. It may be true that, in some of the old Southern States—in South Carolina, for instance, where capital is somewhat fixed and established—those who receive large patrimonial possessions, with hands upon them to work them, and money to carry them on, may do well in any vicissitude of our policy, but less advantageously upon the new than the old system. But even that favored portion of the population of the States of the South is comparatively but a small portion. The great mass of the cotton-growers are men who have moderate means, and are forced to extend their credit. They may have a few thousand dollars and a few negroes. After they shall have purchased a plantation, they will find their funds exhausted, and that they must resort to credit to get their establishment into profitable operation; and this is more especially the case of the Southwestern States. An editor in Mississippi, some time ago, said that that State did not owe less than ten millions of dollars for negroes; in other words, for laboring capital. Now, require that State to pay ten millions in specie, and you would have to sell at least one fourth of the State to make the amount; and that is the most extensive cotton growing State in the Southern country.

Sir, I maintain that this very productive labor, as it has been called—the slave labor of the South—is strictly and truly more of capital than labor. I could quote Lord Brougham and the reasoning of Senator Tracy, to sustain the opinion, but I will not read from either; for I have not time to discuss before this almost exhausted committee, nor is it important for my present purpose. But, to come to the middle, the grain growing and agricultural States; how few of the number of their inhabitants have been left farmers, and utensils, and money, sufficient to carry on the whole of the paraphernalia of farming operations? Nine out of ten have to purchase farms, and to gain credit for their personal property, in order to carry them on with prosperity. "A farm," says Senator Tracy, "is a real manufactory;" "a field is a real utensil, or, if you please, a store of first materials;" to set it into profitable motion, you must have capital, or credit to gain capital, in order to make it useful or profitable.

But if we were, as it is our duty, to turn our eyes and inquiry farther north, where manufactures and farming go hand in hand together; a manufacturer builds his factory, but finds that his ability will not be sufficient to purchase all of the raw material to be worked up into useful and profitable fabrics. He must either gain credit, or at once dismiss his hands, and abandon his useful enterprise; these hands must work in some other and new employment, for a quarter of a dollar a day, instead of gaining a dollar, if the head of the factory could not have obtained credit. Thus, your system will prostrate the man of some capital, and throw out of employment the man who has but a useful trade.

But how can you carry on commerce between man and man without a sound convertible currency, without immense loss to both the consumer and producer? Tracy has truly said that "commerce and society are one and the same thing;" he has said in another place, "commerce is the whole of society, as labor is the whole of riches." The internal commerce among the States and the people of the States is vastly greater than its foreign commerce, and requires some circulating medium to represent value. There is not gold and silver enough for this purpose: then you are forced to have either a convertible or inconvertible paper currency, or make the productions of labor a currency. You had a convertible paper currency, the best in the world, and the nation was happy and prosperous. You taught the people to be dissatisfied with it, and to aid you in destroying it; and they are now afflicted with an inconvertible depreciating currency. To restore the former prosperity, you must restore the former currency.

You tell the people to banish from use small notes; and your measures force the People to countenance their existence. We had a good currency in Maryland a few years ago. That State prohibited the circulation of notes under five dollars, and I believe but one bank under their charters could issue notes of a less denomination. Public necessity has been made paramount to the law and the policy of the State, and every corporation, and almost every individual in business, feels himself authorized to become a banker, and to fill the State with notes of the fractional parts of a dollar. This was the case in all the States, as now, when the first Bank of the United States was destroyed. I have in my possession a relic of those days—a note of the denomination of "ten cents," which a friend sent me from Virginia, on the "Farmers, Mechanics, and Merchants' Bank" of "Charleston, Jefferson county, Virginia," issued "November 2d, 1815," and signed "William Brown, cashier." I have another precious relic of past days, when there was no United States Bank. It is printed on coarse, stiff paper, and designates "No. 27, 418" for "fifteen shillings." According to an act of the General Assembly of Pennsylvania, passed the thirteenth year of the reign of His Majesty George the Third, dated the first day of October, 1773, signed Thos. Leech, William Griffin, James Stephens; and on the back of the note is written, "To counterfeiter, is DEATH." I am as much opposed to the circulation of small notes, and as much in favor of a sound and abundant specie basis, and specie circulation, as any gentleman on this floor. Hence it is that I am in favor of such measures as will effect the desirable result—measures that have been tried; not the chimerical schemes of fanciful politicians.

From the genius and character of our people, spread as they

are from the east many thousand miles west, filling all the intermediate country, of every variety of production, from almost the polar region of the North to the land of the sugar cane and perennial verdure, it is impossible to carry on free interchange and trade, without immense loss to the people, without a better currency than we have at this time. I have no doubt if a United States Bank were established, with a capital of thirty or forty millions of dollars, to issue no notes of a less denomination than ten dollars, its notes to be received in payment of Government dues, and the notes of all banks that shall resume specie payments within a given period; that, after a limited period, neither the Government nor the bank should receive notes of any bank that issued notes less than five dollars, and, after a farther period, of ten—you would gradually have withdrawn all the small notes; confidence would be restored, and the people would once more see and handle specie. The operation would be gradual, and create no alarm or embarrassment, or derangement in business. Whatever might be the character of the State Banks, they would find it to their interest to conform to these regulations; for the receivability of their notes by the Government and the bank would induce them to call in all their small notes; for those banks could not prosper whose notes would be continually returning upon them as so on ash thrown into circulation, as the notes of every bank would that were not received by the Government and the bank and its branches.

At any rate, this is the conclusion to which my mind, after anxious research and reflection, has attained. By such a course, we would enable the People gradually to extricate themselves from their difficulties, and the nation, now and in future time, would be benefited.

But we have been told, by a distinguished member from Virginia, (Mr. ROBERTSON,) that we are not legislating for posterity, but for ourselves; and that posterity will legislate for itself. This is not the first time I have heard of the remark being made in a legislative assembly, though not by Thomas Jefferson. But there is authority and very high authority for it—the authority of Sir Hugh Boyle Roch. Barrington, in his Personal Sketches, mentions, that a debate arose in the Irish House of Commons, on the vote of a grant which was recommended by Sir John Parnell, Chancellor of the Exchequer, as one not likely to be felt burdensome for many years to come. It was observed, in reply, that the House had no just right to load posterity with a weighty debt, for what could in no degree operate to their advantage. Sir Hugh, eager to defend the measures of Government, immediately rose, and in a few words put forward the most unanswerable argument which human ingenuity could possibly devise. "What! Mr. Speaker," said he, "and so we are to beggar ourselves for fear of vexing posterity! Now, I would ask the honorable gentleman, and this still honorable House, why we should put ourselves out of the way to do any thing for posterity—for, what has posterity done for us?"

Sir Hugh, perceiving, upon taking his seat, that there were many smiling, and not being conscious that he had said any thing out of the way, concluded that the House had mistaken him. He therefore rose and begged leave to explain, as he apprehended that gentlemen had entirely mistaken his words. He assured the House "that by posterity he did not at all mean our ancestors, but those who were to come immediately after them."

Such reasoning may have effect on some minds, but it can have none on mine. That an American Congress shall not shape their measures to benefit posterity, is a sentiment I can never subscribe to. There is an instinct in all animated nature, to protect its offspring. The most timid animal that is not endowed with reason will peril its existence to protect its young. What huntsman has not seen the skittish pheasant change its nature at times, at his sudden approach, and, crying warning to its affrighted brood, flutter before his footsteps, with its rich plumage expanded, as if to challenge his deadly aim! And what generous huntsman has not paused, in harmless admiration, till the fond mother could make an adroit retreat to its secure brood! Is it possible for the day ever to arrive when the House of Representatives will have become so metamorphosed as to forget all instinct of nature, all duty of reason, as to look singly at the selfish interest of themselves, without consulting their duty to posterity? No, sir, it is not possible; the laws of human nature will never be so changed.

I cannot but allude to a remark made by the gentleman from South Carolina, (Mr. PICKENS.) He expatiated, as the Message has, upon the banking system of this country and England, and said that England had over-traded and over-banked.

I could but picture in my mind that the gentleman from South Carolina was in the British House of Commons, addressing that body with the same earnest and impassioned strain to change its policy, to destroy its bank, and no narrow down its credit system to the standard of his judgment. I could fancy to my mind the whole House giving him profound attention, and admiring his eloquence, if they doubted the wisdom of his views; and that, after he had concluded, some veteran statesman would approach him in terms of friendly gratulation, and privately admonish him, before he made another speech on those subjects, that he should lock himself up in an abundant library, and neither give nor receive a visit until he had thoroughly read the entire history of England in relation to the causes of her prosperity; that then he hoped he would be willing to make a speech on the other side, for he would find ample reasons for that change; he would find it was that policy which quickened into usefulness the hidden coal and imbedded ore; it was that system which taxed the water courses to lessen the taxes of the people, which had before flowed on unobstructed from the mountain side to the ocean; it was that system which makes them now, in tribute to industry, leap on the water-wheel, and labor into motion millions of spindles; it is that policy which has built up factories, and made all England one vast and prosperous workshop, and created her wealth, which all the gold of all the mines of South America could not purchase; and has given her power that half the world could not subdue, and has made almost all of it tributary to her.

Another gentleman, in his remarks yesterday, (Mr. Hunter, of Virginia,) in making a hard-money speech, (and, if he will allow me, I will say it was one of the best I have listened to,) wished to demonstrate the evils of the banking system, by referring, in illustration, the French Government adopted the policy of making a run on the Bank of England, whose paper was in circulation on the Continent, and consequently the bank had to suspend specie payments. That honorable gentleman is right in his historical fact, but I must differ with him in his conclusion, that the British Government sustained an injury by that bank from this circumstance.

It is true, Mr. Chairman, that the French nation thought that

one of the best ways of defeating the British arms was to make an attack upon the means of supply of money to her armies, and did employ Jews to present at the counter of the Bank of England its notes. But did that quick-sighted nation bend to the policy of its enemy, and countenance the discredit of its banks? Did the Government of England, when a run was made on the bank, does our Government has done—denounce and aid to ruin the bank? No, sir. The Ministers at once brought in a bill to invite—yes, sir, to request—the Bank of England to suspend specie payments. Did the Government of England do as our Government has done—refuse to take the notes of the bank? No, sir; in that very bill of 1797 they made the notes a legal tender, and stamped the encouraging seal of the nation upon them, by saying that the Government would take them for public dues. It was a consummate policy, and the sequel proved it; for, although the law was limited to six months, I think it was renewed, from time to time, for some twenty years. Did the notes of that bank depreciate as the notes of our banks have, that have been dishonored by the Government? Read the history of English currency, and you will find that it did not. That policy prevented a panic, and sustained credit, and enabled England to contract a debt of twenty-five hundred millions, in a war of unprecedented consumption and fury. By preserving credit at home, she gained it abroad; and nothing aided her more than the Bank of England. It was this policy which made her victorious in that war; it was because industry was her capital, and credit her currency.

Mr. Chairman, I have trespassed much longer upon the time of the committee than I had intended; but a dread of the consequences of this measure upon the farmers and mechanics of the district which I represent, has induced me, together with the attention which I have received, to claim so large a portion of your time.

I will answer one other remark, whilst up, from my Southern friends, and then hand them over to their constituents. My friend from Virginia (Mr. ROBERTSON) said that he voted for this same measure in the Twenty-third Congress, when Gen. Gordon proposed, as "skeleton" of a bill; that, as he went for the "divorce" system then, he will sustain his consistency by going for the bill under debate; and that most of the members of the Opposition went for it then. A friend from the Eastern Shore of Virginia (Mr. WIER) has informed the House that he and many others voted for it then, in courtesy to his colleague who had moved it, so as to bring the proposition before the House; but never dreamed for a moment of voting for it on its final passage.

I wish here to say that I was not in my place—from indisposition—when the vote was taken on General Gordon's proposition; but had I been, I would have voted against it.

If my honorable friend is willing to sue out for a "divorce," in order to marry a "skeleton," I should not be, if I were united to the worst scum in the world. But there is no debating about taste.

If I wished to consult a lawyer of profound legal reading and reflection upon an abstract question in that complex science, the first gentleman in this House that I would approach would be the learned gentleman from Richmond, (Mr. ROBERTSON;) but if I wished to ask advice in selecting "a help meet," I think that he would be the last. I will candidly admit that my friend has more courage than myself. I do not believe that I could screw my courage up to join in wedlock's embrace a skeleton of dry bones. I would have first to see it filled with muscles, flesh and blood, life and animation, fair symmetry and proportion. I must first see the human form and face divine; and then, but not till then, I would venture to—"speak to it."

What assurance can the gentleman have that his skeleton might not be made by the Secretary, who has to fill up the outlines of the form, a hideous caricature—a monster in human form, afflicted with

"All the ills that flesh is heir to?"

"—all diseases, all maladies, Of ghastly spasm, or racking torture, quailms Of heart sick agony, all feverish kinds— Convulsions, epilepsies, fierce catarrhs, Intestine ills and ulcers, colic pangs, Demonic frenzy, moping melancholy, And moon-struck madness, pining atrophy, Marasmus, and wide-wasting pestilence, Dropsies, and asthma, and joint-racking rheums."

The skeleton of the bill before us—for it is but a skeleton—although accompanied with "vaunts" and "strong boxes," they are not boxes of ointment—they are but Pandora's boxes, filled with scourges and diseases, without having hope at the bottom, with which the Secretary may afflict with pestiferous evils the body politic, on whom you are going to force this unnatural alliance.

But before I exhaust the patience of this committee and myself, I wish to refer to one historical fact, in hopes that the advocates of this measure may find a moral in it; and in the hope that they may pause and profit by it before they consummate this hasty and ill-judged measure.

At one period of the English history, corporate privileges were unpopular as they have been made in this country; they were unpopular, because abuses existed under them—real, not imaginary; and in none did abuses exist to so great an extent as in the East India Company.

Mr. Fox, who was made Premier, finding that popular feeling existed strongly against the abuses practised under that company's incorporated privileges, and knowing how strong an influence he could wield, if he could bring every interest connected with that company to be dependant upon the ministry, conceived the plan, not of remedying the evils, but the bold scheme of annulling their charter, and appointing commissioners with absolute power to conduct the affairs of that company. He brought forward a bill, and predicated it upon a plausible preamble of the good of the company and the good of the people, for its better regulation and theirs. It was not the skeleton of a bill, like this on your table, but full and ample in its parts and in its details. That the committee may judge of its character, I will request the Clerk to read the preamble and the first section.

[A BILL for vesting the affairs of the East India Company in the hands of certain commissioners, for the benefit of the proprietors and the public.]

Whereas disorders of an alarming nature and magnitude have long prevailed, and do still continue and increase, in the management of the territorial possessions, the revenues and the commerce of this kingdom in the East Indies; by means whereof the prosperity of the natives has been greatly dimi-

nished, and the valuable interests of this nation in the said territorial possessions, revenues, and commerce, have been materially impaired, and would probably have fallen into utter ruin, if an immediate and fitting remedy were not provided:

Be it therefore enacted by the King's most excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and the Commons, in this present Parliament assembled, and by the authority of the same, That the government and management of the territorial possessions, revenue, and commerce, of the united company of merchants of England, trading to the East Indies, by the directors and proprietors of the said company, or either of them; and all and singular the powers and authorities of the said directors and proprietors, or of any special, or general or other court thereof, in the ordering and managing the said possessions, revenues, and commerce; and all elections of the directors of the said company be, and are hereby declared to be, discontinued for and during the continuance of this act; any CHARTER, usage, law, or statute, to the contrary notwithstanding.

The section which you have heard is sufficient for my purpose.

"Ex uno disce omnes."

For the public good he was for seizing upon its chartered rights and its revenues, making it dependant upon the Executive will. Under a tide of strong popular feeling, he carried his bill through one House with an immense majority. His bosom glowed with triumph, and he fancied himself secure in his place.

The public mind paused, and judgment had time to counsel its feeling. The people began to reflect upon the consequences of the measure. They saw if that company was to be destroyed, its charter taken from it, and all control placed in the hands of a few, it might be the case of all other institutions; every chartered privilege might be taken the same way, and finally, all power in the nation might be exercised by the Executive, or surrendered to it by a subservient Parliament. They soon drew a distinction between remedying and destroying; and by the force of a change in the popular mind, the bill was lost in the other House, and Mr. Fox was no longer minister.

What was the great Fox's fate may be the fate of others. Let others, therefore, take warning by the lessons of history.

Our institutions are too firmly implanted in our general system, they have taken too deep root in the business and well being of society, property is too much valued and too equally divided by the laws of our States and the laws of industrious gain, for the people to throw all things into hotch-potch and form a common stock, or ever to induce them to sustain such measures, or measures which lead to such results. The golden bauble will not now even amuse, much less captivate, sober, well thinking men. You cannot even entice children with it.

You may, in a few Congressional districts, still hold out the delusion to the people, but be assured they will be but few. There is one district north of "Mason and Dixon's line" in which it may succeed—a district represented on this floor by a gentleman who defeated one of the most intelligent and amiable gentlemen I have ever known, by telling his constituents enormous wild stories—stories as miraculous as were ever told by the famous "witch king," who figured in the north of England some three centuries ago. But he finally was drowned, and as I know that there are mill ponds in that gentleman's district more than six feet deep, I beg the member to keep look out.

Sir, since the days of Isaac of Cyprus, no man has been pleased to have golden fetters placed upon him. Hume informs us that, after his treasures were seized upon by Richard the First, and the prince incarcerated and bound in lions, he complained of the cruelty of his conqueror. Richard had the iron fetters taken off, and golden ones placed on in their stead. The Cypriot, pleased with this distinction, expressed his gratitude for the generosity of his conqueror.

The people have been restrained in their business by golden fetters, which the Executive brain has forged; they want them thrown off, so that they may have elbow-room to prosecute their industry as formerly.

I ask, I beseech, this House to pause in its course before it sanctions such a ruinous measure.

I appeal to the candid of all parties, whether Conservatives, administration men, or Whigs, to let us cease this "triangular fight," and unite in defeating this measure. If we have differed as widely as the poles on other questions, let us unite in defeating this. Let us say, in the language of another, "Like men we differed, but like men we have agreed." I had rather see the pet bank plan new nipped and tried again.

If you will not reject this bill, or will not lay it on the table never to be called up again, and are resolved to pass it, let the worst come to the worst quickly; and the people, who will suffer, will soon show that they have power as well as the Executive and the two Houses of Congress; and that the Constitution has informed them how they can remedy their grievances.

But I hope it will be rejected, and that the Executive will do as the Kings of England and of France are forced to do in like cases—change his ministers and his measures. Or, if he will not change his advisers, at least change his measures. Or, if he will not change his measures or his advisers, then, as a republican President in practice, finding himself in a minority in either House, and that he and his ministers will not alter their views of the Constitution and the policy of the nation, they will resign the seals of office to the people, and say to them, elect other agents; we come down from our high places, that other, and abler, and better men may ascend.

Or are the lines of the philosophic poet true?

"The age of virtuous politics is past!

And we are deep in that of cold pretence;

Rulers are grown too shrewd to be sincere—

And we—too wise to trust them!"

## REMARKS OF J. Q. ADAMS, OF MASSACHUSETTS.

In the House of Representatives, Friday, September 29, 1837—On the bill to postpone the payment to the States of the fourth instalment of the Surplus revenue.

The question being on Mr. PICKENS's motion for reconsideration, and Mr. P. having made the remarks heretofore published—

Mr. ADAMS followed.

[The following speech of Mr. ADAMS, on the question of reconsideration (moved by Mr. PICKENS) of the vote, 119 to 117,

for passing to the third reading the bill to postpone the payment of the fourth instalment of the deposit with the States, prescribed by the act of 23d June, 1836, is to be taken in connection with his subsequent speech, on the 14th of October, on the bill to adjust the balances remaining due from the late deposit banks, to be found at p. 265. The postponement bill, as it had passed the Senate, postponed the payment of the fourth instalment ("till further provision by law." Mr. PICKENS, in Committee of the Whole on the state of the Union, had moved to strike out the words "further provision by law," and insert "the first day of January, 1839;" to which Mr. ADAMS had moved, as a further amendment, to add the following: "And all balances of public moneys due from all the deposit banks are hereby appropriated to the said payment, and no part of them shall be applied to any other payment whatever; and if the portion of the said balances due by the said deposit banks cannot be received in time to pay the whole of the said deposit with the States, hereby made payable on the first of January, 1839, then the instalment of debt from the late Bank of the United States, for the stock in that institution held by the United States, payable in October, 1838, is hereby appropriated, to make up any insufficiency of the sums recovered from the deposit banks to complete the said payment of the fourth instalment of the deposit with the States."

Both these amendments had been, by small majorities, rejected in Committee of the Whole on the state of the Union, and the bill had been reported, without amendment, to the House, where they had been excluded from consideration by a successful call from Mr. CUSHMAN, of New Hampshire, for the previous question.

The bill having thus passed to the third reading by the vote of Mr. PICKENS, who immediately moved the reconsideration, and the next morning supported the motion by a speech, it was on this motion for reconsideration that the following remarks were addressed to the House:

Mr. ADAMS expressed the hope that it was competent for him, at that stage of the proceedings, to debate the amendment he had introduced in Committee of the Whole, but which had been cut off by the previous question.

The SPEAKER remarked that there was no amendment now before the House, the motion of Mr. PICKENS to reconsider the vote ordering the bill to its third reading being now in order.

Mr. ADAMS begged to know if it were not competent for him to urge the merits of his amendment as a reason for voting for the reconsideration?

The SPEAKER answering in the affirmative, Mr. ADAMS proceeded. He would be very brief in the remarks he should address to the House. He said he had come to his seat at this special session of Congress, fully aware of the difficulties under which the Government was placed, and no less sensible of the embarrassments which afflicted the people of the country. He had felt inclined to go for the measure now before the House, as a means of relieving the Administration from embarrassment, being willing to go for the relief of the Government, and thereby to relieve, indirectly, the people, whether the Government should propose any measure for the direct relief of the people or not. But when he had come to consider the bill, as it came from the Senate, he had been forced to the conviction that whatever relief it would afford the Government would be obtained at the expense of the people, it being, in substance, a bill to raise revenue. And what was the effect of the bill? A bill, bearing on its face one thing, and doing another! Purporting to postpone the operation of an act of Congress restoring to the people a portion of their own money, and, in reality, going to repeal that act! As the bill had passed the Senate, there was no further payment or deposit to be made of the proportion of the surplus revenue now due to the States without further legislation. It was, to all intents and purposes, a proposal to repeal the act of June, 1836. This was its great object. If its intention was not expressed, and apparent upon its face, the effect of it would be a deception upon the people. His constituents (Mr. A. believed) might think the postponement of its operation reasonable, were the time to which it was postponed fixed and certain. But there is now no such certainty upon the face of the bill; its operation is to be put off to a date as far distant as what the old Romans called the *Calendas Græcas*, or, as the French proverb terms it, "the week of the three Thursdays!" Now the amendment of the gentleman from South Carolina (Mr. PICKENS) proposes to postpone the operation of the act until the 1st of January, 1839, instead of until the further action of Congress. He, for one, was willing to take the bill with such an amendment; but there must be one other provision—an assurance that there shall be no more postponement, and that the sum thus appropriated shall be applied to that purpose, and to no other.

Mr. A. had called this a bill to raise revenue; and so it was. It would place in the hands of the Government nine or ten millions of dollars, to be appropriated to any other purpose. It would raise money from the people, for the payment of the public debts. And now where does this money bill come from? And, in asking this question, Mr. A. said he desired to ask that the bill should be viewed as a part of the whole system now projected for the raising of a revenue. The bill comes, first, from the Senate. And is that the branch of the National Legislature in which the Constitution requires that all such bills shall originate? Now all, not only this, but all the bills, which form a part of the system alluded to, have originated in the other branch of Congress. Mr. A. would put these facts to the House, as a man specially entrusted with the guardianship of the public purse, and with the hope that such an appeal may produce its effect upon the action of the House on this bill, and in putting members more on their guard hereafter as to the source whence bills of this character emanate.

Mr. ADAMS said he had heard a good deal, at one time and another, said about the great and growing extent of Executive patronage, and influence, and power. To most of such rumors and expressions of opinions he had given but slight credence and as little of assent; but he could not avoid warning the House that, if the pockets of the people, their constituents, were to be ransacked for money, it behooved them to see that such measures originated with the representatives of the people. But, perhaps, suggested Mr. A. he had not been quite correct in saying that the bill in question had had its origin in the Senate. It would doubtless have been nearer the truth to have said that it, with its companions of the same general system, had originated at the Treasury. Every one of these bills had every mark and feature of such an origin; they were all, beyond question, drawn up and prepared at the Treasury Department! The chairman of the Committee of Ways and

Means (Mr. Cambreleng) hastled the House that the Senate and House bills, on the same subjects, were not identical in all respects; and what was the difference? Mr. A. believed that the House bill proposed the issue of Treasury notes to the amount only of \$12,000,000, while the Senate bill proposed only \$10,000,000. He would confess that he had much rather see the difference on the other side. He would rather find the House disposed to give less than more. The whole thing, as managed thus far, looked like a little "experiment." The House were to be asked by the Treasury through the Senate for \$10,000,000, with the expectation that the House, becoming familiarized to the idea of so large an issue, would consent to throw in the additional two millions as a mere trifle of more or less.

Mr. CAMBRELENG rose to explain. When the bill was reported in the Senate, it was reported in blank. In the House bill, there was an additional appropriation for the Florida war, which was not included in that of the Senate, of course; and there were other differences between the two bills.

Mr. ADAMS said he thought he had seen another bill separate from this bill of twelve millions, and asking sixteen hundred thousand dollars more. He did not understand—

Mr. CAMBRELENG. Don't you understand, sir? The other is the bill appropriating the money proposed to be raised by this.

Mr. ADAMS said he was happy to receive this explanation from the chairman of the Committee of Ways and Means, and would be glad to hear further from him, why, after the enormous appropriations made last spring for this very object, it had become already necessary to appropriate for the service of this same year nearly two millions more. He expressed the hope that Mr. Pickens would accept his amendment as a modification of his own.

Mr. PICKENS said he would willingly do so, but for the latter clause, pledging the faith of the United States that the Congress will provide for the payment of the money in January, 1839.

Mr. ADAMS observed that the proposition was divisible; and that if, after the House had made the appropriation, they think it best not to pledge the faith of the Government to carry it into effect, they could easily reject the latter part of the proposition. All he desired was to say to the people, "we have promised to pay over to you this sum; we cannot do it now for want of that sum to pay over; but we pledge you our faith that we will do so;" and certainly fifteen months will be found abundantly sufficient for the performance of such a pledge. Yet, if there was all this reluctance to the adoption of this part of the proposition, Mr. A. said he was willing to take the amendment of the gentleman from South Carolina, modified by the adoption of his own, (Mr. Adams's) without the latter clause. All he professed to want was an assurance that the people shall not be paltered with any longer with delusive promises never to be performed.

The gentleman from Georgia (Mr. Towns) had said (continued Mr. A.) that the people of that State, when contending for principles, cared nothing for dollars and cents. Well, (said Mr. A.) that was a good sign: he liked that: it was the sentiment of a high, lofty, and admirable spirit; but it so happened that, in the case under consideration, the dollars and cents were the very principle itself! And if the people of Georgia cared nothing for those articles, indeed, they would find many of their neighbors not one-half so disinterested, to whom they might easily make it over, and who would very cheerfully accept it at their hands. Or, the people of that high-spirited State might make it over, a munificent donation to the Treasury of the United States, and relieve themselves from all anxiety about "dollars and cents."

Mr. A. then argued briefly that, with the amendments proposed, this bill ceased to wear the aspect of a bill to raise revenue.

Mr. A. alluded to the alleged differences of opinion existing in the House at the time of passing the act of 1836, as to the true nature of the measure, and whether it were a mere deposit bill, or a distribution bill. There certainly were, and now are, a great variety of arguments used on both sides of this question: but he had heard nobody on that floor arguing in favor of a recall, an actual recall, of the money already paid over to the States. No vote could be gotten in that body for a recall. That would be going back to the principles of the old Confederation. Under that system, the Congress of the United States had no power to raise money by their own authority. To defray the expenses of the Confederacy, whether of peace or war, Congress could only settle the proportions of the sum required for the public service, and issue the proportions of the sum required for its own quota. This is precisely what would now be the form of recalling any portion of those moneys once deposited in the Treasuries of the States; and if any gentleman wished to see the practical working of that system, let him go back to the records of the time, and see the answers that were made by the States to the requisitions of the old Congress. What were the answers?—not in a time of peace—and of plenty—and of prosperity—like that in which the nation has now been seized with this convulsion fit; but at a time when the very existence of the nation was at stake; in the midst of that glorious but soul-trying war of independence, for the very support of which all the expenditures to be provided for were indispensable—what were the answers? Some never answered at all—some replied that it did not suit their convenience—some flatly refused—and others resolutely asked by the Secretary of the Treasury when they intended to resume specie payments, replied, "when the others do!" They were calling spirits from the vasty deep!—every body knowing, all the time, that the spirits would not come! [Continued laughter from all parts of the House.]

After alleging that one of the reasons adduced in opposition to the distribution principle in certain quarters (namely, that it viewed the surplus funds as actually divided among the States) was a strong argument in his mind, as a guardian of the people's interests in its favor, Mr. A. came to the consideration of yet another reason, which made him desire the proposed amendment; and which indeed, rendered it impossible for him to go for the bill without it.

He said that a gentleman from Georgia, (Mr. Dawson), in an exceedingly forcible speech, had pointed out the monstrous inequality with which this sum of \$10,000,000, due to the States under the deposit act, had been deposited by the Secretary of the Treasury. Mr. A. said he could account only for this most extraordinary state of things by ascribing this inequality to the operation of the far-famed "Specie circular." In the Bank of Alabama, at Mobile, it appears by the report of the Secretary of the Treasury, that \$1,000,000, and upwards, were left deposited when the banks suspended specie payments. Two hun-

dred thousand of this is put down under the title, "warrants heretofore drawn, but not yet paid, though payable." This was one of those favorite, but puzzling unintelligibilities which several gentlemen on this floor have complained of, in the report of the Secretary of the Treasury; and he (Mr. A.) had had been much perplexed to obtain a glimpse of its meaning. What, then, was the meaning of this circumlocution about "warrants, to the amount of two hundred thousand dollars, heretofore drawn, but not yet paid, though payable?" Why, Mr. Speaker, all that simple means, that those warrants or drafts of the Secretary of the Treasury were protested: That's all! [Laugh.] The drafts were for specie—"hard currency," "mint drops,"—and they were drawn on those hoards of specie accumulated by the "Specie circular." But the specie had gone when the drafts arrived; and so the drafts were "not yet paid, though payable!" [Laugh.]

Sir, (said Mr. A.) give me leave to say a word or two on the alleged unintelligibility of the Secretary of the Treasury. I certainly cannot but feel a great degree of compassion for him, considering the necessity he was under of making a report to Congress, at any rate. There are a great many things which sound much better in circumlocution than when plainly expressed. The Secretary of the Treasury I know to be well versed in English composition; but there are subjects which the sublimest writers are obliged to cover with a veil, and I "guess," or I "reckon," that there were a good many of these troubling the brain of the Secretary at the time he drew up this much discussed report.

Mr. A. said he had attentively read the report, and must acknowledge that he had occasionally found in it a redundancy of words (to disclose ideas, which might have been expressed with more precision. There were obscurities, like that of which he had given an example in the heading of the column of what he supposed to be protested drafts. But the general purport of the whole document was plain and clear enough—much more plain and clear indeed than it was pleasing to contemplate. He had listened a day or two before to some very ingenious remarks of the eloquent and able gentleman from Ohio, (Mr. Hamer) who, while discussing this subject, had instituted a dialogue between the General Government and the States; and he represented the General Government as saying, (in a very marked and emphatic manner) "Do YOU want this money? So do WE!" [A general laugh.] Sir, (said Mr. A.) the whole substance of the report of the Secretary of the Treasury may be summed up in those few words.

Mr. A. said he had another observation to make. A gentleman from South Carolina (Mr. Thompson) had observed that it was a sort of uniform operation of this confederate Government, that all the money of this nation "flowed to the North!" [Mr. Thompson here said, "I did say so."] There is (said Mr. A.) an English poet, who has said,

"Ask where's the North?—at York, 'tis on the Tyne."

Now, sir, suppose yourself at Charleston, South Carolina, you ask, "Where's the North?" With this maxim of the gentleman from South Carolina, and his system of geography, and the answer you would receive must be—at Charleston, South Carolina, the North . . . is Mobile, Alabama; the North . . . is Natchez, Mississippi; the North—is New Orleans, Louisiana. For these are "North" at Charleston,—if you assume that the money of the country is flowing to the North. I have named a single instance—the Bank of Alabama, at Mobile—where there is a deposit of public money to the amount of more than a million of dollars. It flowed thither, I suppose, by the aid of "the far-famed Specie circular," in "mint drops" and "hard currency." Now, what is that million worth? The amendment of the gentleman from South Carolina, and my own added to it, will secure to that bank the use of that money for fifteen months. That is, until January, 1839; and while would it be worth to that institution, and to the interests affected by the well-being of that institution? In ordinary banking, six per centum. But when it is in the bank, while issuing notes without paying specie when called for, it is worth twenty per centum, at least. That million of dollars is equivalent to a gratuitous donation to the Bank of Mobile, and thereby to the State of Alabama, of two hundred thousand dollars a year.

Pursuing the idea suggested by Mr. Dawson, of Georgia, in regard to the palpable and monstrous inequality with which the money, appropriated to the liquidation of the instalment system, had been deposited among the States, Mr. ADAMS demanded what proportion was on deposit with Massachusetts? Unless he was mistaken greatly, the whole sum in all the banks employed as the depositories of the public money in that State was \$81,278 40, or about two-fifths the sum which falls to the Bank of Alabama alone, as the value of the use of the fund on deposit there. What is the benefit to Massachusetts, he would ask, of that deposit, as it now stands? At six per cent. it is worth about \$4,000, and that is the deposit of public moneys which Massachusetts offsets against the \$1,000,000 in Alabama.

Mr. ADAMS said he had an inquiry to make of the chairman of the Committee of Ways and Means, (Mr. Cambreleng), with regard to one of the unintelligibilities of the Treasury report, which he was desirous of having explained. Until this was done, he could not gather from that document whether or not the \$81,278 40, put down as deposited with Massachusetts, was all the public money for which that State was responsible to the Government. In reading over the report, he found a list of banks, beginning with the State of Maine, and proceeding southward, and the sum of public money on deposit in each. Under date of August 28, 1837, between the banks of Maine and those of Connecticut, he observed a sum total; against the simple words, "Metropolis special." Now, as the State of Massachusetts lies between Maine and Connecticut, Mr. A. would fain know if the word "metropolis" there may not mean Boston?

Mr. CAMBRELENG. The Bank of the Metropolis in this city (Washington) is probably referred to.

Mr. ADAMS. What is the nature of that deposit?

Mr. CAMBRELENG explained that that special deposit in the Bank of the Metropolis was to meet some of the current expenses of the Government, incurred in that part of the country.

Mr. ADAMS. Oh! a "special" deposit for the use of some of the pets, some of the favorites, the preferred public creditors, (of which class I supposed I must consider myself a member, since the Secretary's offer to pay us *per diem* in specie.)

Mr. CAMBRELENG would remind the gentleman that there were other pets, and other favorites, besides those around us. There was the navy yard on the Potomac, and—

Mr. ADAMS. But that navy yard is not "between Maine

25th Cong....1st Sess.

Postponement of fourth instalment.—Mr. Adams.

H. of Reps.

and Connecticut," Mr. Speaker. [Laugh.] And I am still in the dark as to the meaning of that line in the report of the Secretary, which seems to make Massachusetts responsible for a yet larger share of the public treasure than, in her own proper place in the report, she is set down as holding in deposit. And this is the more remarkable, because in this same statement appended to the Secretary's report, the Bank of the Metropolis in this city has its proper place afterwards between the banks of the State of Maryland and those of the State of Virginia, and therefore cannot naturally be supposed to be the same "Metropolis special" thus thrust up in a corner between the States of Maine and of Connecticut. It all goes to corroborate the idea that this same report of the Secretary of the Treasury is far from being so explicit and intelligible to all, as it is to those gentlemen whose sagacity finds it so easy to be understood.

Besides, sir, I find in this Treasurer's weekly statement of the amount to his credit, in the various banks of public deposit, the Bank of the Metropolis, District of Columbia, in its proper place, located between Maryland and Virginia, with a small balance of \$2,162 83 cents due to the Treasurer, and that whole sum, except \$9 and 4 cents in the column of warrants heretofore drawn, but not yet paid, though payable. And in the statement marked K, this same Bank of the Metropolis is included in a list of deposit banks discontinued under the deposit act of June, 1836. And it is not included in the list of present deposit banks under the same act, marked L. In the circular letter of the Secretary to the delinquent banks, I find it written: "The imperative provisions of the act of June, 1836, make it the duty of this Department to discontinue ordering any further sums of public money to be placed with the deposit banks after suspending specie payments, and hence you are notified that no more can be thus deposited in your institution, provided such a failure to redeem your notes has actually occurred."

"No more can be thus deposited in your institution." The Bank of the Metropolis, in the District of Columbia, is one of the deposit banks discontinued by the positive command of the law; but "Metropolis special," between Maine and Connecticut, has a deposit dated the 28th of August, of \$140,541 62 cts. By what authority was that deposit made? This is to me one of those unintelligible things in the report of the Secretary of the Treasury, which I should be glad to see explained. Is it a practical illustration of the divorce between bank and State? or of the locomotive power of the Secretary to transport the Metropolis from the District of Columbia to Massachusetts, to New Hampshire, to Rhode Island, to some undefined region between Maine and Connecticut, where he could make a special deposit of gold without infringing upon "the imperative provisions of the act of June, 1836?"

I should like to know why this item is thus thrust between Maine and Connecticut, as if it were intended to give Massachusetts the reputation of having \$140,000 of the money which is used to pay members of Congress and the navy yard expenses at New York?

But I was observing upon the profound philosophical and geographical statement submitted to the House by the gentleman from South Carolina, (Mr. Thompson,) in which it was asserted that the money of the United States "always flows to the North." Now I have given the House one example, in the case of Alabama. Let us look a little farther: here I find the Union Bank of Louisiana and the Bank of New Orleans have, together, an amount nearly equal to \$1,500,000. Here is a million and a half flowing to that extremity of the North, New Orleans; and here is upwards of one million seven hundred thousand dollars flowing into the deposit banks of the State of Mississippi at Natchez. Now, with the utmost respect for the States of Louisiana and Mississippi, they are not so near to the north pole, that they should have between them more than three millions of United States money, which the gentleman from South Carolina insists is always flowing to the North—money which is, in fact,

a gift bestowed upon them without law, at least not by law, but by the operation of a specie circular, which required all payments to them to be made in gold and silver, and yet they have not a dollar forthcoming. I will put the interest on this specie at ten per cent.; six per cent. is certainly too little. The use of these deposits would be worth six per cent. even if they might be called away at any moment. I will put the interest at ten per cent. Here, then, we have placed at the disposal of the banks of Louisiana \$1,500,000, which I say is equivalent to a pure donation to that State of \$150,000 a year, so long as the deposit shall continue. And how goes it with the State of Mississippi? I find here that the Planters' Bank and branches, Natchez, have \$895,000, and the Agricultural Bank and branches, Natchez, \$349,000, making \$1,244,000. Here is an actual boon to that State of 174,000. They have had this since July already, and they will continue to have it until it suits their convenience to pay it over, which I hope they will do before the 1st of January, 1839.

Well, I am, notwithstanding, willing to vote for this bill, leaving this matter as it is, provided the banks of Alabama and Louisiana and Mississippi will pay back this money on or before the 1st of January, 1839.

We come next to the State of Tennessee. Her share is but small, amounting to not over \$500,000. If she was entitled to receive her share of the deposits on the 1st of October, she might set off that amount, and suffer no injury. She would then have the use of this money, and would still get her portion of the deposits like the other States. Then we come to Ohio: and, in respect to her, it seems to be admitted as a settled affair, that all her banks are good and sound, only their notes will not command the specie without a little premium of ten per cent. Ohio has got \$900,000. She is a large State, and, in the critical condition of her politics, may have been thought a cheap purchase at this amount. It is not, at any rate, a very extravagant sum. Indiana has a large portion. But here there is another "Northward flowing" of a different kind. Here we come to a State hardly a year old. It is hardly a year since we were discussing her admission into the Union; and if she was not satisfied with the conduct of the Government then, I think at least she must be now. Here is Michigan, with more than one million of dollars, which is equal to a clear donation of \$100,000. Does the geography of the gentleman from South Carolina consider Michigan as a place to which the money of the United States flows Northward? All this vast tide of specie, according to my geography, has flowed Southward and Westward. As to the North, the flowing in that direction has been in a precious small rill.

What is the conclusion from these facts? The gentleman from Georgia (Mr. Dawson) complained that Georgia had not had her portion, and he did but justice to his own State, if we consider what has been given to Alabama and Mississippi, Louisiana and Michigan. But what is it if put in comparison with Massachusetts? What has she got in this distribution? The special Metropolitan deposit not being a part of it, as from this table one would suppose? Why, sir, she has got \$81,271 81 cents—a sum which any one of her banks will pay in five minutes, if you will take off the interest. Is there justice in this? Gentlemen complain of the mode and manner in which the deposit law operates, and about the standard of distribution on which it proceeds, as being unjust and unequal; but, sir, what is that inequality, in comparison to this deposit made without law, to a rate of deposit which gives a million and a half to one State, a million seven hundred thousand to another, a million four hundred thousand to another, and to Massachusetts \$81,271 81 cents, supposing its banks not to pay the \$60,000, which is all they owe? I will not ask how many good friends of the Administration have been made, or how many precious votes in this House secured, by this system of operations. When we came to make this deposit, I mean the deposit by law, I remember well the arguments of gentlemen who wanted a dif-

ferent standard of distribution adopted. They complained of a distribution according to the ratio of representation in both Houses of Congress, because it gave too much to Delaware, to Rhode Island, and other small States. Now, sir, it was not the Northern States, but the small, and the Western States chiefly, which got this extra proportion. I was willing they should have it, because, since the last census was taken, their population had increased much more than that of Massachusetts. I assented to this ratio because the new States, who were most in want of money, would be most benefited by it, and I voted for the bill. But the very interest which the members took on that occasion in this question, and the earnestness with which they argued the necessity of an equal principle, proved the earnestness with which every member of the House adhered to the proportional right of his own State.

But what was that ratio of distribution in comparison to this? When \$1,500,000 is given to one State? Alabama had five members in the House and two in the Senate; Massachusetts had twelve in the House and two in the Senate. Their proportions were, therefore, as 7 to 14. To this I assented. But what is the proportion here? Alabama gets \$1,500,000, and Massachusetts \$80,000. I say nothing about Pennsylvania. She is one of the largest States in the Union, and she has \$249,000 in the Girard Bank, \$5,500 in the Moyamensing Bank; but of this sum there has already been drawn, upon the Girard Bank, in warrants not yet paid, though payable, \$160,000, leaving only about \$95,000 as the share of actual deposit held by Pennsylvania. But, when we consider the population of Pennsylvania, what is the proportion of \$250,000 given to Pennsylvania, and \$1,700,000 to Mississippi?

I have intruded upon the patience of the House to a greater extent than I intended. Its patience has been my encouragement. If this bill passes, I wish it to pass with the amendment of the gentleman from South Carolina; but I consider the whole measure as a violation of the public faith, for which the last Administration is responsible to this nation, to the creditors of this country abroad, and to posterity—especially responsible to the people of those States so grossly injured by the withholding from them of the fourth instalment of the sum promised them by the act of June, 1836, by the lavish donation of their money to the people of other States, which they now refuse to refund. That this crying injustice may not be repeated by a further postponement or repeal of the deposit act, I demand, with the amendment of the gentleman from South Carolina, fixing the term of payment to the 1st of January, 1839, a pledge that the money shall then be faithfully paid; and for this purpose that the balances actually due from the late deposit banks shall be appropriated to that payment. They are the identical moneys announced, on the 31 of January last, as being then in the Treasury, to be divided among the States under the act of June, 1836. They are more than sufficient to pay the whole of the fourth instalment. But if the whole sum cannot be recovered from the banks, where it has been deposited, before the 1st of January, 1839, I ask a further contingent appropriation of the money to be paid by the late Bank of the United States in October, 1838, to the same object. If a further indulgence of time beyond the 1st of January, 1839, should become necessary to complete the recovery of the balances due by the deposit banks, that indulgence should be granted by the whole nation, and not at the expense of the States entitled to the fourth instalment. In the amendment which I proposed in Committee of the Whole on the state of the Union, I added further, that if the recovered balances, and the instalment of October, 1838, sufficient for the payment of the fourth instalment to the States, in the faith of the United States should be pledged that further and effective provision should be made by Congress thereafter. Finding some of my friends here willing to vote for the rest of my amendment, but objecting to that, I shall withdraw that clause, with the hope that no further pledge of faith will be necessary for the fulfilment of that which has been given.

THE END.
